

Missouri Statewide DSM Potential Study  
Summary of Changes between March 4 Report and April 14 version

Item	Change	Note	Changed included in March 16 Revision	New Change in April 14 Revision
Figures 1-1, 5-24, 5-27 & 5-30; Appendix figures A3 and A5	The allocation of cost components was corrected.	The change affected only the presentation of an input, not the analysis.	X	
Figures 1-2 & 6-14	The table that generates these charts was updated to the correct values and the correct allocation of cost components for both scenarios.		X	
Figures 6-16 & 6-18	The allocation of cost components was corrected	The total costs, benefits, and net benefits were unchanged.	X	
Figures 4-14 & 4-15	The table generating this chart was updated to be consistent with the data in Table 4-23	The change affected only the presentation of an input, not the analysis.		X
Table 4-22	Updated total homes to the sum of the home by building type	The change affected only the presentation of an input, not the analysis.		X
Figure 5-30	Added “billion” to the legend			X
Table 6-1	Added commercial new construction to gas alternative avoided cost scenarios, and corrected gas alternative avoided cost scenario presentation.	Commercial new construction was included in the base avoided cost scenario in the March 4 submission but was inadvertently excluded from the gas alternative avoided cost scenarios. This adjustment increases economic potential for these scenarios by only three percent. The change does not materially alter the information contained in the figure.		X
Table 6-4	Incentives under the industrial sector were changed to show one decimal place.	The change affected only the presentation of a component, not the total of the outputs.	X	
Figure 6-8	Added display of “Whole Bldg (New Constr)” to chart			X
