

David David M, SAINT LOUIS, MO.  
Hi,

My family and I have lived in St.Louis since 1973. My wife Janet and I are now retired and we live with our disabled daughter Katie. My son Zach and his wife, Margarita also live in St. Louis.

Cold weather in St. Louis begins in November and typically ends in April, with January and February typically being the most brutally cold months of the winter. The decision or choice to shutdown the STL pipeline on December 13th flies in the face of this reality because it is a choice to subject hundreds of thousands of St. Louisians to brutal cold for months, worse than what Texas experienced last winter. What kind of heartless and rigid individual(s) would subject so many people to this by choice??!!

Alternatively, please consider shutting down the pipeline, if this is indeed found to be necessary, during May 2022, when our cold weather has passed and when we have 6 months to try to arrange alternative sources of natural gas.

Thank you for your time and consideration.

David and Janet Solomon
