Public Service Commission

APPLICATION OF TARIFF

This Tariff applies to Private Line Services furnished or made available by the Southwestern Bell Telephone Company, hereinafter referred to as the Telephone Company, and for Private Line Services furnished jointly with a connecting company, to the portion of such Private Line Services furnished by the Telephone Company to the point of connection with the facilities of another company for which that company's rates and regulations apply, over facilities wholly within or partly within and partly without the State of Missouri, between two or more points, all of said points being within the State of Missouri.

(CP) In the event that a connecting company, jointly furnishing Private Line Services with the Telephone Company, does not have the requisite terminal equipment in stock or available, the Telephone Company may negotiate a contract with the connecting company whereby the connecting company will install and maintain the Telephone Company's terminal equipment, or if such contractual arrangement cannot be agreed upon with the connecting company, the Telephone Company may, with the consent of the connecting company, elect to directly install and maintain said terminal equipment itself, or contract said installation and maintenance with a third party. In either case, the schedule of rates and specific regulations as set forth in this Tariff shall be applicable to the provision of terminal equipment by the Telephone Company in the connecting carrier's certificated area when the connecting carrier is unable to do so.

The schedules of rates and specific regulations are set forth in this Tariff.

This Tariff supersedes Southwestern Bell Telephone Company's General Private Line Services and Channels Tariff in its entirety.

REGULATIONS

1.1 UNDERTAKING OF THE TELEPHONE COMPANY

1.1.1 Scope

- A. This Tariff section contains the general regulations and definitions governing Private Line Services furnished by the Telephone Company except as otherwise specified, or unless the terms and conditions of an individual customer agreement provided pursuant to the Customer Specific Pricing Plan Tariff, P.S.C. Mo.-No.37 apply.
- B. Private Line Service is the furnishing of Telephone Company service components for communication between specified locations all within Local Access and Transport Area's (LATA's) of the State of Missouri, 24 hours daily, seven days per week. Service components may be those of the Telephone Company only or those of the Telephone Company and other telephone companies.
- C. The Telephone Company does not undertake to transmit messages, but offers the use of its service components, where available, to customers for such purposes.
- D. Services provided under this Tariff shall be used by private line customers for use in obtaining end-to-end Private Line Services. Interexchange Customers may use services found in this Tariff that will meet their administrative needs; however, an Interexchange Customer is restricted from utilizing services found in this Tariff to furnish a portion of their authorized service offerings.

(AT) E. These services are competitively classified

1.1.2 Limitations

- A. The furnishing of service under this Tariff will require certain physical arrangements of the service components of the Telephone Company and is, therefore, subject to the availability of such service components.
- B. The use and restoration of service shall be in accordance with P.S.C. Mo.-No. 38, Digital Link Services Tariff, Section 7, which specifies the priority system for such activities.
- C. Subject to compliance with Paragraph 1.1.2, B., preceding, where a shortage of channels or equipment exists at any time, either for temporary or protracted periods, the establishment of Long Distance Message Telecommunications Service and/or regular Exchange Telephone Service shall take precedence over all other services.

1.1.1 Scope

- A. This Tariff section contains the general regulations and definitions governing Private Line Services furnished by the Telephone Company. The regulations of the connecting company apply to the portion of Private Line Services which it furnishes at "other line" charges.
- B. Private Line Service is the furnishing of Telephone Company service components for communication between specified locations all within Local Access and Transport Area's (LATA's) of the State of Missouri, 24 hours daily, seven days per week. Service components may be those of the Telephone Company only or those of the Telephone Company and other telephone companies.
- C. The Telephone Company does not undertake to transmit messages, but offers the use of its service components, where available, to customers for such purposes.
- (AT) D. Services provided under this Tariff shall be used by private line customers for use in obtaining end-to-end Private Line Services. Interexchange Customers may use services found in this Tariff that will meet their administrative needs; however, an Interexchange Customer is restricted from utilizing services found in this Tariff to furnish a portion of their authorized service offerings.

1.1.2 Limitations

- A. In case a shortage of service components exists at any time, either for temporary or protracted periods, the establishment of Long Distance Message Telecommunications Service and/or regular Exchange Telephone Service shall take precedence over all other services and uses.
- B. The furnishing of service under this Tariff will require certain physical arrangements of the service components of the Telephone Company and is, therefore, subject to the availability of such service components.
- C. The use and restoration of service shall be in accordance with the Federal Communications Commission's Rules and Regulations which specify the priority system for such activities.
- D. Subject to compliance with Paragraph 1.1.2, C., preceding, where a shortage of channels or equipment exists at any time, either for temporary or protracted periods, the establishment of Long Distance Message Telecommunications Service shall take precedence over all other services.

REGULATIONS

1.1 UNDERTAKING OF THE TELEPHONE COMPANY-(Continued)

1.1.3 Liability

A. In view of the fact that the customer has exclusive control of his communications over the service components furnished him by the Telephone Company and of the other uses for which service components may be furnished him by the Telephone Company, and because of unavoidable errors incidental to the services and to the use of such service components of the Telephone Company, the services and service components furnished by the Telephone Company are subject to the terms, conditions and limitations herein specified and to such particular terms, conditions and limitations as set out in Section 2 of this Tariff governing the respective services.

(RT)
(RT)

B. The liability of the Telephone Company for damages arising out of mistakes, omissions, interruptions, delays or errors or defects in transmission occurring in the course of furnishing service, whether the result of negligence of the Telephone Company or other causes shall in no event exceed an amount equivalent to the proportionate charge to the customer for the service during the period in which such mistakes, omissions, interruptions, delays, errors or defects in transmission occur and continue. No other liability shall in any case attach to the Telephone Company in consideration of such interruptions.

However, any such mistakes, omissions, interruptions, delays, errors or defects in transmission or service which are caused or contributed to by the negligence or willful act of the customer, or which arise from or in connection with the use of customer-provided service components or premises equipment shall not result in the imposition of any liability whatsoever upon the Telephone Company.

C. The customer indemnifies and saves the Telephone Company harmless against claims for libel, slander or the infringement of copyright arising from the material transmitted over the service components, against claims for the infringement of patents arising from, combining with or used in connection with service components of the Telephone Company, apparatus and systems of the customer and against all other claims arising out of any act or omission of the customer in connection with the service components provided by the Telephone Company.

(FC)

1. When a private line service is used for teletypewriter transmission, the teletypewriter equipment may be provided by the customer, authorized user or joint user. On a given private line at a given premises, all such equipment must be provided by (1) the Telephone Company or (2) the customer, authorized user or joint user.

(FC)

2. When a private line service is used for data transmission which requires terminal equipment (data sets), such data sets may be provided by the customer, authorized user or joint user or by the Telephone Company at the option of the customer, except that the Telephone Company shall furnish all data sets located on the Telephone Company premises. Where the customer, authorized user or joint user elects to provide his own data set(s) on a private line, it shall be the responsibility of the customer, authorized user or joint user to ensure the continuing compatibility of such data set(s) with the facilities including data sets furnished by the Telephone Company.

REGULATIONS

1.1 UNDERTAKING OF THE TELEPHONE COMPANY-(Continued)

1.1.4 Provision of Service Components-(Continued)

- (AT) B. Maintenance and Repairs--All ordinary expense of maintenance and repair associated with network facilities and equipment, unless otherwise specified in this Tariff, is borne by the Telephone Company. The customer agrees to take good care of the network equipment and facilities provided. In case of damage to or destruction of any of the Company's network equipment or facilities not due to ordinary wear and tear, the customer is held responsible for the cost of replacing the Company's network equipment destroyed or for the cost of restoring the Company's network equipment to its original condition, except where such damage is not occasioned by the negligence of the customer.
- (FC) C. The charges specified in this Tariff do not contemplate installation, maintenance or repair work being performed by the Telephone Company employees involved at a time when overtime wages apply as a result of customer requests, nor do they contemplate work once begun being interrupted by the customer.

If the customer requests that labor be performed at hours of the day or days of the week other than normal work hours or days, or on holidays, or interrupts work once begun, an additional charge based on the additional costs involved applies. Such charges do not apply if sufficient advance notice is given so that employees' work schedules can be changed. The additional charge does not apply to overtime or premium time worked at the Telephone Company's convenience.

In situations where the customer requests that "stand-by" Telephone Company personnel be provided for installation or maintenance irrespective of when such "stand-by" workmen are provided, the additional estimated cost of providing such "stand-by" personnel will be billed to the customer.

Private Line Service Tariff
Section 1
4th Revised Sheet 9
Replacing 3rd Revised Sheet 9

REGULATIONS

1.2 USE - (Continued)

1.2.1 Authorized Use - (Continued)

A customer may use Private Line Services for one or more of the following purposes: -
(Continued)

- G. Where the use of the service relates to coordination or exchange of electrical pooled power for the transmission of communications between any two or more stations of such service or similar services furnished to others who are parties to the coordinating or exchange arrangement.
- H. For the transmission of communications to, from and/or between users utilizing premises switching equipment within a Multiline Terminating System Area. The premises switching equipment may be furnished under a resold or shared arrangement.

1.2.2 Unlawful Purposes

The service is furnished subject to the condition that it will not be used for any unlawful purpose. Service will be discontinued forthwith if any law enforcement agency, acting within its apparent jurisdiction, advises in writing that such service or channels are being used in violation of law. The Telephone Company will refuse to furnish service when it has reasonable grounds to believe that such service will be used in violation of the law.

1.2.3 Resale for Others

(RT)

- A. Intraexchange Private Line Service provided for in Section 2 of this Tariff shall not be used for any purpose for which a payment or other consideration, direct or indirect, shall be received by the customer or in the collection, transmission or delivery of any communications for others. This provision does not apply for the following:

- 1. To shared cost of Private Line Service in a resold or shared arrangement as follows:
 - a. Shared arrangement within a Multiline Terminating System Area.

- (1) Private Line Service may be shared, but may not be resold, subject to the regulations set forth herein between the customer and users. This customer may, but does not have to, use that Private Line Service.

REGULATIONS

1.2 USE - (Continued)

1.2.4 Shared Use of Private Line Service

Interexchange Private Line Service may be Shared in a long term arrangement between the customer and users subject to the following regulations:

- (CP)
- A. The customer may, but does not have to, use the Private Line Service.
 - B. The customer is responsible for payment of all charges incurred, that are associated with the service utilized by the customer or sharing arrangement participants.
 - C. The customer is responsible for compliance with Tariff regulations by each participant in a sharing arrangement.
 - D. The Telephone Company is not responsible for procuring participants for a sharing arrangement.
 - E. Sharing arrangements must be nonprofit. The total charges to all participants in a sharing arrangement may not exceed the sum of the Telephone Company's charges for the Private Line Service. The allocation of charges to each participant should be on a nonprofit pro-rata basis. Where the customer for a sharing arrangement is organized as a nonprofit entity, a not-for-profit fee, charged solely for the management, may be allocated by the customer among the sharing participants.
 - F. The Telephone Company shall not be responsible for the allocation of usage of, or charges for, shared Interexchange Private Line Service. Orders, including those which involve the start, rearrangement, release or discontinuance of service, will be accepted by The Telephone Company only from the customer.
 - G. Sharing of Private Line Service may not encompass the conversion of that Private Line Service into Local Exchange Service, Message Telecommunications Service, Wide Area Telecommunications Service or the equivalents thereof.

Simple interest at the rate of 6 percent per annum will be credited to the deposit, if held thirty (30) days or more, or upon termination of the service or the return of the deposit by the Telephone Company. No further interest credit will be made on a deposit or any portion of a deposit which is to be refunded, after date of notice of refund to the customer.

Service may be discontinued for failure to post a required deposit or guarantee after the Telephone Company has furnished five days' written notice to the customer requiring the customer to furnish such deposit or guaranty pursuant to Paragraph 1.4.2.

1. Residence Customer

The Telephone Company may require an applicant for service or a present customer who has an unpaid and undisputed delinquent account which accrued within the last two years, or if such delinquent account was paid within the last six months to post a deposit. The Telephone Company may require a present customer to post a deposit as a condition of continued service if undisputed charges in two out of the last twelve billing periods become delinquent. The amount of the deposit shall be determined by estimating the charges for two-months' service and facility charges based on the average bill during the preceding twelve months or estimated for the next twelve months by the applicant or present customer and the Telephone Company.

The Telephone Company shall permit an applicant for service to pay the deposit in two equal monthly installments.

1.4.2 Cancellation for Cause-(Continued)

A. Residence Customer

Upon non-payment of any undisputed sum due the Telephone Company, or upon illegal use of any service or facility, or upon a violation of any of the conditions governing the furnishing of service or facilities, the Telephone Company may, after five days' written notice has been furnished to the customer, without incurring any liability, forthwith discontinue the furnishing of said service. Service shall not be discontinued on a day when the offices of the Telephone Company are not available to facilitate reconnection of service, or on a day immediately preceding such a day.

At least 24 hours preceding a discontinuance, the Telephone Company shall make reasonable efforts to contact the customer to advise them of the proposed discontinuance and what steps must be taken to avoid it.

The Telephone Company shall postpone a discontinuance for a time not in excess of twenty-one days if the Telephone is necessary to obtain emergency medical assistance for a person who is a member of the household where the service is provided and where such a person is under the care of a physician. Any person who alleges such emergency shall, if requested, provide the Telephone Company with reasonable evidence of such necessity.

When the customer incurs charges not covered by a deposit or guaranty and evidences an intent not to pay such charges when due, services may be discontinued at any time after written notice has been sent, certified mail, to such customer at his last known address and at the address where the service to be discontinued is provided. The written notice shall state how a customer has evidenced an intent not to pay charges when due.

1.4 PAYMENT ARRANGEMENTS AND CREDIT ALLOWANCES-(Continued)

1.4.3 Minimum and Fractional Rates and Charges

- A. The minimum service period is one month, except when the cost of special construction is such as to necessitate a longer contract period.
- B. When rates are on a "per month" basis, the minimum charge will be for one month. If the period of use exceeds one month, the charges for the fractional part of a month following and consecutive with a full month will be a proportionate part of the monthly charges based on the actual number of days the service components are furnished. For the purpose of administering this regulation with respect to the determination of charges for a fractional part of a month, every month is considered to have 30 days.
- C. In applying a rate involving a fraction of a cent, the fraction is carried through the entire computation of the charge for the service. When the charge so computed includes a fraction of a cent, a fraction of less than one-half cent is disregarded, and a fraction of one-half cent or more is treated as one cent.

1.4.4 Special Construction

- (CP) A. Rates and charges for special construction will be provided as set forth in Section 14 of the Access Services Tariff.
- B. Special construction is that construction undertaken:
1. Where service components are not presently available, and there is no other requirement for the service components so constructed.
 2. Of a type other than that which the Telephone Company would normally utilize in the furnishing of its services.
 3. Over a route other than that which the Telephone Company would normally utilize in the furnishing of its services.
 4. In a quantity greater than that which the Telephone Company would normally construct to serve the customer's needs.
 5. On a temporary basis until permanent service components are available.
 6. Involving abnormal costs.
 7. In advance of the normal construction on an expedited basis.
- (CP) C. A request for charges for special construction will be subject to a special Quotation Charge for the direct administrative and engineering costs associated with the preparation of that particular quotation. The amount of such charges will be credited to the account of the customer when an order for that particular special construction is received within 90 days of the quotation. The customer will authorize, through a designated representative, the request for a quotation before the Telephone Company undertakes any work involved in developing such quotations.

Special construction rates and charges are in addition to rates and charges for Private Line Service in this Tariff.

B. Special construction is that construction undertaken:

- (CT) 1. Where service components are not presently available, and there is no other requirement for the service components so constructed.
- 2. Of a type other than that which the Telephone Company would normally utilize in the furnishing of its services.
- 3. Over a route other than that which the Telephone Company would normally utilize in the furnishing of its services.
- 4. In a quantity greater than that which the Telephone Company would normally construct to serve the customer's needs.
- (CT) 5. On a temporary basis until permanent service components are available.
- 6. Involving abnormal costs.
- 7. In advance of the normal construction on an expedited basis.

(CT) C. Where special construction of service components has been started prior to the cancellation and there is no other requirement for the specially constructed service components, a charge equal to the costs incurred in the special construction less net salvage applies, except that where one or more, but not all, of the services involved in the special construction are canceled, a charge equal to the cost less net salvage incurred for the discontinued services applies instead. Net salvage is determined based on the value of reusable material less cost of removal. In determining the charge, each canceled service is treated as discontinued as of the date on which it was to have been placed in service.

1.4 PAYMENT ARRANGEMENTS AND CREDIT ALLOWANCES-(Continued)

1.4.9 Cancellation of Application for Service

Where installation of service components other than those provided by special construction has been started prior to the cancellation, the charge specified in Paragraphs 1.4.9, A. and 1.4.9, B., following, whichever is lower, applies.

- A. A charge equal to the estimated costs incurred in such installation less estimated net salvage.
- B. The charge for the minimum period of the service ordered by the customer, as provided in this Tariff, plus the full amount of any termination charges applicable.

Installation of service components for a customer is considered to have started when the Telephone Company incurs any expense, including engineering, in connection therewith or in preparation, therefore, which would not otherwise have been incurred, provided the customer has placed an order with the Telephone Company for provision of service.

1.4.10 Miscellaneous Charges

- (AT) A. Restoration Priority Change (1)

(RT)
|
(RT)

- (AT) (1) Restoration Priority has been superseded by Telecommunications Service Priority (TSP) System as set forth in P.S.C. Mo.-No. 38, Digital Link Services Tariff, Section 7. Prior to March 10, 1993, RP and TSP will both be in effect, but no new assignments of RP will be allowed. The existing RP services will be honored and maintained during the interim period between the Initial Operating Capability (IOC) and Full Operating Capability (FOC) of TSP. No order for changes to existing RP circuits will be accepted without a TSP Authorization Code or a definitive statement to remove the RP assignment. On March 10, 1993, the Telephone Company will remove all RP assignments that have not been converted to TSP or discontinued free of charge.

1.5 DEFINITIONS

Certain terms used throughout this Tariff are defined as follows:

Authorized Protective Connecting Module - Denotes a protective unit designed by the Telephone Company and manufactured under the control of the Telephone Company quality assurance procedures which unit is to be incorporated in a conforming answering device.

Base Rate Area - The portion of the exchange area in which exchange service is furnished at scheduled rates for each class of service without mileage or construction charges.

Baud - Denotes a unit of signaling speed. It is the reciprocal of the time duration in seconds of the shortest signal element (mark or space) within a code signal. The speed in bauds is the number of signal elements per second.

Bit - A bit is the smallest unit of information in the binary system of notation.

Bridging - The connection of a channel or channels to another channel or the common point where more than two channels of any type connect.

Building - "Same Building" is a structure under one roof or two or more structures on the same premises which are connected by an enclosed passageway in which the wires or cables of the Telephone Company may be placed without exposure to outside electrical circuits or the weather. In no case can conduit be considered as an enclosed passageway. The term "same building" does not include those premises connected by a covered public mall (see Premises).

REGULATIONS

1.5 DEFINITIONS

Certain terms used generally throughout this Tariff are defined as follows:

Accessories - Denotes devices which are mechanically attached to, or used with, the facilities furnished by the Telephone Company and which are independent of, and not electrically, acoustically, or inductively connected to the conductors in the communications path of the Telephone Company facilities.

Authorized Protective Connecting Module - Denotes a protective unit designed by the Telephone Company and manufactured under the control of the Telephone Company quality assurance procedures, which unit is to be incorporated in a conforming answering device.

Authorized User - Denotes a person, firm, or corporation who is authorized by the customer to be connected to the service of the customer for the purpose of transmitting communications to or from the customer and relating directly to the customer's business. An authorized user must be specifically named in the application for service and a station must be located on his premises.

Base Rate Area - The portion of the exchange area in which exchange service is furnished at scheduled rates for each class of service without mileage or construction charges.

Baud - Denotes a unit of signaling speed. It is the reciprocal of the time duration in seconds of the shortest signal element (mark or space) within a code signal. The speed in bauds is the number of signal elements per second.

Bridging - The connection of a channel or channels to another channel or the common point where more than two channels of any type connect.

Building - "Same Building" is a structure under one roof, or two or more structures on the same premises which are connected by an enclosed passageway in which the wires or cables of the Telephone Company may be placed without exposure to outside electrical circuits or the weather. In no case can conduit be considered as an enclosed passageway. The term "same building" does not include those premises connected by a covered public mall. (See Premises)

REGULATIONS

1.5 DEFINITIONS-(Continued)

Channel - Denotes a portion of a Private Line Service which is a path (or paths) for electrical communication between two or more network inter-faces located on customer premises or between Telephone Company offices or between a network interface located on a customer's premises and a serving office. A channel may be furnished in such a manner as the Telephone Company may elect, whether by wire, radio or a combination thereof and whether or not by means of a single physical service component or route.

(RT)

(RT)

Channel Terminal - The service components required to terminate an intraLATA interexchange channel or an intraLATA interoffice channel at a serving office.

Communications Systems - Denotes channels and other service components which are capable, when not connected to Private Line Services, of two-way communications between customer-provided terminal equipment or Telephone Company service components.

Composite Data Service - The combined use of terminal and data switching equipment provided by a composite data service vendor with the use of telecommunications services of the Telephone Company to perform data switching for others.

1.5 DEFINITIONS-(Continued)

Channel - Denotes a portion of a Private Line Service which is a path(s) for electrical communication between two or more network interfaces located on customer premises or between Telephone Company offices or between a network interface located on a customer's premises and a serving office. A channel may be furnished in such a manner as the Telephone Company may elect, whether by wire, radio or a combination thereof and whether or not by means of a single physical service component or route.

(AT) Channel Service Units for MEGALINK III* - Wideband Digital Service/ 1.544 Mbps - (CSU's) - A Channel Service Unit for 1.544 Mbps Digital Service or its functional equivalent is required at each customer's terminal location on a 1.544 Megabit per second (Mbps) digital facility. The CSU may perform such functions as: proper termination of the facility, amplification, signal shaping and remote loop back. CSU's installed, owned or on order by the Company prior to November 18, 1983, can be provided by Southwestern Bell. These embedded CSU's may be moved, rearranged or reconnected for the life of the equipment. The CSU or its functional equivalent, other than the embedded CSU's discussed herein, will be provided by the customer. CSU's or their functional equivalents must be connected in accordance with the regulations as set forth in this Tariff.

(CT) Channel Terminal - The service components required to terminate an intraLATA interexchange channel or an intraLATA interoffice channel at a serving office.

Communications Systems - Denotes channels and other service components which are capable, when not connected to Private Line Services, of two-way communications between customer-provided terminal equipment or Telephone Company service components.

Composite Data Service - The combined use of terminal and data switching equipment provided by a composite data service vendor with the use of telecommunications services of the Telephone Company to perform data switching for others.

Private Line Service Tariff
Section 1
1st Revised Sheet 26
Replacing Original Sheet 26

REGULATIONS

1.5 DEFINITIONS-(Continued)

Conforming Answering Device - Denotes a customer-provided device which automatically answers incoming calls; transmits a prerecorded voice message or appropriate audible signal to the calling party; records a voice message from the calling party, if so designed and arranged; and automatically disconnects from the line in a prearranged manner on completion of the last of the functions for which it was designed and arranged as described in this Paragraph. The conforming answering device may include remote interrogation and/or device function control. A conforming answering device must incorporate an authorized protective connecting module and must bear a valid conformance number.

(CT) Connecting Arrangement - Denotes the service components provided by the Telephone Company to accomplish the direct electrical connection of customer-provided service components with the service components of the Telephone Company or the direct electrical connection of Telephone Company service components.

Connecting Company - A corporation, association, firm or individual owning and operating one or more exchanges and with whom traffic is interchanged.

(CT) Contract - The service agreement between a customer and the Telephone Company under which service components for communication between specified locations for designated periods, and for the use of the customer or user specifically named in the contract are furnished in accordance with the provisions of the Tariff.

Covered Public Mall - A covered public area, intended for the general public use, running between two or more premises and not an integral part of any building.

Customer - The person, firm or corporation who orders service and is responsible for the payment of charges and the compliance with the rules and regulations of the Telephone Company. A customer must have a communication requirement of his own for each Private Line Telephone Service.

(CP) Customer-Provided Premises Wiring - Premises wiring provided by a customer for use with service components furnished by the Telephone Company for Private Line Service.

Private Line Service Tariff
Section 1
9th Revised Sheet 27
Replacing 8th Revised Sheet 27

REGULATIONS

1.5 DEFINITIONS-(Continued)

Customer Premises Equipment - Devices, apparatus and their associated wiring, provided by a customer or user for use with service components furnished by the Telephone Company for Private Line Service and does not include customer-provided communications systems.

Customer-Provided Test Equipment - Denotes test equipment located at the premises of the customer or user that is used by the customer or user for the detection and/or isolation of a communications service fault.

Data Access Arrangement - Denotes a protective connecting arrangement for use with the network control signaling unit or, in lieu of the connecting arrangement, an arrangement to identify a central office line and protective service components and procedures to determine compliance with criteria set forth in this tariff.

Demarcation Point - The point (referred to as Demarc Point or Network Interface) of interconnection between the Telephone Company's facilities and the wiring at the subscriber's premises. The Demarc Point shall consist of wire or a jack conforming to Subpart F of Part 68 of the Federal Communications Commission's Rules and Regulations. The Demarc Point will generally be within twelve inches of the protector or, absent a protector, within twelve inches of the entry point to the customer's premises. If conforming to the twelve inches is unrealistic or technically impossible, the Demarc Point will be the most practicable minimum point of entry to the customer's premises.

The network interface may be located at a point other than the normal demarcation point where the network interface is already established by the presence of network equipment with the effective date of this tariff. For multiunit structures (e.g., apartments, college campuses, shopping centers) the structure owner shall make the final decision on whether the structure shall be treated as a multipremise structure with one demarcation point per premises or, as a single premise with one demarcation point for the entire structure. The structure owner shall have the option of having the demarcation point placed at a location other than that determined by the Telephone Company provided the structure owner pays any additional construction cost and such location is consistent with the minimum point of entry standard.

(AT)

Upon request of the subscriber or their agent, the Telephone Company shall provide additional regulated network entrance facilities and/or demarcation arrangements in single tenant multiunit or multibuilding situations. Such arrangements shall be made in accordance with Section 5, Paragraph 5.4, (Special Construction), of the General Exchange Tariff. Each additional regulated network entrance facility will terminate in a demarcation arrangement located at a minimum point of entry within a specified designated telecommunications equipment space.

(AT)

With regard to premises for any structure that is built to be mobile (e.g., mobile homes, recreational vehicles), the Telephone Company may place the Demarc Point on a post or pole at or near the pad where such structure is intended to rest. Boat docks and similar premises may be treated by the Telephone company as single unit premises, with the Demarc Point being placed on the shore.

No supplement to this tariff will be issued except for the purpose of canceling this tariff.

1.5 DEFINITIONS-(Continued)

Customer Premises Equipment - Devices, apparatus and their associated wiring, provided by a customer or user for use with service components furnished by the Telephone Company for Private Line Service and does not include customer-provided communications systems.

Customer-Provided Test Equipment - Denotes test equipment located at the premises of the customer or user that is used by the customer or user for the detection and/or isolation of a communications service fault.

Data Access Arrangement - Denotes a protective connecting arrangement for use with the network control signaling unit or, in lieu of the connecting arrangement, an arrangement to identify a central office line and protective service components and procedures to determine compliance with criteria set forth in this tariff.

(RT)

Direct Electrical Connection - Denotes a physical connection of the electrical conductors in the communications path.

Distribution Center - Indicates amplifying and bridging equipment required to connect the various local sections of a music network or to connect local sections to an interexchange section of that network.

Duplex Service - Denotes service which permits customers or users to communicate in both directions simultaneously.

Encoded Analog Content - "Encoded Analog Content" is an analog signal which has been multiplexed and coded within a digital signal.

Equalized - Denotes a procedure which provides for the component frequencies of the material transmitted having about the same relationship at the two ends of the channel.

(C)

Equivalent Analog Signal Power - "Equivalent Analog Signal Power" is the power of the analog signal at the output of a zero level decoder obtained when a digital signal is the input to the decoder. A zero level decoder yields an analog level of 0dBm at its output when the input is a digital milliwatt signal.

Customer-Provided Terminal Equipment - Devices, apparatus and their associated wiring, provided by a customer, authorized user or joint user for use with facilities furnished by the Telephone Company for Private Line Service and does not include customer-provided communications systems.

(AT)

Customer-Provided Test Equipment - Denotes test equipment located at the premises of the customer that is used by the customer for the detection and/or isolation of a communications service fault.

Data Access Arrangement - Denotes a protective connecting arrangement for use with the network control signaling unit or, in lieu of the connecting arrangement, an arrangement to identify a central office line and protective facilities and procedures to determine compliance with criteria set forth in this Tariff.

Direct Electrical Connection - Denotes a physical connection of the electrical conductors in the communications path.

Distribution Center - Indicates amplifying and bridging equipment required to connect the various local sections of a music network or to connect local sections to an interexchange section of that network.

Duplex Service - Denotes service which permits customers, authorized users or joint users to communicate in both directions simultaneously.

Entrance Facilities - Denotes the facilities required to extend customer-provided channels to a service point of the customer or authorized user.

Equalized - Denotes a procedure which provides for the component frequencies of the material transmitted having about the same relationship at the two ends of the channel.

Equipment-to-Equipment Connection - Denotes the connection of add-on or substitute equipment to host terminal equipment or communications systems. These connections are not within the scope of the Federal Communications Commission's Registration Program. The resulting combination of host and add-on or substitute equipment may be registered and must comply with the Federal Communications Commission's Rules and Regulations in order to be directly connected to the telecommunications network.

REGULATIONS

1.5 DEFINITIONS-(Continued)

Interexchange Channel - That portion of a Private Line Service which interconnects two primary serving offices in different exchanges or Metropolitan Exchanges within the same LATA.

Interexchange Customer(s) (IC) - Denotes any individual, partnership, association, corporation or governmental agency or any other entity which subscribes to the services offered under the Access Services Tariff to provide intrastate telecommunications services for its own use or for the use of its customers (End Users).

Interexchange Service - A Private Line Service within the same LATA where the Demarcation Points located on customer premises are in different exchanges or metropolitan exchanges within the same
(CT) LATA.

Interoffice Channel - That portion of a Private Line Service within the same LATA which interconnects (1) local channels in different serving offices associated with intraexchange service or (2) interexchange channels with local channels.

Intrabuilding Network Cable - Cable in a building that extends the outside plant distribution service components from the building entrance to equipment rooms, cross connection points or other distribution points.

(CT) Intraexchange Service - A Private Line Service where the Demarcation Points located on customer premises are wholly within an exchange or a metropolitan exchange as defined in the Local Exchange Tariff.

(CT) IntraLATA - A Private Line Service where the Demarcation Points located on customer premises are wholly within a LATA as defined in this Tariff.

Isochronous - Isochronous is transmission timing derived from the signal carrying the data. (i.e., No timing or clock lead is provided at the customer interface.)

Local Access and Transport Area (LATA) - The Local Access and Transport Area denotes a geographical area established for the administration of communications service. It encompasses designated local operating Telephone Company exchanges which are grouped to serve common social, economic and miscellaneous purposes.

Original Sheet 29

RECEIVED

REGULATIONS

FEB 1 1980

1.5 DEFINITIONS-(Continued)

Inside Wire and Cable - Those facilities which are confined to the inside wiring and cable furnished in connection with Private Line services from the building main or floor terminal, frame, or protector to the station equipment on the customer's premises. This does not include cable which is a part of switching equipment for Key Telephone systems, PBX Switchboards or other Exchange Tariff offerings.

Interexchange Channel - That portion of a Private Line service which interconnects two primary serving offices in different exchanges or metropolitan exchanges.

Interexchange Service - A Private Line service where station locations are in different exchanges or metropolitan exchanges.

Interface - Denotes that point on the premises of the customer, authorized user, or joint user at which provision is made for connection of other than Telephone Company-provided facilities to facilities provided by the Telephone Company.

Interoffice Channel - That portion of a Private Line service which interconnects, (1) local channels in different serving offices associated with intraexchange service; or, (2) interexchange channels with local channels.

Intraexchange Service - A Private Line service where all the station locations are wholly within an exchange or a metropolitan exchange as defined in the Local Exchange Tariff.

Joint User - The person, firm, or corporation who is designated by the customer as a user of a Private Line service of the customer in accordance with Tariff provisions who would not otherwise be entitled to use the customer's service.

Local Channel - That portion of a Private Line service which interconnects a station location to (1) an interexchange or interoffice channel; or (2) another station location on a different premises in the same serving area, via another local channel to the station on a different premises.

Multipoint Service - Denotes a service arrangement which provides communication capability between more than two Private Line station locations constituting a common dedicated communications system.

REGULATIONS

1.5 DEFINITIONS-(CONTINUED)

Other Telephone Company - See Connecting Company

DEC - 4 1980

Premises -

- A. All portions of the same building occupied by the same customer, provided that:
 - 1. The portions are not separated from each other by intervening offices, rooms, or suites not occupied by the customer.
 - 2. The portions of different floors are contiguous and that the portion on the upper floor is directly above the portion occupied on the lower floor.
- (CT) B. All of the buildings are located on one continuous plot of property, all of which plot is owned and/or held under lease by the same customer, and the buildings are not separated by a public vehicular thoroughfare which is governmentally owned.

Primary Serving Office - That office in a single office service area or that office of a multi-office service area which is designated by the Telephone Company as the primary serving office. A primary serving office is also a serving office. In a service area where there is not physically located a serving office, a theoretical location has been established by the Telephone Company for billing purposes.

Private Branch Exchange - A "Private Branch Exchange" (PBX), or "Private Branch Exchange service" is an arrangement of equipment consisting of stations located on the customer premises and connected to switching equipment. The switching equipment provides for the capability to connect stations to stations, stations to trunks, and central office trunks which terminate in the switching equipment and provides station access to exchange telephone service of the Telephone Company or of a connecting company and for access to the Long Distance Telecommunications network.

- A. In addition to the regulations and definitions applicable to Private Line services as set forth in this Tariff, the following regulations apply to the connections of customer-provided facilities.
- B. Customer-provided terminal equipment and customer-provided communications systems may be connected with facilities furnished for Private Line service by the Telephone Company where such connection is made in accordance with the Tariffs of this Company governing the furnishing of Private Line service.
- C. Since Telephone Company Private Line services utilize Telephone Company facilities in common with other services, it is necessary, in order to prevent excessive noise and crosstalk, that the power of the signal applied to the Telephone Company lines be limited.

To protect Telephone Company facilities and the services furnished to the general public by the Telephone Company from harmful effects, the signals applied to Telephone Company facilities by equipment or systems provided by a customer, authorized user, or joint user must comply with the applicable minimum protection criteria as stated in Paragraph 1.6.5, except as provided in Paragraph 1.6.1F, following.

- D. Where terminal equipment (except where connected with a DATA-PHONE Data Set) or communications systems provided by a customer, authorized user, or joint user, except as provided in Paragraph 1.6.1F, following, are connected with facilities furnished for Private Line service by the Telephone Company and there is connection of such facilities to Long Distance Message Telecommunications service, Local Exchange service or WATS access line, such terminal equipment or communications systems must comply with the minimum network protection criteria as set forth in the General Exchange or WATS Tariffs. The power of the signal which may be applied by the equipment or system provided by a customer, authorized user, or joint user to the Telephone Company interface located on the premises of a customer, authorized user, or joint user will be specified by the Telephone Company for each application to be consistent with the signal power allowed on the telecommunications network.

REGULATIONS

1.6 CONNECTIONS-(Continued)

1.6.1 General-(Continued)

E. Where terminal equipment or communications systems provided by a customer, authorized user, or joint user, except as provided herein, are connected with facilities furnished for Private Line service by the Telephone Company and there is connection of such facilities to Long Distance Message Telecommunications service, Local Exchange service or WATS access line or where such equipment or communications systems are connected to a private line terminated in a CENTREX system, the connection shall be such that the function of network control signaling, (except customer-provided tone-type address signaling through a Telephone Company-provided connecting arrangement or signaling functions performed by customer-provided equipment pursuant to the provisions of Paragraph 1.6.13, following) is performed by equipment furnished, installed and maintained by the Telephone Company.

Customer-provided tone-type address signaling is permitted through acoustic or inductive connections provided such connections are effected externally to a Telephone Company network control signaling unit. However, the facilities of the Telephone Company are not designed for such use and the Telephone Company makes no representation as to the reliability of address signaling which is performed in such manner.

F. Minimum protection criteria stated in Paragraph 1.6.5 are not applicable where customer-provided terminal equipment is connected with a DATA-PHONE Data Set furnished by the Telephone Company or a high speed TELPAK data channel terminal as indicated in Section 2 of this Tariff. Due to the nature of the service provided and/or the type of facility used, minimum protection criteria are not applicable where customer-provided terminal equipment or communications systems are connected with the following channels.

1. Channels provided for Series 200 services.
2. Channels provided for Medium Speed Facsimile.
3. Channels provided for Series 600 service.
4. Channels provided for Bell and Lights Civil Air Defense Warning systems; Series 100.

Public Service Commission

REGULATIONS

(CT) 1.6 CONNECTIONS-(Continued)

1.6.1 General Provisions-(Continued)

C. Responsibility of the Telephone Company-(Continued)

- 2. The Telephone Company will, at the customer's request, provide information concerning interface parameters, including the number of ringers which may be connected to a particular line, needed to permit customer-provided terminal equipment to operate in a manner compatible with the telecommunications network.
- 3. The Telephone Company may make changes in its telecommunications network, equipment, operations or procedures, where such action is not inconsistent with the Federal Communications Commission's Rules and Regulations. If such changes can be reasonably expected to render any customer's terminal equipment or communications system incompatible with the telecommunications network, or require modification or alteration of such customer-provided terminal equipment or communications systems, or otherwise materially affect its use or performance, the customer, authorized user, joint user or Other Common Carrier (listed in 1.6.9, C) will be given adequate notice in writing, to allow the customer an opportunity to maintain uninterrupted service.

D. Recording of Two-Way Telephone Conversations

Private line services are not represented as adapted to the recording of two-way telephone conversations. When customer-provided voice recording equipment is used with a private line service which is connected to telecommunications services, the provisions relating to Recording of Two-Way Telephone Conversations as set forth in 5.1.1, D of the General Exchange Tariff are applicable to such private line service.

REGULATIONS

1.6 CONNECTIONS-(Continued)

1.6.2 Responsibility of the Customer-(Continued)

C. (Continued)

The Institutional Program for Premises Wiring Charge provided for above is comprised of the first, or a combination of both rate elements described below, as appropriate:

(NR) Element 1 - for the first 15 minutes, or fraction thereof, of total time spent by Telephone Company employees in the related monitoring or participation in acceptance tests and/or in related inspection of customer-provided premises wiring for Communications Systems subject to Part 68 of the Federal Communications Commission's Rules and Regulations, and for administrative expenses including the visit to the customer's premises - USOC: EPC1E. \$34.55

(NR) Element 2 - for each additional 15 minutes, or major fraction thereof, of total time spent by Telephone Company employees in performing the related customer-premises activities described in Element 1 preceding - USOC: EPCAE \$ 6.55

(FC) D. The customer shall be responsible for ordering and specifying the DATAPHONE Data Sets (where requested), type channel and the conditioning for operation with his equipment. The undertaking of the Telephone Company is to furnish the DATAPHONE Data Sets, the channels and conditioning, as provided in it's Tariff, as ordered and specified by the customer.

(FC) E. The consent of the customer must be obtained by the authorized user or joint user prior to the connection of authorized user or joint user provided terminal equipment or communications systems to a Private Line service provided to the customer.

1.6 CONNECTIONS - (Continued)

1.6.1 General Provisions - (Continued)

E. Violation of Regulations

(CP) When any customer or interexchange Customer Premises Equipment or Communications System is used with Private Line Services in violation of any of the provisions in this Section, the Telephone Company will take such immediate action as necessary for the protection of the telecommunications network and Telephone Company employees and will promptly notify the customer or interexchange customer of the violation. The customer shall take such steps as are necessary to discontinue such use of the terminal equipment or communications system or correct the violation and shall confirm in writing to the Company within 10 days following the receipt of written notice from the Company that such use has ceased or that the violation has been corrected. Failure to discontinue such use or to correct the violation and to give the required written confirmation to the Telephone Company within the time stated above shall result in suspension of the customer's service until such time as there is compliance with the provisions of this Tariff.

(CT) F. Connection of Service Components Furnished by the Customer Which Involve Hazardous or Inaccessible Locations.

Service Components furnished by the customer which involve hazardous or inaccessible locations may be connected with Private Line Service furnished by the Telephone Company. Such service components furnished by the customer must comply with the minimum protection criteria contained in Paragraph 1.6.4, F., following.

1.6 CONNECTIONS-(Continued)

1.6.2 Responsibility of the Customer-(Continued)

(FC) F. When a customer, authorized user, or joint user elects to provide a communications system, it is contemplated that the customer, authorized or joint user shall provide all the components of the system which are located on the same premises.

(FC) G. When the customer, authorized user, or joint user elects to provide his own data set(s) on a given Private Line service, it shall be the responsibility of the customer, authorized user, or joint user to ensure the continuing compatibility of such data set(s) with the facilities furnished by the Telephone Company.

1.6.3 Responsibility of the Telephone Company

A. The Telephone Company shall not be responsible for installation, operation, or maintenance of any terminal equipment or communications system provided by a customer, authorized user, joint user, or other common carrier listed in Paragraph 1.6.19. Private Line service is not represented as adapted to the use of such equipment or system and where such equipment or system is connected to Telephone Company facilities, the responsibility of the Telephone Company shall be limited to the furnishing of facilities suitable for Private Line service and to the maintenance and operation of such facilities in a manner proper for such Private Line service; subject to this responsibility, the Telephone Company shall not be responsible for (i) the through transmission of signals generated by such equipment or system, or for the quality of, or defects in, such transmission or (ii) the reception of signals by such equipment or system or (iii) address signaling where such signaling is performed by tone-type signaling equipment provided by the customer or other common carrier listed in Paragraph 1.6.19.

B. The Telephone Company shall not be responsible to the customer, authorized user, joint user, or other common carrier listed in Paragraph 1.6.19 if changes in the minimum protection criteria or in any of the facilities, operations, or procedures of the Telephone Company render any terminal equipment or communications systems, or any portion thereof, provided by a customer, authorized user, joint user, or other common carrier listed in Paragraph 1.6.19 as a result of the modification or alteration of such equipment or system or any portion thereof or otherwise affect its use or performance.

1.6.1 General Provisions-(Continued)

(AT) G. Interpositioning of Terminal Equipment and Communications Systems

1. Interpositioned customer premises equipment arrangements of terminal equipment and communications systems are those arrangements which require that Telephone Company-provided equipment gain access to the telecommunications network through customer-provided equipment.
2. Customer-provided equipment may be interpositioned at the customer's premises either between the Telephone Company-provided equipment and the telecommunications network or between items of Telephone Company-provided equipment. Telephone Company-provided equipment will be furnished in an interpositioned configuration for use with telecommunications services in accordance with the following:
 - a. Customer-provided equipment to be connected in an interpositioned configuration must meet the requirements of the Federal Communications Commission's Rules and Regulations.
 - b. The connections between equipments of the interpositioned configuration must conform to recognized standard interfaces such as those specified by the Electronics Industries Association (EIA) or authorized by the Federal Communications Commission's Rules and Regulations.
 - c. The interpositioning must occur at the same premises at which the associated telecommunications service is terminated.
 - d. Any premises wiring which is provided by the customer must be provided in accordance with provisions of the Federal Communications Commission's Rules and Regulations.
 - e. The Telephone Company reserves the right to determine whether or not any individual interpositioned configuration is technically feasible and compatible with Telephone Company-provided services and equipment; however, such a configuration is provided:

1.6.4 Violation of Regulations

Where any terminal equipment or communications systems provided by a customer, authorized user, joint user, or other common carrier listed in Paragraph 1.6.19 is used with Private Line services furnished by the Telephone Company and any of the provisions of this Tariff are violated, the Telephone Company will take such immediate action as necessary for the protection of its facilities, and will promptly notify the customer of the violation. The customer shall discontinue such use of the equipment or system or correct the violation and shall confirm in writing to the Company within 10 days, following the receipt of written notice from the Company, that such use has ceased or that the violation has been corrected. Failure of the customer to discontinue such use or to correct the violation and to give the required written confirmation to the Telephone Company within the time stated above shall result in disconnection of the customer's Private Line service until such time as the customer complies with the provisions of this Tariff.

1.6.5 Minimum Protection Criteria

A. Direct Electrical Connection

1. Customer-provided terminal equipment or communications systems which are connected to facilities furnished for Private Line service by the Telephone Company, except as provided in Paragraph 1.6.1F preceding, must comply with the following minimum protection criteria:
 - a. Because each Private Line service is individually engineered, a single valued limit for all applications cannot be specified. Therefore, the power of the signal which may be applied by the customer-provided equipment to the interface will be specified by the Telephone Company for each application to be consistent with the signal power allowed on the telecommunications network.

A. Direct Electrical Connection-(Continued)

1. (Continued)

- b. To protect other services from interference at frequencies which are above the band of service provided, the Telephone Company will specify the acceptable signal power in the following bands to be applied by the customer-provided equipment to the interface to ensure that the input to the Telephone Company line does not exceed the limits indicated:
 - The power in the band from 3,995 Hertz to 4,005 Hertz shall be at least 18db below the power of the signal as specified in Paragraph 1.6.5A.1a preceding.
 - The power in the band from 4,000 Hertz to 10,000 Hertz shall not exceed 16db below one milliwatt.
 - The power in the band from 10,000 Hertz to 25,000 Hertz shall not exceed 24db below one milliwatt.
 - The power in the band from 25,000 Hertz to 40,000 Hertz shall not exceed 36db below one milliwatt.
 - The power in the band above 40,000 Hertz shall not exceed 50db below one milliwatt.
- c. Where there is connection to Long Distance Message Telecommunications service, Local Exchange service, or a WATS access line, to prevent interruption or disconnection of a call, or interference with network control signaling, it is necessary that the signal applied by the customer-provided equipment to the interface at no time have energy solely in the 2450 to 2750 Hertz band. If signal power is in the 2450 to 2750 Hertz band, it must not exceed the power present at the same time in the 800 to 2450 Hertz band.

- (RT) B. The connection may be made only at the premises of the customer or user to Series 300(1) or 400 (RT) Private Line Service that present a two-wire or four-wire loop signaling interface for such connection under the following conditions:
 - 1. Registered terminal equipment, registered protective circuitry and registered Key Telephone Systems may be connected to the service point end of Private Line Services furnished in connection with off-premises service.
 - 2. Registered PBX Systems may be connected as a trunk termination to the service point end of Private Line Services furnished in connection with off-premises service.
 - 3. Registered terminal equipment, registered protective circuitry and registered Key Telephone Systems may be connected to CCSA access lines.
 - (RT) 4. A Foreign Exchange channel may be utilized with registered terminal equipment, registered (RT) protective circuitry and registered communications systems which are connected to the (RT) exchange telephone service associated with such channels.
- C. The connection of registered terminal equipment and registered PBX Systems may be made only (RT) at the customer's premises to a Series 300(1) or 400 private Line Service that presents an (RT) interface for a two-wire or four-wire transmission, with separate E & M signaling leads conventionally known as Type I (battery/ground) or Type II (contact closure type). Such E & M signaling leads are those terminal equipment or PBX leads (other than voice or data communications leads) used for the purpose of transferring supervisory or address signals across the interface.

(1) Obsolete - applicable to existing installations at existing locations for existing customers.

Private Line Service Tariff
Section 1
Original Sheet 41

REGULATIONS

1.6 CONNECTIONS-(Continued)

1.6.5 Minimum Protection Criteria-(Continued)

B. Acoustic, Inductive Connections

1. Customer-provided terminal equipment or communications systems which involve acoustic or inductive connections must comply with the following minimum protection criteria:

a. Because each Private Line service is individually engineered, a single valued limit for all applications cannot be specified. Therefore, the power of the signal which may be applied by the customer-provided equipment to the interface will be specified by the Telephone Company for each application to be consistent with the signal power allowed on the telecommunications network.

b. To protect other services from interference at frequencies which are above the band of the service provided, the Telephone Company will specify the acceptable signal power in the following bands to be applied by the customer-provided equipment to the interface to ensure that the input to the Telephone Company line does not exceed the limits indicated:

- The power in the band from 3,995 Hertz to 4,005 Hertz shall be at least 18db below the power of the signal as specified in Paragraph 1.6.5B.1a above.
- The power in the band from 4,000 Hertz to 10,000 Hertz shall not exceed 16db below one milliwatt.
- The power in the band from 10,000 Hertz to 25,000 Hertz shall not exceed 24db below one milliwatt.
- The power in the band from 25,000 Hertz to 40,000 Hertz shall not exceed 36db below one milliwatt.
- The power in the band above 40,000 Hertz shall not exceed 50db below one milliwatt.

REGULATIONS

1.6 CONNECTIONS-(Continued)

1.6.2 Connections of Registered Equipment-(Continued)

- D. The connection of customer-provided registered terminal equipment and registered PBX Systems may be made only at the premises of the customer to a Series 100, 300(1) or 400 Private Line Service furnished to provide indications of message registration of outgoing calls or Automatic Identification of Outward Dialing (AIOD) to such customer-provided equipment or systems.

In addition, customers who intend to install, perform additions to or make rearrangements of AIOD functions shall give advance notice to the Telephone Company in accordance with the procedures specified in the Federal Communications Commission's Rules and Regulations or as otherwise authorized by the Federal Communications Commission.

- (AT) E. Unless a specific waiver has been granted by the Federal Communications Commission, or except as otherwise provided in F., following, all connections of registered equipment to services furnished by the Telephone Company will be made through a point of demarcation. In most cases, this will be through a Telephone Company provided standard jack. For simple wiring where there is no Telephone Company provided standard jack at the Demarcation Point, customers may make connections by direct attachment to Company installed wiring at points on the customer's side up to and including at the Demarcation Point. In the case of registered communications systems utilizing complex wiring, a method of connection, jacks, terminal strips, etc., will be provided by the Telephone Company.

- (AT) F. The requirement for the use of standard jacks as described in E., preceding, is waived for registered equipment which is located in hazardous or inaccessible locations.

1.6.3 Connections of Grandfathered Terminal Equipment and Grandfathered Communications Systems-(Continued)

A. Direct Connections-(Continued)

- 5. Systems connected pursuant to 2. through 4. preceding may remain connected and be moved and reconnected, in accordance with 3.a through e, preceding, for the life of the equipment and may be modified only in accordance with the Federal Communications Commission's Rules and Regulations.
- 6. Customer-provided terminal equipment and customer-provided communications systems connected via customer-provided grandfathered protective circuitry are subject to the provisions of 1. through 5. preceding.

B. Connections Through Connecting Arrangements Provided by the Telephone Company

- 1. Grandfathered connections of terminal equipment and grandfathered connections of communications systems to the private line services specified in 1.6.2, B preceding are subject to 5.1.3, B, Connections of Grandfathered Terminal Equipment and Grandfathered Communications Systems, of the General Exchange Tariff. Such connections are subject to the minimum protection criteria set forth in 1.6.4, F, following.
- 2. Grandfathered connections of terminal equipment and grandfathered connections of communications systems to the private line services specified in 1.6.2, C and 1.6.2, D, preceding are subject to the following:
 - a. Until May 1, 1983, the Telephone Company will provide connecting arrangements for installations of new customer-provided terminal equipment or communications systems that are subject to the Federal Communications Commission's Rules and Regulations.

1.6 CONNECTIONS-(Continued)

1.6.9 Data Terminal Equipment

A. Direct Electrical Connection

- 1. Customer-provided data terminal equipment which involves direct electrical connection to facilities furnished for Private Line service by the Telephone Company, may be used with such facilities for such purpose under the conditions set forth below:
 - a. The customer shall be responsible for ordering and specifying the DATA-PHONE Data Set or data set (where requested), the type channel and the channel conditioning for operation with data processing equipment provided by the customer, authorized user, or joint user. The undertaking of the Telephone Company is to furnish the DATA-PHONE Data Set or data set, the type channel and channel conditioning as ordered and specified by the customer.
 - b. Except as otherwise specified in Paragraph 1.6.9A.1c and 1.6.9A.1d following, when the connection of customer-provided data terminal equipment requires the use of data sets, the data sets may be provided by either the customer, authorized user, or joint user or by the Telephone Company at the option of the customer; except that the Telephone Company shall furnish all data sets located on the premises of the Telephone Company. Where the customer, authorized user, or joint user elects to provide his own data set(s) on a given Private Line service, it shall be the responsibility of the customer, authorized user or joint user to ensure the continuing compatibility of such data set(s) with the facilities furnished by the Telephone Company.
 - c. When customer-provided data terminal equipment is used in connection with a TELPAK channel used for high speed data and such service is terminated on a customer's, authorized user's, or joint user's premises, the required data sets are furnished by the Telephone Company as a part of the service.

1.6 CONNECTIONS-(Continued)

1.6.4 Connections of Customer Premises Equipment and Communications Systems Not Subject to the Federal Communications Commission's Registration Program

A. General

1. Connecting arrangements are not required and minimum protection criteria are not applicable where Customer Premises Equipment or Communications Systems are connected with the following channels when such channels are used for the types of transmission specified herein due to the nature of the service provided and/or the type of channels and equipment used:

- Series 100
- Series 200
- Series 400

- Channels for Program Transmission in Connection with Loudspeaker and Sound Recording
- Video Channels (Provided via Special Assembly Request for Closed Circuit TV)

2. Except as otherwise provided in Paragraphs 1.6.2 and 1.6.3, preceding, Customer Premises Equipment and Communications Systems may be electrically connected to Private Line Services in accordance with Paragraph 1.6.4.

a. When the Customer Premises Equipment or Communications System is connected with Private Line Service furnished by the Telephone Company and such Private Line Service is not arranged for connection to telecommunications services, such connections shall be made to a Demarcation Point provided by the Telephone Company.

b. When the Customer Premises Equipment or Communications System is connected with Private Line Service furnished by the Telephone Company and such Private Line Service is arranged for connection to telecommunications services:

- (1) Except as otherwise specified in Paragraph 1.6.4, D.1.d., following, such connections shall be made through a connecting arrangement as provided in Paragraph 1.6.4, and
- (2) The connection shall be such that the functions of the network control signaling (except customer-provided tone-type address signaling through a Telephone Company-provided connecting arrangement) are performed by service components furnished by the Telephone Company.

1.6 CONNECTIONS-(Continued)

1.6.4 Connections of Customer Premises Equipment and Communications Systems Not Subject to the Federal Communications Commission's Registration Program-(Continued)

E.

F. Minimum Protection Criteria for Electrical Connections

1. Since Private Line Services utilize Telephone Company channels and service components in common with other services, it is necessary in order to prevent excessive noise and crosstalk that the power of the signal applied to the Telephone Company Private Line Service is individually engineered. A single-valued limit for all applications cannot be specified. Therefore, the power of the signal in the band above 300 Hertz which may be applied by the customer-provided equipment to the network interface will be specified by the Telephone Company for each application to be consistent with the signal power allowed on the telecommunications network.
2. To protect other services, it is necessary that the signal which is applied by the customer-provided equipment to the Telephone Company Demarcation Point located on the customer's premises meet the following limits:
 - a. The power in the band from 3,995 Hertz to 4,005 Hertz shall be at least 18dB below the power of the signal as specified in Paragraph 1.6.4, F.1., above.
 - b. The power in the band from 4,005 Hertz to 10,000 Hertz shall not exceed 16dB below one milliwatt.
 - c. The power in the band from 10,000 Hertz to 25,000 Hertz shall not exceed 24dB below one milliwatt.
 - d. The power in the band from 25,000 Hertz to 40,000 Hertz shall not exceed 36dB below one milliwatt.
 - e. The power in the band above 40,000 Hertz shall not exceed 50dB below one milliwatt.

REGULATIONS

1.6 CONNECTIONS-(Continued)

1.6.12 Connection of Attested Customer-Provided Terminal Equipment

Customer-provided terminal equipment, listed below, which meets the standards and procedures set forth by the Telephone Company in its technical references may be connected to facilities furnished by the Telephone Company in accordance with the following:

- A. The connection shall be made through an interface termination (e.g., headset jack) provided by the Telephone Company.
- B. The Telephone Company will cause to have issued an identification number for each specific model or type of equipment which indicates compliance with standards, and procedures set forth by the Telephone Company's technical references. Such identification number must appear on each unit of attested equipment utilized pursuant to this regulation.
- C. The customer must notify the Telephone Company of his intention to connect attested terminal equipment. Such notification must include the identification number of the equipment and the location at which that equipment is to be used.
- D. Attested equipment may not:
 1. Be connected to a source of electrical power which is external to the telephone network;
 2. Be grounded;
 3. Perform any network control signaling functions prior to and including the establishment of the intended transmission path;
 4. Have amplification in the transmission path (other than single-ended terminal devices with the maximum gain limited so that the output power meets the minimum protection criteria set forth in Paragraph 1.6.5 preceding);
 5. Use wiring external to such equipment that is permanently affixed at the site of installation other than portable connections compatible with the interface terminations provided by the Telephone Company.

REGULATIONS

1.6 CONNECTIONS-(Continued)

1.6.4 Connections of Customer Premises Equipment and Communications Systems Not Subject to the Federal Communications Commission's Registration Program-(Continued)

F. Minimum Protection Criteria for Electrical Connections-(Continued)

- (CT) 3. Where there is connection to telecommunications services to prevent the interruption or disconnection of a call or interference with network control signaling, it is necessary that the signal applied by the customer- provided equipment to the Telephone Company Demarcation Point located on the customer's premises at no time has energy solely in the 2450 to 2750 Hertz band. If signal power is in the 2450 to 2750 Hertz band, it must not exceed the power present at the same time in the 800 to 2450 Hertz band.
- (CT) 4. With Customer Premises Equipment being utilized, signals having components in the frequency spectrum below 300 Hertz, excluding ringing signals, the currents and voltages (including all harmonics and spurious signals) at the Demarcation Point shall not exceed the limits indicated in Paragraphs 1.6.4, F.4.a. through d., following:
- a. The maximum rms (root-mean-square) value, including dc and ac components of the current per conductor will be specified by the Telephone Company, but in no case will the specified value exceed 0.35 ampere.
 - b. The magnitude of the peak of the conductor to ground voltage shall not exceed 70 volts.
 - c. The conductor-to-conductor voltage shall be such that the conductor- to-ground voltage limit in b., above, is not exceeded. If the signal source is not grounded, the voltage limit in Paragraph 1.6.4, F.4.b., above, applies to the conductor-to-conductor voltage.
 - d. The total weighted rms voltage within the band from 50 Hertz to 300 Hertz shall not exceed 100 volts. The total weighted rms voltage is the square root of the sum of the products of the weighting factors for the individual frequency components times the square of the rms voltage of the individual frequency components. The weighting factors are as indicated:

G. Acoustic or Inductive Connections-(Continued)

2. Minimum Protection Criteria

a. Since private line services utilize Telephone Company channels and equipment in common with other services, it is necessary in order to prevent excessive noise and crosstalk that the power of the signal applied to the Telephone Company private line service be limited. Because each private line service is individually engineered, a single valued limit for all applications cannot be specified. Therefore, the power of the signal which may be applied by the customer-provided equipment to the interface will be specified by the Telephone Company for each application to be consistent with the signal power allowed on the telecommunications network.

b. To protect other services, it is necessary that the power which is applied by the customer-provided equipment to the interface located on the customer's premises meet the following limits at the output of the network control signaling unit:

- (1) The power in the band from 3,995 Hertz to 4,005 Hertz shall be at least 18dB below the power of the signal as specified in a., preceding.
- (2) The power in the band from 4,005 Hertz to 10,000 Hertz shall not exceed 16dB below one milliwatt.
- (3) The power in the band from 10,000 Hertz to 25,000 Hertz shall not exceed 24dB below one milliwatt.
- (4) The power in the band from 25,000 Hertz to 40,000 Hertz shall not exceed 36dB below one milliwatt.
- (5) The power in the band above 40,000 Hertz shall not exceed 50dB below one milliwatt.

1.6.15 Entrance Facilities - Series 1000

A. Description

Entrance facility channels are furnished to the customer by the Telephone Company for the purpose of extending customer-provided communications systems to a service point of the customer, authorized user or to Centrex Control Switching Equipment serving the premises of the customer or authorized user for use at such premises.

These channels are furnished for half-duplex or duplex operation on a two-point basis. The approximate bandwidth is 300-3000 Hertz.

B. Regulations

Customer-provided communications systems may be connected through connecting arrangements furnished by the Telephone Company with entrance facilities furnished to the same customer for the purpose of extending the customer-provided communications systems to a service point of the customer or authorized user. The channels created therefrom, in accordance with Paragraph 1.6.8 preceding, may be connected at such customer's or authorized user's service point to other customer-provided communications systems in accordance with Paragraph 1.6.14A.2a, 1.6.14A.2b and 1.6.14A.2c preceding.

Entrance facilities are furnished (1) within an exchange, or (2) where the customer's or authorized user's service point is located 25 airline miles or less from the point at which the customer-provided communications channel is connected to the Telephone Company entrance facility.

(AT) 1.6.6 Equipment-to-Equipment Connections

- A. Equipment-to-Equipment connections, as defined in 1.5 preceding, will only be permitted with Telephone Company-provided host terminal equipment and communications systems when:
 - 1. The supplier of the added equipment insures compliance of the combined host and added equipment, including wiring, with the Federal Communications Commission's Rules and Regulations and Section 1.6 of this tariff.
 - 2. Connection of the added equipment to the host is made through a Telephone Company-provided interface which:
 - a. Provides all points of connection between the added equipment and wiring internal to host equipment housings.
 - b. Permits reasonable trouble isolation, as determined by the Telephone Company.
 - c. Is otherwise acceptable to the Telephone Company for the specific connection to be accomplished.
 - 3. Such permission does not necessitate disclosure, by the Telephone Company, of information which is proprietary in nature.
 - 4. The customer subscribing to the host notifies the Telephone Company of the added equipment and the host terminal equipment or communications system to which such added equipment is to be connected, in advance of such connection, and agrees to notify the Telephone Company when such added equipment is permanently disconnected.
- B. The Telephone Company reserves the right to not allow, or to require disconnection of, an equipment-to-equipment connection to any Telephone Company-provided host terminal equipment or communications system for reasons including, but not limited to:
 - 1. Incompatibility of a specific equipment-to-equipment connection with the design and/or functioning of a specific host or impairment in the performance of a specific host following such connection.

1.6 CONNECTIONS-(Continued)

1.6:16 Connections With Certain Facilities of Customers

Customer facilities for private line telephone, data transmission, teletypewriter or remote metering, supervisory control and miscellaneous signaling purposes, in lieu of Paragraph 1.6.9 through 1.6.15 preceding, may be connected, as provided in Paragraphs 1.6.16A, 1.6.16B and 1.6.16C below, with Telephone Company voice grade or less Private Line services furnished for communication among three or more stations for such purposes under this Tariff. In all such cases, the customer's facilities will be so constructed, maintained and operated as to work satisfactorily with the facilities of the Telephone Company.

A. U.S. Army, Navy and Air Force

1. Facilities of the U.S. Department of the Army, Navy or Air Force will be connected with facilities of the Telephone Company, subject to the regulations and conditions stated in the following where the Secretary of the Department or his authorized representative notifies the Telephone Company, in writing, that such connection is required for reasons of military necessity. Such connections will be made by means of switching or connecting equipment furnished by the Telephone Company.
2. Such telephone facilities will be connected to Private Line Telephone services and to telephone services and channels provided in connection with TELPAK service furnished by the Telephone Company for communication with stations associated with such Private Line Telephone service, provided however, that the Department facilities will not be connected to the telecommunications network to form a through connection except in cases of emergency involving safety of life or property, unless the aforesaid facilities are provided by the Department in locations where it is impracticable for the Telephone Company to furnish its facilities.

A. U.S. Army, Navy and Air Force-(Continued)

3. Equipment provided on the Department's facilities for the purpose of deriving telephone, teletypewriter, remote metering, supervisory control, telewriting, miscellaneous signaling or data transmission channels may be used, if suitable for such use to derive such channels over private line channels furnished by the Telephone Company.

B. U.S. Government Executive Departments and Agencies

Equipment of a Department or Agency of the Executive Branch of the U.S. Government used for the purpose of disguising or concealing the contents or meaning of communications may be connected to Telephone Company services, subject to the regulations and conditions below:

1. The head of the Department or Agency whose equipment is to be connected, or his authorized representative, shall notify the Telephone Company in writing that such connection is necessary to safeguard official information which requires protection in the interests of national defense, or other confidential official information disclosure of which to unauthorized persons would be detrimental to the public interest.
2. The Government equipment shall be so constructed, maintained and operated as to work satisfactorily with the facilities of the Telephone Company.
3. The connection shall be made by means of connecting equipment or arrangements furnished by the Telephone Company.

1.6.8 Connection of Services Furnished by the Telephone Company to Different Customers-(Continued)

AUG 29 1980

A. (Continued)

MISSOURI
Public Service Commission

3. A private line service furnished to a customer may be connected to a private line service furnished to a different customer and both private lines may be utilized by a joint user provided that:

- a. The connection is made at the premises of a party who is a joint user on both of the private lines.
- b. Such connections will be through switching equipment provided by the joint user or the Telephone Company.
- c. When the private line services are so connected, all communications over the interconnected facilities shall be to or from the joint user and relate directly to his business.

Such private lines shall include channels created by the customer in accordance with 1.6.5 preceding.

4. A joint user of a private line may connect long distance telecommunications service, local exchange service, WATS access line or private line service provided to him as a customer to that private line service on which he is a joint user provided that:

- a. The connection is made at the premises of the joint user.
- b. Such connection will be made through switching equipment provided by the joint user or the Telephone Company.
- c. When the connection involves long distance message telecommunications service, local exchange service or WATS access lines, the connection shall be such that the functions of network control signaling are performed by equipment furnished, installed and maintained by the Telephone Company.
- d. When private line service is connected with long distance message telecommunications service, local exchange service or WATS access lines, all communications over the interconnected facilities shall be to or from the joint user and relate directly to his business.

Such private lines shall include channels created by the customer in accordance with 1.6.5 preceding.

Private Line Service Tariff
Section 1
Original Sheet 65

REGULATIONS

1.6 CONNECTIONS-(Continued)

1.6.17 Connection of Services Furnished by the Telephone Company to the Same Customer-(Continued)

D. (Continued)

- 3. To station apparatus provided by the Telephone Company as a part of a service provided by the Telephone Company to the same customer or to Long Distance Message Telecommunications service, Local Exchange service or WATS access line through such Telephone Company-provided station apparatus.

The connection described above is subject to regulations specified in the General Exchange Tariff and the Wide Area Telecommunications Tariff.

- E. A voice grade Private Line service for voice communication or other Types of voice grade channels when used alternately for voice transmission and when in the voice mode, may be connected at a PBX or other switching or connecting arrangements to Long Distance Message Telecommunications service, Local Exchange service or WATS access line to form a through connection over the private and exchange lines where facility conditions permit. It is not contemplated that more than one such type of connection will be established simultaneously and transmission is not represented as adapted to such connections.

When a Two-Point Private Line service or a Multi-Point Private Line service arranged for service solely between two points utilizing the above type channels is used for transmission of data, through connections over the private and exchange lines may also be established as described above.

1.6.11 Entrance Facilities

A. Description

Entrance facility channels are furnished to the customer by the Telephone Company for the purpose of extending customer-provided communications systems to a service point of the customer or authorized user or to Centrex Control Switching Equipment serving the premises of the customer or authorized user for use at such premises.

These channels are furnished for half-duplex or duplex operation on a two-point basis. The approximate bandwidth is 300-3000 Hertz.

CANCELLED

JAN - 1 1984

B. Regulations

Customer-provided communications systems may be connected through connecting arrangements furnished by the Telephone Company to entrance facilities furnished to the same customer for the purpose of extending the customer-provided communications system to a service point of the customers or authorized user. The channels created therefrom in accordance with 1.6.5, preceding, may be connected at such customer's or authorized user's service point to other customer-provided communications systems in accordance with 1.6.4, D.1.a., b. and d., preceding.

BY HRS 70
PUBLIC SERVICE COMMISSION

Entrance facilities are furnished (1) within an exchange or (2) located 25 air line miles or less from the point at which the customer-provided communications channel is connected to the Telephone Company entrance facility.

(CP)

Requests for entrance facilities to be furnished outside an exchange or over 25 air line miles from the point at which the customer-provided communications channel is connected to the Telephone Company entrance facility will be reviewed on a case-by-case basis to determine if the requested facility can be provided.

C. Connection of Customer-Provided Terminal Equipment or Communications Systems to Telephone Company Entrance Facilities

1. Customer-provided communications channels may be connected with Entrance Facilities furnished by the Telephone Company for the purpose of extending the customer-provided communications channels. The connection shall be through connecting arrangements furnished, installed and maintained by the Telephone Company.

(FC) 1.6.13 Connection of Services Furnished by the Telephone Company to the Same Customer-(Continued)

C. (Continued)

2. To entrance facilities furnished by the Telephone Company and to channels created therefrom as authorized in 1.6.5 preceding.

The connection of channels specified above is subject to the regulations contained in 1.6.1, 1.6.2 and 1.6.3 preceding.

3. To station apparatus provided by the Telephone Company as a part of a service provided by the Telephone Company to the same customer or to long distance message telecommunications service, local exchange service or WATS access line through such Telephone Company-provided station apparatus.

The connection described above is subject to regulations specified in the General Exchange Tariff and the Wide Area Telecommunications Service Tariff.

- D. A voice grade private line service for voice communication or other types of voice grade channels when used alternately for voice transmission and when in the voice mode, may be connected at a PBX or other switching or connecting arrangements to long distance message telecommunications service, local exchange service or WATS access line to form a through connection over the private and exchange lines where facility conditions permit. It is not contemplated that more than one such type of connection will be established simultaneously and transmission is not represented as adapted to such connections.

When a two-point private line service or a multipoint private line service arranged for service solely between two points utilizing the above type channels is used for transmission of data, through connections over the private and exchange lines may also be established as described above.

1.6.14 Connections of Customer-Provided Test Equipment-(Continued)

C. Institutional Procedures for Signal Power Control-(Continued)

2. (Continued)

a. (Continued)

- (1) Information provided in the Affidavit gives reason to believe that a violation of the Federal Communications Commission's Rules and Regulations or the Institutional Procedures set forth in Paragraph 1.6.14, C.1., preceding, is likely.
- (2) Harm has occurred, and there is reason to believe this harm was a result of operations performed under the Institutional Procedures set forth in Paragraph 1.6.14, C.1., preceding.

b. The extraordinary procedures which can be invoked by the Telephone Company include:

- (1) Requiring the use of protective apparatus which either protects solely against excessive signal power or which assures that all of the requirements of the Federal Communications Commission's Rules and Regulations are met at the Private Line Service Demarcation Point.
- (2) Disconnecting service.

c. A charge equal to the Maintenance of Service Charge will apply when:

- (1) It is necessary to send a repair person to the premises where the test equipment is connected because a condition as set forth in Paragraph 1.6.14, C.2.a., preceding, exists, and
- (2) A failure to comply with the Institutional Procedures for signal power control is disclosed.

Private Line Service Tariff
Section 1
Original Sheet 77

REGULATIONS

1.7 SPECIAL TAXES, FEES AND CHARGES

1.7.1 General

- A. There shall be added to the customer's bill or charge as a part of the rate for service, a surcharge, equal to the prorata share of any franchise, occupation, business, license, excise, privilege, or other similar tax, fee or charge (hereafter called "tax") now or hereafter imposed upon the Telephone Company by any taxing body or authority, whether by statute, ordinance, law or otherwise, and whether presently due or to hereafter become due.
- B. On and after the effective date thereof, any subsequent increase, decrease, imposition or determination of liability for such taxes, fees or charges, as described above, shall be applied in the manner provided below, to the customer's bill or charge on each individual billing date.
- C. When such tax or taxes are imposed in terms of a flat sum payment of money, the surcharge applicable to each customer's bill or charge, as the prorata share of such taxes described above, shall be determined by relating the flat such payment to the total local exchange revenues within the jurisdiction of the taxing body; the fraction so described shall be converted to a percentage; the local exchange rate shall be increased by that percentage and applied to the customer's bill or charge so that the amount added, when accumulated from all customers residing in the geographic jurisdiction of the body, will equal the amount of the flat sum payment.

REGULATIONS

1.7 SPECIAL TAXES, FEES AND CHARGES - (Continued)

1.7.1 General - (Continued)

- D. When such tax or taxes are imposed in terms of a percentage of revenues or gross receipts, the surcharge applicable to each customer's bill or charge as the prorata share of such taxes described above shall be determined by dividing the tax expressed as a percentage by 100% minus the tax expressed as a percentage and multiplying the decimal thus obtained by the customer's charges to which such tax applies.

$$\left(\frac{\text{Tax \%}}{100\% - \text{Tax \%}} \right) \times \text{Taxable Charges}$$

- E. The Tariff charge constituting the amount of the surcharge provided for herein shall be stated separately on each customer's bill.
- F. Where more than one tax, fee or charge is imposed by a taxing body or authority, the total of such surcharge applicable to a customer may be billed to the customer as a single amount.

REGULATIONS

1.8 METHOD OF APPLYING RATES-(Continued)

1.8.2 (Continued)

B. Services Between Premises Not More Than One Mile Apart

Where Two-Point Intraexchange service is furnished between customer premises and the airline distance is one mile or less, the service is provided at the rates found in Section 2 of this Tariff. Each off-premises extension and/or station, as defined in the General Exchange Tariff, receives not more than 1 mile treatment when located not more than 1 mile from the main service location. In cases involving a Type 316 local channel and a Telephone Answering service customer provided concentrator located not more than one mile from the serving office, less than one mile treatment is applied for the local channel based on the distance between the serving office and the concentrator location.

C. Interoffice Channel(1)

Two-Point

Intraexchange - When station locations of an Intraexchange Private Line service are located in different serving office areas, interoffice mileage charges apply. Charges are based on the Vertical and Horizontal (V-H) distance between the serving offices. Interoffice mileage charges do not apply when stations are not more than a mile apart, pursuant to Paragraph 1.8.2B preceding.

Interexchange - When a station location of an Interexchange Private Line service is located in an area served by a serving office that is not also the primary serving office, interoffice mileage charges apply. Charges are based on the V-H distance between the primary serving office and the serving office.

(1) Fractional V-H.miles are to be considered whole V-H miles.

Issued: FEB 12 1980

Effective: MAR 13 1980

BY R. R. SHOCKLEY, Vice President-Missouri
Southwestern Bell Telephone Company
St. Louis, Missouri

No supplement to this tariff will be issued except for the purpose of canceling this tariff.

Private Line Service Tariff
Section 1
4th Revised Sheet 81
Replacing 3rd Revised Sheet 81

REGULATIONS

1.8 METHOD OF APPLYING RATES-(Continued)

1.8.2 (Continued)

B. IntraLATA Interoffice Channel(1)-(Continued)

Multi-point

Each channel connecting primary serving offices with serving offices, or serving offices with serving offices is considered a separate channel for which mileage is independently computed. Mileage will be charged for in a manner that results in the lowest possible total intraLATA interoffice channel charges unless the customer requests special routing. Bridging charges per channel bridged apply when three or more voice grade channels connect at the same location. Bridging charges do not apply to Foreign Exchange, Foreign Serving office and Types 312(1), 415, 417A, 417B, 432, 437, 442, 443 and Series 600.

C. Channel Terminals

Channel terminal charges apply at each termination of an intraLATA inter-exchange channel and each termination of an intraLATA interoffice channel.

D. IntraLATA Interexchange Channel(2)

Two-Point

(CT) When the Demarcation Points of a Private Line Service are located in different exchanges or metropolitan exchanges all within the same LATA, interexchange mileage charges apply.

Each exchange and each zone of a metropolitan exchange has one primary serving office. Charges are based on the V-H distance between primary serving office.

Interexchange mileage between a Telephone Company primary serving office and a point of connection with the service components of another telephone company where "other line" charges apply shall be the maximum V-H distance between the primary serving offices.

- (1) Obsolete-applicable to existing installations at existing locations for existing customers.
- (2) Fractional V-H miles are to be considered whole V-H miles.

5th Revised Sheet 83
Replacing 4th Revised Sheet 83

REGULATIONS

1.8 METHOD OF APPLYING RATES - (Continued)

1.8.2 (Continued)

H. Exceptions

(AT)

In those cases where one customer premises involved in an intraLATA interexchange private line service is located in a different Local Exchange Telephone Company's operating territory than the other premises location(s) associated with the service, the method of applying rates will be as follows:

1. The service components for that portion of the intraLATA interexchange private line service located wholly within each exchange, will be rated pursuant to that Local Exchange telephone Company's tariff.
2. The rate for the applicable intraLATA interexchange per mile mileage will be the rate in each Local Exchange Telephone Company's tariff. Each Local Exchange Telephone Company's charge for the per mile mileage element is based on the route mile ownership ratio multiplied by the Local Exchange Telephone Company's per mile rate for the airline (V-H) mileage between the primary serving office of each Local Exchange Telephone Company.

(AT)

In those cases where an intraLATA intraexchange service has stations in Missouri and another state, the method of applying rates in Paragraphs 1.8.1 and 1.8.2 is modified to apply the charges for that portion of the Private Line Service located in the other state pursuant to that state's tariff.

I. Bridging

Bridging charges per channel bridged apply when three or more voice grade channels connect at the same location. Bridging charges do not apply to Foreign Exchange, Foreign Serving Office, Types 312(1), 415, 417A, 417B, 423, 437, 442, 443 and Series 600.

J. Service Charges

A charge applies per point of termination installed or moved as provided in Section 2, following. Those services with one local channel shall be billed as provided in Section 2, following. Private Line Service Charges for Local Channel Types 312(1), and 415 do not apply for inside moves within the same building on the same premises.

(MT)

(1) Obsolete-applicable to existing installations at existing locations for existing customers.

1.8 METHOD OF APPLYING RATES-(Continued)

1.8.2 (Continued)

H. Exceptions

In those cases where an intraLATA intraexchange service has been provided in Missouri and another state, the method of applying rates in Paragraphs 1.8.1 and 1.8.2 is modified to apply the charges for that portion of the Private Line Service located in the other state pursuant to that state's tariff.

I. Bridging

Bridging charges per channel bridged apply when three or more voice grade channels connect at the same location. Bridging charges do not apply to Foreign Exchange, Foreign Serving Office, Types 312(1), 415, 417A, 417B, 423, 437, 442, 443 and Series 600.

J. Service Charges

A charge applies per point of termination installed or moved as provided in Section 2, following. Those services with one local channel shall be billed as provided in Section 2, following. Private Line Service Charges for Local Channel Types 312(1) and 415 do not apply for inside lines within the same building on the same premises.

(RT)

K. Special Routing of Channels

The Private Line Services furnished under this tariff and over such routes as the Telephone Company may elect.

Special routing is involved where, in order to comply with requirements specified by the customer, the Telephone Company furnishes the Private Line Service via serving offices and/or primary serving offices other than those through which the service would normally be routed.

Each channel connecting serving offices and/or primary serving offices is considered a separate channel for which charges are independently computed as provided in Section 2.

Special Routing will be provided only where suitable service components are available.

(1) Obsolete-applicable to existing installations at existing locations for existing customers.

A charge applies per point of termination installed or moved as provided in Section 2, following. Those services with one local channel shall be billed as provided in Section 2, following. Private Line Service Charges for Local Channel Types 312(1) and 415 do not apply for inside moves within the same building on the same premises. Premises wiring will be provided in accordance with the applicable nonrecurring charges as described in the Service Connection Charges Section of the General Exchange Tariff.

(FC) K. Special Routing of Channels

The Private Line Services furnished under this Tariff are provided over such routes as the Telephone Company may elect.

RECEIVED
JAN 1 1987
BY: 44 R.S. #83
PUBLIC SERVICE COMMISSION
OF MISSOURI

Special routing is involved where, in order to comply with requirements specified by the customer, the Telephone Company furnishes the Private Line Service via serving offices and/or primary serving offices other than those through which the service would normally be routed.

Each channel connecting service offices and/or primary serving offices is considered a separate channel for which charges are independently computed as provided in Section 2.

(CT) Special routing will be provided only where suitable service components are available.

(AT) (1) Obsolete-applicable to existing installations at existing locations for existing customers.

REGULATIONS

1.8 METHOD OF APPLYING RATES--(Continued)

1.8.2 (Continued)

I. Exceptions

In those cases where an intraexchange service has stations in Missouri and another state, the method of applying rates in Paragraphs 1.8.1 and 1.8.2 is modified to apply the charges for that portion of the Private Line Service located in the other state pursuant to that state's tariff.

J. Bridging

Bridging charges per channel bridged apply when three or more voice grade channels connect at the same location. Bridging charges do not apply to Foreign Exchange, Foreign Serving Office, Types 312, 315, 316, 317, 322, 323, 342, 343 and Series 600.

(AT)

(CT) K. Service Charges

A charge applies per point of termination installed or moved as provided in Section 2, following. Those services with one local channel shall be billed as provided in Section 2, following. Service between premises not more than one mile apart is considered to have two points of termination. Private Line Service Charges for Local Channel Types 312, 315 and 316 do not apply for inside moves within the same building on the same premises.

(MT) K. Special Routing of Channels

The Private Line Services furnished under this Tariff are provided over such routes as the Telephone Company may elect.

Special routing is involved where, in order to comply with requirements specified by the customer, the Telephone company furnishes the Private Line Service via serving offices and/or primary serving offices other than those through which the service would normally be routed.

Each channel connecting serving offices and/or primary serving offices is considered a separate channel for which charges are independently computed as provided in Section 2.

Special Routing will be provided only where suitable service components are available.

1.8.3 Determination of V-H Mileages

- A. Obtain the "V" and "H" coordinates for each primary serving office or serving office.
- B. Obtain the difference between the "V" coordinates of the two primary serving offices or serving offices. Obtain the difference between the "H" coordinates.

NOTE: The difference is always obtained by subtracting the smaller coordinate from the larger coordinate.

- C. Square each difference obtained in Paragraph 1.8.3, B., above.
- D. Add the squares of the "V" differences and the "H" difference obtained in Paragraph 1.8.3, C., above.
- E. Divide the sum of the squares obtained in Paragraph 1.8.3, D., above by 10.
- F. Obtain the square root of the result obtained in Paragraph 1.8.3, E., above. This is the rate distance in miles (fractional miles being considered as full miles).

SERVICES AND RATES

2.1 GENERAL

- 2.1.1 In addition to the regulations set forth in the Regulations Section of this tariff applicable to Private Line Services, additional regulations are set forth throughout this Section.
- 2.1.2 Channels are classified by series and further classified within each series by types. The various series and types are described in terms of circuit characteristic and/or use.
- 2.1.3 The customer is responsible for the selection of the service, i.e., type of circuit signaling options, jacks and terminating interfaces required to meet his needs. The customer premises equipment, station apparatus and premises wiring must be compatible with the service provided by the Telephone Company. The Telephone Company has overall responsibility for the Private Line Service up to and including the Demarcation Point, including the selection of all local channels.
- 2.1.4 Exchange rates, rules and regulations apply for the exchange portion of the total service when Private Line Services are used in connection with Exchange Services or are connected to Exchange Services.
- 2.1.5 When the number of Private Line Services is such that cable service components are required, such cable service components may be provided specifically for the customer's use and not as a part of the Telephone Company's general distributing plant, at charges based upon cost in lieu of tariff charges, where to do so will result in lower charges to the customer.(1)

(CT)

(RT)

(RT)

2.2 DESCRIPTION OF SERVICES

2.2.1 Special Signaling Service-Series 100

- A. These channels are suitable for use with Two-Point or Multi-Point Service within the same LATA subject to the number of point limitations indicated for each type and are provided for use with customer-provided power and signaling equipment and other special signaling services.

(1) Obsolete to existing service installations at existing locations for existing customers. For existing United States Military establishments additional cable service components may be provided on a cost basis to meet the National Security and Emergency preparedness needs of the Military.

2.1 GENERAL

2.1.1 In addition to the regulations set forth in the Regulations Section of this tariff applicable to Private Line Services, additional regulations are set forth throughout this Section.

MISSOURI
Public Service Commission

2.1.2 Channels are classified by series and further classified within each series by types. The various series and types are described in terms of circuit characteristic and/or use.

2.1.3 The customer is responsible for the selection of the service, i.e., type of circuit signaling options, jacks and terminating interfaces required to meet his needs. The customer premises equipment, station apparatus and premises wiring must be compatible with the service provided by the Telephone Company. The Telephone Company has overall responsibility for the Private Line Service up to and including the network interface, including the selection of all local channels.

(CT)
(CT)

2.1.4 Exchange rates, rules and regulations apply for the exchange portion of the total service when Private Line Services are used in connection with Exchange Services or are connected to Exchange Services.

2.1.5 When the number of Private Line Services is such that cable service components are required, such cable service components may be provided specifically for the customer's use and not as a part of the Telephone Company's general distributing plant, at charges based upon cost in lieu of tariff charges, where to do so will result in lower charges to the customer.(1)

2.1.6 The network interface for the connection of premises services consists of a standard registration jack or its equivalent and is provided as part of the Private Line Service.

Private Line Service Tariff
Section 2
Original Sheet 1

SERVICES AND RATES

2.1 GENERAL

- 2.1.1 In addition to the regulations set forth in the Regulations Section of this Tariff applicable to Private Line services, additional regulations are set forth throughout this Section.
- 2.1.2 Channels are classified by series, and further classified within each series by types. The various series and types are described in terms of circuit characteristic and/or use.
- 2.1.3 When the Telephone Company provides a complete Private Line service, including station equipment, the Telephone Company will select the series and type of circuit needed to meet the needs of the customer. When the customer elects to provide his own terminal equipment, he is responsible for the selection of the service and type of circuit required to meet his needs. (Also see Paragraph 2.1.5)
- 2.1.4 Exchange rates, rules and regulations apply for the exchange portion of the total service when Private Line services are used in connection with Exchange services or, are connected to Exchange services or equipment.
- 2.1.5 In those cases where the Telephone Company provides station apparatus at one end of the Private Line service and the customer provides the station apparatus at the other end, the customer-provided apparatus must be compatible with the service provided by the Telephone Company. The Telephone Company has overall responsibility for the Private Line service (up to the demarcation point on the customer premises at which the interface appears) including the selection of all local channels.
- 2.1.6 When the number of Private Line services is such that cable facilities are required, such cable facilities may be provided specially for the customer's use and not as a part of the Telephone Company's general distributing plant, at charges based upon cost in lieu of Tariff charges, where to do so will result in lower charges to the customer.(1)

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.1 Special Signaling Service-Series 100-(Continued)

A. Continued)

(CT) It is expressly declared that metallic interoffice service components for this type of service are in continually decreasing supply, and the Telephone Company is not obligated to continue to make such additional service components available.

Those local channels used to provide a transmission path to connect with customer premises equipment (CPE) at a premises are defined in terms of electrical interfaces. Interconnection protection criteria and regulations as described in Section 1.6 shall apply.

(RT)

The types of local channels offered for termination at a premises for termination in customer premises equipment and systems are as follows:

- 1. Type 101 - Transmission Characteristics in Paragraph 2.2.1, C., following.
- 2. Type 102 - Transmission Characteristics in Paragraph 2.2.1, C., following.

(CT) B. Type 101 service is furnished on an intraLATA intraexchange two- or three-point basis only.

Type 102 service is furnished on an intraLATA intraexchange multi-point (minimum of 4 points, maximum of 26 points) basis. Type 102 service is also provided on an intraLATA interexchange two-point or multi-point (maximum of 26 points) basis.

Service is restricted to no more than three serving offices, including the serving office of the central station all within the same LATA.

SERVICES AND RATES

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.1 Special Signaling Service-Series 100-(Continued)

C. Transmission characteristics of Types 101A and 102A are as follows:

1. Type 101A service has a two-wire interface with two-wire facilities suitable for use with direct current transmission (metallic continuity). Customers may order two, two-wire services to achieve four-wire service.

Transmission specifications and limitations are described in the Bell System Technical Reference on the transmission specification for Private Line metallic circuits which include the following:

Current applied by CPE - AC and DC components per conductor, not to exceed .150 amperes rms.

Magnitude of the peak of the voltage between any conductor and ground, not to exceed 70.7 volts except continuous DC voltage not to exceed 135 volts.

2. Type 102A service has a two-wire interface with two-wire facilities suitable for low-speed, unidirectional series-operated signaling and may be implemented by either metallic channels or by other means at the Telephone Company's option. If provided by "other means," the transmission specifications are described in a Bell System Technical Reference for low-speed signaling channels.

SERVICES AND RATES

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.2 Sub-Voice Grade Service-Series 200

A. Sub-Voice Grade service provides, and is designed for transmission of low speed data at rates up to 75 and up to 150 baud within certain technical specifications. These channels are furnished for half-duplex and duplex operation. The service is not suitable for the transmission of alternating current tones.

(RT)

(RT)

(MT)

(FC)

B. The types of local channels and the transmission characteristics offered for termination at a premises for termination in customer premises equipment and systems are as follows:

- 1. Type 250 - An interface engineered for binary signals at rates up to 75 baud, 20 ± 1 or 62.5 ± 2.5 milliamperes neutral signals(1). The terminal equipment shall deliver no more than 8 percent telegraph distortion and shall be capable of processing received data signals with up to 35 percent telegraph distortion.

- (1) The Telephone Company has the option of providing 20 of 62.5 milliamperes and will notify the customer of the current level to be supplies. The Telephone Company will supply the line voltage and provide for the current adjustment. The maximum open circuit voltage across the send data leads at the interface will not exceed 270 volts.

2.2 DESCRIPTION OF SERVICES-(Continued)

(CP) 2.2.3 Voice Grade Service-Series 300(1) and 400

(CP) A. Series 300 local channels for Voice Grade service are furnished for half duplex (voice or data use) and duplex (data use) operation for oral communications and data communications which operate within certain technical specifications. Unless expressly provided for elsewhere, these are the only channels provided for voice grade transmission. The various types of local channels which are offered for termination are provided on a customer premises as follows:

1. Type 311 - Furnished for two-point or multipoint voice transmission, Private Line voice or intercommunication line or supervisory control use. Signaling options required to arrange Type 311 for suitable signaling are provided in section 2 of this Tariff. Limited to five (5) local channels on multipoint service where two-way communication is required.
2. Type 312 - Furnished for off-premises main and extension stations associated with premises PBX (or similar) switching systems. Technical specifications are a two-wire interface with effective two-wire service components engineered for 1000Hz net loss of VLN +4dB.
3. Type 314 - Furnished for tie line use between two premises PBX (or similar) switching systems (314A).

(AT) (1) Obsolete-applicable to existing service installations at existing locations for existing customers.

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.3 Voice Grade Service-Series 300 and 400-(Continued)

B. Series 400 local channels are furnished for use as the customer elects and operate within certain technical specifications. The various types and the transmission characteristics of local channels which are offered for termination at a premises for connection to only customer-provided terminal equipment and systems (except as provided in Paragraph 2.1.5) are as set forth following:

1. Type 420 - A four-wire interface with four-wire facilities engineered for 1000 Hz net loss of 16 db. Normally suitable for use as a full duplex data channel.(1)
2. Type 422 - A two-wire interface with effective two-wire facilities engineered for a 1000 Hz net loss of 16 db. Normally suitable for use as a half duplex data channel.(1)
3. Type 423 - A two-wire interface with effective two-wire facilities engineered for a 1000 Hz net loss of 10 db for Two-Point service and up to 20 db for Multi-Point service. Normally suitable for use as a voice channel.(1)
- Type 424 - A four-wire interface with four-wire facilities engineered to 23 db - VNL net gain. Normally suitable for use as a tie line. Multi-Point service not available.
5. Type 425 - A four-wire interface with four-wire facilities engineered for a 1000 Hz net loss of 16 db. Normally suitable for use as a voice channel.
6. Type 428 - A two-wire interface with effective two-wire facilities engineered for a 1000 Hz net loss of 0 db to 3.5 db. Normally suitable for use as an off-premises station of less than 100 miles long. Multi-Point service is not available.
7. Type 434 - A two-wire interface with effective two-wire facilities engineered to VNL + 4 net loss. Normally suitable for use as an off-premises station greater than 100 miles but less than 1850 miles. Multi-Point service is not available.

(1) Type 420 through Type 423 local channels are not suitable for, nor can they be used for, switching and/or tandem operations to the switched network or other Private Line services.

2.2 DESCRIPTION OF SERVICES (cont'd)

2.2.3 Voice Grade Service-Series 300(1) and 400-(cont'd)

B. (cont'd)

Signaling options required to arrange Series 400 channels for suitable signaling are available at charges specified in Paragraph 2.2.15, following. The application of signaling options currently provided to arrange Series 400 on premises, same building and additional point of termination services has been obsoleted to existing installations at existing locations for existing customers.

Bridging charges, per channel bridged, apply when three or more voice grade channels are connected at the same location.

Customers must insure that neither direct transmitted signal nor reflected signal energy is allowed to violate interconnection protection criteria and regulations as set forth in Section 1.

Specifications of net loss (or gain) refer to the requirement of the total channel offering, not the individual local channel. Gains or losses present in CPE have not been included.

C. Parameters and Specifications

Parameters and specifications for two-point service used with Customer Premises Equipment (CPE) and station equipment are as follows: Speech application specifications and limits apply to all local channels except Types 420 and 422. Data application specifications and limits apply only to Types 420 and 422. DATAPHONE Select-a-Station (2) application, specifications and limits are provided in the appropriate Bell System Technical Reference Pub 41014 and apply only to Types 442 and 443.

(AT)

- (1) Obsolete-applicable to existing service installations at existing locations for existing customers.

D. MultiPoint

(CP) The Telephone Company will provide bridging equipment in serving offices and primary serving offices to provide multipoint service. Bridging charges apply per channel (interoffice channel, local channel and inter-exchange channel) in offices where three or more channels are bridged. Bridging charges do not apply to Foreign Exchange, Foreign Serving Office and Types 312(1), 415, 417, 428, 442 and 443. See Paragraph 2.2.3, E.10. for intraLATA intraexchange charges and Paragraph 2.2.3, F.8. for intraLATA interexchange charges.

Standard bridging equipment for two-way communication between all points will be provided unless the customer specifies another fixed bridging arrangement.

The transmission parameters specified in Paragraph 2.2.3, C., preceding, are not applicable to multipoint service consisting of more than five points where local channels with two-wire service components and two-way communication are involved or more than 20 points otherwise.

SERVICES AND RATES

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.3 Voice Grade Service-Series 300 and 400-(Continued)

D. Multi-Point

The Telephone Company will provide bridging equipment in serving offices and primary serving offices to provide multi-point service. Bridging charges apply per channel (interoffice channel, local channel and inter-exchange channel) in offices where three or more channels are bridged. Bridging charges do not apply to Foreign Exchange, Foreign Serving Office and Types 312, 315, 316, 317, 342 and 343. See Paragraph 2.2.3, E.10. for intraexchange charges and Paragraph 2.2.3, F.8. for interexchange charges.

(CT)

Standard bridging equipment for two-way communication between all points will be provided unless the customer specifies another fixed bridging arrangement.

The transmission parameters specified in Paragraph 2.2.3, C., preceding, are not applicable to multi-point service consisting of more than five points where local channels with two-wire facilities and two-way communication are involved or more than 20 points otherwise.

7. Bridging Charge, (multi-point service), per bridged channel (BQ7)	\$10.30(CR)

G. Conditioning Options - Available for Types 414B, 414C, 420 and 422.

The types and description of the available conditioning options at rates and charges specified in 2.2.16, following, are as follows:

1. Type C - Conditioning provides assured transmission quality for frequency response and envelope delay distortion as specified below.

Type C1 (2) - For a two-point or multi-point channel:

- The envelope delay distortion shall not exceed:
Between 1000 and 2400 Hz, a maximum difference of 1000 microseconds.
- The loss deviation with frequency (from 1000 Hz, reference)
shall not exceed:
Between 1000 and 2400 Hz, -1dB to +3dB. Between 300 and 2700 Hz, -2dB to +6dB.
(+ means more loss)

- (1) Obsolete-applicable to existing service installations at existing locations for existing customers.
- (2) Type C1 and C2 Channel Conditioning Service will be provided subject to these restrictions: with customer Premises Equipment, the conditioned channel is restricted to no more than five (5) points and/or 4000 miles on "two-wire" service and no more than twenty (20) points and/or 4000 miles on "four-wire" circuits. These restrictions do not apply to one-way simultaneous transmission from a master service point to all other service points such as broad-cast-type multi-point service.

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.4 TELPAK Channels and Services-Series 500(1)

In addition to the general regulations and definitions applicable to Private Line Services as set forth in Section 1 of this Tariff, the regulations hereinafter set forth apply to TELPAK channels and services. Except as otherwise provided herein, the regulations applicable to derive channels and services are as set forth for channels and services of the same type and furnished for the same purposes under Paragraphs 2.2.2 and 2.2.3, preceding.

A. Description of Channels and Classifications

(CT)

1. TELPAK service provides communications paths of various widths (TELPAK channels) which are capable of transmitting various forms of electrical communications. The Telephone Company will terminate the entire TELPAK channel for use as a broadband transmission medium or will provide channelizing equipment to subdivide TELPAK channels into channels of lesser width (derive channels). These channels may be furnished by such physical service component arrangements appropriate for the forms of communications specified as the Telephone Company may elect for efficient utilization of available physical service components, whether or not in the form of a single carrier spectrum assignment and whether or not the entire TELPAK channel or all derived channels are on the same physical service component.

TELPAK channels as described in Paragraph 2.2.4, A.2., following, are furnished between specified locations for telephone, teletypewriter, remote metering, supervisory control, miscellaneous signaling and for other purposes for which channel terminals are provided under Paragraph 2.2.4, A.3., following.

(CP)

The Telephone Company will provide TELPAK Service only when the originating service point(s) and terminating service point(s) of the entire TELPAK channel, including derived channels, are within the LATA.

In addition to the general regulations and definitions applicable to Private Line Services as set forth in Section 1 of the regulations hereinafter set forth apply to TELPAK channels and services. Except as otherwise provided herein, the regulations applicable to derive channels and services are as set forth for channels and services of the same type and furnished for the same purposes under Paragraphs 2.2.2 and 2.2.3, preceding.

A. Description of Channels and Classifications

- 1. TELPAK service provides communications paths of various widths (TELPAK channels) which are capable of transmitting various forms of electrical communications. The Telephone Company will terminate the entire TELPAK channel for use as a broadband transmission medium or will provide channelizing equipment to subdivide TELPAK channels into channels of lesser width (derive channels). These channels may be furnished by such physical facility arrangements appropriate for the forms of communications specified as the Telephone Company may elect for efficient utilization of available physical facilities, whether or not in the form of a single carrier spectrum assignment and whether or not the entire TELPAK channel or all derived channels are on the same physical facility.

TELPAK channels as described in Paragraph 2.2.4, A.2., following, are furnished between specified locations for telephone, teletypewriter, remote metering, supervisory control, miscellaneous signaling and for other purposes for which channel terminals are provided under Paragraph 2.2.4, A.3., following.

1. (Continued)

A TELPAK channel may be used as a single channel or may be subdivided into a group of channels of lesser band width, hereinafter referred to as derived channels, only through the use of channel terminals or connecting arrangements provided by the Telephone Company, except that the customer may create additional channels from a derived voice grade channel to the same extent permitted under this Tariff. The customer may order as many derived channels arranged for use as he requires. Additional derived channels up to the full capacity of the TELPAK channel, as specified in Paragraph 2.2.4A.2 following, are, if later ordered, furnished subject to the availability of suitable terminating service components at the time the additional channels are ordered.

(CT)

Channels or derived channels are furnished on a two-point basis and are suitable for transmission in either direction or for simultaneous or non-simultaneous transmission in both directions. Service components are furnished on a seven day per week, twenty-four hour per day basis only and for a minimum period of one month.

(CT)

2. TELPAK channels are furnished under the following classifications:

D. Intrastate - Interstate Services and Channels

If a customer has a TELPAK channel connecting two or more exchanges with derived services or channels, some of which carry interstate traffic and some of which carry only intrastate traffic, the TELPAK channel charge for the intrastate portion is determined by multiplying the charge computed in accordance with Paragraph 2.2.4F following, by the ratio of the number of equivalent telephone-derived intrastate channels divided by the total number of equivalent telephone-derived channels in use. Each two-point section is separately computed.

For other items associated with such intrastate-derived services and channels, the rates specified in Paragraphs 2.2.4F.3, 2.2.4F.4, 2.2.4F.5 and 2.2.4F.6 apply.

Interoffice channels and interoffice channel terminals, when applicable, will be provided at the rate for interexchange service.

SERVICES AND RATES

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.4 TELPAK Channels and Services-Series 500-(Continued)

F. Rates

The rates shown below apply for channels and services involving the Telephone Company exchanges and also for channels and services in exchanges of other companies to the extent specified below. TELPAK rates are determined by a percentage discount of Series 300(1) and 400 interexchange channel mileage as found in this tariff. The rate assumes full utilization of TELPAK channel capacity.

DEC 29 1983

MISSOURI

Public Service Commission

- 1. TELPAK Channel Rates
 - a. Effective rates through June 30, 1983.

OF MISSOURI

2. Mileage Measurements

a. Two-Point Service

The interexchange pricing mileage is the V-H mileage (fractional miles being considered as full miles) between the rate centers of the service points or between the rate centers of a service point and the point of connection with the service components of another company in those cases where "other line" charges of another company are applied. In those cases where "other line" charges are applied, the Telephone Company's maximum interexchange pricing mileage shall be the V-H mileage between the rate centers of the service points.

b. Multi-Point Service

The rate mileage is the shortest combination of V-H mileages connecting rate centers of service points in the sequence specified by the customer, each section being determined as specified in Paragraph 2.2.4, F.2.a, preceding.

2.2.5 Channels for Program Transmission in Connection with Loudspeakers and Sound Recording - Series 600

A. Description of Series 600 Channels and Schedule Classifications

1. Facilities, specially equipped and operated for program transmission in connection with loud-speakers and sound recording are furnished for the transmission in one direction of music or speech.
2. Program transmission channels in connection with loudspeakers may be interconnected at Telephone Company premises to form a network for the distribution of program material to a number of loud-speaker locations. The points at which such interconnection of such channels are made are called "distributing centers."
3. The channel facilities covered in Paragraph 2.2.5 are the only channel facilities furnished by the Telephone Company for program transmission in connection with loud-speakers and sound recording. Such channels may not be used for on-the-air audio broadcasting or for pickup for a live audio broadcast.
4. Channels furnished in connection with loud-speakers may be connected with paging systems. Channels furnished in connection with loud-speakers and sound recording may be interconnected with channels furnished in connection with radio broadcasting.

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.5 Voice Grade Service-Series 600

A. General

Series 600 channels are furnished on a two-point or multi-point basis for use with customer premises equipment for one way, closed circuit Wired Music distribution. These are the only channels expressly provided for transmission of Wired Music signals.

B. Regulations

- 1. Distribution amplifiers are required to receive signals from a source provided by the customer (studio) and to transmit the appropriate signal level to the wired music service point locations (patron).

Telephone Company-provided distribution amplifiers are normally located in a Telephone Company serving office. However, the Telephone Company may agree to provide a distribution amplifier at other locations designated by the customer from which point separate channels will be furnished to service point locations (patrons) of the customer, subject to the following:

- a. all premises are located in the same building(1), or
- b. all premises are on the same continuous property, which is owned or operated by a single agency or association, e.g., malls, shopping centers, etc.(1)

Series 600 channels may be connected to a customer-provided distribution amplifier at a location other than the Telephone Company serving office from which point the customer will provide channels to service point locations (patrons).

- (CT) 2. Channel Types 610, 611, 612 and 613 are only provided between the Demarcation Point located at the
- (CT) customer's studio and the distribution amplifier(s) or between two Telephone Company-provided distribution amplifiers or between a Telephone Company-provided distribution amplifier and a customer-provided distribution amplifier.

Channel Types 610, 611, 612 and 613 may also be provided as two-point service, without a Telephone Company-provided distribution amplifier, between two premises.

Type 613 channels are only provided in the same exchange as the customer's studio.

(1) Obsolete to existing service installations at existing locations for existing customers.

B. Regulations-(Continued)

2. (Continued)

A Telephone Company-provided distribution amplifier is required when two or more Type 610, 611, 612 or 613 channels are connected at a serving office to form a multipoint circuit.

3. Channel Types 614, 615 and 616 are only furnished between a Telephone Company-provided distribution amplifier and a station location (patron).
4. Nonequalized and equalized channels may be combined to form a multipoint circuit. Transmission parameters of individual channels cannot exceed those of the channel(s) between the studio and the distribution amplifier(s).

C. Channels are provided at different levels of fidelity as follows:

Type 610 A nonequalized two-wire service engineered for a 1000 Hertz maximum loss of 12dB.

Type 611 A two-wire service engineered for a 1000 Hertz maximum pre-equalized loss of 32dB and equalized to ± 3 dB of the 1000 Hertz loss from approximately 100 to 5000 Hertz.

Type 612 A two-wire service engineered for a 1000 Hertz maximum pre-equalized loss of 32dB and equalized to ± 3 dB of the 1000 Hertz loss from approximately 50 to 8000 Hertz.

Type 613 A two-wire service engineered for a 1000 Hertz maximum pre-equalized loss of 32dB and equalized to ± 3 dB of the 1000 Hertz loss from approximately 50 to 15,000 Hertz.

Type 614 A nonequalized two-wire service engineered for a 1000 Hertz maximum loss of 14dB.

Type 615 A two-wire service engineered for a 1000 Hertz maximum pre-equalized loss of 34dB and equalized to ± 4 dB of the 1000 Hertz loss from approximately 100 to 5000 Hertz.

Type 616 A two-wire service engineered for a 1000 Hertz maximum pre-equalized loss of 34dB and equalized to ± 4 dB of the 1000 Hertz loss from approximately 50 to 8000 Hertz.

CANCELLED

B. Mileage Measurements

DEC 15 1980
BY 1st RS 53
PUBLIC SERVICE COMMISSION
OF MISSOURI

1. Interexchange Channels

a. Interconnection Networks

- (i) Two or more interexchange networks or sections of networks will be connected at a service point designated by the customer, or when such service point is not so designated, at the service point which will result in the lowest total charge to the customer.
- (ii) When networks are interconnected, the mileages will be determined separately for each network.

b. Point of Connection with Intraexchange Channels in Program Exchange Areas.

In the program exchange areas as defined in Paragraph 2.2.5C interexchange channels from a service point outside of the program exchange area may terminate within the program exchange area at more than one service point. In such cases the interexchange mileage will be measured to that point which will result in the lowest total charges to the customer, taking into consideration the availability of suitable interexchange channels, the charges for intraexchange channels, connections and other items of facilities and services.

2. Intraexchange Channels

a. Two-Point Service

The local mileage is the airline distance (fractional quarter miles being considered as full quarter miles) measured on a standard map between two stations or between a station and the point of connection with an interexchange channel.

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.5 Channels for Program Transmission in Connection with Loudspeakers and Sound Recording - Series 600-(Continued)

B. Mileage Measurements-(Continued)

2. Intraexchange Channels-(Continued)

b. Multi-Point Service

(i) Intraexchange mileage is the sum of the airline distances between the customer's studio (or point of connection with an interexchange channel) via its serving central office and the first distributing center, and between each distributing center and each station (or point of connection with an interexchange channel) served therefrom via the serving central office of the station and the shortest combination of airline distances connecting distributing centers.

(ii) When the customer requests that the distributing centers be connected in a specified sequence, the mileage between centers is the shortest airline mileage determined in accordance with (i) preceding which will connect the distributing centers in the desired sequence.

C. Program Exchange Areas

The program exchange area is the exchange, metropolitan exchange or extended area service exchange areas.

D. Interconnection of Facilities

Interconnections of channels as set forth following may be made by a customer (or arranged for by a customer) at a studio or audio broadcasting transmitter, provided that such interconnections will not result in the connection, either directly or indirectly, for through transmission of Telephone Company interexchange channels with interexchange channels of others, and further provided that no interference with or impairment of service rendered by the Telephone Company will result.

JAN 14 1983

- A. Regulations

General

In addition to the regulations and definitions applicable to Private Line services set forth in Section 1 of this Tariff, the following regulations apply to Bell and Lights Civil Air Defense Warning systems.

Bell and Lights Civil Air Defense Warning systems together with public warning siren control installations are services employing channels and equipment furnished by the Telephone Company to enable a customer to transmit air attack warning signals from a key point warning control station to bell and lights receiving stations and/or siren control receiving stations authorized for connection to the air raid warning system involved.

Station apparatus is located at each receiving station and at each control center and auxiliary control center. The bell and lights equipment requires no commercial power. One bell and lights is located at each control center as a monitoring device. The bell and lights equipment can activate auxiliary signals, such as gongs and horns, where the customer desires. A key to cut off and on the audible signals can be provided. The key signals and relays required to operate them will be provided at the rates quoted in Section 3 of the Tariff.

- (1) Mileage measurements are as provided in Paragraph 2.2.5, B.2.a., preceding.
- (2) Nonrecurring charge is applicable per point of termination.

(RT)

B. Description and Application of Service

- 1. DATAPHONE Select-a-Station service is a voiceband Private Line Data system designed for multi-station communication applications. It allows a single master station to communicate with a number of remote stations one at a time. Direct communication between remote stations is not possible, nor is simultaneous communication from the master station to more than one remote station.
- 2. The customer shall provide the terminal equipment at both the master station and remote station locations. The terminal equipment must be provided in accordance with interface specifications as described in the appropriate Bell System DATAPHONE Select-a-Station Technical Reference.
- 3. DATAPHONE Select-a-Station service is arranged for sequential mode of operation; consequently, the customer must specify, prior to installation, the order of connections from the Data Station Selector (DSS) to the remote stations. One of three DSS options shall be selected by the customer to accommodate customer operating procedures and circuit structure. These options are as follows:

Automatic Step - A DSS option in which the duration and order of connections are fixed.

- ii. Addressable Arrangement - An arrangement in which the order of connections made by the DSS from the master station to remote stations is under control of the master station.

C. Description of Service

1. DATAPHONE SAS Service is a multistation, voice grade private line data service designed to establish point-to-point connections between a master station and a number of remote stations, one at a time. Direct transmission between remote stations is not possible, nor is simultaneous communication from the master to more than one remote station possible.

- a. A DSS provides the connection between the master station and any one of up to 128 (125 for addressable operation) remote stations and/or other DSS's. Where more than one DSS is required, the DSS that is directly connected to the master station is termed the PDSS. Additional DSS's, designated SDSS's, may be connected to the PDSS.

SERVICES AND RATES

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.9 DATAPHONE Select-a-Station Service-(Continued)

C. Description of Service-(Continued)

1. (Continued)

- f. Access to each remote station from the DSS (PDSS or SDSS as applicable) is obtained through a Type 442 or 443 channel and through the appropriate channel connection (see Paragraph 2.2.9, D.1.c. or D.2.c.). Remote stations located outside of the serving office area of the DSS will require Type 442 or 443 voice grade interoffice and/or intraLATA interexchange channels and channel terminals as described in Section 2, Paragraph 2.2.3.
- g. Access to each SDSS in a different serving office from the PDSS will require voice grade interoffice and/or intraLATA interexchange channels and Type 443 channel terminals as described in Section 2, Paragraph 2.2.3. In all cases, a four-wire channel connection will be required at the PDSS and the SDSS (see Paragraphs 2.2.9, D.1.c. and D.2.c.).
- h. Upon application for service, the customer shall specify the serving office locations of the DSS's. When interoffice and/or intraLATA interexchange channels are required, charges are determined between the PDSS and SDSS.

2. SAS Service is not designed for alternate voice-data transmission, and such transmission is not supported. DC continuity between the master and remote stations is not provided. Additionally, extension stations and additional points of termination are not provided with SAS Service.

SERVICES AND RATES

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.9 DATAPHONE Select-a-Station Service-(Continued)

B. Description and Application of Service-(Continued)

7. Certain terms used in this Tariff in connection with DATAPHONE Select-a-Station Service are defined as follows:

Data Station Selector (DSS) - A private line data switching device located in a Telephone Company serving office which is capable of making connections between a four-wire input and up to 128 outputs, two-wire or four-wire, one at a time, under the control of a master station.

Master Station - The one station of a multi-station circuit, which communicates with each remote station and may control the connections.

Primary DSS (PDSS) - The DSS which is connected directly to the SCU.

Primary DSS Access Line - The communications path between the SCU and the PDSS.

Remote Station - One of the many stations on a multi-station circuit which is connected to the master station by DSS's.

Remote Station Access Line - The communications path between a remote station and a DSS.

Secondary DSS (SDSS) - Any DSS which is connected to a PDSS.

Secondary DSS Access Line - The communications path between a SDSS and the PDSS.

Selector Control Unit (SCU) - The equipment associated with the PDSS access line which is located at the master station for use by the customer to transmit control signals to and receive supervisory signals from DSS's.

2.2.10 Extension Services

A. Regulations

1. In addition to the general regulations and definitions applicable to private line services set forth in Section 2 of this Tariff, the following regulations apply to Extension Service.

(CP) a. Voice Grade Service (300(1) and 400 Series Channels)

Extension service is that of furnishing service components for one or more service points for each authorized connection to a private line voice grade service equipped for communication among three or more service points at a time, and furnished to a branch or agency of the United States Government for the collection and dissemination of information relating to air traffic control activities and similar information of public interest in connection with supervision of the flight of aircraft along civil airways.

b. Sub-Voice Grade Services (200 Series Channels)

(CT) 1. Extension service is that of furnishing service components to allow connection with a private line sub-voice grade service furnished to a branch or agency of the United States Government for the collection and dissemination of weather information or miscellaneous airways information pertaining to the supervision of flight of air-craft along civil airways.

2. Connection may be made as follows:

- Receiving Only Service - for reception of weather and miscellaneous airways information transmitted over the Government service to which it is connected.

- Sending and Receiving Service - for transmission of flight plans to and acknowledgement of such plans from the Government service to which the connection is authorized.

(AT) (1) Obsolete-applicable to existing service installations at existing locations for existing customers.

2.2.11 Special Bridging Service

(AT) A. Split Band Bridging Arrangement (1)

1. Description of Service

This service provides for a four-wire frequency split common port and two-wire multiple port bridging arrangement intended for application in multipoint voice frequency, data or tone signaling networks.

Certain terms used in this Tariff in connection with Special Bridging Service are defined as follows:

Master Station - In connection with Special Bridging Service, the one service point of a multipoint network located on a customer's premises, which communicates with each remote service point.

Remote Station - In connection with Special Bridging Service, one of the many service points on a multipoint network which is connected to the master service point by a bridging arrangement.

Access Line - In connection with Special Bridging Service, that dedicated channel or channels connecting the master service point, remote service point or interconnecting service point to a special bridge.

Interconnecting Station - In connection with Special Bridging Service, one of the many service points on a multipoint network which is connected to a special bridge and is provided for connecting two special bridges together through customer-owned and maintained equipment located at a remote service point.

(MT)

(AT) (1) Effective January 22, 2005, the Split Band Bridging Arrangement will become obsolete – applicable to existing service installations at existing locations for existing customers. The service will be completely withdrawn on December 31, 2005.

SERVICES AND RATES

(CT) 2.2 DESCRIPTION OF SERVICES (cont'd)

(CT) 2.2.11 Special Bridging Service (cont'd)

(AT) B. Passive Bridging Arrangement (1)

1. Description of Service

This service provides for a network of up to ten passive two-wire ten-port bridges. Each bridge is capable of connecting a combination of remote stations, interoffice channels or interbridge connections totaling nine to one master station, interconnect station, interoffice channel or interbridge connection. This service is intended for application in multi-point voice frequency, data or tone signaling networks.

2. Application

Regulations applicable to Passive Bridging Arrangements, except as otherwise specified below, are in addition to the regulations contained in other sections of this Tariff.

3 Regulations

- a. Passive Bridging Arrangements are provided on voice grade service with a transmission rate normally suitable for 75 baud, but can be utilized with equipment operating at rates up to a maximum of 400 baud.
- b. A maximum of ten (10) serving offices, each equipped with a Passive Bridge, is permitted on a multi-point network.
- c. A maximum of 90 remote stations is permitted on a multi-point network.
- d. Remote stations connected to a Passive Bridge are limited to the same serving office area in which the Passive Bridge is located.

(AT) (1) Effective January 22, 2005, the Passive Bridging Arrangement will become obsolete – applicable to existing service installations at existing locations for existing customers. The service will be completely withdrawn on December 31, 2005.

SERVICES AND RATES

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.12 Local Area Data Service

A. Regulations

In addition to the Regulations specified previously in this Private Line Service Tariff, the following regulation applies to these services:

Provision of this service does not contemplate connection to the public switched message network.

(CT) B. Description of Service

Local Area Data Service will provide, subject to availability of service components, channels suitable for baseband transmission of data signals between two points on the same premises or different premises within the same serving office area. Service is limited to points that are not more than six (6) cable-route miles apart, as determined by the Telephone Company, using normal cable routing between the points to be served. This service is offered only for balanced transmission of data signals conforming to the signal power limitations and other parameters specified in the applicable Bell System Technical Reference.

1. Local Area Data Service channels require use of nonloaded cable service components. In the event that only loaded service components are available, the Telephone Company will, at the customer's request, deload service components as specified under the Special Construction provisions of this Tariff as provided in Section 1, Paragraph 1.4.4.

SERVICES AND RATES

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.13 Customer Operating Center Service

A. Regulations

- 1. A customer who operates a Customer Operating Center requiring large, dedicated quantities of local channel types 101, 102, 415, 417, 420, 422,423 or 428 between their location and its normal serving office may, at this option, subscribe to Customer Operating Center Service.
- 2. For the purpose of this Tariff, a Customer Operating Center is a customer premises:
 - a. Operated by the customer over which the customer has control and provides security.
 - b. From which the customer furnishes and administers services to multiple patrons in a geographical area. The term "patron" denotes a subscriber to the services offered by the operator of a Customer Operating Center.
 - c. At which a system, or a group of systems, operated by the customer to receive signals and messages which are recorded, maintained and supervised by the customer.
 - d. At which the customer has regularly scheduled observers, operators and/or equipment in attendance at all times, which upon receipt of a signal or message from a patron, take such action as shall be required under the rules established by the customer for their/its guidance.

(CP)

(CT)

- 3. Ownership of service components provided in accordance with this offering remains with the Telephone Company.

B. Method of Applying Rates

1. Recurring Monthly Rates

- a. Dedicated cable - a monthly rate applies per cable of a specific quantity of pair and length.

(1) Cable sizes available are 100, 200, 300, 400, 600, 900, 1200, 1500, 1800, 2100, 2400 and 2700.

SERVICES AND RATES

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.14 Served Direct Service

A. Regulations

1. This offering is for specified two-point intraexchange channel types between different buildings on different premises which do not route through a serving office.
2. Served Direct Channel Charges apply:
 - a. When it is the economic decision of the Telephone Company to provide served direct service components.(1).
 - b. When there is a minimum billing of fifteen (15) channels per two-point configuration.
 - c. When the maximum airline distance between the two premises is one mile or less.
 - d. When the customer considers it economically feasible to change to Served Direct Service.
3. A customer may request this service offering when it is not the economic decision of the Telephone Company; however, in such case, Special Construction Charges as specified in Section 1.4.4 shall apply in addition to the rates and charges found in this section.
4. Termination Liability Contracts where applicable in a customer-initiated request for Served Direct Service would be equal to the costs incurred for rearrangements of existing service components and/or construction of new service components as appropriate, less net salvage. Installed cost includes any expense associated with this particular case.
5. The service is limited to intraexchange channels, but can involve Served Direct Service between two separate Serving Office Areas.

(CT)

- (1) A Basic Termination Liability Contract may be applicable in this case if the Telephone Company determines the service components are not reusable. The contract period will normally be 36 months, and the amount will be reduced by 1/36th for each month in service.

(NR) 2.2.14 Served Direct Service

A. Regulations

1. This offering is for specified two-point intraexchange channel types between different buildings on different premises which do not route through a serving office.
2. Served Direct Channel Charges apply:
 - a. When it is the economic decision of the Telephone Company to provide served direct facilities. (1)
 - b. When there is a minimum billing of fifteen minutes for a two-point configuration.
 - c. When the maximum airline distance between the two premises is one mile or less.
 - d. When the customer considers it economically feasible to change to Served Direct Service.
3. A customer may request this service offering when it is not the economic decision of the Telephone Company; however, in such case, Special Construction Charges as specified in Section 1.4.4 shall apply in addition to the rates and charges found in this section.

Where a customer requests a quotation for Special Construction Charges associated with Served Direct Service and then elects not to subscribe to the service, a Quotation Charge for developing the charges shall apply. This charge will include all developmental hours associated with the design and preparation of an individual request.

4. Termination Liability Contracts where applicable in a customer-initiated request for Served Direct Service would be equal to the costs incurred for rearrangements of existing facilities and/or construction of new facilities as appropriate, less net salvage. Installed cost includes any expense associated with this particular case.
5. The service is limited to intraexchange channels, and may involve Served Direct Service between two separate Serving Office Areas.

(1) A Basic Termination Liability Contract may be applicable in this case if the Telephone Company determines the facilities are not reuseable. The contract period will normally be 36 months, and the amount will be reduced by 1/36th for each month in service.

2.2.15 Signaling

A. Rules and Regulations

1. The Type A, B and C Loop Signaling Arrangements for station ports of a premises PBX (or similar) switching system and the E&M Signaling Arrangement for tie-lines are furnished for grandfathered and registered PBX's in accordance with Part 68 of the Federal Communication Commission's Rules and Regulations.
2. For connections to registered PBX (or similar) equipment, customers must specify the equipment capability of their registered equipment.
3. Customers with grandfathered customer-provided PBX (or similar) equipment may, at their option:
 - a. Continue to provide their own off-premises station signaling capability and utilize only the type 428 channel.
 - b. Request that off-premises station signaling capability be provided by the Telephone Company. Where this option is selected, the customer must specify his/her equipment signaling capability.

(1) Obsolete-applicable to existing service installations at existing locations for existing customers.

(2) Service charge applies per point of termination.

(AT) -Type 428 (SLL28)(1).	8.30	65.00(2)
Arranged for Loop signaling with-out Interoffice Channel, a maximum of 1300 ohms		
-Type 420 (SLLW0)(1).	5.25	65.00
-Type 422 (SLLW2)(1).	5.25	65.00
(AT) -Type 423 (SLLW3)(1).	5.95	65.00
-Type 428 (SLLW8)(1).	None	None
Arranged for Loop signaling with Interoffice Channel, per customer requested ohm maximum		
(AT) -Type 428 (SLLC8)(1).	8.60	65.00(2)

The DC resistance specification does not imply a guaranteed end-to-end DC continuity. The customer can expect to be provided a loop meeting the same limits as the normal central office loop (i.e., not exceeding 1300 ohms) exclusive of 200 ohm maximum terminal equipment resistance.

- (1) Obsolete-applicable to existing service installations at existing locations for existing customers.
- (2) Service Charge applies only if the signaling option is installed subsequent to initial installation of the local channel.

2.2.18 Amplifiers and Distributing Centers

A. Amplifiers and bridging equipment are provided where required by customers in connection with loudspeaker networks.(1)

	<u>Monthly Rate</u>	<u>Service Charge</u>
1. Permanent amplifier and bridging equipment for 50 service points (677).	(CR) \$84.25	\$220.00
2. Bridging equipment for additional service points: Each additional group of 30 service points (Maximum capacity 200 service points) (67N). . . .	4.65	27.50
3. Distributing Amplifier		
10-Channel Capacity (61N)(2) . .	35.15	27.50
19-Channel Capacity (61Q)(3) . .	(CR) 60.90	27.50

- (1) At the time of the installation of a permanent amplifier and bridging in a distributing center, the customer's existing local channels emanating from his studio will be rearranged to emanate from the distributing center at charges based upon cost not to exceed the sum of the Service Charges which would otherwise have been applied for such rearrangement.
- (2) A Termination Agreement in the amount of (CR)\$612.85 for 18 months will apply.
- (3) A Basic Termination Agreement in the amount of (CR)\$787.95 for 18 months will apply.

2.2.19 Telecommunications Service Priority (TSP) System

The priority provisioning and restoration of services offered under this tariff relative to the National Security Emergency Preparedness (NSEP) Telecommunications Service Priority (TSP) System shall be pursuant to the regulations and rates as delineated in P.S.C. Mo.-No. 38, Digital Link Services Tariff, Section 7.

For application in this tariff, such regulations, rates and charges shall be interpreted to apply on a "per request, per circuit" basis.

(AT) 2.2.20 Network Reconfiguration Service (NRS)

Type 420, 422, 423, 424, 425 and 435 services in this tariff may be terminated into an NRS channel port in order for the customer to reconfigure portions of their dedicated services network. Regulations, rates and charges for NRS can be found in the Digital Link Services Tariff, P.S.C. Mo.-No. 38, Section 8.

When service from this tariff is included in a customer's NRS grid, only services jurisdictionally the same may be cross-connected. A customer may not connect an intraexchange private line service to an interexchange private line service. All jurisdictionally intraexchange private line services may be changed to interexchange service at the time of retermination into the NRS System and only one service charge will apply per circuit.

(AT) All services terminated into the NRS grid must also be those of the same customer ordering the NRS.

3. Provision of Service-(Continued)

- d. Modifications of existing MEGALINK III - Wideband Digital Service/1.544 Mbps, offered in this Tariff, to meet a particular need, is considered a Special Service Arrangement. Special Service Arrangements will be furnished as provided in Paragraph 1.1.7, of this Tariff.
- e. The Telephone Company has the service responsibility up to the point of minimum penetration(1) on the customer's premises at which the network interface appears for the customer provided equipment. The network interface will be provided by the Telephone Company as set forth in Technical Reference - PUB 62411.
- f. Connection of Channel Service Units for MEGALINK III - Wideband Digital Service/1.544 Mbps
 - (1) The following program is established to accommodate the connection of Channel Service Units (CSU) to MEGALINK III - Wideband Digital Service/1.544 Mbps during the pendency of proposed Rulemaking to modify the Federal Communications Commission's Rules and Regulations (Registration Program) to include such equipment. The program is established in accordance with the Federal Communications Commission's Third Notice of Proposed Rulemaking.

(2) CSU's of a type listed on the program summary may be connected at the customer's or interexchange customer's premises to a MEGALINK III - Wideband Digital Service/1.544 Mbps Channel.

(A copy of the program summary is available from the Federal Communications Commission, Room BB300, Washington, D.C. 20554.) Additional types of equipment may be added to the program summary in one of the following ways:

PRIVATE LINE SERVICE

2.2 DESCRIPTION OF SERVICES-(Continued)

(NR) 2.2.19 MEGALINK III - Wideband Digital Service/1.544 Mbps-(Continued) 1984

B. Regulations-(Continued)

5. Allowance for Interruptions

Credit allowances are determined in accordance with regulations set forth in Section 1 of this Tariff.

MEGALINK III - Wideband Digital Service/1.544 Mbps is considered interrupted when the customer reports that service continuity has been lost or that the service is operating at a performance level of 300 or more seconds of transmission containing errors in a consecutive 15-minute period.

C. Rates

There are six basic rate elements which apply to MEGALINK III - Wideband Digital Service/1.544 Mbps:

- Local Distribution Channels
- Intraexchange Interoffice Channel and Channel Terminals
- Interexchange Interoffice Channel and Channel Terminals
- Channel Service Unit
- Optional Service Functions
- Service Charge

1. Local Distribution Channel

A Local Distribution Channel is a channel between a customer's premises and the Telephone Company serving office serving that customer. Mileage used to rate the Local Distribution Channel is the direct air line distance measured in quarter mile increments between the customer's premises and the serving office.

2. Intraexchange Interoffice Channel

Intraexchange Interoffice Channel is defined as the component of the service between two serving offices or zones in the metropolitan exchanges for an Intraexchange Service. Charges include a fixed Channel Terminal charge and channel mileage which is based on the Vertical and Horizontal (V-H) distance

C. Rates-(Continued)

2. Intraexchange Interoffice Channel-(Continued)

between the serving offices, measured in whole miles. Fractional miles are rounded to the next whole mile.

Two Channel Terminal charges are required per Intraexchange Interoffice Channel.

3. Interexchange Interoffice Channel

Interexchange Interoffice Channel is defined as the component of the service between two serving offices where the serving offices are in different exchanges within the LATA. Charges include a fixed channel terminal charge and channel mileage which is based on V-H distance between the serving offices, measured in whole miles. Fractional miles are rounded to the next whole mile. Two Channel Terminal charges are required per Interexchange Interoffice Channel.

4. Channel Service Unit

A Channel Service Unit or its functional equivalent will be provided by the customer to terminate a MEGALINK III - Wideband Digital Service/ 1.544 Mbps at the customer's premises.

Channel service units installed, owned or on order by the Company prior to November 18, 1983, can be provided by Southwestern Bell. These embedded channel service units may be moved, rearranged or reconnected for the life of the equipment and are provided by the Telephone Company. One CSU channel service unit is required per Local Distribution Channel.

5. Optional Service Functions

a. Automatic Protection Capability

The Automatic Protection Capability (APC) service function, when used in conjunction with compatible customer-provided APC at the customer's premises, provides protection for the Local Distribution Channel by automatically switching the Local Distribution Channel(s) to a spare Local Distribution

5. Optional Service Functions-(Continued)

a. Automatic Protection Capability-(Continued)

Channel. The customer is responsible for circuit compatibility with existing Central Office equipment.

Spare Local Distribution Channel(s) and/or Interoffice Channel(s) are not included with the Automatic Protection Capability. They must be ordered separately at the rates and charges specified in Paragraph 2.2.19, D., following.

b. Transfer Arrangement

The Transfer Arrangement service function permits a customer to transfer an Interoffice Channel between two Local Distribution Channels terminating in the same serving office. The two Local Distribution Channels must use the same signal format. The spare Local Distribution Channel is not included in the Transfer Arrangement. It must be ordered separately as specified in Paragraph 2.2.19, D., following.

A key activated control circuit is required to operate the transfer arrangement. A Special Signaling Channel between the customer-designated control station and the serving office may be obtained from this Tariff for this purpose. The control key must be provided by the customer.

6. Service Charge

A service charge applies per point of termination installed or moved as provided in Paragraph 2.2.19, D., following.

TERMINAL EQUIPMENT AND OPTIONAL SERVICES

3.1 GENERAL

3.1.1 Application

(C) Miscellaneous and key equipment provided in Sections 16 and 26 of the General Exchange Tariff will be provided at the same rates and charges as specified in that Tariff for use, when appropriate, with service provided in this Tariff unless additional costs would be incurred.

(CT) 3.1.2 Service Charges

(CT) The Service Charges in this Section are in addition to Service Charges in Section 2 of this Tariff.

3.1.3 Move Charges

(CT) When an item of terminal equipment is moved on the same premises, one-half the Service Charge listed in this Section as applicable to a new installation will apply in addition to the full Service Charges in Section 2 of this Tariff.

When an item of equipment is moved to a different premises, the charges are as provided in Paragraph 3.1.2.

(CT) Service Charges for any of the miscellaneous options for Private Line Services found in this Section are to be billed at the full rate when any of these options are moved either on premises or off premises. In addition, the full Service Charges in Section 2 of this Tariff are applicable.

3.1.4 Substitution Charges

When existing equipment is replaced at the request of a customer by equipment of a different type or color, the charge applicable is the same as that for installation of the new equipment.

CANCELLED

JAN - 1 1984

3.1.5 Termination Charge

Where a termination charge is applicable to an item of equipment, the charge shown is the maximum charge. If an item of equipment which has a termination charge is discontinued by a customer within the specified time period after it is placed in service, a termination charge applies. The specific time period, in months, is indicated in this Tariff. The amount of customer liability is determined by dividing the termination charge by the number of months of the specific time period and multiplying the result by the number of months and fraction of months remaining in the specified period.

3.1 GENERAL

3.1.1 Application

Miscellaneous and key equipment provided in Sections 16 and 19 of the General Exchange Tariff will be provided at the same rates and charges as specified in that Tariff for use, when appropriate, with service provided in this Tariff unless additional costs would be incurred.

3.1.2 Nonrecurring Charges

The nonrecurring charges in this Section are in addition to nonrecurring charges in Section 2 of this Tariff.

3.1.3 Move Charges

(AT) When an item of terminal equipment is moved on the same premises, one-half the nonrecurring charge listed in this Section as applicable to a new installation will apply in addition to the full nonrecurring charges in Section 2 of this Tariff.

When an item of equipment is moved to a different premises, the charges are as provided in Paragraph 3.1.2.

(AT) Nonrecurring charges for any of the miscellaneous options for private line services found in this Section are to be billed at the full rate when any of these options are moved either on premises or off premises. In addition, the full nonrecurring charges in Section 2 of this Tariff are applicable.

3.1.4 Substitution Charges

When existing equipment is replaced at the request of a customer by equipment of a different type or color, the charge applicable is the same as that for installation of the new equipment.

3.1.5 Termination Charge

Where a termination charge is applicable to any equipment, the charge shown is the maximum charge. If an item of equipment which has a termination charge is discontinued by a customer within the specified time period after it is placed in service, a termination charge applies. The specific time period, in months, is indicated in this Tariff. The amount of customer liability is determined by dividing the termination charge by the number of months of the specific time period and multiplying the result by the number of months and fraction of months remaining in the specified period.

3.1.6 Items with Termination Charge

When any item of equipment, which is located on the customer's premises and subject to a termination charge, is moved and is installed at a new location at the request of the customer, the customer may elect to:

- A. Pay the unexpired portion of the termination charge for the item and applicable Service Charges with a new termination charge for such items made effective at the new location, or
- B. Continue service subject to the unexpired portion of the termination charge and pay the total cost incurred by the Telephone Company of moving such equipment, provided the customer requests a firm commitment as to such charges prior to placing an order. Charges for moving such equipment will be determined on the basis of estimates of such costs.

Cost of moving includes cost of removal, restoration of equipment necessitated by the move, transportation, storage, reinstallation and shall include costs of engineering, labor, supervision, materials, administration, taxes and any other specific items of cost directly attributable to the move.

3.4.6 Data Communication Evaluation Units

A. Scope

1. Except as otherwise specified, the rules, regulations and definitions applicable to Private Line Services apply to the provision of Data Communication Evaluation Units.
2. Data Communication Evaluation Units are representative configurations and/or features of tariffed Telephone Company services, furnished by the Telephone Company, at its option, for the purpose of permitting a prospective customer of the represented service to determine its compatibility with said prospective customer's data communications computer software programs and/or hardware environment.

B. Responsibility

Since the prospective customer is being furnished Data Communication Evaluation Unit(s) for the sole purpose of determining the compatibility of said Unit(s) with his Data Communications System, it shall be the responsibility of the:

1. Telephone Company

To provide Evaluation Unit(s) as specified in (Provision), following, and in accordance with (Provision), following.

3.4.6 Data Communication Evaluation Units

A. Scope

1. Except as otherwise specified, the rules, regulations and definitions applicable to Private Line services apply to the provision of Data Communication Evaluation Units.
2. Data Communication Evaluation Units are representative configurations and/or features of tariffed Telephone Company services, furnished by the Telephone Company, at its option, for the purpose of permitting a prospective customer of the represented service to determine its compatibility with said prospective customer's data communications computer software programs and/or hardware environment.

B. Responsibility

Since the prospective customer is being furnished Data Communication Evaluation Unit(s) for the sole purpose of determining the compatibility of said Unit(s) with his Data Communications system, it shall be the responsibility of the:

1. Telephone Company

Combined sending and receiving:

- Individually housed data set (2EG++) \$ 95.00 \$150.00
- Multiple mounted data set (2EH++)(1) 85.00 50.00

Common equipment for multiple mounting of:

- up to eight DATAPHONE II service data sets (2EJ++)(2)(3) 95.00

Type 2048A

Suitable for conditioning signals at rates of 4800 bits per second in sequence

Combined sending and receiving:

- Individually housed data set (48J++) 135.00 200.00
- Multiple mounted data set (48N++)(1) 125.00 50.00

- (1) Requires common equipment for multiple mounting data sets (USOC 2EJ).
- (2) Requires suitable multiple data set cabinet.
- (3) Audible or visual alarms are not included and are available at existing tariff rates.
- (4) Provision of this service is subject to the availability of a limited quantity of equipment on an allocative basis. Following receipt by the Company of a request for the service, the Company will notify the prospective customer of the anticipated date when service will be provided. Upon notification of such date, the prospective customer may elect to place an order for the service or to cancel his request for service.

F. Comm-Stor* II Communications Storage Unit

1. Service Description

The Comm-Stor II Service provides a data communication storage and retrieval system that is compatible with asynchronous terminals with EIA interface and data sets. It is a magnetic disk system which uses a message-oriented directory for flexibility in storing/retrieving data. The Comm-Stor Service will also provide communications management reports in connection with the Station Message Detail Recording (SMDR) feature of some DIMENSION® PBX Systems and other compatible PBX Systems.

2. Rates and Charge Application

The rates and charges specified herein for the Comm-Stor II are in addition to the rates and charges for service with which the system is associated.

A customer-requested move of the Comm-Stor II to a different premises will incur a charge equal to the nonrecurring charge specified herein. A move on the same premises will incur a charge equal to one-half the nonrecurring charge.

The Telephone Company will provide replacements, without charge, for all diskettes which are determined to be defective at the time of installation, the recognition of such claims being limited to those made within the first ten (10) days of service.

- (1) User diskettes are initially provided with each unit upon installation. Replacements are not provided by the Bell System, except for those that are found to be defective within the first ten (10) days of service.
- (2) At least one USOC MFC or MUL must be ordered per customer system of one or more Comm-Stor II units.
- (3) The Printer Port and 1st 4K memory cannot be provided in the same drive unit as separate options. When both are needed, provide USOC MEL.
- (4) This option requires at least 4K of memory.
- (5) USOC's MOF and MEF are mutually exclusive.
- (6) An \$85.00 exchange charge will apply for replacement of System Diskette. The original must be returned for exchange charge to apply.

E. Switching Arrangements - switching arrangements are provided at the rates specified for those units in Section 2 of this Tariff.

Whenever possible, other switching arrangements are furnished. Special equipment and arrangement charges are applicable for such other arrangements as specified in Paragraph 1.1.7, preceding.

F. Comm-Stor* II Communications Storage Unit

1. Service Description

The Comm-Stor II Service provides a data communication storage and retrieval system that is compatible with asynchronous terminals with EIA interface and data sets. It is a magnetic disk system which uses a message-oriented directory for flexibility in storing/retrieving data. The Comm-Stor Service will also provide communications management reports in connection with the Station Message Detail Recording (SMDR) feature of some DIMENSION® PBX Systems and other compatible PBX Systems.

2. Rates and Charge Application

The rates and charges specified herein for the Comm-Stor II are in addition to the rates and charges for service with which the system is associated.

(CT) A customer-requested move of the Comm-Stor II to a different premises will incur a charge equal to the Service Charge specified herein.

(CT) A move on the same premises will incur a charge equal to one-half the Service Charge.

The Telephone Company will provide replacements without charge for all diskettes which are determined to be defective at the time of installation, the recognition of such claims being limited to those made within the first ten (10) days of service.

(NR) G. 43 Teleprinter Buffered Station

1. Description

The 43 Teleprinter Buffered Station is a data communication terminal containing a 16,000 character buffer. The 43 Teleprinter Buffered Station can be provided as either a Buffered Selective Calling (BSC) arrangement or a Buffered Send and Receive (BSR) arrangement. Either friction or variable tractor paper feed capabilities are available with each configuration.

2. Regulations

- a. The following rates and charges for the 43 Teleprinter Buffered Stations are added to those for any associated services or facilities.
- b. Southwestern Bell provides the initial box/roll of paper and/or paper tape and one ribbon cartridge. After that, the customer supplies the paper, paper tape and ribbon cartridges.
- c. The 43 Teleprinter Buffer Stations are equipped with EIA interface and requires the use of an external data set.
- d. The customer must provide suitable commercial power at the 43 Teleprinter Buffered Station location.
- e. The 43 Teleprinter Buffered Station arrangement consists of a Basic Station and one Major Feature Group item.
- f. A customer requested move of the 43 Teleprinter Buffered Station to a different premises will incur a charge equal to the nonrecurring charge specified herein. A move on the same premises will incur a charge equal to one-half the nonrecurring charges.
- g. Supersedure is permitted. A transfer charge of \$75.00 is applicable to the customer acquiring the 43 Teleprinter Buffered Station.

TERMINAL EQUIPMENT AND OPTIONAL SERVICES

3.4 PRIVATE LINE EQUIPMENT FOR USE WITH VOICE GRADE SERVICES (Continued)

3.4.7 Data Terminal Equipment-(Continued)

(NR) H. Data Station Controller System

1. Description

The Data Station Controller (DSC) System permits remote interface between Transaction III terminals or other equivalent terminals and a customer's host computer. The DSC, located on the customer's premises, provides polling, terminal switching, protocol conversion and speed conversion in a private line environment for inquiry/response applications.

The transmissions between the DSC and the polled terminals originate as digital, serial, 1200 bit per second (bps), asynchronous signals. The built-in Frequency Shift Key (FSK) modem at the DSC converts the signals to analog for transmission over data channels to the terminals. When Transaction III terminals are used, their built-in modems convert the signals back to digital use by terminals.

The transmissions between the DSC and the host computer originate as digital, serial, 2400 bps, synchronous signals. Type 2024A-L1/2 or equivalent data sets at the DSC convert the signal to analog for transmission to the host computer over Type 313 data channels as found in Section 2 of this Tariff. Type 2024A-L1/2 or equivalent data sets at the host location convert the signals back to the digital for communication with the computer.

The service includes the provision of technical materials describing the functions and capabilities of the DSC. It also includes Company assistance in developing a DSC System and augmenting understanding of the materials sufficiently that the customer's computer personnel can program the host computer to take advantage of the DSC's functional capability. Assistance is to be provided to the customer in connection with the initial set up of a DSC System and during the first six months of operation. The customer is expected to provide training and assistance to his secondary and replacement employees.

At the customer's request, subsequent Company assistance requiring other than telephone consultation, will be provided at charges based on estimated costs, including travel and lodging.

-Type 422(SLL22)	13.75	14.30
-Type 423(SLL23)	6.00	14.30
-Type 428(SLL28)	6.25	14.30
-Type 435(SLL35)	13.75	14.30

Arranged for Loop signaling without Interoffice Channel, a maximum of 1300 ohms

-Type 420(SLLW0)	4.00	14.30
-Type 422(SLLW2)	4.00	14.30
-Type 423(SLLW3)	4.50	14.30
-Type 428(SLLW8)	None	None
-Type 435(SLLW6)	4.00	14.30

Arranged for Loop signaling with Interoffice Channel, per customer requested ohm maximum

-Type 420(SLLC0)	13.50	14.30
-Type 422(SLLC2)	13.50	14.30
-Type 423(SLLC3)	7.25	14.30
-Type 428(SLLC8)	6.50	14.30
-Type 435(SLLC5)	13.50	14.30

Arranged for Loop signaling without Interoffice Channel, per customer requested ohm maximum

-Type 420(SLLA0)	3.50	4.30
-Type 422(SLLA2)	3.50	4.30
-Type 423(SLLA3)	4.25	4.30
-Type 428(SLLA8)	1.50	4.30
-Type 435(SLLA5)	3.50	4.30

The DC resistance specification does not imply a guaranteed end-to-end DC continuity. The customer can expect to be provided a loop meeting the same limits as the normal central office loop (i.e. not exceeding 1300 ohms) exclusive of 200 ohm maximum terminal equipment resistance.
