

BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF MISSOURI

In the Matter of Union Electric Company
d/b/a Ameren Missouri 2023 Utility
Resource Filing Pursuant to 20 CSR
4240-Chapter 22

File No. EO-2024-0020

**PUBLIC COMMENTS ON
AMEREN'S 2023 INTEGRATED RESOURCE PLAN**

Pursuant to 20 CSR 4240-22.080, Sierra Club respectfully submits these supplemental comments on behalf of hundreds of petitioners living in Missouri concerning Ameren's 2023 Triennial Integrated Resource Plan.

12/29/2023

After doing some research, I am appalled at Ameren's recent decision to continue using coal -- arguably the dirtiest and most environmentally destructive source of energy. I find Ameren's recent focus on monitoring consumer use and coaching ways to reduce energy consumption to be outrageously hypocritical.

Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. This year, we experienced one of the hottest summers on record, coupled with months of dangerous air quality. People are suffering. And you have the power to make things better.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

James Carrigan

I condemn your explicit threat to continue loading our atmosphere with carbon from your Labadie and Sioux coal-fired power plants. As people of St. Louis and across the northern hemisphere suffer under brutal heat and drought, your proposal constitutes a sickening, depraved endorsement of this suffering, and its amplification to levels that we cannot fathom, by driving climate change into terrifying ranges beyond 2 and 3 degrees Celsius. Every pound of carbon burned in an Ameren generator is a blow struck against the prospects for human survival in the century to come. You may not forge a suicide pact against our children without their consent, and this prohibition its not waived by mere platitudes and further avoiding the hard mathematical reality of what our atmosphere can tolerate, and not negotiable for Ameren's business model.

Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. I'm Gen Z - born 2002, 21 years old. It's really depressing when I read about the scientific consensus on climate change and how the world is likely going to be inhospitable (or at least, very difficult to live in) within my lifetime. I don't bother saving for retirement even though it's recommended that I start early, nor do I plan on having kids, because I don't think I'll be able to enjoy retirement or a healthy family if the world keeps along its current trend.

I know your shareholders are important, but this is my future, their future, my family's and their families' futures, that we're talking about here. Ameren and other energy corporations have already enjoyed decades of growth & profit at the expense of the environment and community health. It's time that you pay it back. Please help change our course before it's too late.

Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. This year, we experienced one of the hottest summers on record, coupled with months of dangerous air quality. People are suffering. And you have the power to make things better.

I'm not very old but I have a strong passion for the environment. Fossil fuels are ruining our beautiful planet and it needs to stop. Personally, I don't want my children to have to deal with the consequences of breathing the air that you polluted. Thank you for reading, please consider my words carefully. Think about the impact you are having on all future generations.

Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. This year, we experienced one of the hottest summers on record, coupled with months of dangerous air quality. People are suffering. And you have the power to make things better.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

12/4/2023

Please, I beg of you, do your part to save our planet for all of us and our children and grandchildren. Multitudes will die from the heat. It is our only home. There is no other, no alternative.

Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. This year, we experienced one of the hottest summers on record, coupled with months of dangerous air quality. People are suffering. And you have the power to make things better.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

The city of St Louis stinks to high heaven whenever the cloud cover is thick and the wind is blowing from the east. That's the smell of coal and even as we have to breathe we know it's killing us. It is totally unnecessary to put us all through that cruelty. Close the coal mines, retrain workers, and use clean energy. Save our health and our lives. Do the right things here.

Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. When there was a hole discovered in the ozone, governments around the world pass laws banning products and chemicals that damaged the ozone. It was swift and immediate action! We have a much bigger problem now! Climate change is obvious now as people are dying and losing their homes to one climate disaster after another, yet fossil fuel companies still continue unabated! Our government officials accept money from big oil in exchange for not doing their jobs! Our greed and gluttonous behavior is leaving our planet getting hotter, killing species, and will eventually us, but history shows we can learn and change our ways, and save our world. This planet, especially America fills landfills and oceans with our garbage and still we are unable to take responsibility for our actions and move to a better path. It's way past time, and people are finally becoming angry. This last summer had days of a 122° heat index in southern Missouri. When will we change our ways?

Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. This year, we experienced one of the hottest summers on record, coupled with months of dangerous air quality. People are suffering. And you have the power to make things better.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. This year, we experienced one of the hottest summers on record, coupled with months of dangerous air quality. People are suffering. And you have the power to make things better.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. This year, we experienced one of the hottest summers on record, coupled with months of dangerous air quality. People are suffering. And you have the power to make things better.

It is your responsibility to take full advantage of the once in a lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

Catastrophic climate change is here, yet Ameren's latest Integrated Resource Plan doubles down on the fossil fuels that worsen an already disastrous situation. This year, we experienced one of the hottest summers on record, coupled with months of dangerous air quality. People are suffering. And you have the power to make things better.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

Ameren is still proposing ongoing coal-burning plants—why? So we can suffer more asthma and air pollution? Please stop asap!

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

Every year the Sioux plant burns coal, its emissions add to our growing climate crisis and pollution burdens for under-resourced community members. In 2022 alone, the Sioux plant emitted 4,214,541 tons of carbon dioxide, 9,919,176 pounds of smog-causing nitrogen oxides, and 3,352,709 pounds of asthma-causing sulfur dioxides.

I am calling on you, Marty Lyons, to do the right thing and reinstate Sioux's 2028 closure date. Do right by your customers and the planet.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

As a St. Louis native, I breathe our region's air every day. Closing the Sioux plant would improve the quality of the air I breathe. It would also cut greenhouse gas pollution.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

Every year the Sioux plant burns coal, its emissions add to our growing climate crisis and pollution burdens for under-resourced community members. In 2022 alone, the Sioux plant emitted 4,214,541 tons of carbon dioxide, 9,919,176 pounds of smog-causing nitrogen oxides, and 3,352,709 pounds of asthma-causing sulfur dioxides.

I am calling on you, Marty Lyons, to do the right thing and reinstate Sioux's 2028 closure date. Do right by your customers and the planet.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

Coal must go! we don't have time to mess around with bad air. We need to focus on renewables for the long-term and stop coal altogether. Please do this for my children, if not yours. Air quality, climate change, asthma - all are related to pollution and coal pollutes more than anything else. Thank you for listening.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

I condemn your explicit threat to continue loading our atmosphere with carbon from your Sioux coal-fired power plant. As people of St. Louis and across the northern hemisphere suffer under brutal heat and drought, your proposal constitutes a sickening, depraved endorsement of this suffering, and its amplification to levels that we cannot fathom, by driving climate change into terrifying ranges beyond 2 and 3 degrees Celsius. Every pound of carbon burned in an Ameren generator, whether coal or methane, is a blow struck against the prospects for human survival in the century to come. You must choose electricity sources that are proportionally concordant with the firm and undisputed conclusion of climatologists, that carbon emissions must decline radically by 2030, not gradually, not later, and not deferentially to Ameren's morally vacant business model. You may not forge a suicide pact against our children without their consent.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

I was reminded of the polluting presence of the Sioux plant on a recent trip to Alton. While I was there, I was relieved that this plant would be closing soon - it's appalling that this plant would stay online for even longer. Please close it as promised.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

Every year the Sioux plant burns coal, its emissions add to our growing climate crisis and pollution burdens for under-resourced community members. In 2022 alone, the Sioux plant emitted 4,214,541 tons of carbon dioxide, 9,919,176 pounds of smog-causing nitrogen oxides, and 3,352,709 pounds of asthma-causing sulfur dioxides.

I am calling on you, Marty Lyons, to do the right thing and reinstate Sioux's 2028 closure date. Do right by your customers and the planet.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

I'm a retired science teacher, mother of 3, grandmother of 7, lifelong climate activist. We are running out of time and delaying this plant closing only hastens the looming catastrophe. Profit should not trump addressing an existential threat! All the money in the world will not help our children and grandchildren survive an unlivable world. Your plant may not be a huge part of the problem but every part we can avert helps us make a difference. Please live up to your commitment to close this plant by 2028, if not sooner!

It's time to get serious about renewable energy or other alternative energy sources as mainstream replacements for fossil fuels- and I don't mean just your subscriber-funded "community solar" program. Solar carports/rooftops, new storage technology, even compact nuclear installations need to be expanded instead of making my grandchildren suffer your continued carbon emissions.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

Let's use our talent and technology to transition from extractive to renewable energy. Let's make clean land, air, and water our priorities for everyone, everywhere. Let's prioritize irreplaceable wildness and ecosystems. We can work toward a bright future instead of continuing to dim our prospects with development and pollution.

I'm asking you to retire the Sioux plant in 2028 and not delay until 2032.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

Please close this plant for the sake of our environment and our families.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

Every year the Sioux plant burns coal, its emissions add to our growing climate crisis and pollution burdens for under-resourced community members. In 2022 alone, the Sioux plant emitted 4,214,541 tons of carbon dioxide, 9,919,176 pounds of smog-causing nitrogen oxides, and 3,352,709 pounds of asthma-causing sulfur dioxides.

I am calling on you, Marty Lyons, to do the right thing and reinstate Sioux's 2028 closure date. Do right by your customers and the planet.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

Think of the profound impacts running the continuation of this plant will have. While I understand there are those who rely on it for careers, you have the power to positively help the community in finding alternative energy careers. Think of this not as a part of a ten year profit projection but rather as a contribution to humanity.

Work for the health of our natural resources.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

Every year the Sioux plant burns coal, its emissions add to our growing climate crisis and pollution burdens for under-resourced community members. In 2022 alone, the Sioux plant emitted 4,214,541 tons of carbon dioxide, 9,919,176 pounds of smog-causing nitrogen oxides, and 3,352,709 pounds of asthma-causing sulfur dioxides.

I am calling on you, Marty Lyons, to do the right thing and reinstate Sioux's 2028 closure date. Do right by your customers and the planet.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

Your Sioux power plant should be closed no later than 2028 and earlier would be better. Put the high costs of operating that plant into solar and wind generated electric facilities. Thank you.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

Every year the Sioux plant burns coal, its emissions add to our growing climate crisis and pollution burdens for under-resourced community members. In 2022 alone, the Sioux plant emitted 4,214,541 tons of carbon dioxide, 9,919,176 pounds of smog-causing nitrogen oxides, and 3,352,709 pounds of asthma-causing sulfur dioxides.

I am calling on you, Marty Lyons, to do the right thing and reinstate Sioux's 2028 closure date. Do right by your customers and the planet.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

Every year the Sioux plant burns coal, its emissions add to our growing climate crisis and pollution burdens for under-resourced community members. In 2022 alone, the Sioux plant emitted 4,214,541 tons of carbon dioxide, 9,919,176 pounds of smog-causing nitrogen oxides, and 3,352,709 pounds of asthma-causing sulfur dioxides.

I am calling on you, Marty Lyons, to do the right thing and reinstate Sioux's 2028 closure date. Do right by your customers and the planet.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

Every year the Sioux plant burns coal, its emissions add to our growing climate crisis and pollution burdens for under-resourced community members. In 2022 alone, the Sioux plant emitted 4,214,541 tons of carbon dioxide, 9,919,176 pounds of smog-causing nitrogen oxides, and 3,352,709 pounds of asthma-causing sulfur dioxides.

I am calling on you, Marty Lyons, to do the right thing and reinstate Sioux's 2028 closure date. Do right by your customers and the planet.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

I am calling on you, Marty Lyons, to do the right thing and reinstate Sioux's 2028 closure date. Do right by your customers and the planet.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.

Revise your inadequate plan immediately to ditch fracked gas, stop investments in deadly coal, and build a clean energy grid on an expedited timeline.

In 2021, Ameren announced a plan to close its polluting Sioux coal plant by 2028. Yet, in its most recent draft Integrated Resource Plan, Ameren proposed to keep the plant open by a full four years, backpedaling on its purported climate goals and commitments to the community.

Every year the Sioux plant burns coal, its emissions add to our growing climate crisis and pollution burdens for under-resourced community members. In 2022 alone, the Sioux plant emitted 4,214,541 tons of carbon dioxide, 9,919,176 pounds of smog-causing nitrogen oxides, and 3,352,709 pounds of asthma-causing sulfur dioxides.

I am calling on you, Marty Lyons, to do the right thing and reinstate Sioux's 2028 closure date. Do right by your customers and the planet.

It is your responsibility to take full advantage of the once-in-a-lifetime opportunities that come with the Inflation Reduction Act to provide reliable, clean, affordable power to our region. There is no more room for excuses, and no more time to debate. Human lives and a livable planet hang in the balance.
