

Definitions for draft 4 CSR 240-22.070

() Critical uncertain factor means one of a set of uncertain factors which the utility decision-makers determine most materially affect the outcome of resource planning decisions.

() Planning future means one of a set of planning futures defined in phase 1 of the risk analysis to represent the distinct future environments in which to assess the performance of each alternative resource plan.

() Top resource plans is a subset of the alternative resource plans identified in phase 2 of the risk analysis and includes those alternative resource plans which are expected to perform best overall in the planning futures defined in phase 1 of the risk analysis. The set of top resource plans should include the one or two best performing alternative resource plans in each planning future and shall include at least four resource plans.
