

October 6, 2009

Per Section 10.2 of its FERC approved tariff, Southern Star Central Gas Pipeline "SSCGP" is issuing a Standard Operational Flow Order "OFO", effective October 8, 2009. This notice is being issued to protect the integrity of SSCGP storage facilities due to high inventories.

The issuance of this OFO requires all shippers under FSS, TSS, & STS agreements to adjust their receipts and/or deliveries so as (i) to maintain storage inventories at or below 100% of their contractual Maximum Storage Quantity (MSQ) under each agreement and (ii) to maintain daily injections at or below their applicable contractual Maximum Daily Injection Quantity (MDIQ) under each agreement.

Failure to specifically adhere to this OFO will result in penalties as follows:

- Shippers under FSS, TSS, & STS agreements with inventories above 100% of their MSQ will be assessed a penalty for each Dth above this inventory as set forth in section 10.4 of the SSCGP FERC approved tariff.
- Shippers under FSS, TSS, & STS agreements that are over their MDIQ will be assessed a penalty for each Dth above this injection rate as set forth in section 10.4 of the SSCGP FERC approved tariff.

Customer specific information is available on CSI in the Daily Operational Allocations reports under Customer Activities > Flowing Gas.

SSCGP estimates the duration of this notice to extend until November 1, 2009. SSCGP will monitor its storage inventories and may, by additional notice, either extend this OFO beyond November 1 or terminate it earlier as operational conditions warrant. Thank you in advance for your cooperation in this matter. If you have any questions regarding this notice, please contact one of the Customer Service Representatives listed below.
