VII.	CONCLUSION .....	52

1     **I.    INTRODUCTION**

2     **Q.    Please state your name and business address.**

3     A.    My name is Robin McAlester. My business address is 602 South Joplin Avenue,  
4           Joplin, MO, 64802.

5     **Q.    By whom are you employed and in what capacity?**

6     A.    I am employed by Liberty Utilities Service Corp. (“LUSC”), a subsidiary of Liberty  
7           Utilities Co. (“Liberty”). I am employed by LUSC as the Senior Manager of  
8           Sustainability for the Liberty Innovations Team. In this role I lead the strategy and  
9           implementation of the transportation electrification programs across the Liberty  
10          electric jurisdictions: California, Missouri, and New Hampshire. In addition, I am  
11          responsible for our Smart Community program and support our sustainability  
12          initiatives across the United States.

13    **Q.    On whose behalf are you testifying in this proceeding?**

14    A.    I am testifying on behalf of The Empire District Electric Company (“Liberty-Empire”  
15          or the “Company”), a Liberty subsidiary.

16    **Q.    Please describe your educational and professional background.**

17    A.    In 1998, I completed my Bachelor of Arts in Communications from Missouri Southern  
18          State University. In 2015, I received my Master of Business Administration from  
19          Missouri State University. From May 1998 to September 2000, I was employed by the  
20          United Way of Southwest Missouri in a variety of social service project  
21          implementation initiatives until joining the marketing and public relations team at St.  
22          John’s Regional Medical Center where I served as the official hospital spokesperson,

1 developed outreach campaigns, and supported the hospital’s mission to help the  
2 medically underserved in our community. In April 2005, I joined the National  
3 Audubon Society to develop the first Audubon Center in the state of Missouri. In the  
4 role of Executive Director, I managed the project from the capital campaign, through  
5 construction, and later program development focusing our efforts on environmental  
6 conservation and stewardship, education, and water quality. I joined the  
7 Communications Team at Liberty-Empire in April 2013. In September 2016, I was  
8 promoted to Manager, Business and Community Development, as lead contact for key  
9 accounts including large business and industry, eighteen cities/counties, and seven  
10 schools, and maintained relationships with local and state government officials. I also  
11 managed the electric vehicle (“EV”) initiative in the Liberty-Empire service area. In  
12 June 2019, I assumed my current position.

13 **Q. Have you previously testified before the Missouri Public Service Commission or**  
14 **any other regulatory agency?**

15 A. No, I have not previously provided testimony before the Missouri Public Service  
16 Commission (“Commission”) or any other regulatory agency.

17 **Q. Are you sponsoring any schedules with your testimony?**

18 A. Yes. I am sponsoring the following schedules attached to my Direct Testimony,  
19 including six specimen tariff sheets:

- 20 • Schedule RM-1 – Residential Smart Charge Pilot Program (“RSCPP”)  
21 proposed tariff;
- 22 • Schedule RM-2 – Ready Charge Pilot Program (“RCPP”) proposed tariff;

- 1           • Schedule RM-3 – Commercial Electric Vehicle Rate Pilot (“CEV”) proposed
- 2           tariff;
- 3           • Schedule RM-4 – Commercial Electrification Pilot Program (“CEPP”)
- 4           proposed tariff;
- 5           • Schedule RM-5 – Electric School Bus Pilot Program (“ESBPP”) proposed
- 6           tariff;
- 7           • Schedule RM-6 – Non-Road Electrification Pilot Program (“NREPP”)
- 8           proposed tariff;
- 9           • Schedule RM-7 – Liberty-Empire’s Customer Survey Results;
- 10          • Schedule RM-8 – Liberty-Empire RSCPP Cost Elements.

11    **II.    PURPOSE OF TESTIMONY**

12    **Q.    What is the purpose of your Direct Testimony?**

13    A.    My Direct Testimony provides an overview of the proposed portfolio of transportation  
14    electrification pilot programs, which include those supporting the electrification of on-  
15    road vehicles and non-road equipment, and the associated benefits. The portfolio is  
16    comprised of pilot programs that target a range of customer segments, including  
17    residential, commercial, and industrial, seeking to build out charging infrastructure  
18    and encourage the use of beneficial electric equipment throughout the Liberty-Empire  
19    service territory. My testimony includes an overview of each pilot program as well as  
20    the Company’s proposed means of cost recovery for the pilot programs. I will also  
21    provide a brief history of Liberty’s experience in transportation electrification to date  
22    and our vision for future programs and offerings.

1 **Q. What are the overarching goals of Liberty-Empire’s proposed pilot programs?**

2 A. The choice to group this collection of pilot programs into a single proposed  
3 transportation electrification portfolio demonstrates the Company’s commitment to  
4 increase transportation electrification across our customer segments – including  
5 residential, commercial, and industrial. The Company seeks to support the deployment  
6 of charging infrastructure in a manner that increases access to electricity as a  
7 transportation fuel, encourages beneficial charging behavior, and accelerates the  
8 regional EV and electrified non-road equipment market.

9 The proposed pilot programs are designed to address key barriers to increased  
10 transportation electrification in the Liberty-Empire territory, which include high  
11 upfront cost of charging infrastructure (both residential and commercial) and lack of  
12 awareness of electric technology benefits. Thanks to efforts by other utilities as well  
13 as state agencies and related partnerships, our customers have a basic level of  
14 awareness about EVs and technologies, but we seek to build customer understanding.  
15 The Company also seeks to complement, but not duplicate, efforts underway to install  
16 EV charging stations funded by Volkswagen Settlement funding, both via the State  
17 Beneficiary Mitigation Plan and Electrify America.

18 Because these are designed as pilot programs, the Company seeks to gather  
19 data and customer insight to better understand the local EV charging dynamics,  
20 including charging behavior and consumer response to price signals. As the number  
21 of EVs in the service territory increases, it will be imperative that the Company have  
22 a way to monitor charging, encourage customers to shift charging to off-peak periods,  
23 and gauge the effectiveness of the utility’s programs and initiatives.

1 **Q. Will additional witnesses submit testimony on the Company’s behalf?**

2 A. Yes. Two expert witnesses are providing pre-filed direct testimony. Ms. Stacy Noblet,  
3 Senior Director of Transportation employed by ICF Resources LLC (“ICF”), is an on-  
4 road transportation electrification expert. Her testimony will address technical, policy,  
5 and analytical aspects of the Company’s proposed on-road pilot programs. In addition,  
6 Ms. Ambika Coletti, Beneficial Electrification Manager at ICF, is a non-road  
7 electrification expert who will address technical, analytical, and strategic aspects of  
8 the proposed non-road technology pilot program. These are in addition to my  
9 testimony, which contains information relevant across the proposed portfolio of pilot  
10 programs.

11 **Q. Please describe ICF and its role in this matter.**

12 A. ICF is a global consulting services company. Liberty-Empire engaged the services of  
13 ICF to assist in the research, program concept screening, program design, and cost  
14 benefit analysis, and to support the review and approval process for the Missouri  
15 regulatory filing.

16 **III. TRANSPORTATION ELECTRIFICATION – EXPERIENCE AND BENEFITS**

17 **Q. What is transportation electrification?**

18 A. Transportation electrification refers to the use of electricity from external sources of  
19 electric power, such as the electric grid, to power all or part of vehicles, trains,

1 watercraft, and other non-road equipment that are mobile sources of air pollution and  
2 greenhouse gases (“GHGs”).<sup>1</sup>

3 **Q. Please describe the Company’s background with transportation electrification.**

4 A. The Company has gained experience with on-road transportation electrification  
5 through the launch of the “EVolve” program in 2015 where we installed 63 Level 2  
6 (“L2”) charging ports within the Liberty-Empire service territory and launched a  
7 customer education campaign. Within that program, the Company also incentivized  
8 employees and customers with rebates for converting to new or used plugin vehicles.  
9 Liberty is also gaining experience in our California service territory through the  
10 California Public Utilities Commission (“CPUC”) approved suite of EV-related  
11 programs for Liberty Utilities (CalPeco Electric) LLC (“Liberty CalPeco”) which  
12 include: a DC Fast Charger Project; a Residential Charger Installation Rebate; a Small  
13 Business Charger Installation Rebate; a Customer Online Resource Project; and an  
14 Electric Bus Infrastructure Program. Liberty CalPeco also has a separate program to  
15 implement charging stations at schools and parks.<sup>2</sup> Through the DC Fast Charger  
16 Project, Liberty CalPeco has been authorized by the CPUC to spend up to \$4 million  
17 to install the infrastructure needed to support direct current fast charging (“DCFC”)  
18 stations at sites in its service territory. Through the Residential Charger Installation

<sup>2</sup> California Public Utility Commission (CPUC) D.18-09-034 issued on September 27, 2018 (Phase One) and CPUC D.19-11-017, issued on November 7, 2019 (Phase Two) <https://www.cpuc.ca.gov/sb350te/#:~:text=18%2D09%2D034%20authorizing%20the,goals%20to%20accelerate%20EV%20adoption%2C>.

1 Rebate Program, Liberty CalPeco has been authorized by the CPUC to offer rebates of  
2 up to \$1,500 to up to 1,000 residential customers for installing L2 charging stations.  
3 Through the Small Business Charger Installation Rebate Program, Liberty CalPeco  
4 plans to offer rebates of up to \$2,500 to up to 100 small commercial customers for  
5 installing L2 charging stations. The Customer Online Resource Project is an  
6 opportunity for Liberty CalPeco to develop a customer resource providing information  
7 to its California customers about the benefits of electric vehicles and enrolling in EV  
8 time-of-use (“TOU”) rates. Through the Electric Bus Infrastructure Program, Liberty  
9 CalPeco plans to install the infrastructure needed for Tahoe Transportation District to  
10 have in-depot charging stations installed to support at least three new electric transit  
11 buses. Finally, through the Schools and Parks Charging Station Program, Liberty  
12 CalPeco plans to implement charging stations at schools and parks, including 28 L2  
13 chargers and 2 DCFCs. 18 of these L2 chargers are at K-12 school sites; 2 L2 chargers  
14 and 2 DCFC are located at Lake Tahoe Community College; 8 L2 charging stations are  
15 located at the Lake Tahoe Unified School District Bus Barn; and 5 L2 charging stations  
16 are located at area parks.

17 **Q. Generally, what benefits can transportation electrification provide to utility**  
18 **customers, the electricity system, and the public?**

19 A. Transportation electrification can provide a range of benefits to all utility customers,  
20 the grid, and society. *First, transportation electrification provides the opportunity to*  
21 *place downward pressure on electricity costs for all customers.* EVs and other  
22 electrified non-road equipment are distributed assets that sit unused at some part of  
23 the day. This flexibility allows for a large share of vehicle and equipment charging to

1 occur at times when the grid is underutilized and when marginal costs to serve  
2 additional load are low. By increasing utility revenues and system load factor without  
3 commensurate increases in utility costs, the incremental EV load can help mitigate  
4 potential electricity rate increases and put downward pressure on electricity rates in  
5 the long-term by spreading fixed system costs over a greater amount of kilowatt-hours  
6 (“kWh”) sold.<sup>3</sup> Some EV charging will inevitably occur during peak hours and will  
7 be driven by customers’ refueling needs. However, there exists a significant  
8 opportunity to incorporate incremental EV and equipment load using time-based  
9 pricing to the benefit of all utility customers. Analysis of utility revenues and costs in  
10 two areas with the highest penetration of light-duty EVs in the country by Synapse  
11 Energy Economics suggests that on-road transportation electrification has already  
12 provided a beneficial impact on electricity rates.<sup>4</sup>

13 *Second, EVs can enhance the reliability and flexibility of the electricity system.*

14 EVs and electrified non-road equipment can provide the grid with a source of flexible,  
15 manageable load. With the proper information and incentives, vehicles and equipment  
16 can charge in a manner that responds to grid conditions – filling troughs in load  
17 without increasing overall capacity requirements. This flexible load can also support  
18 the integration of increasing levels of renewable generation that might otherwise be  
19 underutilized or curtailed. In Missouri where wind generation continues to scale and  
20 peak during overnight hours, EVs are particularly well positioned to absorb this load

---

<sup>3</sup> Jones et al., *The Future of Transportation Electrification: Utility, Industry, and Consumer Perspectives*, published August 2018

<sup>4</sup> Frost et al., *Electric Vehicles Are Driving Electric Rates Down*, published June 2019, available at: <https://www.synapse-energy.com/sites/default/files/EV-Impacts-June-2019-18-122.pdf>.

1 and enhance the flexibility of the grid. Research from the U.S. Department of Energy  
2 (“DOE”) found that with the 1.5 million EVs that California expects to have on the  
3 road by 2025, the State has the potential to leverage the equivalent of approximately  
4 one gigawatt of storage capability for valuable grid services such as valley-filling  
5 (increasing load during periods of low demand on the electricity system) and ramp-up  
6 mitigation (reducing the amount of additional generation capacity needed to satisfy  
7 electricity system demand in the transition from off-peak to on-peak periods) with  
8 smart-charging technology that is readily available today.<sup>5</sup>

9 *Third, transportation electrification can significantly reduce air pollutant and*  
10 *GHG emissions relative to internal combustion engine alternatives.* Fully electric  
11 vehicles and equipment produce zero tailpipe emissions, reducing the transportation  
12 sector’s contribution to harmful nitrogen oxide emissions and the risk of ozone  
13 nonattainment. These benefits can be pronounced when EVs and nonroad equipment  
14 replace the use of diesel vehicles and equipment. Additionally, EVs generally produce  
15 less emissions than comparable internal combustion engine vehicles even when  
16 accounting for emissions from upstream electricity generation. According to the DOE,  
17 a light-duty EV charging with electricity generated from Missouri’s resource mix  
18 produces approximately 33% less GHG emissions than a comparable gasoline  
19 vehicle.<sup>6</sup> As Missouri and the region continue to integrate zero-emission generation  
20 resources to the grid, the emissions profile associated with EVs and electric equipment

---

<sup>5</sup> Jonathan Coignard et al., *Clean Vehicles as an Enabler for a Clean Electricity Grid*, 13 ENVTL. RES. LETTERS 054031 (2018), <https://doi.org/10.1088/1748-9326/aabe97>.

<sup>6</sup> The DOE’s estimates serve as a reasonable proxy for estimating EV GHG emissions in Missouri [https://afdc.energy.gov/vehicles/electric\\_emissions.html](https://afdc.energy.gov/vehicles/electric_emissions.html).

1 will continue to decline. These public health-related benefits are critical since the  
2 transportation sector is a leading source of pollution, and disadvantaged communities  
3 tend to face disproportionately high exposure to the negative impacts. A report by the  
4 American Lung Association found that widespread adoption of zero-emission  
5 transportation technologies could result in the following in Missouri in 2050: 96  
6 avoided premature deaths, more than 1,500 avoided asthma attacks, nearly 6,500  
7 avoided lost work days, and \$1.1 Billion in avoided health impact cost.<sup>7</sup>

8 *EVs and electrified non-road equipment can reduce costs for customers and*  
9 *improve the operational experience.* Total cost of ownership for the vehicles and  
10 equipment continues to fall as technology improves. With fewer parts and lower fuel  
11 prices, maintenance and operational costs are already lower than internal combustion  
12 alternatives in some cases. Additionally, EVs and equipment offer a quieter and  
13 cleaner operating experience whether on or off-road, improving the comfort of drivers  
14 and the public alike.

15 If properly integrated, this incremental load associated with EVs and electric  
16 equipment can enhance the flexibility and reliability of the grid while increasing  
17 overall system efficiency. Liberty's proposed pilot portfolio seeks to address this.

18 **Q. Has the Commission previously issued guidance and orders supporting utility**  
19 **transportation electrification efforts?**

---

<sup>7</sup> American Lung Association, *The Road to Clean Air: Benefits of a Nationwide Transition to Electric Vehicles*, available at <https://www.lung.org/clean-air/electric-vehicle-report>.

1 A. Yes, the Commission has addressed utility transportation electrification efforts in  
2 previous orders and proceedings. Notably, the Commission approved the stipulation  
3 and agreement of Ameren Missouri’s transportation electrification program filing,  
4 *Charge Ahead*, in October 2019.<sup>8</sup> *Charge Ahead*’s purpose is “to stimulate the  
5 development of Infrastructure within [Ameren Missouri’s] service territory that is  
6 needed to support widespread adoption of electric vehicles by the public.”<sup>9</sup> The three-  
7 year program includes a \$6.6 million budget – supporting investment in L2 and DCFC  
8 charger technologies across a range of market segments. The program also included  
9 budgets for administrative, reporting, and marketing expenses associated with  
10 implementation. In its Report and Order, the Commission emphasized the benefits of  
11 increased transportation electrification. “Financial benefits from an EV charging  
12 network accrue to both the utility and the ratepayers. Utilities and ratepayers benefit  
13 economically from the improved utilization of fixed assets when charging is done in  
14 off-peak times. EVs are considered to be a flexible load that can charge during periods  
15 when demand is low.”<sup>10</sup> Further, the Commission noted that, “The financial benefits  
16 to the utility and to the ratepayer from an EV charging network are not merely from  
17 the additional electricity sales at the charging stations, but are also obtained through  
18 additional electric sales from charging at home and creating more efficient utilization  
19 of the electric grid. All ratepayers ultimately will receive those benefits from the

<sup>8</sup> *Order Approving Stipulation and Agreement*, Case No. ET-2018-0132, October 17, 2019.

<sup>9</sup> *Id.*

<sup>10</sup> *Report and Order*, Case No. ET-2018-0132, February 6, 2019.

1 spreading of fixed costs over a greater amount of usage creating rates that are lower  
2 than if there was less usage.”<sup>11</sup> Ultimately, the Commission’s Order declared the final  
3 program and associated tariffs to “support safe and adequate service at just and  
4 reasonable rates and is in the public interest.”<sup>12</sup>

5 During the proceeding on Ameren Missouri’s transportation electrification  
6 program filing, the Commission also released an Order initiating a new proceeding to  
7 evaluate mechanisms for facilitating charging infrastructure deployment in  
8 Missouri.<sup>13</sup> While the proceeding is still open as of the submission of my Direct  
9 Testimony, Commission Staff released a report in September 2019 providing a  
10 summary of activities in the docket, and this document includes a wealth of  
11 information on utilities’ role in transportation electrification.<sup>14</sup> The report also  
12 provides further guidance from Staff on the utilities’ transportation electrification role,  
13 including a continued need for broader customer education and implementation of  
14 time-varying rates that leverage the flexibility of EV charging for grid benefit.<sup>15</sup>

15 These proceedings illustrate the Commission’s familiarity with utility  
16 transportation electrification topics and confirm the Commission’s ability to review  
17 and approve utility transportation electrification programs and tariffs.

1 **IV. OVERVIEW OF THE COMPANY'S PROPOSED TRANSPORTATION**  
2 **ELECTRIFICATION PORTFOLIO OF PILOT PROGRAMS**

3 **Q. Please provide a summary of the Company's proposed Transportation**  
4 **Electrification Portfolio ("Portfolio").**

5 A. The Portfolio is designed to accelerate electric technology adoption and provide utility  
6 customer, grid, and societal benefits. The Portfolio is broadly divided into three  
7 components: the On-Road Component, the Non-Road Component, and the  
8 Administrative Component. Each component consists of specific programs and  
9 offerings that address transportation electrification in various market segments.

10 **On-Road Component**

- 11 • *Residential Smart Charge Pilot Program* – provides a subscription service for  
12 residential customers to install smart L2 charging stations that encourages beneficial  
13 EV charging aligned with TOU pricing. The terms of the Residential Smart Charge  
14 Pilot Program are reflected in the proposed tariff sheet, which is attached to my direct  
15 testimony as Schedule RM-1.
- 16 • *Ready Charge Pilot Program* – deploys Company owned and operated smart L2 and  
17 DCFC charging infrastructure at publicly accessible commercial customer sites for  
18 public use. The terms of the Ready Charge Pilot Program are reflected in the proposed  
19 tariff sheet attached to my direct testimony as Schedule RM-2.
- 20 • *Commercial Electric Vehicle Rate Pilot* – encourages third-party investment in DCFC  
21 and L2 infrastructure as well as supports workplace and fleet settings by providing a  
22 temporary incentive to lower EV charger operational costs. The terms of the

1 Commercial Electric Vehicle Rate Pilot are reflected in the proposed tariff sheet  
2 attached to my direct testimony as Schedule RM-3.

3 • *Fleet Advisory Services Pilot* – provides business case analysis and support, and  
4 technical assistance for vehicle fleets in the Company’s service area seeking to  
5 transition to EVs. There is no proposed tariff sheet for this program.

6 • *Commercial Electrification Pilot Program* – deploys Company owned and operated  
7 smart L2 charging infrastructure at commercial customer sites for use by customer  
8 fleets, employees, and tenants. The terms of the Commercial Electrification Pilot  
9 Program are reflected in the proposed tariff sheet attached to my direct testimony as  
10 Schedule RM-4.

11 • *Electric School Bus Pilot Program* – supports the deployment of Company owned and  
12 operated smart charging infrastructure for school bus applications in Liberty-Empire’s  
13 service area. The terms of the Electric School Bus Pilot Program are reflected in the  
14 proposed tariff sheet attached to my direct testimony as Schedule RM-5.

15 **Non-Road Component**

16 • *Non-Road Electrification Pilot Program* – provides incentives to support the  
17 deployment of charging infrastructure for non-road applications, including electric  
18 forklifts, truck refrigeration units (TRUs), truck stop electrification (TSE), agricultural  
19 wells, and custom equipment. The terms of the Non-Road Electrification Pilot  
20 Program are reflected in the proposed tariff sheet attached to my direct testimony as  
21 Schedule RM-6.

22 **Administrative Component**

1           The administrative component is essential for the implementation of both the On-  
2           Road and Non-Road components of the Portfolio and includes the following:

- 3           • *Customer Education & Outreach* – supports Portfolio-wide education & outreach  
4           (E&O) activities to increase customer awareness of transportation electrification  
5           programs and benefits, as well as encourage beneficial charging of EVs and non-road  
6           equipment.
- 7           • *Annual Reporting & Evaluation* – enables the data collection, analysis, and reporting  
8           of key portfolio metrics to the Commission and interested stakeholders.
- 9           • *Program Implementation* – supports the set-up, launch, and on-going implementation  
10          of the transportation electrification portfolio.

11                     Table 1 below provides a summary of the Company’s Portfolio, including  
12           offerings, market segments addressed, proposed charging infrastructure investments  
13           (where applicable), and proposed budgets. A workpaper associated with the budget  
14           details is being provided to the parties as well.

15   ***Table 1. Company’s Proposed Transportation Electrification Portfolio Summary***

<b>Component</b>	<b>Pilot Program</b>	<b>Target Market Segment</b>	<b>Charging Ports Supported (estimated)</b>	<b>Total Budget</b>	<b>Capital Budget</b>	<b>O&amp;M Budget</b>
On-Road	Residential Smart Charge	Residential	500 L2	\$1M	\$525,000	\$540,000
	Ready Charge	Comm.	100 L2, 15 DCFC	\$2.9M	\$2.9M	-
	Commercial Electric Vehicle Rate	Comm.	-	-	-	-
	Fleet Advisory Services Program	Comm.	-	\$200,000	-	\$200,000
	Commercial Electrification Program	Comm.	100 L2	\$775,000	\$775,000	-

	Electric School Bus Program	Comm.	20 L2	\$266,000	\$266,000	-
Non-Road	Non-Road Electrification	Comm. and Industrial	N/A	\$5.1M	-	\$5.1M
Administrative	Education & Outreach	All	N/A	\$400,000		\$400,000
	Annual Reporting & Evaluation	All	N/A	\$100,000		\$100,000
	Program Implementation	All	N/A	\$857,000		\$857,000
<b>Budget Total</b>				\$11.7M		

1

2

3 **Q. What is the anticipated utility customer bill impact associated with the Portfolio?**

4 A. In the near-term, based on the total budget of the proposed Portfolio, the Company  
5 anticipates a slight increase in customer bills, less than 0.5% overall. In the longer  
6 term, the Company anticipates the Portfolio will provide net benefits to all utility  
7 customers in the form of eventual downward pressure on electricity rates. Refer to Ms.  
8 Noblet’s testimony for additional detail on ICF’s modeling specific to rate pressure  
9 and customer bill impacts.

10 **Q. Why is it important for the Company to have these pilot programs in place?**

11 A. Transportation electrification provides benefits for utility customers, the electricity  
12 system, and society. However, lack of adoption of EVs and electrified equipment,  
13 driven by lack of charging infrastructure, customer awareness, and technical advisory  
14 support, pose critical barriers to growth. As the region’s authority on electrical  
15 infrastructure and trusted energy advisor, Liberty-Empire is well positioned to help  
16 overcome these barriers and unlock the regional benefits of transportation  
17 electrification. Without the Company’s supportive role, lower EV and electric  
18 equipment adoption and greater risk of unmanaged charging would likely lead to fewer

1 overall customer benefits, greater challenges in integrating future vehicle and  
2 equipment load, and increased emissions. The proposed pilot programs seek to deploy  
3 smart charging infrastructure that will enable future demand response and managed  
4 charging capabilities.

5 **Q. What is the Company's vision for transportation electrification and how does the**  
6 **proposed portfolio align with that vision?**

7 A. In the long-term, the Company seeks to be a key partner in advancing regional  
8 transportation electrification efforts by educating and connecting customers to grow  
9 the EV market both through the purchase of EVs and through technical and electrical  
10 infrastructure support. These efforts will benefit the grid, and in turn benefit all  
11 customers.

12 Given the current lack of charging infrastructure in Liberty-Empire's service  
13 area, the Company seeks to play a more active role in providing EV charging  
14 infrastructure that supports the needs of prospective EV drivers in the near-term. The  
15 Portfolio aligns with this vision by establishing the foundation of a regional charging  
16 infrastructure network, encouraging off-peak charging behavior that supports grid  
17 reliability, and raising awareness of transportation electrification efforts in the region.  
18 By establishing a baseline level of EV charging infrastructure, Southwestern Missouri  
19 becomes better positioned to attract additional private investment. For example,  
20 Electrify America's previous investment cycles have prioritized charging

1 infrastructure deployment in regions where EV adoption and station utilization are  
2 expected to grow.<sup>16</sup>

3 Liberty-Empire also recognizes that the need for EVs extends beyond light-  
4 duty passenger vehicles and envisions a holistic program that brings the benefit of  
5 electrification to all customer segments including residential, commercial, and  
6 industrial customers.

7 **A. On-Road Component Overview**

8 **Q. Please provide a summary of the Company's proposed On-Road Component.**

9 A. As discussed earlier in my Direct Testimony, the Company's On-Road Component  
10 includes the following programs: the Residential Smart Charge Pilot Program, the  
11 Ready Charge Pilot Program, the Commercial Electric Vehicle Rate Pilot, the Fleet  
12 Advisory Services Pilot Program, the Commercial Electrification Pilot Program, and  
13 the Electric School Bus Pilot Program. The Administrative Component is also critical  
14 to the implementation of all the pilot programs in the On-Road Component as it  
15 includes resources dedicated to increasing awareness among customers as well as  
16 gathering and reporting valuable data collected during these pilot programs. The goal  
17 of the On-Road Component is to support the deployment of charging infrastructure in  
18 a manner that increases access to electricity as a transportation fuel, encourages  
19 beneficial charging behavior, and accelerates the regional EV market.

---

<sup>16</sup> Electrify America, *National ZEV Investment Plan: Cycle 2*, February 4, 2019, available at <https://www.epa.gov/sites/production/files/2019-02/documents/cycle2-nationalzevinvestmentplan.pdf>.

1                                    **i. Residential Smart Charge Pilot**

2    **Q.    Please provide a description of the Residential Smart Charge Pilot Program.**

3    A.    The Residential Smart Charge Pilot Program (“RSCPP”) is a voluntary program  
4            designed to increase the deployment of smart L2 charging infrastructure in single-  
5            family residences in the Company’s service area and encourage beneficial EV  
6            charging during hours that do not coincide with peak system load. Participating  
7            customers will pay a monthly subscription fee that covers the smart L2 charger cost,  
8            installation costs, electricity costs associated with EV charging from 9 p.m. to 6 a.m.,  
9            and networking fees associated with data collection and management. In exchange,  
10           the Company will provide turnkey installation of smart L2 charging infrastructure –  
11           leveraging the submetering technology embedded in the charging equipment to  
12           monitor energy usage – and will own the charging equipment. The use of the smart  
13           charger as a submeter avoids the need to install a second meter at the customer’s  
14           property while still allowing data collection and monitoring of energy usage occurring  
15           within and outside of the established periods. This pilot program has the benefit of  
16           reducing customer costs by making it less expensive to operate an EV. In response to  
17           a recent survey, residential customers identified “a special utility rate to save money  
18           on EV charging” as the utility initiative in which they would find the greatest value.  
19           The full results of the survey are provided in Schedule RM-7.

20   **Q.    What eligible costs if the RSCPP designed to cover?**

21   A.    The monthly subscription rate charged to participating customers is designed to  
22           cover the costs listed below:

- 23           •    Smart L2 charging equipment;

- 1 • Installation of smart L2 charging equipment;
- 2 • Networking, maintenance, and data agreements; and
- 3 • Monthly time-based electricity service for EV charging occurring between the
- 4 hours of 9 p.m. and 6 a.m. daily.

5 **Q. Please describe the L2 charger technology eligibility criteria.**

6 A. L2 chargers deployed in the RSCPP must be new, equipped with a SAE J1772  
7 standard plug, and capable of delivering at least 6.2 kilowatts (“kW”) of power to an  
8 EV.<sup>17</sup> Chargers must also be network-enabled, capable of delivering station utilization  
9 data to the Company, capable of receiving a demand response signal, be ENERGY  
10 STAR certified, and listed by a nationally recognized testing laboratory (e.g., UL).  
11 The Company will identify one or more qualified vendors that meet the eligibility  
12 requirements at the outset of the program launch via a request for proposals.

13 **Q. Please describe the participant eligibility criteria for the RSCPP.**

14 A. Site hosts must be residential account holders that own or lease an EV in Liberty-  
15 Empire’s service area and commit to keeping the charger installed for at least five  
16 years. Residential customers will be limited to one RSCPP smart L2 charger per site.  
17 Since chargers will be collecting and sending charging data over Wi-Fi, customers  
18 must have reliable access to Wi-Fi. Additional provisions of the RSCPP are included  
19 in the draft tariff attached to my direct testimony as Schedule RM-1.

20 **Q. What is the Company’s proposed monthly subscription charge for the RSCPP?**

---

<sup>17</sup> This kW rating is standard for many L2 chargers today.

1 A. The Company proposes that the pilot program subscription rate for customers  
2 participating in the RSCPP be set at approximately \$40 per month for the five-year  
3 duration of the program. This monthly cost is based on calculations using estimated  
4 costs for the charging station, installation, operations, the time-based electricity rate,  
5 and necessary billing system upgrades. Refer to Schedule RM-8 for these calculations  
6 and sources. Compared to the monthly gasoline expenditures of the average residential  
7 customer, which is approximately \$100 based on the results of the recent customer  
8 survey (see Schedule RM-7), the subscription may result in significant savings for the  
9 customer. Income-qualified customers will be eligible for a reduced subscription  
10 charge of approximately \$20 per month.

11 **Q. How does the Company intend to bill customers for EV charging that occurs  
12 outside of the hours included in the subscription cost?**

13 A. The subscription fee will cover the cost attributable to time-based EV charging that  
14 occurs daily between 9 p.m. and 6 a.m. These windows were selected to reduce  
15 coincident demand with Liberty-Empire's system peak across seasons. However, if  
16 EV charging occurs during the 6 a.m. to 9 p.m. period, participating customers will be  
17 billed \$0.25 per kWh of electricity consumed by the smart charger during those hours.  
18 This price differential is intended to provide a meaningful price signal to customers in  
19 order to shift EV charging to time periods when it provides the most benefit for the  
20 grid and other utility customers: during hours that do not coincide with the system  
21 peak. Participating residential customers will be billed on their standard residential  
22 electricity rate.

23 **Q. How does the Company propose to recover and account for the RSCPP?**

1 A. The monthly subscription charge for participating residential customers will be set at  
2 a level to cover the equipment and operational costs associated with the RSCPP. In  
3 other words, non-participating customers will not incur costs associated with the  
4 RSCPP. However, non-participating customers will likely receive a marginal benefit  
5 from increased evening/nighttime-based EV charging that puts downward pressure on  
6 electricity rates. This cost recovery proposal is unique relative to other programs in  
7 the Company's proposed portfolio because the cost barriers to single-family  
8 residential charging tend to not be as significant as other market segments and  
9 customers that participate in the RSCPP are expected to be the sole users of their  
10 charging equipment.<sup>18</sup> Furthermore, the Company proposes that program costs  
11 associated with the purchase and installation of EV chargers, make-ready electrical  
12 equipment, networking, maintenance, and data agreements, and necessary billing  
13 system upgrades be treated as capital expenditures.

14 **Q. Does the Company intend to collect data via the RSCPP?**

15 A. Yes. To improve understanding of charging behavior and trends, the Company intends  
16 to leverage the network capabilities of its qualified L2 chargers to collect and station  
17 utilization data for program reporting. The utilization data, which will be anonymized  
18 when shared further, will provide insights to the Commission, the Company, and other  
19 stakeholders on the use of the stations, the potential for future active demand  
20 management, and related grid and environmental impacts.

---

<sup>18</sup> In the case of other market segments, site hosts themselves may not directly benefit from or use EV charging infrastructure – potentially discouraging deployment of EV charging stations at current adoption levels.

1                                    **ii. Ready Charge Pilot**

2    **Q.    Please provide a description of the Ready Charge Pilot Program.**

3    A.    The Ready Charge Pilot Program (“RCPP”) supports the deployment of smart,  
4           network-enabled L2 and DCFC charging infrastructure at publicly accessible  
5           locations. To create a turnkey experience for site hosts, establish the foundation of a  
6           public charging network in the region, and attract future private investment, Liberty-  
7           Empire proposes to deploy, own, and operate the stations in the RCPP. Additionally,  
8           to improve understanding of charging behavior and trends, the Company intends to  
9           leverage the network capabilities of its chargers to collect and send station utilization  
10           data for program reporting. The utilization data will provide insights to the  
11           Commission, the Company, and other stakeholders on the use of the stations as well  
12           as related grid and environmental impacts.

13   **Q.    What eligible costs will the RCPP cover?**

14   A.    The RCPP will cover the following costs associated with L2 and DCFC charger  
15           deployment:

- 16           • Front of the meter distribution system upgrades needed to support EV  
17           chargers;
- 18           • Site design and engineering costs;
- 19           • Behind the meter make-ready infrastructure upgrades including trenching,  
20           boring, conduit, wiring, service panel upgrades, switchgear, and mounting  
21           pads or pedestals;
- 22           • Metering upgrades;
- 23           • L2 and DCFC charging equipment;

- 1           • Charging service network and maintenance agreements;  
2           • Easements or other real estate leases; and  
3           • Signage.

4           Costs that are not directly necessary to support the installation of L2 or DCFC chargers  
5           will not be covered.

6   **Q. Please describe the L2 charger technology eligibility criteria.**

7   A. L2 chargers deployed in the RCPP must be new, equipped with a SAE J1772 standard  
8       plug, and capable of delivering at least 6.2 kW of power to an EV. Chargers must also  
9       be network-enabled, capable of delivering station utilization data to the Company,  
10       capable of receiving a demand response signal, accept multiple forms of payment, be  
11       ENERGY STAR certified, listed by a nationally recognized testing laboratory (e.g.,  
12       UL), and must adhere to open communication standards that support interoperability.  
13       Liberty-Empire intends to select up to three network service providers as qualified  
14       vendors at the outset of the RCPP launch via a competitive solicitation. The vendor(s)  
15       will offer at least one L2 charger that meets eligibility criteria.

16   **Q. Please describe the DCFC charger technology eligibility criteria.**

17   A. Fast chargers procured for the RCPP must be new, capable of delivering at least 50  
18       kW of power, and include both SAE CCS Combo and CHAdeMO standard plugs.  
19       These plug standards are able to serve virtually all commercially-available battery  
20       electric vehicles, providing choice and flexibility for customers. DCFC chargers in the  
21       RCPP must be networked and capable of sending station utilization data to the  
22       Company. Qualified DCFC chargers must also accept multiple forms of payment and  
23       must be listed by a nationally recognized testing laboratory. The Company intends to

1 select up to three network service providers as qualified vendors at the outset of the  
2 RCPP launch via a competitive solicitation. The vendor(s) will offer at least one DCFC  
3 that meets eligibility criteria.

4 **Q. Please describe the site host eligibility requirements for the RCPP and how it**  
5 **supports the use and usefulness of EV charging assets.**

6 A. To ensure that EV chargers deployed in the RCPP are used and useful, they must be  
7 publicly accessible and shared use. In other words, EV chargers in the RCPP will not  
8 be dedicated for use by one particular vehicle or customer. Additionally, to take  
9 advantage of cost efficiencies from deploying multiple plugs at a site, participating  
10 site hosts will be required to deploy a minimum of two stations using a combination of  
11 dual-port L2 and/or DCFC chargers. Site hosts will permitted to deploy a maximum of  
12 three dual-port L2 stations or three DCFC chargers per site.<sup>19</sup> For L2 chargers, priority  
13 will be given to site hosts where vehicles are often parked for long periods of time,  
14 including: colleges and universities, municipally-owned parking structures, and retail  
15 locations. For DCFC chargers, priority will be given to sites adjacent to or in close  
16 proximity to highway corridors or to hosts where vehicles are often parked for short  
17 periods of time in heavily trafficked areas, including: grocery stores, gas stations,  
18 shopping centers, and municipally owned parking structures. Fleets and workplace  
19 charging are not a focus area of the RCPP and are covered in the Fleet Advisory  
20 Services Pilot Program and Commercial Electrification Pilot Program.

---

<sup>19</sup> The RCPP does not prohibit site hosts from deploying additional charging infrastructure at the time when RCPP-facilitated stations are being deployed. However, the costs of those additional EV chargers will not be covered by the RCPP.

1 **Q. What does the Company intend to charge customers for the use of EV chargers**  
2 **facilitated by the RCPP?**

3 A. Liberty-Empire wants to ensure that either the RCPP charger users or site hosts pay  
4 for the costs associated with providing the electricity to the charger, at a rate that is  
5 competitive with existing charging stations in the area. To this end, public users of the  
6 RCPP-facilitated chargers will be charged a fee based on the kWh dispensed from the  
7 unit, at a rate of \$0.20 per kWh for L2 stations and \$0.25 per kWh for DCFC. These  
8 fees match the approved rates for Evergy's Clean Charge Network stations in  
9 Missouri. Site hosts will have the option to choose one of two billing options for  
10 RCPP-facilitated chargers: (1) The site host pays the kWh Energy Charge plus  
11 applicable taxes and fees and is billed directly through the Company, or (2) the  
12 charging station user pays the kWh Energy charge plus applicable taxes and fees and  
13 is billed directly through a third-party network service provider. As noted earlier, the  
14 Company intends to select at least one network service provider to provide third-party  
15 vendor services and this vendor will facilitate billing of charging station users. RCPP-  
16 facilitated chargers must be equipped to accept multiple forms of payment from public  
17 users.

18 **Q. What other measures is Liberty-Empire taking to mitigate costs associated with**  
19 **the RCPP?**

20 A. To improve site selection and reduce program costs, the Company proposes that site  
21 hosts that enroll in the RCPP pay a one-time participation payment. The payment  
22 should not be so high as to discourage prospective site hosts from participating in the  
23 program. However, it should reaffirm the site hosts' interest and commitment to

1 hosting EV chargers that will support broader EV adoption in the region. For those  
2 reasons, Liberty-Empire proposes that for L2 chargers, the fee is \$250 per plug, which  
3 is approximately 10% of the equipment cost (per port); and that for DCFC chargers,  
4 the fee is \$500 per plug. The L2 participation fee is approximately 10% of the  
5 equipment cost, per port. The DCFC participation fee is a smaller percentage of the  
6 equipment cost but still intended to ensure site host commitment.

7 **Q. What measures is the Company taking to incorporate equity considerations into**  
8 **the RCPP?**

9 A. Chargers installed through the RCPP have the potential to serve all customers as they  
10 will be available to the public. Residential customers, including those in multi-family  
11 dwellings, without access to home charging can use RCPP chargers.

12 To help ensure that the benefits of the RCPP and transportation electrification  
13 are extended to all communities, Liberty-Empire proposes that the participation fees  
14 be waived for (1) Minority or Women Business Enterprises (M/WBE) certified by the  
15 Missouri Office of Equal Opportunity or (2) non-profit organizations. Disadvantaged  
16 companies will be determined by their inclusion in the Missouri Office of Equal  
17 Opportunity Minority/Women Owned Business (M/WBE) directory.<sup>20</sup> A Minority  
18 Business Enterprises is a business that is at least 51% owned and controlled by one or  
19 more minority persons. A Woman Business Enterprise is a business that is at least  
20 51% owned and controlled by a woman. A racial minority is, for the purposes of the  
21 State of Missouri's MBE program, defined as individuals who are Black, American

---

<sup>20</sup> See [https://oeo.mo.gov/oeo\\_certifications/](https://oeo.mo.gov/oeo_certifications/).

1 Indian, Hispanic, Asian American and other similar racial minority groups as per  
2 RSMo. §33.750.

3 **Q. What is the proposed budget for the RCPP?**

4 A. Liberty-Empire’s proposed budget for the RCPP is \$2.9 million. The Company  
5 anticipates that, when considering reduced costs from the site host participation  
6 payment, the budget will enable the deployment of 50 dual-port L2 chargers and 15  
7 DCFC chargers across approximately 25 sites. The Company anticipates many of the  
8 sites installing DCFC will also install L2 chargers.

9 **iii. Commercial EV Rate Pilot**

10 **Q. Please describe the Commercial Electric Vehicle Rate and how it relates to the**  
11 **RCPP and other proposed programs.**

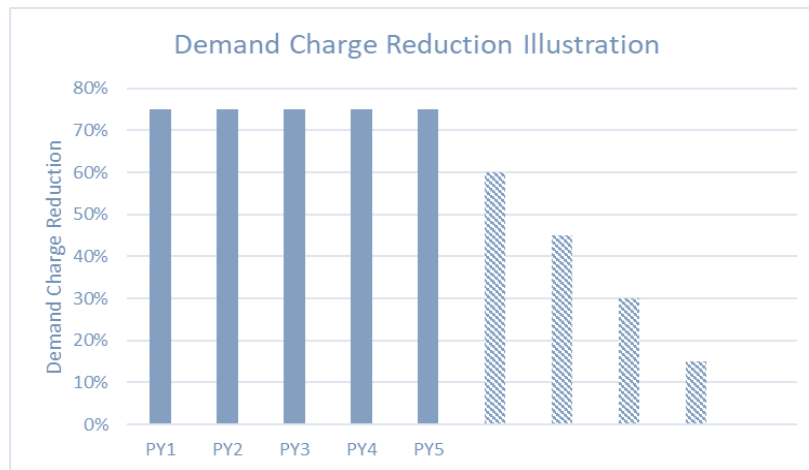

12 A. The Company proposes a new voluntary Commercial Electric Vehicle (“CEV”) Rate  
13 Pilot that applies to EV chargers at commercial customer sites and reduces the  
14 maximum distribution demand charge resulting from chargers’ contribution to  
15 customers’ facility service and metered load. The demand charge rate will reduce  
16 demand charges up to 75% of the billing demand contribution of new DCFC and L2  
17 chargers for a minimum of 5 years. For example, an eligible 60 kW DCFC charger  
18 would be billed for 15 kW of demand under the Company’s current commercial rates.  
19 Applicable Commercial & Industrial tariffs for customers with over 40 kW demand  
20 include General Power Services (Schedule GP), Total Electric Building Service  
21 (Schedule TEB), and Large Power Services (Schedule LP). There are two types of  
22 demand charges on each respective rate schedule: billing demand and facilities

1 demand. Billing demand is determined from the highest fifteen-minute integrated  
2 kilowatt demand registered during the month by a suitable demand meter. Facilities  
3 demand is determined by a comparison of the current month's metered demand and  
4 the metered demand recorded in each of the previous 11 months. If there are less than  
5 11 previous months of data, all available data from previous months will be used. The  
6 demand rate will be based on billing demand. EV chargers deployed in the RCPP are  
7 not eligible to participate in the CEV Rate.

8 **Q. What is the Company's intent with respect to the CEV Rate after the five-year**  
9 **pilot period?**

10 A. Liberty-Empire seeks to further evaluate how it can support private investment in  
11 high-capacity EV charging infrastructure in a manner that aligns with cost-causation  
12 principles. Simply terminating the CEV Rate Pilot after five years and returning to  
13 current commercial rates for high-capacity EV charging infrastructure does not  
14 provide the market with a consistent long-term signal that encourages market growth.  
15 Given the inherent uncertainty in determining how customers will respond to the CEV  
16 Rate Pilot, the Company plans to closely monitor customer uptake of the rate over the  
17 five years of the pilot to determine how it can modify its approach to encourage EV  
18 charging infrastructure deployment. Figure 1 illustrates how the percent reduction  
19 might phase out over time after the pilot period.

20 ***Figure 1 – Example of CEV Rate Phase-Out***

1

2 **Q. Please describe the eligibility criteria for participation in the CEV Rate Pilot.**

3 A. The intent of the CEV Rate is to improve the economics for customers paying for the  
4 energy delivered to EVs through charging stations, particularly higher powered DCFC  
5 stations. To ensure that the CEV Rate is supporting stations that are useful to  
6 customers, any DCFC charger participating in the CEV Rate must be able to deliver  
7 at least 50 kW of power. Grocery stores, gas stations, shopping centers, and  
8 municipally owned parking structures are ideal locations for public DCFC stations –  
9 particularly if they are located near major highway corridors or other highly trafficked  
10 areas. EV chargers participating in the CEV Rate must be separately metered. Only  
11 EV charging loads at the customer’s site will be eligible for the CEV Rate; non-EV  
12 loads are ineligible.

13 **Q. Why are the DCFC chargers and L2 chargers in the RCPP ineligible to**  
14 **participate in the CEV Rate Pilot?**

15 A. RCPP chargers are ineligible to participate in the CEV Rate Pilot because they are  
16 intended to be owned and operated by the Company. Recognizing that the Company  
17 has a role in both providing foundational infrastructure to support EV adoption and

1 encouraging investment from third-party sources, Liberty-Empire seeks to make the  
2 CEV Rate available to support customer operation of charging stations, including  
3 stations installed as part of the Commercial Electrification Pilot Program and the  
4 Electric School Bus Pilot Program.

5 **iv. Fleet Advisory Services Pilot**

6 **Q. Please describe the Fleet Advisory Services Pilot Program.**

7 A. The Fleet Advisory Services Pilot Program (“FASP”) is intended to provide technical  
8 assistance to approximately 10 commercial customers that are interested in  
9 transitioning some or all of their fleet vehicles to EVs. This offering does not provide  
10 incentives for charging infrastructure or equipment. Rather, it provides an opportunity  
11 for commercial customers to receive greater assistance to understand the vehicle,  
12 infrastructure, and fueling considerations associated with electrifying their light,  
13 medium, and heavy-duty vehicle fleets, as well as with providing workplace charging  
14 for employees. This technical assistance will provide fleets with greater insight on  
15 managing fuel costs based on the Company’s existing commercial rates and charging  
16 in a manner that provides grid benefits. Additionally, the assistance will support  
17 customers seeking to identify and pursue alternative funding to electrify their fleets.  
18 This program includes total cost of ownership modeling, quantifying pre- and post-  
19 emissions levels, site and infrastructure cost estimates, and funding application  
20 support for customers. Based on key findings from Liberty-Empire’s recent survey of  
21 key account customers (see Schedule RM-7), the Company recognizes a need to  
22 provide customers with information that includes available incentives, physical site

1 evaluation for infrastructure needs, fleet vehicle use and drive pattern evaluation, and  
2 evaluation of charging infrastructure utilization or needs, among other aspects.

3 **Q. Which market segments are served by the FASP?**

4 A. The FASP is intended for the Company's commercial customers with fleets of at least  
5 five on-road vehicles that are based within the Company's service area. Priority will  
6 be given to government and public fleets looking to electrify their vehicles, including  
7 transit agencies and city fleet departments.

8 **Q. What eligible costs is the Fleet Advisory Services Pilot Program designed to  
9 cover?**

10 A. The FASP is designed to cover the cost associated with completing individual fleet-  
11 level studies to assess the performance, cost, and infrastructure requirements  
12 associated with transitioning from internal combustion engine vehicles to plug in  
13 hybrid and battery electric vehicles. These studies will include an identification of  
14 vehicles best suited to be replaced with EVs based on a total cost of ownership  
15 analysis, an action plan to implement the recommendations highlighted in the study,  
16 and identification of opportunities to offset cost associated with vehicles and charging  
17 equipment. This program offering does not provide incentives for charging  
18 infrastructure, but customers may seek to install infrastructure for fleet or workplace  
19 charging purposes through other Company programs.

20 **Q. What is the proposed budget for the FASP?**

21 A. Liberty-Empire proposes a budget of \$200,000 for the FASP. The Company estimates  
22 it can complete approximately 10-15 fleet assessments based on similar program's  
23 budgets. Similar programs are discussed in Ms. Noblet's testimony.

1                                    **v. Commercial Electrification Pilot**

2    **Q.    Please describe the Commercial Electrification Pilot Program.**

3    A.    The Commercial Electrification Pilot Program (“CEPP”) proposes to provide the  
4           infrastructure necessary to electrify fleets and private workplaces in Liberty-Empire’s  
5           service area. The CEPP will provide for the deployment of smart L2 charging  
6           infrastructure. Similar to the RCPP, the Company proposes to deploy, own, and  
7           operate the charging stations. Results from Liberty-Empire’s recent survey (see  
8           Schedule RM-7) of key accounts revealed that one of the top factors that would  
9           increase a fleet customer’s interest in EVs is the installation of charging equipment by  
10          the Company.

11   **Q.    Please describe the relationship between the CEPP and the FASP.**

12   A.    While the FASP is intended to serve as an initial step for commercial customers that  
13          are interested in exploring the potential to transition to EVs and install EV charging  
14          infrastructure, the CEPP is tailored to commercial customers that are interested in  
15          deploying or expanding existing charging infrastructure. Commercial customers that  
16          participate in the FASP are eligible to participate in the CEPP provided that program  
17          funding is available. The CEPP is intended to support L2 charging infrastructure at  
18          fleet yards and workplaces with parking areas that are not accessible to the public (e.g.,  
19          office parks or private workplace garages for employees). Consultations taking place  
20          as part of FASP may lead to customer participation in CEPP.

21   **Q.    What eligible costs is the CEPP designed to cover?**

22   A.    The CEPP will include the following costs associated with fleet or workplace L2  
23          charger deployment:

- 1 • Front of the meter distribution system upgrades needed to support EV
- 2 chargers;
- 3 • Site design and engineering costs;
- 4 • Behind the meter make-ready infrastructure upgrades including trenching,
- 5 boring, conduit, wiring, service panel upgrades, switchgear, and mounting
- 6 pads or pedestals;
- 7 • Metering upgrades;
- 8 • L2 charging equipment;
- 9 • Charging service network and maintenance agreements;
- 10 • Easements or other real estate leases; and
- 11 • Signage.

12 Costs that are not directly necessary to support the installation of L2 chargers will not  
13 be covered.

14 **Q. Please describe the L2 charger technology eligibility criteria.**

15 A. Liberty-Empire will conduct an open solicitation process through which it will select  
16 and enter into an agreement with at least one qualified vendor or vendors to provide  
17 charging equipment installed through the program. CEPP-facilitated charging  
18 infrastructure must be new, equipped with a SAE J1772 standard plug, capable of  
19 delivering at least 6.2 kilowatts (kW) of power to an EV, network-enabled, capable of  
20 delivering station utilization data to the Company, and capable of receiving a demand  
21 response signal. All CEPP-facilitated chargers must be ENERGY STAR-certified,  
22 listed by a nationally recognized testing laboratory (e.g., UL), and must adhere to open  
23 communication standards that support interoperability.

1 **Q. Please describe the site host eligibility requirements for the CEPP and how it**  
2 **supports the use and usefulness of charging assets.**

3 A. Participating customers must operate a light, medium, or heavy-duty on-road vehicle  
4 fleet and/or have privately accessible workplace parking located in Liberty-Empire's  
5 service area. To reduce per-plug deployment costs, fleets and workplaces must also  
6 commit to the deployment of at least two dual-port L2 chargers. Liberty-Empire will  
7 assess each potential project in coordination with customers to ensure that stations are  
8 being installed at locations where they are used and useful. Customers will be limited  
9 to 10 CEPP-facilitated chargers per site. Electricity used to refuel fleet or workplace  
10 EVs will be billed on the customer's existing commercial service rate. The Company  
11 does not preclude the participating customer from installing additional EV charging  
12 infrastructure while CEPP infrastructure is deployed. However, these additional costs  
13 will not be covered by the CEPP.

14 **Q. What other measures is the Company taking to mitigate costs associated with the**  
15 **CEPP?**

16 A. To improve site selection and reduce program costs, the Company proposes that site  
17 hosts that enroll in the CEPP pay a one-time participation payment. Similar to the  
18 RCPP, the payment should not be so high as to discourage prospective site hosts from  
19 participating in the program. However, it should reaffirm the site hosts' interest and  
20 commitment to hosting EV chargers that will support broader EV adoption in the  
21 region. Liberty-Empire proposes that for L2 chargers, the fee is \$250 per plug, which  
22 is approximately 10% of the equipment cost per plug.

23 **Q. What measures is the Company taking to incorporate equity into the CEPP?**

1 A. To help ensure that the benefits of the CEPP and transportation electrification are  
2 extended to all communities, M/WBEs certified by the Missouri Office of Equal  
3 Opportunity and non-profit organizations will qualify for a waiver of the \$250 per plug  
4 participation fee.

5 **Q. What is the proposed budget for the CEPP?**

6 A. Liberty-Empire proposes a budget of \$775,000 for the CEPP. The Company  
7 anticipates that the budget will enable the deployment of 50 dual-port L2 chargers in  
8 the Company's service area.

9 **vi. Electric School Bus Pilot**

10 **Q. Please describe the Electric School Bus Pilot Program.**

11 A. The Electric School Bus Pilot Program ("ESBPP") proposes to provide charging  
12 infrastructure necessary to support the operation of electric school buses at school  
13 districts within Liberty-Empire's service area. The ESBPP will deploy smart L2  
14 charging infrastructure depending on the operational needs of the participating school  
15 districts. This charging infrastructure, including the chargers, will be owned and  
16 maintained by the Company – reducing administrative and operational burdens for  
17 school districts by offering a turnkey deployment while allowing for the Company to  
18 more easily evaluate the energy storage potential of the school bus batteries.  
19 Specifically, the batteries could be used to further integrate renewable energy onto the  
20 electricity system and enhance the reliability of the grid by modifying charging during  
21 peak periods. Given the roles many schools play as emergency shelters for the  
22 community, the bus batteries could provide power on-site in the event of a long-term

1 power outage or be deployed elsewhere. Participating customers will take service on  
2 the applicable commercial service rate.

3 **Q. Please provide a brief summary of the electric school bus market in Liberty-**  
4 **Empire's territory.**

5 A. Based on Missouri vehicle registration data and the Missouri State Highway Patrol's  
6 2018 Annual School Bus Inspection Reports, the Company estimated the current  
7 population of school buses within Liberty's territory to be approximately 1,300.  
8 However, to the best of our knowledge, there are currently no electric buses in use by  
9 schools in the territory.

10 **Q. What eligible costs are included in the ESBPP?**

11 A. The ESBPP is designed to cover the following costs related to the deployment of  
12 school bus chargers:

- 13 • Front of the meter distribution system upgrades;
- 14 • Site design and engineering costs;
- 15 • Behind the meter make-ready infrastructure upgrades including trenching,  
16 boring, conduit, wiring, service panel upgrades, switchgear, and mounting  
17 pads or pedestals;
- 18 • Metering upgrades;
- 19 • L2 charging equipment;
- 20 • Charging service network agreements;
- 21 • Easements or other real estate leases; and
- 22 • Signage.

1 Costs that are not directly necessary to support the installation of L2 chargers will not  
2 be covered.

3 **Q. Please describe the L2 charger technology eligibility criteria.**

4 A. The Company will conduct an open solicitation process through which it will select  
5 and enter into an agreement with at least one qualified vendor or vendors to provide  
6 charging equipment installed through the program. ESBPP-facilitated charging  
7 infrastructure must be new, equipped with a SAE J1772 standard plug, capable of  
8 delivering at least 6.2 kilowatts (kW) of power to an EV, network-enabled, capable of  
9 delivering station utilization data to the Company, and capable of receiving a demand  
10 response signal. All ESBPP-facilitated chargers must be ENERGY STAR-certified,  
11 listed by a nationally recognized testing laboratory (e.g., UL), and must adhere to open  
12 communication standards that support interoperability.

13 **Q. What other measures is Liberty-Empire taking to mitigate costs associated with  
14 the ESBPP?**

15 A. To reduce program costs, the Company proposes that school districts that enroll in the  
16 ESBPP pay a one-time participation payment. Like the other participation payments  
17 proposed as part of the Portfolio, the Company believes the payment should not be so  
18 high as to discourage prospective school districts from participating in the program.  
19 However, it should reaffirm the customers' interest and commitment to fleet  
20 electrification. Liberty-Empire proposes that for L2 chargers, the fee is \$250 per plug,  
21 which is approximately 10% of the equipment cost per plug. Liberty-Empire proposes  
22 that this participation fee be waived for non-profit organizations.

23 **Q. What is the proposed budget for the ESBPP?**

1 A. Liberty-Empire proposes a \$266,000 budget for the ESBPP, which it believes will  
2 enable the deployment of up to 20 dual-port L2 chargers and associated make-ready  
3 infrastructure at a minimum of two sites.

4 **Q. Does the Company propose to incorporate any budget flexibility across the pilot**  
5 **programs within the On-Road Component?**

6 A. Yes. Liberty-Empire recognizes that the EV market continues to evolve and that  
7 flexibility is required to support EV adoption in a manner that provides customer  
8 benefit. For these reasons, the Company proposes that up to 10% of total On-Road  
9 Component budget be able to be reallocated amongst on-road programs as needed,  
10 which is consistent with the Company's energy efficiency programs.

11 **Q. Are there available alternative funding sources for the equipment the Company**  
12 **intends to support through the On-Road Component?**

13 A. The Volkswagen Mitigation Trust, specifically the Missouri Beneficial Mitigation  
14 Plan<sup>21</sup>, intends to fund DCFC and L2 infrastructure along major corridors in the state.  
15 The sites identified for this funding for Phase 1 resulted in one location in Liberty  
16 Utilities territory, in Joplin at the intersection of I-44 and I-49. The Company has  
17 applied for grant funding for this site in response to the EV Infrastructure Request for  
18 Applications on July 15, 2020. However, one location in our service territory is not  
19 enough to ensure a minimum practical network of charging infrastructure. Should  
20 there be funding available for Phase 2, a second location has been identified within  
21 the Company's territory in or close to Branson which would serve travel from Branson

---

<sup>21</sup> See the Missouri Department of Natural Resources website,  
<https://dnr.mo.gov/env/apcp/vw/readvwplan.htm>.

1 to Kansas City. The EV Collaborative, of which I am a part, has further indicated that  
2 statewide planning and additional utility involvement will be needed to ensure access  
3 to public charging outside of the major metropolitan areas. Given that DCFC  
4 infrastructure outside of St. Louis and Kansas City is very sparse, there is a need.  
5 Additionally, the merits of the proposed Ready Charge Pilot Program extend beyond  
6 the simple provision of charging infrastructure. Owning and operating this equipment  
7 will allow Liberty-Empire to gain insight into charging and operational habits for  
8 future applications.

9 In addition, while the Volkswagen Mitigation Trust and the Diesel Emissions  
10 Reduction Act offer grant funding for the acquisition of clean school buses, they do  
11 not fill the need served by the proposed Electric School Bus Pilot Program for charging  
12 infrastructure. The company-owned and operated infrastructure in this pilot will allow  
13 Liberty-Empire to gain valuable insight and operational data to determine how EV  
14 batteries can be used to support flexibility and grid reliability through future vehicle-  
15 to-grid integration.

16 **B. Non-Road Component Overview**

17 **Q. Please provide a summary of the Company's proposed Non-Road Component.**

18 A. The Liberty-Empire Non-Road Electrification Component includes marketing,  
19 technical support, and incentives to encourage adoption of qualifying electric  
20 technologies. These technologies would otherwise be powered by gasoline, diesel, or  
21 propane fuel, and include electric forklifts, truck refrigeration units, truck stop  
22 electrification, agricultural wells, and custom equipment.

1 **Q. What equipment measures are included in the Company's proposed Non-Road**  
2 **Component?**

3 A. The equipment measures within Liberty-Empire's proposed Non-Road Program  
4 include the following technologies: electric forklifts, truck refrigeration units, truck  
5 stop electrification, agricultural wells, and custom equipment. In addition, the  
6 program includes financial incentives for customers and some dealers, an awareness  
7 campaign, technology specific collateral, promotional events, a program website that  
8 will show benefits of included technologies, and technical and financial assessment  
9 tools to help customers evaluate electric equipment versus alternative fuels. Additional  
10 program services include local account managers to provide technical and application  
11 support to customers, dealers, and other stakeholders as well as data tracking,  
12 reporting and equipment verification.

13 **Q. What customer equity provisions is the Company proposing for the Non-Road**  
14 **Program?**

15 A. The program will include increased incentives for companies designated as M/WBE  
16 businesses. Certified M/WBE businesses will be offered a 20% increased incentive  
17 for equipment measures.

18 **i. Prescriptive Equipment**

19 **Q. Please describe the prescriptive equipment measures included in Liberty-**  
20 **Empire's Non-Road Program.**

21 **Forklifts** are primarily used for lifting and moving heavy loads. They are commonly  
22 found in facilities such as distribution warehouses and shipping depots. Forklifts may

1 be charged by one of two methods – conventional charge (8 hours daily charge) or  
2 rapid/opportunity charge (1-2 hours charge daily, with a weekly 8-hour equalization  
3 charge).

4 **Truck Refrigeration Units (TRUs)** are used by food distribution and cold storage  
5 companies to maintain temperature in trailers. On-road power typically comes from  
6 onboard auxiliary diesel engines. Electric standby or “E/S TRUs” can maintain  
7 temperatures overnight or while loading/unloading (as opposed to idling a diesel  
8 engine during those times). TRUs sold today are capable of operation using diesel fuel  
9 or by plugging in to electric infrastructure.

10 **Truck Stop Electrification (TSE)** provides infrastructure for heavy duty trucks to  
11 connect to the grid to charge or power cab appliances while parked temporarily or  
12 overnight, rather than idling a diesel engine.

13 **Agricultural well conversion** is the process of converting diesel irrigation well  
14 pumps to electric.

15 **Q. Which market segments are served by these equipment measures?**

16 A. The **forklift** equipment measure serves commercial and industrial customers,  
17 including customers in the manufacturing, wholesale and retail trade, and warehousing  
18 sectors. The electric **TRU** equipment measure serves commercial customers in the  
19 trucking sector. The **TSE** equipment measure intends to serve commercial trucking  
20 customers both at public truck stops and travel centers, as well as in warehouses and  
21 shipping depots. The **agricultural well conversion** equipment measure will serve  
22 commercial agricultural customers. Ms. Coletti’s expert witness testimony provides

1 additional details about the approximate size of the market for these non-road  
2 technologies in Liberty-Empire's service territory.

3 **Q. What is the proposed budget for the Non-Road Program?**

4 A. The total proposed budget for Liberty-Empire's proposed 5-year Non-Road Program  
5 is \$5,092,865, which includes custom and prescriptive equipment. Ms. Coletti's  
6 testimony will provide additional details about the proposed budget for Liberty-  
7 Empire's Non-Road Program.

8 **Q. What eligible costs of these equipment measures is the Non-Road Program  
9 designed to cover?**

10 A. The Non-Road Program will offer incentives to cover a portion of the cost of the  
11 equipment and charging infrastructure. These incentives are listed in detail in Table 2.

12 ***Table 2. Non-Road Prescriptive Incentives***

<b>Equipment Measure</b>	<b>Incentive</b>
<b>Forklifts</b>	\$2,500 (propane/diesel replacement); \$700 (new equipment or fleet expansion)
<b>TRU Infrastructure</b>	\$900 (230V Box Trucks); \$4,200 (480V Trailer Units)
<b>TSE Infrastructure</b>	\$2,300
<b>Well Conversion Projects</b>	\$5,000

13 **ii. Custom Equipment**

14 **Q. Please describe the custom equipment measure.**

1 A. The custom equipment measure encompasses any commercial or industrial electrified  
2 equipment not included in the list of prescriptive equipment measures. Custom  
3 equipment measures will be evaluated by account managers on a case-by-case basis.

4 **Q. Which market segments are served by the custom equipment measure?**

5 A. The custom equipment measure serves all commercial and industrial customers.

6 **Q. What eligible costs of the custom equipment measure will the program cover?**

7 A. The custom equipment measure will cover a portion of the cost of custom equipment  
8 and charging infrastructure dependent on equipment type and kWh. The incentive  
9 amount will be \$0.10 per kWh, based on the anticipated electric equipment's annual  
10 load, and capped at a maximum of 75% of the total project cost.

11 **C. Administrative Component Overview**

12 **Q. Please summarize the Administrative Component of the Company's proposed**  
13 **Portfolio.**

14 A. The Administrative Component of the proposed Portfolio is critical to the customer  
15 awareness-building, implementation, evaluation, and reporting of the pilot programs  
16 within the Portfolio. It is composed of three parts.

17 • *Customer Education & Outreach* – supports Portfolio-wide education &  
18 outreach (E&O) activities to increase customer enrollment and encourage  
19 beneficial charging of EVs.

20 • *Annual Reporting & Evaluation* – enables the data collection, analysis, and  
21 reporting of key portfolio metrics to the Commission and interested  
22 stakeholders.

- 1                   • *Program Implementation* – supports the set-up, launch, and on-going  
2                   implementation of the transportation electrification portfolio.

3 **Q. Please describe Liberty-Empire’s approach to customer education and outreach**  
4 **across the Portfolio.**

5 A. Customer E&O remains critical for growing awareness of EVs and accelerating the  
6 EV market. Many customers may be unaware of or have outdated knowledge of EV  
7 range and performance, electric fuel costs, charging station locations, and model  
8 availability. Additionally, while several other states have active non-profit or member-  
9 based organizations to raise awareness of transportation electrification, Liberty-  
10 Empire is not aware of any comparable organizations or initiatives in Missouri.<sup>22</sup>  
11 While it is not the sole responsibility of the Company to inform customers of the  
12 benefits of transportation electrification, Liberty-Empire agrees with the consensus  
13 identified in the Staff Report from docket EW-2019-0229 that “enhanced customer  
14 education is a must.”<sup>23</sup>

15                   The Company is well-positioned to provide E&O in two key areas: Portfolio  
16 program offerings and the use of electricity as transportation fuel. Communicating the  
17 Company’s program offerings to potential participants is a necessary element of  
18 successful customer facing programs. Particular focus should be invested in low-  
19 income and disadvantaged communities where barriers to transportation

---

<sup>22</sup> *Forth Mobility* is a non-profit organization comprised of EV charging companies, automakers, government agencies, and other groups that advances EV initiatives in the Pacific Northwest. *Veloz* is a similar organization that communicates the benefits of vehicle electrification in California. *Drive Electric Vermont* is a coalition-based initiative led by the Vermont Energy Investment Corporation that provides tools for residents to transition to EVs.

<sup>23</sup> *Staff Report*, Case No. EW-2019-0229, Filed September 30, 2019

1           electrification access may be greater than other areas. Additionally, the Company can  
2           leverage its role as an electric distribution utility by helping customers understand the  
3           interaction between EV charging behavior, electric rates, and grid impacts. This focus  
4           on EV charging complements the Company's responsibility to manage the local  
5           electricity system and serve as a trusted regional energy advisor.

6           The Company proposes to engage customers on its Portfolio program offerings  
7           and EV charging information across a variety of strategies aimed at maximizing  
8           customer awareness, including:

- 9           • Updates to feature EV-related content on Liberty-Empire's landing page;
- 10          • Development of outreach materials for social media (e.g., Liberty Twitter,  
11           Facebook, and LinkedIn accounts) and paid media (e.g., promoted content on  
12           social media, other webpages, newspapers, radio, and local billboards);
- 13          • Fact sheets, handouts, and brochures that target specific customer segments  
14           with relevant information (e.g., workplace charging benefits for employers);
- 15          • Customer bill inserts on available program offerings;
- 16          • Engagements and educational collateral at local public events;
- 17          • Licensing of existing EV marketing materials;
- 18          • Technical and financial assessment tools; and
- 19          • Sales training and collateral materials for area dealers.

20   **Q.   What is the proposed budget for the Company's customer education and**  
21   **outreach effort?**

22   A.   Liberty-Empire proposes a budget of \$400,000 for E&O across the Portfolio and over  
23   the 5-year period, with a majority of that funding allocated to the On-Road Component

1 since the Non-Road Component budget includes some awareness-building and  
2 outreach activities. The Company seeks flexibility to tailor education and outreach  
3 efforts in a manner that optimizes uptake of Portfolio pilot program offerings. For  
4 example, if one pilot program offering is relatively undersubscribed compared to  
5 others, the Company can modify its customer engagement approach to increase  
6 customer participation for that specific pilot program.

7 **Q. Please describe the Company's approach to reporting and evaluation across the**  
8 **Portfolio.**

9 A. The implementation of the proposed Portfolio of pilot programs will generate valuable  
10 insight to help shape future programs the Company may pursue, particularly those  
11 focused on EV charging dynamics in the region. Liberty-Empire is committed to  
12 sharing information and lessons learned by proposing to develop annual reports that  
13 will review the status of the Portfolio implementation. The reports will be publicly  
14 available and submitted to the Commission. Aside from providing updates on program  
15 uptake, the Company intends to leverage the network capabilities of installed EV  
16 charging infrastructure to provide a more detailed overview of how EV charger  
17 utilization changes over time and across market segments. These insights will be  
18 critical for understanding strategies to manage future EV loads and developing future  
19 transportation electrification offerings that meet the needs of Liberty-Empire's  
20 customers. At a minimum, the Company plans to include the following information in  
21 its annual reports:

- 22 • Overview of Portfolio implementation status to date;
- 23 • Number and type of participating site hosts by program;

- 1 • Number of participating M/WBE and non-profit organizations by program;
- 2 • Number and type of chargers deployed by program;
- 3 • Number and type of non-road equipment by measure;
- 4 • Total, time-based kWh for deployed measures;
- 5 • Costs incurred compared to budgeted by program;
- 6 • Station utilization data, including kWh dispensed;
- 7 • Avoided greenhouse gas and NOx emissions;
- 8 • Updates on E&O activities; and
- 9 • Opportunities, challenges, and lessons learned.

10 Also, as part of the reporting and evaluation activities, the Company will  
11 survey participants (including residential customers driving EVs and charging station  
12 site hosts) to gather information about the impact of Liberty-Empire's pilot programs.  
13 The Company recognizes the importance of demonstrating how these pilot programs  
14 and related investments are shaping customer behavior, purchasing decisions, and  
15 energy use.

16 **Q. What is the proposed budget for the Company's annual reporting and evaluation**  
17 **activities across the portfolio?**

18 A. Liberty-Empire proposes a budget of \$100,000 to complete anticipated annual  
19 reporting requirements for five years.

20 **Q. Please describe the Company's approach to implementation of the pilot**  
21 **programs in the Transportation Electrification Portfolio.**

22 A. Implementation will include activities to stand up, launch, and run the proposed pilot  
23 programs for a period of five years. These will be closely coordinated with the

1 education, outreach, reporting, and evaluation described above. Liberty-Empire  
2 anticipates pilot program implementation will include, but not be limited to: pilot  
3 program integration and operationalization; site host and rebate application and online  
4 intake portal development and management; application review and processing; pilot  
5 requirements, terms, and conditions development; charging vendor coordination;  
6 related customer service (both for interested customers and participating customers);  
7 construction project management for utility-owned charger installations; pilot  
8 program tracking; and ongoing internal coordination across operating groups.

9 **Q. What is the proposed budget for Liberty-Empire's implementation activities?**

10 A. The Company proposes a budget of approximately \$850,000 to set up and implement  
11 the proposed on-road pilot programs for a period of five years. This budget was  
12 estimated based on 15% of the total cost of the On-Road Component (including  
13 associated education and outreach, reporting, and evaluation); the Non-Road  
14 Component budget already includes program delivery.

15 **V. MARKET ANALYSIS**

16 **Q. Please describe the market analysis performed in support of the Liberty-**  
17 **Empire's proposal.**

18 A. Liberty-Empire's expert consultant for this matter, ICF, conducted a market  
19 assessment and cost benefit analysis for the transportation electrification portfolio.  
20 The on-road market analysis included an assessment of the existing and projected EV  
21 annual sales, population, and charging infrastructure in Liberty's service territory.  
22 Additional detail around the on-road assessment and analyses are included in Ms.

1 Noblet’s Direct Testimony filed herein on behalf of Liberty-Empire. The non-road  
2 market analysis estimated the existing convertible potential and baseline electric  
3 populations for forklifts, truck refrigeration units, truck stop electrification, exemplary  
4 custom measures (cranes and drayage trucks), and agricultural well pumps within  
5 Liberty-Empire’s service territory. Additional detail around the non-road assessment  
6 and analyses are included in Ms. Coletti’s Direct Testimony.

7 **VI. COST AND REVENUE TRACKING**

8 **Q. Please describe the cost and revenue tracking methods proposed by the Company**  
9 **in relation to the proposed Portfolio of transportation electrification pilot**  
10 **programs and initiatives.**

11 A. The Company proposes to isolate and track all costs and revenues related to the  
12 Portfolio, with net costs allowed to be reclassified as a regulatory asset and recovered  
13 in rates in the future. The Company is seeking accounting authority to defer and  
14 amortize these costs over a period of eight years to align with the average expected  
15 life of the assets.

16 **Q. What are the advantages of seeking regulatory asset treatment for costs related**  
17 **to the proposed Portfolio?**

18 A. Regulatory asset treatment has the advantage of spreading the recovery of program  
19 costs and the cost of capital over the life of the assets, which smooths rate impacts for  
20 customers. As the Commission has noted with regard to Ameren Missouri’s  
21 transportation electrification proposal, “deferring the program cost recovery also  
22 serves to ‘sync up’ the costs of the program with the benefits or revenues of the added

1 load and provides ‘a smoother pattern of rate impacts to’ ratepayers. This is a benefit  
2 to the ratepayers.’<sup>24</sup>

3 Other regulatory commissions have supported the use of regulatory assets for  
4 transportation electrification expenses, including the Michigan Public Service  
5 Commission. From its Order in response to DTE’s application for the Charging  
6 Forward EV Program, “Overall, the Commission finds that regulatory asset treatment,  
7 as proposed by the Staff, is the most reasonable and prudent recovery mechanism.  
8 Regulatory asset treatment balances the company’s interest with customer protection,  
9 by not requiring customers to pay for expenses that may not be incurred and by  
10 allowing the company to recover the actual costs incurred.”<sup>25</sup>

11 **VII. CONCLUSION**

12 **Q. Please summarize the purpose of your Direct Testimony and the goals of the**  
13 **proposed Portfolio.**

14 A. I provided an overview of the proposed portfolio of transportation electrification pilot  
15 programs and the associated benefits, a brief history of Liberty’s experience in  
16 transportation electrification to date, and our vision for future programs and offerings.

17 The proposed pilot programs are designed to address key barriers to increased  
18 transportation electrification in the Liberty-Empire territory. Our customers have a  
19 basic level of awareness about EVs and technologies, but we seek to build customer

<sup>25</sup> Michigan Public Service Commission Order, Case No. U-20134, Filed May 2, 2019. Available at:  
<https://mi-psc.force.com/sfc/servlet.shepherd/version/download/068t0000004SM3yAAG>.

1           understanding. The Company also seeks to complement, but not duplicate, efforts  
2           underway to install EV charging stations funded by Volkswagen Settlement funding,  
3           both via the State Beneficiary Mitigation Plan and Electrify America.

4           Because these are designed as pilot programs, the Company seeks to gather  
5           data and customer insight to better understand the local EV charging dynamics,  
6           including charging behavior and consumer response to price signals. As the number  
7           of EVs in the service territory increases, it will be imperative that the Company have  
8           a way to monitor charging, encourage customers to shift charging to off-peak periods,  
9           and gauge the effectiveness of the utility's programs and initiatives.

10   **Q.   Does this conclude your Direct Testimony?**

11   A.   Yes.

**VERIFICATION**

I, Robin McAlester, under penalty of perjury, on this 29<sup>th</sup> day of November, 2020,  
declare that the foregoing is true and correct to the best of my knowledge and belief.
