TAB A**GREAT PLAINS ENERGY****INTRODUCTION**

Great Plains Energy (GPE), headquartered in Kansas City, Missouri, is a registered public utility holding company with two wholly owned direct subsidiaries with operations or active subsidiaries—Kansas City Power & Light Company (KCP&L) and KCP&L Greater Missouri Operations Company (KCP&L GMO). All employees are employed by KCP&L and these employees operate and manage the business and properties of both KCP&L and KCP&L GMO.

KCP&L is a regulated electric utility serving approximately 511,000 customers in western Missouri and eastern Kansas and owns Kansas City Power & Light Receivables Company (Receivables Company), a wholly-owned subsidiary to whom all its retail electric accounts receivables are sold. KCP&L is regulated by the Public Service Commission of the State of Missouri (MPSC) and The State Corporation Commission of the State of Kansas (KCC) with respect to retail rates, certain accounting matters, standards of service and, in certain cases, the issuance of securities, certification of facilities and service territories. KCP&L is classified as a public utility under the Federal Power Act and is subject to regulation by the Federal Energy Regulatory Commission (FERC).

KCP&L GMO was acquired by GPE in July 2008 and consists of two Missouri-based electric divisions—Missouri Public Service (MPS) and St. Joseph Light and Power (L&P). KCP&L GMO also wholly owns MPS Merchant Services, Inc., an unregulated subsidiary which has certain long-term natural gas contracts and several unregulated subsidiaries that no longer have active operations. GMO serves approximately 312,000 customers and is regulated by the MPSC and FERC. In addition to providing electrical services, SJLP also provides industrial steam to a limited number of customers in the St. Joseph service area.

GPE has two inactive subsidiaries—KLT Inc. and Great Plains Energy Services (GPES). KLT Inc. is an intermediate holding company that primarily holds investments in affordable housing limited partnerships. KLT Inc. also wholly owns various unregulated companies which have no active operations. GPES employees were transferred to KCP&L, effective December 16, 2008 and no longer provides services to affiliates but may obtain certain goods and third-party services for affiliates at cost.

The Cost Allocation Manual (CAM) identifies how balance sheet and income statement items are assigned or allocated to the various companies. It documents the Company's cost assignment methods, allocation policies and related procedures that serve as guidelines in producing separate company financial statements. The cost assignment methods and allocation policies are designed to meet the rules and regulations of the FERC, the Securities and Exchange Commission and the applicable state regulatory commissions.

TAB B**GREAT PLAINS ENERGY****OVERVIEW OF COSTS**

Costs are collected and assigned directly, to a business unit when applicable, with business unit referring to a legal or regulatory division within GPE. Costs are assigned to the companies on a fully allocated basis. The assignment of costs is designed to reflect benefits received as closely as practical and to prevent subsidization of any business unit and ensure equitable cost distributions among GPE and its affiliates.

KCP&L provides service to GPE and its subsidiaries. The cost of these services is billed out at cost and ultimately assigned to the other business units at cost. Costs specifically related to one business unit are billed directly to that unit while costs related to more than one business unit are allocated or assigned. MPS and SJLP may provide services on a limited basis to other affiliates with any costs incurred billed to the benefiting unit.

All direct and allocated costs between business units are traceable on the books and records of the Company.

There are three basic types of cost assignments:

1) Billing between Business Units (TAB C) – Applies to balance sheet and income statement costs between GPE affiliates. The billing of costs between business units is based on the project field in the account code. The project field identifies what business unit is benefiting from the cost and is required on all capital and expense items. For billing purposes, costs are grouped into two basic groups: (a) direct billed projects and (b) indirect billed projects. Direct billed projects are assigned directly to a business unit based on the project, while the indirect billed projects are allocated based on relevant cost allocation factors.

2) Clearings and Loadings (TAB D) – Applies to types of cost that “attach” to other costs. In some applications, costs are distributed, or “cleared” over a related base of costs, such as fleet clearings. In other applications, costs are distributed, or “loaded” onto a related cost, such as paid absence loaded to payroll.

3) Specific Assignment (TAB E) – Applies to costs that can be assigned to the benefiting business unit based on a statistical analysis or association with the underlying asset or liability. For instance, depreciation expense is assigned based on the related plant asset. Generally, the Accounting department or the group responsible for control of the costs determines the specific assignments.

TAB C

GREAT PLAINS ENERGY

BILLINGS BETWEEN BUSINESS UNITS

While KCP&L and KCP&L GMO will operate as one regional utility, costs must be tracked and recorded by business unit. To facilitate operations, a business unit may provide service to another entity within GPE. When services are performed for the benefit of another entity, the costs are accumulated and billed to the benefiting business unit on a monthly basis.

All employees are employed by KCP&L requiring KCP&L to bill out labor charges and related loadings incurred for the benefit of other business units. Below is a description of the various billings between business units.

Income Statement Billings -- Income and expenses are classified into the following two groups for billings purposes—direct projects and indirect projects. Costs are accumulated at the project level of the account code with the project indicating the allocation group where the cost belongs. Refer to Tab I for a list of projects and their respective allocation factors.

1. **Direct Billings**—These are costs incurred by a business unit to provide a specific service to a specific business unit. There is a direct relationship between the cost and the business unit receiving the benefit of the cost. These costs are billed to the business unit based on the owner of the project charged.
2. **Indirect Billings**—These are costs incurred by a business unit to provide services for the benefit of multiple business units but where a specific entity cannot be practicably identified. These costs are billed to the business units based on predefined allocation factors. The allocation factors are determined based on a cost causative relationship or if general in nature on the Massachusetts Formula, a general allocator. Attached is a list of allocation factors and how the factors are calculated.

Balance Sheet Billings -- All costs incurred by a business unit for the benefit of another business unit that are charged to a construction, undistributed stores expense or clearing account are billed to the benefiting business unit based on the project. These costs are primarily direct billings from one business unit to another, however, there may be charges to undistributed stores expense or clearing accounts that are billed out based on an allocation factor.

Common Use Plant -- In the course of business, assets belonging to KCP&L and KCP&L GMO may be used by another entity. This property, referred to as common use plant, is primarily service facilities, telecommunications equipment, network systems and software. In order to ensure the regulated entities do not subsidize other GPE companies or jurisdictions, KCP&L and KCP&L GMO will charge for the use of their

respective common use assets. Monthly billings are based on the depreciation and/or amortization expense of the underlying asset and a rate of return applied to the net plant. The total cost is then allocated on an applicable factor to the business unit benefiting from the asset.

Compensation for the Use of Capital -- Transactions between legal entities results in the creation of intercompany receivables or payables with settlement due in the following month. In addition to the above charges, the regulated divisions will add a charge for the use of capital based on the outstanding intercompany receivable balance and the following rate:

- If external borrowings are made to fund intercompany balances, the rate will be based on the daily weighted average outstanding cost for such funds.
- If surplus cash is used, the rate will be based on the daily Commercial Paper Rate published by the Board of Governors of the Federal Reserve System for A2/P2 non-financial issuers.
- If a mix of external funds and surplus cash is used, the rate will be prorated based on the source of the funds.

**Great Plains Energy
December 2011**

Allocation Factor	Description
Corp. Massachusetts Formula	Company/business unit average of 1) Operating revenues 2) Labor charged to O&M and 3) Net plant/investments.
Customers/Transmission Miles	Company/business unit average of jurisdictional retail customers and transmission pole miles as a percent of total.
KWH	The 12 month ended KWH by company/business unit as a percent of total 12 month ended KWH.
Non-Labor & Non-Fuel O&M	The non-labor and non-fuel O&M by company/business unit as a percent of total non-labor and non-fuel O&M.
Number of Customers	Jurisdictional retail customers as a percent of total retail customers.
Plant Capacity Factor	Jurisdictional plant capacity as a percent of total plant capacity.
Transmission Miles	Jurisdictional transmission pole miles as a percent of total pole miles.
Utility Massachusetts Formula	Utility companies (KCP&L, MPS & L&P) average of 1) Operating revenues 2) Labor charged to O&M and 3) Net plant.

(1) Factors are updated annually or as necessary if allocation basis changes significantly.

TAB D

GREAT PLAINS ENERGY

CLEARINGS & LOADINGS

Paid Absence Loadings --The Company follows the FERC Uniform System of Accounts that dictates that the various paid absence costs be allocated over the “at work” activities. Monthly, costs charged to the various paid absence accounts are allocated to capital and expense accounts based on each account’s respective straight-time payroll activity for the month.

Payroll Tax Loadings -- Payroll taxes are loaded to labor charged to expense, work orders and clearing accounts based on a projected rate applied to direct labor charged to these accounts. This process allows for payroll taxes to follow the original labor distribution and to be included in construction costs.

Pensions and Other Benefits Loadings -- Pension, post-retirement, employee insurance and other benefits are applied to labor costs to ensure that an appropriate portion of benefits is capitalized and to provide management with costs per project. Loadings are based on a projected rate applied to direct labor.

Material and Tool Loading --The FERC Uniform System of Accounts requires the use of undistributed stores expense accounts (163 accounts) to accumulate purchasing and store keeping costs of inventory materials. In addition the cost of small tools is accumulated in accounts 184740-184743. These costs are cleared based on historical loading rates. The rates are applied to certain capital materials received and to materials issued to O&M and capital projects.

Administrative and General (A&G) Loading -- The purpose of this loading is to capitalize a portion of the various A&G costs that are incurred in support of capital activities. Monthly, amounts in account 107800 are allocated over all open construction projects, with the exception of latan II projects, based on actual labor dollars charged to those projects.

Delivery Division Overheads -- The purpose of this loading is to capitalize a portion of the delivery division service costs that are related to construction and removal activity but impractical to charge directly. The overhead costs are charged into account 184780 and cleared from Account 184788 based on a historical loading rate. The rate is applied to the actual labor dollars charged to delivery construction projects.

Generation Division Clearing -- The purpose of this clearing is to capitalize a portion of the generation service costs that are related to construction and removal activity but impractical to charge directly. The overhead costs are charged into account 184781 and cleared from Account 184787 based on current month generation labor charges.

Operations and Construction Support Services Reclass – The purpose of this allocation is to distribute general costs in department 451, Construction Services, and department 493, Operations Programs, to the appropriate power plants. This allocation reclasses the monthly activity of general projects to power plant specific projects based on labor hours charged by KCP&L employees.

Flyash Clearings – The purpose of this clearing is to distribute general costs in account 502010, Steam Operations Solid By-Products, to the appropriate coal fired plants. Current month activity in this account is cleared to expense plant projects based on a twelve months ended MMBTU's factor.

Unit Train Maintenance Clearing – The purpose of this clearing is to distribute general unit train maintenance charges to coal fired plants. Labor and non-labor in account 151601, Unit Train Maintenance, with a general expense project, are spread to specific coal fired plant expense projects based on train cars assigned to each plant.

Combustion Turbine (CT) Fuel Clearing – The purpose of this clearing is to distribute general charges in fuel expense and CT expense accounts 547101-554000, to the appropriate combustion turbines. This allocation transfers the monthly activity of general projects in these accounts to specific CT projects based on the twelve months ended MMBTU's factor.

Fuel Clearing – The purpose of this clearing is to distribute general charges in fuel expense and steam accounts 500000 and 501500-514001, to the appropriate coal fired plants. This allocation transfers the monthly activity of general projects in these accounts to specific coal fired plant projects based on the twelve months ended MMBTU's factor.

Fleet Clearings -- Account 184004, Transportation, is used to accumulate the operations and maintenance expenses on general transportation equipment. Monthly, any business unit specific charges for other business units are transferred to the applicable business unit based on the project and any charges to general fleet projects are allocated among the business units based on actual fleet usage from the fleet system. The remaining 184004 balances for each business unit are then cleared to O&M and construction accounts based on actual fleet usage charges for each respective business unit.

TAB E**GREAT PLAINS ENERGY****SPECIFIC ASSIGNMENT METHOD**

Specific assignment of costs among business units is used when a statistical analysis of the underlying cost indicates the benefiting business unit or when the cost can be assigned based on the ownership of the related assets or liabilities. Examples include property insurance premiums allocated to the business units based on an analysis of the value of insurable property or depreciation expense following the ownership of the related assets.

TAB F

CODE BLOCK

BUS UNIT	DEPT	ACCOUNT	PRODUCT	PROJECT	ACTIVITY	CATEGORY
_____	_____	_____	_____	_____	_____	_____

Business Unit – used to indicate the legal or regulatory entity within GPE to which the transaction is recorded. The business unit is not coded on the transaction but automatically added in the PeopleSoft system based on the Department.

Department – used to identify who is responsible within the business unit for the transaction. Departments are business unit specific.

Account – used to group amounts into the proper classification for financial reporting purposes. The numbering is based upon the FERC Uniform System of Accounts.

Product – used to group costs into related services or goods. The use of products is independent of the account used and allows each business unit to analyze and determine what it costs to provide a certain product or service.

Project – used to identify the service being provided and/or who it is being provided to. The project identifies how the cost will be billed to the other business units.

Activity – used to identify the actions or tasks that occur within a project.

Category – also known as resource category, the category is used to provide an additional level of detail to transactions by identifying the type of cost.

GREAT PLAINS ENERGY

GLOSSARY OF TERMS AND DEFINITIONS

A

Affiliate – Companies that are related to each other due to common ownership or control.

Allocation – A process of assigning costs by distribution or apportionment when a direct method does not exist or is impractical.

B

Business Unit – A separate legal company within GPE or a distinct business/regulatory division within a legal entity.

C

Capital Expenditure – Expenditures that are recorded as assets on the financial books and are subtracted from revenues over an extended period of time through some form of capital recovery, i.e. depreciation.

Cost Allocation Manual – A document of a company's cost allocation policies and related procedures.

Cost Allocation Factors – the methods or ratios used to apportion costs.

Costs – An expenditure or outlay of cash, other property, capital stock or services identified with goods or services purchased. Some costs may be expensed, others may be capitalized.

D

Depreciation – A term used to describe the expensing of a fixed asset over a period of time, i.e. capitalized plant costs are depreciated, or expensed, over the useful life of the plant.

Direct Costs – A cost that can be specifically identified with a particular business activity within a specific business unit.

E

E-CORP – A business unit for MPS and SJLP costs that are not specifically identifiable to one or the other.

F

FERC – Federal Energy Regulatory Commission.

G

GAAP – Generally accepted accounting principles.

GPE – Great Plains Energy Incorporated, the holding company.

GPES (or Service Company) – Great Plains Energy Service Company, an inactive subsidiary of GPE.

I

Indirect Costs – Costs that are allocated because they cannot be identified with a particular service or business unit.

K

KCC – The State Corporation Commission of the State of Kansas.

KCP&L – Kansas City Power & Light Company, a wholly owned subsidiary of Great Plains Energy, whose purpose is to provide electricity to customers within its regulated service territory in Missouri and Kansas.

KCP&L GMO – A wholly-owned subsidiary of Great Plains Energy, whose primary purpose is to provide electricity to customers within its regulated Missouri territories of MPS and SJLP.

KLT – KLT Inc. is a wholly owned non-regulated subsidiary of Great Plains Energy.

L

L&P – St. Joseph Light & Power, a regulated division within KCP&L GMO.

M

Massachusetts Formula – A general allocator used to distribute common costs benefiting more than one business unit.

MPS – Missouri Public Service, a regulatory division within KCP&L GMO.

MPSC – Public Service Commission of the State of Missouri.

R

Receivables Company – KCP&L Receivables Company, a wholly owned subsidiary of KCP&L to whom KCP&L sells all of its retail electric accounts receivable.

W

WCNOC – Wolf Creek Nuclear Operating Corporation. Reported as part of the KCP&L.
