United Inc. and Empire District Electric)
Company for Authority to Merge)
2000-Empire District Electric Company with UtiliCorp)
United Inc. and, in Connection Therewith, Certain)
Other Related Transactions)

Case No. EM-2000
369

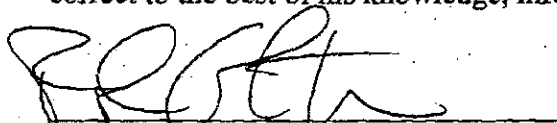

AFFIDAVIT OF ROGER COLTON

COMMONWEALTH OF MASSACHUSETTS)

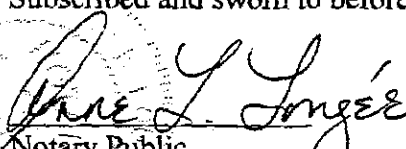

ss.

COUNTY OF MIDDLESEX)

Roger Colton, being duly sworn on his oath, hereby states that he has participated in the preparation of the foregoing Rebuttal Testimony in question and answer form; that the answers in the foregoing Rebuttal Testimony were given by him; that he has knowledge of the matters set forth in such answers; and that such matters were true and correct to the best of his knowledge, information and belief.

Roger Colton

Subscribed and sworn to before me this 21 day of JUN, 2000.

Notary Public

Commonwealth of Massachusetts

County of Middlesex

Commission expires:

09/17/04

11 **ROGER D. COLTON**

12 *On Behalf of:*

13 Missouri Department of Natural Resources

14 Jefferson City, Missouri

15 Q. Please state your name and address.

16 A. My name is Roger Colton. My address is 34 Warwick Road, Belmont, MA 02478.

17 Q. For whom do you work and in what capacity?

1 A. I am a principal in the firm of Fisher, Sheehan & Colton, Public Finance and General
2 Economics (FSC). I provide technical assistance to a variety of public utilities, state agencies
3 and consumer organizations on rate and customer service issues involving telephone,
4 water/sewer, natural gas and electric utilities.

5 Q. For whom are you testifying in this proceeding?

6 A. I am testifying on behalf of the Missouri Department of Natural Resources.

7 Q. Please describe your educational background.

8 A. I received my undergraduate degree from Iowa State University in 1975. In addition, I
9 received my law degree (With Honors) from the University of Florida in 1981 and my
10 advanced degree in economics from the McGregor School, Antioch University in 1993.

11 Q. Please describe your involvement with restructuring the natural gas and electric industries.

12 A. I have been involved with electric and natural gas restructuring throughout the nation. My
13 work has been with state and local governments, with the federal government, and with a
14 variety of community-based organizations. For example, in 1999, I completed a study for the
15 electric restructuring advisory panel of the Colorado state legislature on the impacts of electric
16 restructuring on low-income consumers. I am currently working for the New Jersey Division
17 of Ratepayer Advocate in reviewing the natural gas restructuring proposals by that state's four
18 gas utilities; for the Maryland Office of Peoples Counsel (OPC) on that state's natural gas
19 restructuring deliberations; and for the Pennsylvania Office of Consumer Advocate to help
20 design the universal service offerings for that state's ten natural gas utilities in response to
21 the natural gas retail choice statute. In addition to providing consulting services for
22 administrative proceedings, I assist states in the actual design and implementation of low-

income programs. I am working for the New Hampshire Governor's Office of Energy and Community Services to help them implement their low-income rate affordability program; with the Colorado Energy Assistance Foundation and Public Service Company of Colorado (PSCO) to help them implement a rate affordability pilot in Colorado; and for the Maryland OPC to help the Maryland Energy Assistance Program (MEAP) design and implement that state's electric universal service fund. I am currently working with two different utility companies, including Entergy Services Corporation in Little Rock (AR) to help it design a rate affordability assistance program in its five state territory and Duquesne Light Company to re-design its universal service offerings in Pittsburgh. I am under contract with the U.S. Department of Energy, through Oak Ridge National Laboratory, to provide, on request, state-specific technical assistance on the design of low-income programs funded through system benefits charges, and with the U.S. Department of Health and Human Services to develop outcome-based performance measurements for Low-Income Home Energy Assistance Program (LIHEAP) offices nationwide. I am currently working for the Iowa Department of Human Rights to measure the performance of that state's LIHEAP program relative to targeted outreach and to develop remedies for any performance shortfall. Finally, I am currently the consultant charged with the three year task of developing the low-income service components for Vermont Energy Futures, an all-fuels consumer cooperative serving Vermont.

Q. Have you ever previously testified before any regulatory commission?

A. I have previously pre-filed direct testimony with the Missouri Public Service Commission regarding the St. Joseph/UtiliCorp merger. In addition, I have testified on low-income utility

1 issues in a variety of proceedings before other regulatory bodies. I have attached a summary
2 of my experience as Exhibit RDC-1.

3 Q. Please describe your involvement with utility merger proceedings.

4 A. I was hired by the Colorado Energy Assistance Foundation (CEAF) to present testimony on
5 low-income issues in the 1999 proceeding before the Colorado public utility commission to
6 consider the proposed merger of Public Service Company of Colorado (PSCO). I was hired
7 by the Maryland Office of Peoples' Counsel to present testimony before the Maryland PSC
8 in the proposed merger of Baltimore Gas and Electric Company; by the New Jersey Division
9 of Ratepayer Advocate to assess the impacts on low-income consumers of the proposed
10 Atlantic City Electric merger; and by the Pennsylvania Office of Consumer Advocate to
11 consider the low-income impacts of the PECO Energy/Commonwealth Electric merger. I
12 worked with a community-based organization in Minneapolis on the PSCO/NSP merger and
13 with a local neighborhood association to consider the low-income impacts of the proposed
14 SBC/Ameritech Ohio merger. I am currently working for a community-based organization
15 in New Hampshire on an analysis of the impacts of the proposed merger of Northeast Utilities
16 and Consolidated Edison. Finally on behalf of a coalition of ten low-income groups
17 nationwide, I prepared a set of comments for presentation to FERC respecting its notice of
18 rulemaking to consider new federal merger guidelines.

19 Q. Please describe the purpose of your testimony today.

20 A. The purpose of my testimony is to consider the impacts on low-income consumers arising
21 from the proposed merger of UtiliCorp with Empire District Electric Company. The merged

1 company will be referred to as the Company or as UtiliCorp/EDE throughout my testimony.

2 More specifically, my testimony will:

- 3 ♦ describe the importance of defining "markets" for purposes of assessing merger impacts;
- 4 ♦ assess whether UtiliCorp/EDE adequately passes on merger savings to low-income
- 5 consumers; and
- 6 ♦ propose remedies for the problems that I identify.

7 In general, I conclude that the proposed Missouri merger presents very real dangers to low-
8 income consumers while offering little benefit in return. More specifically, I reach four
9 conclusions: (1) low-income customers represent a separate market that should be
10 independently considered in assessing the impacts of the proposed merger; (2) the merger will
11 have disproportionate adverse impacts on the market consisting of low-income consumers; (3)
12 the merger will deliver a disproportionately small share of the merger savings to low-income
13 customers, from whom those savings were generated; and (4) it is appropriate for the
14 Missouri Public Service Commission (PSC) to condition approval of the merger on the
15 remedies proposed below to address the problems identified relative to the creation of these
16 harms and the denial of these benefits.

17 Q. Please summarize the recommendations you make.

18 A. I recommend the implementation of a Community Energy Partnership Program (CEPP) as a
19 condition of the proposed UtiliCorp/Empire District merger. The CEPP should consist of the
20 following components:

- 21 1. Implementation of a 25-site Benefit Outreach and Screening Software (BOSS) pilot
22 project, with a commitment to expand the program as appropriate if found to successfully
23 deliver benefits to low-income customers.

1 2. Implementation of a base load and space heating electric energy efficiency program
2 directed toward high use payment-troubled low-income customers.

3 3. Implementation of a pilot solar energy program directed toward high use low-income
4 customers.

5 4. Implementation of a periodic survey process through which the merged Company will
6 take proactive efforts to identify which of its payment-troubled customers represent low-
7 income households.

8 5. Implementation of an Outcome-based Performance Reporting System (OPRS) through
9 which the customer service outcomes to low-income customers can be systematically
10 tracked over time.

11 I describe the specifics of the recommendations, as well as the specific merger-related bases
12 for these recommendations, in detail in the text of my testimony below.

13 Q. Please explain your understanding of the appropriate standard to apply in assessing whether
14 this merger should be approved.

15 A. The proposed merger should be reviewed to assess whether it is in the public interest. To be
16 met, this standard as I understand it requires that the merger result in no detriment to
17 consumers, or to investors, or to other legitimate interests.

18 Q. Must the merger take into account the impact on each market it serves?

19 A. Yes. To the extent that the Company serves different markets, it must take each market into
20 account.

21 Q. But, given that the PSC may not both approve *and* disapprove the merger, how can a
22 regulator resolve the conflict if there are benefits to one market and adverse consequences to
23 a different market?

24 A. This question assumes a paradox that does not exist. The decision which Missouri's utility
25 regulators face is not simply to approve the proposed merger on the one hand or to

1 disapprove the proposed merger on the other hand. A third choice is to approve the proposed
2 merger with conditions that serve to mitigate the adverse impacts of the merger to the market
3 that is being harmed while preserving the benefits of the merger to the market that is being
4 benefitted. Indeed, it is *that* approach which is appropriate in this proceeding: to place
5 conditions on the merger should it be approved. Those conditions involve adoption of the
6 mitigation measures and benefit-sharing mechanism that I propose below.

7 Q. Please explain the necessary first step in any evaluation of a proposed merger.

8 A. The first inquiry in analyzing merger impacts involves a market definition. A market, simply
9 defined, is an area within which a group of sellers compete for the patronage of a common
10 group of buyers. In my testimony concerning the low-income market, I will limit my
11 discussion to the need for a commonality amongst buyers.

12 Q. Please explain why it is necessary to define what markets are affected by the proposed
13 merger.

14 A. The significance of a market definition is straightforward. The PSC must have a frame of
15 reference within which to isolate and examine the anticipated effects of the proposed merger.
16 That frame of reference is a market. Indeed, the definition of a relevant market is critical to
17 assessing both the existence of, and extent of, both adverse and beneficial impacts arising
18 from the merger. In brief, without a definition of the relevant market, there is no way to
19 identify and measure the impacts --positive or negative-- of the proposed merger.

20 Q. Please assess how the merger impacts on different markets have been considered in the direct
21 case presented in this proceeding.

1 A. The review of impacts arising from the proposed merger has taken place to date with no
2 consideration of the differences in the markets served (DNR-1-MDED-12; DNR-1-MDMP-
3 12). The analysis in the direct case has assumed that the merger impacts would arise in the
4 same fashion, and perhaps even to the same degree, for all markets served. "Ratepayers,"
5 however, do not represent a market. "Ratepayers" not only may, but as I will show below,
6 do consist of multiple markets. My conclusion is that the merger impacts on the low-income
7 market are different, both in kind and in degree, from the impacts on other markets.

8 Q. Please explain why you focus on the low-income market in particular.

9 A. Low-income customers represent a distinct market for purposes of merger analysis. Indeed,
10 the unique low-income characteristics I identify below demonstrate that, absent the merger
11 conditions that I propose, the Company will inequitably distribute its claimed merger-related
12 savings to consumers in the low-income market. So, too, the unique characteristics of the
13 low-income market demonstrate that, absent the merger conditions that I propose, the merger
14 will generate specific adverse impacts that will impede, if not completely eliminate, the
15 required "passing-on" of efficiency-induced savings that might arise from the proposed
16 merger.

17 Q. Please describe and characterize the low-income market.

18 A. The generally accepted measure of "being poor" in the United States today indexes a
19 household's income to the federal "Poverty Level" published each year by the U.S.
20 Department of Health and Human Services (HHS). The Poverty Level looks at income in
21 relation to household size. This measure recognizes that a three person household with an
22 annual income of \$6,000 is, in fact, "poorer" than a two person household with an annual

1 income of \$6,000. The federal government establishes a uniform "Poverty Level" for the 48
2 contiguous states. The federal Poverty Levels for the year 2000 are set forth in Exhibit RDC-
3 2. Since 100 percent of Poverty Level is generally considered to be too low to be reasonable,
4 other estimates of "being poor" range from 150 to 200 percent of Poverty, or more. A
5 household's "level of Poverty" refers to the ratio of that household's income to the federal
6 Poverty Level. For example, the year 2000 Poverty Level for a two-person household is
7 \$11,250. A two person household with an income of \$5,625 would thus be living at 50% of
8 Poverty.

9 More than one-quarter of all persons in Missouri live at or below 150% of the federal Poverty
10 Level. Many times when persons hear that 25% of households live at or below 150% of
11 Poverty, however, they hear the "at" but not the "or below" portion of the sentence. In
12 assessing the energy needs of low-income consumers, it is important to remember that there
13 is a distribution of consumers over the various ranges of Poverty. While some households
14 live closer to the top (*e.g.*, 140% of Poverty), others live closer to the bottom (*e.g.*, 20% of
15 Poverty). Exhibit RDC-3 shows the actual distribution of Missouri persons who are "poor"
16 over the full range of Poverty Levels. (Exhibit RDC-3 and others are based upon information
17 obtained from the U.S. Census Bureau and the U.S. Department of Information. I routinely
18 uses, and rely upon, such information in my work.)

19 Q. Why do you conclude that low-income customers represent a distinct market?

20 A. A number of consumer-side factors distinguish residential customers generally and low-
21 income customers specifically as separate markets. In particular, the elasticity of demand
22 distinguishes these two markets as separate markets. The definition of a market is frequently

1 predicated upon the elasticity of consumer demand for the product in question. It is this
2 elasticity through which one can measure the extent to which the market offers close
3 substitutes. Elasticity can serve as a surrogate measure for a number of different market
4 characteristics. Low elasticity can indicate a lack of meaningful alternatives. It can indicate
5 the presence of high search costs associated with gains of uncertain magnitude or duration.
6 It can indicate high hurdle rates. Demand elasticity is one of the primary measures by which
7 to distinguish different markets. While the Company has performed no specific elasticity study
8 for low-income consumers (DNR-1-MDED-7; DNR-1-MDMP-7), we know that hurdle rates
9 for low-income consumers are higher than for other consumers. We know further that search
10 costs relative to the potential gains from switching energy suppliers are higher for low-income
11 consumers. Each of these elements indicate a distinct market.

12 The elasticity of demand measures the extent to which consumers can and will turn to
13 substitutes if the price of a product increases. It considers, for example, the ability of
14 consumers to turn to reasonable alternatives to the product in question. It considers the price
15 sensitivity of the product in question as well. There can be no serious dispute that residential
16 customers generally, and low-income customers in particular, have fewer alternatives, and
17 lower price sensitivity, than large user customers in the commercial and industrial classes.

18 The elasticity of demand helps to define a market even within the monopoly situation of a
19 distribution electric and natural gas utility. Low-income customers are less likely to fuel
20 switch. They are less likely to have dual fuel capabilities. They are less likely to reduce
21 consumption. As a result, higher rates and lower levels of service can be imposed with less

1 likelihood to the monopoly utility that consumers will respond by reducing their usage or
2 moving to alternative fuels or fuel suppliers.

3 Q. Are there other factors which distinguish the market made up of low-income customers
4 specifically from the market made up of residential customers generally?

5 A. Yes. One test for a market is whether the services provided are interchangeable between two
6 groups of customers. If they are not, the customers are not in the same market. The service
7 demanded by low-income consumers is different from the service demanded by residential
8 consumers generally.

9 Q. Don't electricity and natural gas represent the same "service" irrespective of who the
10 consumer is, at least between residential consumers generally and low-income consumers in
11 particular?

12 A. No. It would be easy to conclude that the "service" provided by an electric and/or natural gas
13 utility is solely the "service" of providing energy (either kWh or ccf/therms) to the consumer.
14 This approach, however, is too narrow standing alone. A more accurate approach is to
15 consider a utility as a distributor of a "manufactured" product and adopt the manufacturing
16 concepts of "product" and "service." In the manufacturing world, a company's "offering" to
17 its market is composed of both a physical "product" and a "bundle" of related or supporting
18 "services." A simple example would be the appliance manufacturer who offers free delivery,
19 free installation and a 90-day warranty with the purchase of any appliance. The delivery,
20 installation and warranty comprise the "service" components of this offering. Applying these
21 concepts to a utility leads one to define the energy (kWh and ccf) provided to consumers as

1 the "product" component of the company's market offering. All other components supporting
2 the provision of the energy would be the "service" component.

3 Q. What components of service do low-income customers use that distinguish them from
4 residential customers generally?

5 A. There are multiple service components that low-income consumers use that distinguish them
6 from the residential market generally. The services provided through the Company involving
7 the treatment of payment-troubles are more likely to be used by low-income consumers than
8 by residential customers as a whole. The services provided through the Company involving
9 the need to make personal contact with the Company, whether to deal with payment-troubles
10 or to make monthly payments, distinguish low-income customers from the residential class
11 generally. The services involving the provision of information about public bill-paying
12 assistance distinguish low-income customers from the residential class generally.

13 Q. Why do you believe that these components of service distinguish low-income customers from
14 residential customers generally?

15 A. We know that low-income customers served in Missouri routinely face unaffordable electric
16 and natural gas bills. We know that, at the average 1998 residential bill for UtiliCorp (\$899),
17 a LIHEAP recipient with an annual income of \$6,000 would bear an electric burden of 15%;
18 with an income of \$4,000, the electric burden would be 22%; at \$8,000, the burden would
19 be 11%. Given the average 1998 residential electric bill for EDE, the burdens would be 10%,
20 15% and 7% respectively. These are simply electric burdens. Home heating burdens are in
21 addition to these electric burdens. These energy burdens tend to lead to payment-troubles with
22 the corresponding need for the customer to avail themselves of Company services.

1 Q. Are there any final observations that lead you to conclude that low-income consumers
2 represent a distinct market?

3 A. Yes. First, there is an industry and public recognition of low-income consumers as a separate
4 market (or as a sub-market). Low-income consumers are often exempted from late payment
5 charges, are often provided special rates, are often offered special payment plans, and are
6 often provided public benefits (such as fuel assistance and energy efficiency). Second, the
7 market, by its nature, is made up of distinct consumers. That the low-incomes of these
8 consumers is a relevant distinction that sets them apart as a group is evidenced by their low
9 usage and their different appliance ownership patterns (indicating different demand patterns).
10 Third, I have spoken of the physical dissimilarities between the products above. Each of
11 these factors, but certainly the array of factors in combination, lead me to conclude that the
12 low-income market is a separate market.

13 Q. What do you conclude?

14 A. The "market" to be served by a merged UtiliCorp/EDE is not the same as the "service
15 territory" to be served by that company. Even if a utility service territory is the appropriate
16 definition of a geographic market, reaching that conclusion does not address the markets
17 delimited by customer-side characteristics. Geographic definitions are but one element to
18 defining a market for merger analysis. Not all ratepayers are in the same market. There are
19 several different types of markets to be served by a merged EDE/UtiliCorp. Residential
20 consumers and commercial/industrial consumers represent two very different markets. In
21 addition, residential consumers generally and low-income consumers specifically represent two
22 distinct markets. In order to review the impacts that will arise as a result of this proposed

1 merger, it is necessary to consider all of the relevant markets. Accordingly, in reviewing the
2 proposed merger, the PSC should (1) assess whether the merger will generate adverse impacts
3 that impede, at best, the passing-on of merger-related savings; and (2) consider whether the
4 mechanism which the Company has proposed to distribute the dollars of synergy-induced
5 savings disproportionately fails to distribute those savings to the low-income market.

6 Q. Please explain the purpose of this section of your testimony.

7 A. The purpose of this part of my testimony explains those adverse impacts of the proposed
8 merger which impede, at best, the "passing-on" of merger-related benefits to the low-income
9 market. In addition, I assess whether the distribution of benefits appropriately passes-on
10 merger benefits in the low-income market.

11 Q. Please explain what you mean by the "passing-on" requirement.

12 A. Traditional merger analysis holds that merger-related efficiencies are only relevant in an
13 inquiry into the legitimacy of a merger to the extent that they: (1) are "merger-specific," and
14 (2) are likely to be "passed on" to consumers in the form of lower prices. I will address the
15 second half of this inquiry: the "passing on" requirement. The passing-on requirement was
16 first formally described by the Federal Trade Commission's 1984 decision in American
17 Medical International (104 F.T.C. 1, 213 - 20 (1984)). The passing-on requirement has been
18 articulated time and again since.

19 Q. Does the passing-on requirement dictate only review of whether the merging company will
20 distribute the merger-related savings?

21 A. No. The passing-on requirement also dictates that the review of a proposed merger consider
22 whether the merger will result in *adverse* impacts that will impede, if not completely

1 eliminate, the passing-on of benefits to particular markets. This is precisely the situation with
2 the proposed merger now pending before the Missouri PSC. The proposed merger will result
3 in adverse impacts that impede, if not eliminate in their entirety, the passing-on of merger-
4 related benefits to the low-income market. Indeed, the proposed merger will generate specific
5 affirmative harms to the detriment of low-income consumers. These harms arise from
6 consolidation, remoteness, inflexibility, dilution, and standardization.

7 Q. Please explain what you mean by harms arising from consolidation.

8 A. One of the economic benefits to investors arising as a result of this merger involves the cost
9 savings that result from consolidation. Consolidation refers to the process of combining
10 functions and offices so that a larger geographic area can be served with a smaller staff in
11 fewer offices. As a company --be it health care, financial services, or electric/natural gas
12 utility-- expands its geographic service territory, however, the customer and institutional base
13 to whom it is accountable becomes bigger as well. The larger group to which the firm is
14 accountable is less focused on specific services responding to individualized or localized
15 needs. The very largeness of the group makes the indicia of accountability more
16 homogenized. That homogenized indicia tend to be financial return rather than responsiveness
17 to community needs. Responding to local needs in rural Missouri becomes less compelling
18 to a company that serves not only Missouri, but seven other states along with customers in
19 other countries.

20 Consider the health care industry as an example. The merger and consolidation of health care
21 plans has been found to result in a reduction of the plans' responsiveness to the unique health
22 needs and conditions of local communities. A 1993 survey of managed care organizations

1 found that utilization review organizations that served national markets -- compared with
2 similar organizations with state or regional markets -- placed considerably less value on local
3 norms of clinical practices and local participation in making utilization review policies.

4 Q. Has this been found only with health care facilities?

5 A. No, the same problem has been found to arise as a result of bank mergers as well. In one
6 article, Federal Reserve Board researchers noted the special knowledge that local bankers
7 bring to community development. In discussing that "deregulation has raised the specter of
8 larger banks entering rural markets," the Federal Reserve writers noted that bankers offer
9 more than financial lending to the community. This research, and that of others, emphasized
10 the importance of *local* community bankers in exercising leadership in local communities and
11 in addressing local community problems.

12 Q. Will the same results arise in Missouri?

13 A. Yes, the same results will likely obtain in Missouri. An increase in the geographic scope of
14 the markets served by the merged utility can reasonably be expected to lead to a reduced
15 emphasis on, and focus upon, the specific needs of Missouri standing alone, as well as the
16 localities and the local norms of treating payment-troubled customers. My work with local
17 providers of service to low-income utility customers has found this to be true in areas such
18 as negotiating payment plan terms, establishing creditworthiness, and responding to inability
19 to pay.

20 Indeed, my experience with the utility industry is the same as that identified above with
21 health care and financial services. Local utilities offer more than energy. Increased
22 consolidation has decreased utility attention on the needs of particular local populations and

1 how those needs affect the interface between the company and its customers. These local
2 needs range, for example, from the closing of a major employer (thus putting substantial
3 numbers of customers out of work), to the quality of housing, and the prevalence of fixed
4 income older customers in a community. My work with utilities around the nation has found
5 that local communities can have very localized needs that go into the calculus of how the
6 utility best interacts with the community. These localized needs are precisely the needs that
7 are less well-served by a merged company.

8 Q. Is there reason to believe that this will occur with EDE and UtiliCorp in particular?

9 A. Yes. UtiliCorp stated in response to discovery that the way it assures that it maintains a
10 "balance" between "operating efficiencies" and "customer service" is to ensure that certain
11 "customer-related benchmark targets" are maintained. (DNR-1-MDMPED-2). When asked for
12 all documents *applying* that balancing test, UtiliCorp referenced certain "operation and
13 maintenance cost benchmarks" as well as "customer satisfaction" benchmarks. (DNR-1-
14 MDMPED-3). Several observations are important in examining those benchmarks. First, five
15 of the seven benchmarks are cost-related. (DNR-1-MDMPED-1). Second, and just as
16 importantly, the benchmarks for the past six years have all been done on a *total company*
17 basis. No separate application is done for the individual operating companies, just as I
18 discuss above.

19 Q. Is there other evidence of how consolidation will harm customers of a small rural utility such
20 as EDE?

21 A. Yes. UtiliCorp provided the Executive Summary of its 1995 "Needs Assessment" in response
22 to discovery. (DNR-1-MDMP-34). The "needs assessment" found:

1 Availability of Housing-- This area of need surfaced in nine communities, and in the
2 Small Cities, Towns and Small Towns' population segments. It is conspicuously absent
3 from the Metro, Cities and Suburban segments. This doesn't necessarily mean that
4 housing isn't a concern in these segments, but that other needs are more pressing.
5 Specific concerns included single and multi-family housing, affordable rental and housing
6 options for the elderly and low-income families, and existing substandard housing.

7 (DNR-1-MDMP-34). The Company states that, as a result of this needs analysis, it included
8 housing as a "focus" area. The Company went on, however, to create a special "charitable
9 organization" -- MPS Caring for Kids -- designed to meet the needs of needy and foster
10 children, as well as to grant 35 \$1,000 scholarships to students whose parents are customers.
11 (DNR-MDMPED-11). In contrast, in 1996, the Company spent \$2,320 on low-income
12 weatherization. (DNR-MDMPIN-20). The Company did not even track "the dollars
13 contributed to affordable housing initiatives in the MPS service territory." (DNR-1-MDMPIN-
14 22). Indeed, the Company objected to one DNR data request, arguing that the term
15 "affordable housing" was "vague" and "not defined." (DNR-1-MDMPIN-25). In short, the
16 housing need which was identified for nine specific communities, as well as the "small cities,
17 town and small towns" areas, but which was "conspicuously absent" in the larger "metro,
18 cities and suburban" area, was left behind to the needs of the larger area.

19 Q. Is there any final way in which consolidation will harm low-income EDE customers.

20 A. Consolidation will occur as the small Empire District service territory is absorbed into a giant
21 combination utility serving more than three million customers. The unique problems faced
22 by EDE's residential customers (including its low-income residential customers in particular)
23 become tiny aspects of a multi-national corporation rather than the focus of customer service
24 for a largely local, residential, company. The unique problems facing a utility such as EDE
25 include:

1 ♦ EDE's residential customers have a more limited safety net of service providers, thus
2 increasing the potential for payment troubles. This safety net includes not only energy
3 assistance providers, but providers of other helping-services (such as food banks and rental
4 assistance) that low-income customers often use as a mechanism to help address their
5 home energy payment troubles.

6 ♦ EDE's residential customers require a greater effort to identify and access service
7 providers, either by telephone or by vehicle. Telephone calls are often toll calls, and office
8 visits require extended travel.

9 ♦ The EDE service territory has a lack of local media, thus making consumer education
10 about helping services more difficult. Education about local service providers must be
11 more targeted and more selective than blanket media coverage by large market media
12 outlets.

13 These factors will likely result in a degradation of service to EDE's low-income customers
14 for reasons including those identified above, but extending beyond those reasons as well. Let
15 me provide one concrete example. In educating customers about winter heating assistance,
16 it is necessary not only to make low-income consumers aware of the assistance generally, but
17 to educate them as to the specific means through which to access the specific energy
18 assistance programs. This involves providing both program names and agency contacts. I
19 know this based on my 20 years of experience in the field. The need was confirmed, as well,
20 by a Penn State University study which identified the concept of "effective knowledge."
21 "Effective knowledge" involves not only conveying information, but teaching consumers how
22 to use that information as well. Consumers must know how to act upon the information they

1 are given. Consumers must not only have an awareness of energy assistance, in general, but
2 their knowledge must be sufficient to allow them to act. Simply knowing about energy
3 assistance in general is insufficient to provide help if the customers cannot name the specific
4 program where help can be obtained. People who are unaware of programs or who cannot
5 name an agency which they can contact for assistance most likely do not have effective access
6 to help when they need it.

7 I have reviewed the bi-monthly customer service newsletter distributed by UtiliCorp in the
8 states of Colorado, Nebraska, Missouri, Iowa, Minnesota, Michigan and Kansas. The
9 November 1999 newsletter, largely devoted to addressing high winter bills, was identical for
10 all states. No specific (or local) knowledge was provided about how to contact local service
11 providers. If a customer did not know how to seek out local help before receiving the
12 newsletter, they would not know after receiving the newsletter either.

13 Q. Please explain the problem of remoteness.

14 A. Low-income consumers frequently require assistance in dealing with their payment troubles.

15 Low-income consumers rely upon the company to deliver a variety of services, including, but
16 not limited to, the negotiation of payment plans, the negotiation of deposits, and the
17 avoidance of service disconnections for nonpayment. The experience to date has been that
18 remote negotiations generally occurring by telephone have resulted in greater difficulties in
19 reaching agreement on the immediate and long-term actions which the customer needs to take
20 to avoid service termination. While immediate service terminations are generally still
21 avoided, there has been an increased difficulty in reaching agreement on the necessary
22 customer actions. Experience confirms that to the extent that the merger increases the physical

1 distance between the utility offering service and the low-income consumer needing to
2 negotiate deferred payments or the avoidance of a service disconnection for nonpayment, the
3 merger will make it more difficult for those consumers to obtain favorable terms.

4 The problem of remoteness, however, can be found in ways that are in addition to the
5 physical separation between the customer who is calling and the customer service
6 representative who is handling the customer in the Company's call center. In my work across
7 the country, I find:

8 ♦ Low-income payment negotiations often depend on the personal relationship between the
9 service provider and the customer service representative. This relationship results in the
10 creation of a trusting relationship and a shared sense of mores (involving customer and
11 company responsibilities).. A move to remote customer call centers obliterates these
12 relationships thus making it more difficult to reach mutually beneficial payment
13 agreements.

14 ♦ Low-income crisis resolution often results from referrals to local private sources of energy
15 and non-energy assistance providers. These might include local churches, local
16 community-based organizations, and local providers of services such as food banks and
17 crisis rental assistance. It is virtually impossible for a merged call center to track these
18 local sources of assistance for the low-income payment-troubled customer. Indeed,
19 separate calls to the UtiliCorp 1-800 number did not result in the identification of
20 information about local private energy assistance funds in Missouri, Kansas, Nebraska,
21 Colorado, Michigan or Iowa, the locations about which I inquired.

1 Q. Please explain why this merger will increase the remoteness for low-income payment-troubled
2 EDE customers?

3 A. UtiliCorp witness Siemek has testified that one source of synergy savings is the elimination
4 of "redundant" company operations, including such operations as Empire District call centers.
5 (Siemek, at 18). Customer inquiries will be consolidated into the UtiliCorp call center. This
6 stands in sharp contrast to the service quality provided to EDE low-income payment-troubled
7 customers at present. EDE customers currently have eight different Missouri offices (in
8 Aurora, Bolivar, Branson, Greenfield, Joplin, Neosho, Ozark, and Republic) where they can
9 walk-in to make bill inquiries, request deferred payment plans, and respond to shutoff notices.
10 (DNR-1-MEDEIN-5). In addition, EDE customers have eight different local offices where
11 they can call to make bill inquiries, request deferred payment plans, and respond to shutoff
12 notices. (DNR-1-MEDEIN-1). Finally, "collection contacts" are made by the same persons,
13 out of the same offices, as who handle customer contacts. (DNR-1-MEDEIN-7). The
14 consolidation of these functions into the single UtiliCorp call center represents precisely the
15 type of remoteness that I have discussed above.

16 Q. Please explain the problems caused by decreased customer service flexibility.

17 A. Flexibility in the offer of customer service provides a company the opportunity to respond
18 to the diverse individual needs of its low-income payment-troubled customers. Experience
19 counsels, however, that diversity in administrative practices causes complexity; complexity
20 is expensive. As offices and companies are integrated, one generally-accepted cost reduction
21 technique is to standardize a process and then hire fewer personnel to perform the tasks. This
22 is precisely the process that was identified in the direct case in support of the proposed

1 merger. The negotiation of deferred payment plans is one such process. Standardized
2 payment plans, in particular, tend to harm low-income consumers. An increased use of
3 standardized payment plans precludes the ability to respond to the unique situations of
4 particular consumers. Increased payment problems arise as a result.

5 Q. Is there any other area of standardization that will likely harm low-income EDE customers?

6 A. Yes. EDE provides that "regarding deferred payment arrangements for EDE customers, each
7 customer is different, therefore, settlement is negotiated on a case by case basis." (DNR-1-
8 MDED-18). UtiliCorp does not provide similar assurances. Instead, UtiliCorp procedures
9 provide that, when no shutoff or door tag has been effected, the company offers only a 1-
10 month, 2-month and 3-month option. (DNR-1-MDMPIN-16). Even then, the Company states
11 further that the 3 month option is offered only last, and only "in extreme circumstances where
12 a very larger arrears (\$500 or greater) exists." (DNR-1-MDMPIN-16).

13 Q. Is it simply the negotiation of payment plans where the loss of flexibility will harm low-
14 income consumers?

15 A. No. Low-income consumers often exhibit characteristics that utility companies consider to be
16 adverse credit indicators. Low-income consumers more frequently tend to have bad credit
17 reports for non-utility transactions; are less frequently homeowners; are less frequently
18 financial service customers (checking and banking accounts); and are more frequently
19 recipients of collection treatment. All of these characteristics tend to push low-income
20 customers into a need to establish creditworthiness or to secure bill payment. As the processes
21 through which customers (or potential customers) can establish creditworthiness become more
22 standardized and less flexible, however, low-income consumers will be harmed. This harm

1 may be in the form of higher prices (such as higher cash deposits) or in the outright denial
2 of service (in the absence of a deposit). Processes can become more standardized and less
3 flexible either by limiting the demonstrations through which a customer may establish
4 creditworthiness, limiting the processes internal to the Company through which a customer
5 may remedy a finding of non-creditworthiness, or limiting the creditworthiness
6 decisionmaking that may occur at the operational level without need for higher management
7 approval.

8 Q. What standardization can reasonably be expected to arise from the EDE/Utilicorp merger?

9 A. The direct case presented in this proceeding has indicated that two areas of synergy savings
10 involve the consolidation of customer call centers and the switch of EDE customer service
11 operations to the use of the UtiliCorp standard platform to be used by the merged companies
12 relating to customer service. This move to standardized processes can be expected to result
13 in adverse impacts to low-income customers. Consider, for example, the impact on the
14 availability of levelized billing plans. Low-income customers virtually uniformly would
15 benefit from their enrollment in levelized monthly billing plans. Not only do such plans take
16 the winter peak out of home energy bills, but they create equal monthly payments that low-
17 income customers can more easily incorporate into their monthly budgets. The levelized
18 plans of Missouri Public Service, however, are less available to low-income customers than
19 are the levelized plans of EDE. Missouri Public Service Tariff Rule 6.05(B) provides that
20 if a customer has been late on three or more payments within the past 12 months, the
21 customer is not eligible to participate in the Company's levelized budget billing plan. EDE
22 does not have a similar restriction. (DNR-1-MDED-21; DNR-1-MDED-30) Given the greater

1 propensity of low-income customers to be late on multiple payments each year, the move to
2 standardized customer service processes will harm low-income customers.

3 Q. Have you identified any other standardization problem resulting from the merger?

4 A. As the operations of the affected companies merge, it is reasonable to expect that the
5 companies will want to analyze existing systems and to standardize customer service
6 operations and procedures even if the operations are not further centralized. Even beyond the
7 tariff provisions identified above, customer service is directly affected by a range of policy
8 and operational decisions which, while affecting customer access to service, are not set out
9 in tariffs. They are, instead, embodied in documents such as customer service staff
10 procedures manuals.

11 Q. Can you illustrate the "standardization" that you expect?

12 A. Yes. Solely for purposes of illustration, utility company collections are driven by what are
13 called "treatment amounts." A treatment amount is the minimum level of arrears (either in
14 dollars or in age or a combination of the two) that a customer must incur before the utility
15 will take collection action against them. Assume, for example, that EDE will not initiate
16 collection activity (including the disconnection of service) unless and until a customer is \$100
17 or 90-days in arrears. If UtiliCorp has a treatment amount of \$50 or 60-days, or anything
18 stricter than the \$100/90-day threshold, EDE consumers will experience a reduction in service
19 if the treatment amount is standardized at the stricter level.

20 Q. Please explain any final concerns you have with regard to standardization.

1 A. Even at this point in the process, Empire District has completely abrogated responsibility for
2 determining what is in the best interests of its consumers who need to contact the Company
3 because of payment troubles. Consider, for example:

4 ♦ When asked whether the EDE customer information system functions will be consolidated
5 into UtiliCorp, EDE responded: "we do not have this information." (DNR-1-MEDEDIN-
6 39).

7 ♦ When asked whether EDE customer service functions provided by existing Empire District
8 customer call centers (or customer service centers) will be consolidated into UtiliCorp
9 customer service centers, EDE responded: "we do not have this information." (DNR-1-
10 MEDEDIN-38).

11 ♦ When asked whether EDE will retain its own "operations and procedures" with respect
12 to establishing creditworthiness for new customers, EDE responded: "we do not have this
13 information." (DNR-1-MEDEDIN-35).

14 ♦ When asked whether EDE will retain its own "operations and procedures" with respect
15 to establishing customers in arrears, EDE responded: "we do not have this information."
16 (DNR-1-MEDEDIN-35).

17 ♦ When asked whether EDE will retain its own "operations and procedures" with respect
18 to establishing when a customer action is needed to secure bill payment, EDE responded:
19 "we do not have this information." (DNR-1-MEDEDIN-35).

20 ♦ When asked whether EDE will retain its own "operations and procedures" with respect
21 to deciding under what circumstances nonpayment may be cured through a deferred

1 payment arrangement, EDE responded: "we do not have this information." (DNR-1-
2 MEDEDIN-35).

3 ♦ When asked whether EDE will retain its own "operations and procedures" with respect
4 to deciding the terms and conditions of a deferred payment arrangement, including
5 downpayments and payment arrangement lengths, EDE responded: "we do not have this
6 information." (DNR-1-MEDEDIN-35).

7 ♦ When asked whether EDE will retain its own "operations and procedures" with respect
8 to deciding whether collection actions will be taken, and at what level and/or age of
9 arrears, EDE responded: "we do not have this information." (DNR-1-MEDEDIN-35).

10 ♦ When asked whether EDE will retain its own "operations and procedures" with respect
11 to deciding whether service termination action will be taken, and at what level and/or age
12 of arrears, EDE responded: "we do not have this information." (DNR-1-MEDEDIN-35).

13 Q. Why do you believe that the merger will result in a standardization as you are suggesting?

14 A. UtiliCorp says as much. In response to discovery, UtiliCorp stated: "all domestic gas and
15 electric LDC's (sic) use the same standardized procedures. The only exceptions would be
16 items specific to Missouri Gas and Electric, Rules and Regulations which would take
17 precedent (sic)." (DNR-1-MDMPED-6). Moreover, UtiliCorp indicates that the move to a
18 uniform "operational platform" that it references has, amongst its objectives, to "centralize
19 customer calls" and to "standardize business practices." (DNR-1-MDMPED-5). These
20 "standardized business practices" explicitly incorporate "mak(ing) payment arrangements."
21 (DNR-1-MDMPED-6).

22 Q. Please explain the problem of dilution resulting from the merger.

1 A. Dilution can occur in one of two ways. First, a customer service process (such as responding
2 to payment-troubles) historically found in one operating company can be combined into a new
3 combined company serving both service territories. This would be the case if the companies
4 were combined into a single operating company. Second, the same result obtains if two
5 separate operating companies deliver their customer service through an independent third-
6 party serving both operating companies. Thus, combining customer service functions into a
7 third party service company for delivery to both UtiliCorp and EDE presents the same
8 problem of dilution that would exist if EDE and UtiliCorp were combined into the same
9 operating company. The proposed merger will dilute the resources available to low-income
10 payment-troubled customers of EDE as the blending of low-income and customer service
11 resources between EDE and UtiliCorp will likely divert resources from EDE low-income
12 customers who are less well off than Missouri Public Service low-income customers.

13 Q. Please explain.

14 A. Personal contact with low-income customers is almost always initiated by the Company in
15 the event of nonpayment. Previous research in Missouri and elsewhere has confirmed that
16 payment troubles give rise to the customer initiating contact with the utility, either to obtain
17 information about public assistance or to work out payment arrangements. In these situations,
18 information is provided to low-income customers during the collection process. Dilution of
19 resources available to low-income EDE ratepayers will occur because EDE communities have
20 substantively lower incomes than customers in UtiliCorp communities. While only 20% of
21 all UtiliCorp customers live with incomes at or below 150% of Poverty, more than 31% of
22 EDE customers do. Even more strikingly, while 27% of all communities served by UtiliCorp

1 have 20% or fewer of their customers with incomes at or below 150% of Poverty Level, only
2 7% of EDE communities do. At the other end of the spectrum, while 35% of UtiliCorp
3 communities live with 35% or more of their customers with incomes at or below 150% of
4 the Poverty Level, 50% of EDE communities do.

5 Q. Is there a difference in payment-troubles between the two utilities?

6 A. Yes. Information available through the National Association of Regulatory Utility
7 Commissioners (NARUC) shows that more Missouri Public Service customers are in more
8 payment-trouble than EDE customers. For example, according to a 1992 NARUC report (the
9 most recent data available), while UtiliCorp disconnects 12.4% of its residential customers
10 for nonpayment, EDE disconnects only 2.4% of its residential customers. I conclude that
11 combining the customer service functions of the two Companies will direct more resources
12 toward the existing UtiliCorp service territory and fewer resources toward the lower income
13 EDE customers.

14 Q. Is there a final concern that you have identified affecting low-income consumers as a result
15 of the dilution of low-income and customer service resources?

16 A. Yes. In addition to the lower incomes and higher penetrations of poverty in the EDE service
17 territory, there is a considerable disparity in rates paid as well. UtiliCorp has substantially
18 higher residential rates than does EDE. According to the Energy Information Administration
19 of the U.S. Department of Energy, while EDE had an average residential revenue of 6.72¢
20 per kWh in 1998, UtiliCorp had an average residential revenue of 7.72¢ per kWh. The
21 combination of low-incomes and high rates can be expected to create a higher incidence of
22 payment-troubles in those areas, as is confirmed by the available collection statistics.

1 Through the merger, however, the companies are combining customer service operations,
2 reducing customer service personnel, and diluting the resources to help address those payment
3 problems.

4 Q. What do you conclude?

5 A. This mismatch of incomes and payment-troubles will likely result in a dilution of resources
6 devoted to serve the low-income energy needs of EDE customers.

7 Q. What is the purpose of this section of your testimony?

8 A. This part of my testimony will assess the extent to which merger savings will or will not
9 inure to the benefit of low-income EDE and UtiliCorp consumers. I conclude that due to the
10 unique attributes of low-income consumers, those consumers will receive a disproportionately
11 small share of the merger benefits unless specific actions are taken to capture and distribute
12 those benefits.

13 Q. Please explain why a merger rate freeze will not deliver a proportionate share of savings back
14 to low-income consumers.

15 A. The Company proposes to "share" the savings generated by the merger with customers
16 through the mechanism of a rate freeze. This mechanism, in effect, allocates merger savings
17 back to individual customers on a per unit of energy basis. If a customer uses more energy,
18 under the theory of distributing benefits via a rate freeze (or a rate rollback), the customer
19 receives a higher proportion of the savings returned to him or her in the form of a bill that
20 is lower than it would have been without the merger. This method of shared savings does
21 not change if there is a rate rollback rather than a mere freeze. Even if there is a rate
22 rollback, the savings are passed through to end-use consumers on a per-kWh basis.

1 Q. What are the merger savings that you have considered?

2 A. According to Company witness Siemek, one of the major areas of merger savings lies in the
3 area of general and administrative synergies. (Siemek, at 11 - 12). These savings include
4 "eliminating activities needed by Empire as a stand alone entity that are not needed separately
5 as a division of UtiliCorp." (Siemek, at 12). An example of such an activity that will be
6 eliminated, as cited by witness Siemek, is "information systems for billing, financial reporting
7 and managing operations." (Id.). Siemek reports that there will also be operating costs
8 savings "from eliminating the separate departments for EDE and utilizing staff for existing
9 and projected vacancies of approved UtiliCorp positions." (Siemek, at 14). In addition to
10 these Information System synergies, Company witness Siemek testified that a major area of
11 synergy savings comes in the distribution area. (Siemek, at 17 - 18). Included within these
12 distribution savings are synergies relating to the use of Company call centers. (Siemek, at 18)

13 Q. Why does a distribution of these savings on a per unit of energy basis provide a
14 disproportionately small benefit to low-income consumers?

15 A. Customer service costs are incurred as a function of numbers of customers. Indeed, the
16 allocation of customer service costs on the basis of both usage (in units of energy) and sales
17 (in dollars of revenue) are inappropriate as cost allocators for customer service costs. In
18 addition, the proper cost allocation for CIS projects involves the number of customer bills.
19 The proper allocation of IS savings involving distribution and delivery is the number of
20 customers. If benefits are produced based on numbers of customers or customer bills, but
21 distributed on a per unit of energy basis, those customers (or classes of customers) with

1 higher consumption will receive a disproportionately *high* share of the benefits, and those
2 customers with lower consumption will receive a disproportionately *low* share.

3 Assume a simple system, for example, of two customers. Merger cost savings (\$100) are
4 generated based on numbers of customers. Since there are two customers, each customer is
5 entitled to \$50 of the savings. Assume further that Customer A consumes 15,000 kWh each
6 year while Customer B consumes only 5,000 kWh. If the \$100 in benefits are distributed on
7 a per kWh basis, since Customer A has 75% of the consumption ($15,000 / 20,000 = 0.75$),
8 he or she will receive \$75 of the savings. In contrast, Customer B receives only \$25. In
9 effect, Customer A has received \$25 of savings that are, in fact, attributable to Customer B.

10 Q. Does it matter if you are addressing inter- or intra-class distribution of benefits?

11 A. No. Clearly, if you have a certain sum of benefits that are causally related to numbers of
12 customers and you distribute those benefits *between* customer classes (*e.g.*, industrial,
13 commercial) on the basis of units of energy, some "residential" benefits will be distributed
14 to the high use industrial and commercial customers. The same is true *within* a ratepayer
15 class as well. If you have residential savings (such as customer service savings) that are
16 produced on the basis of numbers of customers, and if you then distribute those benefits on
17 the basis of units of energy consumption, there will be a disproportionate distribution of
18 benefits to high use customers.

19 Q. Do low-income customers as a group use less energy per customer than the average
20 residential customer?

21 A. Yes. It is universally found that low-income customers use less energy on a per household
22 basis than do average residential customers. Consider, for example, the Residential Energy

1 Consumption Survey (RECS) prepared by the Energy Information Administration of the U.S.
2 Department of Energy (EIA/DOE). The RECS reports that for the West North Central
3 Census Division of the Midwest Census Region --this is the Census Division of which
4 Missouri is a part-- energy consumption by low-income households is less than that for the
5 average household. This data is set forth in Exhibit RDC-4.

6 According to the annual report to Congress by the Low-Income Home Energy Assistance
7 Program (LIHEAP), a program within the Administration for Children and Families of the
8 U.S. Department of Health and Human Services (ACF/HHS), energy consumption by low-
9 income consumers is only 87% as high as for the average household. This data is set forth
10 in Exhibit RDC-5. This data is consistent with national data published by the Energy
11 Information Administration based on the 1997 Residential Energy Consumption Survey as set
12 forth in Exhibit RDC-6.

13 Q. Is the fact that usage may vary by individual households contrary to your conclusions?

14 A. No. I am not using usage as a surrogate for income. Nor am I using usage as a means to
15 identify low-income consumers (saying that a person can be assumed to be low-income if
16 they are found to have low usage). There will quite clearly be some low-income consumers
17 with high usage, just as some higher income customers will have low usage. Nonetheless,
18 taken as a group, it is indisputable that low-income households are low use consumers.
19 Accordingly, to take cost savings produced as a function of customers and to distribute those
20 savings on a per unit of energy basis will systematically deny low-income consumers their
21 fair share of the merger savings.

1 Q. Can you provide some idea of the magnitude of this redistribution?

2 A. Yes. I estimate that 24 percent of all UtiliCorp/EDE residential accounts are low-income
3 accounts. In addition, the RECS data cited above reports that low-income electric
4 consumption is 22.7 mmBTU/household (6,661 kWh). Using these figures, one can thus
5 compare the low-income "share" of merger savings *generated* as a function of numbers of
6 customers but which are, in fact, *distributed* on a per unit of energy basis. Total jurisdictional
7 electric sales and customers for the combined companies were obtained from the U.S. Energy
8 Information Administration and are presented in RDC-7. Using this data, low-income
9 customers represent 20% of all customers, while they represent only 5.5% of all electric use.
10 On a per thousand dollar basis, therefore, if benefits are distributed on the basis of usage
11 (5.5%) rather than numbers of customers (20.2%), low-income customers will "lose" roughly
12 \$147.

13 Q. Have you applied this rate of misallocation to the appropriate areas of synergies projected by
14 the Company?

15 A. No. The information was requested from the Company and was not provided. Consider that:

- 16 ♦ DNR requested "for each area -- customer service, accounting, community affairs -- the
17 total dollars savings and the net jurisdictional savings to Empire District resulting from
18 the proposed merger." This information was not available. (DNR-1-MEDEIN-40).
- 19 ♦ The total savings and net jurisdictional savings to Empire District resulting from the
20 consolidation of Empire District functions relating to the Customer Service Centers. This
21 information was not available. (DNR-1-MEDED-40).

1 ♦ The total savings and net jurisdictional savings to Empire District resulting from the
2 consolidation of Empire District functions relating to the Computer Aided Dispatching.
3 This information was not available. (DNR-1-MEDED-40).

4 ♦ The total savings and net jurisdictional savings to Empire District resulting from the
5 consolidation of Empire District functions relating to the Customer Information System.
6 This information was not available. (DNR-1-MEDED-40).

7 ♦ The total savings and net jurisdictional savings to Empire District resulting from the
8 consolidation of Empire District functions relating to the Financial Systems. This
9 information was not available. (DNR-1-MEDED-40).

10 ♦ For each figure of total savings and net jurisdictional savings identified in the subsections
11 immediately above, please separately disaggregate such savings by labor savings, capital
12 savings, and other savings. This information was not available. (DNR-1-MEDED-40).

13 Q. Please describe the appropriate remedy to the passing-on problems that you have identified
14 above.

15 A. I recommend a merger condition that will address both: (1) the adverse impacts that I have
16 identified above, and (2) the misallocation of merger-related savings away from low-income
17 consumers. This recommendation would require that UtiliCorp and EDE implement a
18 Community Energy Partnership Program (CEPP) as a condition of the merger. The CEPP
19 would consist of the following parts:

20 ♦ Implementation of a 25-site BOSS pilot project for five years, with a commitment to
21 expand the program as appropriate if found to successfully deliver benefits to low-income
22 customers.

- 1 ♦ Implementation of a space heating and base load energy efficiency program directed
- 2 toward high use payment-troubled low-income customers.
- 3 ♦ Implementation of a pilot solar energy program directed toward high use low-income
- 4 customers.
- 5 ♦ Implementation of a periodic survey process through which the merged Company will
- 6 take proactive efforts to identify which of its payment-troubled customers involve low-
- 7 income households.
- 8 ♦ Implementation of an Outcome-based Performance Reporting System (OPRS) through
- 9 which the customer service outcomes to low-income customers can be systematically
- 10 tracked over time.

11 Q. What is the first component to the proposed Community Energy Partnership Program
12 (CEPP)?

13 A. The first component would require the merged Company to implement a Benefits Outreach
14 and Screening Software (BOSS) initiative. Through BOSS, the customer service personnel
15 of a merged UtiliCorp/EDE can help payment-troubled customers identify those public benefit
16 programs for which they are eligible.

17 Q. What is BOSS?

18 A. BOSS is a computer software screening tool that allows a utility to help its low-income
19 consumers respond to inability-to-pay problems. BOSS not only reduces the complexity and
20 time required to identify assistance programs for which utility customers may be eligible, but
21 also greatly increases the ability of customer assistance representatives to ensure that eligible

1 low-income utility customers (or those with special needs) obtain all the services to which
2 they are entitled. BOSS has the capability to:

- 3 ♦ Screen low-income households for potential eligibility for a wide array of community
4 resources, volunteer services, employment and job training opportunities, and utility
5 assistance programs;
- 6 ♦ Print a resource eligibility report for each person, which report lists the programs for
7 which that person is eligible, telephone numbers of the contact person, addresses, times
8 to apply, and required documentation; and
- 9 ♦ Use scanning technology to store brochures and other agency forms so that information
10 about any agency is available at any site.

11 Indeed, in some places, BOSS can generate completed applications to selected benefits
12 programs for those persons identified as potentially eligible and electronically transfer the
13 application data to the appropriate agency for processing. In some places, also, BOSS can
14 use scanning technology to scan client documents (such as birth certificates) into the system
15 and transfer the scanned image along with the completed application to the appropriate
16 agency.

17 Q. Why do you recommend a BOSS system for the merged company?

18 A. Having the merged Company provide assistance through BOSS is merited because it makes
19 no sense for a customer who is having problems paying his or her utility bill to *not* be getting
20 the benefits for which he or she is eligible. Some people quite rightfully question what a
21 utility can offer low-income customers that the entire range of social service agencies can not.
22 The fact is that a monopoly utility occupies a unique position in the energy market place.

1 First, unlike social service agencies, utilities have a continuing contact with these households.
2 Every month, at a minimum, the Company sends these households a bill. This constant
3 contact does not occur with social services agencies. Second, utilities have a way to target
4 outreach. Rather than doing comprehensive mailings to *all* low-income consumers, or buying
5 blanket radio and television ads, the merged Company can say to customers in payment-
6 trouble and/or facing service disconnections: "You owe us money. Rather than having your
7 service disconnected in the near future, please contact us and let us help find you assistance
8 to keep your service on."

9 Q. Please explain the benefits of BOSS to the Company.

10 A. Assuring that low-income consumers have ready access to all benefits to which they are
11 entitled is one way to help those consumers pay their utility bills, both current and past-due.
12 Consumers who gain access to additional household resources are more likely to pay current
13 bills and to reduce their arrears. One Edison Electric Institute (EEI) staffperson cites the
14 Earned Income Tax Credit (EITC) as an example of this phenomenon. The EEI staffperson
15 noted that the EITC, a tax credit available to the working poor, "can be a vital supplement
16 to families that have difficulty affording basic energy services." He reports that "in a 1993
17 Gallup survey of callers to New Jersey's EITC Hot Line, more than 90 percent of EITC
18 recipients used the money to pay household bills. Approximately a quarter used part of the
19 refund to pay utility bills, and a third paid overdue bills.

20 Q. Have other utilities implemented BOSS?

21 A. Yes. In October 1996, Public Service Electric and Gas agreed to implement the BOSS
22 system for its New Jersey service territory. In addition, GPU is implementing BOSS

1 throughout its Pennsylvania service territory. Implementation of BOSS at a merged
2 UtiliCorp/EDE is merited as a response to the harms of consolidation, decreased flexibility,
3 dilution, and increased standardization.

4 Q. Please explain how the key attributes of BOSS address the adverse impacts of the merger that
5 you identified.

6 A. An effective strategy to deal with low-income payment troubles involves several attributes,
7 including flexibility, integration and personalization. By these terms, I mean:

8 ♦ Flexibility refers to the ability to customize both the types of response and the degree of
9 response to individual circumstances. Not all low-income customers have the same
10 inability-to-pay. To respond to a welfare family, a working poor family, a recently
11 unemployed laborer, and a retired widow on Social Security in the same fashion is not
12 likely to be as effective and efficient as being able to respond to individual circumstances.
13 Flexibility is an important component of a strategy to deal with low-income payment
14 troubles.

15 ♦ Integration refers to the ability to call upon different resources to deal with a customer's
16 specific inability-to-pay problems. In addition to recognized state and national energy
17 assistance resources such as LIHEAP, various local communities have local energy
18 assistance available through churches, local governments, and the like. In addition, other
19 resources may be available. For example, households with earned income may take
20 advantage of the Earned Income Tax Credit; renters may take advantage of rent assistance
21 programs. To the extent that program integration increases, the ability to match specific
22 resources with specific problems is enhanced.

1 ♦ Personalized contact is important to identifying individual needs and crafting an
2 appropriate response to those needs. If nothing else has been learned through the federal
3 REACH program (administered as part of the federal LIHEAP program), it is that
4 individual contact to identify and address family needs is an important component to
5 reaching beyond the immediate energy crisis and dealing with the ability of a low-income
6 household to become self-sufficient. REACH is the Residential Energy Assistance
7 Challenge Option Program. Funded with federal LIHEAP dollars, REACH is a
8 competitive grant program designed to provide funds for states to adopt holistic
9 approaches to reduce low-income energy burdens and to promote household self-
10 sufficiency.

11 This need for personalized contact is what gave rise to the Customer Assistance Referral
12 and Evaluation Service (CARES) operated by Pennsylvania's public utilities. In May
13 1985, the Pennsylvania PUC issued a Secretarial Letter encouraging each of that state's
14 major electric and gas utilities to establish a CARES program. The purpose of CARES
15 is to provide a cost-effective service that helps selected, payment-troubled customers
16 maximize their ability to pay utility bills. A utility CARES representative works with
17 program participants on a personal basis to help them secure energy assistance funds.
18 Besides directly providing assistance to needy customers, CARES representatives also
19 perform the task of strengthening and maintaining a network of community organizations
20 and government agencies that can provide services to program clients. Beginning in 1998,
21 each Pennsylvania gas company, along with three of the state's electric utilities, began to

1 track the "direct dollars" generated by CARES. "Direct dollars" refer to any money
2 applied to a customer's account from sources other than the customer. In 1998, the
3 reporting utilities received \$13 million in direct dollars.

4 Q. Please describe the costs associated with implementing BOSS.

5 A. The Portsmouth Group, Inc. is the corporation that developed the latest iteration of BOSS-
6 type software, referred to now as *Chronicles*. According to the Portsmouth Group, the first-
7 time set-up costs for a program involving from 25 to 75 sites is, on average, \$2,500 per site.
8 The ongoing annual maintenance costs are \$500 per site. A pilot project involving 25 sites
9 throughout the Companies' service territory would thus cost \$62,500 to establish and roughly
10 \$12,500 per year thereafter. In addition, based on its experience with GPU, the Portsmouth
11 Group recommends that each site be provided with new computer hardware. While they note
12 that "computer hardware is becoming cheaper by the day," a cost of \$3,000 per site is
13 reasonable. I recommend that the merged company establish a pilot BOSS program involving
14 25 sites. If found to be successful, the initiative should be expanded as found to be
15 appropriate.

16 Q. Please describe the second component of your proposed Community Energy Partnership
17 Program.

18 A. I propose that the second component of the proposed CEPP involve the implementation of
19 an energy efficiency program for low-income high use payment-troubled customers modelled
20 after the Smart Comfort Program implemented by Duquesne Power Company.

21 Q. Please describe the Duquesne Light Smart Comfort program.

1 A. In 1992, Duquesne Light Company developed an end-use program designed to reduce electric
2 bills for low-income payment-troubled, electric baseload (non-space heating) customers. The
3 program was developed because fewer than five percent of the company's customers heat with
4 electricity. The company believed, therefore, that a usage-reduction program that focused on
5 baseload customers would offer more cost-effective electric reduction than one which focused
6 exclusively on space heating.

7 The Smart Comfort program is targeted to low-income non-electric-heating customers with
8 monthly bills exceeding \$70. Trained company personnel visit qualified homes to provide
9 energy education on energy saving opportunities specific to the customer's home, as identified
10 by a walk-through energy audit. New refrigerators are provided if metering at the time of
11 the premise visit identifies the existing appliance as being energy inefficient. Duquesne has
12 found that the primary technical sources of savings include lighting, refrigerator replacement
13 and replacing water beds with conventional bedding.

14 The initial home visit by Duquesne personnel is followed-up by ongoing contact between the
15 company and the customer for one-year after the visit. Monthly telephone conversations
16 occur between customers and the company to discuss changes in energy consumption and to
17 provide an opportunity for the customer to ask questions. Additional site visits are made in
18 a selected number of cases to determine whether the measures which were installed at the first
19 visit were still in place.

20 The Duquesne program was found to be highly successful in reducing energy. In 1993, the
21 program was found to have a mean energy reduction (pre- to post-) of 37 percent. The
22 average utility program cost in 1994 was approximately \$1,100 per household, which resulted

1 in an average annual bill reduction of \$356 per household. The levelized cost of saved
2 energy to the utility is approximately \$0.03/kWh of saved energy.

3 In addition to the energy savings, the program was found to have a substantial positive impact
4 on arrears. During the pilot stage of the program, participants had paid an average of 78
5 percent of their total billing prior to their program participation. After participating in the
6 program, customers were paying 106 percent of the total billing (meaning that they were
7 paying their entire current bill plus retiring arrears).

8 Q. Why do you propose to condition the merger approval upon the adoption of this specific
9 program?

10 A. This program has several attributes which commend its adoption. First, it is specifically
11 directed toward mitigating the merger harms that I have identified above. It is directed
12 toward payment-troubled customers who otherwise would be calling upon the reduced
13 services of the company. Second, it has a proven track record of success in helping
14 customers to address those payment-troubles. We thus *know* that it will succeed in doing
15 what it purports to do: moving low-income customers away from a reliance on those services.
16 Third, it generates substantial and demonstrated additional benefits to the company. This
17 program, in other words, can accomplish the mitigation which the Department of Natural
18 Resources seeks while at the same time helping to improve the company's competitive
19 position, which is what it seeks. Finally, it directs the mitigation measures toward, and
20 achieves the benefits for the Company from, a class of customers that is not historically
21 reached through low-income weatherization initiatives, *i.e.*, low-income electric baseload
22 customers.

1 Q. Are you proposing a budget line item to be included for this program as a condition of
2 merger approval?

3 A. Yes. A line item budget for energy efficiency equal to one quarter of one percent of total
4 jurisdictional revenues is consistent with the support found to be an appropriate low-income
5 energy efficiency investment by electric utilities in other states. Application of that 0.25%
6 figure to EDE's total 1998 jurisdictional revenues as reported by the Energy Information
7 Administration would yield a low-income energy efficiency investment of \$480,092. I
8 recommend that such an energy efficiency investment be implemented for the first five years
9 of the merger, with a five year renewal unless explicitly eliminated by the PSC. These funds
10 would flow to DNR and would be distributed by DNR to weatherization service providers in
11 the EDE service territory in compliance with the U.S. Department of Energy Weatherization
12 Assistance Program (WAP) funding regulations. In the event Missouri moves to retail choice
13 for the electric industry, this energy efficiency funding mechanism will be converted to a
14 mils/kWh for total distribution kWh delivered.

15 Q. Please explain the third component of your proposed CEPP.

16 A. I recommend that the merged Company solicit proposals from contractors to install 35 units
17 of photovoltaic electricity panels at 1 kW in 2001 and 75 units of PV in 2002 on the
18 dwellings of the Company's low-income customers. This solicitation should seek bids in a
19 price range of \$5.00 per Watt. In the same (or a different) RFP, the Company should also
20 seek proposals to install up to \$150,000 worth of passive or active solar hot water heating on
21 the dwellings of low-income customers. The Company should conduct a process and impact
22 evaluation of the installations capturing such features as customer acceptance of the measures,

1 landlord acceptance in the case where the customer is a renter, cost per unit, payback per unit,
2 Total Resource Cost on a present value basis per unit, and the like. The Company should
3 finally submit a report to the PSC in both 2001 and 2002 concerning the status of the pilot
4 and the findings of any evaluations, together with recommendations as to whether to renew
5 the pilot or extend the pilot.

6 Q. What would be the proposed cost of this pilot project?

7 A. I estimate the cost of the renewables pilot project would be as follows:

- 8 ♦ \$175,000 over two years for the solar hot water project, commencing in 2001;
- 9 ♦ \$75,000 in 2001 for the 15 PV units; and
- 10 ♦ \$150,000 in 2002 for the 25 PV units.

11 In addition, the Company will require some administrative expense to develop the RFP,
12 conduct the proposal process, enter into contracts, conduct data tracking, and the like.
13 Assuming a 10% administration factor, the total administrative cost would be \$37,500. An
14 process and impact evaluation should cost no more than \$35,000. The total cost for the
15 renewables pilot would thus be roughly \$450,000.

16 Q. Why is a renewables pilot project an appropriate remedy for the passing-on problems you
17 have identified above?

18 A. When PV can reach the necessary critical mass for reducing the cost and thus the payback
19 time, it promises to address not only affordability concerns, but environmental concerns as
20 well. Moreover, distributing merger synergy savings to low-income customers in the form
21 of a PV pilot will allow the merged Company to test a mechanism for addressing affordability
22 concerns that addresses many of the issues I have identified above. PV is a low-maintenance

1 installation. It does not require complex interactions between customers and machines to
2 deliver its benefits. It does not readily break down. If these qualities persist, the ease of
3 maintenance, both rural and urban, will be a significant value to this resource. With respect
4 to solar hot water, these technologies are proven. What is not yet understood as well is the
5 viability of these installations in rental situations and existing low-income housing stock of
6 various kinds. As in the case of the PV pilot, the use of an RFP process can permit the
7 Company to obtain the insights of solar experts, while maintaining significant control over
8 the prices it will incur for these installations.

9 Q. Please describe the fourth component of your proposed CEPP.

10 A. I propose an annual process by the merged company designed to identify the low-income
11 payment troubled customers on the Company's system. At present, the Company has no
12 information that allows it to track whether the customer service outcomes identified above
13 will arise for low-income consumers in particular. Because of the customer service
14 implications associated with being able to identify and track these customers, I propose an
15 affirmative, proactive process that provides for such identification and tracking. I do not
16 propose a specific methodology in my testimony. My experience as a consultant to the
17 process being used by Ameritech Ohio to identify the "no-phone households" in its service
18 territory is that the best process is to allow qualified firms respond to an RFP, including a
19 proposed methodology in that response.

20 I *do*, however, wish to emphasize that it is not necessary for the Company to seek to identify
21 *all* low-income customers. The process should be directed to assessing which of the

1 Company's payment-troubled customers are low-income. In this respect, I propose that
2 "payment-troubled" include all customers who the Company's CIS reports as meeting any one
3 of the following criteria:

- 4 ♦ A customer who has been disconnected for nonpayment one or more times in the
5 immediately preceding 12 months; or
- 6 ♦ A customer who has defaulted on at least one deferred payment arrangement in the
7 immediately preceding 12 months; or
- 8 ♦ A customer who has failed to make full and timely payment in six or more of the
9 immediately preceding 12 months; or
- 10 ♦ A customer who has failed to make full and timely payment in three or more months in
11 the immediately preceding heating season; or
- 12 ♦ A customer who has a current arrears of more than 90-days in age.

13 Q. Please describe the final component of your proposed CEPP.

14 A. I propose an outcome-based performance reporting system (OPRS) for customer service
15 relative to low-income payment troubles. More specifically, I propose that the Company be
16 required to report on four outcome-based performance measures as follows:

- 17 1. Rate of disconnection for nonpayment (*i.e.*, percent of total customers disconnected for
18 nonpayment) (DNP Rate);
- 19 2. Rate of arrearage accounts placed on deferred payment arrangements (DPAs) (*i.e.*, percent
20 of accounts in arrears placed onto DPAs) (DPA Rate);
- 21 3. Rate of unsuccessful deferred payment arrangements (*i.e.*, percent of DPAs that default
22 before successful completion) (DPA Failure Rate);

1 4. The "bills behind" for accounts in arrears (Bills Behind Statistic).

2 Q. What is the source of data for establishing the baseline performance to be used in your
3 proposed OPRS?

4 A. With the exception of the average monthly bill that is used in the "bills behind" statistic, and
5 the number of residential customers used in the DNP Rate, the data needed to determine the
6 baseline residential performance for each of these measures should be easily extractable from
7 the existing CIS system. The average monthly bill for residential customers should be readily
8 available to the Company. Clearly, too, the Company will know the number of its residential
9 customers.

10 Q. What is the source of data for establishing the "low-income residential" performance to be
11 used in your proposed OPRS?

12 A. Data should be collected for all customers who have been identified on the Company's
13 customer information system as recipients of assistance through LIHEAP or any other
14 program that might lead the Company to identify and track a customer as low-income. In
15 addition, as I recommend above, the Company should be required to develop and periodically
16 exercise proactive processes through which low-income customers can be identified on the
17 Company system.

18 Q. Please explain why your proposed OPRS is appropriate to adopt as a condition of this merger.

19 A. For all of the reasons I outline above (with respect to consolidation, remoteness, a lack of
20 flexibility, dilution, and standardization), substantial evidence exists that the merger will
21 adversely affect customer service relative to the payment troubles of low-income customers.

22 I have proposed a series of remedies to mitigate those harms. In addition, however, the

1 Company's *performance* should be tracked. As described above, "satisfactory" performance
2 is when performance relative to the low-income population is no worse than performance
3 relative to the total Company residential customer population.

4 Q. Please explain why the DNP rate is an appropriate outcome-based performance measure.

5 A. Every residential involuntary termination of service for nonpayment represents a failure of
6 the Company and its customer to adequately address the customer's payment problems. The
7 disconnection of service represents not only a social problem for those households
8 disconnected, but represents a business problem for the Company as well. The Company
9 must spend money on the physical act of disconnecting service. Moreover, the disconnection
10 of service represents a loss of a future revenue stream to help offset fixed company costs.
11 If the Company is performing well with respect to identifying its low-income customers in
12 arrears, negotiating reasonable deferred payment plans, providing effective outreach for
13 participation in LIHEAP, and doing related activities, no reason exists that the DNP Rate for
14 the low-income population should differ from the DNP Rate for the residential population as
15 a whole.

16 Q. Please explain why the DPA rate is an appropriate outcome-based performance measure.

17 A. When customers become delinquent on their bills, the Company has an incentive to either
18 obtain immediate payment or to place those customers on deferred payment arrangements
19 (DPAs) through which the arrears may be retired over time. Households that are in arrears
20 to the Company, but which have *not* entered into a deferred payment agreement, represent
21 a serious risk of loss to the Company. Moreover, by entering into a deferred payment plan,
22 the risk that the household will ultimately lose its utility service is lessened. If the Company

1 is performing well, it will be identifying its low-income customers in arrears and negotiating
2 DPAs with those customers. No reason exists that the DPA Rate for the low-income
3 population should differ from the DPA Rate for the residential population as a whole.

4 Q. Please explain why the DPA failure rate is an appropriate outcome-based performance
5 measure.

6 A. The successful completion of a deferred payment agreement involves a household which
7 retires its arrears without need for renegotiation of the agreement and without need for the
8 disconnection of service. Given that the Company presumably only enters into *reasonable*
9 deferred payment agreements, virtually all DPAs should be successfully completed. More
10 importantly for this measure, if the Company is entering into reasonable DPAs with its low-
11 income population, no reason exists that the DPA Failure Rate for the low-income population
12 should differ from the DPA Failure Rate for the residential population as a whole.

13 Q. Please explain why the bills behind statistic is an appropriate outcome-based performance
14 measure.

15 A. The "bills behind" statistic calculates a weighted arrears for all households who are not in
16 deferred payment agreements. This statistic calculates the number of average bills contained
17 in an average arrearage by dividing the total monthly arrears not subject to deferred payment
18 agreements by the average monthly customer bill. Hence, if one customer has an arrears of
19 \$400 and an average monthly bill of \$200, that customer has a weighted arrears of 2.0 "bills
20 behind." If a different customer has an arrears of \$400 and an average monthly bill of \$140,
21 that customer has a weighted arrears of 2.86 bills behind. The second customer is considered
22 to be in more serious payment trouble. A high "bills behind" statistic points to a practice of

1 allowing household arrears to persist without placing such households on to deferred payment
2 agreements or otherwise placing them in the collection cycle. If the Company is reasonably
3 reaching its low-income population, and offering the same type and quality of customer
4 service as it offers to its total population, no reason exists that the Bills Behind Statistic for
5 the low-income population should differ from the Bills Behind Statistic for the residential
6 population as a whole.

7 A weighted "bills behind" statistic is calculated to account for the potential difference in bills
8 between time periods. Without such a weighted statistic, a comparison of arrears between time
9 periods can be misleading because of a difference in bills (whether due to rates or weather
10 or some other factor). A weighted statistic is calculated, in other words, so that the effect of
11 different average bills is taken into consideration. As the Bureau of Consumer Services
12 (BCS) of the Pennsylvania Public Utility Commission observes, use of a weighted arrears
13 measure "permits comparisons to be drawn between companies by eliminating the effects of
14 different customer bills on arrearages." Without such a measure, "the interpretations of
15 average arrearages, either over time or in comparison between companies presents some
16 difficulties." (Bureau of Consumer Services, *Utility Payment Problems: The Measurement
17 and Evaluation of Responses to Customer Nonpayment*, Pennsylvania Public Utility
18 Commission:Harrisburg, PA (October 1983)).

19 Q. Why do you include all four measures in your proposed OPRS?

20 A. The four parts are designed to avoid creating unintended incentives for the Company to
21 engage in harmful activities. Thus, for example, if one were to look only at whether the
22 Company minimizes service terminations, the Company would have an incentive to reduce

1 terminations while not improving its collections. If one were to look only at whether the
2 Company minimizes arrearages, the Company would have an incentive to disconnect
3 customers rather than to place them on deferred payment arrangements. If one were to look
4 only at DPAs without looking also at DPA success, the Company would have an incentive
5 to place delinquent customers on DPAs without regard for the affordability of such plans. The
6 four-part structure is necessary for the Company to address *each* aspect of the OPRS.

7 Q. Is the purpose of your proposed OPRS to determine whether the Company is doing a "good"
8 or "bad" job of credit and collection relative to low-income customers?

9 A. No. The proposed OPRS provides only that low-income customers will have customer
10 service outcomes (e.g., disconnections for nonpayment, negotiated DPAs, successful DPAs,
11 timely DPAs) that are no worse than the population as a whole. If the Company does a
12 "good" or a "bad" job relative to its total population, the proposed OPRS will not capture that.
13 Instead, the OPRS is structured to capture only a divergence in the outcomes for low-income
14 customers relative to the outcomes for the total residential customer population.

15 Q. Do you propose to impose financial penalties or incentives based on the data reporting?

16 A. Not at this time. The purpose of the reporting mechanisms at this time is simply to track the
17 customer service outcomes for low-income customers. However, if customer service
18 outcomes begin to degrade subsequent to the merger, it would be appropriate to consider
19 financial rewards and penalties. That, however, is a future issue to be considered if, and
20 only if, the need arises, and I do not make that proposal in this proceeding.

21 Q. What year do you propose to use as the baseline for the proposed OPRS?

1 A. Performance must be measured in terms of a baseline year. The Company should not be
2 allowed to let performance degrade for *all* customers and thus avoid the outcome-based
3 performance incentives. Accordingly, I propose that the baseline year be set as the average
4 performance for the three years immediately preceding the merger.

5 Q. With respect to your proposed CEPP as a whole, is the implementation of a programmatic
6 remedy appropriate to the "passing-on" problems that you have identified?

7 A. Yes. Programmatic remedies are common responses to adverse impacts that adversely affect
8 distinct markets in a merger setting. Consider, for example, the recent merger of Butterworth
9 Health Corporation with Blodgett Memorial Medical Center in Michigan (946 F.Supp. 1285
10 (W.D. Mich. 1996), *aff'd per curiam*, No. 96-2440 (6th Cir. July 8, 1997)). In that proposed
11 merger, the principal claim of "efficiency savings" involved claims of "capital avoidance."
12 Concerns were raised, however, that the capital avoidance really involved excluding the offer
13 of products and services that consumers would otherwise demand from an unmerged hospital.
14 In response to these concerns, the federal court hearing a challenge to the merger required the
15 merging hospitals to enter into a consent decree to implement a "Community Commitment"
16 plan proposed by the hospitals as a condition of allowing the merger to proceed. The
17 Community Commitment provided a binding commitment by the hospitals "not to raise prices
18 *or otherwise injure the community. . .*" (emphasis added). The Community Commitment has
19 five elements: (1) a freeze on prices and charges; (2) a freeze on prices to managed care plans
20 to pre-merger levels; (3) a commitment to limit margins; (4) a commitment to the medically
21 underserved and needy (The merged company will provide a minimum of \$6.0 million each
22 fiscal year to assist the underserved and general community. The funds are distributed

1 through 30 specific programs to address specific locally-identified needs); and (5) a
2 commitment to governance of the merged hospitals with community input. In the decision
3 approving the merger, the court found that the hospitals' Community Commitment plan
4 *partially* described how efficiencies achieved would benefit all consumers. The court required
5 the merging hospitals to enter into the consent decree *partially* to ensure that they complied
6 with the plan's commitment to pass along benefits to consumers.

7 Similarly:

- 8 ♦ The merger of two corporate parents of three hospitals in central Pennsylvania was
9 recently allowed by the Pennsylvania Attorney General's office on the condition that the
10 merged entity pass on at least 80% of the net savings to consumers through reduced prices
11 (or limited actual price increases for existing services), and low-cost or no-cost health care
12 programs for the indigent (Pennsylvania v. Providence Health Sys., No. 4CV-94-772,
13 1994 WL 374424, at *2-3 (M.D. Pa. May 26, 1994); *see also*, Pennsylvania v. Capital
14 Health Sys. Servs., No. CIV.A.4:CV-95-2096, 1995 WL 787534 (M.D.Pa. Dec. 15,
15 1995));
- 16 ♦ Massachusetts recently settled its objections to the merger of that state's second and third
17 largest HMOs on the latter's agreement to freeze group rates for one year, double
18 enrollment in the Medicare risk program, and spend \$4 million on services placed at risk
19 by the merger, such as health care for the homeless, violence prevention, and AIDS
20 prevention. (Merging HMOs Agree to State Plan on Social Spending, Contract Approvals,
21 4 Health L. Rep. (BNA) 6 (Jan. 20, 1995)).

1 Q. Has this type of programmatic response ever been adopted by utility regulators as a condition
2 to a proposed merger?

3 A. Yes. In California, for example, the SBC/Pacific Bell merger was specifically conditioned
4 on the implementation of a Community Partnership Commitment, under which PacBell
5 promised to fund \$80+ million in education and community technology projects over the next
6 ten years. A description of the Community Partnership Commitment is attached as Exhibit
7 RDC-8. Similarly, in Ohio, based on testimony regarding the disproportionate sharing of
8 merger savings for the poor, the stipulated agreement endorsing the proposed SBC/Ameritech
9 merger was conditioned on Ameritech's funding a \$12+ million commitment to consumer
10 education, technology diffusion, and community computer centers. (I/M/O Joint Application
11 of SBC Communications Inc, SBC Delaware, Inc., Ameritech Corporation and Ameritech
12 Ohio for Consent and Approval of a Change of Control, Case No. 98-1082-TP-UNC, Public
13 Utility Commission of Ohio (1999)).

14 These telecommunication merger agreements were specific responses to specific adverse
15 impacts that would have been caused or substantially exacerbated by the proposed mergers.
16 The mergers were explicitly proposed as one mechanism to facilitate the development and
17 distribution of high technology telecommunication services. The information presented in the
18 merger proceedings, however, demonstrated the existing and widening technology gap for
19 low-income consumers. As a result, the benefits of the merger were found to be largely
20 denied to low-income consumers. The Community Partnership Agreement, as well as the
21 Ameritech-Ohio programmatic commitments, were the mechanisms for assuring that the

1 adverse effects of each merger, which impeded the passing-on of merger benefits, were
2 redressed.

3 Q. What do you conclude?

4 A. Traditional merger analysis requires that a company seeking approval of a proposed merger
5 not only demonstrate that efficiency savings will arise, but that those savings will be "passed
6 on" to consumers. Part of the "passing on" analysis is to consider the potential adverse
7 impacts of the proposed merger that might impede or eliminate the benefits of the merger
8 entirely to particular markets. In the proposed merger now pending before the PSC, there are
9 distinct merger-induced adverse impacts for the low-income market that will impede
10 compliance with the passing-on requirement.

11 In other merger situations where such adverse impacts have been found to exist, programmatic
12 responses to mitigate these impacts have been found to be an appropriate condition of the
13 merger. Akin to the programmatic responses I have discussed immediately above in the health
14 care and telecommunications industries, I have recommended the CEPP as a specific package
15 of programmatic responses that are appropriate to redress the merger-induced harms from this
16 proposed merger. Implementation of the CEPP should be required as a condition of any
17 approval of this merger.

18 Q. Will the proposed CEPP be paid for by other ratepayers of the merged Company?

19 A. No. The proposed CEPP will be paid for by merger savings.

20 Q. Is there a necessary relationship between the misallocation of merger savings you have
21 identified and the cost of the proposed CEPP?

1 A. No. The programmatic response represented by CEPP is not a mechanism, unto itself, by
2 which merger-related savings are distributed to consumers. Instead, the proposed CEPP is
3 a package of remedies which redress specifically identified *adverse* impacts that would not
4 exist in the absence of the merger. These adverse impacts impede compliance with the
5 passing-on requirement. *In addition to* these specific merger-induced harms, the merger does
6 not result in an equitable distribution of benefits to the low-income market. The CEPP is
7 designed to address *both* problems, not merely the inequitable distribution of merger benefits.

8 Q. Does this conclude your testimony?

9 A. Yes it does.

Pacific Telesis/SBC Communications Merger Leads to Community Partnership Agreement

As part of the 1997 merger between Pacific Telesis and SBC Communications, the California Public Utilities Commission (CPUC) approved a unique approach to expanding support for California's communities.

Pacific Bell worked with nine community coalition groups--representing 134 different Latino, Asian American, African American, civil rights, and disability organizations and individuals--to determine the most effective ways to bring the benefits of telecommunications to traditionally underserved communities.

The result is the historic Community Partnership Agreement, which combines the strengths and inspiration of community leadership, corporate resources, and telecommunications technology.

For Pacific Bell, the Agreement is part of its commitment to invest in all of California's communities and to help ensure the telecommunications revolution--both new technologies and competitive markets--benefits all California communities, not just the more lucrative residential and business districts traditionally targeted by competitors. Pacific Bell has pledged up to \$80 million to the various initiatives agreed on by the nine coalition groups.

On November 18, 1998, Ed Whitacre, Chairman and CEO of SBC Communications, presented the initial \$10 million funding to launch the new \$50 million Pacific Bell Community Technology Fund and the larger foundation which will govern it, the nonprofit Community Technology Foundation of California. Additional funding will be distributed during the next decade.

Community leaders have hailed the Agreement and the Fund as landmarks for community telecommunications.

"This fund can make a real difference and set a model for the nation," Moore says. "I am excited that the program has the broad-based and collaborative involvement of community based organizations throughout California that are committed and dedicated to reaching the underserved." **Gwen Moore**, former California Assembly member and a Los Angeles-based community

member who chairs the committee of nine coalitions and the Community Technology Foundation.

"Many community leaders now recognize the discriminatory access to the information superhighway as the civil and economic rights issue of the 21st Century. At stake is the opportunity to compete and contribute equally, with full and equal access to education, governmental services, health care, employment, even political access." **Mark Savage** of San Francisco-based Public Advocates, one of the nation's oldest civil rights law firms.

"An unprecedented and important aspect of this fund is its continuity. The changes in telecommunications in just the past five years have been incredible. For the first time, this fund can insure that California's underserved communities can be a part of shaping and benefiting from those changes." **Jess Haro**, of the community coalitions representing San Diego Urban Corps.

"People with disabilities are disproportionately unemployed and underemployed. This fund allows us to begin dismantling the barriers to achievement by providing equitable access to tomorrow's tools." **Jackie Brand**, coordinator of the San Rafael-based Universal Service Alliance and founder of the Alliance for Technology Access, a nationwide organization for bringing technology to people with disabilities.

"Because of language and cultural barriers, Asian Americans have historically been neglected on telecommunications issues. California generally and telecommunications utilities specifically have a lot of catching up to do, and the fund will help secure the benefits of the information superhighway for all of California's underserved communities." **Anni Chung**, executive director of Self Help for the Elderly in San Francisco and chair of the Asian Pacific American Community Partnership.

CHARTER

The company remains deeply committed to improving the availability of basic and advanced telecommunications services to underserved communities throughout the state.

Pacific Bell intends to maintain its leadership position in enhancing the availability and penetration of telecommunications services and will make a good faith effort toward helping California achieve 98% penetration in low-income, minority and limited-English speaking communities within the next seven years.

Given the advent of competition, Pacific Bell's efforts to achieve increased penetration cannot succeed without the complete commitment of the other providers of telecommunications services in California. Pacific Bell intends to lead the industry effort in this respect.

Pacific Bell will form a Universal Service Taskforce to work in partnership with community leaders in assessing methods for improving the penetration of basic and advanced communication services and removing barriers to universal service. Specifically, it will:

- Develop recommendations to move California toward 98% penetration in low income, minority and limited English speaking communities within seven years.
- Review all aspects of Lifeline service.
- Study language and physical barriers to universal service.
- Recommend methods for measuring penetration within the disability community.
- Pacific Bell will provide reports on regulatory, policy, technology and other issues affecting basic and advanced communications services and barriers to universal service.
- The Task Force will communicate as needed with the Pacific Bell Board of Directors and meet with the Board once a year.
- Pacific Bell officers will participate in an annual community forum during which the Task Force will present a Universal Service status report to a broad array of community leaders.

*Distribution of points from the Community Partnership Agreement
approved
by the California Public Utilities Commission, effective April 1,
1997.*

Bridge the Digital Divide: Community Technology Foundation of California

Innovations in communications technologies are creating tremendous opportunities for success and prosperity around the world. From internet access to high speed data transmission to wireless communications, innovative technologies are changing the way we connect with society around us. It's now not only possible, but commonplace, to communicate from virtually anywhere on earth.

But the benefits of technology are not evenly spread through society.

To ensure that all Californians have access to emerging technology, nine statewide community coalitions and Pacific Bell agreed on the \$50 million Pacific Bell Community Technology Fund, and the nonprofit organization that will oversee it, the Community Technology Foundation of California. Pacific Bell provided the initial \$10 million funding on November 18, 1998.

The Foundation's grantmaking focus will be bringing existing and new communications technologies to traditionally underserved communities, defined as low-income, inner-city, minority, disabled, limited-English-speaking, and low-income senior. The Foundation may match other funding sources, issue challenge grants, or leverage money to achieve the maximum benefit of target community projects.

The Foundation will distribute at least \$5 million in grants each year for the next decade. It also hopes to raise additional money for grants from other sources for the same general purposes. The Foundation is governed by a Board of Directors, a broad-based committee of community and public interest group leaders as well as technology experts.

The Community Technology Foundation of California has released its General Grantmaking Guidelines for the year 2000.

Think Tank Concentrates on Public Issues: Pacific Bell Funds \$1 Million Research Fund

The telecommunications industry is undergoing rapid and massive evolution as both state and federal laws transform the industry from a monopolistic environment to a competitive marketplace. Competition will bring benefits such as lower prices, but it will also profoundly change long-established and effective systems. No one can predict how this evolution will affect consumers.

In this new environment, consumer and public interest groups can serve their constituencies more effectively with ongoing, quality research studies that address the interests of underserved communities.

As part of Community Partnership Agreement, the nine coalition groups and Pacific Bell are developing a research unit that is completely independent, nonpartisan, and not affiliated with any signatory to the Agreement.

In addition to studies, the research unit may also fund conferences, seminars, and other educational sessions aimed at increasing understanding of the competitive environment among consumer and public interest group leaders and the general public.

Pacific Bell will contribute \$200,000 a year for five years to the research fund, in addition to the \$5 million annual contribution to the Community Technology Fund.
