**KWH numbers in bold are interpolated to fill in for missing data.**

The data source I used was missing much of the information between November of 1999 and October of 2002 for MPS. I interpolated that data by dividing the difference between the '03 and '99 data by 4, and adding that much in each of the missing years.

**Percent values in bold are based on interpolated data.**

This document contains only energy data, which is largely uncontested in this docket. This information should not be used on its own to analyze changes in demand responsibility. This is actual billing data, and is not normalized for changes in the number of customers, or for weather.

Demand data, not available here, is required to see changes in the demand responsibility of the various classes.
