Service Commission

Laclede Gas Company

CASE NO. GR-99-315

REBUTTAL TESTIMONY

OF

MICHAEL T. CLINE

August 1999

REBUTTAL TESTIMONY OF MICHAEL T. CLINE

1 Q. Please state your name and business address.

2 A. My name is Michael T. Cline and my business address is
3 720 Olive Street, St. Louis, Missouri 63101.

4 Q. Are you the same Michael T. Cline who previously filed
5 direct testimony on behalf of Laclede Gas Company
6 ("Company") in this proceeding?

7 A. Yes, I am.

PURPOSE OF TESTIMONY

9 Q. What is the purpose of your rebuttal testimony?

10 A. The purpose of my rebuttal testimony is to respond to
11 the direct testimony of the following witnesses
12 pertaining to rate design and certain tariff issues:
13 Daniel Beck, James Gray and Michael Wallis, appearing
14 on behalf of the Missouri Public Service Commission
15 Staff ("Staff"); Donald Johnstone, appearing on behalf
16 of Missouri Industrial Energy Consumers ("MIEC");
17 Richard Kovach and Philip Difani, Jr., appearing on
18 behalf of AmerenUE ("UE"); and Thomas Shaw, appearing
19 on behalf of the Office of the Public Counsel ("OPC").

20 The issues I will be addressing include (a) the
21 separation of the Company's rate into the recovery of
22 gas costs and non-gas costs, (b) the regulatory
23 treatment of off-system sales and capacity release
24 revenues; (c) tariff description of service territory;
25 (d) seasonal differentiation of the General Service

1 ("GS") rate schedule; (e) computation of demand units
2 for the Company's GS rate schedule, and (f) Seasonal
3 Air Conditioning ("AC") service rate design.

4 THE SEPARATION OF THE COMPANY'S RATE INTO
5 THE RECOVERY OF GAS COSTS AND NON-GAS COSTS

6 Q. Please summarize this issue.

7 A. Several witnesses (Messrs. Beck, Kovach and Johnstone)
8 make various proposals concerning the elimination of
9 gas cost from Laclede's tariff rates. Specifically,
10 Mr. Beck recommends on page 4 of his direct testimony
11 that the Company exclude the base cost of gas from its
12 tariff rates. On pages 7 and 8 of his direct
13 testimony, Mr. Kovach recommends the segregation of the
14 Company's rates into gas and non-gas components. Mr.
15 Johnstone recommends on page 17 of his direct testimony
16 that the gas component of rates be determined and
17 maintained.

18 Q. Do you agree with these recommendations?

19 A. No, I do not. As I explained on pages 3 and 4 of my
20 direct testimony, there is no agreement as to the level
21 of base gas costs that is currently included in each
22 rate schedule. Neither Mr. Beck nor Mr. Kovach indicate
23 the amount of base gas costs that should be removed
24 from each rate schedule. As a result, I do not see how
25 the Commission can take their testimony seriously.
26 Similarly, OPC did not address this issue. While MIEC
27 witness Johnstone does include in his workpapers a
28 methodology for determining gas costs separately, I

1 believe his methodology is flawed because it relies on
2 coincident peak demand to allocate demand- related gas
3 costs to the various rate classes. Thus, there is no
4 reasonable basis upon which the Commission can approve
5 rate splits between gas and non-gas costs in this
6 proceeding.

7 Q. Do you have any other reasons for opposing these
8 parties' recommendation?

9 A. Yes. None of these parties have explained adequately
10 why the exclusion of gas costs from base rates is
11 necessary. The only reason cited by the Staff is that
12 Laclede is the only Company in the State that includes
13 gas costs in its base rates. Aside from Staff's
14 apparent desire for consistency, it has offered no
15 other benefits to be derived from such a change.
16 Similarly, Mr. Kovach and Mr. Johnstone have failed to
17 explain the benefits of a gas cost and non-gas cost
18 segregation. I am aware of no instance in which the
19 class cost of service information traditionally
20 provided by the Company, including gas costs, has been
21 a hindrance to any party in developing its rate design
22 proposals in past Company rate proceedings. This lack
23 of benefits is especially significant in light of the
24 costs required to implement a segregation of the
25 Company's rates into gas and non-gas components.

26 Q. What types of costs would the Company incur?

1 A. Assuming there is a different level of gas costs
2 embedded in each of the Company's sales rate schedules,
3 recognition of these different levels would require
4 establishment of a different Purchased Gas Adjustment
5 ("PGA") factor for each such schedule. Today, there
6 are only three different PGA factors used in the
7 Company's billing system, whereas a separation of the
8 Company's rates into gas and non-gas components would
9 necessitate nine factors. To provide for six additional
10 PGA factors will require substantial reprogramming of
11 the Company's billing system. Since no party has
12 quantified any benefits associated with the exclusion
13 of gas costs from base rates, the Company cannot
14 justify the expenditure of resources to effectuate such
15 exclusion.

16 Q. Has some level of gas costs always been included in the
17 Company's base rates?

18 A. Yes.

19 Q. Are you aware of any complaints by customers alleging
20 that the Company's rates are unjust or unreasonable or
21 that customers have been overcharged or undercharged
22 because there is no separation of gas costs and non-gas
23 costs in the Company's rate schedules?

24 A. No.

25 Q. Would customers acquire a better understanding of the
26 breakdown of their bills between gas costs and non-gas
27 costs if the Commission were to order the Company to

1 segregate its rates into gas and non-gas cost
2 components?

3 A. No. Customers are already receiving such information
4 through the Company's reporting of the total gas cost
5 per therm that appears on the Company's bills as a
6 result of the Commission's Order Approving Stipulation
7 and Agreement in Case No. GO-97-401.

8 **THE REGULATORY TREATMENT OF**
9 **OFF-SYSTEM SALES AND CAPACITY RELEASE REVENUES**

10 Q. Please summarize the off-system sales and capacity
11 release revenue issue.

12 A. Staff witness Wallis recommends alternative approaches
13 to the treatment of off-system sales net revenues
14 should the Commission not approve an extension of the
15 Company's existing Gas Supply Incentive Plan ("GSIP")
16 in Case No. GT-99-303. OPC witness Shaw recommends the
17 imputation of both off-system sales net revenues and
18 capacity release revenues in the instant proceeding
19 consistent with his recommendation in Case No.
20 GT-99-303.

21 Q. Do you agree with these recommendations?

22 A. Absolutely not. For reasons that were fully explained
23 by Company witnesses Neises and Jaskowiak in Case No.
24 GT-99-303, the Company opposes either the flow-through
25 or the imputation of capacity release revenues and
26 off-systems sales net revenues. These items are
27 intrinsically gas cost-related and therefore properly
28 subject to the GSIP provisions of the Company's PGA

1 clause. The GSIP proposed by the Company in Case No.
2 GT-99-303 provides the best means to encourage the
3 Company to maximize capacity release revenues and
4 off-system sales net revenues and at the same time
5 affords the Company some measure of protection from any
6 significant decline in these revenues.

7 Q. In Case No. GT-99-303, what level of revenues did the
8 Company estimate it could reasonably be expected to
9 achieve for purposes of establishing a baseline in the
10 GSIP above which the Company would retain a share of
11 any excess revenues?

12 A. The Company proposed an aggregate level of \$2 million
13 for both capacity release revenues and off-system sales
14 net revenues. However, as I just explained, such level
15 was proposed only in the context of a baseline in the
16 GSIP. Unlike the GSIP, the imputation of revenues in
17 the establishment of base rates would put the Company
18 at risk for absorption of any shortfall from the
19 imputed level of revenues. Thus, the \$2 million
20 proposed by the Company in Case No. GT-99-303 is
21 substantially in excess of the level that would be
22 appropriate for purposes of revenue imputation in this
23 rate proceeding.

24 TARIFF DESCRIPTION OF SERVICE TERRITORY

25 Q. Please summarize the tariff description of service
26 territory issue.

1 A. On pages 21 through 24 of his direct testimony, Staff
2 witness Gray recommends that the Company list in its
3 tariff all communities it serves "along with township,
4 section, and range numbers by Missouri county."

5 Q. Do you agree that such a requirement is necessary?

6 A. No. The main reason Mr. Gray provides for imposing
7 such a requirement is to minimize future territorial
8 disputes between the Company and other LDCs. However,
9 as the Commission Staff should recognize, inclusion of
10 more precise territory descriptions in the Company's
11 tariff will not eliminate such disputes, since only a
12 franchise or certificate application approved by the
13 Commission determines territorial boundaries. The
14 tariff only serves to document the boundaries after
15 Commission approval has been obtained. However, often,
16 Commission orders are not specific as to the legal
17 description of each Company's service area. Certainly,
18 the Company has no objection to specifying such
19 territories within its tariff if the Commission has
20 specified them. For example, this is exactly what
21 occurred when the Company made compliance tariff
22 filings in Case Nos. GA-99-107 and GA-99-236,
23 Consolidated and Case No. GA-91-82.

24 Q. What do you recommend?

25 A. The form of the Company's existing tariff with respect
26 to service areas provides an adequate description of
27 the Company's service area, has been in place for years

1 and has caused little, if any, confusion. Since
2 territorial clarifications or modifications are
3 relatively rare and generally must be preceded by other
4 Commission action, the Staff's recommendation that the
5 Company modify its tariff to include a listing of
6 existing communities served and a legal description by
7 Missouri county is unnecessary and burdensome. Instead,
8 the Company's tariff should be modified on a case by
9 case basis, when and if necessary, after approval of a
10 service area change by the Commission.

11 **SEASONAL DIFFERENTIATION OF**
12 **THE GENERAL SERVICE RATE SCHEDULE**

13 Q. Please summarize the issue pertaining to the seasonal
14 differentiation of the demand and commodity charges
15 within the General Service rate schedule.

16 A. On page 2 of his direct testimony Mr. Kovach alleges
17 that the Company's rates "do not properly reflect
18 Laclede's actual system seasonal cost differentials."
19 On page 3 of his direct testimony, Mr. Difani states
20 that the Company's proposed General Service rates do
21 not "continue the level of Laclede's existing
22 differential with respect to non-gas costs." Mr.
23 Defani then goes on to develop proposed rates that he
24 believes correct this alleged deficiency.

25 Q. Do you agree with these positions?

26 A. Absolutely not. The Company's proposed rates are, in
27 fact, seasonally differentiated and vary only slightly
28 from the rates proposed by Mr. Difani.

1 Q. How much does the base rate seasonal differential
2 proposed by UE differ from that proposed by the Company?

3 A. For the first 65 therms, UE's proposed differential is
4 only \$.00104 per therm higher than the Company's
5 proposed differential, which difference represents only
6 0.3% (three tenths of one percent) of the Company's
7 proposed first block General Service summer rate. For
8 consumption over 65 therms per month, UE's proposed
9 differential is only \$.00088 per therm higher than the
10 Company's proposed differential, which difference also
11 represents only 0.3% of the Company's proposed General
12 Service second block summer rate. Even the difference
13 between the Company and UE in the demand charge
14 seasonal differential is less than \$.01 per demand
15 therm. Obviously, even if UE's calculations are
16 correct, UE's suggested improvements are petty indeed.
17 Rate design is not an exact science and fine-tuning of
18 this magnitude should not drive a change in Laclede's
19 rates.

20 Q. Mr. Kovach recommends that the Company be required to
21 seasonally differentiate demand-related gas costs. Do
22 you have any comments on this recommendation?

23 A. Yes. In Case No. GR-94-328, UE raised this identical
24 issue before the Commission, and after extensive
25 litigation the Commission issued its Report and Order
26 in 1995 in which it rejected UE's proposal. Since UE
27 tried this issue so recently, and none of the relevant

1 circumstances have changed, it is unnecessary for the
2 Commission to revisit the seasonal differentiation of
3 gas costs in this proceeding.

4 Q. Does UE provide any reasons for its proposal in this
5 case that the Commission did not hear and consider in
6 Docket No. GR-94-328?

7 A. No. Mr. Kovach claims that such costs should be
8 "allocated to seasons in accordance with the results of
9 Mr. Difani's analyses," which analyses allegedly
10 support an allocation of 90% of such costs to the
11 winter and 10% of such costs to the summer. This was
12 similar to the recommendation that UE made in Case No.
13 GR-94-328. However, the Company's rates already result
14 in the recovery of approximately 83% of such costs in
15 the winter period, and this would not change under the
16 Company's proposed rate design. Consequently, UE's
17 proposal would only serve to impose a greater hardship
18 on low income customers who struggle today to pay high
19 winter heating bills. Such hardship was a major factor
20 in the Commission's 1995 decision rejecting UE's
21 proposal. Nothing has changed since that order was
22 issued that would warrant a different result.

23 Q. What are the deficiencies in Mr. Difani's analysis that
24 lead him to conclude that the Company's proposed
25 recovery of costs is inappropriate?

26 A. Mr. Difani makes the same errors as he did in the prior
27 case. Most importantly, Mr. Difani drastically

1 understates the amount of pipeline capacity which the
2 Company needs to meet its summertime load requirements.

3 Q. What do you mean?

4 A. In allocating costs to the summer period, Mr. Difani
5 assumed that the Company only requires 147,000 MMBtu of
6 pipeline capacity to meet the Company's summer
7 requirements.

8 Q. Where did he get this number?

9 A. Apparently that represents the average daily capacity
10 required by the Company to serve customers during the
11 Company's peak summer month of October.

12 Q. Why isn't that quantity appropriate to use in
13 allocating costs to the summer period?

14 A. As the Company explained in Case No. GR-94-328, costs
15 should be allocated to the summer period based not on
16 the amount of capacity required to meet the Company's
17 average daily load during a peak summer month but based
18 on the maximum load the Company could experience during
19 any one day during the summer period.

20 Q. Please explain.

21 A. Since firm pipeline capacity can't be adjusted up and
22 down on a daily basis to meet customers' changing
23 requirements, if the Company were in business only to
24 serve its customers' summer requirements, it would have
25 to contract for enough transmission capacity to enable
26 it to satisfy customers on that day when summer use is
27 greatest.

1 Q. What is the Company's maximum daily summer load?

2 A. It is not uncommon for the Company's requirements to
3 exceed 300,000 MMBtu per day in October. In fact there
4 have been instances when requirements exceeded 450,000
5 MMBtu per day. Nevertheless, for purposes of making an
6 appropriate allocation of costs to the summer period, I
7 have conservatively assumed that at least 283,000 MMBtu
8 of the Company's total daily pipeline capacity is
9 needed just to satisfy customers demands during this
10 period.

11 Q. What is the significance of 283,000 MMBtu?

12 A. This represents the total firm year-round capacity
13 under contract on the Company's upstream pipelines,
14 consistent with my rebuttal testimony in Case No.
15 GR-94-328, plus the Williams Pipelines Central, Inc.
16 capacity which was added in September 1998. Since on
17 some summer days, the Company could utilize all of this
18 pipeline capacity and more to meet its customers
19 requirements, Mr. Difani's analysis should use such
20 capacity levels rather than average daily usage during
21 a peak summer month.

22 Q. What happens when you make this adjustment to Mr.
23 Difani's analysis?

24 A. As can be seen from my Schedule 1, approximately 20% of
25 pipeline reservation costs should be allocated to the
26 summer period rather than the 10% derived by Mr.
27 Difani. The significance of this adjustment is that it

1 reflects the percentage of demand-related gas costs
2 recovered by the Company under its existing and
3 proposed rate structure. Thus, contrary to UE's claim,
4 there is no need to seasonally differentiate such gas
5 costs.

6 Q. Are there any other deficiencies in Mr. Difani's
7 analysis?

8 A. Yes. Rather than applying a single allocation
9 percentage to all of the Company's demand-related gas
10 costs, it would be more appropriate to analyze the
11 various upstream and downstream contracts separately.
12 However, such an approach, compared to the existing and
13 proposed rate design, would allocate even more costs to
14 the summer and less to the winter, a result which the
15 Company is not recommending.

16 **COMPUTATION OF DEMAND UNITS FOR THE**
17 **COMPANY'S GENERAL SERVICE RATE SCHEDULE**

18 Q. Please summarize the demand units issue.

19 A. On page 10 of his direct testimony, Mr. Kovach alleges
20 that the Company will not develop a reasonable estimate
21 of demand therms for each General Service customer
22 since the Company proposes to divide each customer's
23 peak monthly usage by the actual number of days in such
24 billing month. Instead, Mr. Kovach claims that UE's
25 load research data would indicate that it would be more
26 appropriate to divide the peak month by 20 days.

27 Q. What is your response to Mr. Kovach's theory?

1 A. Inasmuch as the Company appreciates Mr. Kovach's
2 efforts to improve upon the Company's determination of
3 a customer's billing demand, the divisor the Company
4 uses is totally irrelevant to the determination of each
5 customer's demand cost responsibility.

6 Q. Why is that?

7 A. As I explained on page 14 of my direct testimony, a
8 customer's peak monthly consumption should be
9 indicative of a customer's relative peak day cost
10 responsibility. Thus, as long as the Commission uses
11 the same divisor for each customer, it makes absolutely
12 no difference whether the Company divides the peak
13 month by 30 days, 20 days or even 5 days. Certainly,
14 the choice of a divisor affects the determination of
15 total billing demand therms. However, the level of
16 billing demand therms has an offsetting effect on the
17 derivation of the demand rate. In other words, the use
18 of a lower divisor will produce greater overall demand
19 determinants for the entire General Service rate
20 schedule, which, in turn, will produce a lower rate.
21 The lower rate would then be applied to the greater
22 calculated billing demands of each individual customer
23 with the result that each customer's level of demand
24 charges would be identical to that obtained through the
25 use of a higher divisor.

26 SEASONAL AIR CONDITIONING SERVICE RATE DESIGN

27 Q. Please summarize the seasonal air conditioning issues.

1 A. On page 12 of his direct testimony, Mr. Kovach
2 complains about the Company's proposed AC rate schedule
3 remaining a two-part rate when the General Service rate
4 is proposed as a three-part rate. He also suggests
5 that the rate apply to air conditioning usage only.
6 Also, Mr. Difani claims that this rate is subsidized by
7 other rates.

8 Q. Please comment on Mr. Kovach's three-part rate proposal.

9 A. Certainly, the Company has no objection to developing a
10 three-part rate schedule (customer charge, demand
11 charge, commodity charge) for its AC customers should
12 the Commission approve a similar rate design for the
13 General Service rate. However, since there are less
14 than 500 AC customers, amounting to less than one-tenth
15 of 1% of the Company's customer base, the Company
16 elected not to modify such rate structure at the time
17 of its filing. Furthermore, contrary to the belief
18 expressed by Mr. Kovach, any new AC rate structure
19 should continue to be based on the Company's
20 interruptible cost of gas as it is today and has been
21 for some time, in order to encourage the off-peak use
22 of natural gas.

23 Q. Do you agree with Mr. Kovach that the AC rate should
24 not apply to other base uses of natural gas?

25 A. No. It is simply not practical to sub-meter these
26 other uses of gas. Accordingly, the AC rate schedule

1 should continue to apply to all gas consumed by the
2 customer during the summer.

3 Q. Please discuss the subsidy allegation.

4 A. On page 9 of his testimony, Mr. Difani alleges that the
5 Company's AC rate schedule customers are being
6 subsidized by all other firm customers.

7 Q. Do you agree?

8 A. No. I do not agree that the reduction in AC rates can
9 or should be confined to air conditioning usage. The
10 tariff requires that the quantity of gas used during
11 the summer period for air conditioning be at least
12 twice the quantity of gas used for all other purposes
13 and makes no distinction in the rates to be charged for
14 these various uses of natural gas. In addition, I
15 believe it is important for the Commission to keep this
16 alleged subsidy in perspective. As I stated above,
17 there are only approximately 500 AC customers. Even if
18 the Commission were to correct for this alleged
19 subsidy, the average General Service customer's bill
20 would be at most approximately 30 cents per year higher
21 than if the Company had a means by which it could
22 practically bill customers separately for air
23 conditioning usage. In my judgment, given the de
24 minimis magnitude of UE's issue, it would be a wasteful
25 use of resources for the Company to alter its billing
26 system to address UE's exaggerated claim.

27 Q. Does this conclude your testimony?

28 A. Yes, it does.
