## CAPITAL ASSET PRICING MODEL (CAPM) COST OF COMMON EQUITY ESTIMATES FOR WATER PEER GROUP BASED ON 30-YEAR US TREASURY

|                                | (1)     | (2)  | (3)     | (4)     |
|--------------------------------|---------|------|---------|---------|
|                                |         |      |         |         |
|                                |         |      |         |         |
|                                | 30-Year |      |         | CAPM    |
|                                | Risk    |      | Market  | Cost of |
|                                | Free    |      | Risk    | Common  |
| Company Name                   | Rate    | Beta | Premium | Equity  |
| American Water Works Company   | 3.75%   | 0.89 | 6.00%   | 9.07%   |
| American States Water Company  | 3.75%   | 0.58 | 6.00%   | 7.24%   |
| California Water Service Group | 3.75%   | 0.60 | 6.00%   | 7.33%   |
| Essential Utilities, Inc.      | 3.75%   | 0.85 | 6.00%   | 8.82%   |
| Middlesex Water Company        | 3.75%   | 0.71 | 6.00%   | 8.03%   |
| SJW Group                      | 3.75%   | 0.74 | 6.00%   | 8.18%   |
| Average                        |         | 0.73 |         | 8.11%   |

Column 1 = Average of last 3 Months of 30-Year Treasuries obtained from the St. Louis Federal Reserve website at https://fred.stlouisfed.org/series/GS20

Column 2 = Beta is a measure of the movement and relative risk of an individual stock to the market as a whole. I used a template provided by S&P Market Intelligence that calculates raw betas based on the Value Linen approach. This approach measures the covariance of the company's weekly returns with that of the S&P 500 divided by the variance of the S&P 500 returns over an historical 5 year period. This raw beta is then adjusted by the Blume formula, which is the following: Adjusted Beta = 0.35 + 0.67 \* Unadjusted Beta

Column 3 = The market risk premium selected is based on consideration of historical achieved earned return spreads and risk premiums market risk premiums typical of those recommended by various authoritative sources.

Column 4 = (Column 1 + (Column 2 \* Column 3)).
