2. <u>GENERAL REGULATIONS</u> (Cont'd)

2.3 <u>Obligations of the Customer</u> (Cont'd)

2.3.8 Jurisdictional Determination

Where possible, the Company will determine the jurisdiction of both originating and terminating calls from the call detail records generated via the switched network, and bill usage according to such determination. A call that enters the Customer's network. in a state different from the state in which the called station is located will be classified as interstate. A call that enters the Customer's network at a point within the same state as the state where the called station is located will be classified as intrastate.

For billing purposes, the Company verifies the type of call (e.g., interstate/ intrastate, interLATA/intraLATA) and calculates percentages based on the type of call and volumes. The Company sends records to each ILEC summarizing all call detail that is billed. The records are broken down by jurisdiction so that each ILEC will be able to calculate and verify the percentages of what the Company should be billing.

2.3.9 VoIP-PSTN Traffic

2.3.9.1 General

- A. The section applies to the treatment of voice-over Internet protocol (VoIP) and public switched telecommunications network (PSTN) traffic pursuant to the Federal Communications Commission's (FCC) Part 51 Interconnection Rules and in compliance with the FCC's Report and Order and Further Notice of Proposed Rulemaking in WC Docket Nos. 10-90, etc., FCC Release No. 11-161 (November 18, 2011), and FCC Second Order on Reconsideration (FCC 12-47) adopted April 24, 212 ("FCC Order").
- B. VoIP-PSTN traffic is defined as a customer's interexchange voice traffic exchanged between a telephone company end-user and the customer in time division multiplexing (TDM) format that originates and/or terminates in Internet protocol (IP) format and travels over PSTN facilities. This section governs the identification of VoIP-PSTN traffic that is required to be compensated at interstate access rates, in absence of an agreement existing between the parties, as required by the FCC Order. Specifically, this section establishes the method of separating such traffic (referred to in this tariff as relevant VoIP-PSTN traffic) from the customer's traditional intrastate access traffic, so that such relevant VoIP-PSTN traffic can be billed in accordance with the FCC Order.
