ACCESS SERVICES

2. GENERAL REGULATIONS

2.1 Undertaking of the Telephone Company

2.1.1 Scope

- A. Services provided to an IC under this Tariff may be connected to facilities used by the IC to provide end-to-end service furnished by the IC for its own use or for the use of its customers.
- B. The Telephone Company does not undertake to transmit messages or offer any telecommunication services under this Tariff.
- C. The Telephone Company shall be responsible only for the installation, operation and maintenance of its services. Telephone Company facilities are not represented as adapted to the use of other than Telephone Company-provided services or equipment. The responsibility of the Telephone Company shall be limited to the provision of services under this Tariff and to the maintenance and operation of such services.
- (CT) D. The Telephone Company shall, for maintenance purposes, test its services only to the extent necessary to detect and/or clear trouble.
- E. Services are provided 24 hours daily, seven days per week, except as set forth in other sections of this Tariff.
- F. The provision of such services by the Telephone Company as set forth in this Tariff does not constitute a joint undertaking with the IC for the furnishing of any service.
- G. Facilities utilized by the Telephone Company to provide service under the provisions of this Tariff shall remain the property of the Telephone Company.
- (AT) H. The Telephone Company does not warrant that its facilities and services meet standards other than those set forth in this tariff.

MO. PUBLIC SERVICE COMMISSION

2. GENERAL REGULATIONS--(Continued)

2.1 Undertaking of the Telephone Company--(Continued)

2.1.2 Limitations

A. For Enhanced Service Providers (ESPs), Access Services are not to be used as toll replacement. All calls, whether originating or terminating, will be limited to the local calling scope of the ESP's serving wire center as defined in the Telephone Company's local or general exchange tariffs. This limitation includes calls which:

- Originate at an end user and terminate to an ESP.
- Originate at an end user, route through the ESP and terminate to another end user.
- Originate at an ESP and terminate to an end user.

Where Access Service features exist which limit the scope of the Access Service to a local calling area, as a condition of being provided Access Services, ESPs shall request these features on the same Order on which the associated Access Service is requested.

Also, as a condition of being provided Access Service, ESPs will be required to sign an agreement not to disclose the calling party's telephone number, except for services directly related to the call (e.g., call setup, routing of calls, billing and maintenance) unless permission is given by the calling party.

- (RT) B. Switched Access Services terminating at an IC terminal location will be billed only to the IC.
- C. The use and restoration of services shall be in accordance with the Federal Communications Commission's Rules and Regulations which specify the priority system for such activities as set forth in Paragraph 10.7.1, C., following.
- D. Directory listings will not be furnished as a part of the services provided under this Tariff. Directory listings will be provided at the rates and charges specified in the appropriate General Exchange Tariff for additional listings.

2.1.2 Limitations

- A. All orders for facilities to be provided under this Tariff shall be made only by the IC or End User.
- B. Switched Access Services terminating at an IC terminal location will be billed only to the IC regardless of whether such service is ordered by the IC or End User. This regulation does not apply to ~~Facility~~ change Service.
- (CP) C. The use and restoration of services shall be in accordance with the Federal Communications Commission's Rules and Regulations which specify the priority system for such activities as set forth in Paragraph 13.3.2, following.
- (RT) D. Directory listings will not be furnished as a part of the services provided under this Tariff. Directory listings will be provided at the rates and charges specified in the appropriate General Exchange Tariff for additional listings.
- (CT) E. First-come first-served shall be based upon the received time and date stamped by the Telephone Company on customer orders which contain the information as required for each respective service as delineated in other sections of this Tariff. Customer orders shall not be deemed to have been received until such information is provided. When necessary, the Telephone Company will attempt to seek clarification on a verbal basis. The Telephone Company will initiate the order process within one working day of receipt of the customer's order.

In the event a shortage of facilities should exist, the type of shortage of facilities and equipment and how quickly relief can be provided would also be taken into consideration with the preceding provisions.

- (CT) F. Signals applied to a metallic facility shall conform to the limitations set forth in Technical Reference Publication AS No. 1, Issue II. In the case of application of dc telegraph signaling systems, the customer shall be responsible, at its expense, for the provision of ~~current limiting~~ devices to protect the Telephone Company facilities from excessive ~~current~~ due to abnormal conditions and for the provision of noise mitigation networks when required to reduce excessive noise.

- (AT) G. The customer has 90 days after receiving Individual Case Basis rates to order the service requested at the rate quoted.

A. The Telephone Company, to the extent that such services are or can be made available with reasonable effort and after provision has been made for the Telephone Company's telephone exchange services, may provide to the IC, upon reasonable notice, services offered in other applicable sections of this Tariff at rates and charges specified therein.

In the event that the IC's request cannot be fulfilled with existing facilities and equipment or the request is not consistent with the Telephone Company's standard practices, alternative designs will be provided by the Telephone Company. Additionally, the Telephone Company will work with the customer to reach an agreeable solution.

B. The services provided under this Tariff are provided over such routes and facilities as the Telephone Company may elect. Requests for special facilities or routing of Access Service will be provided in accordance with Section 11 or Section 14, following, as appropriate.

C. The services provided under this Tariff (1) will include any entrance cable or drop wiring and wiring or cable as set forth in Part 68 of the Federal Communications Commission's Rules and Regulations and (2) will be installed by the Telephone Company to the points of termination.

CANCELLED

BY MRS RS #5

Public Service Commission
MISSOURI

Moves involving the point of termination at the IC terminal on the End User's premises will be as set forth in Section 6, Paragraph 6.7.7 and Section 7, Paragraph 7.3.5, following. Standard Jacks, as set forth in Section 13, Paragraph 13.3.4, following, are used where appropriate to terminate services. For simple inside wiring where there is no Telephone Company provided standard jack at the Demarcation Point, customers may make connections by direct attachment to Company installed wiring at points on the customer's side up to and including at the Demarcation Point.

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.1 Undertaking of the Telephone Company-(Continued)

2.1.6 Discontinuance and Refusal of Services-(Continued)

(AT) A. (Continued)

If the Telephone Company does not discontinue service, refuse additional applications for service and/or refuse to complete any pending orders on the date specified in the thirty (30) day's notice, and the customer's noncompliance continues, nothing contained herein shall preclude the Telephone Company's right to refuse additional applications for service to the noncomplying customer without further notice.

B. If the IC or End User fails to comply with the provisions of this Tariff in connection with the provision of a service or group of services and fails to correct such course of action after notice as set forth in A., preceding, the Telephone Company may refuse applications for additional services until the course of action is corrected to the satisfaction of the Telephone Company.

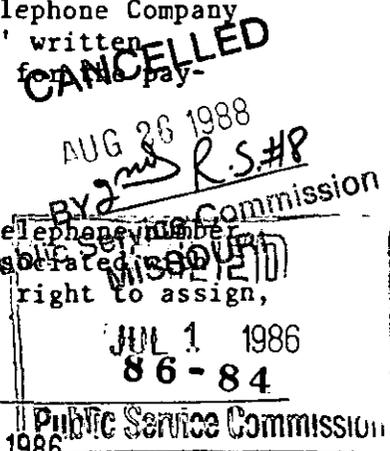

C. The Telephone Company reserves the right to refuse service to any applicant who is found to be indebted to the Telephone Company until satisfactory arrangements have been made for the payment of such indebtedness.

The Telephone Company may also refuse to furnish service to an applicant desiring to establish service for former customers or previous customers who are indebted to the Telephone Company until satisfactory arrangements have been made for payment of such indebtedness.

D. If Access Service is established and it is subsequently determined that either condition in C., preceding, exists, the Telephone Company may suspend or disconnect such service after five days' written notice, until satisfactory arrangements have been made for payment of the prior indebtedness.

2.1.7 Provision and Ownership of Telephone Numbers

The IC and the End User have no property rights to telephone number assignments or any other call number designations associated with Access Services. The Telephone Company reserves the right to assign,

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.1 Undertaking of the Telephone Company-(Continued)

2.1.6 Discontinuance and Refusal of Services-(Continued)

- B. If the IC or End User fails to comply with the provisions of this Tariff in connection with the provision of a service or group of services and fails to correct such course of action after notice as set forth in A., preceding, the Telephone Company may refuse applications for additional services until the course of action is corrected to the satisfaction of the Telephone Company.
- C. The Telephone Company reserves the right to refuse service to any applicant who is found to be indebted to the Telephone Company for Access Service previously furnished until satisfactory arrangements have been made for the payment of such indebtedness.

The Telephone Company may also refuse to furnish service to an applicant desiring to establish service for former customers or previous customers of the Telephone Company who are indebted for Access Service until satisfactory arrangements have been made for payment of such indebtedness.

- D. If Access Service is established and it is subsequently determined that either condition in C., preceding, exists, the Telephone Company may suspend or disconnect such service after five days' written notice, until satisfactory arrangements have been made for the payment of the prior indebtedness.

2.1.7 Provision and Ownership of Telephone Numbers

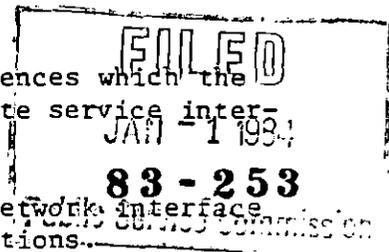

The IC and the End User have no property rights to telephone number assignments or any other call number designations associated with Access Services. The Telephone Company reserves the right to assign, designate or change such numbers, or the Telephone serving central office prefixes associated with such numbers, when reasonably necessary in the conduct of its business.

2.1.8 Technical References

The Telephone Company will publish technical References which the IC can obtain as an aid in selecting the appropriate service interface and feature arrangements.

Upon request, the Telephone Company will furnish network interface information required by the FCC's Rules and Regulations.

2. GENERAL REGULATIONS--(Continued)

2.2 Use

2.2.1 Purpose

- A. Services provided under this Tariff shall be used by the IC for its own use or in furnishing its authorized services to End Users and for operational purposes directly related to the furnishing of the IC's authorized services. Operational purposes are limited to testing and maintenance of circuits, demonstration and experimental services and spare services. Telephone Exchange Services required by the IC for its administrative use are furnished under other applicable tariffs of the Telephone Company.
- B. Where facility conditions permit, the IC may use the entire transmission capability of a service provided under this Tariff as a single channel or create additional communication channels within or below the voice frequency band. The Telephone Company does not warrant that its facilities meet standards other than those set forth in this Tariff.

2.2.2 Assignment and Transfer of Facilities

The IC may not assign or transfer the use of services provided under this Tariff except, where there is no interruption of use or relocation of the services, such assignment or transfer may be made to:

- another IC, whether an individual, partnership, association or corporation, provided the assignee or transferee assumes all outstanding indebtedness for such services, and the unexpired portion of the minimum period and the termination liability applicable to such services, if any; or

- a court-appointed receiver, trustee or other person acting pursuant to law in bankruptcy, receivership, reorganization, involency, liquidation or other similar proceedings, provided the assignee or transferee assumes the unexpired portion of the minimum period and the termination liability applicable to such services, if any.

in this Tariff shall apply to such assignee or transferee. The assignment or transfer of services does not relieve or discharge the assignor or transferor from remaining jointly or severally liable with the assignee or transferee for any obligations existing at the time of the assignment or transfer.

(CT) 2.2.2 Unlawful and Abusive Use

A. The services provided under this Tariff shall not be used for an unlawful purpose or used in an abusive manner.

Abusive use includes:

- 1. The use of the service of the Telephone Company for a call or calls, anonymous or otherwise, in a manner reasonably expected to frighten, abuse, torment, or harass another;
- 2. The use of the service in such a manner as to interface unreasonably with the use of the service by one or more other customers.

B. The Telephone Company shall, upon written request from a customer, another exchange carrier or lawful authority, terminate service to any subscriber or customer identified as having utilized service provided under this Tariff in the completion of abusive or unlawful telephone calls. Service shall be terminated by the Telephone Company as provided for in its General Exchange Service Tariffs.

C. In such instances when termination occurs, as in (B) preceding, the Telephone Company shall be indemnified, defended and held harmless by the customer or any other Exchange Carrier or party against any claim, loss or damage arising from the Telephone Company's actions in terminating such service, unless caused by the Telephone Company's negligence.

2.3 Obligations of the IC

2.3.1 Damages

The IC shall reimburse the Telephone Company for damages to facilities of the Telephone Company utilized to provide services under this Tariff caused by the negligence or willful act of the IC or

in this Tariff shall apply to such assignee or transferee.

The assignment or transfer of services does not relieve or discharge the assignor or transferor from remaining jointly or severally liable with the assignee or transferee for any obligations existing at the time of the assignment or transfer.

2.2.3 Unlawful Use

The service provided under this Tariff shall not be used for any unlawful purpose. Facilities will be disconnected forthwith if any law enforcement agency, acting within its apparent jurisdiction, advises in writing that such facilities are being used in violation of the law. The Telephone Company will refuse to furnish facilities when it has reasonable grounds to believe that such facilities will be used in violation of the law.

2.3 Obligations of the IC

2.3.1 Damages

The IC shall reimburse the Telephone Company for damages to facilities of the Telephone Company utilized to provide services under this Tariff caused by the negligence or willful act of the IC or an End User while using the services of the IC, or resulting from improper use of the Telephone Company's facilities, or due to malfunction of any facilities or equipment provided by other than the the Telephone Company. The Telephone Company will, upon reimbursement for damages, cooperate with the IC in prosecuting a claim against the person causing such damage and the IC shall be subrogated to the right of recovery by the Telephone Company for the damages to the extent of such payment.

2.3.2 Theft

The IC shall reimburse the Telephone Company for any loss through theft of facilities utilized to provide services under this Tariff at the IC terminal location or End User's premises.

The IC shall defend, indemnify and save harmless the Telephone Company from and against any suits, claims, losses or damages, including punitive damages, attorneys fees and court costs arising from the Telephone Company's provision of Billing Analysis Service under this Tariff at the request of the IC, including, but not limited to claims for libel, slander, invasion of privacy, conversion and trespass.

(FC) 2.3.8 Testing and Maintenance

If an interruption or impairment occurs on a service, the IC is responsible for receiving trouble reports from its End User and must determine whether the fault is in (1) connected equipment or system or (2) the IC facilities or (3) the Access Service or (4) any other service provided by the Telephone Company. The Telephone Company will test and maintain only that service or equipment which it provides except as set forth in Section 13, following.

(RT) Maintenance of Service Charges, as set forth in Section 13, following, apply if the IC requests the Telephone Company clear trouble and all Telephone Company-provided services, facilities and equipment are found to be functioning correctly.

(FC) 2.3.9 Balance

(CT) All signals for transmission over the services provided under this Tariff shall be delivered by the IC balanced to ground except for ground start and duplex (DX) and McCulloh-Loop type signaling and dc telegraph transmissions at speeds of 75 baud or less.

2.3.12 Notification of Service-Affecting Activities

The IC shall provide the Telephone Company timely notification of the following: planned or unplanned outages of IC facilities which will affect the Telephone Company's capability to provide adequate service for anticipated traffic volumes; facility failures within the IC network which will adversely impact upon the Telephone Company's capability to provide adequate service for anticipated traffic volumes and IC marketing activities designed to generate rapid or short-term increases in anticipated traffic volumes. This timely notification will enable the Telephone Company to administer its network as set forth in Section 6, Paragraph 6.5.1, following.

2.3.13 Coordination with Respect to Network Contingencies

The IC shall, in cooperation with the Telephone Company, coordinate in planning the actions to be taken to maintain maximum network capability following natural or man-made disasters which affect telecommunications services.

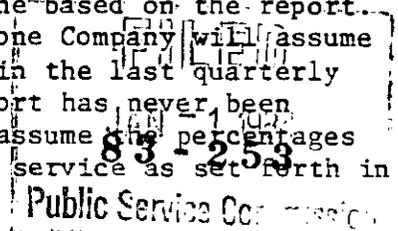

2.3.14 Jurisdictional Report Requirements

A. Jurisdictional Reports

1. When the IC orders service for both interstate and intrastate use, the projected interstate percentage of use and intrastate percentage of use must be provided to the Telephone Company. These percentages will be used by the Telephone Company to apportion the use and/or charges between interstate and intrastate until a revised report is received as set forth in Paragraph 2.3.14, A.2., following.
2. Effective on the first of January, April, July and October of each year the IC shall update the interstate and intrastate jurisdictional report. The IC shall forward to the Telephone Company, to be received no later than 15 days after the first of each such month, a revised report showing the interstate and intrastate percentage of use for the past three months ending the last day of December, March, June and September, respectively, for each service arranged for interstate and intrastate use. The revised report will serve as the basis for the next three months' billing and will be effective on the bill date for that service. No prorating or back billing will be done based on the report. If the IC does not supply the reports, the Telephone Company will assume the percentages to be the same as those provided in the last quarterly report. For those cases in which a quarterly report has never been received from the IC, the Telephone Company will assume the percentages to be the same as those provided in the order for service as set forth in Paragraph 2.3.14, A.1., preceding.

will be the basis for prorating charges. When the actual jurisdictional data is not known for line side or trunk side Switched Access, the percentages provided in the reports in Paragraph 2.3.13, B., following, will serve as the basis for prorating the charges. DNAL BSA rates and charges will be apportioned by the Telephone Company between interstate and intrastate based upon the PIU used to apportion the rates and charges for the line side or trunk side BSA associated with the DNAL. The percentages of an Access Service to be charged as intrastate intraLATA and intrastate interLATA are derived in the following manner.

- Intrastate intraLATA and/or intrastate interLATA charges apply to all messages that originate on the IC's network in Missouri and terminate at a telephone number in Missouri whether or not the IC has the proper state certification or an effective intrastate tariff. A message originates on the IC's network when it first reaches any point of interconnection between the IC's facilities, either owned or leased, and the facilities of the Telephone Company.
- For monthly and nonrecurring chargeable rate elements, multiply the percent intrastate use times the quantity of chargeable elements times the appropriate tariff rate per element.

2.3.14 Jurisdictional Report Requirements--(Continued)

B. Maintenance of IC Records

The IC shall maintain and retain for a minimum of one year, complete, detailed and accurate records, workpapers and backup documentation in form and substance to evidence the percentage data provided to the Telephone Company as set forth in Paragraph 2.3.14, A.1. and 2., preceding. All of the records, workpapers and backup documentation shall be made available during normal business hours, at the location named in the report, upon reasonable request by the Telephone Company in order to permit a review by a Telephone Company auditor, an outside auditor under contract to the Telephone Company, or an auditor of a federal or state regulatory commission. If the records, workpapers and backup documentation are not provided or are insufficient or not in accordance with the provisions of this Paragraph, the percentages of interstate and intrastate service will be assumed by the Telephone Company to be the same as indicated in the last report received until the deficiencies are corrected and new reports, as required herein, are provided to the Telephone Company.

2.3.15 Determination of Intrastate Charges for Mixed Interstate and Intrastate Switched Access Service

When mixed interstate and intrastate Switched Access Service is provided, all charges (i.e., nonrecurring, monthly and usage) including optional features charges, will be prorated between interstate and intrastate. The percentages provided in the reports in Paragraph 2.3.14, A., preceding, will serve as the basis for prorating the charges. The percentage of an Access Service to be charged as intrastate is derived in the following manner:

- For monthly and nonrecurring chargeable rate elements, multiply the percent intrastate use times the quantity of chargeable elements times the stated tariff rate per element.
- For usage-sensitive (i.e., access minutes and calls) chargeable rate elements, multiply the percent intrastate use times actual use (i.e., measured or Telephone Company-assumed average use) times the stated tariff rate.

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.3 Obligations of the IC-(Continued)

2.3.12 Determination of Intrastate Charges for Mixed Interstate and Intrastate Switched Access Service-(Continued)

C. (Continued)

- 2. Seventy-five and nine tenths percent (75.9%) of all messages which originate on the IC's network in the Missouri portion of the St. Louis Standard Metropolitan Statistical Area (SMSA) and terminate at a telephone number in Missouri will be reported as intrastate.
- 3. One hundred percent (100%) of all other messages which originate on the IC's network in Missouri and terminate at a telephone number in Missouri will be reported as intrastate.
- 4. If an IC establishes a point of interconnection between its facilities and those of a local exchange telephone company in a state which adjoins Missouri and which Missouri customers may gain access on a toll free basis, the messages which gain access at such points of interconnection and terminate at a Missouri telephone number shall be reported as intrastate messages. Traffic gaining access at a point of interconnection in Kansas or Illinois and through which Kansas City or St. Louis customers may access on a toll free basis and terminate at a telephone number in Missouri shall be apportioned between the interstate and intrastate jurisdictions on the same basis as described in Paragraph 2.3.12, C.1. and 2., preceding.

The percent of intrastate messages as determined in Paragraphs 2.3.12,C., 1., 2., 3. and 4., preceding, must be further separated into the percent intrastate intraLATA and the percent intrastate interLATA messages (for example, if intrastate usage makes up 20 percent of the customers' total usage and half of the intrastate usage is intraLATA, the intraLATA percent related to the intrastate usage would be 50). All messages which originate on the IC's network in the Missouri portion of a LATA and terminate at a telephone number in the same LATA in Missouri will be reported as intrastate intraLATA. Messages terminating at a telephone number in a different LATA in Missouri will be reported as intrastate interLATA. Wire centers and their corresponding LATA's may be found in the appropriate FCC Tariff. Different intrastate charges may apply to intrastate intraLATA and intrastate interLATA messages.

projected interstate percentage. The projected interstate percentage will be developed on a monthly basis, by end office, when the Switched Access Service access minutes (FGD, FGD, BSA-C and BSA-D) are measured by dividing the measured interstate terminating access minutes (the access minutes where the calling number is in one state and the called number is in another state) by the total terminating access minutes.

For FGC, FGD, BSA-C and BSA-D Switched Access Services where call details are insufficient to determine jurisdiction, the customer will provide an interstate percentage of FGC, FGD, BSA-C or BSA-D terminating access minutes for each end office or LATA from which the customer may terminate traffic. If a LATA-level PIU factor is provided by the customer, the specified percentage will be applied to all end offices to which the customer may terminate traffic within the LATA or to those end offices for which an end office-level PIU is not provided.

If the customer does not provide the Telephone Company with PIU factors for their terminating FGC, FGD, BSA-C or BSA-D traffic, the Telephone Company will develop a PIU factor for such terminating access minutes utilizing the data used to develop the PIU for the originating access minutes. The Telephone Company developed percentage will be based on the average of the customer's originating FGC, FGD, BSA-C and/or BSA-D usage.

If the customer has no originating traffic within the end office for which sufficient call detail exists to develop an interstate percentage, the Telephone Company will designate a PIU factor of 50% for FGC, FGD, BSA-C or BSA-D terminating access minutes.

3. Dedicated Network Access Link (DNAL) BSA

Upon ordering Switched Access DNAL BSA, the customer will provide an interstate percentage of use for each DNAL BSA requested.

2. GENERAL REGULATIONS--(Continued)

2.3 Obligations of the IC--(Continued)

2.3.13 Jurisdictional Report Requirements--(Continued)

(FC) B. Jurisdictional Reports--(Continued)

2. Effective on the first of January, April, July and October of each year, the IC shall update the interstate and intrastate jurisdictional reports pursuant to the method described in Paragraph 2.3.12, preceding. The IC shall forward to the Telephone Company, to be received no later than 15 days after the first of each such month, a revised report showing the interstate percentage of use and intrastate percentages of use for the past three months. This usage will be from the most recent 3 month period for which this data exists and will be reported for each service arranged for interstate and intrastate use. The revised report will serve as the basis for the next three months' billing and will be effective on the bill date for that service. No prorating or back billing will be done based on the report. If the IC does not supply the reports, the Telephone Company will assume the percentages to be the same as those provided in the last quarterly report. For those cases in which a quarterly report has never been received from the IC, the Telephone Company will assume the percentages to be the same as those provided in the order for service as set forth in Paragraph 2.3.13., B.1., preceding.

(FC)

3. Where an IC has previously obtained interstate service and is applying for authorization to provide intrastate service, an interim jurisdictional report may need to be submitted. This interim report will not be necessary if the effective date of the Order authorizing the IC to provide intrastate service coincides with the jurisdictional report dates as set forth in Paragraph 2.3.13., B.2.

(FC)

a. The IC shall submit to the Telephone Company an interim report on or before the effective date of the Order authorizing the IC to provide intrastate service. This report will serve as the basis for billing until revised reports are received as set forth in Paragraph 2.3.13., B.2.

(FC)

b. This interim report will be based on usage from the previous three months for which message data exists. Data used must be from the six month period prior to the effective date of the Order. Interstate and intrastate percentages of use will be reported as ordered by the Commission in Case No. TO-84-223 et al. and will be determined as set forth in Paragraph 2.3.12, preceding.

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.3 Obligations of the IC-(Continued)

2.3.14 Determination of Intrastate Charges for Mixed Interstate and Intrastate Switched Access Service-(Continued)

C.-(Continued)

- 3. One hundred percent (100%) of all other messages which originate on the IC's network in Missouri and terminate at a telephone number in Missouri will be reported as intrastate.
- 4. If an IC establishes a point of interconnection between its facilities and those of a local exchange telephone company in a state which adjoins Missouri and which Missouri customers may gain access on a toll free basis, the messages which gain access at such points of interconnection and terminate at a Missouri telephone number shall be reported as intrastate messages. Traffic gaining access at a point of interconnection in Kansas or Illinois and through which Kansas City or St. Louis customers may access on a toll free basis and terminate at a telephone number in Missouri shall be apportioned between the interstate and intrastate jurisdictions on the same basis as described in Paragraph 2.3.14C.1. and 2., preceding.
- 5. The percent interstate usage resulting residually from the provisions of Paragraph 2.3.14C.1., 2., 3. and 4., preceding is subject to the rounding provision of Paragraph 2.3.14A., preceding.

2.3.15 Jurisdictional Report Requirements

A. Jurisdictional Reports

- 1. When the IC orders service for both interstate and intrastate use, the projected interstate percentage of use and intrastate percentage of use must be provided to the Telephone Company. These percentages, when actual jurisdictional usage is unknown, will be used by the Telephone Company to apportion the use and/or charges between interstate and intrastate until a revised report is received as set forth in Paragraph 2.3.15A.2., following.
- 2. Effective on the first of January, April, July and October of each year the IC shall update the interstate and intrastate jurisdictional report pursuant to the method described in Paragraph 2.3.14, preceding. The IC shall forward to the Telephone Company, to be received no later than 15 days after the first of each such month, a revised report showing the interstate and intrastate percentage of use for the past three months ending the last day of December, March, June and September, respectively, for each service arranged for interstate and intrastate

2. GENERAL REGULATIONS-(Continued)

2.3 Obligations of the IC-(Continued)

2.3.15 (Continued)

The intrastate percentage will change as revised usage reports are submitted as set forth in Paragraph 2.3.14, A., preceding.

2.4 Payment Arrangements and Credit Allowances

2.4.1 Payment of Rates, Charges and Deposits

- A. Where the provision of facilities involves an unusual investment, an IC may be required to make payment in advance of such portion of the estimated cost of the installation or construction as is to be borne by it. The amount of the advance payment will be credited to the IC's account as applying to the indebtedness of the IC for the services and facilities provided.
- B. The Telephone Company may, in order to safeguard its interests, require an IC to make a deposit prior to or at any time after the provision of a service to the IC to be held by the Telephone Company as a guarantee of the payment of rates and charges. Such deposit may not exceed the rates and charges for the service for a one-month period plus the amount of any termination charges attributable to the service. The fact that a deposit has been made in no way relieves the IC from complying with the Telephone Company's regulations as to advance payments or the prompt payment of bills or constitute a waiver or modification of the regular practices of the Telephone Company providing for the discontinuance of the facilities for nonpayment of any sums due the Telephone Company for facilities provided.

The IC shall maintain and retain for a minimum of one year, complete, detailed and accurate records, workpapers and backup documentation in form and substance to evidence in Section 2, Paragraph 2.3.12, A.1. and 2., preceding. All of the records, workpapers and backup documentation shall be made available during normal business hours, at the location named in the report, upon reasonable request by the Telephone Company in order to permit a review by a Telephone Company auditor, an outside auditor under contract to the Telephone Company, or an auditor of a federal or state regulatory commission. The Telephone Company may in its discretion accept the results of a third party audit submitted by the IC in lieu of performing its own audit. If the records, workpapers and backup documentation are not provided or are insufficient or not in accordance with the provisions of this Paragraph, the percentage of interstate and the percentages of intrastate service will be assumed by the Telephone Company to be the same as indicated in the last report received until the deficiencies are corrected and new reports, as required herein, are provided to the Telephone Company.

10. Advanced Carrier Identification Service (ACIS)

Customers ordering Advance Carrier Identification Service (ACIS) must provide the Telephone Company with an originating FGB, FGC, FGD, BSA-B, BSA-C or BSA-D PIU Report for ACIS. The ACIS PIU report shall reflect an interstate percentage, by feature group or basic serving arrangement, of originating ACIS access minutes for each end office or LATA from which the customer may originate ACIS traffic. If a LATA-level PIU factor is provided by the customer, the specified percentage will be applied to all end offices to which the customer may originate traffic within the LATA or to those end office for which an end office-level PIU is not provided.

If a customer does not provide the Telephone Company with an originating ACIS PIU report or quarterly update report, the Telephone Company will determine the interstate percentage of ACIS usage as follows:

For ACIS originated over FGC, FGD, BSA-C and BSA-D Switched Access Service, the Telephone Company will develop an interstate percentage on a monthly basis for each end office by dividing the customer's measured interstate originating access minutes by the customer's total originating access minutes for which sufficient call detail exists to determine the jurisdiction. If the customer has no other traffic within the end office for which sufficient call detail exists to develop an interstate percentage, the Telephone Company will determine an interstate percentage based on an average of all interstate ACIS usage originating within the LATA.

For ACIS originated over FGB or BSA-B Switched Access Service, the Telephone Company will determine an interstate percentage based on an average of all interstate ACIS usage originating within the LATA.

(AT) 11. 700 Access Service

Upon ordering FGC, FGD, BSA-C or BSA-D, the customer must provide the Telephone Company with an originating PIU for 700 Access Service. The 700 Access Service PIU report shall reflect an interstate percentage, by feature group or basic serving arrangement, of originating 700 Access Service access minutes for each end office or LATA from which

B. (Continued)

Simple interest at the rate of 9 percent per annum will be paid on deposits held 30 days or more.

Such a deposit will be refunded or credited to the customer's account at any time prior to the termination of the provision of the service to the customer. Should a deposit be credited to the customer's account, no interest will accrue on the deposit from the date such deposit is credited.

At such time as the provision of the service to the IC is terminated, the amount of the deposit and any applicable interest will be credited to the IC's account, and any credit balance which may remain will be refunded.

- (AT) C. The Telephone Company shall bill on a current basis all charges incurred by and credits due to the IC under this Tariff attributable to services established or discontinued during the preceding billing period. Any known unbilled usage charges for prior periods and any known uncredited adjustments will be applied to this bill. In addition, the Telephone Company shall bill in advance charges for all services to be provided during the ensuing billing period, except for charges associated with service usage and for the Federal Government which will be billed in arrears. Such bills are due when rendered.

Adjustments for the quantities of services established or discontinued in any billing period beyond the minimum period set forth for services in other sections of this Tariff will be prorated to the number of days or fraction thereof based on a 30-day month.

- D. All bills are due when rendered and are considered past due thirty (30) days after the bill date or by the next bill date, except as set forth in Section 3, Paragraph 3.5, A., and Section 8, Paragraph 8.2.3, following, and are payable in immediately available funds.

2.4.2 Minimum Periods

(CT)

A. When a service is discontinued prior to the expiration of the minimum period, charges are applicable whether the service is used or not, as follows:

(1) When a service with a one month minimum period is discontinued prior to the expiration of the minimum period, a one month charge will apply at the rate level in effect at the time service is discontinued.

(2) When a service with a minimum period greater than one month is discontinued prior to the expiration of the minimum period, the applicable charge will be the lesser of (1) the Telephone Company's total nonrecoverable costs, less the net salvage value, for the discontinued service or (2) the total monthly charges, at the rate level in effect at the time service is discontinued, for the remainder of the minimum period.

B. The minimum periods for which services are provided and for which rates and charges are applicable are set forth in Sections 5, 8 and 9, following.

C. The minimum period for which service is provided and for which rates and charges are applicable for a Specialized Service or Arrangement provided on an individual-case basis as set forth in Section 12, following, is one month unless a different minimum period is established with the individual-case filing.

2.4.3 Quotation Preparation Charge

Except as set forth in Section 10, Paragraph 10.7, following, a Nonrecurring Charge for the preparation of a quotation applies whenever an IC requests rates and charges for any service for which the rates and charges are determined on an individual-case basis prior to placing an order for service. The charge includes the costs associated with the development and preparation of the quotation and any applicable taxes. The IC will be advised of the charge for quotation preparation (USOC: QPA) and must agree to pay the charge before development of the quotation will commence.

A. Application of Charge

If, after being advised that a quotation preparation charge is applicable, the IC requests the quotation, it will be developed and furnished. A bill for the quotation preparation will be rendered. The quotation is valid for 180 days and will identify all estimated costs associated with the provision of the facilities needed to satisfy the IC's service requirements. If, with in this 180-day period, the IC orders the service as quoted and service is subsequently provided, the Quotation Preparation Charge will be credited to the IC's account. However, if the IC cancels the order before service is provided, but after completion of the quotation preparation, a charge equal to the costs incurred by the Telephone Company will apply.

If the IC cancels the request for a quotation prior to its completion, the IC will be billed the lesser of the amount for:

- the quotation preparation charge, which the IC was advised would apply, or
- the costs incurred, for quotation preparation, plus any appropriate taxes through the cancellation date.

B. Title or Ownership Rights

The payment of a charge for quotation preparation does not assign, confer or transfer title or ownership rights to proposals or facilities designed or furnished by the Telephone Company. Title and ownership rights for any item developed at the IC's request remains with the Telephone Company, except as specifically provided by an agreement between all parties.

2.4.4 Credit Allowance for Service Interruptions

A. General

A service is interrupted when it becomes unusable to the IC because of a failure of a facility component used to furnish service under this Tariff or in the event that the protective controls applied by the Telephone Company result in the complete loss of service by the customer as set forth in Section 6.8.1, following. An interruption period starts when an inoperative service is reported to the Telephone Company by the IC and ends when the service is operative.

The credit allowance(s) for an interruption or for a series of interruptions shall not exceed the monthly rate, the assumed minutes of use charge or the minimum monthly usage charge as appropriate for the service interrupted in any one monthly billing period.

For calculating credit allowances every month is considered to have 30 days.

B. When a Credit Allowance Applies

In case of an interruption to any service, allowance for the period of interruption, if not due to the negligence of the customer, shall be as follows:

1. For CCS/SS7 Interconnection Service and Special Access Services other than Program Audio service, no credit shall be allowed for an interruption of less than 30 minutes. The customer shall be credited for an interruption of 30 minutes or more at the rate of 1/1440 of the monthly charges for the facility or service for each period of 30 minutes or fraction thereof that the interruption continues.

2. GENERAL REGULATIONS-(Continued)

2.4 Payment Arrangements and Credit Allowances-(Continued)

2.4.4 Credit Allowance for Service Interruptions-(Continued)

(AT) B. When a Credit Allowance Applies-(Continued)

1. (Continued)

The monthly charges used to determine the credit shall be as follows:

- a. For two-point services, the monthly charge shall be the total of all the monthly rate element charges associated with the service (i.e., two channel terminations, channel mileage and optional features and functions).
 - b. For multipoint services, the monthly charge shall be only the total of all the monthly rate element charges associated with that portion of the service that is inoperative (i.e., a channel termination per customer premises, channel mileage and optional features and functions).
 - c. For multiplexed services, the monthly charge shall be the total of all the monthly rate element charges associated with that portion of the service that is inoperative. When the facility which is multiplexed or the multiplexer itself is inoperative, the monthly charge shall be the total of all the monthly rate element charges associated with the service (i.e., the channel termination, channel mileage and option features and functions, including the multiplexer on the facility to the Hub and the channel terminations, channel mileages and optional features and functions on the individual services from the Hub). When the service which rides a channel of the multiplexed facility is inoperative, the monthly charge shall be the total of all the monthly rate element charges associated with that portion of the service from the Hub to a customer premises (i.e., channel termination, channel mileage and optional features and functions).
2. For Program Audio Special Access Services, no credit shall be allowed for an interruption of less than 30 seconds. The customer shall be credited for an interruption of 30 seconds or more as follows:
 - a. For two-point services, when monthly rates are applicable, the credit shall be at the rate of 1/8640 of the monthly charges for the service for each period of 5 minutes or fraction thereof that the interruption continues.

2.4.5 Ordering, Rating and Billing of Access Services Where More Than One Exchange Telephone Company is Involved

When an Access Service is ordered by a customer where one end of the service is in one Exchange Telephone Company operating territory and the other end is in another Exchange Telephone Company operating territory (i.e. Jointly Provided Access Service), the Exchange Telephone Companies involved will agree upon a billing, design and ordering arrangement which is consistent with the provisions contained in this section and the Ordering and Billing Forum standards, Multiple Exchange Carrier Access Billing (MECAB) and Multiple Exchange Carrier Ordering and Design (MECOD). If any changes are made in these arrangements, the Exchange Telephone Companies involved will give affected customers 30 days notice prior to implementation.

(AT)

(C)

At the time an order is placed, the customer will be notified of the arrangement which will apply and any pertinent information pertaining thereto, e.g., the entity to which payment should be made, the entity to which billing inquiries should be made, the entity which will be responsible for adjustments to bills, etc.

A. Single Bill Arrangement for Feature Group A and B (FGA and FGB) Switched Access Services

1. General - A single bill will be rendered for FGA and FGB service.
2. Ordering - The company where the first point of switching is located shall accept the order for FGA and FGB service. The other company(ies) involved shall also receive a copy of the order from the carrier.

The Exchange Telephone Companies involved in providing the Access Service, will develop a mutually agreeable working arrangement to allow one of the Exchange Telephone Companies to perform "Access Service Coordination" (ASC) for all services requested.

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.4 Payment Arrangements and Credit Allowances-(Continued)

2.4.7 Ordering, Rating and Billing of Access Services Where More Than One Exchange Telephone Company is Involved

The Telephone Company will handle ordering, rating and billing of Access Services under this Tariff where more than one Exchange Telephone Company is involved in the provision of Access Services as set forth in Paragraph 2.4.7, A. or B., following. The choice of either Paragraph 2.4.7, A. or B., shall be made by the Telephone Company and the Telephone Company will notify the IC which option will apply when the IC orders Access Service. The choice of Paragraph 2.4.7, A. or B., will be based on the interconnection arrangements between the two Exchange Telephone Companies involved.

A. When an Access Service is ordered by an IC where one end of the Transport element (i.e., Special Transport, Local Transport or Directory Transport, as appropriate) is in one Exchange Telephone Company operating territory and the other end is in another Exchange Telephone Company operating territory, except for Access Services provided with the use of Hubs (multiplexing or bridging), the Exchange Telephone Company in whose territory the End User serving wire center is located will accept the order for the Access Service from the IC. That Exchange Telephone Company will then determine the charges involved, arrange to provide the Access Service ordered and bill the charges in accordance with its Access Service Tariff.

When an Access Service provided with the use of a Hub (multiplexing or bridging) is ordered by an IC, the Exchange Telephone Company in whose territory the Hub is located will accept the order for the Access Service from the IC. That Exchange Telephone Company will then determine the charges involved, arrange to provide the Access Service ordered and bill the charges in accordance with its Access Service Tariff.

2.4.5 Ordering, Rating and Billing of Access Services Where More Than One Exchange Telephone Company is Involved-(Continued)

(AT) C. Single Bill Single Tariff Arrangement for FGB, FGC, FGD, BSA-B, BSA-C, BSA-D, DNAL,
(AT) Special Access and Directory Assistance Services-(Continued)

(AT) 3. The Telephone Company will participate in the Single Bill Single Tariff Billing
(AT) Arrangement with involved exchange telephone companies to jointly provide DNAL or
(AT) Special Access Service when all of the following conditions exist:

- a. The exchange telephone companies involved agree to use the Single Bill Single Tariff Billing Arrangement to render a bill to the customer; and
- b. One of the other exchange telephone companies performs the billing company functions.

4. Ordering - Each exchange telephone company involved in providing the service will accept an order for the access service from the customer.

(AT) For FGB, FGC and FGD, BSA-B, BSA-C, BSA-D and Directory Assistance Services, the exchange telephone companies involved in providing the access services, will develop a mutually agreeable working arrangement to allow one of the exchange telephone companies to perform "Access Service Coordination" (ASC) for all services requested.

(AT) For DNAL and Special Access, the exchange telephone company that performs the billing functions will serve as the ASC.

C. Multiple Bill Arrangement for Service other than FGA and FGB-(Continued)

- 2. Ordering - Each involved Telephone Company will accept an order for the Access Service from the customer.

The Exchange Telephone Companies involved in providing the Access Service, will develop a mutually agreeable working arrangement to allow one of the Exchange Telephone Companies to perform "Access Service Coordination" (ASC) for all services requested.

- 3. Rating and Billing of Service - Each company will provide its portion of the Access Service based on the regulations, rates and charges contained in its Access Services Tariff, subject to the following rules, as appropriate:

- a. The charges billed by this company for mileage sensitive rate elements, e.g., Switched Access Service Local Transport, Special Access Service Channel Mileage, or Directory Assistance Transport, are determined as follows:

- 1. The total mileage for the service is computed using the V&H Coordinate Method set forth in National Exchange Carrier Association, Inc., (NECA) Tariff filed with the F.C.C.(1).
- 2. A billing factor is determined from the appropriate NECA Tariff filed with the F.C.C.(1) for the Telephone Company premises and/or the interconnection point(s) involved.
- 3. This company's rates and charges are then multiplied by the appropriate quantity(ies) and the billing factor to obtain the charges for this company.

(1) For intraLATA LEC to LEC traffic, percentages of ownership will be determined by the V&H coordinates located in the Missouri PTC IntraLATA Data Base.

4. The fixed portion of Special Access Channel Mileage will be billed 50 percent at the applicable rate when the service terminates in this company's operating territory.

An example of this methodology is shown in c. following.

b. The application of nondistance sensitive rate elements varies according to the rate structure and the location of the facilities involved:

1. When rates and charges are listed on a per point of termination basis, this company's rates will be billed for the termination(s) within this company's operating territory.
2. When rates and charges are listed on a per unit basis, e.g., central office bridging or multiplexing, this company's rate and charges will apply for units located in this company's operating territory.
3. When rates and charges are developed on an individual case basis, such rates will be developed for the portions of the service provided by this company.
4. When rates and charges are listed on a per service basis, these rates and charges will be billed.

(CT) C. 2. Mileage (Using the appropriate EXCHANGE CARRIER ASSOCIATION TARIFF
(CT) filed with the F.C.C.)(1)

Airline Miles

-ETCA premises to ETCB premises = 104.4, rounded 105

Route Miles

-ETCA premise to IP = 50 miles

-ETCB premise to IP = 75 miles

% Ownership ETCA = $50 / (50 + 75) = .40$
.40 x 105 = 42 Airline miles

% Ownership ETCB = $75 / (50 + 75) = .60$
.60 x 105 = 63 Airline miles

3. Local Transport Charges for 9000 Access Minutes.

- Assume ETCA rate for Local Transport mileband of over 100 miles is \$0.0490 per access minute

- Assume ETCB rate for Local Transport mileband of over 100 miles is \$0.0495 per access minute

- Formula:

ETCA Local

Transport = Access Minutes x ETCA Rate x Charge % ETCA Ownership

- Calculation of Transport Charges

ETCA Local = $9000 \times \$0.0490 \times .40 = \176.40
Transport Charge

ETCB Local = $9000 \times \$0.0495 \times .60 = \267.30

(CP) 2.4.5 Ordering, Rating and Billing of Access Services Where a Public Service Commission Exchange Telephone Company is Involved-(Continued)

C. Multiple Bill Arrangement for Service other than FGA and FGB-(Continued)

3. Rating and Billing of Services-(Continued)

c. Example - Switched Access-(Continued)

2. Airline Mileages (Using the appropriate NECA Tariff filed with the F.C.C.)(1).

- ETCA premises to ETCB premises = 22.1, rounded = 23

3. Local Transport charges for 9000 access minutes

- Assume ETCA rate for Local Transport mileband of over 1 to 25 miles is \$0.0120 per access minute

- Assume ETCA Billing Percentage (BP) is 57

- Assume ETCB rate for Local Transport mileband of over 1 to 25 miles is \$0.0125 per access minute

- Assume ETCB Billing Percentage (BP) is 43

- Formula:

$$\text{ETCA Local Transport Charge} = \frac{\text{Access Minutes} \times \text{ETCA Rate} \times \text{ETCA Billing Percentage}}{100}$$

- Calculation of Transport Charges

$$\text{ETCA Local Transport Charge} = 9000 \times \$0.0120 \times \frac{57}{100} = \$61.56$$

$$\text{ETCB Local Transport Charge} = 9000 \times \$0.0125 \times \frac{43}{100} = \$48.38$$

(1) For intralATA LEC to LEC traffic, percentages of ownership will be determined by the V&B coordinates located in the Missouri PTC IntralATA Data Base.

Equipment, systems (i.e., terminal equipment, multiline terminating systems and communications systems) and premises wiring, hereinafter referred to as equipment, may be connected with access service including service provided in Section 12 furnished by the Telephone Company where such connection is made in accordance with the provisions specified in this Tariff.

Connection may be made at the facility interface at the IC terminal location or the End User location. The Telephone Company will furnish and maintain its service components in a manner suitable for the service being furnished. The Telephone Company is not responsible for:

- The through transmission of signals generated by IC- or End User-provided equipment or for the quality of, or defects in such transmission.
- The reception of signals by IC- or End User-provided equipment.
- Address signaling performed by IC- or End User-provided equipment.

When an IC or End User connects equipment to a service, it is responsible for:

- The proper installation, operation and maintenance of the connected equipment.
- Compliance with Part 68 of FCC Rules and Regulations (hereinafter referred to as Registration Program).
- Compliance with minimum protection criteria as set forth in Paragraphs 2.5.2 and 2.5.3 following.
- Compliance with the regulations set forth in this Tariff.
- Notifying the Telephone Company when the equipment is permanently disconnected.

2. GENERAL REGULATIONS-(Continued)

2.5 Connections-(Continued)

2.5.1 General-(Continued)

A. Compatibility with the Service

The IC or End User is responsible for the compatibility of the equipment with the service to which it is connected as set forth in Paragraphs 2.5.1, B., and 2.5.3, C., following. This responsibility applies at the initial installation and on a continuing basis for the duration of the connection.

B. Interference and Hazard

The operating characteristics of the equipment or system connected to a service must not interfere with, or impair, any of the services offered by the Telephone Company. In addition, they must not endanger the safety of Telephone Company employees or the public; damage or interfere with the functioning of Telephone Company equipment or services; or otherwise injure the public in its use of these services.

C. Violation of Regulations

If any of these connection regulations are violated, the Telephone Company will take action to protect its services and will promptly notify the IC or End User of the violation. After receiving such notice, the IC or End User must discontinue such use of the equipment or correct the violation and confirm in writing that the correction has been made. This confirmation must be received by the Telephone Company within ten days after the IC or End User has received notification of the violation. If the IC or End User does not correct the violation, or does not provide the required written confirmation to the Telephone Company within ten days, service will be suspended until such time as the IC or End User does comply. Extraordinary procedures, as set forth in Paragraph 2.5.8, B., following, may be invoked, if warranted.

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.5 Connections-(Continued)

2.5.2 Minimum Protection Criteria for Direct Electrical Connections

- A. To prevent excessive noise and crosstalk in the telecommunications network, it is necessary that the power of the signal at the central office not exceed 12dB below one milliwatt when averaged over any three second interval. To insure that this limit is not exceeded, the power of the signal which may be applied by the IC's or End User's facilities to the Telephone Company interface located at the IC's or End User's premises will be specified for each IC's or End User's premises, but in no case shall it exceed one milliwatt.
- B. To protect other services from interference at frequencies which are above the band of service provided and to insure that the input to the service does not exceed the limits indicated, the Telephone Company will specify the acceptable signal power in the following bands to be applied by the equipment at the facility interface:

1. Metallic Voltage

a. 4 kHz to 270 kHz

<u>Center Frequency (f) of 8 kHz Band</u>	<u>Maximum Voltage in All 8 kHz Bands</u>	<u>Metallic Terminating Impedance</u>
8 kHz to 12 kHz	- (6.4+12.6 log f) dBV	300 ohms
12 kHz to 90 kHz	(23 - 40 log f) dBV	135 ohms
90 kHz to 266 kHz	- 55 dBV	135 ohms

- b. The root-mean-square (rms) value of the metallic voltage components in the frequency range of 270 kHz to 6 MHz shall, averaged over 2 microseconds, not exceed -15 dBV. This limitation applies with a metallic termination having an impedance of 135 ohms.

2. GENERAL REGULATIONS--(Continued)

2.5 Connections--(Continued)

2.5.2 Minimum Protection Criteria for Direct Electrical Connections--(Continued)

B. (Continued)

2. Longitudinal Voltage

a. 4 kHz to 270 kHz

<u>Center Frequency (F) of 8 kHz Band</u>	<u>Maximum Voltage in All 8 kHz Bands</u>	<u>Longitudinal Terminating Impedance</u>
8 kHz to 12 kHz	- (18.4+20 log f) dBV	500 ohms
12 kHz to 42 kHz	(3 - 40 log f) dBV	90 ohms
42 kHz to 266 kHz	- 62 dBV	90 ohms

b. The root-mean-square (rms) value of the longitudinal voltage components in the frequency range of 270 kHz to 6 MHz shall, averaged over 2 microseconds, not exceed -30 dBV. This limitation applies with a longitudinal termination having an impedance of 90 ohms.

dBV = 20 log₁₀ voltage in volts

C. To prevent the interruption or disconnection of a call, or interference with network control signaling, it is necessary that the signal applied by the IC's or End User's facilities to the Telephone Company interface located at the IC's or End User's premises at no time have energy solely in the 2450 to 2750 Hz band. If signal power is in the 2450 to 2750 Hz band, it must not exceed the power present at the same time in the 800 to 2450 Hz band.

D. Where there is no connection to the telecommunications network, and the signal applied by the IC's or End User's facilities has energy solely in the 2675 to 2750 Hz band, the IC or End User shall coordinate the application of that signal with the Telephone Company.

E. Where IC's or End User's facilities apply signals that have components in the frequency spectrum below 3000 Hz, excluding ringing signals, the currents and voltages (including all harmonics and spurious signals) at the interface shall not exceed the following limits:

2. GENERAL REGULATIONS-(Continued)

2.5 Connections-(Continued)

2.5.2 Minimum Protection Criteria for Direct Electrical Connections-(Continued)

E. (Continued)

1. The maximum root-mean-square (rms) value, including dc and ac components, of the current per conductor will be specified by the Telephone Company, but in no case will the specified value exceed 0.35 ampere.
2. The magnitude of the peak of the conductor-to-ground voltage shall not exceed 70 volts.
3. The conductor-to-conductor voltage shall be such that the conductor-to-ground voltage limit set forth in Paragraph 2.5.10, E.2., preceding, is not exceeded. If the signal source is not grounded, the voltage limit in Paragraph 2.5.10, E.2., above, applies to the conductor-to-conductor voltage.
4. The total weighted rms voltage within the band from 50 Hz to 300 Hz shall not exceed 100 volts. The total weighted rms voltage is the square root of the sum of the products of the weighting factors for the individual frequency components times the square of the rms voltage of the individual frequency components. The weighting factors are as follows:

<u>for frequencies between</u>	<u>weighting factor</u>
50 Hz and 100 Hz	$f^2/10^4$
100 Hz and 300 Hz	$f^{3.3}/10^{6.6}$

where f is the numerical value of the frequency, in Hz, of the frequency component being weighted.

- F. Where IC- or End User-provided data terminal equipment is connected to special access services with data capability and baseband conditioning, the following limits shall not be exceeded. However, at specific bit rates of 2.4, 4.8 or 9.6 kbps, higher levels of transmission are permissible if a bipolar signal format specified by the Telephone Company

is met. The bipolar signal format is necessary to limit intractable interference. The Telephone Company will provide the bipolar specifications upon request.

1. The maximum root-mean-square (rms) value, including dc and ac components, of the current per conductor will not exceed 0.15 ampere.
2. The magnitude of the peak of the conductor-to-ground voltage shall not exceed 70 volts.
3. The conductor-to-conductor voltage shall be such that the conductor-to-ground voltage limit in Paragraph 2.5.2, B.2.b., preceding, is not exceeded. If the signal source is not grounded, the voltage limit in Paragraph 2.5.2, B.2.b., preceding, applies to the conductor-to-conductor voltage.
4. The total weighted rms voltage within the band from 10 Hz to 10,000 Hz shall not exceed 100 volts. The total weighted rms voltage is the square root of the sum of the products of the weighting factors for the individual frequency components times the square of the rms voltage of the individual frequency components. The weighting factors are as indicated:

<u>for frequencies between</u>	<u>weighting factor</u>
10 Hz and 100 Hz	$f^2/10^4$
1,000 Hz and 10,000 Hz	$f^{3.3}/10^{6.6}$

where f is the numerical value of the frequency, in Hertz, of the frequency component being weighted.

5. The total voltage within the frequency band from 10,000 Hz to 25,000 Hz shall not exceed 100 volts rms.

2.5.3 Connections of Equipment and Systems Subject to the Registration Program

All equipment that is registered may be connected at the IC's or End User's premises to Category I or III access services as specified in Paragraphs 2.5.3, B. and C., following.

A. Registration Program

The Registration Program was established by the FCC so that equipment could be registered in accordance with prescribed rules to demonstrate they will not cause harm to Telephone Company services.

If equipment is registered in accordance with the Registration Program, then it may be connected to those access services within the scope of the Registration Program without the requirement for protective circuitry. Equipment which was lawfully connected to a service without a Telephone Company-provided connecting arrangement as of certain dates is considered grandfathered. (See Paragraph 2.5.4, following.)

C. Conditions Governing the Connection of Registered Equipment--(Continued)

1. All combinations of registered equipment and associated nonregistered terminal equipment (including but not limited to wiring) are installed, operated and maintained so that the rules of the Registration Program are continually satisfied.

2. The following notification requirements are met:

Before connecting the registered equipment to a service, the IC or End User must furnish the following information to the Telephone Company:

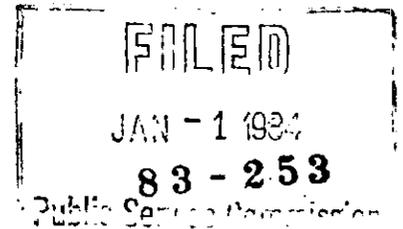

- Registration Number.
- Ringer Equivalence and the type of ringer.
- Type of Telephone Company--provided standard jack required for the connection.
- Access services to which the registered equipment will be connected.
- Information concerning the premises wiring associated with multiline terminating systems (when required).
- Off-Premises Station class (i.e., Type A, B or C port) for which the equipment is registered (when an off-premises station service is involved).
- Appropriate service facility interface information for a Category III access service.

3. The ringer equivalence of the equipment or system in combination with the total ringer equivalence of other equipment connected to the same access service does not exceed the allowable maximum of five or as otherwise determined by the Telephone Company.

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.5 Connections-(Continued)

2.5.5 Connections of Terminal Equipment or Multiline Terminating Systems to Category II Access Services

A. General

Category II access services are those services which are not covered by the Registration Program and are, therefore, not classified as Category I or Category III. Connections to Category II access services are set forth in Paragraphs 2.5.5, B. and C., following.

B. Connections to Category II Access Services

Registered and grandfathered equipment may be directly connected without Telephone Company-provided connecting arrangements to a Category II access service which is not arranged for connection to the telecommunications network. The connection in such cases shall be to the facility Interface.

1. The Telephone Company will equip Category II access services with the necessary arrangements on the IC or End User's premises to protect the telecommunications network from hazardous voltages and the harmful effects of longitudinal imbalance.
2. The Telephone Company will make the necessary arrangements in its central office to protect against signal power overload resulting from violations of the minimum protection criteria specified in Paragraph 2.5.2, preceding.
3. Where there is evidence equipment violates the specified minimum protection criteria, signal level protection may be provided by the Telephone Company on the IC's or End User's premises.
4. The regulations in 1., 2. and 3., preceding, apply to all access services except those placed in service on or after February 15, 1973, where the equipment applies ringing below 300 Hertz or the access services listed in Paragraph 2.5.5, C., following.

At this time, minimum protection criteria have not been specified for the following services due to the nature of the service and/or the type of channels and equipment used. However, the Telephone Company reserves the right to specify such criteria if required.

(RT)

- Voice Grade Secure Communications (Type I, II, III, IV)

(RT)

- Program Audio

(RT)

(RT)

- Wideband Secure Communications (Type I, II, III)

2.5.6 Connections of Access Service to Communications Systems Not Subject to the Registration Program

A. When an IC- or End User-provided communications system is connected to an access service that is arranged for connection to the telecommunications network, the connection may be made through:

1. A connecting arrangement provided by the Telephone Company, or
2. Registered or grandfathered terminal equipment, multiline terminating system or protective circuitry which either singularly or in combination assures that all the requirements of the Registration Program (including signal power) are met at the facility interface.

ACCESS SERVICES

2. GENERAL REGULATIONS--(Continued)

2.5 Connections--(Continued)

2.5.6 Connections of Access Service to Communications Systems Not Subject to the Registration Program--(Continued)

2. (Continued)

In lieu of these requirements for total hardware protection, an optional, alternative method, as set forth in Paragraph 2.5.8, following, is available for the control of signal power only.

B. Where the Access Service is arranged for connection to the common user switching equipment located in a Telephone Company central office, the connection must be:

- 1. through switching equipment, or
2. to a communications system that is arranged to promptly return the access service to an idle (on-hook) state should the communications system fail.

2.5.7 Connections Involving National Defense and Security

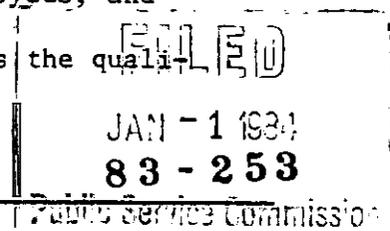

In certain cases involving national defense and security, the Registration Program permits the connection of nonregistered terminal equipment or multiline terminating systems to an access service, if the Secretary of Defense, the head of any other governmental department (having requisite FCC approval) or their authorized representative certifies in writing to the Telephone Company that:

- A. The connection is required in the interest of national defense and security;
B. The equipment to be connected either complies with the technical requirements of the Registration Program or will not cause harm to the telecommunications network or Telephone Company employees; and
C. The installation work is supervised by a person who meets the qualifications stated in the Registration Program.

2.5.8 Institutional Procedures for Control of Signal Power

A. Conditions

When an IC or End User elects to connect a communications system or test equipment to access service and the registered or grand-fathered equipment, through which the connection is made does not provide protection for control of signal power, the IC or End User is required to provide upon request, the proper documentation to demonstrate compliance with the following institutional procedures:

1. The operator/maintainer responsible for the establishment, maintenance and adjustment of the voice frequency signal power present at the access service interface must be trained to perform these functions by successfully completing one of the following:
 - a. a training course provided by the manufacturer of the equipment to control voice frequency signal power; or
 - b. a training course provided by the IC or End User authorized representative, who has responsibility for the entire communications system, multiplexer or test equipment, using training materials and instructions provided by the manufacturer of the equipment used to control the voice frequency signal power; or
 - c. an independent training course (e.g., trade school or technical institution) recognized by the manufacturer of the equipment used to control the voice frequency signal power; or
 - d. in lieu of the preceding training requirements, the operator/maintainer is under the control of a supervisor trained in accordance with Paragraphs 2.5.8, A.1.a. through c., preceding.

2. At least 10 days' advance notice must be given to the Telephone Company in the form of a notarized affidavit before the initial connection of the IC- or End User-provided ^{By communications system} or test equipment. A copy of the affidavit must also be maintained at the IC's or End User's office.

(Continued)

B. Extraordinary Procedures

1. The Telephone Company may invoke extraordinary procedures to protect the service where one or more of the following conditions are present:

- Information provided in the affidavit gives reason to believe that a violation of the Registration Program or the Institutional Procedures for Control of Signal Power is likely.
- Harm has occurred and there is reason to believe this harm was a result of operations performed under the Institutional Procedures for Control of Signal Power.

2. The extraordinary procedures, which can be invoked by the Telephone Company, include:

- Requiring the use of protective apparatus which either protects solely against signal power or which assures that all of the requirements of the Registration Program are met at the facility interface. This protective apparatus may be provided by the Telephone Company, the IC or End User.
- Disconnect Service.

3. A charge equal to the Maintenance of Service charge as set forth in Section 13, following, will apply when:

- It is necessary to send a repair person to the premises where the connection is made because a condition set forth in Paragraph 2.5.8, B.1., preceding, exists, and
- A failure to comply with the Registration Program or the Institutional Procedures for Control of Signal Power is disclosed.

2.5 Connections-(Continued)

2.5.9 Recording of Two-Way Telephone Conversations

Access Services are not represented as adapted to the recording of two-way telephone conversations. When voice recording equipment is used with access service, the IC will insure compliance with the following provisions.

A. Direct Electrical Connection

Voice recording equipment may be used to record two-way telephone conversations if a distinctive recorder tone is repeated at intervals of approximately 15 seconds. This distinctive recorder tone is required when the recording equipment is in use and is electrically connected with services of the Telephone Company. The distinctive recorder tone can be provided as part of (1) the recording equipment, (2) the IC- or End User-provided protective circuitry, or (3) a grandfathered connecting arrangement provided by the Telephone Company.

The IC- or End User-provided voice recording equipment must be arranged so that it can be switched on or off at will.

2. GENERAL REGULATIONS-(Continued)

2.5 Connections-(Continued)

2.5.10 Connection to a High Capacity (HC1) Facility-(Continued)

F. (Continued)

1. (Continued)

- The equipment or system meets the proposed technical requirements for connections to a HC1 service, facility or circuit. The technical requirements are those that have been proposed to the FCC for inclusion in the Rules by the FCC/Industry Ad Hoc Task Group on Digital Interfaces. (Copy available from the Federal Communications Commission, Room BB300, Washington, D.C. 20554.)
- The equipment or system complies with the requirements of the Bell System Technical Reference Publication 41451.

2. Subject to the final disposition of CC Docket No. 81-216 or RM 4087:

- Any equipment connected pursuant to this interim program may require modification;
- Terminal equipment and multiline terminating systems that are connected under the interim program may remain connected and be moved and reconnected for the life of the equipment.

3. The Telephone Company may invoke extraordinary procedures to protect an HC1 facility. The extraordinary procedures applied will be the same as those for connection of a communications system to an access service as set forth in 2.5.8, B., preceding.

4. The interim program will expire on adoption of final FCC Rules in RM 4087, unless sooner canceled or changed or extended.

2.5.11 Connection to Wideband Analog Access Service

A. Connections

Equipment may be directly connected to the interface of a Wideband Analog Access Service if the signals transmitted by such equipment and presented at the interface do not exceed the signal levels specified under the Minimum Protection Criteria Section in 2.5.11, B., following. If the signals transmitted exceed these signal levels, the Telephone Company will take action to protect its services.

2.6 Definitions

Certain terms used herein are defined as follows:

Access Code

(CT) Denotes a uniform five- or seven-digit code assigned by the Telephone Company to an individual IC. The seven-digit codes have the form 101XXXX or 950-XXXX.

Access Customer Name Abbreviation (ACNA)

A three alpha character code that identifies the customers to which the Access Service bill is rendered.

Access Minutes

Denotes the usage of exchange facilities in intrastate service for the purpose of calculating chargeable usage. On the originating end of an intrastate call, usage is measured from the time the originating End User's call is delivered by the Telephone Company and acknowledged as received by the IC's facilities connected with the originating exchange. On the terminating end of an intrastate call, usage is measured from the time the call is received by the End User in the terminating exchange. Timing of usage at both originating and terminating end of an intrastate call shall terminate when the calling or called party disconnects, whichever event is recognized first in the originating and terminating end exchanges, as applicable.

Access Tandem

Denotes a Telephone Company switching system that provides a concentration and distribution function for originating or terminating traffic between end offices and an IC terminal location.

Access Tandem Network

Denotes the network of trunk groups for originating and/or terminating Switched Access traffic between a single access tandem and the Telephone Company end offices subtending the tandem.

Actual Cost

Denotes all costs charged against a specific case of special construction, including any appropriate taxes.

(MT)

2. GENERAL REGULATIONS-(Continued)

2.6 Definitions-(Continued)

Alternate Billing Service

Denotes a term for a service that provides the end users the ability to bill calls to an account not necessarily associated with the originating line

Annual Underutilization Liability

Denotes a per unit amount which may be billed annually if fewer services are in use utilizing specially constructed facilities at filed tariff rates than were originally specially constructed.

(AT)

Answer Message

Denotes an SS7 message sent in the backward direction to indicate that the call has been answered.

(AT)

Answer/Disconnect Supervision

Denotes the transmission of the switch trunk equipment supervisory signal (off-hook or on-hook) to the customer's point of termination as an indication that the called party has answered or disconnected.

Area of Service (AOS)

Denotes the geographical area from which an 800 subscriber can receive calls dialed to the subscriber's 800 number.

Assumed Average Access Minutes

Denotes the usage that will be billed each month to IC's for FGA, FGB, BSA-A or BSA-B access arrangements served from Telephone Company serving end offices where actual recorded minutes of use are not available.

OCT 04 1993

Certain terms used herein are defined as follows:

MISSOURI
Public Service Commission

Access Code

Denotes a uniform five- or seven-digit code assigned by the Telephone Company to an individual IC. The five-digit code has the form 10XXX, and the seven-digit code has the form 950-XXXX.

(CT)

CANCELLED

Access Customer Name Abbreviation (ACNA)

A three alpha character code that identifies the customers to whom the Access Service bill is rendered.

APR 7 1994
BY 5th R.S. #57
Public Service Commission
MISSOURI

Access Minutes

Denotes the usage of exchange facilities in intrastate service for the purpose of calculating chargeable usage. On the originating end of an intrastate call, usage is measured from the time the originating End User's call is delivered by the Telephone Company and acknowledged as received by the IC's facilities connected with the originating exchange. On the terminating end of an intrastate call, usage is measured from the time the call is received by the End User in the terminating exchange. Timing of usage at both originating and terminating end of an intrastate call shall terminate when the calling or called party disconnects, whichever event is recognized first in the originating and terminating end exchanges, as applicable.

Access Tandem

Denotes a Telephone Company switching system that provides a concentration and distribution function for originating or terminating traffic between end offices and an IC terminal location.

Access Tandem Network

Denotes the network of trunk groups for originating and/or terminating Switched Access traffic between a single access tandem and the Telephone Company end offices subtending the tandem.

Actual Cost

Denotes all costs charged against a specific case of special construction, including any appropriate taxes.

Public Service Commission

Access Code

Denotes a uniform four- or seven-digit code assigned by the Telephone Company to an individual IC. The four-digit code has the form 10XX, and the seven-digit code has the form 950-10XX.

Access Minutes

Denotes the usage of exchange facilities in intrastate service for the purpose of calculating chargeable usage. On the originating end of an intrastate call, usage is measured from the time the originating End User's call is delivered by the Telephone Company and acknowledged as received by the IC's facilities connected with the originating exchange. On the terminating end of an intrastate call, usage is measured from the time the call is received by the End User in the terminating exchange. Timing of usage at both originating and terminating end of an intrastate call shall terminate when the calling or called party disconnects, whichever event is recognized first in the originating and terminating end exchanges, as applicable. Those two times are measured by the receipt of a signal known as answer/disconnect supervision.

Access Tandem

Denotes a Telephone Company switching system that provides a concentration and distribution function for traffic originating from or terminating to an end office serving an IC terminal location.

Acceptance (Cooperative) Tests

Denotes those nonchargeable tests which are performed by the Telephone Company in cooperation with the IC at the IC's request at the time the service is installed.

Answer/Disconnect Supervision

Denotes the transmission of a switch-trunk equipment supervisory signal (off-hook or on-hook) to the IC facility interface for terminating calls to the exchange as an indication that the called party has answered or disconnected.

Business Day

Denotes the times of day that a company is open for business. Generally, in the business community, these are 8:00 or 9:00 a.m. to 5:00 or 6:00 p.m., respectively, with an hour for lunch, Monday through Friday, resulting in a standard forty (40) hour work week. However, Business Day hours for the Telephone Company may vary based on company policy, union contract and location. To determine such hours the Telephone Company should be contacted.

Busy Hour Minutes of Capacity (BHMC)

Denotes the customer specified maximum amount of Switched Access Service and/or Directory Assistance Service access minutes the customer expects to be handled in an end office switch during any hour in an 8:00 a.m. to 11:00 p.m. period for the Feature Group, Basic Serving Arrangement or Directory Assistance Service ordered. This customer furnished BHMC quantity is the input data the Telephone Company uses to determine the number of transmission paths for the Feature Group, Basic Serving Arrangement or Directory Assistance Service ordered.

Carrier Identification Code (CIC)

Denotes a numeric code that is assigned by Bellcore to long distance carriers for the provisioning of Feature Group B and/or D trunk side Access Service. The numeric code uniquely identifies the carrier.

Carrier or Common Carrier

Denotes any individual, partnership, associations, joint-stock company, trust or corporation engaged for hire in intrastate, interstate or foreign communication by wire or radio.

(AT) Carrier Identification Code Parameter (CIP)

Denotes the transmission of the Carrier Identification Code (CIC) to the customer within the Initial

(AT) Address Message (IAM) of an originating FGD or BSA-D call.

CCS

Denotes a hundred call seconds, which is a standard unit of traffic load that is equal to 100 seconds of usage or capacity of a group of servers (e.g., trunks).

Central Office

Denotes a local Telephone Company switching system where Telephone Exchange Service customer station loops are terminated for purposes of interconnection to each other and to trunks.

Central Office Prefix

Denotes the first three digits (NXX) of the seven-digit telephone number assigned to an End User's Telephone Exchange Service when dialed on a local basis.

Centralized Automatic Reporting on Trunks (CAROT) Testing

Denotes a type of testing which includes the capacity for measuring operational and transmission parameters.

Channel(s)

Denotes an electrical or photonic, in the case of fiber optic based transmission systems, communications path between two or more points of termination or, for DNAL BSAs, between a point of termination and a Telephone Company switch.

Channelize

Denotes the process of multiplexing-demultiplexing wider bandwidth or higher speed channels into narrower bandwidth or lower speed channels.

Channel Service Unit

Denotes equipment which performs one or more of the following functions: termination of a digital facility, regeneration of digital signals, detection and/or correction of signal format errors, and remote loop back.

(AT) Clear Channel Capability

(AT) Denotes the utilization of increased usable bandwidth per facility.

C-Message Noise

Denotes the frequency weighted average noise within an idle voice channel. The frequency weighting, called C-message, is used to simulate the frequency characteristic of the 500-type telephone set and the hearing of the average subscriber.

C-Notched Noise

Denotes the C-message frequency weighted noise on a voice channel with a holding tone, which is removed at the measuring end through a notch (very narrow band) filter.

MISSOURI
Public Service Commission

Coin Station

Denotes a location where Telephone Company equipment is provided in a public or semi-public place where Telephone Company customers can originate telephonic communications and pay the applicable charges by inserting coins into the equipment.

Common Channel Signaling (CCS)

Denotes a high speed packet switched communications network which is separate (out of band) from the public packet switched and message networks. Its purpose is to carry addressed signaling messages for individual trunk circuits and/or data base related services between Signaling Points in the CCS network.

Common Line

Denotes a line, trunk, pay telephone line or other facility provided under the General and/or Local Exchange Service Tariffs of the Telephone Company, terminated on a central office switch and which may be used to make and receive exchange service calls, intrastate message service calls or interstate message service calls no matter if the customer causes the line, trunk or facility to be arranged to prohibit any type of calls to be made or received. A common line-residence is a line or trunk provided under the residence regulations of the General and/or Local Exchange Service Tariffs. A common line business is a line provided under the business regulations of the General and/or Local Exchange Service Tariffs.

Communications System

Denotes channels and other facilities which are capable, when not connected to the Telecommunications Network, of two-way communications between customer-provided terminal equipment.

Connecting Facility Assignment (CFA)

A code that identifies the Exchange Company carrier system and channel to be used from a Wide Band Analog or a High Capacity Facility.

Demarcation Point

Denotes the point (referred to as a Demarc Point or Network Interface) of interconnection between the Telephone Company's facilities and the wiring at the subscriber's premises. The Demarc Point shall consist of wire or a jack conforming to Subpart F of Part 68 of the Federal Communications Commission's Rules and Regulations. The Demarc Point will generally be within twelve inches of the protector or, absent a protector within twelve inches of the entry point to the customer's premises. If conforming to the twelve inches is unrealistic or technically impossible, the Demarc Point will be the most practical minimum point of entry to the customer's premises.

The network interface may be located at a point other than the normal demarcation point where the network interface is already established by the presence of network equipment with the effective date of this tariff. For multiunit structures (e.g., apartments, college campuses, shopping centers) the structure owner shall make the final decision on whether the structure shall be treated as a multipremise structure with one demarcation point per premise or, as a single premise with one demarcation point for the entire structure. The structure owner shall have the option of having the demarcation point placed at a location other than that determined by the Telephone Company provided the structure owner pays any additional construction costs and such location is consistent with the minimum point of entry standard.

Decibel Reference Noise C-Message Referenced to 0

Denotes noise power in "Decibel Reference Noise C-Message Weighting" referred to or measured at a zero transmission level point.

Detail Billing

Denotes the listing of each message and/or rate element for which charges to an IC or End User are due on a bill prepared by the Telephone Company.

Directory Assistance

Denotes the provision of access to a Directory Assistance location and a Telephone Company Directory Assistance operator.

(AT) Directory Assistance Location

The term Directory Assistance Location denotes a Telephone Company office where Telephone Company equipment first receives the Directory Assistance call from a customer's end user and selects the first operator position to respond to the Directory Assistance call.

Dual Tone Multifrequency Address Signaling

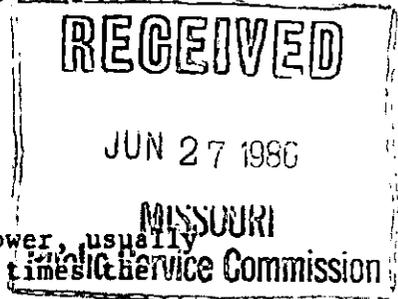

(CT) Denotes a type of signaling that is an optional feature of Switched Access Feature Group A. It may be utilized when Feature Group A is being used in the terminating direction (from the point of termination with the IC to the local exchange end office). An office arranged for Dual Tone Multifrequency Signaling would expect to receive address signals from the IC in the form of Dual Tone Multifrequency signals.

Echo Control

Denotes the control of reflected signals in a telephone transmission path.

Echo Path Loss (EPL)

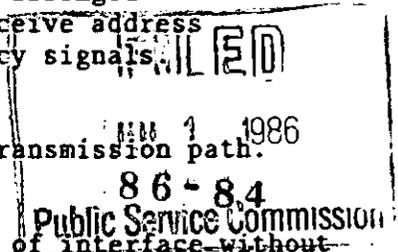

Denotes the measure of reflected signal at a 4-wire point of interface without regard to the send and receive Transmission Level Point (TLP).

3rd Revised Sheet 63
Replacing 2nd Revised Sheet 63

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.6 Definitions-(Continued)

Echo Return Loss (ERL)

Denotes a frequency weighted measure of return loss over the middle of the voiceband (approximately 500 to 2500 Hz), where talker echo is most annoying.

Effective 2-Wire

Denotes a condition which permits the simultaneous transmission in both directions over a channel, but it is not possible to insure independent information transmission in both directions. Effective 2-wire channels may be terminated with 2-wire or 4-wire interfaces.

Effective 4-Wire

Denotes a condition which permits the simultaneous independent transmission of information in both directions over a channel. The method of implementing effective 4-wire transmission is at the discretion of the Telephone Company (physical, time domain, frequency-domain separation or echo cancellation techniques). Effective 4-wire channels may be terminated with a 2-wire interface at the customer premises. However, when terminated on a 2-wire facility, simultaneous independent transmission cannot be supported because the two wire interface combines the transmission paths into a single path.

End Office Switch

Denotes a local Telephone Company switching system where Telephone Exchange Service customer station loops are terminated for purposes of interconnection to each other and to trunks. Included are Remote Switching Modules (RSM) and Remote Switching Systems (RSS) served by a host office in a different wire center.

End User

Denotes a user of the Telephone Company's local or general exchange services or, of a customer's services, unless it is explicitly set forth elsewhere in this Tariff that an end user may be considered an Access Service customer.

Denotes a frequency weighted measure of return loss over the middle portion of the voiceband (approximately 500 to 2500 Hz), where talker echo is most annoying.

Effective 2-Wire

Denotes a condition which permits the simultaneous transmission in both directions over a channel, but it is not possible to insure independent information transmission in both directions. Effective 2-wire channels may be terminated with 2-wire or 4-wire interfaces.

Effective 4-Wire

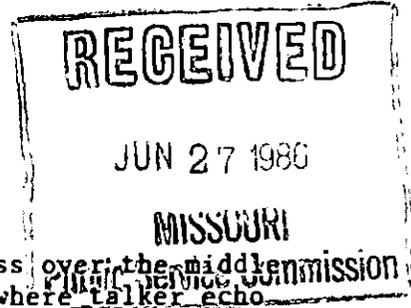

(CT) Denotes a condition which permits the simultaneous independent transmission of information in both directions over a channel. The method of implementing effective 4-wire transmission is at the discretion of the Telephone Company (physical, time domain, frequency-domain separation or echo cancellation techniques). Effective 4-wire channels may be terminated with a 2-wire interface at the customer premises. However, when terminated 2-wire, simultaneous independent transmission cannot be supported because the two wire interface combines the transmission paths into a single path.

End Office Switch

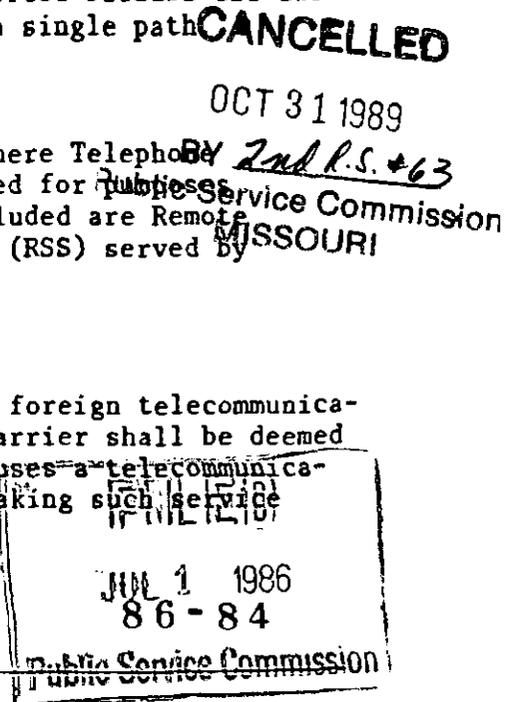

Denotes a local Telephone Company switching system where Telephone Exchange Service customer station loops are terminated for purposes of interconnection to each other and to trunks. Included are Remote Switching Modules (RSM) and Remote Switching Systems (RSS) served by a host office in a different wire center.

End User

(CT) Denotes any customer of an intrastate, interstate or foreign telecommunications service that is not a carrier, except that a carrier shall be deemed to be an "end user" to the extent that such carrier uses a telecommunications service for administrative purposes, without making such service available to others, directly or indirectly.

Echo Return Loss (ERL)

Denotes a frequency weighted measure of return loss over the middle of the voiceband (approximately 500 to 2500 Hz), where talker echo is most annoying.

Effective 2-Wire

Denotes a condition which permits the simultaneous transmission in both directions over a channel, but it is not possible to insure independent information transmission in both directions. Effective 2-wire channels may be terminated with 2-wire or 4-wire interfaces.

Effective 4-Wire

Denotes a condition which permits the simultaneous independent transmission of information in both directions over a channel. The method of implementing effective 4-wire transmission is at the discretion of the Telephone Company (physical, time domain, frequency-domain separation or echo cancellation techniques). Effective 4-wire channels may be terminated with a 2-wire interface at the End User's premises or central office, but not at the IC facility interface. However, when terminated 2-wire, simultaneous independent transmission cannot be supported.

End Office Switch

Denotes a local Telephone Company switching system where Telephone Exchange Service customer station loops are terminated for purposes of interconnection to each other and to trunks. Included are Remote Switching Modules (RSM) and Remote Switching Systems (RSS) served by a host office in a different wire center.

End User

Denotes any individual, partnership, association, corporation, governmental agency or any other entity which (A) obtains a common line, a pay telephone or obtains intrastate service arrangements in the operating territory of the Telephone Company, or (B) subscribes to intrastate service(s) provided by an IC or uses the services of the IC when IC provides intrastate service(s) for its own use.

Entry Switch

See First Point of Switching

Envelope Delay Distortion (EDD)

Denotes a measure of the linearity of the phase versus frequency of a channel.

Equal Level Echo Path Loss (ELEPL)

Denotes the measure of Echo Path Loss (EPL) at a four-wire interface which is corrected by the difference between the send and receive Transmission Level Point (TLP).

$$[ELEPL = EPL - TLP (\text{send}) + TLP (\text{receive})]$$

Equalized

Denotes a procedure which provides for the component frequencies of the material transmitted having about the same relationship at the two ends of the channel.

Estimated Cost

Denotes all estimated costs that will be incurred in providing a specific case of special construction, including any appropriate taxes.

Exchange

Denotes a unit generally smaller than a Local Access and Transport Area, established by the Telephone Company for the administration of communications service in a specified area which usually embraces a city, town or village and its environs. It consists of one or more central offices together with the associated facilities used in furnishing communications service within that area. One or more designated exchanges comprises a given Local Access and Transport Area.

(AT) Exchange Company Signaling Point Code (ECSPC)

(AT) Denotes a code that identifies the Telephone Company's signaling point in the CCS network.

MISSOURI

Intermodulation Distortion

Denotes a measure of the nonlinearity of a channel. It is measured using four tones, and evaluating the ratios (in dBs) of the transmitted composite four-tone signal power to the second-order products of the tones (R2), and the third-order products of the tones (R3).

Interexchange Carrier (IXC)

Denotes any individual, partnership, association, joint stock company, trust, governmental entity or corporation or other entity that has obtained a Certificate of Public Convenience and Necessity or of Service Authority from the Missouri Public Service Commission to engage for hire in (AT) intrastate communication by wire or radio between two or more exchanges.

Impulse Noise

Denotes any momentary occurrence of the noise on a channel over a specified level threshold. It is evaluated by counting the number of occurrences which exceed the threshold.

Individual Case Basis (ICB)

Denotes a condition in which the regulations, if applicable, rates and charges for an offering under the provisions of this Tariff are developed based on the circumstances in each case.

CANCELLED

Inserted Connection Loss (ICL)

Denotes the 1004 Hz power difference (in dBs) between the maximum power available at the originating end and the actual power at the terminating end through the inserted connection.

Maximum Termination Liability

Denotes the maximum amount which may be billed if all services using especially constructed facilities are terminated prior to the expiration of the Maximum Termination Liability Period.

Maximum Termination Liability Period

Denotes the length of time for which a termination charge may apply if all services using specially constructed facilities are terminated. The liability period is equal to the average account life of the specially constructed facilities. When construction involves multiple classes of plant with differing lives, the liability period is equal to the weighted average of the account lives involved in the special construction case, using nonrecoverable investment as the basis for weighting.

Media Stimulated Mass Calling Events

Denotes the use of Switched Access Service for calls placed to 800, 900, POTS, etc. telephone numbers in response to television and radio advertising for which a substantial call volume is anticipated during a short period of time. Media stimulated mass calling is highly peaked and often used in conjunction with call counting services for public opinion polls, marketing surveys, entertainment, etc.

Message

Denotes a "call" as defined preceding.

Milliwatt (102-Type) Test Line

Denotes an arrangement in an end office which provides a 1004 Hz tone at 0 dBm0 for one-way transmission measurements towards the IC terminal location from the Telephone Company end office.

(AT) National Security Emergency Preparedness (NSEP) Telecommunications Service

Those services used to maintain a state of readiness or to respond to and manage any event or crisis, i.e., local, national or international, which causes or could cause injury or harm to the population, damage to or loss of property, or degrades or threatens the National Security Emergency Preparedness posture of the United States.

Net Salvage

Denotes the estimated scrap, sale, or trade-in value, less the estimated cost of removal. Cost of removal includes the costs of demolishing, tearing down, or otherwise disposing of the material and any other applicable costs. Since the cost of removal may exceed salvage value, net salvage may be negative.

Section 2
1st Revised Sheet 68
Replacing Original Sheet 68

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.6 Definitions-(Continued)

Loss Deviation

Denotes the variation of the actual loss from the designed value.

Maximum Termination Liability

Denotes the maximum amount which may be billed if all services using specially constructed facilities are terminated prior to the expiration of the Maximum Termination Liability Period.

(AT) Maximum Termination Liability Period

Denotes the length of time for which a termination charge may apply if all services using specially constructed facilities are terminated. The liability period is equal to the average account life of the specially constructed facilities. When construction involves multiple classes of plant with differing lives, the liability period is equal to the weighted average of the account lives involved in the special construction case, using nonrecoverable investment as the basis for weighting.

Message

Denotes a "call" as defined preceding.

Milliwatt (102-Type) Test Line

Denotes an arrangement in an end office which provides a 1004 Hz tone at 0 dBm0 for one-way transmission measurements towards the IC terminal location from the Telephone Company end office.

(T) Net Salvage

Denotes the estimated scrap, sale, or trade-in value, less the estimated cost of removal. Cost of removal includes the costs of demolishing, tearing down, or otherwise disposing of the material and any other applicable costs. Since the cost of removal may exceed salvage value, net salvage may be negative.

Since the cost of removal may exceed salvage value, net salvage may be negative.

(AT) Network Interface

(AT) See Demarcation Point

Network Control Signaling

Denotes the transmission of signals used in the telecommunications system which perform functions such as supervision (control, status and charge signals), address signaling (e.g., dialing), calling and called number identifications, rate of flow, service selection error control and audible tone signals (call progress signals indicating reorder or busy conditions, alerting, coin denominations, coin collect and coin return tones) to control the operation of the telecommunications system.

Nonrecoverable Cost

Denotes the cost of specially constructed facilities for which the Telephone Company has no foreseeable use should the service be terminated.

Nonsynchronous Test Line

Denotes an arrangement in step-by-step end office which provide operational tests which are not as complete as those provided by the synchronous test lines, but can be made more rapidly.

Normal Construction

Denotes all facilities the Telephone Company would normally use to provide service in the absence of a request for special construction.

Normal Cost

Denotes the estimated cost to provide services using normal construction.

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.6 Definitions-(Continued)

Query

Denotes a request for specific information generated by a computer processor and sent to an application, i.e., a data base, with a predefined set of possible responses.

Recoverable Cost

Denotes the cost of the specially constructed facilities for which the Telephone Company has a foreseeable reuse, either in place or elsewhere, should the service be terminated.

Registered Equipment

Denotes the IC's or the IC's Customer's Premises Equipment (CPE) which complies with and has been approved within the Registration Provisions of the FCC's Rules and Regulations.

(AT) Release Message

(AT) Denotes an SS7 message sent in either direction to indicate that a specific circuit is being released.

Remote Switching Modules (RSM) and/or Remote Switching Systems (RSS)

Denotes small, remotely controlled electronic end office switches which obtain their call processing capability from an electronic switching system-type Host Office. The RSM/RSS cannot accommodate direct trunks to an IC.

Reseller

Denotes any individual, partnership, association, joint-stock company, trust or corporation engaged for hire to provide intrastate, interstate and/or foreign communications by means of reselling services of other carriers.

Response

Denotes one Response from a set of predefined possible responses to a request for information contained in a query from a computer processor.

Return Loss

Denotes a measure of the similarity between the two impedances at the junction of two transmission paths. The higher the return loss, the higher the similarity.

ACCESS SERVICES

2. GENERAL REGULATIONS-(Continued)

2.6 Definitions-(Continued)

Shortage of Facilities or Equipment

Denotes a condition which occurs when the Telephone Company does not have appropriate cable, switching capacity, bridging or multiplexing equipment, etc., necessary to provide the Access Service requested by the customer.

Short Circuit Test Line

Denotes an arrangement in an end office which provides for an ac short circuit termination of a trunk or line by means of a capacitor of at least four microfarads.

Signal-to-C-Notched Noise Ratio

Denotes the ratio in dB of a test signal to the corresponding C-Notched Noise.

Signaling Link (SL)

Denotes a specialized digital data link that provides interconnection/ signaling paths between the various signal and processing nodes of the Common Channel Signaling network. Signaling Links may be routed directly between signaling points or indirectly via a Signal Transfer Point (STP).

Signaling Link Code (SLC)

Denotes a code that identifies a signaling link within the Common Channel Signaling/Signaling System 7 (CS/SS7) link set.

Signaling Point (SP)

Denotes a node in the Common Channel Signaling network that originates and/or receives signaling messages.

Signaling System 7 (SS7)

Denotes the signaling protocol version 7 used in the Common Channel Signaling network based on the American National Standards Institute (ANSI) standards.

Signaling Transfer Point (STP)

Denotes a packet switch in the Common Channel Signaling network that is used to route signaling messages between signaling nodes. STPs also transfer signaling messages to other CCS networks.

Section 2

ACCESS SERVICES

2. GENERAL REGULATIONS--(Continued)

2.7 Mileage Measurement

The rate mileage for local, special and directory transport is the air line distance measured between two serving wire centers. The two serving wire centers may be:

- The IC serving wire center and the End User's serving wire center
- The IC serving wire center and a HUB serving wire center
- The IC serving wire center and a bridging serving wire center
- A HUB serving wire center and an End User's serving wire center
- A bridging serving wire center and an End User's serving wire center, or
- Two IC serving wire centers.

Each serving wire center has a unique set of vertical and horizontal (V & H) coordinates. These coordinates are used for calculating the air line distance between the two serving wire centers.

2.7.1 Mileage Calculation

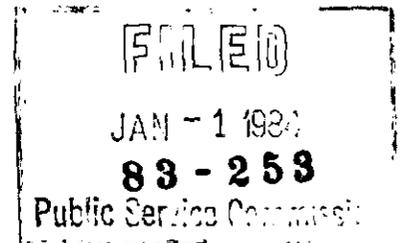

Mileage is calculated as follows:

- A. Using the area code (NPA) and the first three digits of the local exchange telephone number (NXX) of each serving wire center, look up the V & H coordinates of the associated serving wire center.
- B. Obtain the difference between the V coordinates. Then obtain the difference between the H coordinates. (The difference is always obtained by subtracting the smaller from the larger).
- C. Square the differences.

ACCESS SERVICES

3. CARRIER COMMON LINE ACCESS SERVICE

The Telephone Company will provide Carrier Common Line Access Service (Carrier Common Line Access) to ICs in conjunction with line side and trunk side Switched Access Service.

3.1 General Description

Carrier Common Line Access provides for the use of Telephone Company common lines by ICs for access to End Users to furnish IC intrastate telecommunications service.

Carrier Common Line Access is provided where the IC obtains Telephone Company line side or trunk side Switched Access Service under this Tariff.

Premium Access is Switched Access Service other than the DNAL BSA provided to IC's under this Tariff which furnish intrastate MTS/WATS.

Nonpremium Access is Switched Access Service other than the DNAL BSA provided to IC's under this Tariff that do not furnish intrastate MTS/WATS. FGA, FGB, BSA-A and BSA-B are not offered for use in terminating FGC or BSA-C originating communications.

3.2 Limitations

- A. A telephone number is not provided with Carrier Common Line Access.
- B. Detail billing is not provided for Carrier Common Line Access.
- C. Directory listings are not included in the rates and charges for Carrier Common Line Access.
- D. Intercept arrangements are not included in the rates and charges for Carrier Common Line Access.
- E. All trunk side connections provided in the same combined access group or BSA will be limited to the same features and operating characteristics.
- F. All line side connections provided in the same combined access group or BSA will be limited to the same features and operating characteristics.
- G. WATS Access Line Service minutes switched at Telephone Company WATS Serving Offices (i.e., originating minutes for outward WATS and WATS-type services and terminating minutes for inward WATS and WATS-type services) shall not be assessed Carrier Common Line Access per minute charges.
- H. Minutes of use associated with the closed end of WATS/800 service are not subject to Carrier Common Line charges. However, when common lines are utilized for the termination of 800 NPAS, Carrier Common Line charges are applicable.

3.3 Undertaking of the Telephone Company

- (MT) A. Where the IC is provided with Switched Access Service, under other sections of this Tariff, the Telephone Company will provide the use of Telephone Company common lines by an IC for access to End Users at rates and charges as specified in Paragraph 3.8, following.
- (CP) B. Where the customer is reselling intrastate MTS/WATS, MTS-type and/or WATS-type service(s), the customer may, at the option of the customer, employ ordinary local business exchange service at generally applicable local business exchange rates under the Telephone Company General and/or Local Exchange Tariffs. Switched Access or Carrier Common Line Access charges under this Tariff will not apply for such access except as set forth in Section 6.7, and Paragraph 3.7, D., following, provided the underlying carrier that provides the MTS/WATS and/or MTS/WATS-type service(s) which are resold pays Switched Access Services charges including Carrier Common Line Access charges for the services which are resold. Such Switched Access Service and Carrier Common Line Access charges paid shall include charges for origination and termination of calls on both ends of the services which are resold. If the customer wishes to obtain special arrangements such as trunk side service connections for such resale, the customer may, at the option of the customer, obtain Switched Access Service under this Tariff as set forth in Section 6, following. Carrier Common Line Access charges will apply for such access as set forth in Paragraph 3.7, D., following.
- (CT) C. When access to the local exchange is required to provide an MTS/WATS-type service using a resold Private Line Service, Switched Access Service Rates and Regulations, as set forth in Section 6, following, will apply. Carrier Common Line Access rates and charges as set forth in paragraph 3.8, following, apply in accordance with the regulations as set forth in Paragraph 3.7, F., following.
- (CT) D. Where a multiline hunt group or trunk group arrangement is made up of (1) Feature Group A, B or D Switched Access Service and (2) local exchange business lines or other access arrangements associated with MTS/WATS, MTS-type or WATS-type services as provided in Paragraph 3.3, B., preceding, Carrier Common Line Access Charges for such combined access arrangements are calculated in accordance with the regulations in Paragraph 3.7, D., following.

ACCESS SERVICES

3. CARRIER COMMON LINE ACCESS SERVICE-(Continued)

3.3 Undertaking of the Telephone Company-(Continued)

- B. Where the IC is solely reselling MTS/WATS or MTS-type services, the Telephone Company, when the IC orders line side switched access, will not provide Switched Access Service under this Tariff, but will provide switched access such as local business exchange service under the Telephone Company's General and/or Local Exchange Service Tariffs for the locations involved. Carrier Common Line Access Charges will not apply for such access.
- C. Where the IC is (1) reselling Private Line Service of another IC to provide MTS/WATS-type service or reselling WATS-type service or reselling WATS-type services of an IC and (2) the Telephone Company provides a Special Access Service, other than Dedicated Access Line Service, for the resold service terminated at the IC terminal location, the Telephone Company will, when the IC offering the resale service orders any switched access, provide Special Access Service as set forth in Section 7, Paragraph 7.4.2, B., following, Switched Access Service as set forth in Section 6, following. Carrier Common Line Access rates and charges as set forth in Paragraph 3.8, following, apply in accordance with the regulations as set forth in Paragraph 3.7., G., following.
- D. When the IC plans to use Switched Access Service (line side and/or trunk side) provided as set forth in Paragraph 6.7.3, following, in association with the resale of an IC service that is provided through the use of Dedicated Access Line Service provided under this Tariff (i.e., resale of WATS), the Carrier Common Line Access rates and charges as set forth in Paragraph 3.8, following, apply in accordance with the regulations as set forth in Paragraph 3.7, D., following.
- E. The Switched Access Service provided by the Telephone Company includes the Switched Access Service provided for both interstate and intrastate communications and the Carrier Common Line Access rates and charges as set forth in Paragraph 3.8, following, apply in accordance with the regulations as set forth in Paragraph 3.7, F., following.
- F. When the IC is provided Operator Trunk-Coin or Combined Coin and Non-Coin or Operator Trunk-Full Feature Optional Features for sent-paid pay telephone access as set forth in Section 6, following, the Telephone Company will collect sent-paid monies from pay-telephone stations and will remit monies to the IC as set forth in Paragraph 3.6, following. The Telephone Company will provide the message call detail format and bill periods used to determine the monies upon request from the IC.

ACCESS SERVICES

3. CARRIER COMMON LINE ACCESS SERVICE-(Continued)

3.4 Obligations of the IC

A. The Switched Access Service associated with Carrier Common Line access shall be ordered by the IC under other sections of this Tariff.

B. The IC facilities at the IC terminal location shall provide the necessary on-hook and off-hook supervision.

(AT) C. Unless the IC reports interstate use as set forth in Paragraph 3.4, D., following, or FGA, FGB,
(AT) FGD, BSA-A, BSA-B or BSA-D, Switched Access Service as set forth in Paragraph 3.4, F., following, all Switched Access Service provided under this Tariff ordered by the IC will be subject to Carrier Common Line Access charges.

D. When the IC reports interstate and intrastate use of Switched Access Service, the associated Carrier Common Line Access used by the IC for intrastate will be determined as set forth in Paragraph 3.7, following.

(AT) E. Where FGC or BSA-C end office switching is provided without Telephone Company recording
(AT) and the IC records minutes of use which will be used to determine Carrier Common Line Access Charges (i.e., FGC or BSA-C operator and TSPS calls such as pay telephone sent-paid, operator-DDD, operator-person, collect, credit-card, third-number and/or other like calls), the IC shall furnish such minutes of use detail to the Telephone Company in a timely manner. If the IC does not furnish the data to the Telephone Company, the IC shall identify all Switched Access Services which could carry such calls in order for the Telephone Company to accumulate the minutes of use through the use of special Telephone Company measuring and recording equipment.

3.5 Payment Arrangements

- A. The Telephone Company will bill the Carrier Common Line Access. The bill day (i.e., the billing date of the bill) in a month for each IC account will be established by the Telephone Company. Payment is due from the IC 31 days after the bill day date (payment date) or by the next bill date (i.e., same date in the following month as the bill date), whichever is the shortest interval, and is payable in immediately available funds. If such payment date is a Saturday, Sunday or holiday (i.e., New Year's Day, Independence Day, Labor Day, Thanksgiving Day, Christmas Day, the second Tuesday in November, and a day when Washington's Birthday, Memorial Day or Veteran's Day is legally observed), payment will be due from the IC as follows: If the payment date falls on a Saturday, Sunday or on a holiday which is observed on a Monday, the payment date shall be the first non-holiday day following such Saturday, Sunday or holiday.
- B. Further, if any portion of the Carrier Common Line Access payment is received by the Telephone Company after the payment date as set forth in Paragraph 3.5, A., preceding, or if any portion of the Carrier Common Line Access payment is received by the Telephone Company in funds which are not immediately available to the Telephone Company, then a late-payment penalty shall be due to the Telephone Company. The late-payment penalty shall be the portion of the Carrier Common Line Access payment not received by the payment date times a late factor. The late factor shall be the lesser of:
 - 1. The highest interest rate (in decimal value) which may be levied by law for commercial transactions, compounded daily for the number of days from the payment date to and including the date that the IC actually makes the payment to the Telephone Company, or
 - 2. 0.000590 per day, compounded daily for the number of days from the payment date to and including the date that the IC actually makes the payment to the Telephone Company.
- C. In the event a billing dispute concerning a month's Carrier Common Line Access billed to the IC by the Telephone Company is resolved in favor of the Telephone Company, any payments withheld pending settlement of the dispute shall be subject to the late-payment penalty set forth in Paragraph 3.5, B., preceding. If the customer disputes the bill on or before the payment date, and pays the undisputed amount on or before

A. The Telephone Company will bill the Carrier Common Line Access Service the bill day (i.e., the billing date of the bill) in a month for each IC account. The bill will be established by the Telephone Company. Payment is due from the IC 31 days after the bill day date (payment date) or by the next bill date (i.e., same date in the following month as the bill date), whichever is the shortest interval, and is payable in immediately available funds. If such payment date is a Saturday, Sunday or holiday (i.e., New Year's Day, Independence Day, Labor Day, Thanksgiving Day, Christmas Day, the second Tuesday in November, and a day when Washington's Birthday, Memorial Day or Veteran's Day is legally observed), payment will be due from the IC as follows: If the payment date falls on a Saturday, Sunday or on a holiday which is observed on a Monday, the payment date shall be the first non-holiday day following such Saturday, Sunday or holiday.

(MT) B. Further, if any portion of the Carrier Common Line Access payment is received by the Telephone Company after the payment date as set forth in Paragraph 3.5, A., preceding, or if any portion of the Carrier Common Line Access payment is received by the Telephone Company in funds which are not immediately available to the Telephone Company, then a late-payment penalty shall be due to the Telephone Company. The late-payment penalty shall be the portion of the Carrier Common Line Access payment not received by the payment date times a late factor. The late factor shall be the lesser of:

1. The highest interest rate (in decimal value) which may be levied by law for commercial transactions, compounded daily for the number of days from the payment date to and including the date that the IC actually makes the payment to the Telephone Company, or
2. 0.000657 per day, compounded daily for the number of days from the payment date to and including the date that the IC actually makes the payment to the Telephone Company.

this paragraph and Paragraphs 3.4, D., F. and G., preceding, and Paragraph 6.7.3, following, the adjustments and rates as set forth in Paragraphs 3.7, D., E. and F., following, shall not apply until the deficiencies are corrected and new reports as set forth in Paragraphs 3.4, D., F. and G., preceding, and Paragraph 6.7.3, following are delivered to the Telephone Company.

I. Where Operator Trunk-Coin or Combined Coin and Non-Coin or Operator Trunk-Full Feature Optional Features for sent-paid pay telephone access is provided to the IC and the IC wishes to receive the monies it is due for the monies collected by the Telephone Company from coin pay telephone stations, the IC shall furnish to the Telephone Company at a location specified by the Telephone Company, the IC message call detail for the IC sent-paid (coin) pay telephone calls in accordance with the Telephone Company collection schedule. The IC message call detail furnished shall be in a standard format establishment by the Telephone Company as set forth in Section 8, Paragraph 8.2.1, B.l.c., following. If no IC message call detail is received from the IC for each bill period established by the Telephone Company, the Telephone Company will assume there were no IC sent-paid (coin) pay telephone calls for the period. In addition, the IC shall furnish a schedule of its charges for sent-paid (coin) calls to the Telephone Company at a location and date as specified by the Telephone Company. Any change in the IC's schedule of charges shall be furnished to the Telephone Company one day after the change becomes effective.

3.5 Payment Arrangements

A. The Telephone Company will bill the Carrier Common Line Access. The bill day (i.e., the billing date of the bill) in a month for each IC account will be established by the Telephone Company. Payment is due from the IC 31 days after the bill day date (payment date) or by the next bill date (i.e., same date in the following month as the bill date), whichever is the shortest interval, and is payable in immediately available funds. If such payment date is a Saturday, Sunday or holiday (i.e., New Year's Day, Independence Day, Labor Day, Thanksgiving Day, Christmas Day, the second Tuesday in November, and a day when Washington's Birthday, Memorial Day or Veteran's Day is legally observed), payment will be due from the IC as follows:

3. CARRIER COMMON LINE ACCESS SERVICE-(Continued)

3.6 Payment of Coin Sent-Paid Monies

The Telephone Company will collect the monies from coin pay telephone stations and will determine and remit amounts due to an IC which is provided Operator Trunk-Coin or Combined Coin and Non-Operator Trunk-Full Feature Optional Features for sent-paid-pay-telephone-access as set forth in Section 6, following.

A. Bill Period Coin Revenue

The Telephone Company will establish a collection schedule for each coin pay telephone station and will collect the monies from the coin pay stations based on this collection schedule. The monies collected based on this schedule during each bill period established by the Telephone Company will be identified by coin pay telephone station and summed to develop the Bill Period Coin Revenue for each coin record day (i.e., the day a record is prepared and dated to show the amount due the IC).

B. Total IC Coin Revenue

The intrastate total IC Coin Revenue will be determined by the Telephone Company based on the IC message call detail received from the IC for each bill period and the IC's schedule of charges for sent-paid coin calls. Such total IC Coin Revenue will be developed each coin record day.

C. Recourse Adjustments

For each coin record day, the Telephone Company will subtract from the total IC Coin Revenue an amount for coin station shortages. Coin station shortages are amounts resulting from unauthorized calling at coin pay telephone stations, use of unauthorized coins (i.e., foreign coins, slugs and improper use of U.S. pennies), unauthorized removal of coins from coin pay telephone stations and coin refunds beyond the Telephone Company's control. Such amount for coin station shortages will be developed by the Telephone Company by multiplying the total IC Coin Revenue for each coin record day by a shortage factor. Such amount will be rounded to the nearest penny. The shortage factor will be determined by dividing the yearly total coin shortage amount by the yearly total coin revenue amount (i.e., total coin revenue equals the coin revenue due under exchange tariffs, state toll tariffs, and interstate toll tariffs). The total coin shortage amount and the total revenue amount will be determined by the Telephone Company through an annual special study.

ACCESS SERVICES

3. CARRIER COMMON LINE ACCESS SERVICE--(Continued)

3.7 Rate Regulations--(Continued)

(CP) D. Resold Services

1. Scope

Where the customer is reselling MTS and/or MTS-type service(s) on which the Carrier Common Line and Switched Access charges have been assessed, the customer may, at the option of the customer, obtain Feature Group A, Feature Group B or Feature Group D Switched Access Service under this tariff as set forth in Section 6 following for originating and/or terminating access in the local exchange. Such access group arrangements whether single lines or trunks or multiline hunt groups or trunk groups will have Carrier Common Line Access charges applied as set forth in Paragraph 3.8 following in accordance with the resale rate regulations set forth in Paragraph 4, following. For purposes of administering this provision:

Resold intrastate terminating MTS and MTS-type service(s) shall include collect calls, third number calls and credit card calls where the reseller pays the underlying carrier's service charges; and shall include interstate minutes of use.

Resold intrastate originating MTS and MTS-type service(s) shall not include collect, third number, credit card or interstate minutes of use.

2. Customer Obligations Concerning the Resale of MTS and MTS-type Services

When the customer is reselling MTS and/or MTS-type service as set forth in Paragraph 1, preceding, the customer will be charged Carrier Common Line Access charges in accordance with the resale rate regulations as set forth in Paragraph 4, following, if the customer or the provider of the MTS service furnishes documentation of the MTS usage and/or the customer furnishes documentation of the MTS-type usage. Such documentation supplied by the customer shall be supplied each month and shall identify the involved resold MTS and/or MTS-type services.

The monthly period used to determine the minutes of use for resold MTS and/or MTS-type service(s) shall be the most recent monthly period for which the customer has received a bill for such resold service(s). This information shall be delivered to the Telephone Company, at a location specified by the Telephone Company, no later than 15 days after the bill date shown on the resold MTS and/or MTS-type service bill. If the required information is not received by the Telephone Company, the previously reported information, as described preceding, will be used for the next two months. For any subsequent month, no allocation or credit will be made until the required documentation is delivered to the Telephone Company by the customer.

3. CARRIER COMMON LINE ACCESS SERVICE-(Continued)

(CP) 3.7 Rate Regulations-(Continued)

D. When the customer orders a combined access group to be used in conjunction with the resale of MTS/WATS and/or MTS/WATS-type services as set forth in Paragraph 3.3, D., preceding, subject to the limitations of Carrier Common Line as set forth in Paragraph 3.2, preceding, and the Telephone Company receives the usage information required to calculate the proration of Carrier Common Line as set forth in Paragraph 3.4, F., preceding, the customer will be billed as set forth in Paragraph 1., following. When more than one combined access group is provided in a LATA, the Telephone Company will apportion the resold MTS/WATS and/or MTS/WATS-type services and originating minutes of use among the combined access groups. Such apportionment will be based on the relationship of the originating usage for each combined access group to the total originating usage for all combined access groups in the LATA. The involved resold minutes shall be only intrastate outward MTS, MTS-type, WATS and WATS-type minutes and shall not include collect, third number, credit card or interstate minutes of use.

In order for the rate regulations to apply as set forth in Paragraph 1, following, the combined access group and the resold MTS/WATS and/or MTS/WATS-type services must be provided in the same state in the same LATA, provided by the same Telephone Company and connected directly or indirectly. For those LATAs that have more than one state, the customer shall report the information by state within the LATA.

Each of the combined access groups arranged in a multiline hunt group or trunk group arrangement used by the customer in association with the resold MTS/WATS and/or MTS/WATS-type services must be connected either directly or indirectly to the customers' designated premises at which the resold MTS/WATS and/or MTS/WATS-type services are terminated. Direct connections are those arrangements where the combined access groups and resold MTS/WATS and/or MTS/WATS-type services are terminated at the same customers' designated premises. Indirect connections are those arrangements where the combined access groups and resold MTS/WATS and/or MTS/WATS-type services are terminated at different customer designated premises in the same LATA. Such different customer designated premises are connected by facilities that permit a call to flow from combined access groups to resold MTS/WATS and/or MTS/WATS-type services.

ACCESS SERVICES

3. CARRIER COMMON LINE ACCESS SERVICE-(Continued)

(CP) 3.7 Rate Regulations-(Continued)

D. (Continued)

4. The originating intrastate access minutes for Carrier Common Line Access, adjusted as set forth in Paragraph 1, preceding, or any other section of this tariff, that are billed to a customer in a monthly period shall not be less than zero.
5. If the required documentation is not received by the Telephone Company, the previously reported information as described in Paragraph 3.4., F., preceding, will be used for the next two months. For any subsequent month, no adjustment or credit will be made until the required documentation is delivered to the Telephone Company by the customer.
6. The adjustment as set forth in Paragraphs 1. and 2., preceding, will be made to the involved customer's account after making the adjustments to the customer's account as set forth in Paragraph E., following.

E. When the customer reports interstate and intrastate use of in service Switched Access Service, the Carrier Common Line Access Transitional Charge will be billed only to intrastate Switched Access Service access minutes based on the data reported by the customer as set forth in Paragraph 2.3.12. The intrastate Switched Access Service access minutes will, after adjustment as set forth in Paragraph D., preceding, when necessary, be used to determine the Carrier Common Line Charges as set forth in Paragraph F., following.

ACCESS SERVICES

3. CARRIER COMMON LINE ACCESS SERVICE-(Continued)

3.7 Rate Regulations-(Continued)

E. (Continued)

Common Line Access access minutes developed by the Telephone Company for the IC account involved will be reduced by the exchange minutes of use reported by the IC. If the Telephone Company determines the reported exchange minutes are not accurate, no adjustment will be made until a new report properly stating the exchange minutes is delivered to the Telephone Company by the IC. The access minutes, adjusted as set forth in this paragraph or any other section of this Tariff, that are billed to the IC in a monthly period shall not be less than zero.

This adjustment will be made to the involved IC account prior to making the adjustments to the IC account as set forth in Paragraphs 3.7, D., preceding, and Paragraph 3.7, F., following.

F. When the IC reports interstate and intrastate use of in-service Switched Access Service, the Carrier Common Line Access access minutes will be adjusted as follows. The Carrier Common Line Access access minutes developed by the Telephone Company will, after adjustment as set forth in Paragraph 3.7, E., preceding, when necessary, be multiplied by the intrastate percentage reported by the IC as set forth in Section 2, Paragraph 2.3.14. The result will, after adjustment as set forth in Paragraph 3.7, D., preceding, when necessary, be used to determine the Carrier Common Line Charges as set forth in Paragraph 3.7, G., following.

G. After the adjustments as set forth in Paragraphs 3.7, D., E. and F., preceding, have been applied, when necessary, to the Carrier Common Line Access access minutes, the charges for the involved IC account will be determined as follows:

1. The access minutes for a Premium Access Carrier will be multiplied by the transitional charge as set forth in Paragraph 3.8, following, to determine the charges.

ACCESS SERVICES

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE

5.1 General

This Section sets forth the regulations and order-related charges for Access Orders for Switched and Special Access Services. These charges are in addition to other applicable charges as set forth in other sections of this Tariff.

An Access Order is an order to provide the IC with Switched Access Service or Special Access Service or to provide changes to existing services.

5.1.1 Ordering Conditions

A customer may order any number of services of the same type and between the same premises on a single Access Order. All details for services for a particular order must be identical except for those for multipoint service.

The customer shall provide all information necessary for the Telephone Company to provide and bill for the requested service. In addition to the order information required in Paragraph 5.2, following, the customer must also provide:

- Customer name and premises address(es).
- Billing name and address (when different from customer name and address).
- Customer contact name(s) and telephone number(s) for the following provisioning activities: order negotiation, order confirmation, interactive design, installation and billing.

The Telephone Company will establish a service date when the customer has provided an Access Order that contains the information as required for each respective service described in this and other sections of the tariff. The date on which the service date is established is considered to be the Application Date. The Telephone Company will provide a firm order confirmation to the customer and will advise the customer of the application Date and the Service Date.

Orders for FGA and BSA-A Switched Access Service must be in multiples of 30 busy-hour minutes of capacity.

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE

5.1 General

This Section sets forth the regulations and order-related charges for Access Orders and Planned Facilities Orders for Switched and Special Access Services. These charges are in addition to other applicable charges as set forth in other sections of this Tariff.

An Access Order is an order to provide the IC with Switched Access Service or Special Access Service or to provide changes to existing services. A Planned Facilities Order is an order to make facilities available on an established activation date for an IC's future Access Service needs.

For purposes of ordering Access Service, an End User who orders Access Service will be considered to be an IC and will be required to provide the same information that a non-End User IC must provide when placing an order.

5.1.1 Ordering Conditions

An IC may order any number of services of the same type (e.g., Feature Group, interface group, facility type, etc.) between the same locations (i.e., the IC terminal location and end office, Hub or End User's premises) on a single Access Order or Planned Facilities Order.

The IC shall supply all the necessary information to provide service, e.g., IC name and terminal location, End User's name and location, facility interface, etc. All details for a particular order must be identical except for those for multipoint services. The minimum order requirements are set forth in Paragraphs 5.2 and 5.4, following.

Orders for Feature Group A Switched Access Service must be in multiples of 30 busy-hour minutes of capacity.

Dedicated Access Line Special Access Service must be ordered for use with a Feature Group C or D Switched Access Service which is in service on order.

5.1.2 Provision of Other Services

A. Testing Service, Additional Engineering, Additional Labor, Restoration, Priority and Special Facilities Routing may be ordered with an Access Order or Planned Facilities Order as additional features at the time the order is accepted by the Telephone Company. The rates and charges for these services, as set forth in other sections of this Tariff, will apply in addition to the ordering charges set forth in this Section and the rates and charges for the Access Service or Planned Facilities with which they are associated.

(RT) 5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.1 General-(Continued)

5.1.2 Provision of Other Services-(Continued)

(CT) B. With the agreement of the Telephone Company, the items listed in Paragraph A., preceding, may subsequently be added to the order at any time, up to and including the service date for the Access Service. When added subsequently, charges for a design change as set forth in Paragraph 5.2.3, C., following, will apply when an engineering review is required.

(C) C. Additional Engineering is not an ordering option, but will be applied to an Access Order when the Telephone Company determines that Additional Engineering is necessary to accommodate a customer's request. Additional Engineering will only be required as set forth in Paragraph 13.1, following. When it is required, the customer will be so notified and will be furnished with a written statement setting forth the justification for the Additional Engineering as well as an estimate of the charges. If the customer agrees to the Additional Engineering, a firm order will be established. If the customer does not want the service or facilities after being notified that Additional Engineering of Telephone Company facilities is required, the order will be withdrawn and no charges will apply. Once a firm order has been established, the total charge to the customer for the Additional Engineering may not exceed the estimated amount by more than 10 percent.

The regulations, rates and charges for Additional Engineering are as set forth in Paragraph 13.1, following, and are in addition to the regulations, rates and charges specified in this Section.

5.1.3 Special Construction

The regulations, rates and charges for special construction are set forth in Section 14, following, and are in addition to the regulations, rates and charges specified in this Section.

5.2 Access Order

An Access Order is used by the Telephone Company to provide to an IC Access Service as follows:

- Switched Access Services as set forth in Section 6, following.
- Special Access Services as described in Section 7, following, and
- Other Services as set forth in Paragraph 5.1.2, preceding.

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

When placing an order for Access Service, the IC must identify itself as a certified LEC, a certificated IXC, or an ESP for the services being ordered and provide, at a minimum, the following information:

- (AT) - For the DNAL Switched Access BSA, the customer shall specify the designated customer premises, the channel interface and the line side or
- (AT) trunk side Switched Access BSA to be associated with the DNAL.
- (AT) - For FGA and BSA-A Switched Access Service, the customer shall specify the number of lines and the first point of switching (i.e., dial tone office). The first point of switching shall be selected in accordance with the provisions set forth in Section 2, Paragraph 2.1.2.A., and cannot be an end office served by an RSS or RSM because all traffic originating from or terminating at a remote switching office must switch through its host office. The customer shall also specify the directionality of the service, the Local Transport and Local Switching features desired. The IXCs or LECs must also specify whether the ordered lines or capacity is for FX/ONAL or MTS/WATS-type service. The customer shall also specify which MTS/WATS-type FGA or BSA-A lines are to be arranged in multiline hunt group arrangements and which lines are to be provided as single lines.
- (AT) The customer shall also specify that the FX/ONAL is to be provided with an extension to a different LATA, if applicable. When such an extension is specified on the order, the customer must also specify the customer-designated premises within the LATA of the Switched Access Feature Group A
- (AT) service, at which the FGA or BSA-A extension is to be terminated.
- (AT) For FGB or BSA-B Switched Access Service, the customer shall specify the number of trunks, directionality of the service, the entry switch and the Local Transport and Local Switching features desired. The first point of switching cannot be an end office served by an RSS or RSM because all traffic originating or terminating at a remote switching office must switch through its host office. When an end office is the specified entry switch, the Telephone Company will work cooperatively with the customer to determine whether direct trunking of the service to the end office is necessary. Direct trunking to an end office will be installed when a customer orders features that can only be provided through direct trunking.

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE--(Continued) MISSOURI
Public Service Commission

5.2 Access Order--(Continued)

When placing an order for Access Service, the IC must provide, at a minimum, the following information:

- (CP) - For Feature Group A Switched Access Service, the customer shall specify the number of lines and the first point of switching (i.e., dial tone office), the directionality of the service, the Local Transport options and Local Switching options desired. The first point of switching cannot be an end office served by an RSS or RSM because all traffic originating or terminating at a remote switching office must switch through its host office. In addition, the customer shall specify whether the ordered lines or capacity is for FX/ONAL or MTS/WATS-type service. The customer shall also specify which MTS/WATS-type FGA lines are to be arranged in multiline hunt group arrangements and which lines are to be provided as single lines.

CANCELLED

The customer shall also specify that the FX/ONAL is to be provided with an extension to a different LATA, if applicable. When such an extension is specified on the order, the customer must also specify the designated premises within the LATA of the Switched Access Feature Group A service, at which the FGA extension is to be terminated.

SEP 30 1991
BY 304 R.S. # 3

Public Service Commission
MISSOURI

- (CP) - For Feature Group B Switched Access Service, the customer shall specify the number of trunks, directionality of the service, the entry switch and the Local Transport and Local Switching options desired. The first point of switching cannot be an end office served by an RSS or RSM because all traffic originating or terminating at a remote switching office must switch through its host office. When an end office is the specified entry switch, the Telephone Company will work cooperatively with the customer to determine whether direct trunking of the service to the end office is necessary. Direct trunking to an end office will be installed when a customer orders optional features that can only be provided through direct trunking.

5.2 Access Order-(Continued)

When placing an order for Access Service, the IC must provide, at a minimum, the following information:

- For Feature Group A Switched Access Service, the customer shall specify the number of busy-hour minutes of capacity (BHMC) and the first point of switching (i.e., dial tone office), the directionality of the service, the Local Transport options and Local Switching options desired. The first point of switching cannot be an end office served by an RSS or RSM because all traffic originating or terminating at a remote switching office must switch through its host office. In addition, the customer shall specify whether the ordered lines or capacity is for FX/ONAL or MTS/WATS-type service. The customer shall also specify which MTS/WATS type FGA lines are to be arranged in multiline hunt group arrangements and which lines are to be provided as single lines.

The customer shall also specify that the FX/ONAL is to be provided with an extension to a different LATA, if applicable. When such an extension is specified on the order, the customer must also specify the customer-designated premises within the LATA of the Switched Access Feature Group A service, at which the FGA extension is to be terminated.

- For Feature Group B Switched Access Service, the customer shall specify the number of busy-hour minutes of capacity (BHMC), directionality of the service, the entry switch and the Local Transport and Local Switching options desired. The first point of switching cannot be an end office served by an RSS or RSM because all traffic originating or terminating at a remote switching office must switch through its host office. Original Sheet 3

ACCESS SERVICES

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

- Directory Assistance Service is ordered in the same Access Service and requires the same information.
- For Special Access Service, the IC must specify the IC terminal location and End User's premises or Hub, the type of service (e.g., Narrowband 1, Voice Grade 3, High Capacity 1, etc.) and the facility interface combination. When ordering to a Hub, no interface combinations are required but Hub functions must be specified. For multipoint services, the facility interface at each End User's premises may be different, but they must all work in combination with a common facility interface at the IC terminal location.
- The IC must always specify how Special Access Service is to be used so that the Telephone Company may determine the appropriate application of the Special Access Service Surcharge. The surcharge and its applications are described in Section 7, Paragraph 7.4.2, following.
- For Dedicated Access Lines, the IC must specify the End User's premises, the type of facility (i.e., two-wire or four-wire), the type of calling (i.e., originating or terminating) and the type of supervisory signaling. When the necessary screening functions are not provided at the End User's serving wire center, the IC may specify, with the agreement of the Telephone Company, a specific foreign serving wire center where capacity exists.

5.2.1 Access Order Service Date Intervals

Access Service is provided with one of the following Service Date Intervals:

- Standard Interval
- Negotiated Interval
- Short Notice Interval

ACCESS SERVICES

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

When ordering FGB or BSA-B capacity to an access tandem, the Telephone Company may request an estimate of the amount of traffic the customer will generate to and/or from each end office subtending the access tandem to assist the Telephone Company in its own efforts to project further facility requirements. Traffic estimates to end offices served by remote switching offices should be uniquely identified and not included in traffic estimates to the host. The traffic type must also be specified using the same categories as described in Paragraph 6.1.1, following, to enable efficient provisioning and billing functions.

For FGC, FGD, BSA-C and BSA-D Switched Access Service, the customer shall specify the number of busy-hour minutes of capacity (BHMC) from the IC terminal location to end offices (including those served by an RSS or RSM), by Feature Group or BSA and traffic type. The Telephone Company shall design and determine the routing, including the selection of the entry switch in accordance with Section 6, Paragraph 6.8.2, following. This information is used to determine the number of transmission paths as set forth in Section 6, Paragraph 6.8.5, following. The customer then specifies the Local Transport and Local Switching features.

Customers may, at their option, order FGD or BSA-D by specifying the number of trunks desired between the customer's premises and an entry switch. When ordering by trunk quantities to an access tandem, the Telephone Company may request an estimate of the amount of traffic the customer will generate to and/or from each end office subtending the access tandem to assist the Telephone Company in its own efforts to project further facility requirements.

When a customer orders FGD or BSA-D Switched Access Service, the capacity ordered in an Access Tandem Network must be ordered in either BHMCs of trunks and cannot be mixed. When ordering FGD or BSA-D trunks with SS7 Signaling, in addition to the other information listed in Section 5, the customer shall specify the switching point codes and trunk circuit identification codes. The customer must also identify the Common Channel Signaling/Signaling System 7 (CCS/SS7) Interconnection Service link associated with the FGD or BSA-D trunk group.

Remote switching office to host relationships are provided to all customers by the Telephone Company. This information is contained in the Southwestern Bell End Office Profile report.

ACCESS SERVICES

MAR 29 1993

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE--(Continued)

5.2 Access Order--(Continued)

MISSOURI Public Service Commission

For 800 Access Service and 900 Access Service, customers shall specify the LATAs that they wish to receive originating 800 Access Service and 900 Access Service calls from, the 800-NXX and 900-NXX codes that are to be activated in a given LATA and the desired due date of the order. 800 Access Service and 900 Access Service calls originating in LATAs which the customer has not ordered will be blocked.

- (AT) 800 Access Service and 900 Access Service will be combined with either FGB, FGC, FGD, BSA-B, BSA-C or BSA-D Switched Access Service. The customer must have LATA-wide Switched Access Services in order to receive 800 Access Service and 900 Access Service traffic. The customer shall designate which
- (AT) FGB, FGC, FGD, BSA-B, BSA-C or BSA-D Switched Access Service trunk groups are to be associated with 800 Access Service and 900 Access Service.
- (AT) However, when FGD or BSA-D Switched Access Service becomes available in an end office, 800 Access Service and 900 Access Service traffic originating from that end office must be provided with FGD or BSA-D Switched Access Service. The customer must specify whether the 800 Access Service and 900 Access Service to be provided will be joint provided or non-joint provided.

Information regarding 800 Access Service and 900 Access Service Screening Offices is contained in the Southwestern Bell End Office Profile report. Customers wishing to receive this report may obtain ordering information from the Reference to Technical Publications section of Southwestern Bell's Tariff, FCC No. 68.

- (AT) For Directory Assistance Service, the customer shall specify the number of busy-hour minutes of capacity (BHMC) from the customer's premises to the Directory Assistance location. If the Directory Assistance Service is to be combined with a FGB, FGC, FGD, BSA-B, BSA-C or BSA-D Switched Access Service, the customer shall also specify which FGB, FGC, FGD, BSA-B, BSA-C or BSA-D Switched Access Service trunk group is to be associated with the Directory Assistance Service. This information is used to determine the number of transmission paths as set forth in Section 9.2, E.3., following. The customer then specifies the Directory Transport features.

For all Special Access Services, the customer must specify the customer-designated premises or hubs involved, the type of service (e.g., Voice Grade, High Capacity, etc.), the channel interface, technical specification package and features desired. For multipoint services, the channel interface at each premises may, at the request of the customer, be different, but all such interfaces shall be compatible.

Public Service Commission

For 800 Access Service and 900 Access Service, customers shall specify the LATAs that they wish to receive originating 800 Access Service and 900 Access Service calls from, the 800-NXX and 900-NXX codes that are to be activated in a given LATA and the desired due date of the order. 800 Access Service and 900 Access Service calls originating in LATAs which the customer has not ordered will be blocked.

800 Access Service and 900 Access Service will be combined with either Feature Group B, C or D Switched Access Service. The customer must have LATA-wide Switched Access Services in order to receive 800 Access Service and 900 Access Service traffic. The customer shall designate which Feature Group B, C or D Switched Access Service trunk groups are to be associated with 800 Access Service and 900 Access Service. However, when Feature Group D Switched Access Service becomes available in an end office, 800 Access Service and 900 Access Service traffic originating from that end office must be provided with Feature Group D Switched Access Service. The customer must specify whether the 800 Access Service and 900 Access Service to be provided will be joint provided or joint provided.

Information regarding 800 Access Service and 900 Access Service Offices is contained in the Southwestern Bell End Office Profile report. Customers wishing to receive this report may obtain ordering information from the Reference to Technical Publications section of Southwestern Bell's Tariff, FCC No. 68.

CANCELLED
APR 11 1993 #302
Public Service Commission
MISSOURI

For Directory Assistance Service, the customer shall specify the number of busy-hour minutes of capacity (BHMC) from the customer's premises to the Directory Assistance location. If the Directory Assistance Service is to be combined with a Feature Group B, C or D Switched Access Service, the customer shall also specify which Feature Group B, C or D Switched Access Service trunk group is to be associated with the Directory Assistance Service. This information is used to determine the number of transmission paths as set forth in Section 9.2, E.3., following. The customer then specifies the Directory Transport features.

(CT)

For all Special Access Services, the customer must specify the customer-designated premises or hubs involved, the type of service (e.g., Voice Grade, High Capacity, etc.), the channel interface, technical specification package and features desired. For multipoint services, the channel interface at each premises may, at the request of the customer, be different, but all such interfaces shall be compatible.

When Feature Group A (FGA) access is used in conjunction with WATS Access Line Service, the customer must also identify the FGA seven digit local telephone number used to complete the 800 Access Service calls. Additionally, when the necessary screening functions are not provided at the wire center which serves the customer premises, the Telephone Company will provide the service to the nearest wire center where capacity exists. In these circumstances, the customer will be so notified and the order will be changed to designate the appropriate premises. No charge will apply for the order modification. In addition, the customer must specify that the WATS Access Line is to be provided with an extension in the same or a different LATA, if applicable. When such an extension is specified, the customer must provide either (1) the end user premises (for an intraLATA extension) or (2) the customer-designated premises (for an extension in a different LATA) to which the extension is to be provided.

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

(CT)

For Operator Call Processing, the customer must specify the FGC, FGD, BSA-C or BSA-D switched Access Service that will be used to transfer calls from the OSS tandem to the access customer. For Operator Transfer, a separate trunk group and CIC must be established for each name to which Operator Transfer calls are to be transferred. Customers who wish to participate in Operator Transfer and do not presently have a CIC, will be required to obtain a four-digit CIC.

(CT)

The customer must also specify the specific LATAs where the customer desires Operator Call Processing and whether Operator Transfer, Inward Assistance or both are to be provided. In addition, the customer shall specify whether or not operator functionality, coin station control or both are to be provided by the customer.

Access Services Tariff Section 5 3rd Revised Sheet 3.04 Replacing 2nd Revised Sheet 3.04

ACCESS SERVICES

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

Operator Service System (OSS) Tandem interconnection requirements are specified in Section 17, Paragraph 17.2, following. Information regarding OSS Tandem locations is contained in the Southwestern Bell Interexchange Customer Information Handbook.

(AT)

Carrier Identification Code Parameter (CIP)

The customer must specify per trunk group or tandem, and all associated Carrier Identification Codes, the end offices that will be used to pass originating Carrier Identification Code Parameter (CIP) to the customer's designated premises. The customer's end office must be equipped with SS7 Signaling and is provided in conjunction with Common Channel Signaling/Signaling System 7 (CCS/SS7) Interconnection Service as set forth in Section 23. End offices so equipped may be found in NECA Tariff F.C.C. No. 4.

(AT)

- For Common Channel Signaling/Signaling System 7 (CCS/SS7) Interconnection Service, the customer must provide the following information to the Telephone Company at the time of ordering:
 - Number of access links
 - Link Type
 - Signaling Link Code
 - Customer Signaling Point Code
 - Common Language Location Identifier (CLLI) code of the Telephone Company interconnecting Signal Transfer Point
 - Contact telephone number for installation and maintenance of the customer's designated premises

When ordering CCS/SS7 Interconnection Service, the customer will provide an estimate of total annual volume and busy hour busy month volume projected for a period of three years. The forecast should be itemized by message type. The Telephone Company will utilize this forecast in its own efforts to project further facility requirements.

- For LIDB Validation Service, the customer shall provide a LIDB Validation Service Order Form which specifies the OPCs of the customer's designated OSSs sending the query or queries, the PIU per OPC of the customer's OSS location, and the desired due date of the order.

LIDB Validation Service is provided in conjunction with CCS/ SS7 Interconnection Service, as set forth in Section 20. In order to utilize LIDB Validation Service, the customer must have CCS/SS7 Interconnection Service to the two Telephone Company STPs designated by the Telephone Company as the interconnecting STP pair to be utilized for interconnection to the CCS/SS7 network. The Telephone Company's STP locations are provided in the National Exchange Carriers Association, Inc. Tariff F.C.C. No. 4.

ACCESS SERVICES

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

The BHMC may be determined by the customer in the following manner. For each day, the customer shall determine the highest number of minutes of use for a single hour (e.g., 55 minutes in the 10-11 a.m. hour). The customer shall, for the same hour period (i.e., busy hour), pick the 20 consecutive business days in a calendar year which add up to the largest number of minutes of use. The customer shall then determine the average busy-hour minutes of capacity (i.e., BHMC) by dividing the largest number of minutes-of-use figure for the same hour period for the consecutive 20-day period by 20. This computation shall be performed to establish the BHMC's for each end office the customer wishes to serve. These determinations thus establish the forecasted BHMC for each end office.

Where the Special Access Service is exempt from the Special Access Surcharge as set forth in Paragraph 7.3.2, following, and the customer desires an exemption from the surcharge, it shall furnish with the order the certification as set forth in Paragraph 7.3.2, following.

For Frame Relay Service (FRS), the customer must specify the customer's designated premises, the Primary Market Area (PMA) involved and the type of access termination. For each access termination requested, the customer must specify the data transmission speed.

In addition, the customer must provide both points connected by a Logical Link, along with the data link connection identifier (DLCI), or address, assigned for each point when establishing the permanent virtual circuit.

When ordering from a point outside the PMA, the Telephone Company shall determine the frame relay switch(es) within the PMA as well as the nearest serving wire center within the PMA.

(AT) When FGD or BSA-D Switched Access Service is ordered for the provision of Multiple 64 CCC, the customer must have direct routed digital transport facilities between the customer designated premises and the Multiple 64 CCC end office for originating and terminating traffic. To ensure availability of transporting Multiple 64 CCC rates at speeds up to 1536 Kbps, the customer must, at a minimum, order 24 FGD or BSA-D trunks or contiguous increments of 24 FGD or BSA-D trunk groups, equipped with the following:

- SS7 Signaling
- 64 CCC
- Multiple 64 CCC

Replacing Original Sheet 3.0501

ACCESS SERVICES

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

In addition, the customer must specify one of three trunk allocation schemes: fixed, floating or flexible. In the fixed allocation scheme, the FGD or BSA-D trunks selected for a Multiple 64 CCC call are contiguous and the first FGD or BSA-D trunk is constrained to certain fixed starting points. In the floating allocation scheme, the FGD or BSA-D trunks selected for a Multiple 64 CCC call are contiguous, but the position of the first trunk can float. For the flexible allocation scheme, the FGD or BSA-D trunks selected for a Multiple 64 CCC call may occupy non-contiguous positions within a group of 24 FGD or BSA-D trunks.

Customers may segregate their originating and terminating Multiple 64 CCC traffic by specifying dedicated Multiple 64 CCC trunk group(s) on the order. A Multiple 64 CCC trunk group(s) represents access capacity for carrying only Multiple 64 CCC traffic.

(AT)

For Advanced Carrier Identification Service (ACIS), the customer must have LATA-wide Switched Access in order to receive originating ACIS routed traffic. The customer must specify the:

- LATAs from which they wish to receive originating ACIS calls,
- the ACIS Access Code(s) to be activated in a given LATA,
- the Carrier Identification Code (CIC) of each ACIS Code in a given LATA, and
- the desired due date of the order.

Originating ACIS routed calls from LATAs in which the customer has not ordered ACIS will be blocked.

Originating traffic that is to be routed using ACIS may be combined with either FGB, FGC, BSA-B, BSA-C or BSA-D Switched Access Service. The customer shall designate which FGB, FGC, FGD, BSA-B, BSA-C or BSA-D Switched Access Service trunk groups are to be associated with ACIS. However, when FGD or BSA-D Switched Access Service becomes available in an end office, ACIS traffic originating from that end office must be provided with FGD or BSA-D Switched Access Service.

ACCESS SERVICES

- 5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE--(Continued)
- 5.2 Access Order--(Continued)
- 5.2.1 Access Order Service Date Intervals--(Continued)

To the extent the Access Service can be made available with reasonable effort, the Telephone Company will provide the Access Service in accordance with the IC's requested interval, subject to the following conditions:

A. Standard Interval

The Telephone Company shall publish and make available to all IC's, a schedule of Standard Intervals applicable for Switched and Special Access Services. This schedule shall specify which services and the quantities of services that can be provided within the standard intervals.

Access Services provided in a Standard Interval will be installed during normally scheduled Telephone Company work hours. If an IC requests that installation be done outside of scheduled work hours, and the Telephone Company agrees to this request, the IC will be subject to applicable Additional Labor Charges as set forth in Section 13, following.

B. Negotiated Interval

The Telephone Company will negotiate a service date interval with the IC when:

1. There is no Standard Interval for the service, or
2. The Short Notice Interval is not applicable, or
3. The IC requests a service date beyond the applicable Standard Interval service date.

(CP)ACCESS SERVICES

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

5.2.2 Access Order Modifications

MISSOURI
Public Service Commission

The customer may request a modification of its Access Order at any time prior to the service date or notification by the Telephone Company that service is available for the customer's use, whichever is later. The Telephone Company will make every effort to accommodate a requested modification when it is able to do so with the normal work force assigned to complete such an order within normal business hours. If the modification cannot be made with the normal work force during normal business hours, the Telephone Company will notify the customer. If the customer still desires the Access Order modification, the Telephone Company will schedule a new service date. All charges for Access Order modifications will apply on a per-occurrence basis.

Any increase in the number of Special Access Service channels or Switched Access Service busy-hour minutes of capacity will be treated as a new Access Order (for the increase amount only).

If the Telephone Company specifies that order modifications are necessary to satisfy the transmission performance for a Special Access Service ordered by a customer (e.g., the upgrading by the Telephone Company of the channel termination from effective two-wire to effective four-wire) and the customer authorizes the suggested order modifications, these changes will be made without order modification charges being incurred by the ICSE. However, charges for the Special Access Service provided to the customer will apply.

CANCELLED
BY 2nd RS #5

A. Service Date Change Charge

Access Order service dates for the installation of new services or rearrangements of existing services may be changed, but the new service date may not exceed the original service date by more than 45 calendar days. When, for any reason, the customer indicates that service can not be accepted for a period not to exceed 45 calendar days beyond the original service date, and the Telephone Company accordingly delays the start of service, a Service Date Change Charge will apply. If a Design Change has been requested as set forth in 5.2.2.(C), following, and the engineering review cannot be completed within the 45-calendar-day time frame, the new service date may exceed the original service date by

If the customer still desires the Access Order modification, the Telephone Company will schedule a new service date. All charges for Access Order modifications will apply on a per-occurrence basis.

Any increase in the number of DNAL Channels, Special Access Service channels, CCS/SS7 STP Port Terminations, STP Access Connections, Switched Access Service busy-hour minutes of capacity or LIDB OPCs will be treated as a new Access Order (for the increased amount only).

If the Telephone Company specifies that order modifications are necessary to satisfy the transmission performance for a Special Access Service ordered by a customer (e.g., the upgrading by the Telephone Company of the channel termination from effective two-wire to effective four-wire) and the customer authorizes the suggested order modifications, these changes will be made without order modification charges being incurred by the IC. However, charges for the Special Access Service provided to the customer will apply.

CANCELLED

A. Service Date Change Charge

JUL 15 1994

BY 6 TH R.S. # 5.01

MISSOURI Public Service Commission

Access Order service dates for the installation of new services, rearrangements of existing services may be changed, but the new service date may not exceed the original service date by more than 45 calendar days. When, for any reason, the customer indicates that service can not be accepted for a period not to exceed 45 calendar days beyond the original service date, and the Telephone Company accordingly delays the start of service, a Service Date Change Charge will apply. The Application Date will not change as a result of a Service Date Change. If a Design Change has been requested as set forth in 5.2.3, C., following, and the engineering review cannot be completed within the 45-calendar-day time frame, the new service date may exceed the original service date by more than 45 calendar days. In all other cases, if the customer-requested service date exceeds the allowable service date change period previously described, the order will be canceled by the Telephone Company,

(AT)

(MT)

A Service Date Change Charge will apply, on a per-order, per-occurrence basis, for each service date changed. A Service Date Change Dispatch Charge will apply per occurrence when a technician is dispatched to the customer's premises and the customer is not ready for service. The applicable charge is;

(MT)

(AT)

	USOC	Charge
Service Date Change Charge, per Order	OMC	\$ 13.00
Service Date Change Dispatch Charge	VT6DN	200.00

B. Design Change Charge

The customer may request a design change to the service ordered. A design change is any change to an Access Order which requires engineering review. An engineering review is a review by Telephone Company personnel of the service ordered and the requested changes, to determine what changes in the design, if any, are necessary to meet the changes requested by the customer. Design changes to a pending order include such things as the addition or deletion of features, BSEs, or functions or a change in the type of Transport Termination (Switched Access only), type of channel interface, type of interface group or technical specification package. Design changes do not include a change of customer premises, End User premises, End Office Switch, Feature Group type, BSA type, or Special Access Service channel type. Changes of this nature will require the issuance of a new order and the cancellation of the original order with appropriate cancellation charges applied.

5.2.3 Access Order Modifications (cont'd)

C. Expedited Order Charge

- (1) Analog (Metallic, Telegraph, and Wideband Analog), Voice Grade, DS0 (Wideband Data, MegaLink Data and DovLink) and DS1 Access Services

If a customer desires that service be provided on a due date earlier than the standard interval, the customer may request that service be provided on an expedited service interval. To qualify for an expedited interval the customer must provide End User premises access, where needed, until 11PM (CT), Monday-Friday.

If, upon reviewing availability of equipment, facilities and scheduled workload, the Telephone Company agrees to provide service on an expedited basis and the customer accepts this proposal, an Expedite Order Charge will apply.

The maximum number of circuits, which may be expedited, is limited to twelve (12) two-point or six (6) multi-point Analog/DS0 circuits at the same location, and a limit of nine (9) DS1 circuits at the same location. When the number of access circuits exceeds the maximum threshold the interval will be negotiated and expediting will not be an option.

If the Telephone Company determines that service can be provided on an expedited basis, the following charges will apply based upon agreed upon expedited service interval. The Expedited Order Charge applies on a per order basis, regardless of the number of circuits on the order.

D. Expedited Order Charge

If a customer desires that service be provided on an earlier date than that which has been established for the Access Order or the provision of the Access Service, the customer may request that service be provided on an expedited basis. If the Telephone Company determines that service can be provided on the requested date and that additional labor cost or extraordinary costs are required to meet the requested service date, the customer will be notified and will be provided with an estimate of the additional charges involved. If the customer instructs the Telephone Company to proceed, such additional charges will be determined and billed to the customer as follows:

To calculate the additional labor charges, the Telephone Company will keep track of the additional labor hours used to meet the request of the customer and will bill the customer at the applicable Additional Labor charges as set forth in 13.2.6, following.

To develop, determine and bill the customer for extraordinary costs which may be involved, the special construction terms and conditions as set forth in Section 14, following, will be used by the Telephone Company. Authorization to incur the costs and to bill the customer will be in accordance with the terms and conditions in Section 14, following.

When the request for expediting occurs subsequent to the issuance of the Access Order, a Service Date Change Charge as set forth in Paragraph 5.2.3, A., preceding, also applies.

ACCESS SERVICES

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

5.2.1 Access Order Service Date Intervals-(Continued)

C. Short Notice Interval-(Continued)

3. For Short Notice Interval Access Orders, the nonrecurring charge is two times the appropriate nonrecurring charges for the service provided as set forth in other sections of this Tariff.

5.2.2 Access Order Modifications

An Access Order may be modified by the IC prior to the service date as set forth following. One or more of the following charges will apply when such modifications are undertaken. When modifications are undertaken, the Telephone Company may specify that the service date will be changed. All charges for Access Order modifications will apply on a per-occurrence basis.

Any increase in the number of Special Access Service channels or Switched Access Service busy-hour minutes of capacity will be treated as a new Access Order (for the increase amount only).

If order modifications are necessary to satisfy the transmission performance for a Special Access Service ordered by an IC, these changes will be made without order modification charges being incurred by the IC.

A. Service Date Change Charge

Access Order service dates may be changed, but the new service date may not exceed the original service date by more than 30 calendar days. If the IC-requested service date is more than 30 calendar days after the original service date, the order will be cancelled by the Telephone Company and re-issued with the appropriate cancellation charges applied. With the agreement of the Telephone Company, a new service date may be established that is prior to the original standard or negotiated interval service date.

A Service Date Change Charge will apply, on a per-order, per-occurrence basis, for each service date changed. The applicable charge is: **\$1.20**

Original Sheet 7.02

ACCESS SERVICES

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE (cont'd)

Missouri Public Service Commission

5.2 Access Order (cont'd)

5.2.3 Access Order Modifications (cont'd)

REC'D DEC 20 2002

(FC)

C. Expedited Order Charge (cont'd)

(2) For all Access Service, excluding Analog, Voice Grade, DS0 and DS1 Access Services

(MT)

If the customer desires that service be provided on an earlier date than that which has been established for the Access Order or the provision of the Access Service, the customer may request that service be provided on an expedited basis. If the Telephone Company determines that service can be provided on the requested date and that additional labor cost or extraordinary costs are required to meet the requested service date, the customer will be notified and will be provided with an estimate of the additional charges involved. The total charge to the customer for the Additional Engineering may not exceed the estimate amount by more than 10%. If the customer instructs the Telephone Company to proceed, such additional charges will be determined and billed to the customer as follows:

(MT)

To calculate the additional labor charges, the Telephone Company will, upon authorization from the customer to incur the additional labor charges, keep track of the additional labor hours used to meet the request of the customer and will bill the customer at the applicable Additional Labor charges as set forth in 13.2.6, following.

5.2.3 Access Order Modifications (cont'd)

(FC)

C. Expedited Order Charge (cont'd)

(2) For all Access Services, excluding Analog, Voice Grade, DS0 and DS1 Access Services

- a. Extraordinary Costs: The special construction terms and conditions specified in Section 14 will be used by the Telephone Company to determine charges to recover the extraordinary costs which may be involved. Authorization to incur the costs and to bill the customer will be in accordance with the terms and conditions Section 14.
- b. When the request for expediting occurs subsequent to the issuance of the access order, a Service Date Change Charge as specified in (A) preceding also applies.
- c. If the Telephone Company is subsequently unable to meet an agreed upon expedited service date, no Expedited Order Charge will apply, unless the missed service date was caused by the customer.

D. Partial Cancellation Charge

(MT)

Any decrease in the number of DNAL channels, Special Access Service channels, FRS Links or Ports, CCS/SS7 STP Port Terminations, STP Access Connections, Switched Access Service busy hour minutes of capacity or LIDB OPCs will be treated as a partial cancellation, and the charges set forth in Paragraph 5.2.4, following, will apply.

Access Services Tariff
Section 5
3rd Revised Sheet 8
Replacing 2nd Revised Sheet 8

ACCESS SERVICES

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

5.2.4 Cancellation of An Access Order

(CT) A. A customer may cancel an Access Order at any time prior to the service date or notification by the Telephone Company that service is available for the customer's use, whichever is later. The cancellation date is the date the
 (CT) Telephone Company receives written or verbal notice from the customer that the order is to be cancelled. The verbal notice must be followed by written confirmation within 10 days.

(AT) B. When Cancellation Charges Apply

(CT) If a customer or the customer's end user is unable to accept Access Service
 (RT) and the new service date requested is beyond the allowable service date change time period described in Section 5.2.3, A., preceding, the
 (CT) Access Order will be cancelled. When the customer cancels an access order on or after the application date, a Cancellation Charge will apply as specified below in addition to any other applicable charges specified in Paragraph 5.2.3.

1. For all Access Services, the Cancellation Charge equals:

The number of business days from the access order application date through the access order cancellation date (i.e., the service interval)

Multiplied by the average daily charge

Plus the access order charge.

The service interval is the number of business days from the access order application date through the access order cancellation date with the application date being day 1. Service installation costs incurred by the Telephone Company start on the application date.

If the customer has requested a service date change beyond the original service date, the number of business days beyond the original service date are included in the service interval.

(CT) Average daily charge equals installation charges plus rearrangement charges divided by the number of business days in the service interval.

**MISSOURI
Public Service Commission**

(RT) A. An IC may cancel an Access Order at any time prior to the service date or notification by the Telephone Company that service is available for the customer's use, whichever is later. The cancellation date is the date the Telephone Company receives written or verbal notice from the IC that the order is to be cancelled. The verbal notice must be followed by written confirmation within 10 days.

(CT) If an IC or its End User is unable to accept Access Service and the new IC requested service date is beyond the allowable service date change time period described in Section 5.2.3, A., preceding, the Access Order will be cancelled and the charges set forth in Paragraph 5.2.4, B., following will apply.

(AT) B. When a customer cancels an Access Order for the installation or rearrangement of service, a Cancellation Charge will apply as follows:

- (RT) 1. Costs incurred by the Telephone Company start on the Application Date. The Application Date is described in Paragraph 5.1, preceding. This date is also known as the order date.
- (RT) 2. Where the customer cancels an Access Order prior to the Application Date, no charges shall apply.
- 3. When the customer cancels an Access Order on or after the Application Date, a cancellation charge will be calculated as follows:

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

5.2.3 Cancellation of an Access Order

A. An IC may cancel an Access Order for the installation of service at any time prior to the service date or notification by the Telephone Company that service is available for the customer's use, whichever is later. The cancellation date is the date the Telephone Company receives written or verbal notice from the IC that the order is to be canceled. The verbal notice must be followed by written confirmation within 10 days.

If an IC or its End User is unable to accept Access Service and the new IC requested service date is beyond the allowable service date change time period described in Section 5.2.2, A., preceding, the Access Order will be cancelled and the charges set forth in Paragraph B., following will apply.

B. When a customer cancels an Access Order for the installation of service, a Cancellation Charge will apply as follows:

- (1) Costs incurred by the Telephone Company in conjunction with the installation of Switched or Special Access Service, start on the Application Date. The Application Date is described in Paragraph 5.1, preceding. This date is also known as the order date.
- (2) Where the customer cancels an Access Order prior to the Application Date, no charges shall apply.
- (3) When the customer cancels an Access Order on or after the Application Date, a cancellation charge will be calculated as follows:

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

5.2.2 Access Order Modifications-(Continued)

A. Service Date Change Charge-(Continued)

	<u>USOC</u>	<u>Charge</u>
Service Date Change Charge, per order	OMC	\$29.59

If the service date is changed to an earlier date, an Expedited Order Charge as set forth in Paragraph 5.2.2, D., following, will apply in addition to the Service Date Change Charge.

B. Partial Cancellation Charge

Any decrease in the number of Special Access Services, Switched Access Service busy-hour minutes of capacity or Dedicated Access Lines will be treated as a partial cancellation.

An IC may cancel any number of Special Access Services. For Switched Access Service busy-hour minutes of capacity, the amount cancelled cannot cause the order to drop below the minimum requirements as set forth in Paragraph 5.1.1, preceding, and Paragraph 5.5, following. When the capacity cancelled brings the ordered capacity below these minimum requirements, the entire order will be cancelled.

A Cancellation Charge will apply on a per-order, per-occurrence basis for the quantity cancelled. The applicable Cancellation Charge is computed as set forth in Paragraph 5.2.3, following.

C. Design Change Charge

The IC may request a design change to the service ordered. A design change is any change to an Access Order which requires engineering review. A design change may include such things as the addition or deletion of optional features or functions or a change in the type of Transport Termination (Switched Access only), type of facility interface, type of facility or type of access connection interface group. It may not include a change of IC terminal location, End User's premises, end office switch or Feature Group type.

ACCESS SERVICES

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

5.2.2 Access Order Modifications-(Continued)

C. Design Change Charge-(Continued)

Changes of this nature will require the issuance of a new order and the cancellation of the original order with appropriate charges applied. The Design Change Charge will apply to all Special Access Service, channels or Switched Access Service busy-hour minutes of capacity.

The Telephone Company will review the requested change, notify the IC whether the change can be accommodated and specify if a new service date is required. If the IC authorizes the Telephone Company to proceed with the design change, a Design Change Charge will apply. If the change involves the addition or deletion of optional features for which nonrecurring charges are stated, the Design Change Charge is equal to one-half the nonrecurring charge for each feature being added or deleted. When there is no nonrecurring charge associated with the change being made, the Design Change Charge is equal to one-half of the nonrecurring charges for the Access Service ordered. If multiple changes are made on a single order, some of which have separately stated nonrecurring charges and others which do not, both of the above charges will apply. The Design Change Charge will apply on a per-order, per-occurrence basis.

If a change of service date is required, the Service Date Change Charge as set forth in Paragraph 5.2.2, A., preceding, will also apply.

D. Expedited Order Charge

When placing an Access Order, an IC may request a service date that is prior to the standard interval service date. An IC may also request an earlier service date on a pending standard or negotiated interval Access Order. If the Telephone Company agrees to provide service on the requested date, an Expedited Order Charge will apply.

ACCESS SERVICES

5. ORDERING FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

5.2.5 Selection of Planned Facilities for Access Orders

- A. When there are analog or digital high-capacity facilities to the first point of switching for switched access or to a hub for special access, or when there are digital high-capacity facilities to an interconnecting Signal Transfer Point (STP) for CCS/SS7 Interconnection Service, the customer must specify a channel assignment for each service ordered. In addition, when a customer requests a Rollover, the Connecting Facility Assignments (CFA's) must be specified for the facilities involved in the Rollover for each service. The customer will provide this information to the Telephone Company during the order process.
- B. For all other Access Orders, the option to request a specific transmission path or channel is not provided, except as provided for under Special Facilities Routing as set forth in Section 11, following.

5.2.6 Minimum Period

(CT)

The minimum period for which Access Service is provided and for which charges are applicable is set forth in each section of this tariff.

When Access Service is disconnected prior to the expiration of the minimum period, charges are applicable for the balance of the minimum period. A disconnect constitutes facilities being returned to available inventory. This terminology does not refer to when billing is stopped, but rather distinguishes a disconnect from a service rearrangement.

Service arrangements may be made without a change in minimum period requirements where so specified in this tariff.

ACCESS SERVICES

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.2 Access Order-(Continued)

5.2.2 Access Order Modifications-(Continued)

D. Expedited Order Charge-(Continued)

To calculate the Expedited Order Charge, the total of all the nonrecurring charges associated with the order is divided by the number of days in the service date interval. The charge is then applied on a per day (i.e., calendar day) of improvement basis, per order. When the request for expediting occurs subsequent to the issuance of the Access Order, a service date change charge as set forth in Paragraph 5.2.2, A., preceding, also applies.

When expediting causes the Telephone Company to incur extraordinary costs that are not recovered by the Expedited Order Charge, the IC will be billed, on an individual-case basis, an amount equal to the costs incurred in lieu of an Expedited Order Charge.

E. Other Modification Charge

Modifications other than those described in Paragraphs 5.2.2, A., B., C. and D., preceding, may be requested by the IC. If the modification can be accommodated and implemented by the Telephone Company, an Other Modification Charge will apply on a per-order, per-occurrence basis.

Some of the types of modifications for which this charge will apply include, but are not limited to, the following:

- Change of billing address.
- Change of telephone number.
- Change in Hunt Group Arrangement.
- Change in Nonhunting Number of Hunt Group Arrangement.
- Change of Jurisdiction (i.e., breakdown between intrastate and interstate minutes of use for Switched Access Services).

Other Modification Charge,

DEC 29 1983
MISSOURI
Public Service Commission

5.2 Access Order-(Continued)

5.2.3 Cancellation of an Access Order

A. An IC may cancel an Access Order for the installation of service on any date prior to the service date. The cancellation date is the date the Telephone Company receives written or verbal notice from the IC that the order is to be cancelled. The verbal notice must be followed by written confirmation within 10 days.

If an IC or an End User is unable to accept Access Service within 30 calendar days of the original service date, the IC has the choice of the following options:

- The Access Order shall be cancelled, and charges set forth in Paragraph 5.2.6, C., following, will apply, or
- Billing for the service will commence.

In such instances, the cancellation date or the billing date, depending on which option is selected by the IC, shall be the 31st day beyond the original service date of the Access Order.

B. Access Order costs are considered to have started when the Telephone Company incurs any cost in connection therewith or in preparation thereof which would not otherwise have been incurred. These costs include but are not limited to preliminary engineering, orders to suppliers and other similar items of cost. For purposes of determining Cancellation Charges, the costs are considered to have started on the order date (i.e., the day the Telephone Company gives a firm order confirmation to the IC).

C. When an IC cancels an Access Order for the installation of service, a Cancellation Charge will apply on a per-order basis. The Cancellation Charge is calculated by multiplying the total of the nonrecurring charges associated with all items on the Access Order by the number of calendar days elapsed since the order date and dividing that figure by the number of days in the service interval (i.e., the number of days between the order date and the service date). The resulting amount is the Cancellation Charge. When determining the charge for a partial cancellation, as set forth in Paragraph 5.2.2, B., preceding, only those nonrecurring charges associated with the portion of the order being cancelled are used in computing the charge.

5.2.3 Cancellation of an Access Order-(Continued)

D. When an IC cancels an order for the discontinuance of service, no charges apply for the cancellation.

5.2.4 Selection Of Planned Facilities For Access Orders

- A. When there are facilities in the activated state for its use under a Planned Facilities Order or analog or digital high capacity services or a Hub in the Access Service state, an IC may request a specific channel or transmission path be used to provide the Switched or Special Access Service requested in an Access Order. The Telephone Company will make a reasonable effort to accommodate the IC's request. If the Telephone Company determines that the request cannot be met with reasonable effort, and another facility is activated for the IC's use, the Telephone Company will specify the use of that facility and notify the IC accordingly.
- B. For all other Access Orders, the option to request a specific transmission path or channel is not provided, except as provided for under Special Facilities Routing as set forth in Section 11, following.

5.2.5 Minimum Period

- A. Except as set forth in Paragraph 5.2.5, B. and C., following, the minimum period for which Access Service is provided and for which charges are applicable is six months. For the application of minimum period charges for Switched Access Service Feature Groups B, C and D, it is assumed that the last identical capacity placed in service is the first one discontinued.
- B. The minimum period for which Access Service ordered under a short Notice Interval is provided and for which charges are applicable is one month.
- C. The minimum period for analog and digital high capacity services (facilities) to a Hub (service date and activation date are always the same) is 24 months and applies as set forth in Paragraph 5.4.9, A., following.

5.2 Access Order-(Continued)

5.2.7 Shared Use Facilities

Shared Use (i.e., Switched and Special Access Services provided over the same analog or digital high capacity facilities) is allowable only for existing services and to fill out existing systems. Only Switched Access Service busy-hour minutes of capacity may be added to fill out existing systems. When Switched or Special Access Services provided over a shared use facility are disconnected, only Switched Access Service busy-hour minutes of capacity can be ordered by the IC to backfill the system.

5.3 Available Inventory

Available inventory is limited and does not include facilities previously ordered or reserved. Available inventory also does not include analog or digital high capacity facilities. All Access Orders for analog or digital high capacity services or interface groups (i.e., Group, Supergroup, Master-group, DS1, DS1C, DS2, DS3 and DS4) require the use of Planned Facilities.

To the extent they can be provided, the Telephone Company will provide other than high capacity Access Services from an available inventory, except when the IC has Planned Facilities activated for its use and requests the Telephone Company to use such Planned Facilities in providing the requested services.

5.4 Planned Facilities Order

5.4.1 General

- A. An IC may place a Planned Facilities Order for the provision of Planned Facilities. Planned Facilities provided for Special Access Service include Access Connections, Special Transport, Features and Functions and Special Access Lines as described in Section 7, Paragraph 7.1, following. Planned Facilities provided for Switched Access Service include Access Connections, Local Transport and End Office functions as described in Section 6, Paragraph 6.1, following. Planned Facilities will be made available by the Telephone Company for the IC's use on an established activation date. The combinations which may be ordered and made available for the IC's use on the activation date are set forth in Paragraph 5.4.2, following.
- B. Planned Facilities Orders must be placed separately for each activation date for Special Access Service and Switched Access Service. For Switched Access Service, a separate order must be placed for each IC terminal location to end office (by Feature Group type) ordered.

For Special Access Service, separate orders must be placed for each IC terminal location to End User's premises, IC terminal location to IC terminal location and IC terminal location to Hub serving wire center, End User's premises to End User's premises or End User's premises to WATS or WATS-type serving office.

Metallic facilities between the IC terminal location and the IC serving wire center may be ordered for use with Switched Access Service or Special Access Service. A separate order must be placed for each request for such facilities.

- C. To the extent that Planned Facilities can be made available, and unless Special Construction Charges apply as set forth in Paragraph 5.4.1, D., following, the Planned Facilities ordered will be available to the IC at rates and charges as set forth in Paragraph 5.4.11, following, on the activation date. Except as set forth following, the activation date may be set for any working day at least 24 months but not more than 36 months after the order date.

5.4 Planned Facilities Order-(Continued)

5.4.1 General-(Continued)

C. (Continued)

With the agreement of the Telephone Company, the Planned Facilities activation date may be scheduled for a date earlier than 24 months from the order date. If an IC requests an activation date more than 36 months after the order date, the Telephone Company will determine if such requests can be accommodated. When they can be, orders shall be accepted.

D. Planned Facilities for which the Telephone Company has no foreseeable reuse, may be subject to Special Construction Charges as set forth in Section 14, following, in addition to the rates and charges set forth in Paragraph 5.4.11, following.

The Telephone Company shall determine whether Special Construction Charges apply and will so notify the IC prior to establishing a firm order.

5.4.2 Planned Facilities Provided

The IC may order Planned Facilities as follows:

A. For Switched Access Service

1. Two-wire and four-wire metallic facilities between the IC terminal location and the IC serving wire center. These must be ordered in 100 pair units.
2. Busy-hour minutes of capacity (BHMC) between an IC terminal location and an end office (by Feature Group and type of BHMC). Optional features may also be specified by the IC.

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.4 Planned Facilities Order-(Continued)

5.4.2 Planned Facilities Provided-(Continued)

A. For Switched Access Service-(Continued)

Only those rate elements included on the Planned Facilities Order will be made available to the IC on the activation date.

B. For Special Access Service

1. Two-wire and four-wire metallic facilities between the IC terminal location and the IC serving wire center. These must be ordered in 100 pair units.
2. Analog and digital high capacity (i.e., Group, Supergroup, Mastergroup, DS1, DS1C, DS2, DS3 and DS4) facilities between an IC terminal location and a Hub serving wire center. Hub functions may also be specified by the IC.
3. Analog and digital high capacity (i.e., Group, Supergroup, Mastergroup, DS1, DS1C, DS2, DS3 and DS4) facilities between two IC terminal locations. One of the IC terminal locations will be treated as an End User's premises. Facility interface combinations and optional features may also be specified by the IC.
4. Narrowband, Voice Grade, Program Audio, Wideband Analog, Wideband Digital, Digital Data Access and High Capacity 1 (HC1) facilities between an IC terminal location and an End User's premises. Features and functions (e.g., facility interface combinations and optional features) may also be specified by the IC.
5. Dedicated Access Line Service two-wire or four-wire facilities between an End User's premises and a WATS or WATS-like serving office. Optional features may also be specified by the IC.

Only those rate elements included on the Planned Facilities Order will be made available to the IC on the activation date.

5.4.3 Advance Payments

MISSOURI
Public Service Commission

Planned Facilities Orders are subject to advance payments by the IC. Three advance payments are required during the Order Interval, i.e., interval between the order date and the original activation date. These are set forth in Paragraphs 5.4.3, A., B. and C., following. Each advance payment is based on the monthly charge as described in Paragraph 5.4.11, following.

- A. The first advance payment is due to the Telephone Company 30 days after the order date. The payment shall be an amount equal to three times the monthly charge.
- B. The second advance payment is due to the Telephone Company on the last day of the month that is specified in the following table:

<u>Order Interval In Months</u>	<u>Month After Order Date Second Payment Is Due</u>
up to 19	1st
over 19 to 20	2nd
over 20 to 21	3rd
over 21 to 22	4th
over 22 to 23	5th
over 23 to 24	6th
over 24	7th

The payment shall be an amount equal to six times the monthly charge.

5.4 Planned Facilities Order-(Continued)

5.4.3 Advance Payments-(Continued)

C. The third advance payment is due to the Telephone Company on the last day of the month that is specified in the following table:

<u>Order Interval In Months</u>	<u>Month After Order Date Third Payment Is Due</u>
up to 12	1st
over 12 to 13	2nd
over 13 to 14	3rd
over 14 to 15	4th
over 15 to 16	5th
over 16 to 17	6th
over 17 to 18	7th
over 18 to 19	8th
over 19 to 20	9th
over 20 to 21	10th
over 21 to 22	11th
over 22 to 23	12th
over 23 to 24	13th
over 24	14th

The payment shall be an amount equal to three times the monthly charge.

If any advance payment is not received by the Telephone Company by the end of the first working day of the next month, the Telephone Company will cease all work on the Planned Facilities Order involved and Cancellation Charges as set forth in Paragraph 5.4.6, following, will apply.

In those cases where the activation date is less than 24 months, the second and possibly the third advance payment may be due at the same time as the first advance payment.

The advance payments will be credited against money owed by the IC for activated Planned Facilities or Access Services of the same type, i.e., Switched Access Feature Group accounts or Special Access accounts, on the activation date for the facility for which the advance payment was taken.

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE-(Continued)

5.4 Planned Facilities Order-(Continued)

5.4.3 Advance Payments-(Continued)

C. (Continued)

Should the Planned Facilities Order be cancelled by the IC, the amount of the advance payments will be credited to the IC's account, and any remaining credit balance will be refunded. The fact that advance payments have been made in no way relieves the IC from complying with the Telephone Company's regulations as to other payments or the prompt payment of bills.

5.4.4 Hub Serving Wire Centers

Planned Facilities Hub serving wire centers for Special Access may be established by the Telephone Company at designated locations in a LATA. A Hub is a Telephone Company office where facilities will be available to reach a specified set of serving wire centers and End User's premises. The location of Hubs, if any, in a LATA will be specified by the Telephone Company. Different serving wire centers may be designated as Bridging Hubs and Multiplexing Hubs. The wire centers served by the Hub serving wire center will also be specified by the Telephone Company.

5.4.5 Modifications of Planned Facilities Orders

Modifications of Planned Facilities Orders may be made by the IC without charge prior to acceptance by the Telephone Company of the Planned Facilities Order. The date when the order is accepted is known as the order date. After the order date, modifications may be made as set forth following:

A. Change in Number of Facilities

After the order date, any increase or decrease in the number or type of facilities ordered will be treated as follows:

1. An increase in the number of facilities ordered will be treated as a new Planned Facilities Order for the increased amount only.

2. Any decrease in the number of facilities ordered will be treated as a cancellation (for the decreased amount only) and will be subject to the regulations and charges set forth in Paragraph 5.4.6, following.

5.4 Planned Facilities Order-(Continued)

5.4.5 Modifications of Planned Facilities Orders-(Continued)

B. Activation Date Changes

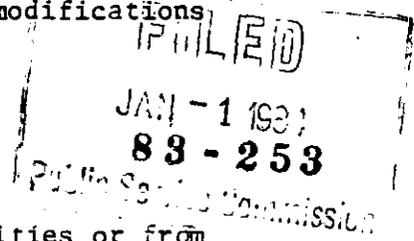

With the agreement of the Telephone Company, the IC may change the activation date of a Planned Facilities Order subject to the following conditions:

1. No activation date may be established that is more than 12 months beyond the activation date specified on the original order. If the IC is unable to accept the facilities within 12 months of the original activation date, the IC has the choice of the following options:
 - a. The Planned Facilities Order shall be cancelled and charges set forth in 5.4.6, B., following, will apply or
 - b. Billing for the facilities will commence.
2. If the requested date is prior to the original activation date, Additional Engineering, Additional Labor and/or special construction charges may apply in order to meet the date. The Telephone Company will determine whether such charges apply and will notify the IC accordingly.
3. A Planned Facilities Order Modification Charge as set forth in Paragraph, 5.4.5, D., following, will apply for each activation date change.

C. Other Modifications

1. With the agreement of the Telephone Company, other modifications may be made prior to the activation date. The types of modifications that may be made include, but are not limited to:

- Change in facility interface
- Addition or deletion of optional features
- Change in type of Transport Termination (Switched Access only)
- Change from two-wire facilities to four-wire facilities or from four-wire facilities to two-wire facilities

A Planned Facilities Order Modification Charge as set forth in Paragraph 5.4.5, D., following, will apply for these types of modification.

2. The following types of modifications may not be made, but instead require the cancellation and reissuance of the order:

C. Other Modifications-(Continued)

2. (Continued)

- Change in Feature Group type
- Change in location, i.e., the IC terminal location, the Hub location, the end office or the End User's premises
- Change in type of facilities other than from two-wire facilities to four-wire facilities or four-wire facilities to two-wire facilities

Cancellation Charges as set forth in Paragraph 5.4.6, following, will apply in these cases.

D. Planned Facilities Order Modification Charge

The Planned Facilities Order Modification Charge is applied on a per-order, per-occurrence basis. The applicable charge is:

	<u>USOC</u>	<u>Charge</u>
Planned Facilities Modification Charge, per order.	OMC	\$29.59

If more than one change is being made at the same time, only one charge applies.

5.4.6 Cancellation of a Planned Facilities Order

A. A Planned Facilities Order may be cancelled after the order date. Cancellation Charges will apply as set forth in Paragraphs 5.4.6, B and C.. following. The cancellation date is the date the Telephone Company receives written or verbal notice from the IC that the capacity or channels ordered are to be cancelled. The verbal notice must be followed by written confirmation within 10 days.

B. The applicable Cancellation Charge is based on the interval between the cancellation date and the activation date or the interval between the cancellation date and 24 months after the order date, whichever interval is shorter. This interval is known as the Cancellation Interval. The Cancellation Charge applicable to each Cancellation Interval is shown in the following table:

5. ORDERING OPTIONS FOR SWITCHED AND SPECIAL ACCESS SERVICE--(Continued)

5.4 Planned Facilities Order--(Continued)

5.4.7 Activation of Planned Facilities

The Planned Facilities ordered are made available for the IC's future service needs on the activation date. Special or Switched Access Service using the Planned Facilities will be provided pursuant to standard, negotiated or short-notice service date intervals, under an Access Order as set forth in Paragraph 5.2.1, preceding. The service date on such orders may be the same as, or later than, the Planned Facilities Order activation date. For analog and digital high capacity planned facilities order to a Hub, the service date and activation date are always the same. When the service and activation dates are the same, the Access Order charges apply and the Planned Facilities charges do not. If the service is disconnected prior to the expiration of the minimum-period requirements for the Planned Facilities Order, the facilities will be returned to the activated status and Planned Facilities Order minimum-period charges will commence and will apply until such time as the minimum-period requirements are fulfilled.

5.4.8 Delayed Activation Credit

The Telephone Company will make every effort to provide the Planned Facilities to the IC on the established activation date. If the date is missed, unless for reasons beyond the control of the Telephone Company as set forth in Section 2, Paragraph 2.1.3, preceding, and Paragraphs 5.4.12, following, a Delayed Activation Credit will apply and will be credited to the IC's account.

The Delayed Activation Credit will be 1/30 of the monthly charge as specified in Paragraph 5.4.11, following, for each day the date is missed.

5.4.9 Minimum Period

- A. The minimum period for which Planned Facilities are activated for the IC's use and for which charges are applicable is 24 months. Beginning on the activation date, the appropriate charges as specified in Paragraph 5.4.11, following, will apply.

5.4.9 Minimum Period-(Continued)

- B. Facilities in the activated status for which the minimum period has ended will be treated as follows:
 1. Subject to Paragraph 5.4.9, C., following, the IC may retain the facilities in the activated status, and the charges as set forth in Paragraph 5.4.11, following, will apply.
 2. Subject to the provisions of Paragraph 5.5, following, the IC may return the facilities to the Telephone Company upon 30-days' notice. All availability for use by the IC will cease as of that date.
- C. Facilities in the activated status for which the minimum period has ended, and for which there are no currently pending Access Orders, except those where special construction applies, may be taken by the Telephone Company for its use upon written 90-days' notice to the ordering IC. If the IC does not submit Access Orders for the use of such Planned Facilities prior to the end of the 90-day notice period, all availability for use by the IC will cease as of that date or other date mutually agreeable to the Telephone Company and the IC, and charges as set forth in Paragraph 5.4.11, following, will cease.
- D. Planned Facilities provided by special construction will be subject to liabilities and charges as set forth in Section 14, following, in addition to Paragraphs 5.4.9, A, through C., preceding.

5.4.10 Minimum Period Charges

When Planned Facilities are returned to the Telephone Company prior to the expiration of the minimum period, charges are applicable for the remainder of the minimum period. The charge for the quantity returned will be an amount equal to the applicable monthly charge times the number of months and/or fraction thereof between the return date and the end of the minimum period. The monthly charge is set forth in Paragraph 5.4.11, following.

5.4.11 Monthly Charge

Monthly charges are applicable for activated Planned Facilities. The monthly charge will apply from the activation date until such time as the facilities are used to provide Access Service via an Access Order or until the minimum period requirements have been satisfied. If the minimum period requirement has been satisfied and the IC chooses to retain the facilities in the activated status, the monthly charge will continue to apply. If the IC requests the Planned Facilities be used to provide Access Service and they are so used, the Planned Facilities monthly charge will cease, and the appropriate Switched or Special Access Service rates and charges set forth in Section 6, Paragraph 6.8 and Section 7, Paragraph 7.5, respectively, will apply.

The monthly charge will serve as the basis for advance payments and Cancellation Charges, as well as for the monthly charge to be billed for activated Planned Facilities.

The monthly charges are as follows:

A. For Switched Access

Activated Switched Access Planned Facilities between the IC terminal location and the end office will be billed at the rates established for Minimum Monthly Usage Charge (MMUC) as set forth in Section 6, Paragraph 6.7.5, following.

B. For Special Access

Activated Special Access Planned Facilities will be billed at the monthly rates in Section 7, Paragraphs 7.5.1, 7.5.2 and 7.5.4, following, for the Access Connections, Special Transport and Special Access Lines, respectively.

Bridging functions, if specified on the Planned Facilities Order, will be billed at the monthly rates set forth in Section 7, Paragraph 7.5.3, C., following. Billing for all other Features and Functions, including Facility Interface Combinations, even if specified on the order, will not commence until placed in service via an Access Order. The monthly rate is the total of all the items included on the order for which charges are to apply while in the activated status.

C. For Metallic Facilities

Two-wire and four-wire metallic facilities between an IC terminal location and the IC serving wire center, whether ordered as Switched Access or Special Access, will be billed at the monthly rates set forth in Section 7, Paragraph 7.5.1, following, for two-wire and four-wire Special Access Service Access Connections.

5.4.12 Planned Facilities Test and Line Up

A. Prior to the activation date, the Telephone Company will test and line up the facilities provided, as appropriate. Test and line up will be made by the Telephone Company using the IC facilities which are installed at the IC terminal location to terminate the capacity or services provided. The IC shall provide personnel and equipment and shall have its facilities available to complete the testing and line up during the period specified. If the personnel, equipment and facilities are not provided by the IC, and the activation date is missed, no Delayed Activation Credit applies.

B. Testing and line up as set forth in Paragraph 5.4.12, A., preceding, may begin up to 30 days prior to the scheduled activation date. The Telephone Company will notify the IC of the scheduled start date at least ten working days prior to such date. If this date is mutually agreeable, the Telephone Company will begin testing on the scheduled date. If this date is not agreeable to the IC and another date is agreed upon, no Delayed Activation Credit will apply if the facilities are not available on the activation date.

5.5 Switched Access Service Minimum Capacity Requirements

- 5.5.1 When Switched Access Service Access Connections are ordered under Planned Facilities Orders or Access Orders, they will be provided subject to the minimum capacity provisions set forth in Paragraph 5.1.1, preceding, and Paragraphs 5.5.2 through 5.5.7, following.
- 5.5.2 There is no minimum capacity for Interface Groups 1 and 2, except as set forth in Paragraphs 5.4.2, A. 1., preceding. The minimum capacity provided for Interface Groups 3 through 10 and for which charges are applicable is set forth in Paragraph 5.5.6, following.
- 5.5.3 When additional busy-hour minutes of capacity are ordered, they may be provided using activated or in-service Access Connection Interface Groups. Such busy-hour minutes of capacity, up to and including the number that brings the Interface Group to its designated capacity, will be provided without being subject to the minimum capacity provisions as set forth in Paragraph 5.5.6, following. Any additional busy-hour minutes of capacity ordered will be subject to the minimum capacity provisions, unless they are provided under an Access Order using Planned Facilities.

5.5 Switched Access Service Minimum Capacity Requirements-(Continued)

- 5.5.4 When an IC requests high frequency analog or Digital interface groups, the IC is required to order at a minimum, sufficient capacity to utilize 70 percent of the channels.
- 5.5.5 For the purpose of administering the minimum capacity provisions, Access Orders for Access Connection Interface Groups for different Feature Groups may be grouped together if the facilities provided for all the connections are the same and terminate in the same facilities terminal in the same end office.
- 5.5.6 The following table provides the total capacity of the interface and the threshold for minimum order requirements:

<u>Interface Type</u>	<u>Interface Name</u>	<u>Total Capacity (Channels)</u>	<u>Minimum Capacity (Channels)</u>
Analog	Group	12	9
Analog	Supergroup	60	42
Analog	Mastergroup	600	420
Digital	DS1	24	17
Digital	DS1C	48	34
Digital	DS2	96	68
Digital	DS3	672	471
Digital	DS4	4032	2823

The Telephone Company will not provide these Interface Groups when less than 70 percent of the capacity is ordered. For purposes of grouping as set forth in Paragraph 5.5.5, preceding, it shall be assumed that Feature Groups A, B, C or D minutes may be combined.

- 5.5.7 When Switched Access Service provided from available inventory is disconnected and the disconnect causes the in-service capacity to fall below the minimum requirements, the Telephone Company will at the option of the IC:

- A. Disconnect all the service subject to the minimum capacity requirements, and all appropriate charges will apply, or

5.5 Switched Access Service Minimum Capacity Requirements-(Continued)

5.5.7 (Continued)

- B. Establish a Planned Facilities Order for the minimum capacity as of the disconnect date, and all facilities not in service required to meet the minimum requirements will be established as activated Planned Facilities, with appropriate charges applying.

When a return of Planned Facilities to the Telephone Company causes the activated capacity to fall below the minimum, the Telephone Company will take back all Planned Facilities involved and all appropriate charges will apply.

5.6 Record Modification and Charges

An IC may request a record modification for existing Access Service or activated Planned Facilities. Record modifications include the following types of changes:

- Billing name
- Billing address
- Contact telephone number
- Rearrange account structure
- Change designation of IC serving wire center (applies only to the application of the five-mile rule as set forth in Paragraph 6.7.13, B., following).

The charges to be applied for record modifications are as follows:

- For changes to existing Access Service, a charge equal to the amount of the Other Modification Charge set forth in Paragraph 5.2.2, E., preceding, will apply.
- For changes to activated Planned Facilities, a charge equal to the amount of the Planned Facilities Order Modification Charge set forth in Paragraph 5.4.5, D., preceding, will apply.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE

6.1 General

Switched Access Service provides a two-point electrical communications path between the IC terminal location and telephone exchange service locations. Each path is capable of the transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

Switched Access Service provides for the use of common terminating, switching and trunking facilities and jointly used subscriber plant of the Telephone Company's public switched network by IC's for their use in furnishing their services. Directory listings are not included with Switched Access. These are provided from the Telephone Company's Local and/or General Exchange Service Tariff.

Switched Access Service is provided in various feature group arrangements which are differentiated by the type of connection (i.e., line side connection and trunk side connection) and the access calling pattern (e.g., 950-10XX calling in a LATA, 10XX calling in a LATA, etc.).

Switched Access Service provides for the ability to make and receive calls to and from telephone exchange service locations in the LATA associated with the specific feature group provided.

At the option of the IC, Switched Access Service may be provided for both interstate and intrastate communications. When the IC orders such mixed access, it is responsible for providing the reports in Paragraph 2.3.14, preceding, to the Telephone Company.

When the IC plans to use Switched Access Service in connection with the resale of services of another IC, such Switched Access Service will be provided subject to the rate regulations set forth in Paragraph 6.7.3, following. Such Switched Access Service will be provided as set forth in the following paragraphs of this Section. The IC shall order the features and options it desires in accordance with the provisions of this Section.

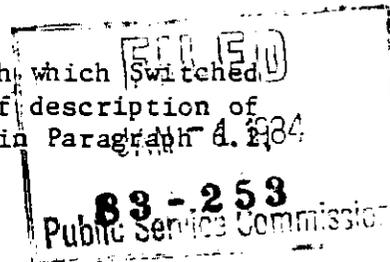

6.1.1 Feature Group Arrangements

There are four feature group arrangements through which Switched Access Service is provided. Following is a brief description of each. More detailed descriptions are set forth in Paragraph 6.2, following.

A. Feature Group A (FGA)

FGA Access provides line side access to Telephone Company end office switches with an associated seven-digit local telephone number for the IC's use in originating and terminating communications.

6.1 General

Switched Access Service, which is available to customers for their use in furnishing their services to end users, provides a two-point electrical communications path between a customer's premises and an end user's premises. It provides for the use of common terminating, switching, trunking facilities and common subscriber plant of the Telephone Company. Switched Access Service provides for the ability to originate calls from an end user's premises to a customer's premises, and to terminate calls from a customer's premises to an end user's premises in the LATA where it is provided. Specific references to material describing the elements of Switched Access Service are provided in Paragraphs 6.1.1, 6.1.2, 6.2, and 6.3.

(RT)
—
(RT)

A transitional period exists during which Switched Access Service will be provided either in four service categories called Feature Groups or in three service categories called Basic Serving Arrangements (BSAs) along with their associated Basic Service Elements (BSEs). This transition period will expire at the time Feature Groups are eliminated for interstate services. At the expiration of this transition period, Feature Group arrangements will be abolished, any remaining feature group services will be automatically converted by the Telephone Company to BSA/BSE formats and Switched Access Service will only be provided as Basic Serving Arrangements and Basic Service Elements.

The Telephone Company will provide written notification of the date the Feature Groups are being eliminated, as well as the last date the Telephone Company will accept orders for feature group service to all access customers of record. This notification will be sent at least six months in advance of the elimination date.

During this transitional period, Switched Access Service will be provided as both Feature Groups and Basic Serving Arrangements to Telephone Company end offices (either directly routed or routed via an access tandem) except as set forth following:

6. SWITCHED ACCESS SERVICE--(Continued)

JUL 12 1994

MAR 29 1993

6.1 General

BY 5# B.S.#2
MISSOURI Public Service Commission

Switched Access Service, which is available to customers for their use in furnishing their services to end users, provides a two-point electrical communications path between a customer's premises and an end user's premises. It provides for the use of common terminating, switching, trunking facilities and common subscriber plant of the Telephone Company. Switched Access Service provides for the ability to originate calls from an end user's premises to a customer's premises, and to terminate calls from a customer's premises to an end user's premises in the LATA where it is provided. Specific references to material describing the elements of Switched Access Service are provided in Paragraphs 6.1.1, 6.1.2, 6.2, and 6.3.

The Switched Access Service Tariffs that implement the Company's intrastate Open Network Architecture access structure (e.g., Basic Serving Arrangements, Basic Service Elements) are designated as "Experimental and Temporary." Absent good cause, the Company will file permanent ONA tariffs no later than December 31, 1993. Until those permanent tariffs become effective, these Experimental and Temporary tariffs will remain in effect.

A transitional period exists during which Switched Access Service will be provided either in four service categories called Feature Groups or in three service categories called Basic Serving Arrangements (BSAs) along with their associated Basic Service Elements (BSEs). This transition period will expire at the time Feature Groups are eliminated for interstate services. At the expiration of this transition period, Feature Group arrangements will be abolished, any remaining feature group services will be automatically converted by the Telephone Company to BSA/BSE formats and Switched Access Service will only be provided as Basic Serving Arrangements and Basic Service Elements.

The Telephone Company will provide written notification of the date the Feature Groups are being eliminated, as well as the last date the Telephone Company will accept orders for feature group service to all access customers of record. This notification will be sent at least six months in advance of the elimination date.

During this transitional period, Switched Access Service will be provided as both Feature Groups and Basic Serving Arrangements to Telephone Company end offices (either directly routed or routed via an access tandem) except as set forth following:

6.1 General-(Continued)

- (AT) - Bundled and unbundled trunk side equivalents (e.g., FGB and BSA-B, FGC and BSA-C, and FGD and BSA-D) may not be provided for the same Carrier Identification Code (CIC) at Telephone Company end offices which subtend the same access tandem. When a Telephone Company end office subtends multiple tandems (e.g., an access tandem and an OSS tandem), bundled and unbundled equivalents may not be provided for the same CIC at any Telephone Company end office which subtends either tandem.
- Bundled and unbundled line side equivalents (i.e., FGA and BSA-A) may not be mixed in the same multiline hunt group.

Switched Access Service Categories are differentiated by their technical characteristics, e.g., line side vs. trunk side connection at the Telephone Company entry switch, and the manner in which an end user accesses them in originating calling, e.g., with or without an access code. Feature Groups are described in Section 6, Paragraph 6.2, following. Basic Service Arrangements are described in Section 6, Paragraph 6.3, following.

(AT)
(FC) 6.1.1 Manner of Provision

(RT)
(RT)
(AT) Switched Access is furnished in either quantities of lines or trunks for FGA, FGB, BSA-A and BSA-B, busy hour minutes of capacity (BHMCs) for (AT) FGC, FGD, BSA-C, and BSA-D, or in quantities of channels for DNAL. FGD and BSA-D may also be provided to customers on a per trunk basis as set forth in Paragraph 5.2, preceding.
(AT)

BHMCs and trunks are differentiated by type and directionality of traffic carried over a Switched Access Service arrangement. Differentiation of traffic is necessary for the Telephone Company to properly design Switched Access Service to meet the traffic carrying capacity requirement of the customer.

There are two major traffic categories identified as: Originating and Terminating.

Originating represents access capacity within a LATA for carrying traffic from the end user to the customer;

6. SWITCHED ACCESS SERVICE-(Continued)

6.1 General-(Continued)

6.1.1 Feature Group Arrangements and Manner of Provision-(Continued)

D. Feature Group D (FGD)

FGD Access, which is available to all customers, provides trunk side access to Telephone Company end office switches with an associated uniform 10XXX access code for the customer's use in originating and terminating communications. A more detailed description of FGD Access is provided in Paragraph 6.2.4, following.

E. Manner of Provision

Switched Access is furnished in busy hour minutes of capacity. BHMCS are differentiated by type and directionality of traffic carried over a Switched Access Service arrangement. Differentiation of traffic among BHMCS types is necessary for the Telephone Company to properly design Switched Access Service to meet the traffic carrying capacity requirement of the customer.

There are four major BHMCS categories identified as: Originating, Terminating, FGA and Directory Assistance. Originating BHMCS represent access capacity within a LATA for carrying traffic from the end user to the customer; Terminating BHMCS represent access capacity within a LATA for carrying traffic from the customer to the end user; and, Directory Assistance BHMCS represent access capacity within a LATA for carrying Directory Assistance traffic from the customer to a Directory Assistance location. When ordering capacity for FGC Access or FGD Access, the customer must at a minimum specify such access capacity in terms of Originating BHMCS and/or Terminating BHMCS. Directory Assistance BHMCS are used for ordering Directory Assistance Access Service as set forth in Section 9., following.

Because some customers will wish to further segregate their originating traffic into separate trunk groups, Originating BHMCS are further categorized into Domestic, 800, 900, Operator and FGB. Domestic BHMCS represent access capacity for carrying only domestic traffic other than 800, 900 and Operator traffic. When ordering such types of access capacity, the customer must specify Domestic, 800, 900, Operator or FGB BHMCS.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.1 General-(Continued)

6.1.3 Rate Categories-(Continued)

A. Access Connections

The Access Connections rate category provides for the busy-hour minutes of capacity and interface arrangements established for the IC. Such Access Connections are provided at rates and charges as set forth in Paragraph 6.8.1, following.

Access Connection busy-hour minutes of capacity are differentiated by type of traffic. There are four major categories of busy-hour minutes of capacity, i.e., originating, terminating, Feature Group A and Directory Assistance. Originating busy-hour minutes of capacity may be further categorized to domestic, 800, 900 or operator. The IC must specify originating, terminating, Feature Group A or Directory Assistance when ordering capacity. In addition, if separate trunk groups are required for Feature Groups B or C originating busy-hour minutes of capacity, the IC may also specify domestic, 800, 900 or operator.

Access Connections are provided in ten separate Interface Groups. Each Interface Group provides a specified facility interface (e.g., two-wire, four-wire, DSL, etc.). Interface Groups 3-10 are subject to the minimum busy-hour minutes of capacity requirements when ordered as set forth in Section 5, preceding. Where transmission facilities permit, the individual transmission paths between the point of interface and the first point of switching may, at the option of the IC, be provided with optional features as set forth in Paragraph 6.1.3, A.12.a., following. Provision of the Interface Groups and any optional features may require placement of Telephone Company equipment on the IC's premises.

Interface Group 1 is provided with Transmission Performance Capability Type C, and Interface Groups 2 through 10 are provided with Transmission Performance Capability Type A or B, depending on the Feature Group and whether the Access Service is routed directly or through an access tandem. Interface Groups 3 through 10 are provided with Data Transmission Parameters.

Only certain facility interface codes are available at the IC terminal locations. The facility interfaces associated with the Interface Groups may vary among Feature Groups. The various facility interfaces which are available with the Interface Groups, and the Feature Groups with which they may be used, are set forth in Paragraph 6.1.3, A.11, following.

The capacity provided with each Interface Group is based on the IC's order subject to Section 5.5, preceding.

6.1 General-(Continued)

6.1.2 Rate Categories – (Continued)

A. Local Transport

(FC) The Local Transport rate category provides the transmission facilities between the IC terminal location and the end office switch(es) where the IC's traffic is switched to originate or terminate its communications. For purposes of determining Local Transport mileage, distance will be calculated as set forth in Paragraph 6.10.15, following.

(FC) Local Transport is a two-way voice frequency transmission path composed of facilities determined by the Telephone Company. The two-way voice frequency transmission path permits the transport of calls in the originating direction and in the terminating direction, but not simultaneously. The voice frequency transmission path may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

(FC) Local Transport is provided at the rates and charges set forth in Paragraph 6.11.1, following.

Original Sheet 5

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.1 General-(Continued)

6.1.3 Rate Categories-(Continued)

A. Access Connections-(Continued)

1. Interface Group 1

- a. Interface Group 1, except as set forth in Paragraph 6.1.3, A.1.b., following, provides two-wire voice frequency transmission at the point of interface at the IC terminal location. The interface is capable of transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.
- b. Interface Group 1 is not provided in association with FGC and FGD when the first point of switching is an access tandem. In addition, Interface Group 1 is not provided in association with FGB, FGC or FGD when the first point of switching provides only four-wire terminations.
- c. The transmission path between the points of interface at the IC terminal location and the first point of switching may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of 300 to 3000 Hz.
- d. The interface is provided with loop supervisory signaling. When the interface is associated with FGA, such signaling will be loop start or ground start signaling. When the interface is associated with FGB, FGC or FGD, such signaling, except for two-way calling which is E&M signaling, will be reverse battery signaling.

2. Interface Group 2

- a. Interface Group 2 provides four-wire voice frequency transmission at the point of interface at the IC terminal location. The interface is capable of transmission of voice and associated telephone

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.1 General-(Continued)

6.1.2 Rate Categories – (Continued)

A. Local Transport

Ten Interface Groups are provided for terminating the Local Transport at the customer's premises. Each Interface Group provides a specified premises interface (i.e., two-wire, four-wire, DS1, etc.). Where transmission facilities permit, the individual transmission paths between the customer's premises and the first point of switching may, at the option of the IC, be provided with Local Transport features as set forth in Paragraphs 6.1.2, A.12.a. and b., following.

As a result of the customer's access order and type of Telephone Company transport facilities serving the customer's premises, the need for level control equipment, signaling conversions or two-wire to four-wire con-versions or the need to terminate digital or high frequency facilities in channel bank equipment may require that Telephone Company equipment be placed at the customer's premises. For example, if a voice frequency interface is ordered by the customer and the Telephone Company facilities serving the customer's premises are digital, then Telephone Company channel bank equipment must be placed at the customer's premises in order to provide the voice frequency interface ordered by the customers.

Interface Group 1 is provided with Type C Transmission Specifications, and Interface Groups 2 through 10 are provided with Type A or B Transmission Specifications, depending on the Feature Group or Basic Serving Arrangement and whether the Access Service is routed directly or through an access tandem. All Interface Groups are provided with Data Transmission Parameters.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.1 General-(Continued)

6.1.3 Rate Categories-(Continued)

A. Access Connections-(Continued)

12. Interface Group Nonchargeable Optional Features

The Telephone Company will provide the following optional features in association with the Interface Groups listed in Paragraphs 6.1.3, A.1 through A.10, preceding. Only those Interface Groups referenced with each optional feature will be provided with that feature. The provision of such features may require placement of Telephone Company equipment on the IC's premises.

a. Supervisory Signaling

A Supervisory signaling capability is provided for each Interface Group as listed in Paragraphs 6.1.3, A.1 through A.10, preceding.

Where the transmission parameters permit, and where signaling conversion is required by the IC to meet its signaling capability, the IC may order an optional supervisory signaling arrangement for each transmission path provided as follows:

- For Interface Groups 1 and 2

DX Supervisory Signaling,
E&M Type I Supervisory Signaling, or
E&M Type II Supervisory Signaling

- For Interface Group 2

SF Supervisory Signaling,
Tandem Supervisory Signaling, or
E&M Type III Supervisory Signaling

FILED
JAN - 1 1984
83 - 253

A. Local Transport-(Continued)

13. Features

Where transmission facilities and standard design practices permit, as described in appropriate Technical Publications, the Telephone Company will provide the following features in association with Local Transport at the customer's request.

a. Supervisory Signaling

Where the transmission parameters permit, and where signaling conversion is required by the IC to meet its signaling capability, the IC may order supervisory signaling arrangement for each transmission path provided as follows:

- For Interface Groups 1 and 2

DX Supervisory Signaling,
E&M Type I Supervisory Signaling,
E&M Type II Supervisory Signaling, or
E&M Type III Supervisory Signaling
- For Interface Group 2

SF Supervisory Signaling
- For Interface Groups 6 through 10

These Interface Groups may, at the option of the customer, be provided with individual transmission path SF supervisory signaling where such signaling is available in Telephone Company central offices. Generally such signaling is available only where the entry switch provides an analog, i.e., nondigital, interface to the transport termination and a portion of the facility between the analog entry switch and the customer's premises is analog. These Supervisory Signaling arrangements are not available in combination with the SS7 Signaling feature described in 6.4.1.

6. SWITCHED ACCESS SERVICE-(Continued)

6.1 General-(Continued)

6.1.3 Rate Categories-(Continued)

B. Local Transport

The Local Transport rate category provides the transmission facilities between the IC terminal location and the end office switch(es) where the IC's traffic is switched to originate or terminate its communications. For purposes of determining Local Transport mileage, distance will be measured from the wire center that normally serves the IC to the end office switch(es). Exceptions to the mileage measurement rules are set forth in Paragraph 6.7.13, following.

Local Transport is a two-way voice frequency transmission path composed of facilities determined by the Telephone Company. The two-way voice frequency transmission path permits the transport of calls in the originating direction (from the end user end office switch to the IC terminal location) and in the terminating direction (from the IC terminal location to the IC end office switch), but not simultaneously. The voice frequency transmission path may be comprised of any form or configuration of plant capable of and typically used in the telecommunications industry for the transmission of voice and associated telephone signals within the frequency bandwidth of approximately 300 to 3000 Hz.

The Telephone Company will determine whether the Switched Access Service is to be routed directly to an end office switch or through an access tandem switch unless the IC orders the provision of other than Telephone Company Selected Traffic Routing optional feature. The Telephone Company will determine whether the Switched Access Service is to be provided as one-way calling or two-way calling unless the IC orders the IC Specification of Feature Group Directionality optional feature. These optional features are described in Paragraph 6.1.3, B.1., following. Another optional feature, IC Specification of Local Transport Termination, is also described in that section.

Local Transport is provided at the rates and charges as set forth in Paragraph 6.8.2, A., following. Rates are applied on an access minutes basis. When Feature Group A terminates in Telephone Company end offices that are not equipped for measurement capabilities, a Telephone Company assumed average number of access minutes will be billed to the IC in lieu

b. Customer-Specified Entry Switch Receive Level

(RT) This feature allows the customer with Type B transmission to specify the receive
(AT) transmission level at the first point of switching. This feature is available with
Interface Groups 2 through 10 for FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C
and BSA-D.

c. Customer Specification of Local Transport Termination

(AT) This feature allows the customer to specify, for FGB or BSA-B routed directly to an
access tandem, a four-wire termination of the Local Transport at the entry switch in
lieu of a Telephone Company selected two-wire termination. This feature is available
(AT) only when the FGB or BSA-B arrangement is provided with Type B
Transmission Specifications.

of actual usage. These rates will be billed in terms of the total number of access minutes (i.e., originating and terminating). For terminating Feature Group B Switched Access Service where no measurement capabilities exist in the Telephone Company designated electronic Access Tandem switch, a Telephone Company assumed average number of access minutes will be billed to the IC in lieu of actual usage.

The number of Local Transport transmission paths provided is based on the IC's order and is determined by the Telephone Company as set forth in Paragraph 6.5.5, following.

1. Chargeable Optional Features

a. Provision of Other Than Telephone Company Selected Traffic Routing

This option allows the IC to specify a particular traffic routing for trunk groups in lieu of Telephone Company selected routing, i.e., the IC may specify that the routing be on a direct trunk basis or via an access tandem. It is available with Feature Groups B, C and D.

b. IC Specification of Feature Group Directionality

This option allows the IC to specify that the operation of a trunk group will be one-way originating or terminating calling in lieu of Telephone Company selected two-way calling or, alternatively, that operation will be two-way calling in lieu of Telephone Company selected one-way calling. It is available with Feature Groups B, C and D.

c. IC Specification of Local Transport Termination

This option allows the IC to specify, for Feature Group B routed directly to an end office or access tandem, a four-wire termination of the Local Transport at the end office switch in lieu of a Telephone Company selected two-wire termination. This option is available only when the Feature Group B arrangement is provided with Type B Transmission Performance.

B. Local Switching

The Local Switching rate category provides the local end office switching and end user termination functions necessary to complete transmission of Switched Access communications to and from the users served by the local end office. Each of the functions provided for in the Local Switching rate category are described below:

1. Common Switching

(AT) Common Switching provides the local end office switching functions associated with the various access (i.e., Feature Group and BSA) switching arrangements. The Common Switching arrangements are described in Paragraph 6.2, following.

(FC) Included as part of the Common Switching are various features which the IC can order to meet its specific communications requirements.
(FC) These features are described in Paragraph 6.4.1, following. The number of end office switching transmission paths will be determined as set forth in Paragraph 6.8.5, following.

2. Transport Termination

(FC)(AT) Transport Termination provides for the line or trunk side arrangements which terminate the Local Transport facilities. Included as part of Transport Termination are various termination arrangements. These terminating arrangements are described in Paragraphs 6.4.2, 6.4.3 and 6.4.5, following.

(FC) The number of Transport Terminations provided will be determined by the Telephone Company as set forth in Paragraph 6.8.6, following.

3. Line Termination

Line Termination provides the terminations for the end user lines terminating in the local end office. There are two types of Line Terminations, i.e., Common Line Terminations and WATS Access Line Service Terminations.

C. End Office

The End Office rate category provides the local end office switching and end user termination functions necessary to complete the transmission of Switched Access communications to and from the end users served by the local end office. The End Office rate category includes the Local Switching, Line Termination, Intercept and Information (i.e., Directory Assistance) rate elements. Directory Assistance Service and the applicable rates for it are set forth in Section 9, following.

When Feature Group A Switched Access Service terminates in Telephone Company end offices that are not equipped for measurement capabilities, a Telephone Company assumed average number of access minutes will be billed to the IC in lieu of actual usage. These rates will be billed in terms of the total (i.e., originating and terminating) number of access minutes. For terminating Feature Group B Switched Access Service where no measurement capabilities exist in the Telephone Company designated electronic Access Tandem switch, a Telephone Company assumed average number of access minutes will be billed to the IC in lieu of actual usage.

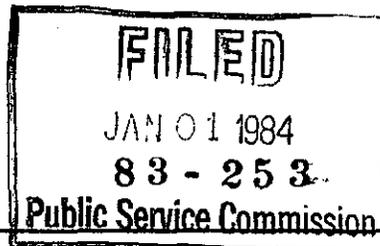

1. Local Switching

The Local Switching rate element provides for the use of end office switching equipment. It is divided into two distinct categories, i.e., LS1 and LS2. The first category, LS1, provides local dial switching for Feature Groups A and B. The second category, LS2, provides local dial switching for Feature Groups C and D.

LS1 and LS2 use is measured on an originating and terminating basis. Rates for LS1 and LS2 use are applied on a total number of access minutes of use basis, as set forth in Paragraph 6.8.3, A., following.

There are two types of local switching functions, i.e., Common Switching functions and Transport Termination functions. These are described in Paragraphs a. and b., following.

4. Intercept

Intercept provides for the termination of a call at a Telephone Company Intercept operator or recording. The operator or recording tells a caller why a call, as dialed, could not be completed, and if possible, provides the correct number.

During the transition period in which Switched Access Services are provided either as Feature Groups or as Basic Serving Arrangements (as set forth in Section 6.1, preceding), Local Switching is available on a bundled or unbundled basis. Bundled Local Switching rates will apply to Switched Access Services provided as Feature Groups. Unbundled Local Switching rates will apply to Switched Access Services provided as Basic Serving Arrangements. When the Feature Groups are abolished at the end of this transitional period, Local Switching will only be provided on an unbundled basis.

The Local Switching rate element (both bundled and unbundled) provides for the use of end office switching equipment. Bundled and unbundled local switching rates are divided into two distinct categories, i.e., LS1 and LS2. These categories provide dial switching as follows:

Bundled Local Switching:

LS1 for originating and terminating Feature Groups A and B; except when FGA or FGB is used to terminate calls to WATS Access Line Service;

LS2 for originating and terminating Features Groups C and D; for FGA and FGB when used to terminate calls to WATS Access Line Service; and for ACIS and 900 Access Service minutes originating from nonequal access offices when the customer elects to combine ACIS and/or 900 traffic with tandem-routed FGD traffic; and for 950-XXXX access minutes originating from equal access offices when combined with FGD traffic; and for 800 NPAS.

Unbundled Local Switching:

LS1 for originating and terminating BSA-A and BSA-B except when BSA-A or BSA-B is used to terminate calls to WATS Access Line Service.

The Local Switching rate element provides for the use of end office switching equipment. It is divided into two distinct categories, i.e., LS1 and LS2. These categories provide dial switching as follows:

LS1 for originating and terminating Feature Groups A and B; except when FGA or FGB is used to terminate calls to WATS Access Line Service;

LS2 for originating and terminating Features Groups C and D; for FGA and FGB when used to terminate calls to WATS

Access Line Service; and for 800 Access Service minutes originating from nonequal access offices when the customer elects to combine 800 traffic with tandem-routed FGD traffic;

(CP) Rates for LS1 and LS2 are set forth in 6.8.2, A., following.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.2 Provision and Description of Switched Access Service Feature Groups

(RT) The provision of each Feature Group requires Local Transport facilities and
(CT) the appropriate Local Switching functions.

There are three specific transmission performances (i.e., Types A, B and C) that have been identified for the provision of Feature Groups. The specific performance provided is dependent on the Interface Group and the routing of the service, i.e., whether the service is routed directly to the end office or via an access tandem.

Feature Groups are arranged for either originating, terminating or two-way calling, based on the IC end office switching busy-hour minutes of capacity ordered. Originating calling permits the delivery of calls from Telephone Exchange Service locations to the IC terminal location. Terminating calling permits the delivery of calls from the IC terminal location to Telephone Exchange Service locations. Two-way calling permits the delivery of calls in both directions, but not simultaneously. The Telephone Company will determine the type of calling to be provided unless the IC specifies in its order that a different type of directional calling is to be provided. In such cases, the Telephone Company will work cooperatively with the IC to determine directionality.

6. SWITCHED ACCESS SERVICE-(Continued)

6.2 Provision and Description of Switched Access Service Feature Groups

Switched Access Service is provided in four different Feature Group arrangements. The provision of each Feature Group requires Public Service Commission facilities and the appropriate End Office functions. In addition, WATS-Access Lines may, at the option of the IC, be provided for use with Feature Groups C and D.

There are three specific transmission performances (i.e., Types A, B and C) that have been identified for the provision of Feature Groups. The specific performance provided is dependent on the Interface Group and the routing of the service, i.e., whether the service is routed directly to the end office or via an access tandem.

Feature Groups are arranged for either originating, terminating or two-way calling, based on the IC end office switching busy-hour minutes of capacity ordered. Originating calling permits the delivery of calls from Telephone Exchange Service locations to the IC terminal location. Terminating calling permits the delivery of calls from the IC terminal location to Telephone Exchange Service locations. Two-way calling permits the delivery of calls in both directions, but not simultaneously. The Telephone Company will determine the type of calling to be provided unless the IC specifies in its order that a different type of directional calling is to be provided. In such cases, the Telephone Company will work cooperatively with the IC to determine directionality.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.2 Provision and Description of Switched Access Service Feature-Groups

Switched Access Service is provided in four different Feature Group arrangements. The provision of each Feature Group requires an Access Connection, Local Transport facilities and the appropriate End Office functions.

There are three specific transmission performances (i.e., Types A, B and C) that have been identified for the provision of Feature Groups. The specific performance provided is dependent on the Interface Group and the routing of the service, i.e., whether the service is routed directly to the end office or via an access tandem. The parameters for the transmission performances are set forth in Paragraph 6.4.1, following.

Feature Groups are arranged for either originating, terminating or two-way calling, based on the IC end office switching busy-hour minutes of capacity ordered. Originating calling permits the delivery of calls from Telephone Exchange Service locations to the IC terminal location. Terminating calling permits the delivery of calls from the IC terminal location to Telephone Exchange Service locations. Two-way calling permits the delivery of calls in both directions, but not simultaneously. The Telephone Company will determine the type of calling to be provided unless the IC specifies in its order that a different type of directional calling is to be provided.

6. SWITCHED ACCESS SERVICE-(Continued)

6.2 Provision and Description of Switched Access Service Feature Groups-(Continued)

There are various features available with the Feature Groups. These additional features are provided as Local Transport, Common Switching, Transport Termination or Line Termination features.

Following are detailed descriptions of each of the available Feature Groups. Each Feature Group is described in terms of its specific physical characteristics and calling patterns, the transmission performances with which it is provided, the features available for use with it and the standard testing capabilities.

(AT) The Common Switching and Transport Termination features, which are described in Paragraphs 6.3, 6.4 and 6.5, following, unless specifically stated otherwise, are available at all Telephone Company end office switches.

6.2.1 Feature Group A (FGA)

A. Description

1. FGA is provided in connection with Telephone Company electronic and electromechanical end offices. At the option of the IC, FGA is provided on a single or multiple line group basis and is arranged for originating calling-only, terminating calling-only or two-way calling. FGA is arranged for use by the Interexchange Carrier in the provision of its FX/ONAL service or MTS/WATS-type Service.
2. FGA provides a line side termination at the first point of switching. The line side termination will be provided with either ground start supervisory signaling or loop start supervisory signaling. The type of signaling is at the option of the IC.
3. The Telephone Company shall select the first point of switching, within the selected LATA, at which the line side termination is to be provided unless the IC requests a different first point of switching and Telephone Company facilities and measurement capabilities are available to accommodate such a request. The first point of switching must comply with Section 2, Paragraph 2.1.2., A.
4. A seven-digit local telephone number assigned by the Telephone Company is provided for access to FGA switching in the originating direction. The seven-digit local telephone number will be associated with the selected end office switch and is of the form NXX-XXXX.

4. (Continued)

If the customer requests a specific seven-digit telephone number that is available and the necessary facilities and/or equipment are available to the customer, the requested number will be assigned to the customer.

5. FGA switching, when used in the terminating direction, is arranged with dial tone start-dial signaling. When used in the terminating direction, FGA switching may, at the option of the IC, be arranged for dial pulse or dual tone multifrequency address signaling, subject to availability of equipment at the first point of switching. When FGA switching is provided in a hunt group or uniform call distribution arrangement, all FGA switching will be arranged for the same type of address signaling.
6. No address signaling is provided by the Telephone Company when FGA Switching is used in the originating direction. Address signaling in such cases, if required by the IC, must be provided by the IC's customer using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.
7. FGA switching, when used in the terminating direction, may be used to access valid NXX's in the LATA. Local operator service (0- and 0+), Directory Assistance (411 where available and 555-1212), emergency reporting service (911 where available), exchange telephone repair, time or weather announcement services of the Telephone Company, community information services of an information service provider and other IC's services (by dialing the appropriate digits) may also be accessed by FGA services. FGA may be used for the termination of ACIS, 800 and 900 Access Service calls. FGA may also be used for completion of calls to WATS Access Line Service. Charges for FGA terminating calls requiring operator assistance or calls to 911 will only apply where sufficient call details are available. Additional non-access charges will also be billed on a separate account for (1) an operator surcharge, as set forth in the Local Exchange Tariffs, for local operator assistance (0- and 0+) calls; (2) calls to certain community information services, for which rates are applicable under Telephone Company exchange service

7. (Continued)

tariffs, i.e., 976 (DIAL-IT) Network Services, and, (3) calls from a FGA line to another customer's service in accordance with that customer's applicable service rates when the Telephone Company performs the billing function for that customer. For calls to Directory Assistance (411 and 555-1212, whichever is available), Local Transport rates for FGA Switched Access Service will not apply. Instead, FGA calls to this service are subject to the Directory Assistance Service

(AT) Call rates set forth in Paragraph 9.6, B., following. FGA Access is not offered for use in terminating FGC, FGD, BSA-C or BSA-D originating communications.

8. When a FGA switching arrangement for an individual IC (a single line or entire hunt group) is discontinued at an end office, an intercept announcement is provided. This arrangement provides, for a maximum period of 90 days, an announcement that the service associated with the number dialed has been disconnected.

B. Features

1. Common Switching Feature

- a. Hunt Group Arrangement
- b. Uniform Call Distribution Arrangement
- c. Nonhunting Number for use with Hunt Group Arrangement or Uniform Call Distribution Arrangement
- d. Call Denial
- e. Service Code Denial
- f. Hunt Group Arrangement for use with WATS Access Line Service
- g. Uniform Call Distribution Arrangement for use with WATS Access Line Service
- h. Nonhunting Number Arrangement for use with WATS Access Line Service as described in f. or g., preceding
- i. Band Advance Arrangement for use with WATS Access Line Service

2. Transport Termination Features

- a. Two-way operation with dial pulse address signaling and loop start supervisory signaling

(MT)

D. Testing Capabilities

FGA is provided, in the terminating direction where equipment is available, with seven-digit access to balance (100 type) test line and milliwatt (102 type) test line. In addition to the tests described in Paragraph 6.1.4, preceding, which are included with the installation of service, Additional Cooperative Acceptance Testing and Nonscheduled Testing are available for FGA as set forth in Paragraph 13.3.5, following.

6.2.2 Feature Group B (FGB)

A. Description

1. FGB, when directly routed to an end office (i.e., provided without the use of an access tandem switch), is provided at appropriately equipped Telephone Company electronic end office switches. When provided via Telephone Company designated electronic access tandem switches, FGB switching is provided at Telephone Company electronic and electromechanical end office switches.
2. FGB is provided as trunk side switching. The switch trunk equipment is provided with Wink Start Address Signaling or Immediate Dial Pulse Address Signaling and answer and disconnect supervisory signaling.
3. FGB switching is provided with multifrequency address signaling in both the originating and terminating directions. Except for FGB switching provided with the automatic number identification (ANI) or rotary dial station signaling arrangements as set forth in Paragraph 6.4, following, any other address signaling in the originating direction, if required by the IC, must be provided by the IC's customer using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.

The customer's end user is not required to dial an access code for originating 800 and 900 Access Service provided with Feature Group B Switched Access Service. FGB may be used to terminate 800 and 900 Access Service calls.
- 5. FGB switching, when used in the terminating direction, may be used to access valid NXX's in the LATA, time or weather announcement services of the Telephone Company, community information services of an information service provider and other IC's services (by dialing the appropriate digits). When directly routed to an end office, only those valid NXX codes served by that end office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. The IC will also be billed additional non-access charges for calls to certain community information services for which rates are applicable under Telephone Company exchange service tariffs, i.e., 976 (DIAL-IT) Network Service. Additionally, non-access charges will also be billed for calls from an FGB trunk to another customer's service in accordance with that customer's applicable service rates when the Telephone Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 950-0XXX or 950-1XXX access codes, local operator assistance (0- and 0+), Directory Assistance (411 where available and 555-1212), service codes 611 and 911 or 10XXX access codes. Calls will be completed to Directory Assistance (NPA-555-1212 or 555-1212) when FGB switching is combined with Directory Assistance switching. The combination of FGB Switched Access Service with DA service is provided as set forth in Section 9., following. FGB, in the terminating direction, may not be (1) switched to access another Feature Group B, C or D in the same LATA and (2) switched to access a BSA-B, BSA-C or BSA-D in the same LATA and (3) used to terminate originating FGC, PGD, BSA-C or BSA-D calls.

Additionally, nonaccess charges will also be billed for calls from an FGB trunk to another customer's service in accordance with that customer's applicable service rates when the Telephone Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 950-0XXX or 950-1XXX access codes, local operator assistance (0- and 0+), Directory Assistance (411 where available and 555-1212), service codes 611 and 911 or 10XXX access codes. Calls will be completed to Directory Assistance (NPA-555-1212 or 555-1212) when FGB switching is combined with Directory Assistance switching. The combination of FGB Switched Access Service with DA service is provided as set forth in Section 9., following. FGB, in the terminating direction, may not be (1) switched to access another Feature Group B, C or D in the same LATA and (2) switched to access a BSA-B, BSA-C or BSA-D in the same LATA and (3) used to terminate originating FGC, FGD, BSA-C or BSA-D calls.

(MT)

6. The Telephone Company will establish a trunk group or groups for the IC at end office switches or access tandem switches where FGB switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGB switching arrangement provided, e.g., 900 Access Service. Different types of FGB or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.

A. Description

(CT)
(CT)
(CT)
(CT)

1. FGC is provided at all Telephone Company end office switches on a direct trunk basis or via Telephone Company-designated access tandem switches. FGC is used for Local Exchange Company to Local Exchange Company traffic. FGC switching is provided to the IC (i.e., providers of MTS and WATS) at an end office switch unless FGD or BSA-D end office switching is provided in the same office. When FGD or BSA-D switching is available, FGC switching will not be provided except for Local Exchange Company to Local Exchange Company traffic.

2. FGC is provided as trunk side switching through the use of end office or access tandem switch trunk equipment. The switch trunk equipment is provided with answer and disconnect supervisory signaling. Wink start start-pulsing signals are provided in all offices where available. In those offices where wink start start-pulsing signals are not available, delay dial start-pulsing signals will be provided, unless immediate dial pulse signaling is provided, in which case no start-pulsing signals are provided.

FILED OCT 18 1999

3. FGC is provided with multifrequency address signaling except in certain electromechanical end office switches where multifrequency signaling is not available. In such switches, the address signaling will be dial pulse or immediate dial pulse, whichever is available. Up to 12 digits of the called party number dialed by the IC's customer using dual tone multifrequency or dial pulse address signals will be provided by Telephone Company to equipment to the IC terminal location where the Switched Access Service terminates. 3. (Continued)

signals will be subject to the ordinary transmission capabilities of the Local Transport provided.

4. No access code is required for FGC switching. The telephone number dialed by the IC's customer shall be a seven- or ten-digit number for calls in the North American Numbering Plan (NANP). FGC Switched Access Service may also be used to originate ACIS and 900 Access Service and terminate ACIS, 800 NPAS and 900 Access Service. The form of the numbers dialed by the IC's customers is NXX-XXXX, 0 or 1 + NXX-XXXX, NPA + NXX-XXXX, 0 or 1 + NPA + NXX-XXXX.

5. FGC switching, when used in the terminating direction, may be used to access valid NXX's in the LATA, time or weather announcement services of an information provider and other IC's services (by dialing the appropriate codes) when the services can be reached using valid NXX codes. When directly routed to an end office, only those valid NXX codes served by that office may be accessed. When routed through an access tandem, only those valid NXX codes served by offices subtending the access tandem may be accessed. Where measurement capability exists, the IC will also be billed additional non-access charges, for calls to certain community information services, for which rates are applicable under Telephone Company exchange service tariffs, i.e., 976 (DIAL-IT) Network Services. Additionally, non-access charges will also be billed for calls from an FGC trunk to another customer's service in accordance with that customer's applicable service rates when the Telephone Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 950-XXXX access code, local operator assistance (0- and 0+), Directory Assistance (411 and 555-1212), service codes (611 and 911 where available) 101XXXX access codes. Calls will be completed to Directory Assistance (NPA-555-1212 or 555-1212) when FGC switching

signals will be subject to the ordinary transmission capabilities of the Local Transport provided.

4. No access code is required for FGC switching. The telephone number dialed by the IC's customer shall be a seven- or ten-digit number for calls in the North American Numbering Plan (NANP). FGC Switched Access Service may also be used to originate ACIS and 900 Access Service and terminate ACIS, 800 NPAS and 900 Access Service. The form of the numbers dialed by the IC's customers is NXX-XXXX, 0 or 1 + NXX-XXXX, NPA + NXX-XXXX, 0 or 1 + NPA + NXX-XXXX.

5. FGC switching, when used in the terminating direction, may be used to access valid NXX's in the LATA, time or weather announcement services of an information provider and other IC's services (by dialing the appropriate codes) when the services can be reached using valid NXX codes. When directly routed to an end office, only those valid NXX codes served by that office may be accessed. When routed through an access tandem, only those valid NXX codes served by offices subtending the access tandem may be accessed. Where measurement capability exists, the IC will also be billed additional non-access charges, for calls to certain community information services, for which rates are applicable under Telephone Company exchange service tariffs, i.e., 976 (DIAL-IT) Network Services. Additionally, non-access charges will also be billed for calls from an FGC trunk to another customer's service in accordance with that customer's applicable service rates when the Telephone Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 950-XXXX access code, local operator assistance (0- and 0+), Directory Assistance (411 and 555-1212), service codes (611 and 911 where available) and 10XXX or 101XXXX access codes. Calls will be completed to Directory Assistance (NPA-555-1212 or 555-1212) when FGC switching

is combined with Directory Assistance switching. The combination of FGC Switched Access Service with DA Service is provided as set forth in Section 9., following. FGC may not be switched, in the terminating direction, to access another Feature Group B, C or D in the same LATA.

6. The Telephone Company will establish a trunk group or groups for the IC at end office switches or access tandem switches where FGC switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGC switching arrangement provided. Different types of FGC or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.

private codes) when such services can be reached using valid NXX codes. When directly routed to an end office, only those valid NXX codes served by that office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. For calls to services of other IC's, additional charges may apply. The IC will also be billed additional charges for calls to certain community information services, for which rates are applicable under Telephone Company exchange service tariffs, e.g., 976 (DIAL-IT) Network Service. Calls in the terminating direction will not be completed to 950-10XX access codes, local operator assistance (0- and 0+), service codes (611 and 911 where available) and 10XX access codes. Calls will not be completed to directory assistance (411 where available and 555-1212) unless FGD switching is combined with DA switching. FGD may not be switched, in the terminating direction, to Switched Access Service Feature Groups B, C or D.

5. The Telephone Company will establish a trunk group or groups for the IC at end office switches or access tandem switches where FGD switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGD switching arrangement provided. Different types of FGD or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.

6. The access code for FGD switching is a uniform access code of the form 10XX. No access code is required for calls to an IC over FGD Switched Access Service if the customer's telephone exchange service is arranged for a subscription to that IC, as set forth in Section 13, following. For a limited period of time, no access code is required for calls to a provider of MTS and WATS, when such calls are placed from a Telephone Company public or semi-public telephone.

appropriate codes) when such services can be reached using valid NXX codes. When directly routed to an end office, only those valid NXX codes served by that office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. The IC will also be billed additional non-access charges for calls to certain community information services, for which rates are applicable under Telephone Company exchange service tariffs, i.e., 976 (DIAL-IT) Network Service. Additionally, non-access charges will also be billed for calls from a FGD trunk to another customer's service in accordance with that customer's applicable service rates when the Telephone Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 950-XXXX access code, local operator assistance (0- and 0+), Directory Assistance (NPA-555-1212 or 555-1212) when FGD switching is combined with Directory Assistance switching. The combination of FGD Switched Access Service with DA Service is provided as set forth in Section 9., following. FGD may not be switched, in the terminating direction, to access another Feature Group B, C or D in the same LATA or switched to access a BSA-B, BSA-C, or BSA-D in the same LATA.

5. The Telephone Company will establish a trunk group or groups for the IC at end office switches or access tandem switches where FGD switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGD switching arrangement provided. Different types of FGD or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.
6. The uniform access code for FGD switching is a 101XXXX. A single access code will be the assigned number of all FGD access provided to the customer by the Telephone Company. No access code is required for calls to a customer over FGD Switched Access Service (this includes MicroLink I Access Capability provided in conjunction with FGD) if the end user's telephone exchange service is arranged for presubscription to that customer, as set forth in Section 13, following. FGD Switched Access may be originated using the 950-XXXX access code if the customer requests the FGD or BSA-D with 950 Access feature.

A. Description-(Continued)

4. (Continued)

private codes) when such services can be reached using valid NXX codes. When directly routed to an end office, only those valid NXX codes served by that office may be accessed. When routed through an access tandem, only those valid NXX codes served by end offices subtending the access tandem may be accessed. The IC will also be billed additional non-access charges for calls to certain community information services, for which rates are applicable under Telephone Company exchange service tariffs, i.e., 976 (DIAL-IT) Network Service. Additionally, non-access charges will also be billed for calls from a FGD trunk to another customer's service in accordance with that customer's applicable service rates when the Telephone Company performs the billing function for that customer. Calls in the terminating direction will not be completed to 950-XXXX access code, local operator assistance (0- and 0+), Directory Assistance (NPA-555-1212 or 555-1212) when FGD switching is combined with Directory Assistance switching. The combination of FGD Switched Access Service with DA Service is provided as set forth in Section 9., following. FGD may not be switched, in the terminating direction, to access another Feature Group B, C or D in the same LATA or switched to access a BSA-B, BSA-C, or BSA-D in the same LATA.

5. The Telephone Company will establish a trunk group or groups for the IC at end office switches or access tandem switches where FGD switching is provided. When required by technical limitations, a separate trunk group will be established for each type of FGD switching arrangement provided. Different types of FGD or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.

(AT)

6. The uniform access code for FGD switching is a 10XXX or 101XXXX. A single access code will be the assigned number of all FGD access provided to the customer by the Telephone Company. No access code is required for calls to a customer over FGD Switched Access Service (this includes MicroLink I Access Capability provided in conjunction with FGD) if the end user's telephone exchange service is arranged for presubscription to that customer, as set forth in Section 13, following. FGD Switched Access may be originated using the 950-XXXX access code if the customer requests the FGD or BSA-D with 950 Access feature.

A. Description-(Continued)

6. (Continued)

Where no access code is required, the number dialed by the IC's customer shall be a seven or ten-digit number for calls in the North American Numbering Plan (NANP). For international calls outside the NANP, a seven- to twelve-digit number may be dialed. The form of the numbers dialed by the IC's customers is NXX-XXXX, 0 or 1 + NXX-XXXX, NPA + NXX-XXXX, 0 or 1 + NPA + NXX-XXXX, and, when the end office is equipped for International Direct Distance Dialing (IDDD), 01 + CC + NN or 011 + CC + NN. When the 10XX access code is used, FGD switching also provides for dialing the digit 0 for access to the IC's operator, 911 for access to the Telephone Company's emergency reporting service, or the end-of-dialing digit (#) for cut-through access to the IC's terminal location.

7. FGD switching will be arranged to accept calls from telephone exchange service locations without the need for dialing 10XX uniform access code. Each telephone exchange service line may be marked with a presubscription code to identify which 10XX code its calls will be directed to for interLATA service. Presubscription codes are applied as set forth in Section 13, following.

(AT)

Where no access code is required, the number dialed by the IC's customer shall be a seven or ten-digit number for calls in the North American Numbering Plan (NANP). FGD Switched Access Service may also be used to originate and terminate 800 NPAS and 900 Access Service. The customer's end user is not required to dial an access code for originating 800 NPAS and 900 Access Service provided with FGD Switched Access Service. 800 NPAS and 900 Access Service calls dialed with an access code will be blocked by the Telephone Company. The form of the numbers dialed by the IC's customers is NXX-XXXX, 0 or 1 + NXX-XXXX, NPA + NXX-XXXX, 0 or 1 + NPA + NXX-XXXX. When the 10XXX access code is used, FGD switching also provides for dialing the digit 0 for access to the IC's operator, 911 for access to the Telephone Company's emergency reporting service, or the end-of-dialing digit (#) for cut-through access to the IC's terminal location.

7. When a customer changes an existing FGB to FGD in the same end office, end users may dial either the previous FGB access code or the new FGD access code. This arrangement will be provided at the customer's request, for a maximum period of 90 days where facilities are available. In addition, use of the FGB access code may continue from public coin, coinless and hotel classes of service, until the customer requests otherwise.

The customer must be prepared to differentiate between 950-0XXX and 950-1XXX calls and the other FGD calls on the same trunks by using the signaling described in Technical Reference PUB. TSY-000064 LATA Switching System General Requirements. All access minutes will be rated as FGD.

The customer must be prepared to differentiate between 950-0XXX and 950-1XXX calls and the other FGD calls on the same trunks by using the signaling described in Technical Reference PUB. TSY-000064 LATA Switching System General Requirements. All access minutes will be rated as FGD.

8. A WATS Access Line may, at the option of the customer, be provided for use with FGD Switched Access Service. A WATS Access Line provides a connection between a customer's end user's premises and a Telephone Company end office switch capable of performing the necessary screening functions for 800 Service, WATS or similar services and is provided only for use at the closed end of such services.

WATS Access Lines are arranged for either originating calling only or terminating calling only. They are provided with rotary dial or equal tone multifrequency address signaling and either loop start or ground start supervisory signaling. The choice of the type of signaling is at the option of the customer.

6.3 Common Switching and Transport Termination Nonchargeable Optional Features

6.3.1 Common Switching Optional Features

Following are descriptions of the various optional features that are available in lieu of, or in addition to, the standard features provided with the feature groups. They are provided as either common switching or transport termination options.

A. Call Denial on Line or Hunt Group

This option allows for the screening of terminating calls within the LATA, and for the completion only of calls to 411, 611, 911, 800, 555-1212, and a Telephone Company-specified set of NXX's within the Telephone Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. This feature is provided in all Telephone Company electronic end offices and, where available, in electromechanical end offices. It is available with Feature Group A.

B. Service Code Denial on Line or Hunt Group

This option allows for the screening of terminating calls within the LATA and for disallowing completion of calls to 0- and N11 (e.g., 411, 611 and 911). This feature is provided, where available, in all Telephone Company electronic end offices and electromechanical end offices. It is available with Feature Group A.

C. Hunt Group Arrangement

This option provides the ability to sequentially access one of two or more line side connections in the originating direction, when the access code of the line group is dialed. This feature is provided in all Telephone Company end offices. It is available with Feature Group A.

D. Uniform Call Distribution Arrangement

This option provides a type of multi-line hunting arrangement which provides for an even distribution of calls among the available lines in a hunt group. Where available, this feature is provided in Telephone Company electronic end offices only. It is available with Feature Group A.

FEB 1 1988

BY *JMR* R.S.#39

Public Service Commission
MISSOURI

(AT)

A. WATS Access Line Service

WATS Access Line Service is a line side connection that combines Switched Access Service with a dedicated Special Access connection between an end user's premises and the WATS serving office. WATS Access Line Service is available only with Feature Group C and D Switched Access Service. WATS Access Line Service is available in either the originating direction or terminating direction as specified below. WATS Access Line Service used in the terminating direction may only be used to complete 800 Access Service calls. WATS Access Line Service must be used when the customer terminates 800 Access Service calls over Feature Group C or D. WATS Access Line Service will be provided as follows:

- Jointly with the Telephone Company providing intraLATA and the customer providing interLATA calling as specified in the Telephone Company's Wide Area Telecommunications Service Tariff. Jointly provisioned WATS Access Line Service is available in either the originating or terminating direction. When the customer uses Feature Group C or D for the completion of 800 Access Service calling, jointly provisioned WATS Access Line Service must be used until such time as intraLATA 800 Access Service calls can be distinguished from interLATA 800 Access Service calls.

6.3 Common Switching and Transport Termination Optional Features

Following are descriptions of the various optional features that are available in lieu of, or in addition to, the standard features provided with the Feature Groups. They are provided as either Common Switching or Transport Termination options.

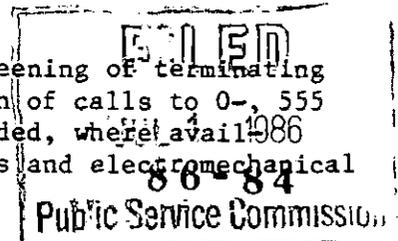

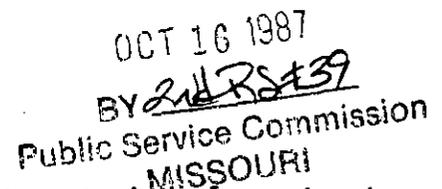

6.3.1 Common Switching Optional Features

A. Call Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating call within the LATA, and for the completion only of calls to 411, 911, 800, 555-1212 and a Telephone Company-specified set of NXX's within the Telephone Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. This feature is provided in all Telephone Company electronic end offices and, where available, in electro-mechanical end offices.

B. Service Code Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating calls within the LATA and for disallowing completion of calls to 0-, 555 and N11 (i.e., 411 and 911). This feature is provided, where available in all Telephone Company electronic end offices and electro-mechanical end offices.

 Public Service Commission

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.1 Common Switching Optional Features-(Continued)

E. Nonhunting Number for Use with Hunt Group or Uniform Call Distribution Arrangement .

This option provides an arrangement for an individual line within a multiline hunt or uniform call distribution group that provides access to that line within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed. Where available, this feature is provided in Telephone Company electronic end offices only. It is available with Feature Group A.

F. Automatic Number Identification (ANI)

This option provides the automatic transmission of a seven- or ten-digit number and information digits to the IC terminal location for calls originating in the LATA, to identify the calling station. The ANI feature is an end office software function which is associated on a call by call basis with (1) all individual transmission paths in a trunk group routed directly between an end office and an IC's terminal location or, where technically feasible, with (2) all individual transmission paths in a trunk group between an end office and an access tandem and a trunk group between an access tandem and an IC's terminal location.

The seven-digit ANI telephone number is available with Feature Groups B and C. With these Feature Groups, technical limitations may exist in Telephone Company switching facilities which require ANI to be provided only on a directly trunked basis. Where direct trunking would not have been provided except as required by the provision of ANI, additional charges will apply for Provision of Other Than Telephone Company Selected Traffic Routing, as set forth in Paragraph 6.8.2, B., following. ANI will be transmitted on all calls except those originating from multiparty lines, coin stations and coinless pay telephones using Feature Group B, or with ANI failure has occurred.

The ten-digit ANI telephone number is only available with Feature Group D. The ten-digit ANI telephone number consists of the Numbering Plan Area (NPA) plus the seven-digit ANI telephone number. The ten-digit ANI telephone number will be transmitted on all calls except those identified as multiparty line or ANI failure, in which case only the NPA will be transmitted (in addition to the information digit described below).

(RT)

(AT) Provider will be identified from the dialed 800 number (i.e., 1+800+NXX+XXXX). The 800 Service Provider has the option of receiving the dialed 800 number (i.e., 1+800+NXX+XXXX) or a translated ten-digit POTS number (i.e., 1+NPA+XXXX). For 800 NPAS calls outside of the North American Numbering Plan (NANP), the 800 Service Provider will receive a six digit data base translation.

When an end user originates a 1+800+NXX+XXXX call, the Telephone Company will determine how the call is to be routed, based on the 800 number dialed. If an 800 NPAS call originates in an end office not SSP equipped to provide the customer identification function, the call will be routed to an SSP equipped Telephone Company access tandem. Once the 800 NPAS Provider has been identified, the 800 call, served by the Telephone Company's SSP, will be routed to the 800 Service Providers defined FGD/BSA-D trunk group.

Originating 800 NPAS traffic must be provided over FGD or BSA-D trunk groups. The 800 Service Provider may use FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D to terminate an 800 call. When FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D is used to terminate an 800 call, the customer is required to deliver 800 calls to the Telephone Company in the standard POTS number North American Numbering Plan format.

6.2.5 Miscellaneous Switched Access Service--(Continued)

B. 800 Access Service--(Continued)

Terminating usage and/or a line charge will be billed according to the type of facility arrangement utilized for termination and completion of the 800 Access Service call.

Unless prohibited by technical limitations (e.g., different dialing plans), originating 800 Access Service traffic may, at the option of the customer, be combined in the same Feature Group B, C or D trunk group with the customer's other Access Service traffic. At the option of the customer, 800 Access Service traffic which originates from a nonequal access end office may be combined with a customer's equal access Feature Group D Service. This arrangement is only available when a customer utilizes tandem-routed Feature Group D Switched Access Service. However, when Feature Group D becomes available in an end office, originating 800 Access Service traffic from that end office must be provided with Feature Group D.

(AT)
|
(AT)

In addition, when required by technical limitations, or at the request of the customer, a separate Feature Group B, C or D trunk group may be established for originating 800 Access Service type calls.

The customer may use Feature Group A, B, C or D to terminate an 800 Access Service call. When Feature Group A, B, C or D is used to terminate 800 Access Service, the customer is required to deliver 800 Access Service calls to the Telephone Company in standard POTS number North American Numbering Plan format.

6.3.1 Common Switching Optional Features

A. Call Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating calls within the LATA, and for the completion only of calls to 411, 911, 800, 555-1212 and a Telephone Company-specified set of NXX's within the Telephone Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. This feature is provided in all Telephone Company electronic end offices and, where available, in electromechanical end offices.

B. Service Code Denial on Line or Hunt Group

This option, available with FGA, allows for the screening of terminating calls within the LATA and for disallowing completion of calls to 0-, 555 and N11 (i.e., 411 and 911). This feature is provided, where available, in all Telephone Company electronic end offices and electromechanical end offices.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.2 Provision and Description of Switched Access Service Feature Groups-(Continued)

6.2.5 Miscellaneous Switched Access Service-(Continued)

D. Advanced Carrier Identification Service (ACIS)

General

Advanced Carrier Identification Service (ACIS) is an originating offering utilizing trunk side Switched Access Services from both equal access and non-equal access offices and provides the ability for calls to be delivered to access customers based on the dialed Personal Communication Service (PCS) subscriber number. ACIS will use the dialed PCS subscriber number (e.g., 1+500+NXX-XXXX) to identify the access customer (i.e., the transport carrier) to whom the call will be delivered and then deliver the call to the access customer.

The ACIS functionality will be available in suitably equipped end offices or access tandems. If an ACIS routed call originates in an office not equipped to provide the identification function, the call will be routed to an office where the function is available.

ACIS allows the PCS subscriber to originate calls using one-plus (1+), zero plus (0+) and from public coin phones. The Telephone Company will block an ACIS originated call if it originates through a 101XXXX access code, zero minus (0-) dialing or 0- Transfer Service.

(CT)

Provisioning

Unless prohibited by technical limitations, originating traffic that is routed using ACIS may, at the option of customer, be combined in the same FGB, FGD, BSA-B, BSA-C or BSA-D trunk group with the customer's other Access Service traffic. Where such technical limitations do exist, the Telephone Company will provide notification to the customer prior to establishment of ACIS. At the option of the customer, ACIS routed traffic originating from a non-equal access office may be combined with a customer's equal access FGD or BSA-D Service. This arrangement is only available when a customer utilizes tandem routed FGD or BSA-D. Premium access charges will apply for such originating ACIS usage. When FGD or BSA-D becomes available in an end office, originating ACIS routed traffic from that end office must be provided with FGD or BSA-D.

The customer may use FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D to terminate a call that was routed using ACIS. When FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D is used to terminate a call that was routed using ACIS, the customer is required to deliver ACIS originated calls to the Telephone Company in the standard POTS number North American Numbering Plan format.

When FGD or BSA-D becomes available in an end office, originating ACIS routed traffic from that end office must be provided with FGD or BSA-D.

The customer may use FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D to terminate a call that was routed using ACIS. When FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C or BSA-D is used to terminate a call that was routed using ACIS, the customer is required to deliver ACIS originated calls to the Telephone Company in the standard POTS number North American Numbering Plan format.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

(CT) 6.3 Basic Serving Arrangement Descriptions

(AT) BSAs are differentiated by their technical characteristics, e.g., line side or trunk side connection at the Telephone Company entry switch. The trunk side BSA is further differentiated into three Alternatives based upon the manner in which an end user would access the BSA for originating calling, e.g., with or without an access code.

There are various Local Transport features, Local Switching features and Basic Service Elements available with a BSA. Local Transport and Local Switching features are described in Paragraphs 6.1.2, A.2, and 6.4. Basic Service Elements are described in Paragraph 6.6. Unless specifically stated otherwise, these features and BSEs are available at all Telephone Company end office switches.

BSAs are arranged for either originating, terminating or two-way calling, based upon the customer's order specifications. Originating calling permits the delivery of calls from Telephone Exchange Service locations to the customer's premises. Terminating calling permits the delivery of calls from the customer's premises to Telephone Exchange Service locations. Two-way calling permits the delivery of calls in both directions, but not simultaneously.

Following are detailed descriptions of each Basic Serving Arrangement and Alternatives. Each BSA is described in terms of its specific physical characteristics and calling patterns. BSA transmission specifications are described in Paragraph 6.3.5. Descriptions of available features are located in Paragraphs 6.1.2, A.2, and 6.4. Descriptions of available BSEs are located in Paragraph 6.5.

6.3.1 Circuit Switched - Line Side BSA (BSA-A)

A. General

1. Circuit Switched - Line Side BSA is provided in connection with Telephone Company electronic and electromechanical end offices.
2. Circuit Switched - Line Side BSA provides network access in the form of a line side termination at the first point of switching and provides the basis for selection of Basic Service Elements. The line side termination will be provided with either ground start supervisory signaling or loop start supervisory signaling. The type of signaling is at the option of the customer.
3. The customer shall specify the first point of switching within the selected LATA at which the line side termination is to be provided. The first point of switching must comply with Section 2, Paragraph 2.1.2, A., preceding

6.3 Common Switching and Transport Termination Features-(Continued)

MO. PUBLIC SERVICE COMM.

6.3.1 Common Switching Features

A. Call Denial on Line or Hunt Group

This feature, available with FGA, allows for the screening of terminating calls. This screening does not affect calls to 411, 911, 800, 900, and 555-1212. This feature is provided in all Telephone Company electronic end offices and, where available, in electromechanical end offices.

(CT)
(MT)

(AT) 1. Local Exchange Restriction

(MT) The screening is set up to allow calls to complete only to a Telephone Company specified set of NXXs within the Telephone Company local exchange calling area of the dial tone office in which the arrangement is provided. All other "toll" calls are routed to a reorder tone or recorded announcement. As set forth in Section 2, Paragraph 2.1.2.A., this feature is required on all FGA Switched Access Services requested by an Enhanced Service Provider.

(MT)
(AT)

2. LATA Restriction

The screening is set up to allow calls to complete only those valid NXX codes within the LATA. All other calls are routed to a reorder tone or recorded announcement.

(AT)

B. Service Code Denial on Line or Hunt Group

This feature, available with FGA, allows for the screening of terminating calls within the LATA and for disallowing completion of calls to 0-, 555 and N11 (i.e., 411 and 911). This feature is provided, where available, in all Telephone Company electronic end offices and electromechanical end offices.

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Basic Serving Arrangement Descriptions-(Continued)

6.3.1 Circuit Switched - Line Side BSA (BSA-A)

A. General-(Continued)

- 4. When an individual customer's Circuit Switched - Line Side BSA is discounted at an end office, an intercept announcement is provided. This arrangement provides, for a maximum period of 90 days, an announcement that the service associated with the number dialed has been disconnected.

B. Originating Circuit Switched - Line Side BSA (BSA-A)

- 1. Originating Circuit Switched - Line Side BSA may be utilized in conjunction with the following access services provided under this tariff:

WATS Access Line Service

- 2. A seven-digit local telephone number assigned by the Telephone Company is provided for access to Circuit Switched - Line Side switching and provides the calling area associated with the exchange in which the local telephone number is assigned. The seven digit local telephone number will be associated with the selected end office switch and is of the form NXX-XXXX. If the customer requests a specific seven digit telephone number and that number (as well as the necessary facilities and equipment) is available, the requested number will be assigned to the customer.
- 3. No address signaling is provided by the Telephone Company. If address signaling is required by the customer, it must be provided by the customer's end user using inband tone signaling techniques. Such inband tone address signals will not be regenerated by the Telephone Company and will be subject to the ordinary transmission capabilities of the Local Transport provided.

C. Terminating Circuit Switched - Line Side BSA-A

- 1. Terminating Circuit Switched - Line Side may be utilized in conjunction with the following access services provided under this tariff:

- WATS Access Line Service

1. Alternative B (BSA-B)

a. General

1. When directly routed to an end office (i.e., provided without the use of an access tandem switch), Alternative B is provided at appropriately equipped Telephone company electronic end office switches. When provided via Telephone company designated electronic access tandem switches, Alternative B switching is provided at Telephone Company electronic and electromechanical end office switches.
2. Alternative B is provided as trunk side switching. The switch trunk equipment is provided with wink start address signaling or immediate dial pulse address signaling as well as answer and disconnect supervisory signaling. Alternative B switching is provided with multifrequency address signaling in both the originating and terminating directions.
3. The Telephone Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where Alternative B switching is provided. When required by technical limitations, a separate trunk group will be established for each type of Alternative B switching arrangement provided, e.g., 900 Access Service. Different types of Alternative B switching may be combined in a single trunk group at the option of the Telephone Company.
4. When all Alternative B switching arrangements are discontinued at an end office or in a LATA, an intercept announcement is provided. This arrangement provides, for a maximum period of 90 days, an announcement that the service associated with the number dialed has been disconnected.

Calls in the terminating direction will not be completed to 950-XXXX access code, local operator assistance (0- and 0+), Directory Assistance (411), exchange telephone repair service or service code 911 or 10XXX access codes. Alternative C may not be switched to access FGB, FGC, FGD or another Alternative of the Circuit Switched - Trunk Side Basic Serving Arrangement, including another Alternative C, in the same LATA.

CANCELLED

3. Alternative D (BSA-D)

a. General

1. Alternative D is provided at Telephone Company designated end office switches.
2. Whether routed directly or via Telephone Company designated electronic access tandem switches, the end office or access tandem switch trunk equipment is provided with wink start start-pulsing signals and answer and disconnect supervisory signaling.
3. The Telephone Company will establish a trunk group or groups for the customer at end office switches or access tandem switches where Alternative D switching is provided. When required by technical limitations, a separate trunk group will be established for each type of Alternative D switching arrangement provided. Different types of Alternative D or other switching arrangements may be combined in a single trunk group at the option of the Telephone Company.
4. Alternative D switching is provided with multifrequency address signaling. Up to 12 digits of the called number dialed by the customer's end user using dual tone multifrequency or dial pulse address signals will be provided by Telephone Company equipment to the customer's premises where the

5. Where no access code is required, the telephone number dialed by the customer's end user shall be a seven or ten digit number for calls in the North American Numbering Plan (NANP). For international calls outside the NANP, a seven to twelve digit number may be dialed. The form of the numbers dialed by the customer's end user is NXX-XXXX, 0 or 1 + NXX-XXXX, NPA + NXX-XXXX, 0 or 1 + NPA + NXX-XXXX, and, when the end office is equipped for International Direct Distance Dialing (IDDD), 01 + CC + NN or 011 + CC + NN. (IDDD provides the capability of switching international calls with service prefix and address codes having more digits than are capable of being switched through a standard end office equipped with Alternative D capability.)

6.3.4 Basic Serving Arrangement Features

There are various features available with the Basic Serving Arrangements. These features are provided as Local Transport and Local Switching (i.e., common switching, transport termination or line termination) features.

Certain other features which may be available in connection with Basic Serving Arrangements are provided under the Telephone Company's local or General Exchange service tariffs. These are:

- Custom Calling features (BSA-A)
- Billed Number Screening (BSA-A and BSA-B)
- IntraLATA Extensions (BSA-A)
- TeleBranch^R (BSA-A)

Following are matrices identifying the Basic Serving Arrangements and the Local Transport and Local Switching features available with each BSA. Descriptions of the features are set forth in Paragraphs 6.1.2, A.2, 6.4.1, 6.4.2, 6.4.3 and 6.4.4, following.

6.3.5 Service Provisioning

A. Design and Traffic Routing of Basic Serving Arrangements

When ordering line side or trunk side Switched Access Service BSAs, the customer may specify routing to be direct to a suitably equipped end office or routing to be through an access tandem switch. The customer is required to specify whether the service should be provided by originating only, terminating only or two-way lines or trunks.

For Circuit Switched - Line Side and Circuit Switched - Trunk Side Alternative B, the line or trunk directionality and traffic routing of the BSA between the customer's premises and the entry switch are determined by the customer's order for service. The Telephone Company will compare the customers' requests with their own traffic routing plan and available facilities and equipment to determine whether the customer's request can be met. The Telephone Company is responsible for selection of facilities from the interface to any switching point and to the end offices where capacity is ordered. The Telephone Company will also decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. For Circuit Switched - Trunk Side Alternative B, the customer may order the Customer Specification of Local Transport Termination Feature.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Basic Serving Arrangement Descriptions-(Continued)

6.3.5 Service Provisioning-(Continued)

A. Design and Traffic Routing of Basic Serving Arrangements-(Continued)

Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment, and the Telephone Company traffic routing plans. If the customer desires routing or directionality different from that determined by the Telephone Company, the Telephone Company will work cooperatively with the customer in determining whether the services is to be routed directly to an end office or through an access tandem switch and the directionality of the service.

B. Transmission Specifications

Each line side and trunk side Switched Access Basic Serving Arrangement transmission path is provided with standard transmission specifications. Transmission specifications for the DNAL BSA are set forth in Technical Reference TR-NPL-000336. For the line side or trunk side BSAs and for the Feature Groups, there are three different standard specifications (Types A, B, and C). The standard for a particular transmission path is dependent on the BSA, the interface group and whether the service is directly routed or routed via an access tandem. For example, interface Group 1 is provided with Type C and interface groups 2 through 10 are provided with Type A or B transmission specifications. Data transmission parameters are also provided with each BSA transmission path. Upon notification by the customer that the data parameters set are not being met, the Telephone Company will conduct tests independently or in cooperation with the customer, and take any necessary action to insure that the data parameters are met.

For line side and trunk side BSAs, transmission specifications are specified in Technical Reference TR-NPL-000334 in terms of (1) acceptance and immediate action limits for the five voice parameters and (2) immediate action limits for the data parameters. In addition, maintenance limits for the voice parameters of Circuit Switched - Trunk Side Alternatives B, C and D are specified in Southwestern Bell Telephone Company Technical Reference PUB 76500.

6.3 Basic Serving Arrangement Descriptions-(Continued)

6.3.5 Service Provisioning-(Continued)

B. Transmission Specifications-(Continued)

The specific applications in terms of the BSAs and the interface groups with which the BSA standard transmission performances are provided are described below.

1. Circuit Switched - Line Side

Circuit Switched - Line Side is provided with either Type B or Type C transmission specifications. The specifications for the associated parameters are guaranteed to the first point of switching except when optional extensions are provided. Type C transmission specifications are provided with interface group 1 and Type B is provided with interface groups 2 through 10.

Type DB data transmission parameters are provided with Circuit Switched - Line Side to the first point of switching.

2. Circuit Switched - Trunk Side

a. Alternative B

Circuit Switched - Trunk Side Alternative B is provided with either Type B or Type C transmission specifications. The specifications for the associated parameters are guaranteed to the end office when routed directly, or to the first point of switching when routed via an access tandem. Type C transmission specifications are provided with interface group 1 and Type B is provided with interface groups 2 through 10.

Type DB data transmission parameters are provided with Circuit Switched - Trunk Side Alternative B to the first point of switching.

B. Transmission Specifications-(Continued)

2. Circuit Switched - Trunk Side-(Continued)

b. Alternative C

When BSA-C is routed directly to the end office, either Type B or Type C transmission specifications are provided. When BSA-C is routed via an access tandem, only Type B is provided. Type B transmission specifications are provided with interface groups 2 through 10 whether routed directly to an end office or to an access tandem. Type C transmission specifications are provided with interface group 1 when routed directly to an end office. Type B or Type C transmission specifications are provided on the transmission path from the access tandem to the end office.

Type DB data transmission parameters are provided for the transmission path from the customer's premises to the end office when routed directly to the end office. Type DB data transmission parameters are provided for the transmission path between the customer's premises and the access tandem and between the access tandem and the end office when routed via an access tandem.

c. Alternative D

When BSA-D is routed directly to the end office, either Type B or Type C transmission specifications are provided. When BSA-D is routed via an access tandem, only Type A is provided. Type A and B transmission specifications are provided with interface groups 2 through 10. Type C transmission specifications are provided with interface group 1. Type A transmission specifications are provided on the transmission path from the access tandem to the end office.

Type DA data transmission parameters are provided for the transmission path between the customer's premises and the access tandem and between the access tandem and the end office. Type DB data transmission parameters are provided for the transmission path between the customer's premises and the end office when directly routed to the end office.

C. Testing Capabilities

In addition to the acceptance tests described in Paragraph 6.1.4, preceding, (which are included with the installation of the BSA), Additional Cooperative Acceptance Testing, Automatic Scheduled Testing, Cooperative Scheduled Testing, Manual Scheduled Testing, and Nonscheduled Testing are available as described in Section 13, Paragraph 13.3.5 (Testing Services) for line side and trunk side BSAs. The following testing capabilities are available on an ongoing basis for the services provided under this tariff as described below:

1. Circuit Switched - Line Side

In the terminating direction where equipment is available, Circuit Switched - Line Side is provided with seven digit access to balance (100 type) test line and milliwatt (102 type) test line.

2. Circuit Switched - Trunk Side Alternatives B, C and D

In the terminating direction and where equipment is available, Circuit Switched - Trunk Side Alternatives B, C and D are provided with seven digit access to balance (100 type) test line, milliwatt (102 type) test line, nonsynchronous or synchronous test line, automatic transmission measuring (105 type) test line, data transmission (107 type) test line, loop around test line, short circuit test line and open circuit test line.

6.3.6 Non-Access Charges

Rates and charges for services other than Switched Access Service, e.g., a customer's interLATA toll message service, may also be applicable when Switched Access Service is used in conjunction with these other services.

F. Automatic Number Identification (ANI)-(Continued)

With Feature Group C, ANI is provided from end offices at which Telephone Company recording for end user billing is not provided, or where it is not required, as with 800 service. It is not provided from end offices for which the Telephone Company needs to forward ANI to its recording equipment.

Where ANI cannot be provided, e.g., on calls from 4-party services, information digits will be provided to the IC.

The information digits identify: (1) telephone number is the station billing number - no special treatment required, (2) multiparty line - telephone number is a 4-party line and cannot be identified - number must be obtained via an operator or in some other manner, (3) ANI failure has occurred in the end office switch which prevents identification of calling telephone number - must be obtained by operator or in some other manner, (4) hotel/motel-originated call which requires room number identification, (5) coinless station, hospital, inmate, etc., call which requires special screening or handling by the IC, and (6) call is an Automatic Identified Outward Dialed (AIOD) call from customer premises equipment. The ANI telephone number is the listed telephone number of the customer and is not the telephone number of the calling party. These ANI information digits are available with Feature Groups B, C and D.

Additional ANI information digits are available with Feature Group D only. They include:

1. InterLATA restricted - telephone number is identified line
2. InterLATA restricted - hotel/motel line
3. InterLATA restricted - coinless, hospital, inmate, etc., line

These information digits will be transmitted as agreed to by the IC and the Telephone Company.

MO. PUBLIC SERVICE COMM.

F. Automatic Number Identification (ANI)-(Continued)

The seven-digit ANI telephone number is available with FGB or BSA-B on a direct trunk basis only. With FGC or BSA-C, technical limitations may exist in Telephone Company switching facilities which require ANI to be provided only on a directly trunked basis. ANI will be transmitted on all calls except those originating from multiparty lines, coin stations and coinless pay telephones using FGB or BSA-B, or when an ANI failure has occurred where ANI is not provided to an SSP equipped office for 800 NPAS.

(AT)

With FGC and BSA-C, ANI is provided from end offices at which Telephone Company recording for end user billing is not provided, or where it is not required. It is not provided from end offices for which the Telephone Company needs to forward ANI to its recording equipment.

(RT)

The ten-digit ANI telephone number is only available with Feature Group D. The ten-digit ANI telephone number is also available with BSA-D as a BSE as described in Paragraph 6.6.2, following. The ten-digit ANI telephone number consists of the Numbering Plan Area (NPA) plus the seven-digit ANI telephone number. The ten-digit ANI telephone number will be transmitted on all calls except those identified as multiparty line or ANI failure or where ANI is not provided to an SSP equipped office for 800 NPAS in which case only the NPA will be transmitted (in addition to the information digit described below).

(AT)

(AT)

Where ANI cannot be provided, e.g., on calls from 4-party services, formation digits will be provided to the IC with FGB, FGC, FGD, BSA-B or BSA-C or BSA-D.

The information digits identify: (1) telephone number billing number - no special treatment required, (2) multiparty telephone number is a 4-party line and cannot be identified - number must be obtained via an operator or in some other manner, (3) ANI failure has occurred in the end office switch which prevents identification of calling telephone number - must be obtained by operator or in some other manner, (4) hotel/motel-originated call which requires room number identification, (5) coinless station, hospital, inmate, etc., call which requires special screening or handling by the IC, and (6) call is an Automatic Identified Outward Dialed (AIOD) call from customer premises equipment. The ANI telephone number is the listed telephone number of the customer and is not the telephone number of the calling party.

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.1 Common Switching Optional Features-(Continued)

G. Up to 7-Digit Outpulsing of Access Digits to IC

This option provides for the end office capability of providing up to 7 digits of the uniform access code (950-10XX) to the IC terminal location. The IC can request that only some of the digits in the access code be forwarded. The access code digits would be provided to the IC terminal location using multifrequency signaling, and transmission of the digits would precede the forwarding of ANI if that feature were provided. It is available with Feature Group B.

H. Revertive Pulse Address Signaling

This option provides for a dc pulsing arrangement that transmits intelligence in the following manner:

1. The equipment at the originating location presets itself to represent the number of pulses required and to count the pulses received from the terminating location.
2. The equipment at the terminating location transmits a series of pulses by the momentary grounding of its battery supply until the originating location breaks the dc path to indicate that the required number of pulses has been counted.

This option is available with Feature Group C.

6.4.1 Common Switching Features-(Continued)

F. Automatic Number Identification (ANI)-(Continued)

In addition to the information indicators, the seven or ten digit telephone number will be provided to customers for each feature group or BSA as described below:

Seven Digit ANI

FGB or BSA-B - Seven digit ANI is available with FGB or BSA-B on a direct trunk basis only.

FGC or BSA-C - Seven digit ANI is provided with FGC or BSA-C from end offices at which Telephone Company recording for end user billing is not provided, or where it is not required, as with 800 service. It is not provided from end offices for which the Telephone Company needs to forward ANI to its recording equipment. Technical limitations may exist in Telephone Company switching facilities which require seven digit ANI to be provided only on a direct trunk basis. Seven digit ANI is not available with SS7 signaling.

Ten Digit ANI/Charge Number Parameter

FGD - Ten digit ANI/Charge Number Parameter is only available with FDG. (Ten digit ANI/Charge Number Parameter for use with BSA-D is provided as a BSE as specified in 6.6.1.) The ten digit telephone number will be transmitted on all calls except those identified as multiparty line or ANI failure, in which case only the NPA will be transmitted (in addition to the information indicators described preceding). The Charge Number Parameter is equivalent to ten digit ANI when SS7 signaling is ordered.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.1 Common Switching Optional Features-(Continued)

I. Delay Dial Start-Pulsing Signaling

This option provides a method of indicating to the near end trunk circuit readiness to accept address signaling information by the far end trunk circuit. Delay dial is often referred to as an off-hook, on-hook signaling sequence. The delay dial signal is the off-hook interval and the start-pulsing signal is the on-hook interval. With integrity check, the calling office will not outpulse until a delay dial (off-hook) signal followed by a start-pulsing (on-hook) signal has been identified at the calling office. This option is available with Feature Group C.

J. Immediate Dial Pulse Address Signaling

This option provides for the forwarding of dial pulses from the Telephone Company end office to the IC without the need of a start-pulsing signal from the IC. It is available with Feature Group C.

K. Dial Pulse Address Signaling

This option provides for the transmission of number information, e.g., called number, between the end office switching system and the IC's terminal location (in either direction) by means of direct current pulses. It is available with Feature Group C.

L. Panel Call Indicator Address Signaling

This trunk side option provides a dc pulsing arrangement in which each digit is transmitted as a series of four marginal and polarized impulses. It is available with Feature Group C.

M. Service Class Routing

This option provides the capability of directing originating traffic from an end office to a trunk group to an IC-designated terminal location, based on the line class of service (e.g., coin, multiparty or hotel/motel), service prefix indicator (e.g., 0-, 0+) or service access code (e.g., 600, 700, 800 or 900). It is provided in suitably equipped end office or access tandem switches and is available with Feature Groups C and D.

H. Delay Dial Start-Pulsing Signaling

This feature, available with FGC and BSA-C, provides a method of indicating to the near end trunk circuit readiness to accept address signaling information by the far end trunk circuit. Delay dial is often referred to as an off-hook, on-hook signaling sequence. The delay dial signal is the off-hook interval and the start-pulsing signal is the on-hook interval. With integrity check, the calling office will not output until a delay dial (off-hook) signal followed by a start-pulsing (on-hook) signal has been identified at the calling office.

CANCELLED

I. Immediate Dial Pulse Address Signaling

This feature, available with FGB, FGC, BSA-B and BSA-C provides for the forwarding of dial pulses from the Telephone Company end office without the need of a start-pulsing signal from the IC.

J. Dial Pulse Address Signaling

This feature, available with FGC and BSA-C, provides for the transmission of number information, i.e., called number, between the end office switching system and the IC's terminal location (in either direction) by means of direct current pulses.

K. Service Class Routing

This feature provides the capability of directing or blocking originating traffic from an end office to a trunk group to an IC-designated terminal location, based on the line class of service (i.e., coin, multiparty or hotel/motel), service prefix indicator (i.e., 0-, 0+, 00-, 01+ or 011+). It is provided with FGC, FGD, BSA-C and BSA-D, in suitably equipped end office or access tandem switches.

In addition, service class routing provides the capability of directing originating traffic from an end office to a trunk group to a customer designated premises based on the line class of service, service prefix indicator or 800-NXX-XXXX or 900 service access code + NXX. It is provided with FGC, FGD, BSA-C and BSA-D in suitably equipped end office or access tandem switches.

6.3.1 Common Switching Optional Features-(Continued)

N. Alternate Traffic Routing

This option provides the capability of directing originating traffic from an end office (or appropriately equipped access tandem) to a trunk group (the "high usage" group) to an IC-designated terminal location until that group is fully loaded, and then delivering additional originating traffic (the "overflowing" traffic) from the same end office or access tandem to a different trunk group (the "final" group) to the same or a second IC-designated terminal location. The IC shall specify the last trunk CCS desired for the high usage group. It is provided in suitably equipped end office or access tandem switches and is available with Feature Groups B, C and D.

O. Trunk Access Limitation

This option provides for the routing of originating 600, 700, 800 or 900 service calls to a specified number of transmission paths in a trunk group, in order to limit (choke) the completion of such traffic to the IC. Calls to the designated service which could not be completed over the subset of transmission paths in the trunk group, i.e., the choked calls, would be routed to reorder tone. It is provided in all Telephone Company electronic end offices and, where available, in electromechanical end offices. It is available with Feature Groups C and D.

P. Call Gapping Arrangement

This option, provided in suitably equipped end office switches, provides for the routing of originating calls to 10XX or service code 600, 700, 800 or 900 service to be switched in the end office to all transmission paths in a trunk group at a prescribed rate of flow, e.g., one call every five seconds, in order to limit (choke) the completion of such traffic to the IC. Calls to the designated service which are denied access by this feature, i.e., the choked calls, would be routed to a no-circuit announcement. It is provided in selected Feature Group D-equipped end offices and is available only with Feature Group D.

Routing for FGD is provided in Paragraph 6.5.2, following. Optional features provided in (F) preceding and Paragraph 6.3.2(A) following are only available on the direct route.

M. Band Advance Arrangement for use with WATS Access Line Service

This option, which is provided with FGC and FGD in association with two or more WATS Access Line Service groups, provides for the automatic overflow of terminating calls to a WATS Access Line group, when that group has exceeded its call capacity, to another WATS Access Line group with a band designation equal to or greater than that of the overflowing WATS Access Line group. This arrangement does not provide for call overflow from a group with a higher band designation to one with a lower one.

Q. Band Advance Arrangement for Use With Dedicated Access Line Service

This option, which is provided in association with two or more Dedicated Access Line Service (DALs) groups, provides for the automatic overflow of terminating calls to a DALs group, when that group has exceeded its call capacity, to another DALs group with a band designation equal to or greater than that of the overflowing DALs group. This arrangement does not provide for call overflow from a group with a higher band designation to one with a lower one. This option is available with Feature Groups C and D.

R. End Office Customer Line Service Screening for Use With Dedicated Access Line Service

This option provides the ability to verify that a customer has dialed a called party address (by screening the called NPA and/or NXX on the basis of geographical bands selected by the Telephone Company) which is in accordance with that customer's service agreement with the IC, i.e., WATS. This option is provided in all Telephone Company electronic end offices and where available, in electromechanical end offices in which Dedicated Access Line Service is provided. It is available with Feature Groups C and D.

N. End Office End User Line Service Screening for use with WATS Access Line Service

(AT) This feature, available with FGC, FGD, BSA-C and BSA-D provides the ability to verify that an end user has dialed a called party address (by screening the called NPA and/or NXX on the basis of geographical bands selected by the Telephone Company) which is in accordance with that customer's service agreement with the IC, i.e., WATS. This feature is provided in most Telephone Company electronic end offices and where available, in electromechanical end offices in which WATS Access Line Service is provided.

O. Hunt Group Arrangement for use with WATS Access Line Service

(AT) This feature, available with FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C and
(AT) BSA-D provides the ability to sequentially access one of two or more WATS Access Line Services in the terminating direction, when the hunting number of the WATS Access Line Service group is forwarded from the IC to the Telephone Company. This feature is provided in all Telephone Company end offices in which WATS Access Line Service is provided.

P. Trunk Access Limitation

(AT) This feature, available with FGC, FGD, BSA-C and BSA-D, provides for the routing of originating 900 service calls to a specified number of transmission paths in a trunk group or at the option of the Telephone Company, a trunk group dedicated to 900 service, in order to limit (choke) the completion of such traffic to the IC. Calls to the designated service which could not be completed over the subset of transmission paths in the trunk group, i.e., the choked calls, would be routed to reorder tone. It is provided in suitably equipped Telephone Company end offices.

Q. Uniform Call Distribution Arrangement for use with WATS Access Line Service

This feature, available with FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C and BSA-D, provides a type of multiline hunting arrangement which provides for an even distribution of terminating calls among the available WATS Access Line Services in the hunt group. This feature is only provided in suitably equipped electronic end offices in which WATS Access Line Service is provided.

R. Nonhunting Number for use with Hunt Group Arrangement or Uniform Call Distribution Arrangement for use with WATS Access Line Services

This feature, available with FGA, FGB, FGC, FGD, BSA-A, BSA-B, BSA-C and BSA-D, provides an arrangement for an individual WATS Access Line Service within a multiline hunt or uniform call distribution group that provides access to a specific WATS Access Line Service within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed. This feature is only provided in suitably equipped electronic end offices in which WATS Access Line Service is used for the completion of terminating calls.

S. Cut-Through

(CT)
(CT) This feature, available with FGD and BSA-D, allows end users to reach the customer's premises by dialing 101XXXX + #. This feature provides for connection of the call to the premises of the customer indicated by the 101XXXX code upon receipt of the end of dialing the # digit. The Telephone Company will not record any other dialed digits for these calls.

T. Overlap Outpulsing

This feature, available with FGD and BSA-D where technically feasible, decreases call setup delay by starting to establish the connection to a customer's switch before the last four digits of the called number have been dialed.

U. Wink Start Address Signaling

This feature, available with FGB, FGC, BSA-B, BSA-C and FGD, provides a method of indicating to the originating switch the readiness of the far end switch to receive address signaling. This is done by providing a battery ground reversal. This feature is not available with SS7 Signaling.

This option, available with FGD, allows end users to reach the customer's premises by dialing 10XXX + #. This option provides for connection of the call to the premises of the customer indicated by the 10XXX code upon receipt of the end of dialing the # digit. The Telephone Company will not record any other dialed digits for these calls.

Q. Uniform Call Distribution Arrangement for use with WATS Access Line Service

This option, available with FGC and FGD, provides a type of multiline hunting arrangement which provides for an even distribution of terminating calls among the available WATS Access Line Services in the hunt group. This feature is only provided in suitably equipped electronic end offices in which WATS Access Line Service is provided.

R. Nonhunting Number for use with Hunt Group Arrangement or Uniform Call Distribution Arrangement for use with WATS Access Line Services

This option, available with FGC and FGD, provides an arrangement for an individual WATS Access Line Service within a multiline hunt or uniform call distribution group that provides access to a specific WATS Access Line Service within the hunt or uniform call distribution group when it is idle or provides busy tone when it is busy, when the nonhunting number is dialed. This feature is only provided in suitably equipped electronic end offices in which WATS Access Line Service is provided.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.2 Transport Termination Optional Features

A. Rotary Dial Station Signaling

This option provides for the transmission of called party address signaling from rotary dial stations to the IC terminal location for originating calls. This option is provided in the form of a specific type of Transport Termination. It is available with Feature Group B only on a directly trunked basis. When direct trunking would not have been provided except as required by the provision of rotary dial station signaling, additional charges will apply for the Provision of Other Than Telephone Company Selected Traffic Routing, as set forth in Paragraph 6.8.2, B., following.

B. Operator Trunk - Coin, Non-Coin or Combined Coin and Non-Coin

This option may be ordered to provide coin, non-coin or combined coin and non-coin operation. It is available only with Feature Group C and is provided in electronic end offices and other Telephone Company end offices where equipment is available. It is provided as a trunk type of Transport Termination. When this Feature may, because of technical limitations, only be provided on a directly trunked basis, and when direct trunking would not have been provided except as required by the provision of this feature, additional charges will apply for the Provision of Other Than Telephone Company Selected Traffic Routing, as set forth in Paragraph 6.8.2, B., following.

Coin:

This arrangement provides for initial coin return control and routing of 0+, 0- or 1+ prefixed originating coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the service class routing condition.

The operator assistance coin calling arrangement is also normally ordered by the IC in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the IC's TSS systems, rather than in the IC's manual cord boards.

(MT) V. Carrier Identification Code (CIC)

This feature permits the customer to establish or add a CIC, change an existing CIC or delete an

(MT) existing CIC used in conjunction with the customer's FGB, FGD, BSA-B, and BSA-D service.

(AT)(FC) W. Carrier Identification Code Parameter (CIP)

Available with FGB and BSA-D that has SS7 Signaling in suitably equipped end offices or access tandem switches.

Provides for the transmission of the Carrier Identification Code (CIC) to the customer within the Initial Address Message (IAM) of an originating FGD or BSA-D call. This optional feature transmits the CIC of the presubscribed carrier or the CIC selected when the end user originated a call using a 101XXXX access code. CIP is available at the end office and is billed on a per call basis.

(AT) Technical Specifications for CIP are set forth in Technical Reference GR-394-CORE.

(MT)(FC) X. International Carrier Feature

This feature allows for FGD and BSA-D end office or access tandem switched equipped for International Direct Distance Dialing to be arranged to forward international calls to the customer designated by the end user.

This feature also allows for FGD and BSA-D end offices or access tandem switched equipped for International Direct Distance Dialing to be arranged to forward the international call of one or more international carriers to the customer (i.e., the Telephone Company is able to route originating international calls to a customer other than the one designated by the end user either through presubscription, 101XXXX dialing). This arrangement requires provision of written verification to the Telephone Company that the customer is authorized to forward such calls. The written verification must be in the form of a letter of agency authorizing the customer to order the feature on behalf of the international carrier. This feature is only provided with FGD

(MT) and BSA-d at end offices or access tandems equipped for International Direct Distance Dialing.

6.3 Common Switching and Transport Termination Optional Features (Continued)

6.3.2 Transport Termination Optional Features

A. Rotary Dial Station Signaling

This option provides for the transmission of called party address signaling from rotary dial stations to the IC terminal location for originating calls. This option is provided in the form of a specific type of Transport Termination. It is available with Feature Group B only on a directly trunked basis.

B. Operator Trunk - Coin, Non-Coin or Combined Coin and Non-Coin

This option is a trunk type termination which may be ordered to provide coin, non-coin, or combined coin and non-coin operation. It is available only with FGC and is provided in suitably equipped end offices.

This arrangement is normally ordered in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the customer's TSPS systems, rather than in the customer's manual cord boards.

Coin:

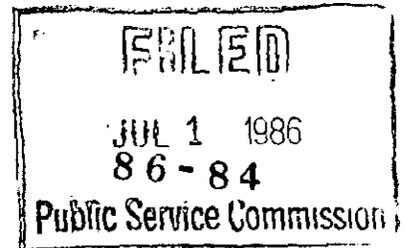

This arrangement provides for initial coin return control and routing of 0+, 0- or 1+ prefixed originating coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing option.

6.3 Common Switching and Transport Termination Nonchargeable Optional Features-(Continued)

6.3.2 Transport Termination Optional Features-(Continued)

B. Operator Trunk - Coin, Non-Coin or Combined Coin and non-Coin-(Continued)

Non-Coin:

This arrangement provides for the routing of 0+, 0- or 1+ prefixed originating non-coin calls requiring operator assistance to the IC's terminal location. Because operator assisted non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the service class routing option.

The operator assistance non-coin calling arrangement is also normally ordered by the IC in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the IC's TSPS systems, rather than in the IC's manual cord boards. When so equipped, the ANI feature provides for the forwarding of information digits which identify that the call has originated from a hotel or motel, and whether room number identification is required, or that special screening is required, e.g., for coinless public stations, dormitory or inmate stations, or other screening arrangements agreed to between the IC and the Telephone Company.

Combined Coin and Non-Coin:

This arrangement provides for initial coin return control and routing of 0+, 0- or 1+ prefixed originating operator assisted coin and non-coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin and non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the service class routing option.

This arrangement is normally ordered by the IC in conjunction with the ANI optional feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the IC's operator services systems, rather than in the IC's manual cord boards. When so equipped, the ANI optional feature provides for the forwarding of information digits which identify that the call has originated from a hotel or motel and whether room number identification is required, or that special screening is required, e.g., for coinless public stations, dormitory or inmate stations, or other screening arrangements, agreed to between the IC and the Telephone Company.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.4 Local Switching Features-(Continued)

6.4.1 Common Switching Features-(Continued)

(MT)

(MT)

(FC) AA. Multifrequency Address Signaling

This feature, available with FGB, FGC, FGD, BSA-B, BSA-C, and BSA-D, provides for the transmission of number information and control signals, e.g., number address signals, automatic number identification, between the end office switching systems and the customer's premises (in either direction). Multifrequency signaling arrangements make use of pairs of frequencies out of a group of six frequencies. Specific information transmitted is dependent upon feature group and call type, i.e., POTS, coin or operator. This feature is not available in combination with SS7 signaling.

(FC) BB. Signaling System 7 (SS7) Signaling

This feature provides common channel out of band transmission of address and supervisory SS7 protocol signaling information between the end office switching system or the tandem office switching system and the customer's designated premises. The signaling information is transmitted over facilities provided with the Common Channel Signaling/Signaling System 7 Interconnection Service as specified in Section 20 following.

(FC) CC. Calling Party Number (CPN) Parameter

This feature includes the transport in the originating direction of the Calling Part Number (CPN) Parameter where technically feasible and where the Telephone Company has made CPN privacy restriction available to the originating end user. The CPN Parameter provides for the automatic transmission of the ten digit directory number, associated with a calling station, to the customer's premises for calls originating in the LATA. The ten digit telephone number consists of the NPA plus the seven digit telephone number, which may or may not be the same number as the calling station's charge number. The CPN will be coded as presented, or restricted via a "privacy indicator" for delivery to the called end user.

The CPN Parameter must be transported without alteration or modification to the connecting carrier, the terminating telephone company, or an end user when the customer has a direct connection. Customers must honor and transmit the unaltered "privacy indicator" within the CPN Parameter.

6.4 Local Switching Features-(Continued)

6.4.1 Common Switching Features-(Continued)

MO. PUBLIC SERVICE COMM.

Provides the ability to add values to the existing information indicators (ii) that are available with the ANI feature. The customer will receive all new ii codes that are assigned by the North American Numbering Plan Administrator as they become available and are activated in the Telephone Company switches. Flex ANI is provided per end office and on a Carrier Identification Code (CIC) basis.

Z. Multifrequency Address Signaling

This feature, available with FGB, FGC, FGD, BSA-B, BSA-C, and BSA-D, provides for the transmission of number information and control signals, e.g., number address signals, automatic number identification, between the end office switching systems and the customer's premises (in either direction). Multifrequency signaling arrangements make use of pairs of frequencies out of a group of six frequencies. Specific information transmitted is dependent upon feature group and call type, i.e., POTS, coin or operator. This feature is not available in combination with SS7 signaling.

AA. Signaling System 7 (SS7) Signaling

This feature provides common channel out of band transmission of address and supervisory SS7 protocol signaling information between the end office switching system or the tandem office switching system and the customer's designated premises. The signaling information is transmitted over facilities provided with the Common Channel Signaling/Signaling System 7 Interconnection Service as specified in Section 20 following.

(CT) This feature includes the transport in the originating direction of the Calling Party Number (CPN) Parameter where technically feasible and where the Telephone Company has made CPN privacy restriction available to the originating end user. The CPN Parameter provides for the automatic transmission of the ten digit directory number, associated with a calling station, to the customer's premises for calls originating in the LATA. The ten digit telephone number consists of the NPA plus the seven digit telephone number, which may or may not be the same number as the calling station's charge number. The CPN will be coded as presented, or restricted via a "privacy indicator" for delivery to the called end user.

CANCELLED

AUG 26 1999

By *RS #47.01*
Public Service Commission
MISSOURI

The CPN Parameter must be transported without alteration or modification through the connecting carrier, the terminating telephone company, or an end user when the customer has a direct connection. Customers must honor and transmit the unaltered "privacy indicator" within the CPN Parameter.

6.4 Local Switching Features-(Continued)

6.4.1 Common Switching Features-(Continued)

(FC) DD. Carrier Selection Parameter (CSP)

This feature provides for the automatic transmission of a signaling indicator which signifies to the customer whether or not the call being processed originated from a presubscribed line. If the line was presubscribed, the indicator will signify if the end user did or did not dial or 101XXXX. This feature is provided with originating FGD or BSA-D with SS7 signaling.

(FC) EE. MicroLink I Access Capability

Is available with FGD and BSA-D in suitably equipped end offices or access tandem switches. It provides the capability to originate and terminate digital data at speeds up to 56 kbps. MicroLink I Access Capability establishes the connection between the Telephone Company's MicroLink I switched digital data service and the customer's digital network. Segregated or common FGD or BSA-D trunk groups will be provided, as requested by the customer, between the customer designated premises and suitably equipped end offices or access tandems. Segregated trunk groups will be used to transmit digital data traffic only. Common FGD and BSA-D trunk groups will be used to transmit digital data traffic as well as voice traffic.

(FC) FF. 64 Clear Channel Capability (64 CCC)

Available with FGD and BSA-D that has SS7 Signaling in suitably equipped end offices or access tandem switches.

Provides the customer with an increase in usable bandwidth from 56 Kbps to 64 Kbps per trunk data stream across the network. Clear Channel Capability is provided only on a 1.544 Mbps facility and requires the customer signal at the channel interface to conform to Bipolar with Eight Zero Substitution (B8ZS) line code format as described in Transport Systems Generic Requirements (TSGR): Common Requirements; TR-TSY-000499. This feature is provided with SS7 Signaling and is available where technically feasible and facilities permit. These locations are specified in the National Exchange Carrier Association, Inc., Tariff F.C.C. No. 4, Wire Center and Interconnection Information.

originating calls. This feature is provided in the form of a specific type of Transport Termination. It is available with FGB and BSA-B only on a directly trunked basis.

B. Operator Trunk - Coin, Non-Coin or Combined Coin and Non-Coin

This feature is a trunk type termination which may be ordered to provide coin, non-coin, or combined coin and non-coin operation. It is available only with FGC and BSA-C and is provided in suitably equipped end offices.

This arrangement is normally ordered in conjunction with the ANI feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the customer's TSPS systems, rather than in the customer's manual cord boards.

Coin:

- (AT) This arrangement provides for initial coin return control and routing of 0+, 0-, 1+ or 011+ prefixed originating coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin
- (AT) and non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing option.

Non-Coin:

This arrangement provides for the routing of 0+, 0- or 1+ prefixed originating non-coin calls requiring operator assistance to the IC's terminal location. Because operator assisted non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing feature.

Combined Coin and Non-Coin:

This arrangement provides for initial coin return control and routing of 0+, 0- or 1+ prefixed originating operator assisted coin and non-coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin and non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing feature.

MISSOURI
Public Service Commission

(MT) 6.3.2 Transport Termination Features-(Continued)

B. Operator Trunk - Coin, Non-Coin or Combined Coin and Non-Coin

This feature is a trunk type termination which may be ordered to provide coin, non-coin, or combined coin and non-coin operation. It is available only with FGC and is provided in suitably equipped end offices.

(MT)

This arrangement is normally ordered in conjunction with the ANI feature, since the preponderance of trunk groups equipped with this arrangement will be terminated in the customer's TSPS systems, rather than in the customer's manual cord boards.

Coin:

This arrangement provides for initial coin return control and routing of 0+, 0- or 1+ prefixed originating coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing option.

Non-Coin:

This arrangement provides for the routing of 0+, 0- or 1+ prefixed originating non-coin calls requiring operator assistance to the IC's terminal location. Because operator assisted non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing feature.

Combined Coin and Non-Coin:

This arrangement provides for initial coin return control and routing of 0+, 0- or 1+ prefixed originating operator assisted coin and non-coin calls requiring operator assistance to the IC's terminal location. Because operator assisted coin and non-coin calling traffic is routed over a trunk group dedicated to operator assisted calls, this arrangement is only provided in association with the Service Class Routing feature.

DEC 29 1983

6. SWITCHED ACCESS SERVICE-(Continued)

6.4 Transmission Performance Capabilities

Each Switched Access Service transmission path is provided with a standard transmission performance. There are three different standard performances (Types A, B and C). The standard for a particular transmission path is dependent on the Interface Group and whether the service is directly routed or via an access tandem. The available transmission performances are set forth in Paragraph 6.4.1, following. Data Transmission Parameters are also provided with each Switched Access Service transmission path. The Telephone Company will, upon receipt of a trouble report from the IC, conduct tests, either independently or cooperatively with the IC as appropriate, and take any necessary action to insure that the parameters set forth in Paragraph 6.4.2, A or Paragraph 6.4.2, B, following, are met. The testing will be charged for at the rates set forth in Paragraph 13.3.5, C.1.e, following, for Nonscheduled Testing.

The Telephone Company will maintain existing transmission performance on service configurations installed prior to January 1, 1984. All service configurations installed after January 1, 1984, will conform to the transmission performance standards contained in this tariff, except as follows. Where local facility conditions cannot support the transmission performance standards contained in this tariff, transmission standards that can be supported will be uniformly applied to all IC's.

6.4.1 Standard Transmission Performance

Following are descriptions of the three Standard Transmission Performances available with Switched Access Service. Their specific applications in terms of the Feature Groups and Interface Groups with which they are provided are set forth in Paragraphs 6.2.1, C., 6.2.2, C., 6.2.3, C. and 6.2.4, C., preceding.

A. Transmission Performance Type A

Transmission Performance Type A is provided with the following parameters:

1. Loss Deviation

The maximum Loss Deviation of the 1004 Hz ¹⁹⁸⁶ relative to the expected Measured Loss (EML) is ± 2.0 dB.

2. Attenuation Distortion

The maximum Attenuation Distortion in the 404 to 2804 Hz frequency band relative to the loss at 1004 Hz is - 1.0 dB to + 3.0 dB.

(AT) 6.4 Local Switching Features-(Continued)

6.4.3 Transport Termination Features - Line Side Terminations

Local Switching Transport Termination Features provide for the line or trunk side arrangements which terminate the Local Transport facilities. Transport Termination Features are provided as either Line Side Terminations or Trunk Side Terminations. Descriptions of these features are located in Paragraphs 6.4.2 and 6.4.3.

Line Side Terminations are provided with either dial pulse or dual tone multifrequency address signaling and loop start or ground start supervisory signaling. The various signaling arrangements are specified in the Feature Matrix in Paragraph 6.3.4., D., preceding, for Basic Serving Arrangements.

A. Dial Pulse Address Signaling

Available with FGA and BSA-A

Provides for the transmission of number information, e.g., called number, between the end office switching systems and the customer's premises (in either direction) by means of two voice-frequency components, one from a group of four low frequencies and the other from a group of four high frequencies.

B. Dual Tone Multifrequency Address Signaling

Available with FGA and BSA-A

Provides for the transmission of number information, e.g., called number, between the end office switching systems and the customer's premises (in either direction) by means of two voice-frequency components, one from a group of four low frequencies and the other from a group of four high frequencies.

C. Ground-Start Supervisory Signaling

Available with FGA and BSA-A and WATS Access Line Services that terminate on the line side of the switch.

A form of line supervision in which both a terminal request for service and a network seizure for an incoming call are indicated by grounding one of the line conductors.

digit ANI telephone number for Circuit Switched - Trunk Side Alternative B and Dial Pulse Station Signaling) are not available on the tandem route.

2. Multiple Customer Switching Systems

Available with Circuit Switched - Trunk Side Alternatives B, C and D in suitably equipped end offices or access tandem switches.

This alternative provides the capability of directing originating traffic from an end office or access tandem to a trunk group (the "high usage group") until that group is fully loaded, and then delivering additional originating traffic (the "overflowing" traffic from the same end office or access tandem) to a different trunk group (the "final" group). These trunk groups may be terminated at the customer's switching systems on the same or different premises. The customer shall specify the last trunk ECCS desired for the high usage group. MicroLink I traffic cannot be alternate routed if analog facilities are deployed in the alternate route.

(AT)
(AT)

B. Automatic Number Identification (ANI)/Charge Number Parameter

Available with Circuit Switched - Trunk Side Alternative D.

This BSE provides the automatic transmission of a ten digit number and information digits to the customer's premises to identify the calling station of calls originating in the LATA. The ANI/Charge Number Parameter BSE is an end office software function which is associated on a call-by-call basis with (1) all individual transmission paths in a trunk group routed directly between an end office and a customer's premises or, (2) where technically feasible, with all individual transmission paths in a trunk group between an end office and an access tandem, and a trunk group between an access tandem and a customer's premises.

2. Preferential Hunting

Available with Circuit Switched - Line Side and Packet Switched MicroLink II. Where available, this alternative is only provided in electromechanical end offices. Packet Switched MicroLink II is provided for in Section 16, following.

This alternative provides the ability to establish a separate hunting list to be associated with each terminal in a hunt group. At the customer's option, this list may or may not include all terminals in the hunt group. When a call is made directly to a busy terminal in a multiline hunt group equipped with preferential hunting, a linear hunt is performed over the preferential hunt terminals in the order requested by the customer. The call will terminate in the first idle terminal in the preferential hunt list. If all of the terminals in the preferential hunt are busy, and if the hunt list did not include all lines in the hunt group, hunting continues sequentially until an idle terminal is encountered or the last terminal in the hunt group is encountered. If all terminals are busy, a busy tone will be returned to the calling party. This alternative is not available with the Uniform Call Distribution Arrangement and Nonhunting Number Arrangement BSEs.

3. Regular Line Hunting

Available with Circuit Switched - Line Side and Packet Switched MicroLink II in electronic and electromechanical end offices where technically feasible. Packet Switched MicroLink II is provided for in Section 16, following.

This alternative provides the ability to sequentially access terminals in a hunt group. Hunting begins with the terminal number associated with the called number and continues sequentially until an idle terminal is found or the last terminal number is reached. If no idle terminal number is found, a busy tone is returned to the calling party.

The Impulse Noise Counts exceeding a 65 dBrnC0 threshold in 15 minutes is no more than 15 counts.

4. Intermodulation Distortion

The Second Order (R2) and Third Order (R3) Intermodulation Distortion products are equal to or greater than:

Second Order (R2)	33 dB
Third Order (R3)	37 dB

5. Phase Jitter

The Phase Jitter over the 4-300 Hz frequency band is less than or equal to 5 degrees peak-to-peak.

6. Frequency Shift

The maximum Frequency Shift does not exceed -2 to +2 Hz.

B. Data Transmission Parameters Type DB

1. Signal to C-Notched Noise Ratio

The signal to C-Notched Noise Ratio is equal to or greater than 30 dB.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

(AT) 6.6 Basic Service Elements-(Continued)

6.6.2 Basic Service Element Descriptions-(Continued)

D. Nonhunting Number Arrangement

Available with Circuit Switched - Line Side in association with Multiline Hunt Group or UCD Arrangement. Where available, this BSE is only provided in Telephone Company electronic end offices.

This BSE provides an arrangement to access an individual line within a Multiline Hunt Group or Uniform Call Distribution Arrangement when the line is idle. When the Nonhunting Number is dialed and the line is busy, a busy tone will be provided to the caller.

E. Queuing

Available with Circuit Switched - Line side in association with the Uniform Call Distribution (UCD) Arrangement BSE and where facilities permit. Where available, this BSE is only provided in Telephone Company electronic end offices.

When all terminals in a Uniform Call Distribution Arrangement are busy, queuing allows for an incoming call to be placed in queue to await an available terminal in the UCD Arrangement. When a call is placed in queue, audible ringing is returned to the customer and no further indication is sent until a terminal completes the call. The call that has been in queue the longest will be the first call serviced when a terminal becomes available. The maximum number of calls that can be placed in queue is dependent upon the total number of lines in the multiline hunt group. If the incoming call cannot be placed in queue, the calling party will receive a busy tone.

F. Recorded Announcements

Available with Circuit Switched - Line Side and Circuit Switched - Trunk Side Alternatives B and D and in association with Queuing or Remote Make Busy. Where available, this BSE is only provided in electronic end offices.

This BSE provides for standard announcements on calls. When combined with Queuing, calls receive a timed audible ringing tone followed by a repeating announcement that can be separated by silence or audible ringing tone as selected by the customer. When combined with Remote Make Busy or Remote Make Busy - Trunk Side, announcements do not repeat. Calls receive only a timed audible ringing tone followed by an announcement.

(AT) 6.6 Basic Service Elements-(Continued)

6.6.2 Basic Service Element Descriptions-(Continued)

G. Remote Make Busy

Available with Circuit Switched - Line Side and DNAL in electronic end offices where facilities permit.

This BSE provides the customer with the ability to place lines into a busy or overflow condition by customer activation of a CPE key or toggle switch located at the customer's premises. When requested for lines arranged in a Multiline Hunt Group, Remote Make Busy will be provided to the entire hunt group. Calls to lines placed in a busy or overflow condition will receive busy tones. Lines remain in the busy or overflow condition until released by the customer. At the customer's option, busy tone conditioning may be replaced with Recorded Announcements. Charges for Recorded Announcements are in addition to charges for the Remote Make Busy BSE. Recorded Announcements are described in Paragraph 6.6.2, preceding.

Provisioning this BSE requires the use of a DNAL BSA to pass the network control information used to place the line(s) into a busy or overflow condition (or to release those lines for use once they have been busied out). The DNAL must be associated with the BSA-A line(s) arranged for use with the BSE. Rates and charges for the DNAL BSA are in addition to the rates and charges for the associated line side BSA and the BSE.

H. Remote Make Busy - Trunk Side

Available with Circuit Switch - Trunk Side Alternatives B and D and DNAL in electronic end offices where facilities permit.

This BSE provides the customer with the ability to place a Circuit Switched - Trunk Side Alternative B or D trunk or trunk group into a busy condition by customer activation of a CPE key or toggle switch located at the customer's premises. This BSE is available on a trunk group basis. If only one trunk is to be busied out, it must be in a trunk group separate from other trunks which are not to be busied out. Calls to trunks placed in a busy condition will receive busy tones. Trunks remain in the busy condition until released by the customer. At the customer's option, busy tone conditioning may be replaced with Recorded Announcements or Alternate Traffic Routing. Charges for Recorded Announcements and Alternate Traffic Routing are in addition to charges for Remote Make Busy - Trunk Side. Recorded Announcements and Alternate Traffic Routing are described in Paragraph 6.6.2.

6. SWITCHED ACCESS SERVICE-(Continued)

6.5 Obligations of the Telephone Company

In addition to the obligations of the Telephone Company set forth in Section 2, preceding, the Telephone Company has certain other obligations pertaining only to the provision of Switched Access Service. These obligations are as follows:

6.5.1 Network Management

The Telephone Company will administer its network to insure the provision of acceptable service levels to all telecommunications users of the Telephone Company's network services. The Telephone Company maintains the right to apply protective controls on any traffic that it carries over its network, including an IC's Switched Access Service, in order to prevent unsatisfactory performance to other users.

6.5.2 Design and Traffic Routing of Switched Access Service

The Telephone Company shall design and determine the routing of Switched Access Service, including the selection of the first point of switching and the selection of facilities from the interface to any switching point and to the end offices where busy hour minutes of capacity are ordered unless the IC orders the optional feature provision of other than Telephone Company-selected traffic routing. The Telephone Company shall also decide if capacity is to be provided by originating only, terminating only or two-way trunk groups unless the IC orders the optional feature IC specification of feature group directionality. Finally, the Telephone Company will decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. However, for Feature Group B, the IC may order the optional feature IC Specification of Local Transport Termination. Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment and the Telephone Company traffic routing plans.

6.5.3 Provision of Service Performance Data

With the agreement of the Telephone Company, service performance data for an IC's Switched Access Service may be made available to the IC, based on previously arranged intervals and format. Data may include, but are not limited to, IC equipment blockage, failure results and transmission performance. If the data are to be provided through a mechanized exchange of data, the cost of such exchange will be determined on an individual-case basis and must be borne by the IC. Provision of the data in paper format will be at no charge.

Section 6
1st Revised Sheet 59
Replacing Original Sheet 59

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

(MT)(FC) 6.7 Transmission Specifications

(AT) Each Switched Access Service transmission path is provided with standard transmission performance. Transmission specifications for the DNAL BSA are set forth in Technical Reference TR-NPL-000336. For the line side or trunk side BSAs and for the Feature Groups, there are three different standard performances (Types A, B and C). The standard for a particular transmission path is dependent on the Interface Group and whether the service is directly routed or routed via an access tandem. Data Transmission Parameters are also provided with each Switched Access Service transmission path. The Telephone Company will, upon notification by the customer that the data parameters set are not being met, conduct tests independently or in cooperation with the customer and take any necessary action to insure that the data parameters are met.

(AT) Transmission specifications are set forth in appropriate Technical
(RT) References in terms of (1) acceptance and immediate action limits for the five voice parameters and (2) immediate action limits for the data parameters. In addition, maintenance limits for the voice parameters of

(AT)(CT) FGB, FGC, FGD, BSA-B, BSA-C and BSA-D are set forth in appropriate
(RT) Telephone Company Technical References.

The Telephone Company will maintain existing transmission specifications on functioning service configurations installed prior to the effective date of this tariff except that service configurations having performance specifications exceeding the standards listed in this provision will be maintained at performance levels specified in this tariff and the appropriate Technical Reference Publication.

(AT) The specific applications in terms of the Feature Groups, line side or
(AT) trunk side Basic Serving Arrangements, and Interface Groups with which the
(AT) Feature Group or line side or trunk side Basic Serving Arrangement standard transmission performances are provided as set forth in Paragraphs 6.2.1(C), 6.2.2(C), 6.2.3(C) and 6.2.4(C), preceding.

(AT) The specific applications in terms of the line side or trunk side Basic Serving Arrangements and the interface groups with which the line side or trunk side Basic Serving Arrangement standard transmission performances are provided as described in Paragraph 6.3.5. For the DNAL BSA, the transmission specifications for each available interface group are as set forth in Technical Reference TR-NPL-000336.

6. SWITCHED ACCESS SERVICE-(Continued)

6.5 Obligations of the Telephone Company-(Continued)

6.5.4 Trunk Group Measurements Reports

With the agreement of the Telephone Company, trunk group data in the form of usage in CCS, peg count and overflow, where technologically feasible, will be made available to the IC based on previously agreed to intervals.

6.5.5 Determination of Number of Transmission Paths

The Telephone Company will determine the number of Switched Access Service transmission paths to be provided for the Switched Access busy hour minutes of capacity ordered. A transmission path is a communication path within the frequency bandwidth of approximately 300 to 3000 Hz or a derived communication path of a frequency bandwidth of approximately 300 Hz to 3000 Hz provided over a high frequency analog facility or a high speed digital facility between an IC, End User or Telephone Company location and another IC, End User or Telephone Company location. The number of transmission paths will be developed using the total busy hour minutes of capacity by type (as described in Paragraph 6.1.3, A., preceding) for the end offices for each Feature Group ordered from an IC terminal location. The total busy hour minutes of capacity by type for the Feature Group end office will be converted to transmission paths using standard Telephone Company traffic engineering methods for all Feature Groups except for FGA, which will be converted on the basis of 30 busy-hour minutes of capacity per transmission path. The number of transmission paths provided shall be the number required based on (1) the use of access tandem switches and end office switches, (2) the use of end office switches only, or (3) the use of tandem switches only.

6.5.6 Determination of Number of End Office Transport Terminations

For analog entry switches, a termination will be provided for each transmission path provided. For digital entry switches, an equivalent termination will be provided for each transmission path provided.

6.5.7 Design Blocking Probability

The Telephone Company will design the facilities used in the provision of Switched Access Service to meet the blocking probability criteria as set forth in Paragraphs 6.5.7, A. through D., following.

6. SWITCHED ACCESS SERVICE-(Continued)

6.5 Obligations of the Telephone Company-(Continued)

6.5.7 Design Blocking Probability-(Continued)

The Telephone Company will maintain existing blocking performance on service configurations installed prior to January 1, 1984. All service configurations installed after January 1, 1984, will conform to the blocking objectives contained in this Tariff, except as follows: Where local facility conditions cannot support the blocking objectives contained in this Tariff, blocking objectives that can be supported will be uniformly applied to all IC's.

- A. For Feature Group A, no design blocking criteria apply.
- B. For Feature Groups B and C, the design blocking objective will be no greater than one percent (.01) between the point of interface at the IC terminal location and the first point of switching when traffic is directly routed without an alternate route. Standard traffic engineering methods will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.
- C. For Feature Group D, the design blocking objective will be no greater than one percent (.01) between the point of interface at the IC terminal location and the end office switch, whether traffic is directly routed without an alternate route or routed via an access tandem. Standard traffic engineering methods will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.
- D. The Telephone Company will perform routine measurement functions except on Feature Group A to assure that an adequate number of transmission paths are in service. The Telephone Company will recommend that additional busy-hour minutes of capacity be ordered by the IC when additional paths are required to reduce the measured blocking to the designed blocking level. For the busy-hour minutes of capacity ordered, the design blocking objective is assumed to have been met if the routine measurements show that the measured blocking does not exceed the threshold listed in the following tables.

6.6 Obligations of the IC

In addition to the obligations of the IC set forth in Section 2, preceding, the IC has certain specific obligations pertaining to the use of Switched Access Service. These obligations are as follows:

6.6.1 Report Requirements

IC's are responsible for providing the following reports to the Telephone Company, when applicable.

A. Jurisdictional Reports

When an IC orders Switched Access Service for both interstate and intrastate use, the IC is responsible for providing reports as set forth in Section 2, Paragraph 2.3.14, preceding. Changes will be apportioned in accordance with those reports. The method to be used for determining the interstate charges is set forth in Section 2, Paragraph 2.3.15, preceding.

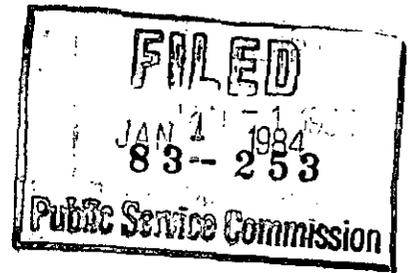

B. LATA Default Percent Interstate Use (PIU) Report

When an IC orders Switched Access to any end office in a LATA, it must provide a projected percentage of interstate use that will serve as a default PIU for the entire LATA. This figure will be used to apportion charges for usage measured at end offices to which the IC has not ordered capacity.

(FC) 6.8 Obligations of the Telephone Company

In addition to the obligations of the Telephone Company set forth in Section 2, preceding, the Telephone Company has certain other obligations pertaining only to the provision of Switched Access Service. These obligations are as follows:

(FC) 6.8.1 Network Management

The Telephone Company will administer its network to insure the provision of acceptable service levels to all telecommunications users of the Telephone Company's network services. Generally, service levels are considered acceptable only when both end users and customers are able to establish connections with little or no delay encountered within the Telephone Company network. The Telephone Company maintains the right to apply protective controls, i.e., those actions, such as call gapping, which selectively cancel the completion of traffic, over any traffic carried over its network, including that associated with a customer's Switched Access Service. Generally, such protective measures would only be taken as a result of occurrences such as failure or overload of Telephone Company or customer facilities, natural disasters, mass calling or national security demands. In the event that the protective controls applied by the Telephone Company result in the complete loss of service by the customer, the customer will be granted a Credit Allowance for Service Interruptions as set forth in Paragraph 2.4.4, preceding, except as specified in 2.4.4, c, preceding.

Section 6
Original Sheet 63

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE--(Continued)

6.6 Obligations of the IC--(Continued)

6.6.1 Report Requirements--(Continued)

C. Code Screening Reports

When an IC orders service class routing, trunk access limitation or call gapping arrangements, it must report the number of trunks and/or the appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

6.6.2 On- and Off-Hook Supervision

The IC facilities shall provide the necessary on- and off-hook supervision.

6.6.3 Trunk Group Measurements Reports

With the agreement of the IC, trunk group data in the form of usage in CCS, peg count and overflow for its end of all access trunk groups, where technologically feasible, will be made available to the Telephone Company. These data will be used to monitor trunk group utilization and service performance and will be based on previously arranged intervals and format.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.8 Obligations of the Telephone Company-(Continued)

6.8.2 Design and Traffic Routing of Switched Access Service

When ordering FGC, FGD, BSA-C or BSA-D Switched Access Services, the customer may specify whether it desires routing to be direct to an end office or through an access tandem switch. The customer is required to specify whether the capacity should be provided by originating only, terminating only or two-way trunk groups.

For FGA, FGB, BSA-A and BSA-B, the line or trunk directionality and traffic routing of the Switched Access Service between the customer's premises and the entry switch are determined by the customer's order for service.

The Telephone Company will compare the customer's request with its own traffic routing plan and available facilities and equipment to determine whether the customer's request can be met. The Telephone Company is responsible for selection of facilities from the interface to any switching point and to the end offices where capacity is ordered. The Telephone Company will also decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. For FGB or BSA-B, the customer may order the optional feature Customer Specification of Local Transport Termination.

Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment and the Telephone Company traffic routing plans. If the customer desires routing or directionality different from that determined by the Telephone Company, the Telephone Company will work cooperatively with the customer in determining (1) whether the service is to be routed directly to an end office or through an access tandem switch and (2) the directionality of the service.

Additionally, when the customer has ordered a dedicated FGD or BSA-D trunk group with the MicroLink I Access Capability feature, the Telephone Company will ensure that these facilities are capable of supporting 56 kbps digital data.

- (AT) When the customer has ordered a dedicated FGD or BSA-D trunk group with SS7 Signaling and 64 CCC, where technically feasible and facilities permit, the Telephone Company will ensure that these facilities are

In the event that the protective controls applied by the Telephone Company result in the complete loss of service by the customer, the customer will be granted a Credit Allowance for Service Interruptions as set forth in Paragraph 2.4.4, preceding.

6.5.2 Design and Traffic Routing of Switched Access Service

For Feature Groups C and D, the Telephone Company shall design and determine the routing of Switched Access Service, including the selection of the first point of switching and the selection of facilities from the interface to any switching point and to the end offices where busy-hour minutes of capacity are ordered. The Telephone Company shall also decide if the capacity is to be provided by originating only, terminating only or two-way trunk groups. Finally, the Telephone Company will decide whether trunk side access will be provided through the use of two-wire or four-wire trunk terminating equipment. Selection of facilities and equipment and traffic routing of the service are based on standard engineering methods, available facilities and equipment and the Telephone Company traffic routing plans. If the customer desires routing or directionality different from that determined by the Telephone Company, the Telephone Company will work cooperatively with the customer in determining (1) whether the service is to be routed directly to an end office or through an access tandem switch and (2) the directionality of the service.

6.5.3 Provision of Service Performance Data

Subject to availability, end-to-end service performance data available to the Telephone Company through its own information routines, may also be made available to the customer based on previously arranged intervals and format. These data provide information on overall end-to-end call completion and noncompletion performance, e.g., customer equipment blockage, failure results and transmission performance. These data do not include service performance data which are provided under other tariff sections, e.g., testing service results. If data are to be provided in other than paper format, the charges for such exchange will be determined on an individual-case basis.

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations

This section contains the specific regulations governing the rates and charges that apply for Switched Access Service.

6.7.1 Types of Rates and Charges

There are three types of rates and charges that apply to Switched Access Service. These are monthly recurring rates, usage rates and nonrecurring charges. These rates and charges are applied differently to the various rate elements.

A. Monthly Rates

Monthly rates are flat recurring rates that apply each month or fraction thereof that a specific rate element is provided. For billing purposes, each month is considered to have 30 days.

B. Usage Rates

Usage rates are rates that apply only when a specific rate element is used. These are applied on a per access minute basis. Access Minute Charges are accumulated over a monthly period.

C. Nonrecurring Charges

Nonrecurring charges are one-time charges that apply for a specific work activity (i.e., installation or change to an existing service). The three types of nonrecurring charges that apply for Switched Access Service are: installation of service, installation of optional feature(s) and service rearrangements.

1. Installation of Service

Nonrecurring charges apply to each service (e., busy-hour minutes of capacity) installed.

CANCELLED
JUL 1 1986
BY P.S.C. #64
PUBLIC SERVICE COMMISSION
OF MISSOURI

FILED
JAN - 1 1984
83 - 253

2. Installation of Optional Features

Nonrecurring charges apply for the installation of the various optional features available with the Switched Access Service Local Transport rate element. The other optional features are installed at no additional cost to the IC other than the cost of the basic service (busy-hour minutes of capacity nonrecurring charge) with which the features are associated.

- 6.7.1 Types of Rates and Charges-(Continued)
- C. Nonrecurring Charges-(Continued)
- 3. Service Rearrangements

Nonrecurring charges apply for service rearrangements. Service rearrangements are changes to existing services that do not result in a change to any of the following: (1) address of the IC terminal location or the end office, (2) Feature Group type, or (3) type of capacity. Changes of this nature constitute a discontinuance and start of service.

Service Rearrangement Charges are based on the nonrecurring (i.e., installation) charge of the service being changed. Following are the service rearrangements that are allowable for Switched Access Service and the appropriate levels of charging.

<u>Type of Change</u>	<u>Level of Charging</u>
Change in Access Connection of Transport Termination Supervisory Signaling (e.g., loop start to ground start)	1/2 of the Access Connection nonrecurring charge (\$/BHMC) for the capacity being changed
Change in type of Address Signaling (e.g., dial pulse to multifrequency)	1/2 of the Access Connection nonrecurring charge (\$/BHMC) for the capacity being changed
Change in Access Connection Interface Group (e.g., two-wire to group level)	Full Access Connection non-recurring charge (\$/BHMC) for the capacity being changed
Change in Transport Termination (e.g., FGB standard to rotary dial station signaling)	1/2 of the Access Connection nonrecurring charge (\$/BHMC) for the capacity being changed
Change in Provision of Other Than Telephone Company Selected Traffic Routing (e.g., tandem in lieu of direct, to direct)	Full Access Connection non-recurring charge (\$/BHMC) for capacity being changed
Change in Dedicated Access Line Service (e.g., change type of termination from line to trunk or change end office switching features).	1/2 of the SAL nonrecurring charge as set forth in Section 7, Paragraph 7.5.4, following per changed.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

(FC) 6.8 Obligations of the Telephone Company-(Continued)

(FC) 6.8.7 Design Blocking Probability-(Continued)

(AT) A. No design blocking criteria apply for FGA, FGB, BSA-A, BSA-B or DNAL.

(AT) B. The design blocking objective for FGC and BSA-C will be no greater than one percent (.01) between the point of termination at the IC terminal location and the first point of switching when traffic is directly routed without an alternative route. In the event of media stimulated mass calling, the design blocking objective cannot be guaranteed. Standard traffic engineering methods will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.

(AT) C. The design blocking objective for FGD and BSA-D will be no greater than one percent (.01) between the point of termination at the IC terminal location and the end office switch, whether traffic is directly routed without an alternate route or routed via an access tandem. In the event of media stimulated mass calling, the design blocking objective cannot be guaranteed. Standard traffic engineering methods as set forth in appropriate Technical References will be used by the Telephone Company to determine the number of transmission paths required to achieve this level of blocking.

(CT)(RT)
(RT)

D. The Telephone Company will perform routine measurement functions to assure that an adequate number of transmission paths are in service. The Telephone Company will recommend that additional busy-hour minutes of capacity be ordered by the IC when additional paths are required to reduce the measured blocking to the designed blocking level. Dedicated trunk groups provided for the purpose of trunk access limitation will be taken into consideration when recommending additional capacity. For the busy-hour minutes of capacity ordered, the design blocking objective is assumed to have been met if the routine measurements show that the measured blocking does not exceed the threshold listed in the following tables:

1. For transmission paths carrying only first routed traffic directly between an end office and an IC terminal location without an alternate route, and for paths carrying only overflow traffic, the measured blocking thresholds are as follows:

6.7.3 Switched Access Service for Resale of Other IC Service-(Continued)

A. (Continued)

- When both line side (i.e., FGA) and trunk side (i.e., FGB, FGC and FGD) Switched Access Service are used in association with the resale of Dedicated Access Line Service, the number of Dedicated Access Line Services to be associated with each line side and trunk side Switched Access Service. If this split is not reported, the Telephone Company will assume all the Dedicated Access Line Services with 2500 or more originating access minutes are to be associated with line side Switched Access Service.

The preceding information and the information required in Paragraph B, following, must be reported for each LATA in which the IC is reselling services. For those LATA's that are multistate LATA's, the IC must report the information by state within the LATA. In order for the rate treatment in Paragraph D., following, to apply, both the Switched Access Service and the associated Dedicated Access Line Services must be in the same state and be provided by the same Telephone Company.

- B. Each of the Switched Access Services used by the IC in association with the resale of Dedicated Access Line Service must be in the same LATA as the Dedicated Access Line Services in order for such Switched Access Service to be rated as set forth in Paragraph D, following. The Switched Access Service must also be connected either directly or indirectly to the IC terminal location at which the associated Dedicated Access Line Services are terminated. Direct connections are those where the Switched Access Service is terminated at the same IC terminal location. Indirect connections are those where the Switched Access Service is terminated at a second IC terminal location in the same LATA which is in turn connected to the first IC terminal location by facilities that can be used by the Switched Access Service to reach the first IC terminal location (i.e., the IC terminal location where the Dedicated Access Line Services are terminated). When more than one IC terminal location is involved in a LATA, the IC shall notify the Telephone Company in writing and shall report the locations of the involved IC terminal locations.

6.7.3 Switched Access Service for Resale of Other IC Service-(Continued) Missouri Public Service Commission

C. For the initial month, the data that the IC reports as set forth in Paragraphs A and B, preceding, will be used by the Telephone Company to determine the rates and charges as set forth in Paragraph D, following. For each subsequent month, the IC must update the report per Paragraphs A and B, preceding, for each LATA for the preceding monthly period unless the Telephone Company notifies the IC that it has sufficient information to substantiate the rate treatment set forth in Paragraph D, following. The monthly period used to determine the 2500 originating access minutes per Dedicated Access Line Service shall be the most recent monthly period for which the IC has received a bill for the Dedicated Access Line Services. This updated report shall show the bill date for the Dedicated Access Line Services. The report shall be delivered to the Telephone Company at a location specified by the Telephone Company no later than 15 days after the bill date shown on the Dedicated Access Line Service bill. If an updated report is required but is not received by the Telephone Company during the monthly period after the initial monthly period, the Telephone Company will assume there are no resold Dedicated Access Line Services associated with Switched Access Services in the LATA. The rate treatment set forth in Paragraph D, following, will not apply in these cases.

D. When the IC reports Switched Access Services associated with the resale of Dedicated Access Line Services in a LATA as set forth in Paragraphs A, B and C, preceding, and the Telephone Company verifies the reports are accurate, such Switched Access Services will be rated as follows:

I. For line side Switched Access Services (i.e., FGA) in a LATA associated with the resale of Dedicated Access Line Service, the LATA access minutes used to determine the charges for Local Transport, Local Switching (LS1), Line Termination and Intercept will be reduced by 2500 access minutes for each Dedicated Access Line Service with at least 2500 originating access minutes reported by the IC as set forth in Paragraphs A, B or C, preceding. However, the access minutes for the line side Switched Access Services in the LATA, adjusted as set forth in this or any other section of this Tariff, that are billed to an IC in a monthly period shall not be less than zero. When the prorate in more than one mileage band, the prorate will be applied to each mileage band in proportion to the actual usage in that band. The adjustment will be made to the involved IC account no later than either the next bill date or the one subsequent to that, depending on when the report is received.

6. SWITCHED ACCESS SERVICE-(Continued)

6.9 Obligations of the IC-(Continued)

6.9.1 Report Requirements-(Continued)

(CT) B. Jurisdictional Reports - 800 NPAS/900 Access Service

When an IC orders service class routing or trunk access limitation, it must report the number of trunks and/or the appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

(CT) 1. 800 Number Portability Access Service (NPAS)

(RT)

(AT) (a) The jurisdictional report requirements for 800 NPAS will apply to 800 access minutes and queries.

For 800 NPAS, where jurisdiction can be determined from the call detail, the Telephone Company will bill according to such jurisdiction by developing a projected interstate percentage. The projected interstate percentage will be developed on a monthly basis, by end office, when the 800 NPAS access minutes are measured by dividing the measured interstate originating 800 NPAS access minutes (the access minutes where the calling number is in one state and the called number is in another state) by the total originating 800 NPAS access minutes.

For 800 NPAS, where the call detail is insufficient to determine jurisdiction, the customer will provide an interstate percentage of 800 NPAS originating access minutes for each LATA from which the customer may originate 800 traffic.

If a customer does not provide the Telephone Company with an originating 800 NPAS PIU report that will be used when the call detail is insufficient to determine the jurisdiction, the Telephone Company will determine the interstate percentage of 800 NPAS usage as follows:

The Telephone Company will develop an interstate percentage on a monthly basis for each end office by dividing the customer's measured MTS usage interstate originating access minutes by the customer's total MTS usage originating access minutes for which sufficient call detail exists to determine the jurisdiction.

Public Service Commission

When an IC orders service class relative to trunk access limitation, it must report the number of public and private codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

1. 800 Access Service

Customers ordering Joint Provided 800 Access Service must provide the Telephone Company with an 800 Network Data Report. Customers ordering non-joint provided 800 Access Service have the option to provide the Telephone Company with either an 800 Network Data Report or, an 800 Access Service Percent Intrastate IntraLATA/Carrier Common Line (PIIL/CCL) Report. The Telephone Company will work cooperatively with the customer should the customer request to change his reporting method. In such case, the customer must provide written notification to the Telephone Company specifying which reporting option the customer will utilize. Such requests to change the reporting method will be accepted by the Telephone Company no more than one time in a six (6) month period.

- (a) For intrastate traffic, the 800 Network Data Report will reflect all 800 telephone numbers that originate and terminate within the state of Missouri. For intrastate traffic, each 800 telephone number provided in the 800 Network Data Report will reflect one of the following depending on whether the customer has ordered Joint Provided or Non-Joint Provided 800 Access Service:

Joint Provided 800 Access Service Calls

The 10-digit POTS number associated with the WATS Access Line to which the 800 call will terminate.

Non-Joint Provided 800 Access Service Calls

The NPA-NXX associated with the terminating POTS number. This option is required when the 800 call uses Switched Access Service to terminate on WATS Access Line Service or a common line.

6.6 Obligations of the IC--(Continued)

6.6.1 Report Requirements--(Continued)

MISSOURI
Public Service Commission

B. Code Screening Reports

When an IC orders service class routing, trunk access limitation or call gapping arrangements, it must report the number of trunks and/or the appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

(CP)

Customers ordering Joint Provided 800 Access Service must provide the Telephone Company with an 800 Network Data Report. Customers ordering non-joint provided 800 Access Service have the option to provide the Telephone Company with either an 800 Network Data Report or, an 800 Access Service Percent Intrastate IntraLATA/Carrier Common Line (PIIL/CCL) Report. The Telephone Company will work cooperatively with the customer should the customer request to change his reporting method. In such case, the customer must provide written notification to the Telephone Company specifying which reporting option the customer will utilize. Such requests to change the reporting method will be accepted by the Telephone Company no more than one time in a six (6) month period.

- (1) For intrastate traffic, the 800 Network Data Report will reflect all 800 telephone numbers that originate and terminate within the state of Missouri. For intrastate traffic, each 800 telephone number provided in the 800 Network Data Report will reflect one of the following depending on whether the customer has ordered Joint Provided or Non-Joint Provided 800 Access Service:

Joint Provided 800 Access Service Calls

The 10-digit POTS number associated with the WATS Access Line to which the 800 call will terminate.

Non-Joint Provided 800 Access Service Calls

The NPA-NXX associated with the terminating POTS number. This option is required when the 800 call uses Switched Access Service to terminate on WATS Access Line Service or a common line.

When an IC orders service class routing, trunk access limitation or call gapping arrangements, it must report the number of trunks and/or the appropriate codes to be instituted in each end office or access tandem switch, for each of the arrangements ordered.

Customers ordering 800 Access Service must provide the Telephone Company with an 800 Network Data Report. This report shall reflect all 800 Telephone numbers that may originate and terminate within the state of Missouri. Each 800 telephone number provided in the 800 Network Data Report will reflect one of the following:

Non-joint provided 800 Access Service calls

- The NPA-NXX associated with the terminating POTS number. This option is required when the 800 call uses Switched Access Service to terminate on WATS Access Line Service or a common line.
- The NPA-NXX associated with the terminating end user's serving wire center. This option is required when the 800 call terminates on a premise to premise special access service or customer provided facilities.

Joint provided 800 Access Service calls

- The ten digit POTS number associated with the WATS Access Line Service to which the 800 call will terminate.

(AT) This report shall also reflect any time or day sensitive routing information which the Telephone Company requires to accurately bill and an indicator of the type of termination that will be used in the completion of the 800 call, i.e., common line, WATS Access Line, or (CT) other. (RT)

Customers are required to provide 800 Network Data Reports before initial 800 Access Service is established. The 800 Network Data

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.3 Switched Access Service for Resale of Other IC Service-(Continued)

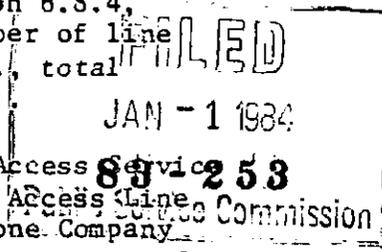

D. (Continued)

1. (Continued)

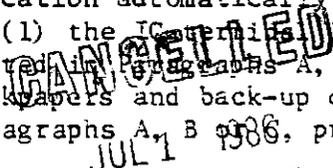

Where the interexchange service for which the Dedicated Access Line Service is provided is billed to the IC by service group and/or in a unit other than minutes, the IC shall convert these as follows:

- If the billing is in hours, convert the hours to access minutes by multiplying the hours by 60.
- If the billing is by service group, divide the total access minutes on the monthly bill by the number of Dedicated Access Line Services in the service group to determine the access minutes per Dedicated Access Line Service.

2. For each Dedicated Access Line Service used as set forth in Paragraph 1, preceding, to reduce the line side Switched Access Service access minutes in a LATA, a local business line rate as set forth in Paragraph 6.8.4, following, shall apply. The exchange involved shall be the exchange in which the IC terminal location at which the Dedicated Access Line Services are terminated is located. When more than one IC terminal location is involved, local business line rates for both exchanges shall be used. The number of involved Dedicated Access Line Services terminated at each location shall be used to determine the appropriate number of local business line rates. However, the number of local business line rates, as set forth in Paragraph 6.8.4, following, applied in a LATA shall not exceed the number of line side Switched Access Services provided to the IC (i.e., total number of busy-hour minutes of capacity divided by 30).

E. When the IC notifies the Telephone Company that Switched Access Service is to be used in association with the resale of Dedicated Access Line Service, the notification automatically grants the Telephone Company the right to audit (1) the IC terminal locations to verify the use of facilities as reported in Paragraphs A, B or C, preceding, and (2) all of the records, workpapers and back-up documentation for each report as set forth in Paragraphs A, B or C, preceding. The Telephone Company

1. 800 Access Service-(Continued)
(b)-(Continued)

(FC)

The 800 Access Service PIIL/CCL report must be provided to the Telephone Company on a quarterly basis. Effective on the first of January, April, July, and October of each year the customer will update the 800 Access Service PIIL/CCL report. The customer shall forward to the Telephone Company, to be received no later than 15 business days after the first of each month, a revised 800 Access Service PIIL/CCL report showing the intrastate intraLATA percentage of use for the most recent three months for which data is available. The revised report will serve as the basis for the next three months billing and will be effective on the bill date for that service. No prorating or backbilling will be done based on the report. If the initial 800 Access Service PIIL/CCL report or a quarterly update has not been received from the customer, the Telephone Company may determine the intrastate intraLATA percentage as described below.

If the customer does not provide the Telephone Company with either an 800 Network Data Report or an 800 Access Service PIIL/CCL report as specified above, the Telephone Company will determine the jurisdiction of all the originating intrastate 800 traffic to be intrastate interLATA and bill the 800 Access Service customer accordingly.

PIIL/CCL reporting is required only if there is a difference between interLATA and intraLATA rates. If these rates are identical, no report need be submitted.

2. 900 Access Services

Customers offering both interstate and intrastate originating 900 traffic within a LATA, must provide to the Telephone Company a 900 Access Service Percent Interstate Usage (PIU) report as specified in the Telephone Company's Access Service Tariff F.C.C. No. 68. Customers must also report whether they are providing only intrastate originating 900 traffic within the LATA.

duration and the frequency of the event, and estimated call volume and the telephone number(s) to be utilized.

The Telephone Company will utilize such information to administer its Network in a manner that minimizes the impact of traffic surges due to media stimulated mass calling events as specified in Sections 2.3.10 and 6.8.1 preceding. Failure to provide such notification may cause excessive network congestion, which could result in a complete loss of service to the customer. If the Telephone Company has not received required notification at least 24 hours in advance of the event, and a service interruption has occurred, provisions set forth in Section 2.4.4, C.8, preceding will apply.

6.9.3 Trunk Group Measurements Reports

With the agreement of the IC, trunk group data in the form of usage in CCS, peg count and overflow for its end of all access trunk groups, where technologically feasible, will be made available to the Telephone Company. These data will be used to monitor trunk group utilization and service performance and will be based on previously arranged intervals and format.

(MT) 6.10 Rate Regulations

This section contains the specific regulations governing the rates and charges that apply for Switched Access Service. The rates and charges apply to both intrastate intraLATA and intrastate interLATA service.

6.10.1 Types of Rates and Charges

There are three types of rates and charges that apply to Switched Access Service. These are monthly recurring rates, usage rates and nonrecurring charges. These rates and charges are applied differently to the various rate elements. For billing purposes, each month is considered to have 30 days.

(MT)

6.10.1 Types of Rates and Charges-(Continued)

A. Monthly Rates

Monthly rates are flat recurring rates that apply each month or fraction thereof that a specific rate element is provided.

B. Usage Rates

(AT) Usage rates for each line or trunk are rates that apply on a per call or a per access minute basis when a specific rate element is used. Access minute charges are accumulated over a monthly period.

(AT) Usage rates for FGD or BSA-D Service utilizing the Multiple 64 CCC feature will apply on a per unit basis. For Multiple 64 CCC, a unit represents a FGD or BSA-D trunk with 64 Kbps of bandwidth. The Multiple 64 CCC feature (n x 64 Kbps) is available in increments from 64 Kbps to 1536 Kbps bandwidth, where n may be from 1 to 24 and represents the incremental number of 64 Kbps of bandwidth per call.
|
|
|
(AT)

C. Nonrecurring Charges

Nonrecurring charges are one-time charges that apply for a specific work activity (i.e., installation or change to an existing service).

1. Installation of Service

A Per Line or Per Trunk Installation Charge will apply to installation of each Feature Group Service (FGA, FGB, FGC and FGD) and to each Basic Serving Arrangement (BSA-A, BSA-B, BSA-C and BSA-D). The Per Line Installation Charge is applicable to FGA and BSA-A. The Per Trunk Installation Charge is applicable to FGB, FGC, FGD, BSA-B, BSA-C and BSA-D.

An installation charge will apply per DNAL termination to each DNAL.

An Installation Charge is applicable on a first and additional line, trunk or DNAL termination basis. If a customer orders multiple lines, trunks or DNAL terminations on the same Access Order, the first line, trunk or DNAL termination is assessed the "first" installation charge and each additional line, trunk or DNAL termination is assessed the "additional" installation charge.

(CP)

(CP)

(MT)(FC)

3. 800/900 Access Service NXX Activation Charge

The 800/900 Access Service NXX Activation Charge applies for all 800 Access Service NXX code activations subsequent to the customer's initial request for activation of 800 NXX code(s) within the LATA. The 800/900 Access Service NXX Activation Charge also applies for all 900 Access Service NXX code activations subsequent to the customer's initial request for activation of 900 NXX code(s) within the LATA.

The initial request for NXX activation within a LATA does not include the NXX activation charge, regardless of the number of NXX's being activated. For all 800/900 NXX activation requests after the customers initial request within the LATA, the "First" charge applies to the first NXX code listed on the request for activation per each equal access end office within the LATA. The "Additional" charge applies to each additional NXX code(s) listed on the activation request per each equal access end office within the LATA.

MAR 13 1993

MO. PUBLIC SERVICE COMM.

(RT) 4. 900 Access Service NXX Activation Charge

(RT) The 900 Access Service NXX Activation Charge also applies for all 900 Access Service NXX code activations subsequent to the customer's initial request for activation of 900 NXX code(s) within the LATA.

(RT) The initial request for NXX activation within a LATA does not include the NXX activation charge, regardless of the number of NXX's being activated. For all 900 NXX activation requests after the customers initial request within the LATA, the "First" charge applies to the first NXX code listed on the request for activation per each equal access end office within the LATA. The "Additional" charge applies to each additional NXX code(s) listed on the activation request per each equal access end office within the LATA.

5. Service Rearrangements

Service Rearrangements are changes to existing services which result in either a change in the minimum period requirements as set forth in Paragraph 5.2.6, preceding, or a change in the physical location of the point of termination at the customer's premises or the customer's end user's premises.

Changes which result in the establishment of new minimum period obligations are treated as a discontinuance of the existing service and an installation of a new service and all applicable nonrecurring charges will apply. Changes in the physical location of the point of termination are treated as moves and are described and charged for as set forth in Paragraph 6.10.10, following.

A change in the customer of record (i.e., existing Access Service is provided and billed to a different entity, such as a different company as opposed to a company name change) is when the new customer assumes liability for all current and prior charges for the service(s) and has complied with the regulations and conditions as set forth in Paragraph 2.2.1. In this case only applicable Administrative Change Charges, as specified in Paragraph 6.11.4, shall apply. If the customer has not complied with Paragraph 2.2.1, this service rearrangement will be considered a disconnect and installation of new service.

4. Service Rearrangements

(AT)

Service Rearrangements are changes to existing services which do not result in either a change in the minimum period requirements as set forth in Paragraph 5.2.6, preceding, or a change in the physical location of the point of termination at the customer's premises or the customer's end user's premises.

Changes which result in the establishment of new minimum period obligations are treated as a discontinuance of the existing service and an installation of a new service and all applicable nonrecurring charges will apply. Changes in the physical location of the point of termination are treated as moves and are described and charged for as set forth in Paragraph 6.7.7, following.

A change in the customer of record (i.e., existing Access Service is provided and billed to a different entity, such as a different company as opposed to a company name change) is when the new customer assumes liability for all current and prior charges for the service(s) and has complied with the regulations and conditions as set forth in Paragraph 2.2.1. In this case only applicable Administrative Change Charges, as specified in Paragraph 6.8.4, shall apply. If the customer has not complied with Paragraph 2.2.1, this service rearrangement will be considered a disconnect and installation of new service.

(AT)

A customer may request one or more of the following Service Rearrangements. An Access Order Charge will apply as set forth in Paragraph 5.2.2.

(RT)

a. Administrative changes will be made without charge(s) to the customer as follows:

(AT)

- Change of customer name, (i.e., the customer of record does not change, but the customer of record changes its name, e.g., ABC Communications changes to All Business Concepts Communication.),
- Change of customer's or customer's end user premises address when the change of address is not a result of a physical relocation of the service,
- Change in billing data (name, address, or contact name or telephone number of the bill recipient changes, but the customer of record does not change)

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.4 Minimum Monthly Charge

Switched Access Service is subject to a minimum monthly charge. The minimum charge applies for the total number of feature groups (by type of Feature Group by type of Busy-hour-Minutes-of-Capacity) provided to each end office. The minimum monthly charge consists of the following elements:

For those rate elements that are billed a flat monthly rate, i.e., Local Transport Optional Features, the minimum monthly charge is the monthly rate as set forth in Paragraph 6.8.2, B., following.

The minimum monthly charge for the Local Switching, Line Termination and Intercept rate elements is the charge set forth in Paragraph 6.8.3, A., B. and C., following, for the actual usage for the month, adjusted as set forth in Paragraph 6.7.3, D.1., preceding.

For the Local Transport rate element, the minimum monthly charge is assessed in terms of a Minimum Monthly Usage Charge (MMUC). If the actual Local Transport usage charge for the month adjusted as set forth in Paragraph 6.7.3, D.1., preceding, is higher than the MMUC, the IC pays the actual usage charge. If the Local Transport usage charge is lower than the MMUC, the IC pays the MMUC. The MMUC is determined as set forth in Paragraph 6.7.5, following. Rates for actual usage are set forth in Paragraph 6.8.2, A., following.

6.7.5 Minimum Monthly Usage Charge (MMUC)

The Minimum Monthly Usage Charge (the minimum transport charge) varies by mileage band and capacity.

The MMUC is as follows:

Mileage Bands	Minimum Transport Charge Per BHMC*
0 to 1	\$.3726
Over 1 to 8	.8553
Over 8 to 16	.9908
Over 16 to 25	1.0670
Over 25 to 50	1.7191
Over 50 to 100	2.3965
Over 100	3.8361

APR 7 1994

STP R.S. # 71.02
Public Service Commission
St. Louis, Missouri
JUNE 1, 1994

g. Nonrecurring charges will be waived for rearrangements that reroute trunks from tandem to end office or end office to tandem provided the Access Service Request is placed no later than June 1, 1994. This waiver of nonrecurring charges includes both the Access Order Charge and nonrecurring charges for installation of new facilities and features or BSEs between the Telephone Company serving wire center and the customer's premises when such facilities are required to provision rerouted trunks. The following conditions must be met in order for charges to be waived:

- The customer must maintain the same customer premises location. Requests to add or change features or BSEs will incur the charges applicable to the feature or BSE.
- Direct routed end office trunks must subtend the tandem from which service is being rearranged.
- One trunk at the end office or tandem must be disconnected for each rerouted tandem or end office trunk installed with the following exception. If the customer demonstrates that industry accepted engineering standards require the installation of additional trunks, the nonrecurring charges for such additional trunks will also be waived.

(AT) 1. When FGA, FGB, BSA-A or BSA-B Switched Access Service is provided in Telephone Company end offices that are not equipped for public service capabilities, an assumed average intrastate access minutes will be used to determine the Switched Access Service Charges. The assumed average intrastate access minutes are as follows:

(AT) a. When a FGA or BSA-A Switched Access Service arranged for two-way calling is provided where neither the originating nor terminating access minutes are recorded, the assumed average intrastate access minutes are 3,863 access minutes. 1,893 access minutes are assumed to be originating and 1,970 access minutes are assumed to be terminating. When a FGA or BSA-A Switched Access Service arranged for two-way calling is provided where the terminating access minutes are recorded but the originating access minutes are not, the assumed average originating access minutes are 1,893 originating access minutes. When a FGA or BSA-A Switched Access Service arranged for two-way calling is provided where the originating access minutes are recorded but the terminating access minutes are not, the assumed average terminating access minutes are 1,970 terminating access minutes.

(AT) When a FGA or BSA-A Switched Access Service arranged for originating calling only is provided where originating access minutes are not recorded, the assumed average originating access minutes are 3,863 access minutes and no terminating access minutes

6.7.2 Minimum Periods

Switched Access Service is provided for a minimum period of one month.

6.7.3 Switched Access Service for Resale of MTS, WATS, MTS-type and WATS-type Services

A. Where a multiline hunt group or trunk group arrangement is made up of (1) Feature Group A, B or D Switched Access Service and (2) local exchange business lines or other access arrangements associated with MTS/WATS, MTS-type or WATS-type services as provided in Paragraph A., 1., following, Switched Access charges for such combined access arrangements are calculated in accordance with the regulations in Paragraphs A., 4. and B., 1., following.

1. Where the customer is reselling MTS/WATS, MTS-type and/or WATS-type service(s) on which the Switched Access charges have been assessed, the customer may, at the option of the customer, employ ordinary local business exchange service at generally applicable local business exchange rates under the Telephone Company General and/or Local Exchange Tariffs. Switched Access charges under this Tariff will not apply for such access except as set forth in Paragraph B., 1., following, provided the underlying carrier that provides the MTS/WATS and/or MTS/WATS-type service(s) which are resold pays Switched Access Services charges for the services which are resold. Such Switched Access Service charges paid shall include charges for origination and termination of calls on both ends of the services which are resold. If the customer wishes to obtain special arrangements, such as trunk side service connections for such resale, the customer may, at the option of the customer, obtain Switched Access Service. Switched Access charges will apply for such access as set forth in Paragraph B., 1., following.

2. When access to the local exchange is required to provide an MTS/WATS-type service using a resold Private Line Service, Switched Access Service Rates and Regulations, as set forth in this section, will apply.

3. When the customer orders combined access, the customer will be charged the Switched Access charges in accordance with the regulations set forth in Paragraphs A., 4. and B., 1., following, if the customer or

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.5 Minimum Monthly Usage Charge (MMUC)-(Continued)

The MMUC billed to the IC for Feature Groups B, C and D will be based on the total number of BHMC's (by type of BHMC) provided in or out of the end office (by Feature Group). For Feature Group A, the MMUC will be billed to the IC at the line or hunt-group level or other level of account.

For FGA, when a prorata as set forth in Paragraph 6.7.3, preceding, is involved, the busy-hour minutes of capacity per mileage band will be reduced in the same proportion that the Local Transport actual usage is reduced. (See Paragraph 6.7.3, D.1., preceding).

The Minimum Monthly Usage Charge is not applied to Telephone Company assumed average number of access minutes for those Feature Groups A and B for which measurement capabilities do not exist. In these cases, the IC will always be billed for the assumed average number of access minutes, adjusted as set forth in Paragraph 6.7.3, D.1., preceding, if required for Feature Group A.

6.7.6 Change of Feature Group Type

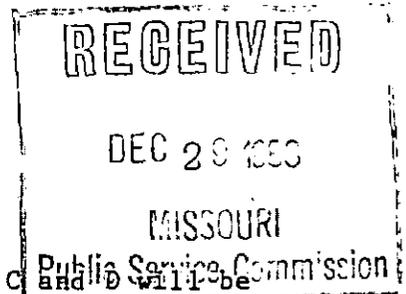

Change from one type of Feature Group to another will be treated as a discontinuance of one type of service and a start of another. Non-recurring charges will apply, with one exception. When an IC upgrades a Feature Group B and C service to a Feature Group D service of the same capacity in the same end office, the nonrecurring charges will not apply. If, however, additional local transport optional features are added to the service at the time the conversion takes place, the nonrecurring charges for the added features will apply.

6.7.7 Moves

A move involves a change in the physical location of one of the following:

- The point of interface at the IC terminal location
- The IC terminal location

The charges for the move are dependent on whether the move is to a new location within the same building or to a different building.

the provider of the WATS service furnishes documentation of the WATS usage and/or the customer furnishes documentation of the WATS-type service. The documentation supplied by the customer shall be supplied each month as set forth in Paragraph A., 6., following.

- 4. When the customer orders a combined access group to be used in conjunction with the resale of MTS/WATS and/or MTS/WATS-type services as set forth in Paragraph A., preceding, subject to the limitations of Carrier Common Line as set forth in Paragraph 3.2, preceding, the customer will be billed as set forth in Paragraph B., following. When more than one combined access group is provided in a LATA, the Telephone Company will apportion the resold MTS/WATS and/or MTS/WATS-type services and originating minutes of use among the combined access groups. Such apportionment will be based on the relationship of the originating usage for each combined access group to the total originating usage for all combined access groups in the LATA. The involved resold minutes shall be only intrastate outward MTS, MTS-type, WATS and WATS-type minutes and shall not include collect, third number, credit card or interstate minutes of use.

In order for the rate regulations to apply as set forth in Paragraph B., following, the combined access group and the resold MTS/WATS and/or MTS/WATS-type services must be provided in the same state, in the same LATA, provided by the same Telephone Company and connected directly or indirectly. For those LATAs that have more than one state, the customer shall report the information by state within the LATA.

Each of the combined access groups arranged in a multiline hunt group or trunk group arrangement used by the customer in association with the resold MTS/WATS and/or MTS/WATS-type services must be connected either directly or indirectly to the customer's designated premises at which

6.7 Rate Regulations-(Continued)

6.7.7 Moves-(Continued)

A. Moves Within the Same Building

When the move is to a new location within the same building, the charge for the move will be an amount equal to one half of the busy-hour minutes of capacity nonrecurring charge for the capacity affected. There will be no change in the minimum period requirements.

B. Moves to a Different Building

Moves to a different building will be treated as a discontinuance and start of service and all associated nonrecurring charges will apply. New minimum period requirements will be established for the new service. The IC will also remain responsible for satisfying all outstanding minimum period charges for the discontinued service.

6.7.8 Measuring Access Minutes

IC traffic to end office switches will be measured (i.e., recorded or assumed) by the Telephone Company at end office switches or access tandem switches. Originating and terminating calls will be measured (i.e., recorded or assumed) by the Telephone Company to determine the access minutes.

the resold MTS/WATS and/or MTS/WATS-type services are terminated. Direct connections are those arrangements where the combined access groups and resold MTS/WATS and/or MTS/WATS-type services are terminated at the same customers' designated premises. Indirect connections are those arrangements where the combined access groups and resold MTS/WATS and/or MTS/WATS-type services are terminated at different customer designated premises in the same LATA. Such different customer designated premises are connected by facilities that permit a call to flow from combined access groups to resold MTS/WATS and/or MTS/WATS-type services.

The adjustments as set forth following will be computed separately for each combined access group.

- 5. When the customer orders combined access as set forth in Paragraph A., preceding, subject to the limitations as set forth in Paragraph 3.2, preceding, and the Telephone Company receives the information furnished as set forth in Paragraph A., 3., preceding, the following regulations apply. This provision does not apply if Switched Access Charges as set forth in Paragraph A., 3., preceding are not applied to the MTS, MTS-type, WATS and WATS-type service being resold.
- 6. As set forth in Paragraph A., 3., preceding, the customer shall supply specific documentation in connection with the provision of combined access. Such documentation shall be supplied each month and shall identify the involved resold MTS, WATS, MTS-type and/or WATS-type services, herein after referred to as resold service(s). The reported resold minutes shall be only intrastate outward MTS, WATS, MTS-type and/or WATS-type minutes, and shall not include collect, third number, credit card or interstate minutes of use. The monthly period used to determine the minutes of use per resold service(s) shall be the most recent monthly period for which the customer has received a bill for such resold service(s). This information shall be delivered to the Telephone Company, at a location specified by the Telephone Company,

6.7.3 Switched Access Service for Resale of MTS/WATS-type Services-(Continued)

B. Combined Access Groups

1. When combined access groups are provided in a LATA, the following regulations apply:

a. One MTS/WATS-type FGA Switched Access Service for each resold WATS and WATS-type service reported as set forth in Paragraph A., 3., preceding, and Paragraph C., following, will be billed at local business exchange service rates as set forth in Paragraph 2., following.

b. Switched Access Service rates will apply for the line side (i.e., MTS/WATS-type FGA) and trunk side combined access groups as follows:

For MTS/WATS-type FGA provided in a combined access group, the minutes billed will be all the terminating intrastate access minutes and the adjusted originating intrastate access minutes for such combined groups. The adjusted originating minutes will be the originating intrastate access minutes less the reported resold service(s) minutes of use apportioned when necessary.

For trunk side provided in a combined access group, the minutes billed will be all the terminating and originating intrastate access minutes for such combined groups.

The rates that apply for the line side and/or the trunk side Switched Access Service access minutes, will be the Switched Access Service rates as set forth in Paragraph 6.8, following.

c. For the first month a combined access group is in service, each associated resold WATS and WATS-type service will be assumed to have 2500 or more originating intrastate minutes of use.

After the first month that both the combined access and the associated resold WATS and WATS-type services are in service,

6.7.8 Measuring Access Minutes-(Continued)

Access minutes on a terminating call start when the called telephone exchange service location answers and end when the access tandem switch or end office switch receives a disconnect signal. Access minutes on an originating call start when the IC terminal location acknowledges the call and end when the access tandem switch or end office switch receives a disconnect signal. The assumed average access minutes are as set forth in Paragraph 3.7, C., except as set forth following.

6.7.9 Network Blocking Charge for Feature Group D

The IC will be notified by the Telephone Company to increase its Access Connection busy hour minutes of capacity when excessive trunk group blocking occurs on groups carrying Feature Group D traffic and the measured access minutes for that hour exceed that purchased. Excessive trunk group blocking occurs when the blocking thresholds stated below are exceeded. They are predicated on time consistent, hourly measurements over a 30-day period, excluding Saturdays, Sundays and national holidays. If the order for additional capacity has not been received by the Telephone Company within 15 days of the notification, the Telephone Company will bill the IC, at the rate set forth in Paragraph 6.8.1, C., following, for each overflow in excess of the blocking threshold when (1) the average "30-day-period" overflow exceeds the threshold level for any particular hour and (2) the "30-day-period" measured average originating or two-way usage for the same block hour exceeds the Access Connection capacity purchased.

each resold WATS and WATS-type service shall have 2500 or more originating intrastate minutes of use per month on average. If the average originating intrastate usage per service for each resold WATS or WATS-type service group does not equal 2500 originating minutes of use in any month, then for combined access billing purposes, the number of WATS and WATS-type services for which local business exchange service rates will be applicable will be reduced until the average originating intrastate usage per month for the remaining services equals or exceeds 2500 originating intrastate minutes. The number of originating minutes per month per resold WATS and WATS-type service will be developed by adding the resold outward MTS and MTS-type minutes to the resold originating WATS and WATS-type minutes and dividing the resulting sum per service group by the number of services in the group.

- 2. For each Switched Access Service provided as set forth in Paragraph B.1.a., preceding, local business exchange service rates as set forth in Paragraph 6.8.3 shall apply. The exchange involved shall be the exchange in which the service is provided.

The number of line side Switched Access Services billed at local business exchange service rates shall not exceed the number of line side connections provided in line side combined access groups in service in a LATA.

No Local Measured Service minutes are billed for terminating usage because all the terminating access minutes are billed as Switched Access Service access minutes.

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.10 Application of Rates for Feature Group A Extension Service

Feature Group A Switched Access Service is available with extensions, i.e., additional terminations of the service at different building(s) in the same or a different LATA. Feature Group A extensions within the LATA are provided and charged for under the Telephone Company's Local and/or General Exchange Service Tariffs. Extensions in different LATA's are provided and charged for as Special Access Service. The rate elements which they apply are: Special Transport (from the extension bridging point to the IC serving wire center), Access Connections and one-half of the appropriate facility interface combination monthly rates and nonrecurring charges.

6.7.11 Message Unit Credit

Calls from end users to the seven-digit local telephone numbers associated with Feature Group A Switched Access Service are subject to Telephone Company Local and/or General Exchange Service Tariff charges, as well as any other applicable charges for IC services. The monthly bills rendered to IC's for their Feature Group A Switched Access Service will include a credit to reflect any message unit charges collected from their customers under the Telephone Company's Local and/or General Exchange Service Tariffs. No message unit credit is given on the access minutes that have been prorated as set forth in Paragraph 6.7.3, preceding.

6.7.12 Local Information Delivery Services

Calls over Switched Access in the terminating direction to certain community information services will be rated under the applicable rates for Switched Access Service as set forth in Paragraph 6.8, following. In addition, the charges per call as specified under the Telephone Company Local and/or General Exchange Tariffs, e.g., 976 (DIAL-IT) Network Services, will also apply.

6. SWITCHED ACCESS SERVICE-(Continued)

(FC) 6.10 Rate Regulations-(Continued)

(FC) 6.10.4 Minimum Monthly Charge

Switched Access Service is subject to a minimum monthly charge. The minimum charge applies for the total capacity provided. The minimum monthly charge consists of the following elements:

(FC) The minimum monthly charge for the Carrier Common Line and Local Switching rate elements is the sum of the charge set forth in Section 3, preceding and, 6.11.2, A., B. and C., following, for the measured or assumed usage for the month.

(FC) For the Local Transport rate element, the minimum monthly charge is assessed in terms of a Minimum Monthly Usage Charge (MMUC). If the actual Local Transport usage charge for the month is higher than the MMUC, the IC pays the actual usage charge. If the Local Transport usage charge is lower than the MMUC, the IC pays the MMUC. The MMUC is determined as set forth in Paragraph 6.10.5, following. Rates for actual usage are set forth in Paragraph 6.11.1, A., following.

(AT) The minimum monthly charge for DNAL BSA is the sum for the applicable monthly rates for the BSA as set forth in Paragraph 6.11.

(FC) 6.10.5 Minimum Monthly Usage Charge (MMUC)

The MMUC billed the customer will be determined as follows: FGC, FGD, BSA-C and BSA-D when ordered in BHMCs, will be determined separately for the total number of originating BHMCs (by BHMC type) and the total number of terminating BHMCs (by BHMC type) provided to the end office (by feature group);

(AT) FGD and BSA-D when ordered on a per trunk basis, will be based on an assumed 30 BHMCs, per trunk, by entry switch;

(AT) FGA and BSA-A will be based on an assumed 30 BHMCs per line;

(AT) FGB and BSA-B will be based on an assumed 30 BHMCs per trunk, by entry switch;

(FC) The rates for the MMUC are set forth in Section 6.11., following.

6.7.4 Minimum Monthly Charge

Public Service Commission

Switched Access Service is subject to a minimum monthly charge. The minimum charge applies for the total capacity provided. The minimum monthly charge consists of the following elements:

(AT) The minimum monthly charge for the Carrier Common Line and Local
(RT) Switching rate elements is the sum of the charge set forth in
(RT) Section 3, preceding and, 6.8.2, A., B. and C., following, for the
(RT) measured or assumed usage for the month.

(RT) For the Local Transport rate element, the minimum monthly charge
(RT) is assessed in terms of a Minimum Monthly Usage Charge (MMUC). If
(RT) the actual Local Transport usage charge for the month is higher
(RT) than the MMUC, the IC pays the actual usage charge. If the Local
(RT) Transport usage charge is lower than the MMUC, the IC pays the
(RT) MMUC. The MMUC is determined as set forth in Paragraph 6.7.5,
(RT) following. Rates for actual usage are set forth in Paragraph
(RT) 6.8.1, A., following.

CANCELLED

6.7.5 Minimum Monthly Usage Charge (MMUC)

The MMUC billed the customer will be determined as follows:

APR 11 1993

BY 4th R.S. #76

FGC and FGD, when ordered in BHCs, will be determined separately for the total number of originating BHCs (by BHC type) and the total number of terminating BHCs (by BHC type) provided to the end office (by feature group);

Public Service Commission

FGD, when ordered on a per trunk basis, will be based on an assumed 30 BHCs, per trunk, by entry switch;

FGA will be based on an assumed 30 BHCs per line;

FGB will be based on an assumed 30 BHCs per trunk, by entry switch;

The rates for the (MMUC) are set forth in Section 6.8., following.

6. SWITCHED ACCESS SERVICE-(Continued)

6.7 Rate Regulations-(Continued)

6.7.13 Mileage Measurement

The mileage to be used to determine the monthly rate for the Local Transport is calculated on the air line distance between the end office switch where the call carried by Local Transport originates or terminates and the IC serving wire center, except as set forth in Paragraphs 6.7.13, A., B., C., D. and E., following. The V&H coordinates method is used to determine mileage. This method is set forth in General Regulations, Section 2, Paragraph 2.7, preceding.

Mileage is shown in Paragraph 6.8.2, following, in terms of mileage bands. To determine the rate to be billed, first compute the mileage using the V&H coordinates method, then find the band into which the computed mileage falls and apply the rate shown for that band.

Exceptions to the mileage measurement rules are as follows:

- A. Mileage for access minutes in the originating direction over Feature Group A Switched Access Service will be calculated on an air line basis, using the V&H coordinates method, between the end office switch where the Feature Group A End Office switching dial tone is provided and the IC serving wire center for the Switched Access Service provided.
- B. When a non-AT&T IC terminal location is within five miles of an AT&T Class 4 office, the Local Transport mileage for a call which is carried over a Switched Access Service, originating or terminating through an end office switch, shall be the distance as would be determined from that end office switch to the serving wire center for that AT&T Class 4 office unless the IC specifies that for an entire LATA, it wants all measurements determined from its serving wire center. This designation (i.e., which serving wire center to use in calculating mileage) may be changed only once in any 12-month period, and when it is changed, the call will be billed for the change as set forth in Section 5, Paragraph 5.6, preceding.

6.10.6 DNAL Recurring Rates

Recurring rates for the DNAL BSA apply as follows:

A. DNAL Termination

A monthly rate applies for each DNAL point of termination requested by the customer.

B. DNAL Mileage

A fixed monthly rate applies, per mileage band, for each DNAL channel between the customer's designated premises and the Telephone Company end office switch where the DNAL is terminated.

A monthly rate per mile applies to each airline mile between the serving wire center of the customer's designated premises and the Telephone Company end office switch where the BSE requiring the DNAL is provided.

Airline mileage is calculated as set forth in Paragraph 6.10.15.

6.10.7 Change of Feature Group Type

Changes from one type of Feature Group to another will be treated as a discontinuance of one type of service and a start of another. Nonrecurring charges will apply, with one exception. When a customer upgrades a Feature Group A, B or C service to a Feature Group D service, the trunk installation charges will not apply. Any features that are added when the customer upgrades to FGD will incur the charges applicable to that feature. When a customer upgrades a Feature A, B or C service to Feature Group D service, minimum period obligations will not change, i.e., the time elapsed in the existing minimum period obligations will be credited to the minimum period obligations for Feature Group D service. For all other changes from one type of Feature Group to another, new minimum period obligations will be established.

6.10.8 Change of Basic Serving Arrangements

Changes from one type of BSA to another will be treated as a discontinuance of one type of service and a start of another. Nonrecurring charges will apply with one exception. When a customer upgrades a Circuit Switched - Line Side or a Circuit Switched - Trunk Side Alternative B or C service to a Circuit Switched - Trunk Side

(CT)
(AT)
|
(AT)

Alternative D service, the BSA-D trunk installation charges will not apply. Any features or BSE's that are added or changed when the customer upgrades the service to BSA-D will incur the charge applicable to that feature or BSE. When a customer makes such an upgrade, minimum period obligations will not change, i.e., the time elapsed in the existing minimum period obligations will be credited to the minimum period obligations for Circuit Switched - Trunk Side Alternative D service. For all other changes from one type of BSA to another, new minimum period obligations will be established.

6.10.9 Conversion of Existing Feature Groups to Basic Serving Arrangements

During the transition period, as set forth in Paragraph 6.1, preceding, nonrecurring charges will not apply to the conversion of existing Feature Groups to their unbundled BSA equivalents. However, conversions from a BSA to its equivalent Feature Group will be treated as a discontinuance of one type of service and a start of another (nonrecurring charges will apply).

When a customer converts an existing Feature Group to its unbundled BSA equivalent, minimum period obligations will not change, i.e., the time elapsed in the existing minimum period obligations will be credited to the minimum period obligations for the BSA. For changes from a BSA to a bundled Feature Group during the transition period as noted above, new minimum period obligations will be established.

MISSOURI
Public Service Commission

A move involves a change in the physical location of one of the following:

- The point of termination at the customer's premises
- The customer's premises

The charges for the move are dependent on whether the move is to a new location within the same building or to a different building.

A. Moves Within the Same Building

When the move is to a new location within the same building, the move will be treated as an extension of access service facilities. There will be no change in minimum period requirements. Extension of access service facilities will be provided, at the customer's request, on a time-sensitive charge basis. The labor rates which apply are as set forth in Section 13.2.6, c., following, for Other Labor.

B. Moves to a Different Building

Moves to a different building will be treated as a discontinuance and start of service and all associated nonrecurring charges will apply. New minimum period requirements will be established for the new service. The customer will remain responsible for satisfying all outstanding minimum period charges for the discontinued service.

ACCESS SERVICES

6. SWITCHED ACCESS SERVICE-(Continued)

6.10 Rate Regulations-(Continued)

6.10.11 Measuring Access Minutes-(Continued)

Step 1: Obtain recorded originating minutes and messages (measured as set forth in Paragraph (A) and (C) following for FX/ONAL FGA, FX/ONAL, BSA-A, FGC and BSA-C, respectively) from the appropriate recording data.

(AT) Step 2: Obtain the total attempts by dividing the originating measured messages by the completion ratio. Completion Ratios (CR) are obtained separately for the major call categories such as DDD, operator, ACIS, 800, 900, directory assistance and international from a sample study which analyzes the ultimate completion status of the total attempts which receive acknowledgment from the customer. That is, Measured Messages divided by Completion Ratio equals Total Attempts.

Step 3: Obtain the total non-conversation time additive (NCTA) by multiplying the total attempts (obtained in Step 2) by the NCTA per attempt ratio. The NCTA per attempt ratio is obtained from the sample study identified in Step 2 by measuring the non-conversation time associated with both completed and incomplete attempts. The total NCTA is the time on a completed attempt from customer acknowledgment of receipt of call to called party answer (set up and ringing) plus the time on an incomplete attempt from customer acknowledgment of call unit the access tandem or end office receives a disconnect signal (ring - no answer, busy or network blockage). That is, Total Attempts times Non-Conversation Time per Attempt Ratio equals Total NCTA.

Step 4: Obtain total chargeable originating access minutes by adding the total NCTA (obtained in Step 3) to the recorded originating measured minutes (obtained in Step 1). That is, Measured Minutes plus NCTA equals Chargeable Originating Access Minutes.

(B) Feature Group B Usage Measurement

For originating calls over FGB, usage measurement begins when the originating FGB entry switch receives answer supervision forwarded from the customer's point of termination, indicating the customer's equipment has answered. If answer supervision is not received within 4 (+4, -0) seconds of the end of outpulsing as set forth in reference document TSY-000064 LATA Switching System General Requirements, the call will be terminated to an announcement.

The measurement of originating call usage over FGB ends when the originating FGB entry switch receives disconnect supervision from either the originating end user's end office, indicating the originating end user has disconnected, or the customer's point of termination, whichever is recognized first by the entry switch.

For terminating calls over FGB, usage measurement begins when the terminating FGB entry switch receives answer supervision from the terminating end user's end office, indicating the terminating end user has answered.

(RT) Feature Group A Switched Access Service is available with extensions, i.e., additional terminations of the service at different building(s) in the same or a different LATA. Feature Group A extensions within the LATA are provided and charged for under the Telephone Company's Local and/or General Exchange Service Tariffs. Feature Group A extensions in different LATAs are provided and charged for as Special Access Service. The rate elements which apply are: A Voice Grade Channel Termination, Channel Mileage, if applicable, and Signaling Capability, if applicable. All appropriate monthly rates and nonrecurring charges set forth in Paragraph 7.5, following, will apply.

6.7.11 Message Unit Credit

Calls from end users to the seven-digit local telephone numbers associated with Feature Group A Switched Access Service are subject to Telephone Company Local and/or General Exchange Service Tariff charges, (including message unit and toll charges as applicable). The monthly bills rendered to IC's for their Feature Group A Switched Access Service will include a credit to reflect any message unit charges collected from their end users. The credit will apply for recorded originating usage or for assumed originating usage, as appropriate for the FGA service provided. When the credit is applied on assumed usage, such credit will not exceed the assumed levels of usage as set forth in Paragraph 6.7.1 D., preceding. No credit will apply for any terminating FGA access minutes. No message unit credit will be given when local business exchange rates apply as set forth in Paragraph 6.7.3, preceding. The factor for determining the applicable message unit credit is set forth in Paragraph 6.8, following.

(FC) 6.10 Rate Regulations-(Continued)

(FC) 6.10.15 Mileage Measurement

The mileage to be used to determine the monthly rate for Local Transport is calculated on the airline distance between the end office switch where the call carried by Local Transport originates or terminates and the IC serving wire center, except as set forth

(FC) in Paragraphs 6.10.14, A., B., C., and D., following. Where applicable, the V&H coordinates method is used to determine mileage. This method is set forth in the appropriate Exchange Carrier Association Tariff filed with the F.C.C.(1)

(FC) Mileage is shown in Paragraph 6.11.1, following, in terms of mileage bands. To determine the rate to be billed, first compute the mileage, then find the band into which the computed mileage falls and apply the rate shown for that band. If the calculation results in a fraction of a mile, always round up to the next whole mile before determining the mileage band and applying the rates.

Exceptions to the mileage measurement rules are as follows:

(AT) A. Mileage for FGA or BSA-A originating access minutes will be calculated using the V&H coordinates of the customer's serving wire center and the end office switch

(AT) where the FGA or BSA-A dial tone is provided.

(C) B. When a non-AT&T IC terminal location is within five miles of an AT&T Class 4 office, the Local Transport mileage for a call which is carried over a Switched Access Service, originating or terminating through an end office switch shall be the distance as would be determined from that end office switch to the IC's serving wire center unless the IC specifies that for an entire LATA, it wants all measurements determined from the serving wire center for that AT&T class 4 office. This designation (i.e., which serving wire center to use in calculating mileage) may be changed only once in any 12-month period. Such change will be made without charge to the IC.

(AT) C. When the Alternate Traffic Routing feature is provided with FGB, FGC and FGD or the Alternate Traffic Routing BSE is provided with BSA-B, BSA-C or BSA-D to provide service to multiple customer switching systems, usage rated Local Transport access minutes will be apportioned between the two transmission routes

(AT) used to provide this feature. Such apportionment will be made for FGB, FGC,

(AT) BSA-B and BSA-C using standard Telephone Company traffic engineering methodology as set forth in appropriate Technical References and will be based on the last trunk CCS desired for the high usage group, as described in Paragraph 6.3.1, L., preceding, and the relative capacity ordered to the end office, when the feature

6.7.12 Mileage Measurement

The mileage to be used to determine the monthly rate for Local Transport is calculated on the airline distance between the end office switch where the call carried by Local Transport originates or terminates and the IC serving wire center, except as set forth in Paragraphs 6.7.12, A., B., C., and D., following. Local Transport for the WATS Access Line optional feature will apply as follows. When the WATS serving office is a different end office than the end user's end office, Local Transport will be measured between the end user's end office and the WATS serving office in addition to being measured between the WATS serving office and the serving wire center for the customer's premises. Local Transport rates will apply separately to each of these Local Transport measurements. Where applicable, the V&H coordinates method is used to determine mileage. This method is set forth in the Exchange Carrier Association Tariff FCC No. 2 for Wire Center Information.

Mileage is shown in Paragraph 6.8.1, following, in terms of mileage bands. To determine the rate to be billed, first compute the mileage, then find the band into which the computed mileage falls and apply the rate shown for that band. If the calculation results in a fraction of a mile, always round up to the next whole mile before determining the mileage band and applying the rates.

Exceptions to the mileage measurement rules are as follows:

- A. Mileage for FGA originating access minutes will be calculated using the V&H coordinates of the customer's serving wire center and the end office switch where the FGA dial tone is provided.
- B. When a non-AT&T IC terminal location is within five miles of an AT&T Class 4 office, the Local Transport mileage for a call which is carried over a Switched Access Service, originating or terminating through an end office switch, shall be the distance as would be determined from that end office switch to the IC's serving wire center unless the IC specifies that for an entire LATA, it wants all measurements determined from the serving wire center for that AT&T class 4 office. 6.7.13 Shared Use

Shared use occurs when Switched Access Service and Special Access Service are provided over the same analog or digital high capacity service through a common interface. The regulations governing the provision of Shared Use Facilities are set forth in Paragraph 7.4.8, following. Switched Access rates and charges, as set forth in Paragraph 6.8, following, apply for each equivalent voice grade channel utilized to provide Switched Access Service.

(CP)ACCESS SERVICES

- 6. SWITCHED ACCESS SERVICE-(Continued)
- 6.7 Rate Regulations-(Continued)
- 6.7.12 Mileage Measurement-(Continued)

- C. When the Alternate Traffic Routing optional feature is provided with Feature Groups B, C and D to provide service to multiple customer switching systems, usage rated Local Transport access minutes will be apportioned between the two transmission routes used to provide this feature. Such apportionment will be made for FGB and FGC using standard Telephone Company traffic engineering methodology as set forth in reference document Technical Reference PUB TR EOP-000178 Trunk Traffic Engineering Concepts and Applications and will be based on the last trunk CCS desired for the high usage group, as described in Paragraph 6.3.1, L preceding, and the relative capacity ordered to the end office, when the feature is provided at an end office switch, or to the subtending end offices when the feature is provided at an access tandem switch. The apportionment for FGD to a tandem will be based on the actual measured data Originating FGD usage from the access tandem to multiple customer premises will be apportioned in the same manner described for FGB and FGC above. This apportionment will serve as the basis for Local Transport mileage calculation.
- D. When terminating Feature Group C Switched Access Service is provided from multiple IC terminal locations to an end office not equipped with measurement capabilities, the total Local Transport access minutes for that end office will be apportioned among the trunk groups accessing the end office on the basis of the individual busy-hour minutes of capacity ordered for each of those trunk groups. This apportionment will serve as the basis for Local Transport mileage calculation and the customer will be billed accordingly.
- E. When FGA calls terminate in the local calling area of the dial tone office, the Local Transport mileage will be calculated on an air-line basis between the customer's serving wire center and the end office where the call terminates. When FGA calls terminate outside the local calling area of the dial tone office, the Local Transport mileage will be calculated on an airline basis between the customer's serving wire center and the dial tone office.

6.10 Rate Regulations-(Continued)

6.10.17 800 Number Portability Access Service (NPAS)

MO. PUBLIC SERVICE COMM.

The following rate elements found in Paragraph 6.11.7 are applicable to 800 NPAS:

(AT) A. The 800 NPAS Query provides the customer identification function required to determine the appropriate routing for each 1+800+NXX+XXXX number based on the geographic origination of the call, from a specific NPA/NXX, NPA, or LATA, up to any combination of the same. The 800 NPAS Query rate applies per call for each 800 Query received at the Telephone Company SCP that returns a valid carrier identification code that provides the appropriate routing information of that call and results in the delivery of the 800 call to the customer. The following features are available with 800 NPAS:

B. The POTS translation feature converts the 800 number into a designated Plain Old Telephone Service (POTS) ten-digit number. If the customer provides the POTS number associated with the 800 number and requests delivery of the POTS number in place of the 800 number, the Telephone Company will deliver the POTS number.

The charge for this feature will be applied for each POTS translation Query and will be in addition to the 800 NPAS Query.

C. The Call Validation feature ensures that calls originate only from an 800 Subscriber's customized service area. Calls originating outside the area will be screened and an out of band recording will be returned to the calling party.

The charge for this feature will be applied for each Call Validation query and will be in addition to the 800 NPAS Query.

D. The Call Handling and Destination feature allows routing of 800 calls based on one or any combination of the following: time of day, day of week, percent allocation and specific ten-digit ANI.

The charge for this feature will be applied for each Call Handling and Destination query and will be in addition to the 800 NPAS Query.

(AT) E. The 800 NPAS rate elements will be billed to the customer utilizing FGD/BSA-D trunk side Switched Access Service for the delivery of 800 calls. Upon written notification by an exchange telephone company, the Telephone Company will render the 800 NPAS charges to the exchange telephone company, instead of the customer. The Telephone Company will bill the exchange telephone company for the appropriate 800 NPAS charges when an 800 NPAS call originates in the exchange telephone company's territory but uses the Telephone Company's SSP to execute the carrier identification function and delivery of the 800 call to the customer.
