(AT)

A. WATS Access Line Service

WATS Access Line Service is a line side connection that combines Switched Access Service with a dedicated Special Access connection between an end user's premises and the WATS serving office. WATS Access Line Service is available only with Feature Group C and D Switched Access Service. WATS Access Line Service is available in either the originating direction or terminating direction as specified below. WATS Access Line Service used in the terminating direction may only be used to complete 800 Access Service calls. WATS Access Line Service must be used when the customer terminates 800 Access Service calls over Feature Group C or D. WATS Access Line Service will be provided as follows:

- Jointly with the Telephone Company providing intraLATA and the customer providing interLATA calling as specified in the Telephone Company's Wide Area Telecommunications Service Tariff. Jointly provisioned WATS Access Line Service is available in either the originating or terminating direction. When the customer uses Feature Group C or D for the completion of 800 Access Service calling, jointly provisioned WATS Access Line Service must be used until such time as intraLATA 800 Access Service calls can be distinguished from interLATA 800 Access Service calls.

6.2.4 Feature Group D (FGD)-(Continued)

D. Testing Capabilities

FGD is provided, in the terminating direction where equipment is available, with seven-digit access to balance (100 type) test line, milliwatt (102 type) test line, nonsynchronous or synchronous test line, automatic transmission measuring (105 type) test line, data transmission (107 type) test line, loop around test line, short circuit test line and open circuit test line. In addition to the tests described in Paragraph 6.1.4, preceding, which are included with the installation of service, Additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing, Manual Scheduled Testing and Nonscheduled Testing are available as set forth in Paragraph 13.3.5, following.

6.3 Common Switching and Transport Termination Optional Features

Following are descriptions of the various optional features that are available in lieu of, or in addition to, the standard features provided with the Feature Groups. They are provided as either Common Switching or Transport Termination options.

CANCELLED

6.3.1 Common Switching Optional Features

A. Call Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating call within the LATA, and for the completion only of calls to 411, 911, 800, 555-1212 and a Telephone Company-specified set of NXX's within the Telephone Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. This feature is provided in all Telephone Company electronic end offices and, where available, in electro-mechanical end offices.

OCT 16 1987  
BY 214 RS 439  
Public Service Commission  
MISSOURI

B. Service Code Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating calls within the LATA and for disallowing completion of calls to 0-, 555 and N11 (i.e., 411 and 911). This feature is provided, where available in all Telephone Company electronic end offices and electro-mechanical end offices.

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.1 Common Switching Optional Features-(Continued)

E. Nonhunting Number for Use with Hunt Group or Uniform Call Distribution Arrangement .

This option provides an arrangement for an individual line within a multiline hunt or uniform call distribution group that provides access to that line within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed. Where available, this feature is provided in Telephone Company electronic end offices only. It is available with Feature Group A.

F. Automatic Number Identification (ANI)

This option provides the automatic transmission of a seven- or ten-digit number and information digits to the IC terminal location for calls originating in the LATA, to identify the calling station. The ANI feature is an end office software function which is associated on a call by call basis with (1) all individual transmission paths in a trunk group routed directly between an end office and an IC's terminal location or, where technically feasible, with (2) all individual transmission paths in a trunk group between an end office and an access tandem and a trunk group between an access tandem and an IC's terminal location.

The seven-digit ANI telephone number is available with Feature Groups B and C. With these Feature Groups, technical limitations may exist in Telephone Company switching facilities which require ANI to be provided only on a directly trunked basis. Where direct trunking would not have been provided except as required by the provision of ANI, additional charges will apply for Provision of Other Than Telephone Company Selected Traffic Routing, as set forth in Paragraph 6.8.2, B., following. ANI will be transmitted on all calls except those originating from multiparty lines, coin stations and coinless pay telephones using Feature Group B, or with ANI failure has occurred.

The ten-digit ANI telephone number is only available with Feature Group D. The ten-digit ANI telephone number consists of the Numbering Plan Area (NPA) plus the seven-digit ANI telephone number. The ten-digit ANI telephone number will be transmitted on all calls except those identified as multiparty line or ANI failure, in which case only the NPA will be transmitted (in addition to the information digit described below).

IntraLATA usage will be billed as specified in the Wide Area Telecommunications Service Tariff. For joint provided 800 Access Service which utilizes terminating WATS Access Line Service for the completion of 800 Access Service calling, a WATS Access Line charge will apply as specified in Section 7, following, and in addition, a WATS Access Line charge will apply as described in the Wide Area Telecommunications Service Tariff.

Common Switching optional features and Line Terminations for WATS Access Line Service are provided in Section 6.

WATS Access Line Service is provided with either dial pulse or dual tone multifrequency address signaling and either loop start or ground start supervisory signaling. The choice of the type of signaling is at the option of the customer.

A description of WATS Access Line Service is provided in Section 7 Paragraph 7.1.3(C), following.

Public Service Commission MISSOURI

B. 800 Access Service

800 Access Service is an originating offering utilizing trunk side Switched Access Services. 800 Access Service allows the customer's end user to originate 800 calls on a one plus basis without the use of an access code. The customer will be identified from the dialed 800 telephone number.

When a customer's end user originates a 1+800+XXX-XXXX call, the Telephone Company will perform the customer identification function at an 800 Access Service Screening Office to determine the customer to which the call is to be routed. The customer identification function will consist of the

Provider will be identified from the dialed 800 number (i.e., 1+800+NXX+XXXX). The 800 Service Provider has the option of receiving the dialed 800 number (i.e., 1+800+NXX+XXXX) or a translated ten-digit POTS number (i.e., 1+NPA+XXXX). For 800 NPAS calls outside of the North American Numbering Plan (NANP), the 800 Service Provider will receive a six digit data base translation.

When an end user originates a 1+800+NXX+XXXX call, the Telephone Company will determine how the call is to be routed, based on the 800 number dialed. If an 800 NPAS call originates in an end office not SSP equipped to provide the customer identification function, the call will be routed to an SSP equipped Telephone Company access tandem. Once the 800 NPAS Provider has been identified, the 800 call, served by the Telephone Company's SSP, will be routed to the 800 Service Providers defined FGD/BSA-D trunk group.

Originating 800 NPAS traffic must be provided over FGD or BSA-D trunk groups. The 800 Service Provider may use FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D to terminate an 800 call. When FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D is used to terminate an 800 call, the customer is required to deliver 800 calls to the Telephone Company in the standard POTS number North American Numbering Plan format.

originating intrastate intraLATA 800 access minutes as specified in the Wide Area Telecommunications Service Tariff. Terminating usage and/or a line charge will be billed according to the type of facility arrangement utilized for termination and completion of the 800 Access Service call.

Unless prohibited by technical limitations (e.g., different dialing plans), originating 800 Access Service traffic may, at the option of the customer, be combined in the same Feature Group B, C or D trunk group with the customer's other Access Service traffic. However, when Feature Group D becomes available in an end office, originating 800 Access Service traffic from that end office must be provided with Feature Group D.

In addition, when required by technical limitations, or at the request of the customer, a separate Feature Group B, C or D trunk group may be established for originating 800 Access Service type calls.

(AT) The customer may use Feature Group A, B, C or D to terminate an 800 Access  
(AT) Service call. When Feature Group A, B, C or D is used to terminate 800 Access Service, the customer is required to deliver 800 Access Service calls to the Telephone Company in standard POTS number North American Numbering Plan format.

6.3.1 Common Switching Optional Features

A. Call Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating calls within the LATA, and for the completion only of calls to 411, 911, 800, 555-1212 and a Telephone Company-specified set of NXX's within the Telephone Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. This feature is provided in all Telephone Company electronic end offices and, where available, in electromechanical end offices.

B. Service Code Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating calls within the LATA and for disallowing completion of calls to 0-, 555 and N11 (i.e., 411 and 911). This feature is provided, where available, in all Telephone Company electronic end offices and electromechanical end offices.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.2 Provision and Description of Switched Access Service Feature Groups-(Continued)

6.2.5 Miscellaneous Switched Access Service-(Continued)

D. Advanced Carrier Identification Service (ACIS)

General

Advanced Carrier Identification Service (ACIS) is an originating offering utilizing trunk side Switched Access Services from both equal access and non-equal access offices and provides the ability for calls to be delivered to access customers based on the dialed Personal Communication Service (PCS) subscriber number. ACIS will use the dialed PCS subscriber number (e.g., 1+500+NXX-XXXX) to identify the access customer (i.e., the transport carrier) to whom the call will be delivered and then deliver the call to the access customer.

The ACIS functionality will be available in suitably equipped end offices or access tandems. If an ACIS routed call originates in an office not equipped to provide the identification function, the call will be routed to an office where the function is available.

ACIS allows the PCS subscriber to originate calls using one-plus (1+), zero plus (0+) and from public coin phones. The Telephone Company will block an ACIS originated call if it originates through a 101XXXX access code, zero minus (0-) dialing or 0- Transfer Service.

(CT)

Provisioning

Unless prohibited by technical limitations, originating traffic that is routed using ACIS may, at the option of customer, be combined in the same FGB, FGD, BSA-B, BSA-C or BSA-D trunk group with the customer's other Access Service traffic. Where such technical limitations do exist, the Telephone Company will provide notification to the customer prior to establishment of ACIS. At the option of the customer, ACIS routed traffic originating from a non-equal access office may be combined with a customer's equal access FGD or BSA-D Service. This arrangement is only available when a customer utilizes tandem routed FGD or BSA-D. Premium access charges will apply for such originating ACIS usage. When FGD or BSA-D becomes available in an end office, originating ACIS routed traffic from that end office must be provided with FGD or BSA-D.

The customer may use FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D to terminate a call that was routed using ACIS. When FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D is used to terminate a call that was routed using ACIS, the customer is required to deliver ACIS originated calls to the Telephone Company in the standard POTS number North American Numbering Plan format.

#### (CT) 6.3 Basic Serving Arrangement Descriptions

(AT) BSAs are differentiated by their technical characteristics, e.g., line side or trunk side connection at the Telephone Company entry switch. The trunk side BSA is further differentiated into three Alternatives based upon the manner in which an end user would access the BSA for originating calling, e.g., with or without an access code.

There are various Local Transport features, Local Switching features and Basic Service Elements available with a BSA. Local Transport and Local Switching features are described in Paragraphs 6.1.2, A.2, and 6.4. Basic Service Elements are described in Paragraph 6.6. Unless specifically stated otherwise, these features and BSEs are available at all Telephone Company end office switches.

BSAs are arranged for either originating, terminating or two-way calling, based upon the customer's order specifications. Originating calling permits the delivery of calls from Telephone Exchange Service locations to the customer's premises. Terminating calling permits the delivery of calls from the customer's premises to Telephone Exchange Service locations. Two-way calling permits the delivery of calls in both directions, but not simultaneously.

Following are detailed descriptions of each Basic Serving Arrangement and Alternatives. Each BSA is described in terms of its specific physical characteristics and calling patterns. BSA transmission specifications are described in Paragraph 6.3.5. Descriptions of available features are located in Paragraphs 6.1.2, A.2, and 6.4. Descriptions of available BSEs are located in Paragraph 6.5.

#### 6.3.1 Circuit Switched - Line Side BSA (BSA-A)

##### A. General

1. Circuit Switched - Line Side BSA is provided in connection with Telephone Company electronic and electromechanical end offices.
2. Circuit Switched - Line Side BSA provides network access in the form of a line side termination at the first point of switching and provides the basis for selection of Basic Service Elements. The line side termination will be provided with either ground start supervisory signaling or loop start supervisory signaling. The type of signaling is at the option of the customer.
3. The customer shall specify the first point of switching within the selected LATA at which the line side termination is to be provided. The first point of switching must comply with Section 2, Paragraph 2.1.2, A., preceding

6.3 Common Switching and Transport Termination Features-(Continued)

MO. PUBLIC SERVICE COMM.

6.3.1 Common Switching Features

A. Call Denial on Line or Hunt Group

This feature, available with FGA, allows for the screening of terminating calls. This screening does not affect calls to 411, 911, 800, 900, and 555-1212. This feature is provided in all Telephone Company electronic end offices and, where available, in electromechanical end offices.

(CT)  
(MT)

(AT) 1. Local Exchange Restriction

(MT) The screening is set up to allow calls to complete only to a Telephone Company specified set of NXXs within the Telephone Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. As set forth in Section 2, Paragraph 2.1.2.A., this feature is required on all FGA Switched Access Services requested by an Enhanced Service Provider.

(MT)  
(AT)

2. LATA Restriction

The screening is set up to allow calls to complete only those valid NXX codes within the LATA. All other calls are routed to a reorder tone or recorded announcement.

(AT)

B. Service Code Denial on Line or Hunt Group

This feature, available with FGA, allows for the screening of terminating calls within the LATA and for disallowing completion of calls to 0-, 555 and N11 (i.e., 411 and 911). This feature is provided, where available, in all Telephone Company electronic end offices and electromechanical end offices.

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.1 Circuit Switched - Line Side BSA (BSA-A)

###### A. General-(Continued)

4. When an individual customer's Circuit Switched - Line Side BSA is discounted at an end office, an intercept announcement is provided. This arrangement provides, for a maximum period of 90 days, an announcement that the service associated with the number dialed has been disconnected.

###### B. Originating Circuit Switched - Line Side BSA (BSA-A)

1. Originating Circuit Switched - Line Side BSA may be utilized in conjunction with the following access services provided under this tariff:

WATS Access Line Service

2. A seven-digit local telephone number assigned by the Telephone Company is provided for access to Circuit Switched - Line Side switching and provides the calling area associated with the exchange in which the local telephone number is assigned. The seven digit local telephone number will be associated with the selected end office switch and is of the form NXX-XXXX. If the customer requests a specific seven digit telephone number and that number (as well as the necessary facilities and equipment) is available, the requested number will be assigned to the customer.
3. No address signaling is provided by the Telephone Company. If address signaling is required by the customer, it must be provided by the customer's end user using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.

###### C. Terminating Circuit Switched - Line Side BSA-A

1. Terminating Circuit Switched - Line Side may be utilized in conjunction with the following access services provided under this tariff:

- WATS Access Line Service
- 800 NPAS
- 900 Access Service
- Directory Assistance
- ACIS

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.1 Circuit Switched - Line Side BSA (BSA-A)-(Continued)

##### C. Terminating Circuit Switched - Line Side BSA-A-(Continued)

2. Circuit Switched - Line Side may be used to access valid NXXs in the LATA. Local operator service (0- and 0+), Directory Assistance (411 where available and 555-1212), emergency reporting service (911 where available), exchange telephone repair, time or weather announcement services of the Telephone Company, community information services of an information service provider, and other customers' services may also be accessed by Circuit Switched - Line Side services (by dialing the appropriate digits). Charges for Circuit Switched - Line Side terminating calls requiring operator assistance or calls to 911 will only apply where sufficient call details are available.
3. Circuit Switched - Line Side switching is arranged with dial tone start-dial signaling. Circuit Switched - Line Side switching may be arranged for dial pulse or dual tone multifrequency address signaling, subject to availability of equipment at the first point of switching. When Circuit Switched - Line Side switching is provided in a hunt group or uniform call distribution arrangement, all Circuit Switched - Line Side switching will be arranged for the same type of address signaling.

##### 6.3.2 Circuit Switched - Trunk Side BSA

##### A. General

1. Circuit Switched - Trunk Side BSA is provided in connection with Telephone Company electronic end offices and, where facilities permit, electromechanical end offices on a direct trunk basis or via Telephone Company designated access tandem switches.
2. Circuit Switched - Trunk Side BSA is differentiated into three Alternatives which are distinguished by their technical characteristics and the manner in which an end user accesses them in originating calling, e.g., with or without an access code.
3. Each Circuit Switched - Trunk Side Alternative BSA provides the customer with a trunk side access to the Telephone Company's network and provides the basis for the selection of available Basic Service Elements (BSEs).

Following are detailed descriptions of each of the Alternatives available with the Circuit Switched - Trunk Side Basic Serving Arrangement

B. Alternative Trunk Side BSA Descriptions

1. Alternative B (BSA-B)

a. General

1. When directly routed to an end office (i.e., provided without the use of an access tandem switch), Alternative B is provided at appropriately equipped Telephone company electronic end office switches. When provided via Telephone company designated electronic access tandem switches, Alternative B switching is provided at Telephone Company electronic and electromechanical end office switches.
2. Alternative B is provided as trunk side switching. The switch trunk equipment is provided with wink start address signaling or immediate dial pulse address signaling as well as answer and disconnect supervisory signaling. Alternative B switching is provided with multifrequency address signaling in both the originating and terminating directions.
3. The Telephone Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where Alternative B switching is provided. When required by technical limitations, a separate trunk group will be established for each type of Alternative B switching arrangement provided, e.g., 900 Access Service. Different types of Alternative B switching may be combined in a single trunk group at the option of the Telephone Company.
4. When all Alternative B switching arrangements are discontinued at an end office or in a LATA, an intercept announcement is provided. This arrangement provides, for a maximum period of 90 days, an announcement that the service associated with the number dialed has been disconnected.

(RT)

3. Alternative B is provided with multifrequency address signaling. Except for Alternative B provided with rotary dial station signaling arrangements or the Automatic Number Identification (ANI) feature, any other address signaling in the originating direction, if required by the customer, must be provided by the customer's end user using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.

c. Terminating Alternative B (BSA-B)

1. Terminating Alternative B may be utilized in conjunction with the following access services provided under this tariff:

- WATS Access Line Service
- 800 NPAS
- 900 Access Service
- Directory Assistance Service

1. Alternative B (BSA-B)--(Continued)

b. Originating Alternative B (BSA-B)--(Continued)

1. (Continued)

- WATS Access Line Service
- 800 Access Service
- 900 Access Service

Alternative B may be used to originate 800 and 900 Access Service until such time as Alternative D becomes available in the end office.

2. The uniform access code for Alternative B switching is either 950-0XXX or 950-1XXX (where XXX represents a unique three digit number for each access customer). These uniform codes will be the assigned access numbers of all Alternative B Switched Access Service provided to the customer by the Telephone Company. The customer's end user is not required to dial an access code for originating 800 or 900 Access Service provided with Alternative B Switched Access Service.

3. Alternative B is provided with multifrequency address signaling. Except for Alternative B provided with rotary dial station signaling arrangements or the Automatic Number Identification (ANI) feature, any other address signaling in the originating direction, if required by the customer, must be provided by the customer's end user using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.

#### B. Alternative Trunk Side BSA Descriptions-(Continued)

##### 1. Alternative B (BSA-B)-(Continued)

##### c. Terminating Alternative B (BSA-B)-(Continued)

2. When directly routed to an end office, only those valid NXX codes served by that end office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. Calls will also be completed to time or weather announcement services of the Telephone Company, community information services of an information service provider and other customers' services (by dialing the appropriate digits), as well as to Directory Assistance (NPA-555-1212 or 555-1212) when Alternative B switching is combined with Directory Assistance switching.

3. Calls in the terminating direction will not be completed to 950-XXXX access code, local operator assistance (0- and 0+), Directory Assistance (411), exchange telephone repair service or service code 911 or 101XXXX codes. Alternative B may not be switched to access FGB, FGC, FGD or another Alternative of the Circuit Switched - Trunk Side Basic Serving Arrangement, including another Alternative B in the same LATA.

(CT)

##### 2. Alternative C (BSA-C)

##### a. General

1. Alternative C is provided in all Telephone Company non-Equal Access end office switches on a direct trunk basis or via Telephone Company designated access tandem switches. Alternative C is only provided to the provider of MTS/WATS and only at an end office switch until Alternative D is provided in the same office. When Alternative D switching becomes available, Alternative C will not be provided.

3. The Telephone Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where Alternative C switching is provided. When required by technical limitations, a separate trunk group will be established for each type of Alternative C switching arrangement provided. Different types of Alternative C or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.
4. Alternative C is provided with multifrequency address signaling except in certain electromechanical end office switches where multifrequency signaling is not available. In such switches, the address signaling will be dial pulse or immediate dial pulse, whichever is available. Up to 12 digits of the called party number dialed by the customer's end user using dual tone multifrequency or dial pulse address signals will be provided by the Telephone Company equipment to the customer's premises where the Switched Access Services terminates. Such called party number signals will be subject to the ordinary transmission capabilities of the Local Transport provided.

###### b. Originating Alternative C (BSA-C)

1. Originating Alternative C may be utilized in conjunction with the following access services provided under this tariff:
  - WATS Access Line Service
  - ACIS
  - 900 Access Service
  - Operator Call Processing Service
2. No access code is required for Alternative C switching. The telephone number dialed by the customer's end user shall be a seven or ten digit number for calls in the North American Numbering Plan (NANP). For international calls outside

Calls in the terminating direction will not be completed to 950-XXXX access code, local operator assistance (0- and 0+), Directory Assistance (411), exchange telephone repair service or service code 911 or 101XXXX access codes. Alternative C may not be switched to access FGB, FGC, FGD or another Alternative of the Circuit Switched - Trunk Side Basic Serving Arrangement, including another Alternative C, in the same LATA.

(CT)

##### 3. Alternative D (BSA-D)

##### a. General

1. Alternative D is provided at Telephone Company designated end office switches.
2. Whether routed directly or via Telephone Company designated electronic access tandem switches, the end office or access tandem switch trunk equipment is provided with wink start start-pulsing signals and answer and disconnect supervisory signaling.
3. The Telephone Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where Alternative D switching is provided. When required by technical limitations, a separate trunk group will be established for each type of Alternative D switching arrangement provided. Different types of Alternative D or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.
4. Alternative D switching is provided with inband multi-frequency address signaling or out of band SS7 signaling. Up to 12 digits of the called number dialed by the customer's end user using dual tone multi-frequency or dial pulse address signals will be provided by Telephone Company equipment to the customer's premises where the

(AT)

4. No access code is required for calls to a customer over Alternative D Switched Access Service (this includes MicroLink I Access Capability provided in conjunction with BSA-D) if the end user's telephone exchange service is arranged for presubscription to that customer, as specified in Section 13, Paragraph 13.3.3 (Easy Access Dialing). The customer's end user is not required to dial an access code for originating 800 NPAS and 900 Access Service provided with Alternative D Switched Access Service. 800 NPAS and 900 Access Service calls dialed with an access code will be blocked by the Telephone Company.

5. Where no access code is required, the telephone number dialed by the customer's end user shall be a seven or ten digit number for calls in the North American Numbering Plan (NANP). For international calls outside the NANP, a seven to twelve digit number may be dialed. The form of the numbers dialed by the customer's end user is NXX-XXXX, 0 or 1 + NXX-XXXX, NPA + NXX-XXXX, 0 or 1 + NPA + NXX-XXXX, and, when the end office is equipped for International Direct Distance Dialing (IDDD), 011 + CC + NN or 011 + CC + NN. (IDDD provides the capability of switching international calls with service prefix and address codes having more digits than are capable of being switched through a standard end office equipped with Alternative D capability.)

##### 6.3.2 Circuit Switched - Trunk Side BSA-(Continued)

#### B. Alternative Trunk Side BSA Descriptions-(Continued)

##### 3. Alternative D (BSA-D)-(Continued)

##### c. Terminating Alternative D (BSA-D)-(Continued)

1. Terminating Alternative D may be utilized in conjunction with the following access services provided under this tariff:

- WATS Access Line Service
- 800 NPAS
- 900 Access Service
- Directory Assistance
- Operator Call Processing Service
- ACIS

2. When directly routed to an end office, only those valid NXX codes served by that office may be accessed. When routed through an access tandem, only those valid NXX codes served by offices subtending the access tandem may be accessed. Calls will also be completed to time or weather announcement services of the Telephone Company, community information services of an information provider, and other customers' services (by dialing the appropriate codes) when the services can be reached using valid NXX codes, as well as to Directory Assistance (NPA-555-1212 or 555-1212) when Alternative D switching is combined with Directory Assistance switching.

3. Calls in the terminating direction will not be completed to 950-0XXX or 950-1XXX access codes, local operator assistance (0- and 0+), Directory Assistance (411), exchange telephone repair service, service code 911 or 101XXXX access codes. Alternative D may not be switched to access FGB, FGC, FGD or another Alternative of the Circuit Switched - Trunk Side Basic Serving Arrangement, including another Alternative D, in the same LATA.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.4 Basic Serving Arrangement Features

There are various features available with the Basic Serving Arrangements. These features are provided as Local Transport and Local Switching (i.e., common switching, transport termination or line termination) features.

Certain other features which may be available in connection with Basic Serving Arrangements are provided under the Telephone Company's local or General Exchange service tariffs. These are:

- Custom Calling features (BSA-A)
- Billed Number Screening (BSA-A and BSA-B)
- IntraLATA Extensions (BSA-A)
- TeleBranch<sup>R</sup> (BSA-A)

Following are matrices identifying the Basic Serving Arrangements and the Local Transport and Local Switching features available with each BSA. Descriptions of the features are set forth in Paragraphs 6.1.2, A.2, 6.4.1, 6.4.2, 6.4.3 and 6.4.4, following.

6.3.5 Service Provisioning

A. Design and Traffic Routing of Basic Serving Arrangements

When ordering line side or trunk side Switched Access Service BSAs, the customer may specify routing to be direct to a suitably equipped end office or routing to be through an access tandem switch. The customer is required to specify whether the service should be provided by originating only, terminating only or two-way lines or trunks.

For Circuit Switched - Line Side and Circuit Switched - Trunk Side Alternative B, the line or trunk directionality and traffic routing of the BSA between the customer's premises and the entry switch are determined by the customer's order for service. The Telephone Company will compare the customers' requests with their own traffic routing plan and available facilities and equipment to determine whether the customer's request can be met. The Telephone Company is responsible for selection of facilities from the interface to any switching point and to the end offices where capacity is ordered. The Telephone Company will also decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. For Circuit Switched - Trunk Side Alternative B, the customer may order the Customer Specification of Local Transport Termination Feature.

Original Sheet 39.24

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.5 Service Provisioning-(Continued)

#### A. Design and Traffic Routing of Basic Serving Arrangements-(Continued)

Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment, and the Telephone Company traffic routing plans. If the customer desires routing or directionality different from that determined by the Telephone Company, the Telephone Company will work cooperatively with the customer in determining whether the services is to be routed directly to an end office or through an access tandem switch and the directionality of the service.

#### B. Transmission Specifications

Each line side and trunk side Switched Access Basic Serving Arrangement transmission path is provided with standard transmission specifications. Transmission specifications for the DNAL BSA are set forth in Technical Reference TR-NPL-000336. For the line side or trunk side BSAs and for the Feature Groups, there are three different standard specifications (Types A, B, and C). The standard for a particular transmission path is dependent on the BSA, the interface group and whether the service is directly routed or routed via an access tandem. For example, interface Group 1 is provided with Type C and interface groups 2 through 10 are provided with Type A or B transmission specifications. Data transmission parameters are also provided with each BSA transmission path. Upon notification by the customer that the data parameters set are not being met, the Telephone Company will conduct tests independently or in cooperation with the customer, and take any necessary action to insure that the data parameters are met.

For line side and trunk side BSAs, transmission specifications are specified in Technical Reference TR-NPL-000334 in terms of (1) acceptance and immediate action limits for the five voice parameters and (2) immediate action limits for the data parameters. In addition, maintenance limits for the voice parameters of Circuit Switched - Trunk Side Alternatives B, C and D are specified in Southwestern Bell Telephone Company Technical Reference PUB 76500.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.5 Service Provisioning-(Continued)

#### B. Transmission Specifications-(Continued)

The specific applications in terms of the BSAs and the interface groups with which the BSA standard transmission performances are provided are described below.

##### 1. Circuit Switched - Line Side

Circuit Switched - Line Side is provided with either Type B or Type C transmission specifications. The specifications for the associated parameters are guaranteed to the first point of switching except when optional extensions are provided. Type C transmission specifications are provided with interface group 1 and Type B is provided with interface groups 2 through 10.

Type DB data transmission parameters are provided with Circuit Switched - Line Side to the first point of switching.

##### 2. Circuit Switched - Trunk Side

#### a. Alternative B

Circuit Switched - Trunk Side Alternative B is provided with either Type B or Type C transmission specifications. The specifications for the associated parameters are guaranteed to the end office when routed directly, or to the first point of switching when routed via an access tandem. Type C transmission specifications are provided with interface group 1 and Type B is provided with interface groups 2 through 10.

Type DB data transmission parameters are provided with Circuit Switched - Trunk Side Alternative B to the first point of switching.

#### 6.3 Basic Serving Arrangement Descriptions-(Continued)

##### 6.3.5 Service Provisioning-(Continued)

#### B. Transmission Specifications-(Continued)

##### 2. Circuit Switched - Trunk Side-(Continued)

###### b. Alternative C

When BSA-C is routed directly to the end office, either Type B or Type C transmission specifications are provided. When BSA-C is routed via an access tandem, only Type B is provided. Type B transmission specifications are provided with interface groups 2 through 10 whether routed directly to an end office or to an access tandem. Type C transmission specifications are provided with interface group 1 when routed directly to an end office. Type B or Type C transmission specifications are provided on the transmission path from the access tandem to the end office.

Type DB data transmission parameters are provided for the transmission path from the customer's premises to the end office when routed directly to the end office. Type DB data transmission parameters are provided for the transmission path between the customer's premises and the access tandem and between the access tandem and the end office when routed via an access tandem.

###### c. Alternative D

When BSA-D is routed directly to the end office, either Type B or Type C transmission specifications are provided. When BSA-D is routed via an access tandem, only Type A is provided. Type A and B transmission specifications are provided with interface groups 2 through 10. Type C transmission specifications are provided with interface group 1. Type A transmission specifications are provided on the transmission path from the access tandem to the end office.

Type DA data transmission parameters are provided for the transmission path between the customer's premises and the access tandem and between the access tandem and the end office. Type DB data transmission parameters are provided for the transmission path between the customer's premises and the end office when directly routed to the end office.

#### C. Testing Capabilities

In addition to the acceptance tests described in Paragraph 6.1.4, preceding, (which are included with the installation of the BSA), Additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing, Manual Scheduled Testing, and Nonscheduled Testing are available as described in Section 13, Paragraph 13.3.5 (Testing Services) for line side and trunk side BSAs. The following testing capabilities are available on an ongoing basis for the services provided under this tariff as described below:

#### 1. Circuit Switched - Line Side

In the terminating direction where equipment is available, Circuit Switched - Line Side is provided with seven digit access to balance (100 type) test line and milliwatt (102 type) test line.

#### 2. Circuit Switched - Trunk Side Alternatives B, C and D

In the terminating direction and where equipment is available, Circuit Switched - Trunk Side Alternatives B, C and D are provided with seven digit access to balance (100 type) test line, milliwatt (102 type) test line, nonsynchronous or synchronous test line, automatic transmission measuring (105 type) test line, data transmission (107 type) test line, loop around test line, short circuit test line and open circuit test line.

#### 6.3.6 Non-Access Charges

Rates and charges for services other than Switched Access Service, e.g., a customer's interLATA toll message service, may also be applicable when Switched Access Service is used in conjunction with these other services.

C. Hunt Group Arrangement

This feature, available with FGA, provides the ability to sequentially access one of two or more line side connections in the originating direction, when the access code of the line group is dialed. This feature is provided in all Telephone Company end offices. Hunt group arrangements are available for BSA-A as a BSE as described in Paragraph 6.6.2, following.

D. Uniform Call Distribution Arrangement

This feature, available with FGA, provides a type of multiline hunting arrangement which provides for an even distribution of calls among the available lines in a hunt group. Where available, this feature is provided in Telephone Company electronic end offices only. Uniform Call Distribution Arrangement is available with BSA-A as a BSE as described in Paragraph 6.6.2, following.

E. Nonhunting Number Arrangement

This feature, available with FGA, provides an arrangement for an individual line within a multiline hunt or uniform call distribution group that provides access to that line within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed. Where available, this feature is provided in Telephone Company electronic end offices only. Nonhunting Number Arrangement is available with BSA-A as a BSE as described in Paragraph 6.6.2, following.

F. Automatic Number Identification (ANI)

Available with FGB, FGC, FGD, BSA-B, and BSA-C. (Ten digit ANI/Charge Number Parameter for use BSA-D is provided as a BSE as specified in 6.6.1.

This feature provides the automatic transmission of:

Class of service information indicators, and

A seven or ten digit telephone number to the customer's premises to identify the calling station of calls originating in the LATA.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.1 Common Switching Optional Features-(Continued)

F. Automatic Number Identification (ANI)-(Continued)

With Feature Group C, ANI is provided from end offices at which Telephone Company recording for end user billing is not provided, or where it is not required, as with 800 service. It is not provided from end offices for which the Telephone Company needs to forward ANI to its recording equipment.

Where ANI cannot be provided, e.g., on calls from 4-party services, information digits will be provided to the IC.

The information digits identify: (1) telephone number is the station billing number - no special treatment required, (2) multiparty line - telephone number is a 4-party line and cannot be identified - number must be obtained via an operator or in some other manner, (3) ANI failure has occurred in the end office switch which prevents identification of calling telephone number - must be obtained by operator or in some other manner, (4) hotel/motel-originated call which requires room number identification, (5) coinless station, hospital, inmate, etc., call which requires special screening or handling by the IC, and (6) call is an Automatic Identified Outward Dialed (AIOD) call from customer premises equipment. The ANI telephone number is the listed telephone number of the customer and is not the telephone number of the calling party. These ANI information digits are available with Feature Groups B, C and D.

Additional ANI information digits are available with Feature Group D only. They include:

1. InterLATA restricted - telephone number is identified line
2. InterLATA restricted - hotel/motel line
3. InterLATA restricted - coinless, hospital, inmate, etc., line

These information digits will be transmitted as agreed to by the IC and the Telephone Company.

(AT) The seven-digit ANI telephone number is available with FGB or BSA-B  
(AT) on a direct trunk basis only. With FGC or BSA-C, technical limitations may exist in Telephone Company switching facilities which require ANI to be provided only on a directly trunked basis. ANI will be transmitted on all calls except those originating from multiparty lines, coin stations and coinless pay telephones using FGB or BSA-B, or when an ANI failure has occurred.

(AT) With FGC and BSA-C, ANI is provided from end offices at which phone Company recording for end user billing is not provided, or where it is not required, as with 800 Service. It is not provided from offices for which the Telephone Company needs to forward ANI to its recording equipment.

**CANCELLED**  
MAY 1 1993  
BY 4 TARS #41

Public Service Commission  
MISSOURI

(AT) The ten-digit ANI telephone number is only available with Feature Group D. The ten-digit ANI telephone number is also available with BSA-D as a BSE as described in Paragraph 6.6.2, following. The ten-digit ANI telephone number consists of the Numbering Plan Area (NPA) plus the seven-digit ANI telephone number. The ten-digit ANI telephone number will be transmitted on all calls except those identified as multiparty line or ANI failure, in which case only the NPA will be transmitted (in addition to the information digit described below).

(AT) Where ANI cannot be provided, e.g., on calls from 4-party services, information digits will be provided to the IC with FGB, FGC, FGD, BSA-B, (AT) BSA-C or BSA-D.

The information digits identify: (1) telephone number is the station billing number - no special treatment required, (2) multiparty line - telephone number is a 4-party line and cannot be identified - number must be obtained via an operator or in some other manner, (3) ANI failure has occurred in the end office switch which prevents identification of calling telephone number - must be obtained by operator or in some other manner, (4) hotel/motel-originated call which requires room number identification, (5) coinless station, hospital, inmate, etc., call which requires special screening or handling by the IC, and (6) call is an Automatic Identified Outward Dialed (AIOD) call from customer premises equipment. The ANI telephone number is the listed telephone number of the customer and is not the telephone number of the calling party.

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.1 Common Switching Optional Features-(Continued)

G. Up to 7-Digit Outpulsing of Access Digits to IC

This option provides for the end office capability of providing up to 7 digits of the uniform access code (950-10XX) to the IC terminal location. The IC can request that only some of the digits in the access code be forwarded. The access code digits would be provided to the IC terminal location using multifrequency signaling, and transmission of the digits would precede the forwarding of ANI if that feature were provided. It is available with Feature Group B.

H. Revertive Pulse Address Signaling

This option provides for a dc pulsing arrangement that transmits intelligence in the following manner:

1. The equipment at the originating location presets itself to represent the number of pulses required and to count the pulses received from the terminating location.
2. The equipment at the terminating location transmits a series of pulses by the momentary grounding of its battery supply until the originating location breaks the dc path to indicate that the required number of pulses has been counted.

This option is available with Feature Group C.

6.4 Local Switching Features-(Continued)

6.4.1 Common Switching Features-(Continued)

F. Automatic Number Identification (ANI)-(Continued)

(CT)

In addition to the information indicators, the seven or ten digit telephone number will be provided to customers for each feature group or BSA as described below:

Seven Digit ANI

FGB or BSA-B - Seven digit ANI is available with FGB or BSA-B on a direct trunk basis only.

FGC or BSA-C - Seven digit ANI is provided with FGC or BSA-C from end offices at which Telephone Company recording for end user billing is not provided, or where it is not required, as with 800 service. It is not provided from end offices for which the Telephone Company needs to forward ANI to its recording equipment. Technical limitations may exist in Telephone Company switching facilities which require seven digit ANI to be provided only on a direct trunk basis. Seven digit ANI is not available with SS7 signaling.

Ten Digit ANI/Charge Number Parameter

FGD - Ten digit ANI/Charge Number Parameter is only available with FDG. (Ten digit ANI/Charge Number Parameter for use with BSA-D is provided as a BSE as specified in 6.6.1.) The ten digit telephone number will be transmitted on all calls except those identified as multiparty line or ANI failure, in which case only the NPA will be transmitted (in addition to the information indicators described preceding). The Charge Number Parameter is equivalent to ten digit ANI when SS7 signaling is ordered.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.1 Common Switching Optional Features-(Continued)

I. Delay Dial Start-Pulsing Signaling

This option provides a method of indicating to the near end trunk circuit readiness to accept address signaling information by the far end trunk circuit. Delay dial is often referred to as an off-hook, on-hook signaling sequence. The delay dial signal is the off-hook interval and the start-pulsing signal is the on-hook interval. With integrity check, the calling office will not outpulse until a delay dial (off-hook) signal followed by a start-pulsing (on-hook) signal has been identified at the calling office. This option is available with Feature Group C.

J. Immediate Dial Pulse Address Signaling

This option provides for the forwarding of dial pulses from the Telephone Company end office to the IC without the need of a start-pulsing signal from the IC. It is available with Feature Group C.

K. Dial Pulse Address Signaling

This option provides for the transmission of number information, e.g., called number, between the end office switching system and the IC's terminal location (in either direction) by means of direct current pulses. It is available with Feature Group C.

L. Panel Call Indicator Address Signaling

This trunk side option provides a dc pulsing arrangement in which each digit is transmitted as a series of four marginal and polarized impulses. It is available with Feature Group C.

M. Service Class Routing

This option provides the capability of directing originating traffic from an end office to a trunk group to an IC-designated terminal location, based on the line class of service (e.g., coin, multiparty or hotel/motel), service prefix indicator (e.g., 0-, 0+) or service access code (e.g., 600, 700, 800 or 900). It is provided in suitably equipped end office or access tandem switches and is available with Feature Groups C and D.

H. Delay Dial Start-Pulsing Signaling

This feature, available with FGC and BSA-C, provides a method of indicating to the near end trunk circuit readiness to accept address signaling information by the far end trunk circuit. Delay dial is often referred to as an off-hook, on-hook signaling sequence. The delay dial signal is the off-hook interval and the start-pulsing signal is the on-hook interval. With integrity check, the calling office will not output until a delay dial (off-hook) signal followed by a start-pulsing (on-hook) signal has been identified at the calling office.

CANCELLED

I. Immediate Dial Pulse Address Signaling

This feature, available with FGB, FGC, BSA-B and BSA-C provides for the forwarding of dial pulses from the Telephone Company end office without the need of a start-pulsing signal from the IC.

Public Service Commission  
Missouri

J. Dial Pulse Address Signaling

This feature, available with FGC and BSA-C, provides for the transmission of number information, i.e., called number, between the end office switching system and the IC's terminal location (in either direction) by means of direct current pulses.

K. Service Class Routing

This feature provides the capability of directing or blocking originating traffic from an end office to a trunk group to an IC-designated terminal location, based on the line class of service (i.e., coin, multiparty or hotel/motel), service prefix indicator (i.e., 0-, 0+, 00-, 01+ or 011+). It is provided with FGC, FGD, BSA-C and BSA-D, in suitably equipped end office or access tandem switches.

In addition, service class routing provides the capability of directing originating traffic from an end office to a trunk group to a customer designated premises based on the line class of service, service prefix indicator or 800-NXX-XXXX or 900 service access code + NXX. It is provided with FGC, FGD, BSA-C and BSA-D in suitably equipped end office or access tandem switches.

6.3.1 Common Switching Optional Features-(Continued)

N. Alternate Traffic Routing

This option provides the capability of directing originating traffic from an end office (or appropriately equipped access tandem) to a trunk group (the "high usage" group) to an IC-designated terminal location until that group is fully loaded, and then delivering additional originating traffic (the "overflowing" traffic) from the same end office or access tandem to a different trunk group (the "final" group) to the same or a second IC-designated terminal location. The IC shall specify the last trunk CCS desired for the high usage group. It is provided in suitably equipped end office or access tandem switches and is available with Feature Groups B, C and D.

O. Trunk Access Limitation

This option provides for the routing of originating 600, 700, 800 or 900 service calls to a specified number of transmission paths in a trunk group, in order to limit (choke) the completion of such traffic to the IC. Calls to the designated service which could not be completed over the subset of transmission paths in the trunk group, i.e., the choked calls, would be routed to reorder tone. It is provided in all Telephone Company electronic end offices and, where available, in electromechanical end offices. It is available with Feature Groups C and D.

P. Call Gapping Arrangement

This option, provided in suitably equipped end office switches, provides for the routing of originating calls to 10XX or service code 600, 700, 800 or 900 service to be switched in the end office to all transmission paths in a trunk group at a prescribed rate of flow, e.g., one call every five seconds, in order to limit (choke) the completion of such traffic to the IC. Calls to the designated service which are denied access by this feature, i.e., the choked calls, would be routed to a no-circuit announcement. It is provided in selected Feature Group D-equipped end offices and is available only with Feature Group D.

Replacing Original Sheet 44

(CP)ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Optional Features-(Continued)

6.3.1 Common Switching Optional Features-(Continued)

L. Alternate Traffic Routing

1. Multiple Customer Switching Systems

This option provides the capability of directing originating traffic from an end office or access tandem to a trunk group (the "high usage" group) until that group is fully loaded, and then delivering additional originating traffic (the "overflowing" traffic) from the same end office or access tandem to a different trunk group (the "final" group). These trunk groups may be terminated at the IC's switching systems on the same or different premises. The IC shall specify the last trunk CCS desired for the high usage group. It is provided with FGB, FGC and FGD in suitably equipped end offices or access tandem switches.

2. End Office Alternate Routing

This option provides an alternate routing arrangement for customers who order FGB to suitably equipped end offices via two routes: one route via an access tandem and one direct route. The feature allows the customers originating traffic from the end office to be offered first to the direct trunk group and then overflow to the access tandem group. Routing for FGD is provided in Paragraph 6.5.2, following. Optional features provided in (F) preceding and Paragraph 6.3.2(A) following are only available on the direct route.

M. Band Advance Arrangement for use with WATS Access Line Service

This option, which is provided with FGC and FGD in association with two or more WATS Access Line Service groups, provides for the automatic overflow of terminating calls to a WATS Access Line group, when that group has exceeded its call capacity, to another WATS Access Line group with a band designation equal to or greater than that of the overflowing WATS Access Line group. This arrangement does not provide for call overflow from a group with a higher band designation to one with a lower one.

Q. Band Advance Arrangement for Use With Dedicated Access Line Service

This option, which is provided in association with two or more Dedicated Access Line Service (DALs) groups, provides for the automatic overflow of terminating calls to a DALs group, when that group has exceeded its call capacity, to another DALs group with a band designation equal to or greater than that of the overflowing DALs group. This arrangement does not provide for call overflow from a group with a higher band designation to one with a lower one. This option is available with Feature Groups C and D.

R. End Office Customer Line Service Screening for Use With Dedicated Access Line Service

This option provides the ability to verify that a customer has dialed a called party address (by screening the called NPA and/or NXX on the basis of geographical bands selected by the Telephone Company) which is in accordance with that customer's service agreement with the IC, i.e., WATS. This option is provided in all Telephone Company electronic end offices and where available, in electromechanical end offices in which Dedicated Access Line Service is provided. It is available with Feature Groups C and D.

#### (FC)(CT) 6.4 Local Switching Features-(Continued)

#### (FC) 6.4.1 Common Switching Features-(Continued)

#### N. End Office End User Line Service Screening for use with WATS Access Line Service

(AT) This feature, available with FGC, FGD, BSA-C and BSA-D provides the ability to verify that an end user has dialed a called party address (by screening the called NPA and/or NXX on the basis of geographical bands selected by the Telephone Company) which is in accordance with that customer's service agreement with the IC, i.e., WATS. This feature is provided in most Telephone Company electronic end offices and where available, in electromechanical end offices in which WATS Access Line Service is provided.

#### O. Hunt Group Arrangement for use with WATS Access Line Service

(AT) This feature, available with FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C and  
(AT) BSA-D provides the ability to sequentially access one of two or more WATS Access Line Services in the terminating direction, when the hunting number of the WATS Access Line Service group is forwarded from the IC to the Telephone Company. This feature is provided in all Telephone Company end offices in which WATS Access Line Service is provided.

#### P. Trunk Access Limitation

(AT) This feature, available with FGC, FGD, BSA-C and BSA-D, provides for the routing of originating 900 service calls to a specified number of transmission paths in a trunk group or at the option of the Telephone Company, a trunk group dedicated to 900 service, in order to limit (choke) the completion of such traffic to the IC. Calls to the designated service which could not be completed over the subset of transmission paths in the trunk group, i.e., the choked calls, would be routed to reorder tone. It is provided in suitably equipped Telephone Company end offices.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.4 Local Switching Features-(Continued)

##### 6.4.1 Common Switching Features-(Continued)

###### Q. Uniform Call Distribution Arrangement for use with WATS Access Line Service

This feature, available with FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C and BSA-D, provides a type of multiline hunting arrangement which provides for an even distribution of terminating calls among the available WATS Access Line Services in the hunt group. This feature is only provided in suitably equipped electronic end offices in which WATS Access Line Service is provided.

###### R. Nonhunting Number for use with Hunt Group Arrangement or Uniform Call Distribution Arrangement for use with WATS Access Line Services

This feature, available with FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C and BSA-D, provides an arrangement for an individual WATS Access Line Service within a multiline hunt or uniform call distribution group that provides access to a specific WATS Access Line Service within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed. This feature is only provided in suitably equipped electronic end offices in which WATS Access Line Service is used for the completion of terminating calls.

###### S. Cut-Through

(CT) This feature, available with FGD and BSA-D, allows end users to reach the customer's premises by dialing 101XXXX + #. This feature provides for connection of the call to the premises of the customer indicated by the 101XXXX code upon receipt of the end of dialing the # digit. The Telephone Company will not record any other dialed digits for these calls.

###### T. Overlap Outpulsing

This feature, available with FGD and BSA-D where technically feasible, decreases call setup delay by starting to establish the connection to a customer's switch before the last four digits of the called number have been dialed.

###### U. Wink Start Address Signaling

This feature, available with FGB, FGC, BSA-B, BSA-C and FGD, provides a method of indicating to the originating switch the readiness of the far end switch to receive address signaling. This is done by providing a battery ground reversal. This feature is not available with SS7 Signaling.

Q. Uniform Call Distribution Arrangement for use with WATS Access Line Service

(CT) This feature, available with FGA, FGB, FGC and FGD, provides a type of multiline hunting arrangement which provides for an even distribution of terminating calls among the available WATS Access Line Services in the hunt group. This feature is only provided in suitably equipped electronic end offices in which WATS Access Line Service is provided.

R. Nonhunting Number for use with Hunt Group Arrangement or Uniform Call Distribution Arrangement for use with WATS Access Line Services

(CT) This feature, available with FGA, FGB, FGC and FGD, provides an arrangement for an individual WATS Access Line Service within a multiline hunt or uniform call distribution group that provides access to a specific WATS Access Line Service within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed. This feature is only provided in suitably equipped electronic end offices in which WATS Access Line Service is used for the completion of terminating calls.

S. Cut-Through

(CT) This feature, available with FGD, allows end users to reach the customer's premises by dialing 10XXX + #. This feature provides for connection of the call to the premises of the customer indicated by the 10XXX code upon receipt of the end of dialing the # digit. The Telephone Company will not record any other dialed digits for these calls.

(AT) T. Overlap Outpulsing

This feature, available with FGD where technically feasible, decreases call setup delay by starting to establish the connection to a customer's switch before the last four digits of the called number have been dialed.

U. Wink Start Address Signaling

(AT) This feature, available with FGB and FGC, provides a method of indicating to the originating switch the readiness of the far end switch to receive address signaling. This is done by providing a battery ground reversal.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.2 Transport Termination Optional Features

A. Rotary Dial Station Signaling

This option provides for the transmission of called party address signaling from rotary dial stations to the IC terminal location for originating calls. This option is provided in the form of a specific type of Transport Termination. It is available with Feature Group B only on a directly trunked basis. When direct trunking would not have been provided except as required by the provision of rotary dial station signaling, additional charges will apply for the Provision of Other Than Telephone Company Selected Traffic Routing, as set forth in Paragraph 6.8.2, B., following.

B. Operator Trunk - Coin, Non-Coin or Combined Coin and Non-Coin

This option may be ordered to provide coin, non-coin or combined coin and non-coin operation. It is available only with Feature Group C and is provided in electronic end offices and other Telephone Company end offices where equipment is available. It is provided as a trunk type of Transport Termination. When this Feature may, because of technical limitations, only be provided on a directly trunked basis, and when direct trunking would not have been provided except as required by the provision of this feature, additional charges will apply for the Provision of Other Than Telephone Company Selected Traffic Routing, as set forth in Paragraph 6.8.2, B., following.

Coin:

This arrangement provides for initial coin return control and routing of 0+, 0- or 1+ prefixed originating coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the service class routing option.

The operator assistance coin calling arrangement is also normally ordered by the IC in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the IC's TSS systems, rather than in the IC's manual cord boards.

(MT) V. Carrier Identification Code (CIC)

This feature permits the customer to establish or add a CIC, change an existing CIC or delete an

(MT) existing CIC used in conjunction with the customer's FGB, FGD, BSA-B, and BSA-D service.

(AT)(FC) W. Carrier Identification Code Parameter (CIP)

Available with FGB and BSA-D that has SS7 Signaling in suitably equipped end offices or access tandem switches.

Provides for the transmission of the Carrier Identification Code (CIC) to the customer within the Initial Address Message (IAM) of an originating FGD or BSA-D call. This optional feature transmits the CIC of the presubscribed carrier or the CIC selected when the end user originated a call using a 101XXXX access code. CIP is available at the end office and is billed on a per call basis.

(AT) Technical Specifications for CIP are set forth in Technical Reference GR-394-CORE.

(MT)(FC) X. International Carrier Feature

This feature allows for FGD and BSA-D end office or access tandem switched equipped for International Direct Distance Dialing to be arranged to forward international calls to the customer designated by the end user.

This feature also allows for FGD and BSA-D end offices or access tandem switched equipped for International Direct Distance Dialing to be arranged to forward the international call of one or more international carriers to the customer (i.e., the Telephone Company is able to route originating international calls to a customer other than the one designated by the end user either through presubscription, 101XXXX dialing). This arrangement requires provision of written verification to the Telephone Company that the customer is authorized to forward such calls. The written verification must be in the form of a letter of agency authorizing the customer to order the feature on behalf of the international carrier. This feature is only provided with FGD

(MT) and BSA-d at end offices or access tandems equipped for International Direct Distance Dialing.

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Optional Features (Continued)

6.3.2 Transport Termination Optional Features

A. Rotary Dial Station Signaling

This option provides for the transmission of called party address signaling from rotary dial stations to the IC terminal location for originating calls. This option is provided in the form of a specific type of Transport Termination. It is available with Feature Group B only on a directly trunked basis.

B. Operator Trunk - Coin, Non-Coin or Combined Coin and Non-Coin

This option is a trunk type termination which may be ordered to provide coin, non-coin, or combined coin and non-coin operation. It is available only with FGC and is provided in suitably equipped end offices.

This arrangement is normally ordered in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the customer's TSPS systems, rather than in the customer's manual cord boards.

Coin:

This arrangement provides for initial coin return control and routing of 0+, 0- or 1+ prefixed originating coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing option.

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.2 Transport Termination Optional Features-(Continued)

B. Operator Trunk - Coin, Non-Coin or Combined Coin and non-Coin-(Continued)

Non-Coin:

This arrangement provides for the routing of 0+, 0- or 1+ prefixed originating non-coin calls requiring operator assistance to the IC's terminal location. Because operator assisted non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the service class routing option.

The operator assistance non-coin calling arrangement is also normally ordered by the IC in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the IC's TSPS systems, rather than in the IC's manual cord boards. When so equipped, the ANI feature provides for the forwarding of information digits which identify that the call has originated from a hotel or motel, and whether room number identification is required, or that special screening is required, e.g., for coinless public stations, dormitory or inmate stations, or other screening arrangements agreed to between the IC and the Telephone Company.

Combined Coin and Non-Coin:

This arrangement provides for initial coin return control and routing of 0+, 0- or 1+ prefixed originating operator assisted coin and non-coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin and non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the service class routing option.

This arrangement is normally ordered by the IC in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the IC's operator services systems, rather than in the IC's manual cord boards. When so equipped the ANI optional feature provides for the forwarding of information digits which identify that the call has originated from a hotel or motel and whether room number identification is required, or that special screening is required, e.g., for coinless public stations, dormitory or inmate stations, or other screening arrangements, agreed to between the IC and the Telephone Company.

6.4.1 Common Switching Features-(Continued)

(MT)

(MT)

(FC) AA. Multifrequency Address Signaling

This feature, available with FGB, FGC, FGD, BSA-B, BSA-C, and BSA-D, provides for the transmission of number information and control signals, e.g., number address signals, automatic number identification, between the end office switching systems and the customer's premises (in either direction). Multifrequency signaling arrangements make use of pairs of frequencies out of a group of six frequencies. Specific information transmitted is dependent upon feature group and call type, i.e., POTS, coin or operator. This feature is not available in combination with SS7 signaling.

(FC) BB. Signaling System 7 (SS7) Signaling

This feature provides common channel out of band transmission of address and supervisory SS7 protocol signaling information between the end office switching system or the tandem office switching system and the customer's designated premises. The signaling information is transmitted over facilities provided with the Common Channel Signaling/Signaling System 7 Interconnection Service as specified in Section 20 following.

(FC) CC. Calling Party Number (CPN) Parameter

This feature includes the transport in the originating direction of the Calling Part Number (CPN) Parameter where technically feasible and where the Telephone Company has made CPN privacy restriction available to the originating end user. The CPN Parameter provides for the automatic transmission of the ten digit directory number, associated with a calling station, to the customer's premises for calls originating in the LATA. The ten digit telephone number consists of the NPA plus the seven digit telephone number, which may or may not be the same number as the calling station's charge number. The CPN will be coded as presented, or restricted via a "privacy indicator" for delivery to the called end user.

The CPN Parameter must be transported without alteration or modification to the connecting carrier, the terminating telephone company, or an end user when the customer has a direct connection. Customers must honor and transmit the unaltered "privacy indicator" within the CPN Parameter.

(FC) GG. Multiple 64 Clear Channel Capability (64 CCC)

Available with direct routed FGD and BSA-D that has SS7 Signaling and 64 CCC in suitably equipped end offices.

Provides the ability, where technically feasible and facilities permit, to set up circuit switched digital connections from 64 Kbps to 1536 Kbps, synchronous, in 64 Kbps increments of bandwidth on a dialable real-time basis and supports unrestricted digital information (UDI) bearer capabilities. Each 64 Kbps of bandwidth is provided over a FGD or BSA-D trunk. This feature will be provided in accordance with the specifications described in Generic Requirements for the Switched DS1/Switched Fractional DS1 Service Capability from an ISDN Interface (SWF-DS1/ISDN), TR-NWT-001203; and Common Channel Signaling (CCS) Network Interface Specification Supporting Switched DS1/Switched Fractional DS1 Service Capability (SWF-DS1), TR-NWT-001357.

(FC) HH. Alternate Billing Indicator

Available with terminating FGA and terminating BSA-A in electronic end offices where technically feasible.

This feature provides the capability for the switch translations of the dial tone office of the FGA or BSA-A service to pass the ANI information indicator 07 on all terminating calls.

6.4.2 Transport Termination Features - Trunk Side Terminations

A. Dial Pulse Station Signaling

This feature provides for the transmission of called party address signaling from rotary dial stations to the IC terminal location for

originating calls. This feature is provided in the form of a specific type of Transport Termination. It is available with FGB and BSA-B only on a directly trunked basis.

## B. Operator Trunk - Coin, Non-Coin or Combined Coin and Non-Coin

This feature is a trunk type termination which may be ordered to provide coin, non-coin, or combined coin and non-coin operation. It is available only with FGC and BSA-C and is provided in suitably equipped end offices.

This arrangement is normally ordered in conjunction with the ANI feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the customer's TSPS systems, rather than in the customer's manual cord boards.

## Coin:

- (AT) This arrangement provides for initial coin return control and routing of 0+, 0-, 1+ or 011+ prefixed originating coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin
- (AT) and non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing option.

## Non-Coin:

This arrangement provides for the routing of 0+, 0- or 1+ prefixed originating non-coin calls requiring operator assistance to the IC's terminal location. Because operator assisted non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing feature.

## Combined Coin and Non-Coin:

This arrangement provides for initial coin return control and routing of 0+, 0- or 1+ prefixed originating operator assisted coin and non-coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin and non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing feature.

ACCESS SERVICES

RECEIVED

DEC 29 1983

6. SWITCHED ACCESS SERVICE-(Continued)

6.4 Transmission Performance Capabilities

Each Switched Access Service transmission path is provided with standard transmission performance. There are three different standard performances (Types A, B and C). The standard for a particular transmission path is dependent on the Interface Group and whether the service is directly routed or via an access tandem. The available transmission performances are set forth in Paragraph 6.4.1, following. Data Transmission Parameters are also provided with each Switched Access Service transmission path. The Telephone Company will, upon receipt of a trouble report from the IC, conduct tests, either independently or cooperatively with the IC as appropriate, and take any necessary action to insure that the parameters set forth in Paragraph 6.4.2, A or Paragraph 6.4.2, B, following, are met. The testing will be charged for at the rates set forth in Paragraph 13.3.5, C.1.e, following, for Nonscheduled Testing.

The Telephone Company will maintain existing transmission performance on service configurations installed prior to January 1, 1984. All service configurations installed after January 1, 1984, will conform to the transmission performance standards contained in this tariff, except as follows. Where local facility conditions cannot support the transmission performance standards contained in this tariff, transmission standards that can be supported will be uniformly applied to all IC's.

6.4.1 Standard Transmission Performance

Following are descriptions of the three Standard Transmission Performances available with Switched Access Service. Their specific applications in terms of the Feature Groups and Interface Groups with which they are provided are set forth in Paragraphs 6.2.1, C., 6.2.2, C., 6.2.3, C. and 6.2.4, C., preceding.

A. Transmission Performance Type A

Transmission Performance Type A is provided with the following parameters:

1. Loss Deviation

The maximum Loss Deviation of the 1004 Hz <sup>1986</sup> relative to the expected Measured Loss (EML) is  $\pm 2.0$  dB.

2. Attenuation Distortion

The maximum Attenuation Distortion in the 404 to 2804 Hz frequency band relative to the loss at 1004 Hz is - 1.0 dB to + 3.0 dB.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### (AT) 6.4 Local Switching Features-(Continued)

##### 6.4.3 Transport Termination Features - Line Side Terminations

Local Switching Transport Termination Features provide for the line or trunk side arrangements which terminate the Local Transport facilities. Transport Termination Features are provided as either Line Side Terminations or Trunk Side Terminations. Descriptions of these features are located in Paragraphs 6.4.2 and 6.4.3.

Line Side Terminations are provided with either dial pulse or dual tone multifrequency address signaling and loop start or ground start supervisory signaling. The various signaling arrangements are specified in the Feature Matrix in Paragraph 6.3.4., D., preceding, for Basic Serving Arrangements.

#### A. Dial Pulse Address Signaling

Available with FGA and BSA-A

Provides for the transmission of number information, e.g., called number, between the end office switching systems and the customer's premises (in either direction) by means of two voice-frequency components, one from a group of four low frequencies and the other from a group of four high frequencies.

#### B. Dual Tone Multifrequency Address Signaling

Available with FGA and BSA-A

Provides for the transmission of number information, e.g., called number, between the end office switching systems and the customer's premises (in either direction) by means of two voice-frequency components, one from a group of four low frequencies and the other from a group of four high frequencies.

#### C. Ground-Start Supervisory Signaling

Available with FGA and BSA-A and WATS Access Line Services that terminate on the line side of the switch.

A form of line supervision in which both a terminal request for service and a network seizure for an incoming call are indicated by grounding one of the line conductors.

6. SWITCHED ACCESS SERVICE-(Continued)

MISSOURI  
Public Service Commission

6.4 Transmission Performance

Each Switched Access Service transmission path is provided with a standard transmission performance. There are three different standard performances (Types A, B and C). The standard for a particular transmission path is dependent on the Interface Group and whether the service is directly routed or via an access tandem. Data Transmission Parameters are also provided with each Switched Access Service transmission path. The Telephone Company will, upon notification by the customer that the data parameters set are not being met, conduct tests independently or in cooperation with the customer and take any necessary action to insure that the data parameters are met.

(RT)  
(RT)

Transmission specifications are set forth in Technical Reference PUB 62500 in terms of (1) acceptance and immediate action limits for the five voice parameters and (2) immediate action limits for the data parameters. In addition, maintenance limits for the voice parameters of Feature Group B, C and D are set forth in Southwestern Bell Telephone Company Technical Reference PUB 76500.

The Telephone Company will maintain existing transmission specifications on functioning service configurations installed prior to the effective date of this tariff except that service configurations having performance specifications exceeding the standards listed in this provision will be maintained at performance levels specified in this tariff and the appropriate Technical Reference Publication.

The specific applications in terms of the Feature Groups and Interface Groups with which the Feature Group standard transmission performances are provided are set forth in Paragraphs 6.2.1(C), 6.2.2(C), 6.2.3(C) and 6.2.4(C), preceding.

(AT) 6.4 Local Switching Features-(Continued)

6.4.3 Transport Termination Features - Line Side Terminations-(Continued)

D. Loop-Start Supervisory Signaling

Available with FGA and BSA-A

A form of line supervision in which a terminal request for service is indicated to the network by the terminal allowing loop current to flow.

6.4.4 Local Switching - Line Termination Features

A. General

Local Switching Line Termination Features provide the terminations for the end user lines terminating in the local end office. There are two types of line terminations, i.e., Common Line Terminations and WATS Access Line Service Terminations.

B. Feature Descriptions

Line Terminations are provided with either dial pulse or dual tone multifrequency address signaling and loop start or ground start supervisory signaling. The various signaling arrangement combinations specified for BSA-A in Paragraph 6.3.4, C., preceding, are also available for FGA. Dial pulse and dual tone multifrequency address signaling and loop start and ground start supervisory signaling for FGA and BSA-A are described in Paragraph 6.4.3, preceding.

6.5 Local Transport Features

Descriptions of Local Transport features are located in Paragraph 6.1.2, A.2, preceding.

6.6 Basic Serving Elements

Basic Service Elements (BSEs) are unbundled service options available only with Basic Serving Arrangements. Paragraph 6.6.1 provides a matrix identifying the BSAs and their available BSEs. Paragraph 6.6.2 provides descriptions of the available BSEs. Unless otherwise stated, BSEs are available at all Telephone Company end office switches.

digit ANI telephone number for Circuit Switched - Trunk Side Alternative B and Dial Pulse Station Signaling) are not available on the tandem route.

2. Multiple Customer Switching Systems

Available with Circuit Switched - Trunk Side Alternatives B, C and D in suitably equipped end offices or access tandem switches.

This alternative provides the capability of directing originating traffic from an end office or access tandem to a trunk group (the "high usage group") until that group is fully loaded, and then delivering additional originating traffic (the "overflowing" traffic from the same end office or access tandem) to a different trunk group (the "final" group). These trunk groups may be terminated at the customer's switching systems on the same or different premises. The customer shall specify the last trunk ECCS desired for the high usage group.

CANCELLED

B. Automatic Number Identification (ANI)

MAY 1 1993

Available with Circuit Switched - Trunk Side Alternative D.

BY 2nd R.S. # 53

Public Service Commission

This BSE provides the automatic transmission of a ten digit number and information digits to the customer's premises for calls originating in the LATA, to identify the calling station. The ANI BSE is an end office software function which is associated on a call-by-call basis with (1) all individual transmission paths in a trunk group routed directly between an end office and a customer's premises or, (2) where technically feasible, with all individual transmission paths in a trunk group between an end office and an access tandem, and a trunk group between an access tandem and a customer's premises.

The ten digit ANI telephone number consists of the Numbering Plan Area (NPA) plus the seven digit ANI telephone number. The ten digit ANI telephone number will be transmitted on all calls except those identified as multiparty line or ANI failure, in which case only the NPA will be transmitted (in addition to the information digits described below).

- 6.4 Transmission Performance Capabilities-(Continued)
- 6.4.1 Standard Transmission Performance-(Continued)

RECEIVED  
DEC 20 1983  
MISSOURI  
Public Service Commission

C. Transmission Performance Type C

Transmission Performance Type C is provided with the following parameters:

1. Loss Deviation

The maximum Loss Deviation of the 1004 Hz loss relative to the Expected Measured Loss (EML) is  $\pm 3.0$  dB.

2. Attenuation Distortion

The maximum Attenuation Distortion in the 404 to 2804 Hz frequency band relative to loss at 1004 Hz is  $-2.0$  dB to  $+5.5$  dB.

3. C-Message Noise

The maximum C-Message Noise for the transmission path at the route miles listed is less than or equal to:

Route Miles	C-Message Noise*	
	Type C1	Type C2
0 to 50	32 dBrnC0	38 dBrnC0
51 to 100	33 dBrnC0	39 dBrnC0
101 to 200	35 dBrnC0	41 dBrnC0
201 to 400	37 dBrnC0	43 dBrnC0
401 to 1000	39 dBrnC0	45 dBrnC0

4. C-Notch Noise

The maximum C-Notch Noise, utilizing a  $-16$  dBm0 holding tone is less than or equal to 47 dBrnC0.

6.4.2 Data Transmission Parameters

Two types of Data Transmission Parameters, i.e., Type DA and Type D are provided. The specific applications, in terms of the Feature Groups with which they are provided are set forth in Paragraphs 6.2.1, C., 6.2.2, C., 6.2.3, C. and 6.2.4, C., preceding. Following are descriptions of each.

A. Data Transmission Parameters Type DA

1. Signal to C-Notched Noise Ratio

The Signal to C-Notched Noise Ratio is equal to or greater than 33 dB.

2. Envelope Delay Distortion

The maximum Envelope Delay Distortion for the frequency bands and route miles specified is:

	<u>604 to 2804 Hz</u>	
less than 50 route miles		500 microseconds
equal to or greater than 50 route miles		900 microseconds
	<u>604 to 2404 Hz</u>

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### (AT) 6.6 Basic Service Elements-(Continued)

##### 6.6.2 Basic Service Element Descriptions-(Continued)

#### C. Multiline Hunt Group-(Continued)

##### 2. Preferential Hunting

Available with Circuit Switched - Line Side and Packet Switched MicroLink II. Where available, this alternative is only provided in electromechanical end offices. Packet Switched MicroLink II is provided for in Section 16, following.

This alternative provides the ability to establish a separate hunting list to be associated with each terminal in a hunt group. At the customer's option, this list may or may not include all terminals in the hunt group. When a call is made directly to a busy terminal in a multiline hunt group equipped with preferential hunting, a linear hunt is performed over the preferential hunt terminals in the order requested by the customer. The call will terminate in the first idle terminal in the preferential hunt list. If all of the terminals in the preferential hunt are busy, and if the hunt list did not include all lines in the hunt group, hunting continues sequentially until an idle terminal is encountered or the last terminal in the hunt group is encountered. If all terminals are busy, a busy tone will be returned to the calling party. This alternative is not available with the Uniform Call Distribution Arrangement and Nonhunting Number Arrangement BSEs.

##### 3. Regular Line Hunting

Available with Circuit Switched - Line Side and Packet Switched MicroLink II in electronic and electromechanical end offices where technically feasible. Packet Switched MicroLink II is provided for in Section 16, following.

This alternative provides the ability to sequentially access terminals in a hunt group. Hunting begins with the terminal number associated with the called number and continues sequentially until an idle terminal is found or the last terminal number is reached. If no idle terminal number is found, a busy tone is returned to the calling party.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### (AT) 6.6 Basic Service Elements-(Continued)

##### 6.6.2 Basic Service Element Descriptions-(Continued)

#### D. Nonhunting Number Arrangement

Available with Circuit Switched - Line Side in association with Multiline Hunt Group or UCD Arrangement. Where available, this BSE is only provided in Telephone Company electronic end offices.

This BSE provides an arrangement to access an individual line within a Multiline Hunt Group or Uniform Call Distribution Arrangement when the line is idle. When the Nonhunting Number is dialed and the line is busy, a busy tone will be provided to the caller.

#### E. Queuing

Available with Circuit Switched - Line side in association with the Uniform Call Distribution (UCD) Arrangement BSE and where facilities permit. Where available, this BSE is only provided in Telephone Company electronic end offices.

When all terminals in a Uniform Call Distribution Arrangement are busy, queuing allows for an incoming call to be placed in queue to await an available terminal in the UCD Arrangement. When a call is placed in queue, audible ringing is returned to the customer and no further indication is sent until a terminal completes the call. The call that has been in queue the longest will be the first call serviced when a terminal becomes available. The maximum number of calls that can be placed in queue is dependent upon the total number of lines in the multiline hunt group. If the incoming call cannot be placed in queue, the calling party will receive a busy tone.

#### F. Recorded Announcements

Available with Circuit Switched - Line Side and Circuit Switched - Trunk Side Alternatives B and D and in association with Queuing or Remote Make Busy. Where available, this BSE is only provided in electronic end offices.

This BSE provides for standard announcements on calls. When combined with Queuing, calls receive a timed audible ringing tone followed by a repeating announcement that can be separated by silence or audible ringing tone as selected by the customer. When combined with Remote Make Busy or Remote Make Busy - Trunk Side, announcements do not repeat. Calls receive only a timed audible ringing tone followed by an announcement.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### (AT) 6.6 Basic Service Elements-(Continued)

##### 6.6.2 Basic Service Element Descriptions-(Continued)

##### G. Remote Make Busy

Available with Circuit Switched - Line Side and DNAL in electronic end offices where facilities permit.

This BSE provides the customer with the ability to place lines into a busy or overflow condition by customer activation of a CPE key or toggle switch located at the customer's premises. When requested for lines arranged in a Multiline Hunt Group, Remote Make Busy will be provided to the entire hunt group. Calls to lines placed in a busy or overflow condition will receive busy tones. Lines remain in the busy or overflow condition until released by the customer. At the customer's option, busy tone conditioning may be replaced with Recorded Announcements. Charges for Recorded Announcements are in addition to charges for the Remote Make Busy BSE. Recorded Announcements are described in Paragraph 6.6.2, preceding.

Provisioning this BSE requires the use of a DNAL BSA to pass the network control information used to place the line(s) into a busy or overflow condition (or to release those lines for use once they have been busied out). The DNAL must be associated with the BSA-A line(s) arranged for use with the BSE. Rates and charges for the DNAL BSA are in addition to the rates and charges for the associated line side BSA and the BSE.

##### H. Remote Make Busy - Trunk Side

Available with Circuit Switch - Trunk Side Alternatives B and D and DNAL in electronic end offices where facilities permit.

This BSE provides the customer with the ability to place a Circuit Switched - Trunk Side Alternative B or D trunk or trunk group into a busy condition by customer activation of a CPE key or toggle switch located at the customer's premises. This BSE is available on a trunk group basis. If only one trunk is to be busied out, it must be in a trunk group separate from other trunks which are not to be busied out. Calls to trunks placed in a busy condition will receive busy tones. Trunks remain in the busy condition until released by the customer. At the customer's option, busy tone conditioning may be replaced with Recorded Announcements or Alternate Traffic Routing. Charges for Recorded Announcements and Alternate Traffic Routing are in addition to charges for Remote Make Busy - Trunk Side. Recorded Announcements and Alternate Traffic Routing are described in Paragraph 6.6.2.

The Second Order (R2) and Third Order (R3) Intermodulation Distortion products are equal to or greater than:

Second Order (R2)	31 dB
Third Order (R3)	34 dB

5. Phase Jitter

The Phase Jitter over the 4-300 Hz frequency band is less than or equal to 7 degrees peak-to-peak.

6. Frequency Shift

The maximum Frequency Shift does not exceed -2 to +2 Hz.

6. SWITCHED ACCESS SERVICE-(Continued)

6.6 Basic Service Elements-(Continued)

6.6.2 Basic Service Element Descriptions-(Continued)

H. Remote Make Busy - Trunk Side-(Continued)

Provisioning this BSE requires the use of a DNAL BSA to pass the network control information used to place the trunk(s) into a busy or overflow condition (or to release those trunks for use once they have been busied out). The DNAL must be associated with the BSA-B or BSA-D trunk(s) arranged for use with the BSE. Rates and charges for the DNAL BSA are in addition to the rates and charges for the trunk side BSA and the BSE.

I. Uniform Call Distribution (UCD) Arrangement

Available with Circuit Switched - Line Side in most Telephone Company electronic end offices.

This BSE provides for an even distribution of calls over the available lines in a Multiline Hunt Group. This BSE is not available with any alternative of the Multiline Hunt Group BSE.

(AT) J. Flexible Automatic Number Identification (Flex ANI)

Available with BSA-D in suitably equipped end offices and in association with the ANI BSE.

Provides the ability to add values to the existing information indicators (ii) that are available with the ANI BSE. The customer will receive all new ii codes that are assigned by the North American Numbering Plan Administrator as they become available and are activated in the Telephone Company switches. Flex ANI is provided per end office and on a Carrier Identification Code (CIC) basis.

ACCESS SERVICES

DEC 29 1983

6. SWITCHED ACCESS SERVICE-(Continued)

6.5 Obligations of the Telephone Company

In addition to the obligations of the Telephone Company set forth in Section 2, preceding, the Telephone Company has certain other obligations pertaining only to the provision of Switched Access Service. These obligations are as follows:

6.5.1 Network Management

The Telephone Company will administer its network to insure the provision of acceptable service levels to all telecommunications users of the Telephone Company's network services. The Telephone Company maintains the right to apply protective controls on any traffic that it carries over its network, including an IC's Switched Access Service, in order to prevent unsatisfactory performance to other users.

6.5.2 Design and Traffic Routing of Switched Access Service

The Telephone Company shall design and determine the routing of Switched Access Service, including the selection of the first point of switching and the selection of facilities from the interface to any switching point and to the end offices where busy hour minutes of capacity are ordered unless the IC orders the optional feature provision of other than Telephone Company-selected traffic routing. The Telephone Company shall also decide if capacity is to be provided by originating only, terminating only or two-way trunk groups unless the IC orders the optional feature IC specification of feature group directionality. Finally, the Telephone Company will decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. However, for Feature Group B, the IC may order the optional feature IC Specification of Local Transport Termination. Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment and the Telephone Company traffic routing plans.

6.5.3 Provision of Service Performance Data

With the agreement of the Telephone Company, service performance data for an IC's Switched Access Service may be made available to the IC, based on previously arranged intervals and format. This data may include, but are not limited to, IC equipment blockage, failure results and transmission performance. If the data are to be provided through a mechanized exchange of data, the cost of such exchange will be determined on an individual-case basis and must be borne by the IC. Provision of the data in paper format will be at no charge.

Replacing Original Sheet 59

## ACCESS SERVICES

## 6. SWITCHED ACCESS SERVICE-(Continued)

## (MT)(FC) 6.7 Transmission Specifications

(AT) Each Switched Access Service transmission path is provided with standard transmission performance. Transmission specifications for the DNAL BSA are set forth in Technical Reference TR-NPL-000336. For the line side or trunk side BSAs and for the Feature Groups, there are three different standard performances (Types A, B and C). The standard for a particular transmission path is dependent on the Interface Group and whether the service is directly routed or routed via an access tandem. Data Transmission Parameters are also provided with each Switched Access Service transmission path. The Telephone Company will, upon notification by the customer that the data parameters set are not being met, conduct tests independently or in cooperation with the customer and take any necessary action to insure that the data parameters are met.

(AT) Transmission specifications are set forth in appropriate Technical  
(RT) References in terms of (1) acceptance and immediate action limits for the five voice parameters and (2) immediate action limits for the data parameters. In addition, maintenance limits for the voice parameters of

(AT)(CT) FGB, FGC, FGD, BSA-B, BSA-C and BSA-D are set forth in appropriate  
(RT) Telephone Company Technical References.

The Telephone Company will maintain existing transmission specifications on functioning service configurations installed prior to the effective date of this tariff except that service configurations having performance specifications exceeding the standards listed in this provision will be maintained at performance levels specified in this tariff and the appropriate Technical Reference Publication.

(AT) The specific applications in terms of the Feature Groups, line side or  
(AT) trunk side Basic Serving Arrangements, and Interface Groups with which the  
(AT) Feature Group or line side or trunk side Basic Serving Arrangement standard transmission performances are provided as set forth in Paragraphs 6.2.1(C),  
(MT) 6.2.2(C), 6.2.3(C) and 6.2.4(C), preceding.

(AT) The specific applications in terms of the line side or trunk side Basic Serving Arrangements and the interface groups with which the line side or trunk side Basic Serving Arrangement standard transmission performances are provided as described in Paragraph 6.3.5. For the DNAL BSA, the transmission specifications for each available interface group are as set  
(AT) forth in Technical Reference TR-NPL-000336.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.5 Obligations of the Telephone Company-(Continued)

6.5.4 Trunk Group Measurements Reports

With the agreement of the Telephone Company, trunk group data in the form of usage in CCS, peg count and overflow, where technologically feasible, will be made available to the IC based on previously agreed to intervals.

6.5.5 Determination of Number of Transmission Paths

The Telephone Company will determine the number of Switched Access Service transmission paths to be provided for the Switched Access busy hour minutes of capacity ordered. A transmission path is a communication path within the frequency bandwidth of approximately 300 to 3000 Hz or a derived communication path of a frequency bandwidth of approximately 300 Hz to 3000 Hz provided over a high frequency analog facility or a high speed digital facility between an IC, End User or Telephone Company location and another IC, End User or Telephone Company location. The number of transmission paths will be developed using the total busy hour minutes of capacity by type (as described in Paragraph 6.1.3, A., preceding) for the end offices for each Feature Group ordered from an IC terminal location. The total busy hour minutes of capacity by type for the Feature Group end office will be converted to transmission paths using standard Telephone Company traffic engineering methods for all Feature Groups except for FGA, which will be converted on the basis of 30 busy-hour minutes of capacity per transmission path. The number of transmission paths provided shall be the number required based on (1) the use of access tandem switches and end office switches, (2) the use of end office switches only, or (3) the use of tandem switches only.

6.5.6 Determination of Number of End Office Transport Terminations

For analog entry switches, a termination will be provided for each transmission path provided. For digital entry switches, an equivalent termination will be provided for each transmission path provided.

6.5.7 Design Blocking Probability

The Telephone Company will design the facilities used in the provision of Switched Access Service to meet the blocking probability criteria as set forth in Paragraphs 6.5.7, A. through D., following.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.5 Obligations of the Telephone Company-(Continued)

6.5.7 Design Blocking Probability-(Continued)

The Telephone Company will maintain existing blocking performance on service configurations installed prior to January 1, 1984. All service configurations installed after January 1, 1984, will conform to the blocking objectives contained in this Tariff, except as follows: Where local facility conditions cannot support the blocking objectives contained in this Tariff, blocking objectives that can be supported will be uniformly applied to all IC's.

- A. For Feature Group A, no design blocking criteria apply.
- B. For Feature Groups B and C, the design blocking objective will be no greater than one percent (.01) between the point of interface at the IC terminal location and the first point of switching when traffic is directly routed without an alternate route. Standard traffic engineering methods will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.
- C. For Feature Group D, the design blocking objective will be no greater than one percent (.01) between the point of interface at the IC terminal location and the end office switch, whether traffic is directly routed without an alternate route or routed via an access tandem. Standard traffic engineering methods will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.
- D. The Telephone Company will perform routine measurement functions except on Feature Group A to assure that an adequate number of transmission paths are in service. The Telephone Company will recommend that additional busy-hour minutes of capacity be ordered by the IC when additional paths are required to reduce the measured blocking to the designed blocking level. For the busy-hour minutes of capacity ordered, the design blocking objective is assumed to have been met if the routine measurements show that the measured blocking does not exceed the threshold listed in the following tables.

BY 1st R.S. #51  
PUBLIC SERVICE COMMISSION  
OF MISSOURI

- 1. For transmission paths carrying only first routed traffic direct between an end office and an IC terminal location without an alternate route, and for paths carrying only overflow traffic, the measured blocking thresholds are as follows:

6. SWITCHED ACCESS SERVICE--(Continued)

6.6 Obligations of the IC

In addition to the obligations of the IC set forth in Section 2, preceding, the IC has certain specific obligations pertaining to the use of Switched Access Service. These obligations are as follows:

6.6.1 Report Requirements

IC's are responsible for providing the following reports to the Telephone Company, when applicable.

A. Jurisdictional Reports

When an IC orders Switched Access Service for both interstate and intrastate use, the IC is responsible for providing reports as set forth in Section 2, Paragraph 2.3.14, preceding. Changes will be apportioned in accordance with those reports. The method to be used for determining the interstate charges is set forth in Section 2, Paragraph 2.3.15, preceding.

B. LATA Default Percent Interstate Use (PIU) Report

When an IC orders Switched Access to any end office in a LATA, it must provide a projected percentage of interstate use that will serve as a default PIU for the entire LATA. This figure will be used to apportion charges for usage measured at end offices to which the IC has not ordered capacity.

(FC) 6.8 Obligations of the Telephone Company

In addition to the obligations of the Telephone Company set forth in Section 2, preceding, the Telephone Company has certain other obligations pertaining only to the provision of Switched Access Service. These obligations are as follows:

(FC) 6.8.1 Network Management

The Telephone Company will administer its network to insure the provision of acceptable service levels to all telecommunications users of the Telephone Company's network services. Generally, service levels are considered acceptable only when both end users and customers are able to establish connections with little or no delay encountered within the Telephone Company network. The Telephone Company maintains the right to apply protective controls, i.e., those actions, such as call gapping, which selectively cancel the completion of traffic, over any traffic carried over its network, including that associated with a customer's Switched Access Service. Generally, such protective measures would only be taken as a result of occurrences such as failure or overload of Telephone Company or customer facilities, natural disasters, mass calling or national security demands. In the event that the protective controls applied by the Telephone Company result in the complete loss of service by the customer, the customer will be granted a Credit Allowance for Service Interruptions as set forth in Paragraph 2.4.4, preceding, except as specified in 2.4.4, c, preceding.

Replacing 5th Revised Sheet 64

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.8 Obligations of the Telephone Company-(Continued)

6.8.2 Design and Traffic Routing of Switched Access Service

When ordering FGC, FGD, BSA-C or BSA-D Switched Access Services, the customer may specify whether it desires routing to be direct to an end office or through an access tandem switch. The customer is required to specify whether the capacity should be provided by originating only, terminating only or two-way trunk groups.

For FGA, FGB, BSA-A and BSA-B, the line or trunk directionality and traffic routing of the Switched Access Service between the customer's premises and the entry switch are determined by the customer's order for service.

The Telephone Company will compare the customer's request with its own traffic routing plan and available facilities and equipment to determine whether the customer's request can be met. The Telephone Company is responsible for selection of facilities from the interface to any switching point and to the end offices where capacity is ordered. The Telephone Company will also decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. For FGB or BSA-B, the customer may order the optional feature Customer Specification of Local Transport Termination.

Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment and the Telephone Company traffic routing plans. If the customer desires routing or directionality different from that determined by the Telephone Company, the Telephone Company will work cooperatively with the customer in determining (1) whether the service is to be routed directly to an end office or through an access tandem switch and (2) the directionality of the service.

Additionally, when the customer has ordered a dedicated FGD or BSA-D trunk group with the MicroLink I Access Capability feature, the Telephone Company will ensure that these facilities are capable of supporting 56 kbps digital data.

(AT) | When the customer has ordered a dedicated FGD or BSA-D trunk group with SS7 Signaling and  
| 64 CCC, where technically feasible and facilities permit, the Telephone Company will ensure  
| that these facilities are  
(AT) | capable of supporting 64 Kbps digital data.

6.8.2 Design and Traffic Routing of Switched Access Service **MISSOURI Public Service Commission**

When ordering FGC, FGD, BSA-C or BSA-D Switched Access Services, the customer may specify whether it desires routing to be direct to an end office or through an access tandem switch. The customer is required to specify whether the capacity should be provided by originating only, terminating only or two-way trunk groups.

For FGA, FGB, BSA-A and BSA-B, the line or trunk directionality and traffic routing of the Switched Access Service between the customer's premises and the entry switch are determined by the customer's order for service.

The Telephone Company will compare the customer's request with its own traffic routing plan and available facilities and equipment to determine whether the customer's request can be met. The Telephone Company is responsible for selection of facilities from the interface to any switching point and to the end offices where capacity is ordered. The Telephone Company will also decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. For FGB or BSA-B, the customer may order the optional feature Customer Specification of Local Transport Termination.

Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment and the Telephone Company traffic routing plans. If the customer desires routing or directionality different from that determined by the Telephone Company, the Telephone Company will work cooperatively with the customer in determining (1) whether the service is to be routed directly to an end office or through an access tandem switch and (2) the directionality of the service.

In the event that the protective controls applied by the Telephone Company result in the complete loss of service by the customer, the customer will be granted a Credit Allowance for Service Interruptions as set forth in Paragraph 2.4.4, preceding.

6.5.2 Design and Traffic Routing of Switched Access Service

For Feature Groups C and D, the Telephone Company shall design and determine the routing of Switched Access Service, including the selection of the first point of switching and the selection of facilities from the interface to any switching point and to the end offices where busy-hour minutes of capacity are ordered. The Telephone Company shall also decide if the capacity is to be provided by originating only, terminating only or two-way trunk groups. Finally, the Telephone Company will decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment and the Telephone Company traffic routing plans. If the customer desires routing or directionality different from that determined by the Telephone Company, the Telephone Company will work cooperatively with the customer in determining (1) whether the service is to be routed directly to an end office or through an access tandem switch and (2) the directionality of the service.

6.5.3 Provision of Service Performance Data

Subject to availability, end-to-end service performance data available to the Telephone Company through its own information routines, may also be made available to the customer based on previously arranged intervals and format. These data provide information on overall end-to-end call completion and noncompletion performance, e.g., customer equipment blockage, failure results and transmission performance. These data do not include service performance data which are provided under other tariff sections, e.g., testing service results. If data are to be provided in other than paper format, the charges for such exchange will be determined on an individual-case basis.

6.7 Rate Regulations

This section contains the specific regulations governing the rates and charges that apply for Switched Access Service.

6.7.1 Types of Rates and Charges

There are three types of rates and charges that apply to Switched Access Service. These are monthly recurring rates, usage rates and nonrecurring charges. These rates and charges are applied differently to the various rate elements.

A. Monthly Rates

Monthly rates are flat recurring rates that apply each month or fraction thereof that a specific rate element is provided. For billing purposes, each month is considered to have 30 days.

B. Usage Rates

Usage rates are rates that apply only when a specific rate element is used. These are applied on a per access minute basis. Access Minute Charges are accumulated over a monthly period.

C. Nonrecurring Charges

Nonrecurring charges are one-time charges that apply for a specific work activity (i.e., installation or change to an existing service). The three types of nonrecurring charges that apply for Switched Access Service are: installation of service, installation of optional feature(s) and service rearrangements.

1. Installation of Service

Nonrecurring charges apply to each service (e., busy-hour minutes of capacity) installed.

2. Installation of Optional Features

Nonrecurring charges apply for the installation of the various optional features available with the Switched Access Service Local Transport rate element. The other optional features are installed at no additional cost to the IC other than the cost of the basic service (busy-hour minutes of capacity nonrecurring charge) with which the features are associated.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### (FC) 6.8 Obligations of the Telephone Company-(Continued)

##### (FC) 6.8.4 Trunk Group Measurements Reports

Subject to availability, the Telephone Company will make available trunk group data in the form of usage in CCS peg count and overflow to the customer based on previously agreed to intervals. Trunk Group Measurement Reports will be provided in standard format.

##### (FC) 6.8.5 Determination of Number of Transmission Paths

(AT) The customer specifies the number of transmission paths (lines or trunks) in the order for FGA, FGB, BSA-A and BSA-B service; for FGD and BSA-D service ordered in trunks and for DNAL ordered in channels.

(AT) The Telephone Company will determine the number of transmission paths to be provided for the FGC, FGD, BSA-C or BSA-D busy hour minutes of capacity ordered. The number of transmission paths will be developed using the total busy hour minutes of capacity by type (as described in

(RT) Paragraph 6.1.1, preceding) for the end offices for each Feature Group  
(AT) or BSA ordered from an IC terminal location. The total busy hour  
(AT) minutes of capacity by type for the Feature Group or BSA end office will be converted to transmission paths using standard Telephone Company  
(AT) traffic engineering methods for all Feature Groups or BSAs except for  
(AT) FGA or BSA-A, which will be converted on the basis of 30 busy hour minutes of capacity per transmission path. The number of transmission paths provided shall be the number required based on (1) the use of access tandem switches and end office switches, (2) the use of end office switches only, or (3) the use of tandem switches only.

##### (FC) 6.8.6 Determination of Number of End Office Transport Terminations

For analog entry switches, a termination will be provided for each transmission path provided. For digital entry switches, an equivalent termination will be provided for each transmission path provided.

##### (FC) 6.8.7 Design Blocking Probability

(FC) The Telephone Company will design and monitor the facilities used in the provision of Switched Access Service to meet the blocking probability criteria as set forth in Paragraphs 6.8.7, A., through D., following.

- 3. Service Rearrangements

RECEIVED  
DEC 20 1983  
MISSOURI  
Public Service Commission

Nonrecurring charges apply for service rearrangements. Service rearrangements are changes to existing services that do not result in a change to any of the following: (1) address of the IC terminal location or the end office, (2) Feature Group type, or (3) type of capacity. Changes of this nature constitute a discontinuance and start of service.

Service Rearrangement Charges are based on the nonrecurring (i.e., installation) charge of the service being changed. Following are the service rearrangements that are allowable for Switched Access Service and the appropriate levels of charging.

<u>Type of Change</u>	<u>Level of Charging</u>
Change in Access Connection of Transport Termination Supervisory Signaling (e.g., loop start to ground start)	1/2 of the Access Connection nonrecurring charge (\$/BHMC) for the capacity being changed
Change in type of Address Signaling (e.g., dial pulse to multifrequency)	1/2 of the Access Connection nonrecurring charge (\$/BHMC) for the capacity being changed
Change in Access Connection Interface Group (e.g., two-wire to group level)	Full Access Connection non-recurring charge (\$/BHMC) for the capacity being changed
Change in Transport Termination (e.g., FGB standard to rotary dial station signaling)	1/2 of the Access Connection nonrecurring charge (\$/BHMC) for the capacity being changed
Change in Provision of Other Than Telephone Company Selected Traffic Routing (e.g., tandem in lieu of direct, to direct)	Full Access Connection non-recurring charge (\$/BHMC) for capacity being changed
Change in Dedicated Access Line Service (e.g., change type of termination from line to trunk or change end office switching features).	1/2 of the SAL nonrecurring charge as set forth in Section 7, Paragraph 7.5.4, following per changed.

## ACCESS SERVICES

## 6. SWITCHED ACCESS SERVICE-(Continued)

(FC) 6.8 Obligations of the Telephone Company-(Continued)

(FC) 6.8.7 Design Blocking Probability-(Continued)

(AT) A. No design blocking criteria apply for FGA, FGB, BSA-A, BSA-B or DNAL.

(AT) B. The design blocking objective for FGC and BSA-C will be no greater than one percent (.01) between the point of termination at the IC terminal location and the first point of switching when traffic is directly routed without an alternative route. In the event of media stimulated mass calling, the design blocking objective cannot be guaranteed. Standard traffic engineering methods will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.

(AT) C. The design blocking objective for FGD and BSA-D will be no greater than one percent (.01) between the point of termination at the IC terminal location and the end office switch, whether traffic is directly routed without an alternate route or routed via an access tandem. In the event of media stimulated mass calling, the design blocking objective cannot be guaranteed. Standard traffic engineering methods as set forth in appropriate Technical References will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.

(CT)(RT)  
(RT)

D. The Telephone Company will perform routine measurement functions to assure that an adequate number of transmission paths are in service. The Telephone Company will recommend that additional busy-hour minutes of capacity be ordered by the IC when additional paths are required to reduce the measured blocking to the designed blocking level. Dedicated trunk groups provided for the purpose of trunk access limitation will be taken into consideration when recommending additional capacity. For the busy-hour minutes of capacity ordered, the design blocking objective is assumed to have been met if the routine measurements show that the measured blocking does not exceed the threshold listed in the following tables:

1. For transmission paths carrying only first routed traffic directly between an end office and an IC terminal location without an alternate route, and for paths carrying only overflow traffic, the measured blocking thresholds are as follows:

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.3 Switched Access Service for Resale of Other IC Service-(Continued)

A. (Continued)

- When both line side (i.e., FGA) and trunk side (i.e., FGB, FGC and FGD) Switched Access Service are used in association with the resale of Dedicated Access Line Service, the number of Dedicated Access Line Services to be associated with each line side and trunk side Switched Access Service. If this split is not reported, the Telephone Company will assume all the Dedicated Access Line Services with 2500 or more originating access minutes are to be associated with line side Switched Access Service.

The preceding information and the information required in Paragraph B, following, must be reported for each LATA in which the IC is reselling services. For those LATA's that are multistate LATA's, the IC must report the information by state within the LATA. In order for the rate treatment in Paragraph D., following, to apply, both the Switched Access Service and the associated Dedicated Access Line Services must be in the same state and be provided by the same Telephone Company.

- B. Each of the Switched Access Services used by the IC in association with the resale of Dedicated Access Line Service must be in the same LATA as the Dedicated Access Line Services in order for such Switched Access Service to be rated as set forth in Paragraph D, following. The Switched Access Service must also be connected either directly or indirectly to the IC terminal location at which the associated Dedicated Access Line Services are terminated. Direct connections are those where the Switched Access Service is terminated at the same IC terminal location. Indirect connections are those where the Switched Access Service is terminated at a second IC terminal location in the same LATA which is in turn connected to the first IC terminal location by facilities that can be used by the Switched Access Service to reach the first IC terminal location (i.e., the IC terminal location where the Dedicated Access Line Services are terminated). When more than one IC terminal location is involved in a LATA, the IC shall notify the Telephone Company in writing and shall report the locations of the involved IC terminal locations.

ACCESS SERVICES

DEC 29 1983

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.3 Switched Access Service for Resale of Other IC Service-(Continued) Missouri Public Service Commission

C. For the initial month, the data that the IC reports as set forth in Paragraphs A and B, preceding, will be used by the Telephone Company to determine the rates and charges as set forth in Paragraph D, following. For each subsequent month, the IC must update the report per Paragraphs A and B, preceding, for each LATA for the preceding monthly period unless the Telephone Company notifies the IC that it has sufficient information to substantiate the rate treatment set forth in Paragraph D, following. The monthly period used to determine the 2500 originating access minutes per Dedicated Access Line Service shall be the most recent monthly period for which the IC has received a bill for the Dedicated Access Line Services. This updated report shall show the bill date for the Dedicated Access Line Services. The report shall be delivered to the Telephone Company at a location specified by the Telephone Company no later than 15 days after the bill date shown on the Dedicated Access Line Service bill. If an updated report is required but is not received by the Telephone Company during the monthly period after the initial monthly period, the Telephone Company will assume there are no resold Dedicated Access Line Services associated with Switched Access Services in the LATA. The rate treatment set forth in Paragraph D, following, will not apply in these cases.

D. When the IC reports Switched Access Services associated with the resale of Dedicated Access Line Services in a LATA as set forth in Paragraphs A, B and C, preceding, and the Telephone Company verifies the reports are accurate, such Switched Access Services will be rated as follows:

1. For line side Switched Access Services (i.e., FGA) in a LATA associated with the resale of Dedicated Access Line Service, the LATA access minutes used to determine the charges for Local Transport, Local Switching (LS1), Line Termination and Intercept will be reduced by 2500 access minutes for each Dedicated Access Line Service with at least 2500 originating access minutes reported by the IC as set forth in Paragraphs A, B or C, preceding. However, the access minutes for the line side Switched Access Services in the LATA, adjusted as set forth in this or any other section of this Tariff, that are billed to an IC in a monthly period shall not be less than zero. When the prorate in more than one mileage band, the prorate will be applied to each mileage band in proportion to the actual usage in that band. The adjustment will be made to the IC account no later than either the next bill date or the one subsequent to that, depending on when the report is received.

6. SWITCHED ACCESS SERVICE-(Continued)

6.9 Obligations of the IC-(Continued)

6.9.1 Report Requirements-(Continued)

(CT) B. Jurisdictional Reports - 800 NPAS/900 Access Service

When an IC orders service class routing or trunk access limitation, it must report the number of trunks and/or the appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

(CT) 1. 800 Number Portability Access Service (NPAS)

(RT)

(AT) (a) The jurisdictional report requirements for 800 NPAS will apply to 800 access minutes and queries.

For 800 NPAS, where jurisdiction can be determined from the call detail, the Telephone Company will bill according to such jurisdiction by developing a projected interstate percentage. The projected interstate percentage will be developed on a monthly basis, by end office, when the 800 NPAS access minutes are measured by dividing the measured interstate originating 800 NPAS access minutes (the access minutes where the calling number is in one state and the called number is in another state) by the total originating 800 NPAS access minutes.

For 800 NPAS, where the call detail is insufficient to determine jurisdiction, the customer will provide an interstate percentage of 800 NPAS originating access minutes for each LATA from which the customer may originate 800 traffic.

If a customer does not provide the Telephone Company with an originating 800 NPAS PIU report that will be used when the call detail is insufficient to determine the jurisdiction, the Telephone Company will determine the interstate percentage of 800 NPAS usage as follows:

The Telephone Company will develop an interstate percentage on a monthly basis for each end office by dividing the customer's measured MTS usage interstate originating access minutes by the customer's total MTS usage originating access minutes for which sufficient call detail exists to determine the jurisdiction.

MAY 1 1993  
BY 7th R.S. #69  
Public Service Commission

Public Service Commission

When an IC orders service class ~~relative to~~ trunk access limitation, it must report the number of ~~trunks and~~ <sup>public service</sup> ~~one~~ appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

1. 800 Access Service

Customers ordering Joint Provided 800 Access Service must provide the Telephone Company with an 800 Network Data Report. Customers ordering non-joint provided 800 Access Service have the option to provide the Telephone Company with either an 800 Network Data Report or, an 800 Access Service Percent Intrastate IntraLATA/Carrier Common Line (PIIL/CCL) Report. The Telephone Company will work cooperatively with the customer should the customer request to change his reporting method. In such case, the customer must provide written notification to the Telephone Company specifying which reporting option the customer will utilize. Such requests to change the reporting method will be accepted by the Telephone Company no more than one time in a six (6) month period.

- (a) For intrastate traffic, the 800 Network Data Report will reflect all 800 telephone numbers that originate and terminate within the state of Missouri. For intrastate traffic, each 800 telephone number provided in the 800 Network Data Report will reflect one of the following depending on whether the customer has ordered Joint Provided or Non-Joint Provided 800 Access Service:

Joint Provided 800 Access Service Calls

The 10-digit POTS number associated with the WATS Access Line to which the 800 call will terminate.

Non-Joint Provided 800 Access Service Calls

The NPA-NXX associated with the terminating POTS number. This option is required when the 800 call uses Switched Access Service to terminate on WATS Access Line Service or a common line.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.3 Switched Access Service for Resale of Other IC Service-(Continued)

D. (Continued)

1. (Continued)

Where the interexchange service for which the Dedicated Access Line Service is provided is billed to the IC by service group and/or in a unit other than minutes, the IC shall convert these as follows:

- If the billing is in hours, convert the hours to access minutes by multiplying the hours by 60.
- If the billing is by service group, divide the total access minutes on the monthly bill by the number of Dedicated Access Line Services in the service group to determine the access minutes per Dedicated Access Line Service.

2. For each Dedicated Access Line Service used as set forth in Paragraph 1, preceding, to reduce the line side Switched Access Service access minutes in a LATA, a local business line rate as set forth in Paragraph 6.8.4, following, shall apply. The exchange involved shall be the exchange in which the IC terminal location at which the Dedicated Access Line Services are terminated is located. When more than one IC terminal location is involved, local business line rates for both exchanges shall be used. The number of involved Dedicated Access Line Services terminated at each location shall be used to determine the appropriate number of local business line rates. However, the number of local business line rates, as set forth in Paragraph 6.8.4, following, applied in a LATA shall not exceed the number of line side Switched Access Services provided to the IC (i.e., total number of busy-hour minutes of capacity divided by 30).

E. When the IC notifies the Telephone Company that Switched Access Service is to be used in association with the resale of Dedicated Access Line Service, the notification automatically grants the Telephone Company the right to audit (1) the IC terminal locations to verify the use of facilities as reported in Paragraphs A, B or C, preceding, and (2) all of the records, workpapers and back-up documentation for each report as set forth in Paragraphs A, B or C, preceding. 1. 800 Number Portability Access Service (NPAS)- (Continued)

(b) (Continued)

The 800 NPAS PIIL/CCL report must be provided to the Telephone Company on a quarterly basis. Effective on the first of January, April, July, and October of each year the customer will update the 800 NPAS PIIL/CCL report. The customer shall forward to the Telephone Company, to be received no later than 15 business days after the first of each month, a revised 800 NPAS PIIL/CCL report showing the intrastate intraLATA percentage of use for the most recent three months for which data is available. The revised report will serve as the basis for the next three months billing and will be effective on the bill date for that service. No prorating or backbilling will be done based on the report. If the initial 800 NPAS PIIL/CCL report or a quarterly update has not been received from the customer, the Telephone Company may determine the intrastate intraLATA percentage as described below.

If the customer does not provide the Telephone Company with an 800 NPAS PIIL/CCL report as specified above, the Telephone Company will determine the jurisdiction of all the originating intrastate 800 traffic to be intrastate interLATA and bill the 800 NPAS customer accordingly.

The 800 Access Service PIIL/CCL report must be provided to the Telephone Company on a quarterly basis. Effective on the first of January, April, July, and October of each year the customer will update the 800 Access Service PIIL/CCL report. The customer shall forward to the Telephone Company, to be received no later than 15 business days after the first of each month, a revised 800 Access Service PIIL/CCL report showing the intrastate intraLATA percentage of use for the most recent three months for which data is available. The revised report will serve as the basis for the next three months billing and will be effective on the bill date for that service. No prorating or backbilling will be done based on the report. If the initial 800 Access Service PIIL/CCL report or a quarterly update has not been received from the customer, the Telephone Company may determine the intrastate intraLATA percentage as described below.

If the customer does not provide the Telephone Company with either an 800 Network Data Report or an 800 Access Service PIIL/CCL report as specified above, the Telephone Company will determine the jurisdiction of all the originating intrastate 800 traffic to be intrastate interLATA and bill the 800 Access Service customer accordingly.

PIIL/CCL reporting is required only if there is a difference between interLATA and intraLATA rates. If these rates are identical, no report need be submitted.

2. 900 Access Services

Customers offering both interstate and intrastate originating 900 traffic within a LATA, must provide to the Telephone Company a 900 Access Service Percent Interstate Usage (PIU) report as specified in the Telephone Company's Access Service Tariff F.C.C. No. 68. Customers must also report whether they are providing only intrastate originating 900 traffic within the LATA.

3. Media Stimulated Mass Calling Events

When Switched Access Service is utilized to provide services for which a substantial call volume is anticipated during a short period of time (e.g., 800, 900, POTS, etc. calls placed in response to television and radio advertising), the customer shall provide notification of such an event to the Telephone Company at least 24 hours in advance of the peak period. Such notification shall include the nature, time, duration and the frequency of the event, and estimated call volume and the telephone number(s) to be utilized.

The Telephone Company will utilize such information to administer its Network in a manner that minimizes the impact of traffic surges due to media stimulated mass calling events as specified in Sections 2.3.10 and 6.8.1 preceding. Failure to provide such notification may cause excessive network congestion, which could result in a complete loss of service to the customer. If the Telephone Company has not received required notification at least 24 hours in advance of the event, and a service interruption has occurred, provisions set forth in Section 2.4.4, C.8, preceding will apply.

(FC) 6.9.2 Supervisory Signaling

The IC facilities shall provide the necessary on-hook, off-hook, answer and disconnect supervision.

(FC) 6.9.3 Trunk Group Measurements Reports

With the agreement of the IC, trunk group data in the form of usage in CCS, peg count and overflow for its end of all access trunk groups, where technologically feasible, will be made available to the Telephone Company. These data will be used to monitor trunk group utilization and service performance and will be based on previously arranged intervals and format.

(AT) 3. Advanced Carrier Identification Service (ACIS)

Customers offering both interstate and intrastate originating ACIS traffic within a LATA must provide to the Telephone Company an ACIS Percent Interstate Usage (PIU) report as specified in Section 2. Customers must also report whether they are providing only intrastate originating ACIS traffic within the LATA.

For originating intrastate ACIS traffic, customers must provide to the Telephone Company an ACIS Percent Intrastate IntraLATA/Carrier Common Line (PIIL/CCL) report. The ACIS PIIL/CCL report is required for proper Carrier Common Line rate application, as specified in Section 3.

Customers who provide the ACIS PIIL/CCL report will supply the Telephone Company with an intrastate intraLATA percentage.

PIIL/CCL reporting is required only if there is a difference between interLATA and intraLATA rates. If these rates are identical, no report need be submitted.

6.10.1 Types of Rates and Charges-(Continued)

A. Monthly Rates

Monthly rates are flat recurring rates that apply each month or fraction thereof that a specific rate element is provided.

B. Usage Rates

(AT) Usage rates for each line or trunk are rates that apply on a per call or a per access minute basis when a specific rate element is used. Access minute charges are accumulated over a monthly period.

(AT) Usage rates for FGD or BSA-D Service utilizing the Multiple 64 CCC feature will apply on a per unit basis. For Multiple 64 CCC, a unit represents a FGD or BSA-D trunk with 64 Kbps of bandwidth. The Multiple 64 CCC feature (n x 64 Kbps) is available in increments from 64 Kbps to 1536 Kbps bandwidth, where n may be from 1 to 24 and represents the incremental number of 64 Kbps of bandwidth per call.  
|  
|  
|  
(AT)

C. Nonrecurring Charges

Nonrecurring charges are one-time charges that apply for a specific work activity (i.e., installation or change to an existing service).

1. Installation of Service

A Per Line or Per Trunk Installation Charge will apply to installation of each Feature Group Service (FGA, FGB, FGC and FGD) and to each Basic Serving Arrangement (BSA-A, BSA-B, BSA-C and BSA-D). The Per Line Installation Charge is applicable to FGA and BSA-A. The Per Trunk Installation Charge is applicable to FGB, FGC, FGD, BSA-B, BSA-C and BSA-D.

An installation charge will apply per DNAL termination to each DNAL.

An Installation Charge is applicable on a first and additional line, trunk or DNAL termination basis. If a customer orders multiple lines, trunks or DNAL terminations on the same Access Order, the first line, trunk or DNAL termination is assessed the "first" installation charge and each additional line, trunk or DNAL termination is assessed the "additional" installation charge.

6.7 Rate Regulations

MISSOURI

Public Service Commission

This section contains the specific regulations governing the rates and charges that apply for Switched Access Service.

6.7.1 Types of Rates and Charges

There are three types of rates and charges that apply to Switched Access Service. These are monthly recurring rates, usage rates and nonrecurring charges. These rates and charges are applied differently to the various rate elements. For billing purposes, each month is considered to have 30 days.

A. Monthly Rates

Monthly rates are flat recurring rates that apply each month or fraction thereof that a specific rate element is provided.

CANCELLED

FEB 1 1988

B. Usage Rates

Usage rates are rates that apply on a per access minute basis when a specific rate element is used. Access minute charges are accumulated over a monthly period.

BY 302 R.S. #70

Public Service Commission  
MISSOURI

C. Nonrecurring Charges

Nonrecurring charges are one-time charges that apply for a specific work activity (i.e., installation or change to an existing service).

1. Installation of Service

Nonrecurring charges apply to each Switched Access Service installed and certain optional features. This charge is applied on a per line or trunk basis, but the charge applies only when the capacity ordered requires the installation of an additional trunk(s).

(AT)

A nonrecurring charge does not apply to establish initial 800 Access Service in a LATA

2. Installation of Optional Features

Nonrecurring charges apply for the installation of some of the optional features available with Switched Access Service. The charge applies whether the feature is installed coincident with the initial installation of service or at any time subsequent to the initial installation of service.

also has the right to contact and review the records of other involved entities to verify the data the IC reports is accurate.

All of the records, workpaper and back-up documentation for each report furnished the Telephone Company as set forth in Paragraphs A, B or C, preceding, shall be available (for one year from the date of the report) during normal business hours at an IC location in the involved LATA, upon reasonable request by the Telephone Company, in order to permit a review by the Telephone Company auditor or outside auditor under contract to the Telephone Company. If the records, workpapers and back-up documentation are not provided or are insufficient or not in accordance with the provision of this paragraph and Paragraphs A, B and C, preceding, the adjustments and rates as set forth in Paragraph D, preceding, shall not apply until the deficiencies are corrected and new reports are required in Paragraphs A, B and C, preceding, are delivered to the Telephone Company.

F. When the IC reports line side and/or trunk side Switched Access Services associated with the resale of Dedicated Access Line Services in a LATA, as set forth in Paragraphs A, B or C, preceding, the regulations set forth in Section 3, Paragraph 3.7, D, preceding, shall apply.

G. When the IC reports line side and/or trunk side Switched Access Service associated with the resale of Private Line Service (including WATS - type service) which is provided with the use of Special Access Service, other than Dedicated Access Line Service, the regulations set forth in Section 7, Paragraph 7.4.2, following, shall apply.

(CP)

(CP)

(MT)(FC)

3. 800/900 Access Service NXX Activation Charge

The 800/900 Access Service NXX Activation Charge applies for all 800 Access Service NXX code activations subsequent to the customer's initial request for activation of 800 NXX code(s) within the LATA. The 800/900 Access Service NXX Activation Charge also applies for all 900 Access Service NXX code activations subsequent to the customer's initial request for activation of 900 NXX code(s) within the LATA.

The initial request for NXX activation within a LATA does not include the NXX activation charge, regardless of the number of NXX's being activated. For all 800/900 NXX activation requests after the customers initial request within the LATA, the "First" charge applies to the first NXX code listed on the request for activation per each equal access end office within the LATA. The "Additional" charge applies to each additional NXX code(s) listed on the activation request per each equal access end office within the LATA.

b. Automatic Number Identification (ANI)

When the Automatic Number Identification (ANI) with Circuit Switched - Trunk Side Alternative D BSE is requested on the same access order as the features identified in Section 6.11.2, A.1.a.1 with footnote (1), following, nonrecurring charges apply to the BSE only if it has the highest nonrecurring charge. If so, nonrecurring charges are assessed as set forth in a. above. as set forth in a., above.

c. A nonrecurring charge applies on a per trunk group basis when the following BSE is installed:

- Alternate Traffic Routing
- End Office Alternate Routing
- Multiple Traffic Routing

d. A nonrecurring charge applies on a first and additional per line basis for the following BSEs:

- Multiline Hunt Group
- Circular Hunting
- Preferential Hunting
- Regular Line Hunting
- Nonhunting Number Arrangement
- Uniform Call Distribution Arrangement

e. A nonrecurring charge applies on an initial and subsequent order basis per arrangement for the following BSEs:

- Queuing

(MT) 4. 900 Access Service NXX Activation Charge

The 900 Access Service NXX Activation Charge also applies for all 900 Access Service NXX code activations subsequent to the customer's initial request for activation of 900 NXX code(s) within the LATA.

The initial request for NXX activation within a LATA does not include the NXX activation charge, regardless of the number of NXX's being activated. For all 900 NXX activation requests after the customers initial request within the LATA, the "First" charge applies to the first NXX code listed on the request for activation per each equal access end office within the LATA. The "Additional" charge applies to each additional NXX code(s) listed on the activation request per each equal access end office within the LATA.

4. 900 Access Service NXX Activation Charge-(Continued)

(AT)

0+900 Access Service Installation Nonrecurring Charge

The 0+900 Access Service Installation Nonrecurring Charge applies to customers who request 0+900 Access Service. The nonrecurring charge will apply on a per end office basis for those end offices within the LATA that require modification to allow 0+900 dialing. The nonrecurring charge will apply whether the request for 0+900 Access Service is concurrent with or subsequent to the initial activations of the NXX code(s).

In addition to the 0+900 Access Service Installation Nonrecurring Charge, the 900 Access Service NXX Activation Charge will apply. If the customer requests to receive 0+900 Access Service at the time of subsequent activation of the 900 NXX code(s), the 900 Access Service NXX Activation Charge will apply for the newly established 900 NXX code(s) and the existing 900 NXX code(s).

(AT)

5. Service Rearrangements

Service Rearrangements are changes to existing services which do not result in either a change in the minimum period requirements as set forth in Paragraph 5.2.6, preceding, or a change in the physical location of the point of termination at the customer's premises or the customer's end user's premises.

Changes which result in the establishment of new minimum period obligations are treated as a discontinuance of the existing service and an installation of a new service and all applicable nonrecurring charges will apply. Changes in the physical location of the point of termination are treated as moves and are described and charged for as set forth in Paragraph 6.10.10, following.

A change in the customer of record (i.e., existing Access Service is provided and billed to a different entity, such as a different company as opposed to a company name change) is when the new customer assumes liability for all current and prior charges for the service(s) and has complied with the regulations and conditions as set forth in Paragraph 2.2.1. In this case only applicable Administrative Change Charges, as specified in Paragraph 6.11.4, shall apply. If the customer has not complied with Paragraph 2.2.1, this service rearrangement will be considered a disconnect and installation of new service.

Issued: December 6, 1994 Effective: January 6, 1995

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.4 Minimum Monthly Charge

Switched Access Service is subject to a minimum monthly charge. The minimum charge applies for the total number of Feature Groups (by type of Feature Group by type of Busy-hour-Minutes-of-Capacity) provided to each end office. The minimum monthly charge consists of the following elements:

For those rate elements that are billed a flat monthly rate, i.e., Local Transport Optional Features, the minimum monthly charge is the monthly rate as set forth in Paragraph 6.8.2, B., following.

The minimum monthly charge for the Local Switching, Line Termination and Intercept rate elements is the charge set forth in Paragraph 6.8.3, A., B. and C., following, for the actual usage for the month, adjusted as set forth in Paragraph 6.7.3, D.1., preceding.

For the Local Transport rate element, the minimum monthly charge is assessed in terms of a Minimum Monthly Usage Charge (MMUC). If the actual Local Transport usage charge for the month adjusted as set forth in Paragraph 6.7.3, D.1., preceding, is higher than the MMUC, the IC pays the actual usage charge. If the Local Transport usage charge is lower than the MMUC, the IC pays the MMUC. The MMUC is determined as set forth in Paragraph 6.7.5, following. Rates for actual usage are set forth in Paragraph 6.8.2, A., following.

6.7.5 Minimum Monthly Usage Charge (MMUC)

The Minimum Monthly Usage Charge (the minimum transport charge) varies by mileage band and capacity.

The MMUC is as follows:

Mileage Bands	Minimum Transport Charge Per BHMC*
0 to 1	\$ .3726
Over 1 to 8	.8553
Over 8 to 16	.9908
Over 16 to 25	1.0670
Over 25 to 50	1.7191
Over 50 to 100	2.3965
Over 100	3.8361

## C. Nonrecurring Charges-(Continued)

## 5. Service Rearrangements-(Continued)

A customer may request one or more of the following Service Rearrangements. An Access Order Charge will apply as set forth in Paragraph 5.2.2.

a. Administrative changes will be made without charge(s) to the customer as follows:

- Change of customer name, (i.e., the customer of record does not change, but the customer of record changes its name, e.g., ABC Communications changes to All Business Concepts Communication.),
- Change of customer's or customer's end user premises address when the change of address is not a result of a physical relocation of the service,
- Change in billing data (name, address, or contact name or telephone number of the bill recipient changes, but the customer of record does not change)
- Change of agency authorization,
- Change of customer's or customer's end user contact name or telephone number, and
- Change of jurisdiction.

b. For the following Administrative changes, a nonrecurring charge will apply as specified in Paragraph 6.11.4, following.

- Change of Access Carrier Name Abbreviation (ACNA)
- Change of Billing Account Number (BAN) (e.g. a customer request to categorize end users by city, town, etc. using specific blocks of Billing Account Numbers.)
- Change of Customer Circuit Identification (CKR)

c. Rearrangements of Switched Access features or BSEs will incur nonrecurring charges specific to the feature or BSE as specified in Paragraph 6.11.1, following.

d. Rearrangements of lines, trunks or channels will be treated as a discontinuance of the existing service and an installation of a new service and all applicable nonrecurring charges will apply as specified in Paragraph 6.11.1, following.

- Multifrequency address (MF) signaling to SS7 signaling.
- SS7 signaling to MF signaling.
- MF signaling to SS7 signaling with 64 CCC.
- MF signaling to SS7 signaling with 64 CCC and Multiple 64 CCC.
- SS7 signaling to SS7 signaling with 64 CCC.
- SS7 signaling to SS7 signaling with 64 CCC and Multiple 64 CCC.
- SS7 signaling with 64 CCC to SS7 signaling with 64 CCC and Multiple 64 CCC.
- Subsequent rearrangement of Multiple 64 CCC.

h. All other changes to existing services will be treated as a discontinuance of the existing service and an installation of a service.

D. Assumed Access Minutes

1. When FGA, FGB, BSA-A or BSA-B Switched Access Service is provided in Telephone Company end offices that are not equipped for measurement capabilities, an assumed average intrastate access minutes will be used to determine the Switched Access Service Charges. The assumed average intrastate access minutes are as follows:

- a. When a FGA or BSA-A Switched Access Service arranged for two-way calling is provided where neither the originating nor terminating access minutes are recorded, the assumed average intrastate access minutes are 3,863 access minutes. 1,893 access minutes are assumed to be originating and 1,970 access minutes are assumed to be terminating. When a FGA or BSA-A Switched Access Service arranged for two-way calling is provided where the terminating access minutes are recorded but the originating access minutes are not, the assumed average originating access minutes are 1,893 originating access minutes. When a FGA or BSA-A Switched Access Service arranged for two-way calling is provided where the originating access minutes are recorded but the terminating access minutes are not, the assumed average terminating access minutes are 1,970 terminating access minutes.

6.7.2 Minimum Periods

Switched Access Service is provided for a minimum period of one month.

6.7.3 Switched Access Service for Resale of MTS, WATS, MTS-type and WATS-type Services

A. Where a multiline hunt group or trunk group arrangement is made up of (1) Feature Group A, B or D Switched Access Service and (2) local exchange business lines or other access arrangements associated with MTS/WATS, MTS-type or WATS-type services as provided in Paragraph A., 1., following, Switched Access charges for such combined access arrangements are calculated in accordance with the regulations in Paragraphs A., 4. and B., 1., following.

1. Where the customer is reselling MTS/WATS, MTS-type and/or WATS-type service(s) on which the Switched Access charges have been assessed, the customer may, at the option of the customer, employ ordinary local business exchange service at generally applicable local business exchange rates under the Telephone Company General and/or Local Exchange Tariffs. Switched Access charges under this Tariff will not apply for such access except as set forth in Paragraph B., 1., following, provided the underlying carrier that provides the MTS/WATS and/or MTS/WATS-type service(s) which are resold pays Switched Access Services charges for the services which are resold. Such Switched Access Service charges paid shall include charges for origination and termination of calls on both ends of the services which are resold. If the customer wishes to obtain special arrangements, such as trunk side service connections for such resale, the customer may, at the option of the customer, obtain Switched Access Service. Switched Access charges will apply for such access as set forth in Paragraph B., 1., following.
2. When access to the local exchange is required to provide an MTS/WATS-type service using a resold Private Line Service, Switched Access Service Rates and Regulations, as set forth in this section, will apply.
3. When the customer orders combined access, the customer will be charged the Switched Access charges in accordance with the regulations set forth in Paragraphs A., 4. and B., 1., following, if the customer or

No supplement to this tariff will be issued except for the purpose of canceling this tariff.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.5 Minimum Monthly Usage Charge (MMUC)-(Continued)

The MMUC billed to the IC for Feature Groups B, C and D will be based on the total number of BHMC's (by type of BHMC) provided in or out of the end office (by Feature Group). For Feature Group A, the MMUC will be billed to the IC at the line or hunt-group level or other level of account.

For FGA, when a prorata as set forth in Paragraph 6.7.3, preceding, is involved, the busy-hour minutes of capacity per mileage band will be reduced in the same proportion that the Local Transport actual usage is reduced. (See Paragraph 6.7.3, D.1., preceding).

The Minimum Monthly Usage Charge is not applied to Telephone Company assumed average number of access minutes for those Feature Groups A and B for which measurement capabilities do not exist. In these cases, the IC will always be billed for the assumed average number of access minutes, adjusted as set forth in Paragraph 6.7.3, D.1., preceding, if required for Feature Group A.

6.7.6 Change of Feature Group Type

Change from one type of Feature Group to another will be treated as a discontinuance of one type of service and a start of another. Non-recurring charges will apply, with one exception. When an IC upgrades a Feature Group B and C service to a Feature Group D service of the same capacity in the same end office, the nonrecurring charges will not apply. If, however, additional local transport optional features are added to the service at the time the conversion takes place, the nonrecurring charges for the added features will apply.

6.7.7 Moves

A move involves a change in the physical location of one of the following:

- The point of interface at the IC terminal location
- The IC terminal location

the provider of the WATS service furnishes documentation of the WATS usage and/or the customer furnishes documentation of the WATS-type service. The documentation supplied by the customer shall be supplied each month as set forth in Paragraph A., 6., following.

- 4. When the customer orders a combined access group to be used in conjunction with the resale of MTS/WATS and/or MTS/WATS-type services as set forth in Paragraph A., preceding, subject to the limitations of Carrier Common Line as set forth in Paragraph 3.2, preceding, the customer will be billed as set forth in Paragraph B., following. When more than one combined access group is provided in a LATA, the Telephone Company will apportion the resold MTS/WATS and/or MTS/WATS-type services and originating minutes of use among the combined access groups. Such apportionment will be based on the relationship of the originating usage for each combined access group to the total originating usage for all combined access groups in the LATA. The involved resold minutes shall be only intrastate outward MTS, MTS-type, WATS and WATS-type minutes and shall not include collect, third number, credit card or interstate minutes of use.

In order for the rate regulations to apply as set forth in Paragraph B., following, the combined access group and the resold MTS/WATS and/or MTS/WATS-type services must be provided in the same state, in the same LATA, provided by the same Telephone Company and connected directly or indirectly. For those LATAs that have more than one state, the customer shall report the information by state within the LATA.

Each of the combined access groups arranged in a multiline hunt group or trunk group arrangement used by the customer in association with the resold MTS/WATS and/or MTS/WATS-type services must be connected either directly or indirectly to the customer's designated premises at which

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.7 Moves-(Continued)

A. Moves Within the Same Building

When the move is to a new location within the same building, the charge for the move will be an amount equal to one half of the busy-hour minutes of capacity nonrecurring charge for the capacity affected. There will be no change in the minimum period requirements.

B. Moves to a Different Building

Moves to a different building will be treated as a discontinuance and start of service and all associated nonrecurring charges will apply. New minimum period requirements will be established for the new service. The IC will also remain responsible for satisfying all outstanding minimum period charges for the discontinued service.

6.7.8 Measuring Access Minutes

IC traffic to end office switches will be measured (i.e., recorded or assumed) by the Telephone Company at end office switches or access tandem switches. Originating and terminating calls will be measured (i.e., recorded or assumed) by the Telephone Company to determine the access minutes.

the resold MTS/WATS and/or MTS/WATS-type services are terminated. Direct connections are those arrangements where the combined access groups and resold MTS/WATS and/or MTS/WATS-type services are terminated at the same customers' designated premises. Indirect connections are those arrangements where the combined access groups and resold MTS/WATS and/or MTS/WATS-type services are terminated at different customer designated premises in the same LATA. Such different customer designated premises are connected by facilities that permit a call to flow from combined access groups to resold MTS/WATS and/or MTS/WATS-type services.

The adjustments as set forth following will be computed separately for each combined access group.

- 5. When the customer orders combined access as set forth in Paragraph A., preceding, subject to the limitations as set forth in Paragraph 3.2, preceding, and the Telephone Company receives the information furnished as set forth in Paragraph A., 3., preceding, the following regulations apply. This provision does not apply if Switched Access Charges as set forth in Paragraph A., 3., preceding are not applied to the MTS, MTS-type, WATS and WATS-type service being resold.
- 6. As set forth in Paragraph A., 3., preceding, the customer shall supply specific documentation in connection with the provision of combined access. Such documentation shall be supplied each month and shall identify the involved resold MTS, WATS, MTS-type and/or WATS-type services, herein after referred to as resold service(s). The reported resold minutes shall be only intrastate outward MTS, WATS, MTS-type and/or WATS-type minutes, and shall not include collect, third number, credit card or interstate minutes of use. The monthly period used to determine the minutes of use per resold service(s) shall be the most recent monthly period for which the customer has received a bill for such resold service(s). This information shall be delivered to the Telephone Company, at a location specified by the Telephone Company,

6.7.3 Switched Access Service for Resale of MTS/WATS-type Services-(Continued)

B. Combined Access Groups

1. When combined access groups are provided in a LATA, the following regulations apply:

a. One MTS/WATS-type FGA Switched Access Service for each resold WATS and WATS-type service reported as set forth in Paragraph A., 3., preceding, and Paragraph C., following, will be billed at local business exchange service rates as set forth in Paragraph 2., following.

b. Switched Access Service rates will apply for the line side (i.e., MTS/WATS-type FGA) and trunk side combined access groups as follows:

For MTS/WATS-type FGA provided in a combined access group, the minutes billed will be all the terminating intrastate access minutes and the adjusted originating intrastate access minutes for such combined groups. The adjusted originating minutes will be the originating intrastate access minutes less the reported resold service(s) minutes of use apportioned when necessary.

For trunk side provided in a combined access group, the minutes billed will be all the terminating and originating intrastate access minutes for such combined groups.

The rates that apply for the line side and/or the trunk side Switched Access Service access minutes, will be the Switched Access Service rates as set forth in Paragraph 6.8, following.

c. For the first month a combined access group is in service, each associated resold WATS and WATS-type service will be assumed to have 2500 or more originating intrastate minutes of use.

After the first month that both the combined access and the associated resold WATS and WATS-type services are in service,

6.7 Rate Regulations-(Continued)

6.7.8 Measuring Access Minutes-(Continued)

Access minutes on a terminating call start when the called telephone exchange service location answers and end when the access tandem switch or end office switch receives a disconnect signal. Access minutes on an originating call start when the IC terminal location acknowledges the call and end when the access tandem switch or end office switch receives a disconnect signal. The assumed average access minutes are as set forth in Paragraph 3.7, C., except as set forth following.

6.7.9 Network Blocking Charge for Feature Group D

The IC will be notified by the Telephone Company to increase its Access Connection busy hour minutes of capacity when excessive trunk group blocking occurs on groups carrying Feature Group D traffic and the measured access minutes for that hour exceed that purchased. Excessive trunk group blocking occurs when the blocking thresholds stated below are exceeded. They are predicated on time consistent, hourly measurements over a 30-day period, excluding Saturdays, Sundays and national holidays. If the order for additional capacity has not been received by the Telephone Company within 15 days of the notification, the Telephone Company will bill the IC, at the rate set forth in Paragraph 6.8.1, C., following, for each overflow in excess of the blocking threshold when (1) the average "30-day-period" overflow exceeds the threshold level for any particular hour and (2) the "30-day-period" measured average originating or two-way usage for the same block hour exceeds the Access Connection capacity purchased.

B. Combined Access Groups-(Continued)

1. (Continued)

c. (Continued)

each resold WATS and WATS-type service shall have 2500 or more originating intrastate minutes of use per month on average. If the average originating intrastate usage per service for each resold WATS or WATS-type service group does not equal 2500 originating minutes of use in any month, then for combined access billing purposes, the number of WATS and WATS-type services for which local business exchange service rates will be applicable will be reduced until the average originating intrastate usage per month for the remaining services equals or exceeds 2500 originating intrastate minutes. The number of originating minutes per month per resold WATS and WATS-type service will be developed by adding the resold outward MTS and MTS-type minutes to the resold originating WATS and WATS-type minutes and dividing the resulting sum per service group by the number of services in the group.

- 2. For each Switched Access Service provided as set forth in Paragraph B.1.a., preceding, local business exchange service rates as set forth in Paragraph 6.8.3 shall apply. The exchange involved shall be the exchange in which the service is provided.

The number of line side Switched Access Services billed at local business exchange service rates shall not exceed the number of line side connections provided in line side combined access groups in service in a LATA.

No Local Measured Service minutes are billed for terminating usage because all the terminating access minutes are billed as Switched Access Service access minutes.

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.10 Application of Rates for Feature Group A Extension Service

Feature Group A Switched Access Service is available with extensions, i.e., additional terminations of the service at different building(s) in the same or a different LATA. Feature Group A extensions within the LATA are provided and charged for under the Telephone Company's Local and/or General Exchange Service Tariffs. Extensions in different LATA's are provided and charged for as Special Access Service. The rate elements which they apply are: Special Transport (from the extension bridging point to the IC serving wire center), Access Connections and one-half of the appropriate facility interface combination monthly rates and nonrecurring charges.

6.7.11 Message Unit Credit

Calls from end users to the seven-digit local telephone numbers associated with Feature Group A Switched Access Service are subject to Telephone Company Local and/or General Exchange Service Tariff charges, as well as any other applicable charges for IC services. The monthly bills rendered to IC's for their Feature Group A Switched Access Service will include a credit to reflect any message unit charges collected from their customers under the Telephone Company's Local and/or General Exchange Service Tariffs. No message unit credit is given on the access minutes that have been prorated as set forth in Paragraph 6.7.3, preceding.

6.7.12 Local Information Delivery Services

Calls over Switched Access in the terminating direction to certain community information services will be rated under the applicable rates for Switched Access Service as set forth in Paragraph 6.8, following. In addition, the charges per call as specified under the Telephone Company Local and/or General Exchange Tariffs, e.g., 976 (DIAL-IT) Network Services, will also apply.

6. SWITCHED ACCESS SERVICE-(Continued)

(FC) 6.10 Rate Regulations-(Continued)

(FC) 6.10.4 Minimum Monthly Charge

Switched Access Service is subject to a minimum monthly charge. The minimum charge applies for the total capacity provided. The minimum monthly charge consists of the following elements:

(FC) The minimum monthly charge for the Carrier Common Line and Local Switching rate elements is the sum of the charge set forth in Section 3, preceding and, 6.11.2, A., B. and C., following, for the measured or assumed usage for the month.

(FC) For the Local Transport rate element, the minimum monthly charge is assessed in terms of a Minimum Monthly Usage Charge (MMUC). If the actual Local Transport usage charge for the month is higher than the MMUC, the IC pays the actual usage charge. If the Local Transport usage charge is lower than the MMUC, the IC pays the MMUC. The MMUC is determined as set forth in Paragraph 6.10.5, following. Rates for actual usage are set forth in Paragraph 6.11.1, A., following.

(AT) The minimum monthly charge for DNAL BSA is the sum for the applicable monthly rates for the BSA as set forth in Paragraph 6.11.

(FC) 6.10.5 Minimum Monthly Usage Charge (MMUC)

The MMUC billed the customer will be determined as follows: FGC, FGD, BSA-C and BSA-D when ordered in BHMCs, will be determined separately for the total number of originating BHMCs (by BHMC type) and the total number of terminating BHMCs (by BHMC type) provided to the end office (by feature group);

(AT) FGD and BSA-D when ordered on a per trunk basis, will be based on an assumed 30 BHMCs, per trunk, by entry switch;

(AT) FGA and BSA-A will be based on an assumed 30 BHMCs per line;

(AT) FGB and BSA-B will be based on an assumed 30 BHMCs per trunk, by entry switch;

(FC) The rates for the MMUC are set forth in Section 6.11., following.

6.7.4 Minimum Monthly Charge

Public Service Commission

Switched Access Service is subject to a minimum monthly charge. The minimum charge applies for the total capacity provided. The minimum monthly charge consists of the following elements:

(AT) The minimum monthly charge for the Carrier Common Line and Local  
(RT) Switching rate elements is the sum of the charge set forth in  
(RT) Section 3, preceding and, 6.8.2, A., B. and C., following, for the  
(RT) measured or assumed usage for the month.

(RT) For the Local Transport rate element, the minimum monthly charge  
(RT) is assessed in terms of a Minimum Monthly Usage Charge (MMUC). If  
(RT) the actual Local Transport usage charge for the month is higher  
(RT) than the MMUC, the IC pays the actual usage charge. If the Local  
(RT) Transport usage charge is lower than the MMUC, the IC pays the  
(RT) MMUC. The MMUC is determined as set forth in Paragraph 6.7.5,  
(RT) following. Rates for actual usage are set forth in Paragraph  
(RT) 6.8.1, A., following.

CANCELLED

6.7.5 Minimum Monthly Usage Charge (MMUC)

The MMUC billed the customer will be determined as follows:

APR 11 1993  
BY 4th R. S. #46  
Public Service Commission

FGC and FGD, when ordered in BEMCs, will be determined separately for the total number of originating BEMCs (by BEMC type) and the total number of terminating BEMCs (by BEMC type) provided to the end office (by feature group);

FGD, when ordered on a per trunk basis, will be based on an assumed 30 BEMCs, per trunk, by entry switch;

FGA will be based on an assumed 30 BEMCs per line;

FGB will be based on an assumed 30 BEMCs per trunk, by entry switch;

The rates for the (MMUC) are set forth in Section 6.8., following.

Public Service Commission

6. SWITCHED ACCESS SERVICE--(Continued)

6.7 Rate Regulations--(Continued)

6.7.4 Minimum Monthly Charge

Switched Access Service is subject to a minimum monthly charge. The minimum charge applies for the total capacity provided. The minimum monthly charge consists of the following elements:

The minimum monthly charge for the Carrier Common Line, Local Switching, Line Termination and Intercept rate elements is the sum of the charge set forth in Section 3, preceding and, 6.8.2, A., B. and C., following, for the measured or assumed usage for the month, adjusted as set forth in Paragraph 6.7.3, B.1., preceding, when applicable.

For the Local Transport rate element, the minimum monthly charge is assessed in terms of a Minimum Monthly Usage Charge (MMUC). If the actual Local Transport usage charge for the month adjusted as set forth in Paragraph 6.7.3, B.1., preceding, when applicable, is higher than the MMUC, the IC pays the actual usage charge. If the Local Transport usage charge is lower than the MMUC, the IC pays the MMUC. The MMUC is determined as set forth in Paragraph 6.7.5, following. Rates for actual usage are set forth in Paragraph 6.8.1, A., following.

Original Sheet 76

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.13 Mileage Measurement

The mileage to be used to determine the monthly rate for the Local Transport is calculated on the air line distance between the end office switch where the call carried by Local Transport originates or terminates and the IC serving wire center, except as set forth in Paragraphs 6.7.13, A., B., C., D. and E., following. The V&H coordinates method is used to determine mileage. This method is set forth in General Regulations, Section 2, Paragraph 2.7, preceding.

Mileage is shown in Paragraph 6.8.2, following, in terms of mileage bands. To determine the rate to be billed, first compute the mileage using the V&H coordinates method, then find the band into which the computed mileage falls and apply the rate shown for that band.

Exceptions to the mileage measurement rules are as follows:

- A. Mileage for access minutes in the originating direction over Feature Group A Switched Access Service will be calculated on an air line basis, using the V&H coordinates method, between the end office switch where the Feature Group A End Office switching dial tone is provided and the IC serving wire center for the Switched Access Service provided.
- B. When a non-AT&T IC terminal location is within five miles of an AT&T Class 4 office, the Local Transport mileage for a call which is carried over a Switched Access Service, originating or terminating through an end office switch, shall be the distance as would be determined from that end office switch to the serving wire center for that AT&T Class 4 office unless the IC specifies that for an entire LATA, it wants all measurements determined from its serving wire center. This designation (i.e., which serving wire center to use in calculating mileage) may be changed only once in any 12-month period, and when it is changed, the call will be billed for the change as set forth in Section 5, Paragraph 5.6, preceding.

6.10.6 DNAL Recurring Rates

Recurring rates for the DNAL BSA apply as follows:

A. DNAL Termination

A monthly rate applies for each DNAL point of termination requested by the customer.

B. DNAL Mileage

A fixed monthly rate applies, per mileage band, for each DNAL channel between the customer's designated premises and the Telephone Company end office switch where the DNAL is terminated.

A monthly rate per mile applies to each airline mile between the serving wire center of the customer's designated premises and the Telephone Company end office switch where the BSE requiring the DNAL is provided.

Airline mileage is calculated as set forth in Paragraph 6.10.15.

6.10.7 Change of Feature Group Type

Changes from one type of Feature Group to another will be treated as a discontinuance of one type of service and a start of another.

Nonrecurring charges will apply, with one exception. When a customer upgrades a Feature Group A, B or C service to a Feature Group D service, the trunk installation charges will not apply. Any features that are added when the customer upgrades to FGD will incur the charges applicable to that feature. When a customer upgrades a Feature A, B or C service to Feature Group D service, minimum period obligations will not change, i.e., the time elapsed in the existing minimum period obligations will be credited to the minimum period obligations for Feature Group D service. For all other changes from one type of Feature Group to another, new minimum period obligations will be established.

Alternative D service, the BSA-D trunk installation charges will not apply. Any features or BSE's that are added or changed when the customer upgrades the service to BSA-D will incur the charge applicable to that feature or BSE. When a customer makes such an upgrade, minimum period obligations will not change, i.e., the time elapsed in the existing minimum period obligations will be credited to the minimum period obligations for Circuit Switched - Trunk Side Alternative D service. For all other changes from one type of BSA to another, new minimum period obligations will be established.

6.10.9 Conversion of Existing Feature Groups to Basic Serving Arrangements

During the transition period, as set forth in Paragraph 6.1, preceding, nonrecurring charges will not apply to the conversion of existing Feature Groups to their unbundled BSA equivalents. However, conversions from a BSA to its equivalent Feature Group will be treated as a discontinuance of one type of service and a start of another (nonrecurring charges will apply).

When a customer converts an existing Feature Group to its unbundled BSA equivalent, minimum period obligations will not change, i.e., the time elapsed in the existing minimum period obligations will be credited to the minimum period obligations for the BSA. For changes from a BSA to a bundled Feature Group during the transition period as noted above, new minimum period obligations will be established.

(MT) 6.10.7 Change of Feature Group Type-(Continued)

Changes within Feature Group A (i.e., MTS/WATS-type to FX/ONAL or FX/ONAL to MTS/WATS-type) are not treated as a discontinuance of one type of service and start of another but are subject to a non-recurring charge as set forth in Paragraph 5.2.2.A, preceding.

CANCELLED

6.10.8 Change of Basic Serving Arrangements

Changes from one type of BSA to another will be treated as a discontinuance of one type of service and a start of another. Nonrecurring charges will apply with one exception. When a customer upgrades a Circuit Switched - Line Side or a Circuit Switched - Trunk Side Alternative B or C service to a Circuit Switched - Trunk Side Alternative D service, the nonrecurring charges will not apply. When a customer makes such an upgrade, minimum period obligations will not change, i.e., the time elapsed in the existing minimum period obligations will be credited to the minimum period obligations for Circuit Switched - Trunk Side Alternative D service. For all other changes from one type of BSA to another, new minimum period obligations will be established.

(AT) 6.10.10 Moves and Rollovers

A move involves a change in the physical location of one of the following:

- The point of termination at the customer's premises
- The customer's premises

(CT) The charges for the move are dependent on the type of move requested by the customer.

(AT) A. Moves of the Point of Termination Within the Same Customer Premises

(1) Rollover

A Rollover is a customer initiated move of a Point of Termination from one existing Local Transport facility to another existing Local Transport facility, within the same customer premises. The Rollover must occur within the same Telephone Company location. The following moves will be considered Rollovers of access service facilities:

- A Voice Frequency facility is moving to a DS1 facility.
- A DS1 facility is moving to a DS3 facility. All channels on the DS1 facility must move simultaneously.

The following diagram is an example of a DS1 facility moving to a DS3 facility.

- DS1 Multiplexed to Voice Frequency (VF)
- DS3 Multiplexed to DS1

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE-(Continued)

#### 6.10 Rate Regulations-(Continued)

##### 6.10.11 Measuring Access Minutes-(Continued)

Step 1: Obtain recorded originating minutes and messages (measured as set forth in Paragraph (A) and (C) following for FX/ONAL FGA, FX/ONAL, BSA-A, FGC and BSA-C, respectively) from the appropriate recording data.

(AT) Step 2: Obtain the total attempts by dividing the originating measured messages by the completion ratio. Completion Ratios (CR) are obtained separately for the major call categories such as DDD, operator, ACIS, 800, 900, directory assistance and international from a sample study which analyzes the ultimate completion status of the total attempts which receive acknowledgment from the customer. That is, Measured Messages divided by Completion Ratio equals Total Attempts.

Step 3: Obtain the total non-conversation time additive (NCTA) by multiplying the total attempts (obtained in Step 2) by the NCTA per attempt ratio. The NCTA per attempt ratio is obtained from the sample study identified in Step 2 by measuring the non-conversation time associated with both completed and incomplete attempts. The total NCTA is the time on a completed attempt from customer acknowledgment of receipt of call to called party answer (set up and ringing) plus the time on an incomplete attempt from customer acknowledgment of call unit the access tandem or end office receives a disconnect signal (ring - no answer, busy or network blockage). That is, Total Attempts times Non-Conversation Time per Attempt Ratio equals Total NCTA.

Step 4: Obtain total chargeable originating access minutes by adding the total NCTA (obtained in Step 3) to the recorded originating measured minutes (obtained in Step 1). That is, Measured Minutes plus NCTA equals Chargeable Originating Access Minutes.

## ACCESS SERVICES

## 6. SWITCHED ACCESS SERVICE-(Continued)

## (FC) 6.10 Rate Regulations-(Continued)

## (FC) 6.10.11 Measuring Access Minutes-(Continued)

- (AT) When assumed minutes are used, the assumed minutes are the chargeable access minutes. Assumed minutes are used for FGA, FGB, (AT) BSA-A and BSA-B services which originate or terminate in end offices not equipped with measurement capabilities and are applied on a line (FC) or trunk basis, as set forth in Paragraph 6.10.1.D., preceding.
- (AT) FGA and BSA-A access minutes or fractions thereof, the exact value of the fraction being a function of the switch technology where the measurement is made, are accumulated over the billing period for each line or hunt group, and are then rounded up to the nearest (AT) access minute for each line or hunt group. FGB, FGC, FGD, BSA-B, (AT) BSA-C and BSA-D access minutes or fractions thereof, the exact value of the fraction being a function of the switch technology where the measurement is made, are accumulated over the billing period for each end office, and are then rounded up to the nearest access minute for each end office.
- (AT) A. FGA and BSA-A Usage Measurement
- (AT) For originating calls over FGA or BSA-A, usage measurement begins when the (AT) originating FGA or BSA-A entry switch receives an off-hook supervisory (AT) signal forwarded from the customer's point of termination. (Where FGA or (AT) BSA-A is used for MTS/WATS-type services, this off-hook signal is (AT) generally provided by the customer's equipment. Where FGA or BSA-A is used for FX/ONAL services, the off-hook signal is generally forwarded by the customer's equipment when the called party answers.)
- (AT) The measurement of originating call usage over FGA or BSA-A ends when the (AT) originating FGA or BSA-A entry switch receives an on-hook supervisory signal from either the originating end user's end office, indicating the originating end user has disconnected, or the customer's point of termination, whichever is recognized first by the entry switch.

(CP)ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.8 Measuring Access Minutes-(Continued)

RECEIVED  
JUN 27 1986  
MISSOURI  
Public Service Commission

When assumed minutes are used, the assumed minutes are the chargeable access minutes. Assumed minutes are used for FGA and FGB services which originate or terminate in end offices not equipped with measurement capabilities and are applied on a line or trunk basis, as set forth in Paragraph 6.7.1.D., preceding.

FGA access minutes or fractions thereof, the exact value of the fraction being a function of the switch technology where the measurement is made, are accumulated over the billing period for each line or hunt group, and are then rounded up to the nearest access minute for each line or hunt group. FGB, FGC and FGD access minutes or fractions thereof, the exact value of the fraction being a function of the switch technology where the measurement is made, are accumulated over the billing period for each end office, and are then rounded up to the nearest access minute for each end office.

(A) Feature Group A Usage Measurement

For originating calls over FGA, usage measurement begins when the originating FGA entry switch receives an off-hook supervisory signal forwarded from the customer's point of termination. (Where FGA is used for MTS/WATS-type services, this off-hook signal is generally provided by the customer's equipment. Where FGA is used for FX/ONAL services, the off-hook signal is generally forwarded by the customer's equipment when the called party answers.)

The measurement of originating call usage over FGA ends when the originating FGA entry switch receives an on-hook supervisory signal from either the originating end user's end office, indicating the originating end-user has disconnected, or the customer's point of termination, whichever is recognized first by the entry switch.

6.7 Rate Regulations-(Continued)

6.7.9 Network Blocking Charge for Feature Group D

The IC will be notified by the Telephone Company to increase its busy-hour minutes of capacity when excessive trunk group blocking occurs on groups carrying Feature Group D traffic. Excessive trunk group blocking occurs when the accumulated blocked calls in a calendar month exceeds the quantity specified in the chargeable thresholds table below times the number of trunks in the group. If the order for sufficient additional capacity has not been received by the Telephone Company within 15 days of the notification, the Telephone Company will bill the IC, at the rate set forth in Paragraph 6.8.1, C., following, for each overflow in excess of the chargeable threshold.

Chargeable Thresholds

## 6. SWITCHED ACCESS SERVICE-(Continued)

## (FC) 6.10 Rate Regulations-(Continued)

## (FC) 6.10.15 Mileage Measurement

The mileage to be used to determine the monthly rate for Local Transport is calculated on the airline distance between the end office switch where the call carried by Local Transport originates or terminates and the IC serving wire center, except as set forth

(FC) in Paragraphs 6.10.14, A., B., C., and D., following. Where applicable, the V&H coordinates method is used to determine mileage. This method is set forth in the appropriate Exchange Carrier Association Tariff filed with the F.C.C.(1)

(FC) Mileage is shown in Paragraph 6.11.1, following, in terms of mileage bands. To determine the rate to be billed, first compute the mileage, then find the band into which the computed mileage falls and apply the rate shown for that band. If the calculation results in a fraction of a mile, always round up to the next whole mile before determining the mileage band and applying the rates.

Exceptions to the mileage measurement rules are as follows:

(AT) A. Mileage for FGA or BSA-A originating access minutes will be calculated using the V&H coordinates of the customer's serving wire center and the end office switch

(AT) where the FGA or BSA-A dial tone is provided.

(C) B. When a non-AT&T IC terminal location is within five miles of an AT&T Class 4 office, the Local Transport mileage for a call which is carried over a Switched Access Service, originating or terminating through an end office switch shall be the distance as would be determined from that end office switch to the IC's serving wire center unless the IC specifies that for an entire LATA, it wants all measurements determined from the serving wire center for that AT&T class 4 office. This designation (i.e., which serving wire center to use in calculating mileage) may be changed only once in any 12-month period. Such change will be made without charge to the IC.

(AT) C. When the Alternate Traffic Routing feature is provided with FGB, FGC and FGD or the Alternate Traffic Routing BSE is provided with BSA-B, BSA-C or BSA-D to provide service to multiple customer switching systems, usage rated Local Transport access minutes will be apportioned between the two transmission routes

(AT) used to provide this feature. Such apportionment will be made for FGB, FGC,

(AT) BSA-B and BSA-C using standard Telephone Company traffic engineering methodology as set forth in appropriate Technical References and will be based on the last trunk CCS desired for the high usage group, as described in Paragraph 6.3.1, L., preceding, and the relative capacity ordered to the end office, when the feature

MISSOURI

Exceptions to the mileage measurement rules are as follows:

- A. Mileage for FGA originating access minutes will be calculated using the V&H coordinates of the customer's serving wire center and the end office switch where the FGA dial tone is provided.
- B. When a non-AT&T IC terminal location is within five miles of an AT&T Class 4 office, the Local Transport mileage for a call which is carried over a Switched Access Service, originating or terminating through an end office switch, shall be the distance as would be determined from that end office switch to the IC's serving wire center unless the IC specifies that for an entire LATA, it wants all measurements determined from the serving wire center for that AT&T class 4 office. This designation (i.e., which serving wire center to use in calculating mileage) may be changed only once in any 12-month period. Such change will be made without charge to the IC.

AUG 15 1995

6.10 Rate Regulations-(Continued)

6.10.17 800 Number Portability Access Service (NPAS)

MO. PUBLIC SERVICE COMM.

The following rate elements found in Paragraph 6.11.7 are applicable to 800 NPAS:

(AT) A. The 800 NPAS Query provides the customer identification function required to determine the appropriate routing for each 1+800+NXX+XXXX number based on the geographic origination of the call, from a specific NPA/NXX, NPA, or LATA, up to any combination of the same. The 800 NPAS Query rate applies per call for each 800 Query received at the Telephone Company SCP that returns a valid carrier identification code that provides the appropriate routing information of that call and results in the delivery of the 800 call to the customer. The following features are available with 800 NPAS:

B. The POTS translation feature converts the 800 number into a designated Plain Old Telephone Service (POTS) ten-digit number. If the customer provides the POTS number associated with the 800 number and requests delivery of the POTS number in place of the 800 number, the Telephone Company will deliver the POTS number.

The charge for this feature will be applied for each POTS translation Query and will be in addition to the 800 NPAS Query.

C. The Call Validation feature ensures that calls originate only from an 800 Subscriber's customized service area. Calls originating outside the area will be screened and an out of band recording will be returned to the calling party.

The charge for this feature will be applied for each Call Validation query and will be in addition to the 800 NPAS Query.

D. The Call Handling and Destination feature allows routing of 800 calls based on one or any combination of the following: time of day, day of week, percent allocation and specific ten-digit ANI.

The charge for this feature will be applied for each Call Handling and Destination query and will be in addition to the 800 NPAS Query.

(AT) E. The 800 NPAS rate elements will be billed to the customer utilizing FGD/BSA-D trunk side Switched Access Service for the delivery of 800 calls. Upon written notification by an exchange telephone company, the Telephone Company will render the 800 NPAS charges to the exchange telephone company, instead of the customer. The Telephone Company will bill the exchange telephone company for the appropriate 800 NPAS charges when an 800 NPAS call originates in the exchange telephone company's territory but uses the Telephone Company's SSP to execute the carrier identification function and delivery of the 800 call to the customer.

(MT) 6.10.17 800 Number Portability Access Service (NPAS)

The following rate elements found in Paragraph 6.11.7 are applicable to 800 NPAS:

- A. The 800 NPAS Query provides the customer identification function required to determine the appropriate routing for each 1+800+NXX+XXXX call. The 800 NPAS Query rate applies per call for each 800 Query received at the Telephone Company SCP that returns a valid carrier identification code that provides the appropriate routing information of that call. The following features are available with 800 NPAS:
- B. The POTS translation feature converts the 800 number into a designated Plain Old Telephone Service (POTS) ten-digit number. If the customer provides the POTS number associated with the 800 number and requests delivery of the POTS number in place of the 800 number, the Telephone Company will deliver the POTS number.

The charge for this feature will be applied for each POTS translation Query and will be in addition to the 800 NPAS Query.

- C. The Call Validation feature ensures that calls originate only from an 800 Subscriber's customized service area. Calls originating outside the area will be screened and an out of band recording will be returned to the calling party.

The charge for this feature will be applied for each Call Validation query and will be in addition to the 800 NPAS Query.

- D. The Call Handling and Destination feature allows routing of 800 calls based on one or any combination of the following: time of day, day of week, percent allocation and specific ten-digit ANI.

The charge for this feature will be applied for each Call Handling and Destination query and will be in addition to the 800 NPAS Query.

### 6. SWITCHED ACCESS SERVICE (Continued)

#### 6.10 Rate Regulations (Continued)

##### 6.10.19 Switched Access Optional Payment Plan

###### (A) Description

The Switched Access Optional Payment Plan provides the customer with an optional pricing plan and discounted tariff rates for a one, two, three, four and five year period when the customer agrees to a specific minimum monthly usage commitment level for the Optional Payment Plan period. The Switched Access Optional Payment Plan is available with Switched Access Service, i.e., Feature Group A (FGA), FGB, FGC, FGD, Basic Service Arrangement - A (BSA-A), BSA-B, BSA-C and BSA-D; however, it does not apply to assumed usage, monthly rated (flat recurring) elements or nonrecurring charges. The Telephone Company's portion of usage related to traffic jointly provided by the Telephone Company and other local exchange carriers will be included.

The Switched Access Optional Payment Plan, which includes both originating and terminating access minutes of use, provides the customer with discounts for usage sensitive switched access rate elements based upon a customer's commitment to purchase switched access for a specified length of time at a specific volume level. Switched Access Optional Payment Plan discounts apply to usage sensitive rate elements, such as Carrier Common Line, Local Switching, Interconnection Charge and Local Transport.

The Switched Access Optional Payment Plan is available as a one, two, three, four or five-year Plan. The Switched Access Optional Payment Plan commitment levels range from 80%, the minimum commitment level, to 100% of a customer's base period usage. A base period is defined as the customer's most recent twelve months of billed usage.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE - (Continued)

#### 6.10 Rate Regulations - (Continued)

##### 6.10.19 Switched Access Optional Payment Plan - (Continued)

###### (A) Description - (Continued)

The Switched Access Optional Payment Plan discounts are applied to the applicable switched access usage sensitive rate elements. The discount applies to all minutes of use including those minutes exceeding the customer's commitment level. Reassessment charges will apply if actual usage for the annual period is less than the Switched Access Optional Payment Plan commitment level but greater than the 80% minimum commitment level. Termination charges will apply when a customer either terminates the Plan prior to the stop date of the Plan or when the actual usage for the annual period falls below the 80% minimum commitment level.

###### (B) Ordering and Renewing

The Switched Access Optional Payment Plan is available to all customers and may be ordered at the state or LATA level within the State of Missouri. A customer may subscribe to only one Switched Access Optional Payment Plan per state or LATA at one time. The Switched Access Optional Payment Plan is subscribed to at an Access Carrier Name Abbreviation (ACNA) level. The sum of ACNAs may be used to develop a customer's base period commitment level. Should merger or acquisition activity occur, a customer may combine additional ACNAs after the start date of the Plan. Upon written request of the customer to add ACNAs to the existing Plan, the Telephone Company will work cooperatively with the customer to renegotiate the new base period usage.

## ACCESS SERVICES

### 6. SWITCHED ACCESS SERVICE - (Continued)

#### 6.10 Rate Regulations - (Continued)

##### 6.10.19 Switched Access Optional Payment Plan - (Continued)

###### (B) Ordering and Renewing - (Continued)

An Access Service Request (ASR) form is not required to order a Switched Access Optional Payment Plan. Instead, a customer must request the Switched Access Optional Payment Plan in writing by providing the following information:

- Length of Plan expressed as one, two, three, four, five years;
- Minutes of use in base period;
- Percentage of commitment level of base period usage;
- ACNA to be included in the calculations of base period and commitment levels;
- State or LATA option.

A customer may, at any time during the Plan, renew the Plan based upon current market and tariff conditions provided the new Plan's expiration date is not earlier than the current Plan's expiration date and the new Plan is at the same or higher commitment level. For example, a customer, having completed one year of a three year term Plan, may renew for two years (or longer) at the same or higher commitment level to take advantage of a higher discount rate for the renewed Plan commitment level and term period. New base period commitments will be determined for the renewal.

Upon expiration of a customer's Switched Access Optional Payment Plan, nondiscounted tariff rates will apply to the customer's switched access usage sensitive rate elements.

### 6. SWITCHED ACCESS SERVICE - (Continued)

#### 6.10 Rate Regulations - (Continued)

##### 6.10.19 Switched Access Optional Payment Plan - (Continued)

###### (C) Terms and Conditions - (Continued)

###### (1) Discount Factor

Discount factors are percentage discounts applied to current tariff rates for switched access usage sensitive rate elements. The discount applies to all switched access minutes of use included in the Switched Access Optional Payment Plan, including those exceeding the commitment level. The resulting discounted tariff rate will be calculated to the same number of decimal places as the nondiscounted tariff rate. If a Switched Access Optional Payment Plan Matrix discount factor is increased, the new factor will automatically apply to the customer's usage as of the effective date of the tariff change. The Switched Access Optional Payment Plan Matrix discount factors are displayed in (9) following.

###### (2) Annual Commitment and Commitment Percentage

To obtain the discounted tariff rates, the customer agrees to purchase a specific level of usage over a specified period of time. The commitment is an annual quantity of billed minutes of use associated with the applicable switched access usage sensitive rate elements and is expressed as a percentage level of the customer's previous twelve months (base period) billed usage. The annual quantity will be based on the local switching MOU. All applicable rate elements should be consistent with the commitment percentage. For multi-year Plans, the base period is recast each anniversary date and defined as the previous twelve month period. If a customer does not have twelve months of prior usage, the Telephone Company will work cooperatively with the customer to develop an estimated base period usage level upon which to base a Switched Access Optional Payment Plan commitment. No discounts are applicable to usage volume levels below the 80% minimum commitment level.

### 6. SWITCHED ACCESS SERVICE - (Continued)

#### 6.10 Rate Regulations - (Continued)

##### 6.10.19 Switched Access Optional Payment Plan - (Continued)

###### (C) Terms and Conditions - (Continued)

###### (3) Start and Stop Dates

The Switched Access Optional Payment Plan is initiated at the beginning of a bill period (start date) and is completed at the end of a pre-determined bill period (stop date) in 12 month increments. During this time period, the discount is applied to the switched access usage sensitive rate elements.

###### (4) Anniversary Dates

Anniversary date(s) occur annually between the start and stop dates. Ninety days after the anniversary date, actual usage is compared to the commitment level. The billing for the given year will be adjusted as of the anniversary date. For one year Plans, the anniversary date is the end date of the Plan. For multi-year Plans, anniversary dates occur at the end of each twelve-month period of the Plan. On the anniversary date of a multi-year Plan, the base period is recast and defined as the previous twelve month period.

###### (5) Reassessment Charges

###### (a) Definition

Reassessment charges are charges that apply when the actual usage is less than the customer's Switched Access Optional Payment Plan commitment level but greater than the 80% minimum level.

#### 6.10 Rate Regulations - (Continued)

##### 6.10.19 Switched Access Optional Payment Plan - (Continued)

###### (C) Terms and Conditions - (Continued)

###### (5) Reassessment Charges - (Continued)

###### (b) Determination

Each Plan is reviewed ninety days following the Plan anniversary or early termination date to determine if commitment levels were achieved. This determination is made by comparing the total usage accumulated from the last anniversary date up to the current anniversary or termination date. The ninety day period allows late usage to be applied to the Plan. If actual usage is below the commitment level, but greater than the 80% minimum level, Reassessment charges apply.

###### (c) Application of Reassessment Charges

With the exception of a one year Plan, when actual usage is less than the customer's commitment level but greater than the 80% minimum level, actual usage is multiplied by the tariff rate and the difference between the customer's existing Optional Payment Plan discount factor and the new applicable discount factor for the shorter plan period at the percentage level appropriate for the actual usage. Application of Reassessment charges represents a recovery of the difference between discount levels.

###### (c) Application of Reassessment Charges - (Continued)

- For a one year Plan, actual usage is re-rated at the tariff rate in effect at the time usage was recorded.
- For a multi-year Plan, actual usage is re-rated using the discount factor for a Plan of that length. For example, a five year Plan in the third year would re-rate all actual usage for each year (i.e., years one, two and three) using the discount factor for a three year Plan.

At the time Reassessment charges are applied, the customer is considered to have terminated the Plan; however, Termination charges will not apply.

###### (6) Termination Charges

###### (a) Definition

Termination charges are charges that occur when the customer either terminates the Optional Payment Plan prior to the stop date of the Plan or the actual annual usage falls below the 80% minimum commitment level. The customer must notify the Telephone Company in writing 60 days prior to the termination of the Switched Access Optional Payment Plan. When the annual usage falls below the 80% minimum commitment level, the customer is considered to have terminated the Plan.

6.10 Rate Regulations - (Continued)

6.10.19 Switched Access Optional Payment Plan - (Continued)

(C) Terms and Conditions - (Continued)

(6) Termination Charges

(b) Determination

Each Plan is reviewed ninety days following the Plan anniversary or early termination date, whichever occurs first, to determine if commitment levels were achieved. This determination is made by comparing the total usage accumulated from the last anniversary date up to the current anniversary or termination date. This ninety day period allows late usage to be applied to the Plan. If actual annual usage is below the customer's commitment level and the 80% minimum level, or the customer terminates the Plan prior to the stop date, Termination charges will apply.

(c) Application of Termination Charges

If termination occurs before the end of the first year, actual usage will be billed at the tariffed rate in effect at the time the usage was recorded.

If a customer terminates the Plan after the first year but before the Plan's stop date or the actual usage is below the 80% minimum commitment level, actual usage for all previous months is re-rated using the tariff rate in effect at the time the usage was recorded. For example, if a five year Plan is terminated in the third year, all actual usage for years one, two and three are re-rated using the tariff rate and the difference between the re-rated usage and the billed discounted usage is billed as a Termination charge.

### ACCESS SERVICES

#### 6. SWITCHED ACCESS SERVICE - (Continued)

##### 6.10 Rate Regulations - (Continued)

##### 6.10.19 Switched Access Optional Payment Plan - (Continued)

##### (C) Terms and Conditions - (Continued)

##### (7) Rate Changes

The maximum rate for each rate element is equal to the nondiscounted tariff rate at the start date of the customer's Switched Access Optional Payment Plan. Any price decreases during the Plan will be passed on to the customer in the form of a lower discounted tariffed rate.

A customer may terminate its Switched Access Optional Payment Plan without liability and termination charges if any applicable switched access tariff rate increases by more than five percent of the rate at the beginning of the Switched Access Optional Payment Plan. To be eligible for the rate change termination option, the customer must notify the Telephone Company in writing within 90 days of a rate change. Upon discontinuance of the Plan, nondiscounted tariff rates will apply to the customer's usage sensitive rate elements.

##### (8) Lost or Damaged Usage Data

If usage data becomes unavailable to determine discounts, the Telephone Company will estimate the amount of lost usage. The estimate will be used in the Plan calculations.

(9) Term Plan Discount Matrix

The following matrix is used to determine the customer's Optional Payment Plan commitment level and discount factor. To determine the matrix discount factor for a Plan:

- Identify the number of years of the Switched Access Optional Payment Plan.
- Identify the usage commitment provided by the customer as the percentage of the base period minutes of use.
- Use the Plan Discount Matrix to identify the appropriate discount percentage.

**Discount Factors**

6.8.4 Local Business Line Rates for Access to Resold Service

The local business line rates that apply for arrangements provided as set forth in Paragraph 6.7.3, preceding, are the same as the local business exchange service rates as set forth in the General and/or Local Exchange Service Tariffs of the Telephone Company applicable to the exchange involved and type of equipment at the IC terminal location. The local business line rate also includes any End User Access Service Charges authorized by the FCC.
