Public Regulation Commission, the Public Utilities Commission of the State of California, the Illinois Commerce Commission, the Arizona Corporation Commission, the Delaware Public Service Commission, the Connecticut Department of Public Utility Control, the Idaho Public Utility Commission, and the Tennessee Regulatory Authority, concerning revenue requirements, cost of service allocation, rate design and cash working capital claims. A list of cases in which I have testified is attached to my testimony.

5. Q. WHAT IS YOUR EDUCATIONAL BACKGROUND?

A. I have a Bachelor of Science Degree in Finance from the Pennsylvania State
University, University Park, Pennsylvania.

6. Q. WOULD YOU PLEASE DESCRIBE YOUR PROFESSIONAL14 **AFFILIATIONS?**

A. I am a member of the American Water Works Association and served as a member of the Management Committee for the Pennsylvania Section. I am also a member of the Pennsylvania Municipal Authorities Association. In 1998, I became a member of the National Association of Water Companies as well as a member of its Rates and Revenue Committee.

7. Q. BRIEFLY DESCRIBE YOUR WORK EXPERIENCE.

A. I joined the Valuation Division of Gannett Fleming Corddry and Carpenter, Inc., predecessor to Gannett Fleming, Inc., in September 1977, as a Junior Rate Analyst. Since then, I advanced through several positions and was assigned the position of Manager of Rate Studies on July 1, 1990. I was promoted to Vice President on June 1, 1994 and Senior Vice President in November 2003. On July 1, 2007, I was promoted to my current position as President.

While attending Penn State, I was employed during the summers of 1972, 1973 and 1974 by the United Telephone System - Eastern Group in its accounting department. Upon graduation from college in 1975, I was employed by Herbert Associates, Inc., Consulting Engineers (now Herbert Rowland and Grubic, Inc.), as a field office manager until September 1977.

8. Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS PROCEEDING?

A. The purpose of my testimony is to present and explain Missouri-American Water Company's (or MAWC or Company) State-wide cost of service allocation study for water operations (sometimes called class cost of service study) and proposed rate design set forth in Schedule No. PRH-1. Schedule No. PRH-2, sets forth the cost of service and the revenues under proposed rates for wastewater operations.

9. Q. WERE SCHEDULE NOS. PRH-1 AND PRH-2 PREPARED BY YOU OR UNDER YOUR DIRECTION AND SUPERVISION?

A. Yes, they were.

10. Q. BRIEFLY DESCRIBE THE PURPOSE OF YOUR WATER COST ALLOCATION STUDY.

A. The purpose of the study was to allocate the State-wide cost of service, which is the total revenue requirement for MAWC water operations to the customer classifications. The State-wide cost of service (All Districts) is the sum of the pro forma cost of operations for the following districts: Brunswick (BRU), Jefferson City (JFC), Joplin (JOP), Mexico (MEX), Platte County (PTC), St. Joseph (SJO), St. Louis Metro Area (SLM), Warrensburg (WAR), and the several small water districts including: Anna Meadows (AMW), Maplewood, Stonebridge, Saddlebrooke, and Emerald Point (MRS), Ozark Mountain and Lake Tanneycomo (OML), Rankin Acres and White Branch (RKA), Spring Valley and Lakewood Manor (SPV), and Tri-States (TRI). Class cost of service studies were also prepared for each of the districts separately except for the small water districts where there is only one customer classification.

In the State-wide study, the aggregated cost of water service was allocated to the following customer classifications: Rate A, consisting of residential, commercial, small industrial, and other public authorities customers, Rate B, consisting of sales for resale customers, Rate J, consisting of large users, and Rate F, private fire protection customers. The cost of service associated with public fire protection was identified and reallocated back to the Rate A and Rate J classifications.

The study was performed in accordance with generally accepted principles and procedures and results in indications of the relative cost

responsibilities of each class of customers. The allocated cost of service is one of several criteria appropriate for consideration in designing customer rates to produce the required revenues. The results of the allocation of the State-wide cost of service for the test year ended December 31, 2014, and the revenues from the proposed rates, which produce the pro forma revenue requirements, are presented in the study.

11. Q. PLEASE DESCRIBE THE METHOD OF COST ALLOCATION THAT WAS USED IN YOUR STUDY.

A. The base-extra capacity method, as described in 2012 and prior Water Rates Manuals published by the American Water Works Association (AWWA), was used to allocate the pro forma costs. Base-extra capacity is a recognized method for allocating the cost of providing water service to customer classifications in proportion to the classifications' use of the commodity, facilities, and services. It is generally accepted as a sound method for allocating the cost of water service and was used by the Company in previous cases.

12. Q. PLEASE DESCRIBE THE PROCEDURE FOLLOWED IN THE STATE-WIDE (ALL DISTRICTS) COST ALLOCATION STUDY.

A. Each identified classification of cost in the cost of service study was allocated to the customer classifications through the use of appropriate factors. These allocations are presented in Schedule B for each study. The items of cost, which include operation and maintenance expenses, depreciation expense,

taxes and income available for return, are identified in column 1 of Schedule B. The cost of each item, shown in column 3, is allocated to the several customer classifications based on allocation factors referenced in column 2. The development of the allocation factors is presented in Schedule C. I will use some of the larger cost items to illustrate the principles and considerations used in the cost allocation methodology.

Purchased water, purchased electric power, treatment chemicals and waste disposal are examples of costs that tend to vary with the amount of water consumed and are thus considered base costs. They are allocated to the several customer classifications in direct proportion to the average daily consumption of those classifications through the use of Factor 1. The development of Factor 1 is shown in Schedule C.

Other source of supply, water treatment and transmission costs are associated with meeting usage requirements in excess of the average, generally to meet maximum day requirements. Costs of this nature were allocated to customer classifications partially as base costs, proportional to average daily consumption, partially as maximum day extra capacity costs, in proportion to maximum day extra capacity, and, in the case of pumping stations and transmission mains, partially as fire protection costs, through the use of Factors 2 and 3. The development of the allocation factors, referenced as Factors 2 and 3, is shown in Schedule C.

Costs associated with storage facilities and the capital costs of distribution mains were allocated partly on the basis of average consumption and partly on the basis of maximum hour extra demand, including the demand for fire protection service, because these facilities are designed to meet maximum hour and fire demand requirements. The development of the factors, referenced as Factors 4 and 5, used for these allocations is shown in Schedule C.

Fire demand costs were allocated to public and private fire protection service in proportion to the relative potential demands on the system by public fire hydrants and private service lines as presented in Schedule E.

For operation and maintenance of mains, the relative weightings of Factor 3 (maximum day and fire) and Factor 4 (maximum hour) were based on the footage of transmission and distribution mains. Generally, for cost allocation purposes, mains larger than 10-inch were classified as serving a transmission function and mains 10-inch and smaller were classified as serving a distribution function. The development of this weighted factor is referenced as Factor 6.

Costs associated with meters were allocated to customer classifications in proportion to the relative unit costs of the sizes and quantities of meters serving each classification. The development of the factor for meters is referenced as Factor 8. Factor 9, Allocation of Services, was developed in a similar manner as Factor 8, except that the relative unit cost per foot by service size was used in order to weight the number of services by classification. Costs associated with public fire hydrants were assigned directly to the public fire protection class (Factor 7).

Costs for customer accounting, billing and collecting were allocated on the basis of the number of customers for each classification, and costs for

meter reading were allocated on the basis of metered customers. The development of these factors is referenced as Factor 12 and Factor 13.

Administrative and general costs were allocated on the basis of allocated direct costs, excluding those costs such as purchased water, power, chemicals and waste disposal, which require little administrative and general expense. The development of the factor is referenced as Factor 14.

Cash working capital is allocated based on total operation and maintenance expense. The development of the factor is referenced as Factor 15.

Annual depreciation accruals were allocated on the basis of the function of the facilities represented by the depreciation expense for each depreciable plant account. The original cost less depreciation of utility plant in service was similarly allocated for the purpose of developing factors, referenced as Factor 18, for allocating items such as income taxes and return. The development of Factor 18 is presented on the last three pages of Schedule C.

Factors 15 and 18, as well as Factors 10, 11, 16, 17 and 19, are composite allocation factors. These factors are based on the result of allocating other costs and are computed internally in the cost allocation program. Refer to Schedule C for a description of the bases for each composite allocation factor.

13. Q. WHAT WAS THE SOURCE OF THE TOTAL COST OF SERVICE DATA SET FORTH IN COLUMN 3 OF SCHEDULE B?

A. The pro forma costs of service were furnished by the Company, and are set forth in Company accounting exhibits and workpapers.

3

- 14. Q. REFER TO SCHEDULE C, AND EXPLAIN THE SOURCE OF THE SYSTEM

 MAXIMUM DAY AND MAXIMUM HOUR RATIOS USED IN THE

 DEVELOPMENT OF FACTORS REFERENCED AS FACTORS 2, 3 AND 4.
- A. The ratios were based on a review of State-wide system deliveries for the
 Company. Schedule D shows the experienced maximum day ratios over the
 last several years. The maximum hour ratios were estimated based on actual
 data or the relationship of system maximum hour ratios compared to system
 maximum day ratios for similar systems.

12

13 15. Q. WHAT FACTORS WERE CONSIDERED IN ESTIMATING THE MAXIMUM

14 DAY EXTRA CAPACITY AND MAXIMUM HOUR EXTRA CAPACITY

15 DEMANDS USED FOR THE CUSTOMER CLASSIFICATIONS IN THE

16 DEVELOPMENT OF FACTORS 2, 3 AND 4?

A. The estimated demands were based on judgment which considered field studies of actual customer class demands conducted for other American Water Companies, field observations of the service areas of the Company, and generally-accepted customer class maximum day and maximum hour demand ratios.

22

23

24

16. Q. PLEASE EXPLAIN THE ALLOCATION OF SMALL MAINS.

A. Factor 4, used to allocate distribution mains, was modified to exclude

consumption for certain Rate B and Rate J large customers connected primarily to large mains, commonly referred to as transmission mains, in Joplin, St. Joseph and St. Louis Metro Area districts. This was done to recognize that certain industrial and sales for resale customers are connected directly to the transmission system and do not benefit from the smaller distribution mains.

Α.

17. Q. HOW WAS THIS ADJUSTMENT ACCOMPLISHED?

In Joplin, the five largest industrial customers are connected to mains 12-inch and larger. The test year consumption for these five customers was excluded from the Rate J class for the basis of developing Factor 4. In addition, all sales for resale customers are served from the transmission system and therefore were excluded from Factor 4.

In St. Joseph, the four largest industrial accounts and all sales for resale accounts are served from mains 12-inch and larger. The test year consumption for these customers was excluded in the development of Factor 4. In addition, all sales for resale customers are served from the transmission system and therefore were excluded from Factor 4.

In the St. Louis Metro Area, all sales for resale customers (Rates B) are served from the transmission system and therefore, were excluded from Factor 4. For the large user or Rate J classification, an analysis of the customers was performed to determine the size of main which serves each Rate J customer. The analysis showed that out of 141 Rate J customers, 73 customers representing 54.2% of the Rate J consumption are connected to

mains 12-inch and larger. The remaining 68 customers with 45.8% of the consumption are connected to mains smaller than 12-inch.

A further analysis of the 68 customers connected to small mains was conducted to measure the length of distribution mains used to serve these customers from the transmission system. This analysis showed that approximately 130,000 feet of small mains are used from the transmission system to the connection point of the 68 Rate J customers. The 130,000 feet represents about 0.7% of the total 19.3 million feet of distribution mains in the St. Louis Metro area. This analysis clearly shows that although certain Rate J customers are connected to smaller mains, the length of those mains are only a small fraction of the total distribution main system. Therefore, based on this analysis, 10% of the Rate J consumption was used in the development of Factor 4, to reflect that a small part of the distribution mains are used by Rate J customers. In a St. Louis Metro only allocation, this results in an allocation factor of 0.66% for Rate J, which approximates the 0.7% share of the distribution mains.

18. Q. HAVE YOU SUMMARIZED THE RESULTS OF YOUR COST ALLOCATION STUDY?

A. Yes. The results are summarized in columns 1, 2 and 3 of Schedule A. Column 2 sets forth the total allocated pro forma, State-wide cost of service as of December 31, 2014, for each customer classification identified in column 1. Column 3 presents each customer classification's cost responsibility as a percent of the total cost.

| 19 | . Q. | HAVE YOU COMPARED THESE COST RESPONSIBILITIES WITH THE |
|----|------|--|
| | | PROPORTIONATE REVENUE UNDER EXISTING RATES FOR EACH |
| | | CUSTOMER CLASSIFICATION? |

A. Yes. A comparison of the allocated cost responsibilities and the percentage revenue under existing rates can be made by comparing columns 3 and 5 of Schedule A. A similar comparison of the percentage cost responsibilities (relative cost of service) and the percentage of pro forma revenues (relative revenues) under proposed rates can be made by comparing columns 3 and 7 of Schedule A.

III. CUSTOMER RATE DESIGN – WATER

20. Q. WHAT ARE THE APPROPRIATE FACTORS TO BE CONSIDERED IN THE DESIGN OF THE RATE STRUCTURE?

A. In preparing a rate structure, one should consider the allocated costs of service, the impact of changes from the present rate structure, the understandability and ease of application of the rate structure, community and social influences, and the value of service. General guidelines should be developed with management to determine the extent to which each of these criteria is to be incorporated in the rate structure to be designed, inasmuch as the pricing of a commodity or service is a function of management.

21. Q. DID MANAGEMENT DISCUSS RATE DESIGN GUIDELINES WITH YOU?

Yes, they did. The guidelines were as follows: (1) Develop rate schedules for three rate zones as a step toward a consolidated tariff pricing rate schedule applicable to all water customers State-wide; (2) propose uniform customer charges to recover the pro forma customer costs by meter size; (3) design volumetric rates for Rate A and Rate J for each rate zone and for Rate B for two rate zones so that proposed revenues by customer classification move toward or approximate the indicated cost of service; (4) design private fire line and private hydrant rates for two rate zones to recover the indicated cost of service; and (5) develop consolidated tariff rates for all wastewater service areas except for Arnold which has its own rate schedule.

Α.

22. Q. DO YOU AGREE WITH THESE GUIDELINES?

A. Yes, I do.

23. Q. HAVE YOU PREPARED PROPOSED RATE SCHEDULES FOR EACH CLASSIFICATION FOR THREE RATE ZONES?

Α. Yes. Comparisons of present and proposed rate schedules for Rate Zones 1, 2, and 3 are set forth in Company Schedule CAS-12. Rate Zone 1 includes St. Louis Metro (SLM), St. Joseph's (SJO), Joplin (JOP), Warrensburg (WAR), Maplewood, Stonebridge, Saddlebrooke, and Emerald Point (MRS), Anna Meadows (AMW), and Tri-States (TRI). Rate Zone 2 includes Mexico (MEX), Jefferson City (JFC) and Platte County (PTC). Rate Zone 3 includes Brunswick (BRU), Ozark Mountain and Lake Tanneycomo (OML), Rankin Acres and White Branch (RKA), and Spring Valley and Lakewood Manor

(SPV),

24. Q. PLEASE EXPLAIN THE PROPOSED CUSTOMER CHARGES.

A. An analysis of the State-wide customer costs was prepared to determine the appropriate monthly and quarterly minimum charges by meter size. The proforma customer costs for a 5/8-inch meter is \$17.42 per month and \$31.08 per quarter (See Schedule F). Based on this analysis, the 5/8-inch minimum charge was set at \$17.40 per month and \$31.00 per quarter. The increases to the larger sizes (3/4-inch through 12-inch meters) were based on the existing meter ratios by size to the 5/8-inch charge.

25. Q. PLEASE EXPLAIN THE VOLUMETRIC CHARGES.

A. Generally, a one-block uniform volumetric rate is proposed for Rate Zones 1, 2, and 3 for Rate A and Rate J classifications and Rate Zones 1 and 2 for the Rate B class. The rates were set so that proposed revenues would be nearly aligned with the indicated cost of service without decreasing revenues for any class.

26. Q. PLEASE EXPLAIN PRIVATE FIRE CHARGES.

A. The existing private fire revenues exceed the indicated cost of service. Since
there is a large disparity between the private fire rates for St. Louis Metro and
St. Joseph and the other districts, two separate private fire rate schedules are
proposed – Rate F-1 and Rate F-2. St. Louis Metro, St. Joseph and
Maplewood will be under Rate F-1 and all other districts will be under Rate F-

| 1 | | | 2 |
|---|--|--|---|
| | | | |

3 27. Q. PLEASE EXPLAIN THE PUBLIC FIRE HYDRANT CHARGES.

A. The cost of service for public fire protection was established and allocated back to Rate A and Rate J based on meter equivalents. Under proposed rates, public fire service is included in the customer charge and recovered based on meter size.

28. Q. HAS THE COMPANY PREPARED PROOF OF REVENUE SCHEDULES UNDER PRESENT AND PROPOSED RATES?

A. Yes. The proof of revenue shows that the application of the present and proposed rates to the billing determinants or bill analysis produce the proforma present and proposed revenue and proves that the proposed rates filed in the proposed tariffs recover the requested revenue requirements.

Schedule CAS-11 and 12, sponsored by Mr. Petry, sets forth the proof of revenues from the application of present and proposed rates to the customer consumption analysis. The revenues from these exhibits are brought forward to Schedule A, columns 4 and 6.

IV. CONSOLIDATED TARIFF PRICING

29. Q. YOU MENTIONED EARLIER THAT THE PROPOSED RATE DESIGN FOR
THE THREE RATE ZONES WAS A STEP TOWARD STATE-WIDE
CONSOLIDATED TARIFF PRICING. PLEASE DESCRIBE THE CONCEPT

OF CONSOLIDATED TARIFF PRICING.

A. Consolidated tariff pricing (CTP) is the use of the same rates for the same service rendered by a water company regardless of the customer's location.

30. Q. WHAT ARE THE FACTORS THAT SUPPORT THE USE OF CONSOLIDATED RATES?

A. Consolidated rates are based on the long-term rate stability which results from a consolidated tariff, the operating characteristics of the tariff groups, the equivalent services offered, the cost of service on a district specific basis, and the principle of gradualism.

31. Q. PLEASE EXPLAIN HOW CONSOLIDATED RATES WILL PROVIDE LONG-TERM RATE STABILITY FOR THE SEVERAL AREAS.

A. Utility customer rates are dependent on the total expenses and rate base of the utility and the amount of the commodity which the utility sells. Changes in rate base, particularly as the result of the Safe Drinking Water Act, have a significant potential for adversely impacting the rates for certain areas within a utility.

The ability to absorb the cost of such projects over a larger customer base is a compelling argument in support of rate equalization. Capital programs will never be uniform in the several operating areas, even over periods of 5 to 10 years. The cost of specific programs should be shared by all customers rather than burdening those of the affected areas. Rate increases will be more stable and major increases in specific tariff groups will

32. Q. IN WHAT MANNER DO THE OPERATING CHARACTERISTICS OF THE SEVERAL AREAS SUPPORT CONSOLIDATED TARIFF PRICING?

A. There are many similarities in the manner in which the several areas are operated. All of the systems pump their treated water through transmission lines to distribution areas that include mains, booster pump stations and storage facilities. All of the areas provide water to individual customers through a service line and meter. All of the areas rely on a centralized work force for billing, accounting, engineering, administration, and regulatory matters. All of the areas rely on a common source of funds for financing working capital and plant construction. Inasmuch as the costs of operation are related to functions in which the operating characteristics are the same, the use of equal rates is supported.

33. Q. PLEASE EXPLAIN WHY THE EQUIVALENCE OF SERVICES OFFERED SUPPORT CONSOLIDATED TARIFF PRICING.

A. The use of the same rates in a utility with noncontiguous service areas is supported by the equivalent service rendered in each area. Although there would be considerable debate with respect to the equivalency of the service rendered to different customer classifications, there is no question that the service rendered to a residence in one area is the same as the service rendered to a residence in another area. Residential customers are relatively consistent in their uses of water: cooking, bathing, cleaning and other sanitary

purposes, and lawn sprinkling. If customers use water for the same purposes, the service offering is the same and should be priced accordingly. Thus, from this perspective, there is no basis for charging different prices to customers in different areas.

34. Q. DO VARIANCES BETWEEN ALLOCATED COSTS OF THE DISTRICTS WARRANT THE USE OF SEPARATE RATE SCHEDULES?

A. No, they do not. Charging one group of customers higher rates because they may be served by a newer plant whose original cost exceeds that of other plants (as a result of inflation) is not logical. The concepts previously discussed outweigh this consideration and justify the goal of moving toward a consolidated tariff. The electric industry reflects such concepts when it serves customers in geographically dispersed areas. A kilowatt-hour delivered in one area has the same price as a kilowatt-hour delivered in another area despite the fact that cost of service studies could be performed to identify differences in the cost of providing service to customer classes in different regions.

35. Q. ARE THERE OTHER COST OF SERVICE CONSIDERATIONS THAT SUPPORT CONSOLIDATED TARIFF PRICING?

A. Yes. The Company manages the State-wide operations from a common location. Common costs which must be assigned or allocated to each operating area to establish district specific revenue requirements include management fees, corporate headquarter costs, office costs, customer service costs, depreciation expense developed on the basis of Company-wide

depreciation rates, capital structure, and income tax expense based on total Company financing and tax provisions. The allocations of common costs, while reasonable, are subject to judgment and may not result in the development of district specific revenue requirements which reflect precisely the cost of serving each area.

36. Q. BRIEFLY SUMMARIZE YOUR ANALYSIS OF CONSOLIDATED TARIFF PRICING FOR MAWC.

A. Consolidated Tariff Pricing is appropriate for MAWC. Such pricing is supported by considerations of the benefits of sharing the impact of capital programs on a Company-wide basis, the significant majority of common costs, and the equivalent service rendered. The best interests of the customers are served through gradualism by continuing to implement consolidated rates during this case and in subsequent rate cases.

For additional testimony regarding the merits of CTP, please refer to the direct testimony of Mr. Karl McDermott.

V. STRAIGHT FIXED VARIABLE PRICING

- 20 37. Q. THE COMPANY IS PROPOSING IN THIS CASE THE REVENUE
 21 STABILIZATION MECHANISM (RSM). PLEASE COMMENT ON THE
 22 MERITS OF RSM VERSUS AN ALTERNATIVE PRICING SUCH AS
 23 STRAIGHT FIXED VARIABLE PRICING.
 - A. The Company believes that a move toward consolidated tariff that consists of

a fixed customer charge that recovers customer costs with a volumetric charge by class and the RSM is the most efficient rate structure and protects the Company from declining sales. An alternative to the RSM would be a straight fixed variable rate structure.

38. Q. WHAT IS A STRAIGHT FIXED VARIABLE RATE STRUCTURE?

A. A straight fixed variable rate structure would recover all of the company's fixed costs in a monthly fixed charge and only the variable costs would be recovered in the volumetric charge. For a typical water company, over 90% of the costs are fixed and only the true variable costs such as power, chemicals, waste disposal and purchased water are included in the volumetric rate. For MAWC, only 7.26% of the total costs are considered variable.

39. Q. WHAT WOULD A STRAIGHT FIXED VARIABLE RATE STRUCTURE LOOK LIKE FOR MAWC?

A. Preliminary calculations show that a 5/8-inch customer would pay a monthly fixed charge of approximately \$56 and a volumetric rate of about \$0.039 per hundred gallons. Larger meter sizes would pay higher fixed charges with the same volumetric rate.

40. Q. WHAT IS YOUR OPINION REGARDING SUCH A RATE STRUCTURE?

A. This would be an alternative to an RSM by having a guarantee of recovering
the Company's fixed costs, however low-use customers would be adversely
affected and there would be little incentive for customers to conserve.

2

VI. <u>CUSTOMER RATE DESIGN – WASTEWATER</u>

3

6

7

8

9

4 41. Q. PLEASE DESCRIBE THE RATE DESIGN FOR THE WASTEWATER 5 OPERATIONS.

A. Class cost of service studies were not performed for wastewater since the customer base is predominantly residential. The proposed rate design consists of two rate zones – one for Arnold and a consolidated tariff for all the REMAINING DISTRICTS.

10

11

12

13

14

42. Q. WHY WAS ARNOLD LEFT OUT OF THE CONSOLIDATED TARIFF?

A. The increase for Arnold was limited to Arnold's cost of service. Placing Arnold on the consolidated tariff would have generated more revenue than their costs. Arnold's proposed rates reflect a 25.35% increase to their existing minimum and volumetric charges as well as their flat rate charge.

16

17

15

43. Q. WHAT ARE THE CONSOLIDATED RATES?

A. The rate structure for the remaining districts includes a \$40.00 per month minimum charge for customers with 5/8-inch water meters, increasing for larger-sized meters, and a volumetric charge of \$0.5900 per hundred gallons.

The flat rate charge of \$69.50 per month reflects an average monthly usage of 5,000 gallons priced out at the above rates.

23

24

44. Q. DOES THIS COMPLETE YOUR TESTIMONY AT THIS TIME?

1 A. Yes, it does.

Excellence Delivered As Promised

July 29, 2015

Missouri-American Water Company 727 Craig Road St. Louis, MO 63141

Attention Mr. Frank Kartmann, President

Gentlemen:

Pursuant to your request, we have conducted a cost of service allocation study based on the consolidated water utility revenue requirements estimated for the test year ended December 31, 2014.

The attached report presents the results of the allocation study, as well as supporting schedules which set forth the detailed cost allocation calculations. Schedule A presents a comparison of the cost of service by customer classification with the proforma revenues produced by each classification under present and proposed rates.

Respectfully submitted,

GANNETT FLEMING VALUATION AND RATE CONSULTANTS, LLC

PAUL R. HERBERT

President

MISSOURI-AMERICAN WATER COMPANY

COST OF SERVICE ALLOCATION STUDY FOR THE TEST YEAR ENDED DECEMBER 31, 2014

PART I. INTRODUCTION

PLAN OF REPORT

The report sets forth the results of the cost of service allocation study based on the consolidated state-wide revenue requirements and district specific revenue requirements for water utility operations as of December 31, 2014, for Missouri-American Water Company. Part I, Introduction, contains statements with respect to the basis of the study, the procedures employed, and a summary of the results of the study. Part II, Cost of Service by Customer Classification, presents detailed schedules of the allocation of costs to customer classifications, as well as the bases for the allocations for the consolidated state-wide revenue requirements. Schedule A in Part II summarizes the cost allocation and the revenues produced under present and proposed rates. Part III presents detailed schedules for the allocation of costs to customer classification on a district specific basis.

BASIS OF STUDY

The purpose of the cost allocation study was to determine the relative cost of service responsibilities of the several customer classifications based on considerations of quantity of water consumed, variability of rate of consumption, and costs associated with customer metering, billing and accounting. The allocation study incorporated generally-accepted principles and procedures for allocating the several categories of cost to customer classifications in proportion to each classification's use of facilities, commodities and services required in providing water service.

ALLOCATION PROCEDURES

The allocation studies were based on the Base-Extra Capacity Method for allocating costs to customer classifications. The method is described in the 2012 and prior editions of the Water Rates Manual published by the American Water Works Association. The four basic categories of cost responsibility are base, extra capacity, customer, and fire protection costs. The following discussion presents a brief description of these costs and the manner in which they were allocated.

<u>Base Costs</u> are costs that tend to vary with the quantity of water used, plus costs associated with supplying, treating, pumping, and distributing water to customers under average load conditions, without the elements necessary to meet peak demands. Base costs were allocated to customer classifications on the basis of average daily usage.

Extra Capacity Costs are costs associated with meeting usage requirements in excess of the average. They include operating and capital costs for additional plant and system capacity beyond that required for average use. The extra capacity costs in this study are subdivided into costs necessary to meet maximum day extra demand and costs to meet maximum hour extra demand. The extra capacity costs were allocated to customer classifications on the bases of each classification's maximum day and hour usage in excess of average usage.

<u>Customer Costs</u> are costs associated with serving customers regardless of their usage or demand characteristics. Customer costs include the operating and capital costs related to meters and services, meter reading costs, and billing and collecting costs. The customer costs were allocated on the bases of the capital cost of meters and services, and the number of customers.

<u>Fire Protection Costs</u> are costs associated with providing the facilities to meet the potential peak demand of fire protection service. Fire Protection costs are subdivided into costs to meet Public Fire Protection and Private Fire Protection demands. The extra capacity costs assigned to fire protection service were allocated to Public and Private Fire Protection on the basis of the total relative demands of the hydrants and fire service lines, sized to provide fire protection.

RESULTS OF STUDY

The results of the cost of service allocation studies are set forth in Parts II and III. The data summarized in Schedule A, Comparison of Pro Forma Cost of Service with Revenues Under Present and Proposed Rates for the Test Year Ended December 31, 2014 for each cost of service study, constitute the principal results of the cost allocation studies and subsequent rate design.

The cost of service by customer classification shown in column 2 of Schedule A is developed in Schedule B, Cost of Service for the Twelve Months Ended December 31, 2014, Allocated to Customer Classifications, for each study. The allocation of the total cost of service to the several customer classifications was performed by applying the allocation factors referenced in column 2 of Schedule B to the cost of service set forth in column 3. The bases for the allocation factors are presented in Schedule C.

Schedule D sets forth the experienced average day and maximum day system sendout and the maximum day ratios through 2014. Schedule E presents the basis for allocating demand related costs of fire service to private and public fire protection classifications.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma test year average daily consumption for each customer classification.

| | Average Daily | |
|---------------------------|---------------|------------|
| Customer | Consumption, | Allocation |
| Classification | 100 Gallons | Factor |
| (1) | (2) | (3) |

| Total | 1,507,424 | 1.0000 |

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capacity demand for each customer classification, as follows:

| | Average Daily Consumption | | | um Day Sapacity | |
|---------------------------|------------------------------|----------|------------|--------------------|-------------|

The derivation of the maximum day extra capacity factors in column 4 and the basis for the column 3 and 5 weightings are presented on the following page.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.90 and the average daily system sendout for 2014 of 198.7 MGD. The system demand for fire protection is 30,000 Gallons per minute for 10 hours.

| Total | | 415,339,362 | 1.0000 |

The public and private fire protection allocation factors in column 6 on the previous page are based on the relative potential demands (see Schedule E).

The maximum hour extra capacity factors in column 5 are determined as follows:

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum hour ratio of 2.5 and the average daily system sendout for 2014 of 198.7 MGD. The system demand for fire protection is 30,000 gallons per minute.

The public and private fire protection allocation factors in column 7 on the previous page are based on the relative potential demands (see Schedule E).

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES.

Factors are based on the weighting of the average hourly consumption, the maximum hour extra capacity demand, and the fire protection demand for each customer classification.

The weighting of the factors is based on the ratio of the capacity required for a 10 hour demand of fire flow, as related to total storage capacity. The calculation is shown on the following page.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES, cont.

The weighting of the factors is based on the ratio of the capacity required for a 10 hour demand of fire flow, as related to total storage capacity.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma test year average daily consumption for each customer classification.

| Customer | Average Daily Consumption, | Allocation |
|----------------------------------|----------------------------|------------|
| Classification | 100 Gallons | Factor |
| (1) | (2) | (3) |
| Residential - Rate A | 270.80 | 0.2717 |

| Total | 996.48 | 1.0000 |

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capacity demand for each customer classification, as follows:

| | Average Daily Consumption | | | um Day Capacity | |
|----------------------------------|---------------------------|----------|------------|--------------------|-------------|

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.60 and the average daily system sendout for 2014 of 0.123 MGD. The system demand for fire protection is 300 Gallons per minute for 2 hours.

The maximum hour extra capacity factors in column 5 are determined on the next page.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 4. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM HOUR EXTRA CAPACITY FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum hour ratio of 2.5 and the average daily system sendout for 2014 of 0.123 MGD. The system demand for fire protection is 300 gallons per minute.

| | | Rate of Flow, | |

| Fire Protection | | 195 | 0.4756 |
| Total | | 410 | 1.0000 |

The maximum hour extra capacity factors in column 5 of the previous page are determined as follows:

| | Average | | | |
|---------------------------------|-------------|---------|-------------------|------------|
| | Hourly | Maxim | um Hour Extra Cap | acity |
| Customer | Consumption | | 100 Gallons | Allocation |
| Classification | 100 gallons | Factor* | Per Hour | Factor |

The weighting of the factors is based on the ratio of the capacity required for a 2 hour demand of fire flow, as related to total storage capacity. The calculation is shown on the following page.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES, cont.

The weighting of the factors is based on the ratio of the capacity required for a 2 hour demand of fire flow, as related to total storage capacity.

The weighting of the average hourly consumption and maximum hour extra demand for general service is based on the maximum hour ratio, as follows:

| | Maximum Hour | | |
|--------------------------------|-----------------|---------|--------|
| | Ratio | Percent | Weight |
| Average Hour | 1.00 | 40.00 | 0.3064 |

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma test year average daily consumption for each customer classification.

| | Average Daily | |
|---------------------------------|---------------|------------|
| Customer | Consumption, | Allocation |
| Classification | 100 Gallons | Factor |
| (1) | (2) | (3) |

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 2.10 and the average daily system sendout for 2014 of 2.872 MGD. The system demand for fire protection is 3,000 Gallons per minute for 3 hours.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma test year average daily consumption for each customer classification.

| | Average Daily | |
|---------------------------------|---------------|------------|
| Customer | Consumption, | Allocation |
| Classification | 100 gallons | Factor |
| (1) | (2) | (3) |

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.70 and the average daily system sendout for 2014 of 12.85 MGD. The system demand for fire protection is 6,000 Gallons per minute for 3 hours.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma test year average daily consumption for each customer classification.

| | Average Daily | |
|---------------------------------|---------------|------------|
| Customer | Consumption, | Allocation |
| Classification | 100 Gallons | Factor |
| (1) | (2) | (3) |

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.40 and the average daily system sendout for 2014 of 1.809 MGD. The system demand for fire protection is 1,500 Gallons per minute for 2 hours.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED

Factors are based on the pro forma test year average daily consumption for each customer classification.

| | Average Daily | |
|---------------------------------|---------------|------------|
| Customer | Consumption, | Allocation |
| Classification | 100 Gallons | Factor |
| (1) | (2) | (3) |

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 2.50 and the average daily system sendout for 2014 of 2.287 MGD. The system demand for fire protection is 2,000 Gallons per minute for 2 hours.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED

Factors are based on the pro forma test year average daily consumption for each customer classification.

| | Average Daily | |
|---------------------------------|---------------|------------|
| Customer | Consumption, | Allocation |
| Classification | 100 Gallons | Factor |
| (1) | (2) | (3) |
| Residential - Rate A | 41,872 | 0.3438 |

| Total | 121,765 | 1.0000 |

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capacity demand for each customer classification, as follows:

| | Average Daily | | Maximi | Maximum Day | | |

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.50 and the average daily system sendout for 2014 of 16.878 MGD. The system demand for fire protection is 8,000 Gallons per minute for 4 hours.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 5. ALLOCATION OF COSTS ASSOCIATED WITH STORAGE FACILITIES, cont.

The weighting of the factors is based on the ratio of the capacity required for a 4 hour demand of fire flow, as related to total storage capacity.

Fire Protection Weight = 8,000 GPM X 60 Min. X 4 Hrs. = 0.1368 14,040,000 Gallons = 0.8632

The weighting of the average hourly consumption and maximum hour extra demand for general service is based on the maximum hour ratio, as follows:

| | Maximum Hour Ratio | Percent | Weight |
|-----------------------------|--------------------------|---------|--------|
| Average Hour | 1.00 | 50.00 | 0.4316 |
| Extra Capacity Maximum Hour | 1.00 | 50.00 | 0.4316 |
| Total | 2.00 | 100.00 | 0.8632 |

| | Average Hourly | • | | | | |

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 6. ALLOCATION OF COSTS ASSOCIATED WITH TRANSMISSION AND DISTRIBUTION MAINS.

Factors are based on the weighting of the maximum daily consumption with fire, Factor 3, and the maximum hour consumption, Factor 4, for each customer classification, as follows:

| | Maxim | um Daily | Maximu | m Hourly | |
|---------------------------------|------------|--------------|------------|----------|-------------|

The weighting of the factors is based on the total footage of mains, designated as either transmission mains or distribution mains, as follows:

| | Total Footage | |
|--------------------|---------------|--------|
| | of Mains | Weight |
| Transmission Mains | 623,836 | 0.1903 |

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma test year average daily consumption for each customer classification.

| | Average Daily | |
|---------------------------|---------------|------------|
| Customer | Consumption, | Allocation |
| Classification | 100 Gallons | Factor |
| (1) | (2) | (3) |
| Rate A - Res/Com/Ind/OPA | 1,022,086 | 0.8661 |
| Rate B - Sales for Resale | 43,484 | 0.0368 |
| Rate J - Manufacturing | 112,429 | 0.0953 |
| Rate F - Private Fire | 1,537 | 0.0013 |
| Rate E - Public Fire | 597_ | 0.0005 |
| Total | 1,180,133 | 1.0000 |

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capacity demand for each customer classification, as follows:

| | Average Daily Consumption | | | Maximum Day Extra Capacity | | |
|---------------------------|---------------------------|----------|------------|----------------------------|-------------|--|
| Customer | Allocation | Weighted | Allocation | Weighted | Allocation | |
| Classification | Factor 1 | Factor | Factor | Factor | Factor | |

| Total | 1.0000 | 0.4762 | 1.0000 | 0.5238 | 1.0000 | |

The derivation of the maximum day extra capacity factors in column 4 and the basis for the column 3 and 5 weightings are presented on the following page.

The weighting of the factors is based on the maximum day ratio of 1.90, based on a review of maximum day ratios experienced during the period 1999 through 2014 (see Schedule D).

| | Maximum Day | |

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS, cont.

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.90 and the average daily system sendout for 2014 of 151.326 MGD. The system demand for fire protection is 20,000 Gallons per minute for 10 hours.

FACTORS FOR ALLOCATING COST OF SERVICE TO CUSTOMER CLASSIFICATIONS

FACTOR 1. ALLOCATION OF COSTS WHICH VARY WITH THE AMOUNT OF WATER CONSUMED.

Factors are based on the pro forma test year average daily consumption for each customer classification.

| | Average Daily | |
|---------------------------------|---------------|------------|
| Customer | Consumption, | Allocation |
| Classification | 100 Gallons | Factor |
| (1) | (2) | (3) |
| | | |
| Residential - Rate A | 9,561 | 0.4685 |
| Commercial - Rate A | 3,689 | 0.1807 |
| Industrial - Rate A | 350 | 0.0171 |
| Other Public Authority - Rate A | 2,119 | 0.1038 |
| Sales for Resale - Rate B | 2,527 | 0.1238 |
| Rate J - Large Users | 2,050 | 0.1004 |
| Private Fire Protection | 29 | 0.0014 |
| Public Fire Protection | 88 | 0.0043 |
| Total | 20,413 | 1.0000 |

FACTOR 2. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE AND MAXIMUM DAY EXTRA CAPACITY FUNCTIONS.

Factors are based on the weighting of the factors for average daily consumption (Factor 1) and the factors derived from maximum day extra capacity demand for each customer classification, as follows:

| | Average Daily | | | um Day | |
|---------------------------------|---------------|----------|------------|----------|-------------|
| Customor | Consumption | | | apacity | Allocation |

FACTOR 3. ALLOCATION OF COSTS ASSOCIATED WITH FACILITIES SERVING BASE, MAXIMUM DAY EXTRA CAPACITY AND FIRE PROTECTION FUNCTIONS, cont.

The weighting of the factors is based on the potential demand of general and fire protection service. The bases for the potential demand of general service are the maximum day ratio of 1.70 and the average daily system sendout for 2014 of 2.341 MGD. The system demand for fire protection is 2,000 Gallons per minute for 2 hours.
