TARIFF FORMAT

- A. Sheet Numbering** - Sheet numbers appear in the upper right corner of the sheet. Sheets are numbered sequentially. However, new sheets are occasionally added to the tariff. When a new sheet is added between sheets already in effect, a decimal is added. For example, a new sheet added between sheets 14 and 15 would be 14.1.
- B. Sheet Revision Numbers** - Revision numbers also appear in the upper right corner of each sheet. These numbers are used to determine the most current sheet version on file with the PSCM. For example, the 4th revised Sheet 14 cancels the 3rd revised Sheet 14. Because of various suspension periods, deferrals, etc. the PSCM follows in its tariff approval process, the most current sheet number on file with the Commission is not always the tariff sheet in effect. Consult the Check Sheet for the sheet currently in effect.
- C. Paragraph Numbering Sequence** - There are nine levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2.
 - 2.1.
 - 2.1.1.
 - 2.1.1.A.
 - 2.1.1.A.1.
 - 2.1.1.A.1.(a).
 - 2.1.1.A.1.(a).I.
 - 2.1.1.A.1.(a).I.(i).
 - 2.1.1.A.1.(a).I.(i).(1).
- D. Check Sheets** - When a tariff filing is made with the PSCM, an updated Check Sheet accompanies the tariff filing. The Check Sheet lists the sheets contained in the tariff, with a cross-reference to the current revision number. When new sheets are added, the Check Sheet is changed to reflect the revision. All revisions made in a given filing are designated by an asterisk (*). There will be no other symbols used on this sheet if these are the only changes made to it (i.e., the format, etc. remain the same, just revised revision levels on some sheets). The tariff user should refer to the latest Check Sheet to find out if a particular sheet is the most current on file with the PSCM.

SECTION 3 - DESCRIPTION OF SERVICE, (CONT'D.)

3.2 Calculation of Distance

Usage charges for all mileage sensitive products are based on the airline distance between serving wire centers associated with the originating and terminating points of the call.

The serving wire centers of a call are determined by the area codes and exchanges of the origination and destination points.

The distance between the Wire Center of the Customer's equipment and that of the destination point is calculated by using the "V" and "H" coordinates found in BellCore's V&H Tape and NECA FCC Tariff No. 1.

- Step 1** Obtain the "V" and "H" coordinates for the Wire Centers serving the Customer and the destination point.
- Step 2** Obtain the difference between the "V" coordinates of each of the Wire Centers. Obtain the Difference between the "H" coordinates.
- Step 3** Square the differences obtained in Step 2.
- Step 4** Add the squares of the "V" difference and "H" difference obtained in Step 3.
- Step 5** Divide the sum of the square obtained in Step 4 by ten (10). Round to the next higher whole number if any fraction results from the division.
- Step 6** Obtain the square root of the whole number obtained in Step 5. Round to the next higher whole number if any fraction is obtained. This is the distance between the Wire Centers.

Formula:

$$\sqrt{\frac{(V_1 V_2)^2 + (H_1 H_2)^2}{10}}$$

SECTION 3 - DESCRIPTION OF SERVICE, (CONT'D.)

3.3 Timing of Calls

Billing for calls placed over the LDMI network is based in part on the duration of the call as follows, unless otherwise specified in this tariff:

- 3.3.1** Long distance usage charges are based on usage of the Company's network. Chargeable time begins when the calling and the called station are connected.
- 3.3.2** Should a call originate in one rate period and terminate in another rate period, the entire call will be billed by the rates in effect at the time of connection based on the originating rate period.
- 3.3.3** Chargeable time ends when one party "hangs up" the telephone, thereby releasing the network connection.
- 3.3.4** The minimum call duration and call increments for billing purposes are specified on a per-product basis. Fractional increments are rounded up to the next whole increment.
- 3.3.5** The Company shall not bill for unanswered calls.
- 3.3.6** For "Option 2" billing, calls are rounded in six (6) second increments with a thirty (30) second minimum call duration.
- 3.3.7** For "Option 3" billing, calls are rounded in six (6) second increments with an eighteen (18) second minimum call duration.
