**MISSOURI-AMERICAN WATER COMPANY**  
**CASE NO. WR-2015-0301**

1 **I. INTRODUCTION**

2 **Q. Please state your name, title and business address.**

3 A. Dr. Geoffrey Marke, Economist, Office of the Public Counsel (OPC or Public Counsel), P.O.  
4 Box 2230, Jefferson City, Missouri 65102.

5 **Q. Please describe your education and employment background.**

6 A. I received a Bachelor of Arts Degree in English from The Citadel, a Masters of Arts Degree  
7 in English from The University of Missouri, St. Louis, and a Doctorate of Philosophy in  
8 Public Policy Analysis from Saint Louis University (SLU). At SLU, I served as a graduate  
9 assistant where I taught undergraduate and graduate course work in urban policy and public  
10 finance. I also conducted mixed-method research in transportation policy, economic  
11 development and emergency management.

12 I have been in my present position with OPC since April of 2014 where I have been  
13 responsible for economic analysis and policy research in electric and gas utility operations.  
14 Prior to joining OPC, I was employed by the Missouri Public Service Commission as a  
15 Utility Policy Analyst II in the Energy Resource Analysis Section, Energy Unit, Utility  
16 Operations Department, Regulatory Review Division. My primary duties in that role  
17 involved reviewing, analyzing and writing recommendations concerning electric integrated  
18 resource planning, renewable energy standards, and demand-side management programs for  
19 all investor-owned electric utilities in Missouri. I also have been employed by the Missouri  
20 Department of Natural Resources (later transferred to the Department of Economic  
21 Development), Energy Division where I served as a Planner III and functioned as the lead  
22 policy analyst on electric cases. I have worked in the private sector, most notably serving as

1 the Lead Researcher for Funston Advisory based out of Detroit, Michigan. My experience  
2 with Funston involved a variety of specialized consulting engagements with both private and  
3 public entities.

4 **Q. Have you been a member of, or participated in, any work groups, committees, or other**  
5 **groups that have addressed electric utility regulation and policy issues?**

6 A. Yes. I am currently a member of the National Association of State Consumer Advocates  
7 (NASUCA) Distributed Energy Resource Committee which shares information and  
8 establishes policies regarding energy efficiency, renewable generation, and distributed  
9 generation, and considers best practices for the development of cost-effective programs that  
10 promote fairness and value for all consumers. I also serve as a member on NASUCA's  
11 Electricity and NASUCA's Water Committee's which discuss current issues affecting  
12 residential consumers.

13 **Q. Have you testified previously before the Missouri Public Service Commission?**

14 A. Yes. A listing of the cases in which I previously have filed testimony and/or comments  
15 before this commission is attached in GM-1.

16 **Q. What is the purpose of your direct testimony?**

17 A. The purpose of my testimony is to articulate OPC's position on the issue of consolidated  
18 tariff pricing (CTP) of the Missouri American Water Company's (MAWC) water and  
19 wastewater districts and to comment on the Missouri Public Service Commission Staff's  
20 (Staff) report on rate design based on the questions submitted by Chairman Hall.

21 **Q. Could you please give a brief contextual history of CTP as it pertains to MAWC?**

22 A. In the Company's 2010 rate case, WR-2010-0131, the Commission Report and Order stated  
23 that there would be no consolidation of MAWC's operating districts and instead a  
24 collaborative group consisting of MAWC, Public Counsel, Staff and other interested parties  
25 would be formed to study the issue and explore future options. The Commission created a  
26 separate working docket, SW-2011-0103: *In the Matter of the Review of Economic, Legal*

1            *and Policy Considerations of District-Specific Pricing and Single Tariff Pricing* in which  
2            stakeholders submitted comments and an on-the-record proceeding occurred. Within that  
3            docket, the Company submitted a narrative history of rate design as it pertains to  
4            consolidation for MAWC since 1989 as appendix A to their brief (see GM-2). That docket  
5            was closed when the Company filed notice with the Commission for another rate case, WR-  
6            2011-0337 where MAWC again requested a CTP rate design. As the result of a non-  
7            unanimous stipulation and agreement between MAWC, Staff, OPC, Ag Processing Inc.  
8            (AGP), Missouri Industrial Energy Consumers (MIEC), Metropolitan St. Louis Sewer  
9            District (MSD), City of St. Joseph (St. Joseph), BJC HealthCare (BJC), Triumph Foods, LLC  
10           (Triumph), and The Empire District Electric Company (Empire) it was decided:

11            **Water districts.** The Signatories have reached a resolution for this case that  
12            includes the establishment of eight (8) water Districts as described herein.  
13            The Signatories propose to combine Warren County with St. Louis Metro  
14            District (St. Louis Metro) and to combine Loma Linda with Joplin District  
15            (Joplin), and to maintain the following individual Districts: Mexico,  
16            Jefferson City, Warrensburg, Platte County, and St. Joseph. The eighth  
17            District (District 8) will consist of the following water systems: Brunswick,  
18            Lakewood Manor, Spring Valley, Ozark Mountain, Lake Taneycomo, White  
19            Branch, Rankin Acres, Riverside Estates, Roark and Lake  
20            Carmel/Maplewood. The systems included in District 8 will be grouped into  
21            four groups, with one group that consists of systems that are charged a flat  
22            rate (i.e., no commodity charge) while the other three groups are based on  
23            similar commodity charges within each group.<sup>1</sup>

24            This agreement reflects the present-day, district-specific rate design as will be discussed in  
25            this testimony.

---

<sup>1</sup> WR-2011-0337. (2/24/2012). Non-Unanimous Stipulation and Agreement. Item No. 283. *In the Matter of Missouri-American Water Company's Request for Authority to Implement a General Rate Increase for Water and Sewer Service Provided in Missouri Service Areas.*

1 **Q. Would you please summarize your direct testimony in this docket?**

2 A. In previous cases, Public Counsel has argued for flexibility from strict district specific pricing  
3 when reasonably necessary based on consideration of all relevant factors. After reviewing the  
4 literature and case history over CTP, Public Counsel has concluded that further movement  
5 towards CTP is not presently warranted. This conclusion is based on the following  
6 considerations:

- 7 • Water service is local
- 8 • The principles of cost causation in rate making
- 9 • Inappropriate price signal to consumers
- 10 • Overinvestment of infrastructure

11 And lastly, OPC is in general agreement with Staff's rate design report and looks forward to  
12 discussing the Company's proposed decoupling mechanism in rebuttal testimony. With this  
13 in mind, Public Counsel proposes that the Commission consider opening a Rate Design  
14 docket specifically for Missouri American Water following the conclusion of this case in  
15 which agreed to metrics are in place and further policy direction from the Commission is  
16 provided.

17 **II. WATER SERVICE IS LOCAL**

18 **Q. Is it accurate to compare water systems to electric and gas?**

19 A. No, water systems differ considerably from electric and gas. The reason for this is that water  
20 is extremely heavy and costly to transport, precluding the physical interconnection that could  
21 lead to system consolidation and greater economies of scale that are seen in both electric and  
22 gas. Unlike other public utilities, most water in the United States is supplied by publicly  
23 owned and operated waterworks. In fact, roughly 84% of the community water and 98% of  
24 the community wastewater systems are government-owned.<sup>2</sup> Because of the predominately

---

<sup>2</sup> American Water Works Company, Inc. Form 10-K. p. 10  
<http://ir.amwater.com/Cache/29123208.PDF?Y=&O=PDF&D=&FID=27943982&T=&OSID=9&IID=4004387>

1 local feature of water, it is estimated that there are more water systems in the United States  
2 than there are schools. In 2011, there were more than 152,000 water systems in service across  
3 the country—more than all elementary, middle, high schools and post-secondary institutions  
4 combined.<sup>3</sup> Although there are many factors that have been suggested as to why water and  
5 wastewater systems remained publicly owned and operated as other natural monopolies  
6 overwhelmingly were privatized in the late-19<sup>th</sup> and early-20<sup>th</sup> centuries, the local, physical  
7 (and political) nature of the service and system itself remains a stark contrast to electric and  
8 gas.<sup>4</sup>

9 Comparisons between parochial water systems and the interconnected electric grid<sup>5</sup> or the  
10 U.S. natural gas pipeline network do not reflect the operating market or the engineering  
11 realities of the systems in which they provide service. This can be seen by the absence of any  
12 comparable federal regulatory body over the water industry as well. For example, the Federal  
13 Energy Regulatory Commission (FERC) is entrusted, in part, with jurisdiction of interstate  
14 electricity sales and natural gas pricing and the Federal Communications Commission (FCC)  
15 regulates interstate telecommunication. All three industries (electric, gas and  
16 telecommunications) operate in a manner that necessitates additional federal economic  
17 oversight in these natural monopoly operations. No federal agency exerts economic  
18 regulatory policy over the water industry. The large number of water providers, the local  
19 source of the water supply, and the dominance of public ownership distinguish the water  
20 industry in fundamental ways. Water is local, and the cost in providing this service, and  
21 consequently its usage, varies considerably based on its location.

<sup>5</sup> Actually three separate grids under the North American Electric Reliability Corporation: Eastern Interconnection, Western Interconnection and the Electricity Reliability Council of Texas Interconnection

1 **Q. Are the present water districts of MAWC interconnected or at least close to one**  
2 **another?**

3 **A. No, none of the presently structured districts are interconnected and the proximity of the eight**  
4 **water districts varies considerably. This is seen, in part, within figure 1 which includes**  
5 **highlighted counties of MAWC's seven largest water districts.**

6 Figure 1: MAWC's 7 large water districts with September 2015 customer account numbers<sup>6</sup>

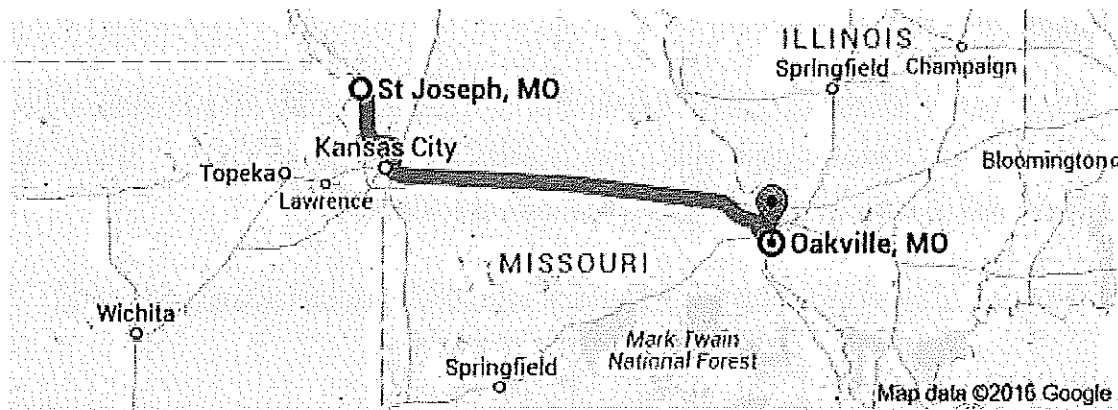

7  
8 **Q. Which districts have the greatest distance between each other?**

9 **A. St. Louis Metro and the St. Joseph districts are the greatest distance apart as illustrated in**  
10 **figure 2.**

11  
12  
<sup>6</sup> Based on Staff's DR 0239

1 Figure 2: Distance from St. Joseph to St. Louis Metro (Oakville, MO.)<sup>7,8</sup>

2 4 h 30 min (307.1 mi) via I-70 E

3 To illustrate just how distant these two service areas are from one another, consider that St.  
4 Louis Metro is closer in proximity to all of the following cities:

- 5 • Chicago IL - 296.7 miles (via I-55)<sup>9</sup>
- 6 • Memphis, TN - 283.3 miles (via I-55)<sup>10</sup>
- 7 • Iowa City, IA - 259.7 miles (via US-218 and US-61)<sup>11</sup>
- 8 • Louisville, KY - 259.9 miles (via I-64)<sup>12</sup>
- 9 • Kansas City, KA - 251.0 miles (via I-70)<sup>13</sup>
- 10 • Indianapolis, IN - 243.3 miles (via I-70)<sup>14</sup>

<sup>7</sup> Oakville, Missouri is a municipality within St. Louis County which receives MAWC service.

- Jonesboro, AR - 228.7 miles (via US-67)<sup>15</sup>

At more than three hundred miles apart, these two districts represent entirely different customers (demographics) and customer densities (# of customers per square mile), economies, geographies, local water sources, and treatment and distribution systems. For instructive purposes under a CTP design, a customer in St. Louis would receive no benefit but would shoulder an additional cost for an upgrade to a treatment plant further away than the city of Chicago.

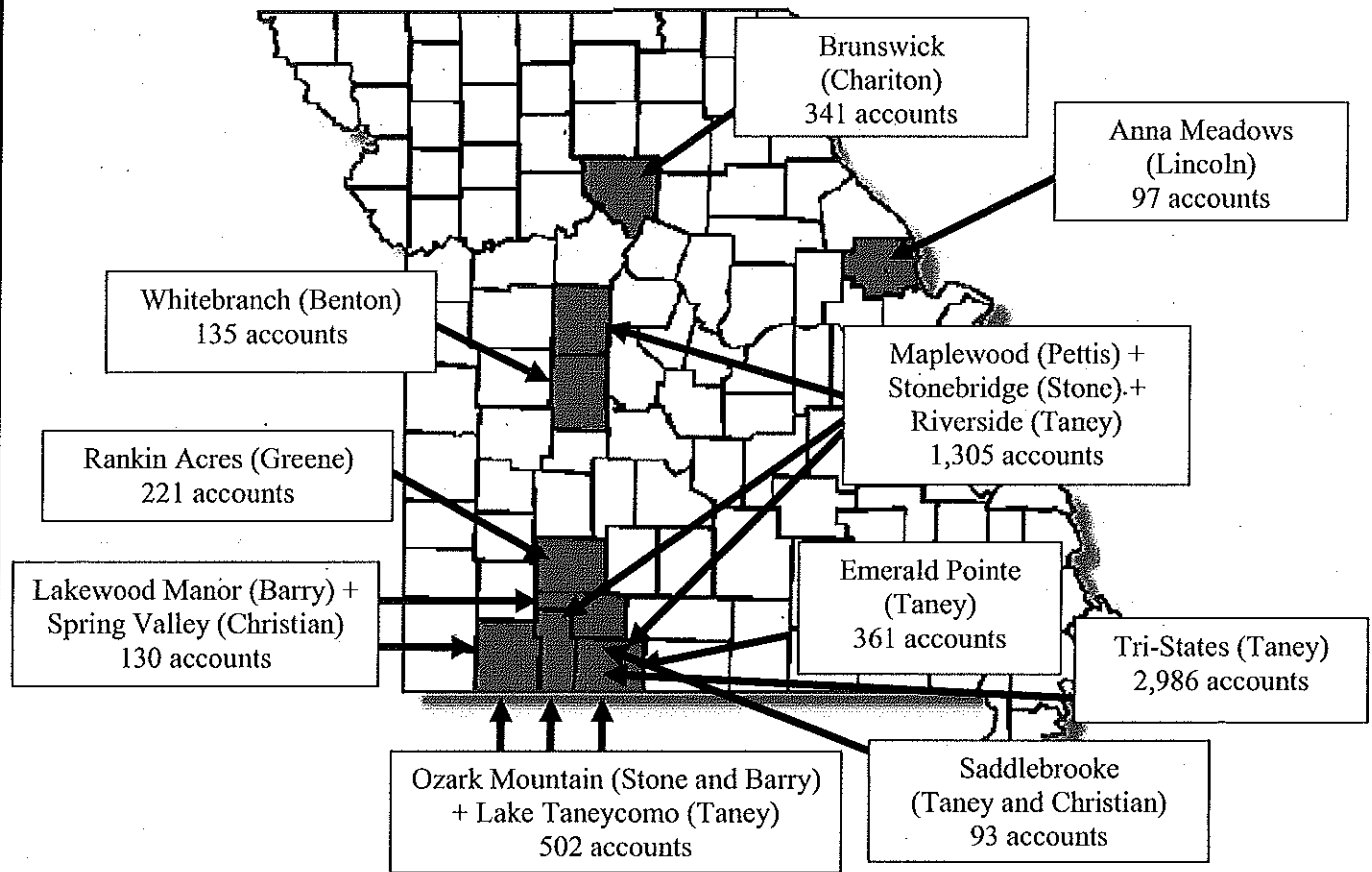

In addition to the seven large districts, there is an additional smaller water system district that has been categorized as “district 8” based on MAWC’s last rate case. The number of small systems within this district has increased through acquisitions by the Company. Figure 3 breaks down “district 8” or the small water systems units as they are currently constructed by highlighting the counties in which they operate.

---

<sup>14</sup> Google Search: Indianapolis to St. Louis (2016). <https://www.google.com/webhp?sourceid=chrome-instant&ion=1&espv=2&ie=UTF-8#safe=active&q=Indianapolis+to+st.+louis>

<sup>15</sup> Google Search: Jonesboro to St. Louis (2016). <https://www.google.com/webhp?sourceid=chrome-instant&ion=1&espv=2&ie=UTF-8#safe=active&q=Jonesboro+to+st.+louis>

1 Figure 3: MAWC's district 8 small water systems with September 2015 customer account numbers<sup>16</sup>

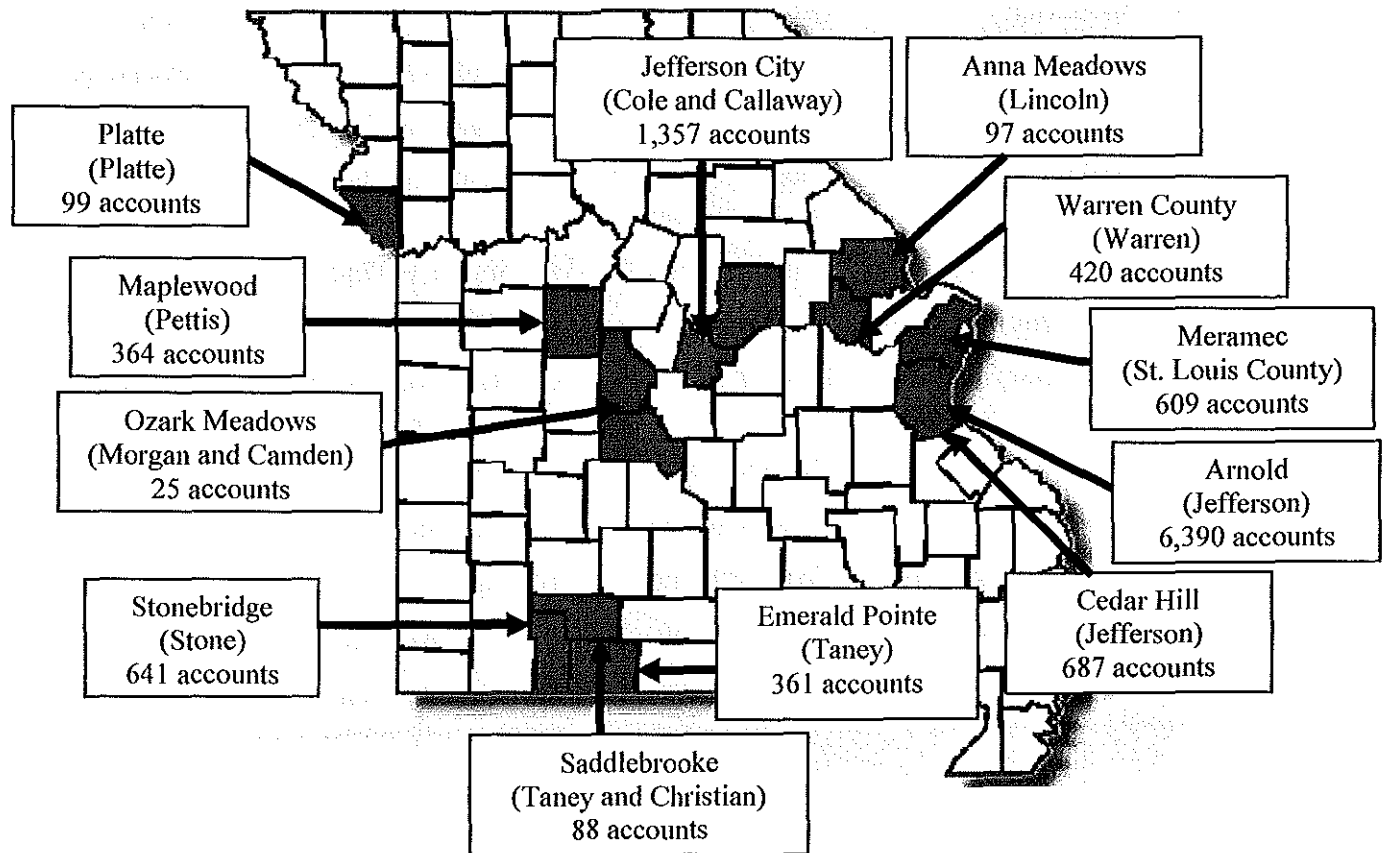

2  
3  
4  
5 It is important to note that there has already been some consolidation within these units. For  
6 example, the Maplewood, Stonebridge, and Riverside systems operate in three separate  
7 counties with an approximate distance of 170 miles from Pettis County, Missouri to Taney  
8 County, Missouri for that billing group. Additionally, MAWC has five separate residential  
9 customer groups within Taney County. Proximity of systems and/or system interconnections  
10 historically has been grounds for consolidation of pricing alike customers. However, the  
11 rationale for these presently situated small water customer account breakdowns are not  
12 readily evident in that they were the result of settlement negotiation from MAWC's last rate  
13 case. Further inquiry is warranted.

<sup>16</sup> Ibid.

1 Figure 4 displays MAWC's wastewater systems as well as the highlighted counties in which  
2 the system is located.

3 Figure 4: MAWC's wastewater systems with September 2015 customer account numbers<sup>17</sup>

4  
5  
6 **Q. What is the primary source of water for each district?**

7 **A.** MAWC districts rely on either groundwater (aquifers), surface water (rivers, creeks) or a  
8 combination of the two as a local resource. The district breakdown can be seen in table 1  
9 which was populated based on MAWC's Water Quality Reports page from the Company's  
10 website:

11  
12  
<sup>17</sup> Ibid.

1 Table 1: MAWC water source<sup>18</sup>

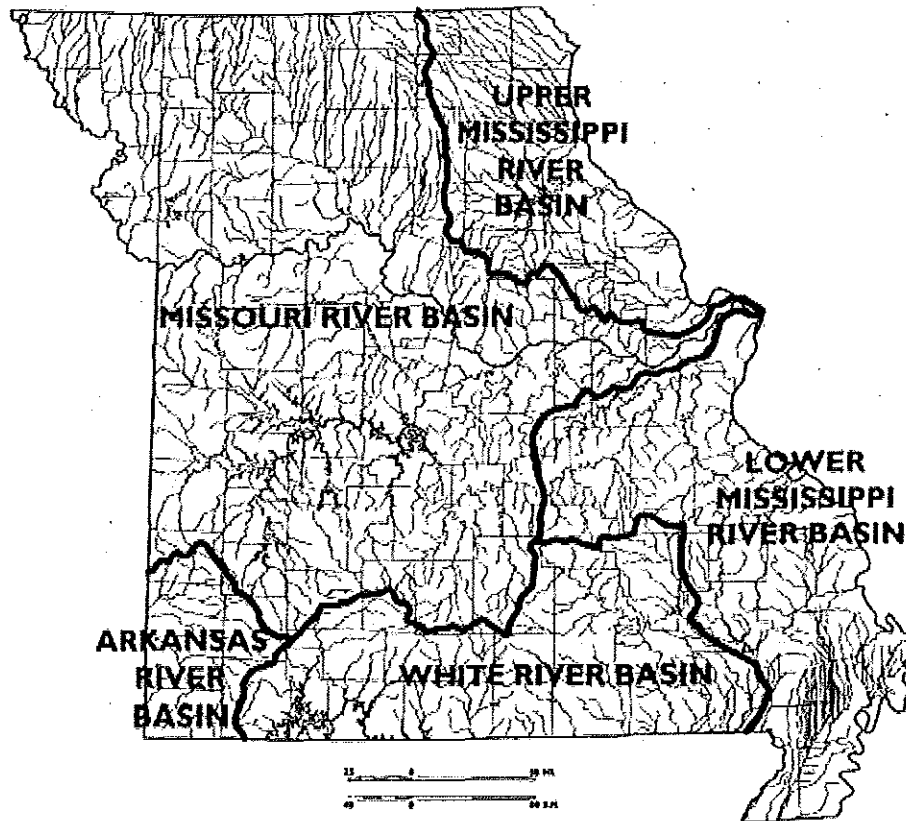

<b>District</b>	<b>Water Source</b>	<b>District</b>	<b>Water Source</b>
• Anna Meadows	Ground Water	• Platte	Ground Water
• Brunswick	Ground Water	• Rankin Acres	Ground Water
• Emerald Pointe	Ground Water	• Redfield	Ground Water
• Jefferson City	Missouri River	• Riverside Estates	Ground Water
• Joplin	Shoal Creek & Ground water	• Saddlebrooke	Ground Water
• Lake Carmel	Ground Water	• Spring Valley	Ground Water
• Lake Taneycomo	Ground Water	• St. Joseph	Ground Water
• Lakewood Manor	Ground Water	• St. Louis County & St. Charles	Missouri & Meramec Rivers
• Maplewood	Ground Water	• Stonebridge	Ground Water
• Mexico	Ground Water	• Tri-State	Ground Water
• Ozark Mountain No.1	Ground Water	• Warren	Ground Water
• Ozark Mountain No. 2	Ground Water	• Warrensburg	Ground Water
• Ozark Mountain No. 3	Ground Water	• White Branch	Ground Water

2  
 3 The terms “ground water” and “surface water” only reflect the most general description of  
 4 where the water is drawn. The extraction, treatment and delivery of that water at the local  
 5 level will vary considerably from site to site. For MAWC ratepayers, more than 80% of the  
 6 total customer base is composed of residents in the St. Louis Metro, Jefferson City and Joplin  
 7 districts who rely primarily on surface water from rivers or creeks. However, the majority of  
 8 districts rely on local ground water sources. Not all ground water or surface water is alike.  
 9 For example, surface water availability and quality can be understood in part by identifying  
 10 the appropriate river basin a district is situated in.

<sup>18</sup> Missouri American Water Quality Reports (2016). <http://www.amwater.com/moaw/water-quality-and-stewardship/water-quality-reports.html>

1 Just as a bathtub catches all of the water that falls within its sides, a river basin (creeks,  
2 waterways, storm water runoff, drainage lines, etc.) sends all of the water falling within it to a  
3 river. In the state of Missouri: the Mississippi, the Missouri and the Arkansas-White River  
4 basins provide the primary sources of surface water. This breakdown can be seen in Figure 5.

5 Figure 5: Major drainage basins in Missouri<sup>19</sup>

6  
7 Surface water is generally more expensive to treat than ground water. While both sources are  
8 dependent on fluctuations in the weather, surface water availability will be impacted more  
9 rapidly during both droughts and heavy rain seasons. Ultimately, the interdependence of the

<sup>19</sup> Missouri Water Quality Assessment (1997) Water Resources Report Number 47, Missouri State Water Plan Series Volume III. P. 6. <http://dnr.mo.gov/pubs/WR47.pdf>

1 ecosystem is such that any major development in either source will impact the quantity and  
2 quality of the other.<sup>20</sup>

3 The majority of MAWC districts rely primarily on groundwater; the quality, cost and  
4 treatment of groundwater varies regionally throughout the state. In Missouri, the occurrence  
5 of groundwater is related primarily to the local geological conditions that determine the type  
6 and properties of aquifers. On a whole, groundwater resources are not evenly distributed,  
7 with usable groundwater most abundant from the Ozark aquifer in the Springfield and Salem  
8 Plateau and sparsest in the St. Francois Mountain area.<sup>21</sup> According to the last statewide  
9 Missouri Water Quality Assessment report, seven groundwater provinces were formed  
10 "using factors such as physiography, geology, hydrology, and vulnerability to  
11 contamination."<sup>22</sup> These provinces can be seen in Figure 6.

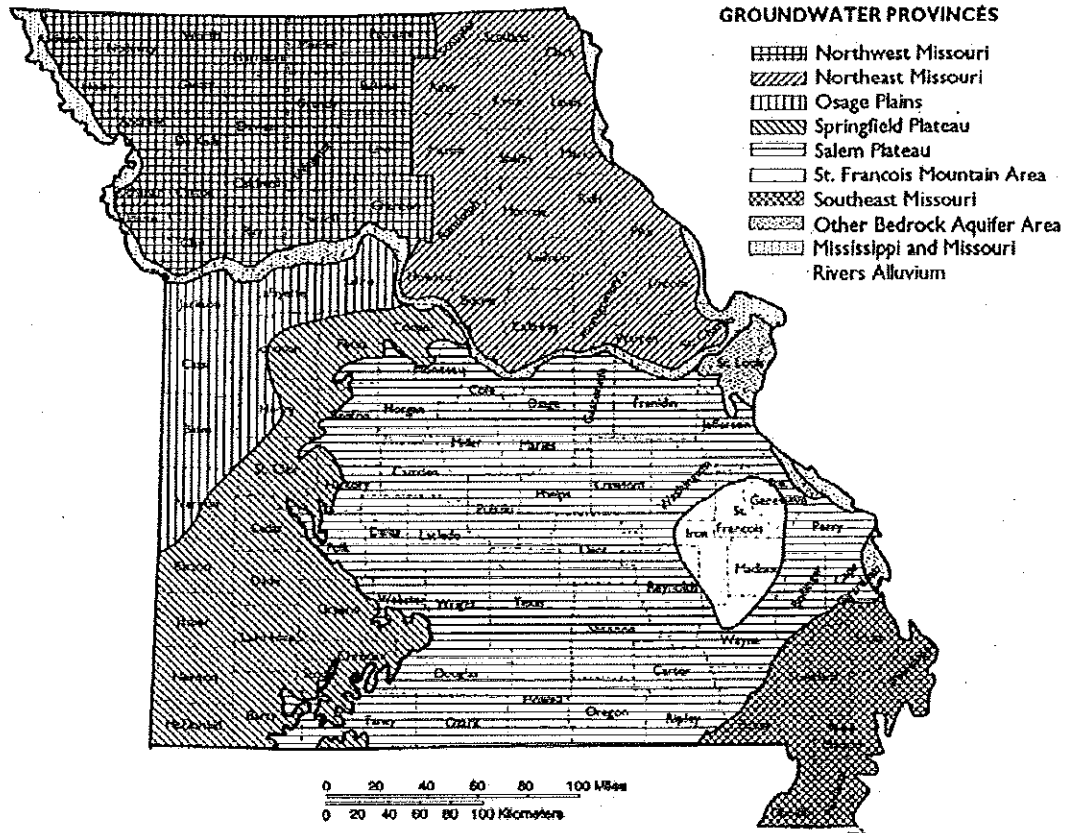

<sup>20</sup> Winter, et. al (1998). U.S. Geological Survey Circular 1139. Ground Water and Surface Water a Single Source.  
<http://pubs.usgs.gov/circ/circ1139/pdf/circ1139.pdf>

<sup>21</sup> Missouri Department of Natural Resources (2016) Missouri Groundwater Provinces and Aquifer Characteristics  
<http://dnr.mo.gov/geology/wrc/groundwater/education/provinces/gwprovince.htm>

<sup>22</sup> Ibid.

1 Figure 6: Groundwater provinces of Missouri<sup>23</sup>

2  
3 Variations between districts are based in part on the accessibility and availability of those  
4 sources of water. Location matters in the water utility cost of service, for the quality of the  
5 product, and for the availability of the resource in a manner that is not comparable to electric  
6 or gas operations. For example, an Ameren Missouri customer in Jefferson City is not  
7 dependent on the availability, treatment and distribution of Jefferson City fuel or generation  
8 to power their lights. Treating MAWC customers as if they function under the same market  
9 conditions or have the same resource flexibility as Ameren Missouri customers runs counter  
10 to the manner in which MAWC actually operates.

11  
<sup>23</sup> Ibid.

1 **III. THE PRINCIPLE OF COST CAUSATION IN RATE MAKING**

2 **Q. Please explain the principle of cost causation.**

3 A. As stated in the Company's Rates Information page of their website:

4 Missouri American Water rates are based on the true cost of providing water  
5 service to our customers. Rates vary based on the cost of providing service in  
6 each of the communities we serve.<sup>24</sup>

7 Cost causation suggests that the cost causer pays the cost it imposed on the utility system.  
8 This is what is known as cost-based rates, which are designed to prevent unjust or undue  
9 discrimination between rate classes or customers. Because CTP merges non-contiguous  
10 systems the cost-causation principle is diminished, if not entirely abandoned. Under a CTP  
11 design the approved rates would not accurately reflect the costs caused by the customer who  
12 would pay them. The emphasis on "costs" in this argument is usually confined to large  
13 capital investment costs that service only the local system and not common costs such as  
14 billing. The argument for a departure from this principle often rests on two general points: 1)  
15 the need to meet safe and adequate service; and 2) that in the long-run every service area will  
16 need major capital investments and therefore will be subsidized by another service area. I  
17 will address each point in turn.

18 **Q. Would CTP ensure safe and adequate service?**

19 A. This basic question centers on whether an improvement in social equity resulting from  
20 consumers facing the same price across districts is better than the loss of efficiency in pricing  
21 should consumers no longer face the particular costs that affect the provision of service in  
22 their local area. To put it another way, CTP is a pricing response not a costing response to  
23 providing service. Consequently, any consolidation grounded primarily on social equity  
24 considerations should be examined in their totality to prevent any unnecessary subsidization  
25 or unintended impact on those customers who can least afford to bear the burden.

---

<sup>24</sup> Missouri American Water. Rates Information (2016). <http://www.amwater.com/moaw/customer-service/rates-information.html>

1 Q. Do MAWC's residential customers share similar income levels?

2 A. No. Not surprisingly, important descriptive economic data of MAWC's districts suggest that  
3 there is considerable variation across income levels, multi-family housing rates, housing  
4 ownership rates and poverty levels. Table 2 provides U.S. Census information on some of  
5 these key socio-economic variables.

<sup>25</sup> U.S. Census Bureau (2016) State & County QuickFacts. <http://quickfacts.census.gov/qfd/states/29000.html>

<sup>26</sup> See attachment GM-3 for a breakdown of socio-economic data for district/county specific MAWC wastewater systems.

1 At first glance, based on the Census data cited above one could theoretically make an equity  
2 argument that St. Louis Metro's average ratepayers would be in a better comparative position  
3 to shoulder an increase in rates compared to other "average" ratepayers in many of the other  
4 districts.

5 Of course, given the number of customers within St. Louis Metro it is hardly surprising that a  
6 more granular examination of the data within that district reveals large socio-economic  
7 disparities. For example figure 7 provides a comparison across 4 municipalities within St.  
8 Louis County:

9 Figure 7: Descriptive economic data of select communities within the St. Louis Metro District

Municipality	Population	Multi-unit housing	Home Ownership	Population Change	Median Income	% Below Poverty
Ladue	8,576	0.0%	96.1%	1.2%	\$176,369	1.6%
Bellefontaine Neighbors	10,807	6.1%	74.2%	-0.4%	\$37,337	23.5%
Creve Coeur	17,868	38.4%	68.9%	0.2%	\$89,203	6.0%
Ferguson	21,086	23.8%	58.7%	-0.6%	\$38,685	24.9%

10 There are only 11 miles separating Ladue from Ferguson in St. Louis County, but the socio-  
11 economic data suggests a much greater distance between these ratepayers; however, under  
12 the principles of cost causation and district-specific pricing, both ratepayers in Ferguson and  
13 Ladue will pay the same rates and receive the same service *because* they share the same  
14 water system. Under a CTP design, Ferguson (and Ladue) residents would be subsidizing  
15 future high cost districts geographically dispersed across the state and in which no direct  
16 benefit would be received in St. Louis Metro. This would produce a result for St. Louis  
17 Metro customers well beyond the zone of "just and reasonable."

1 In this case, MAWC has not provided any compelling evidence that consolidation of  
2 MAWC's districts is warranted. In fact, it appears likely that a movement to further  
3 consolidate would place an additional burden on those least able to bear it.

4 **Q. Please respond to the premise that every district will need capital investment in the**  
5 **long-run and, therefore, be subsidized by someone else.**

6 A. It is true that given a long enough timeframe all water and wastewater systems will be subject  
7 to entropy and need to be replaced. Under a CTP design in any particular year, the costs of  
8 any single large investment in a particular area would be socialized over a wider body of  
9 ratepayers, reducing the impact on individuals. Over many years, the total costs would be the  
10 same, but the variation from year-to-year would be reduced. Still, despite the benefits in  
11 reducing year-to-year changes in rates, it does not alter the reality that some areas are more  
12 costly to serve than others, thus resulting in long-term winners and losers.

13 However, under the current regulatory system, in which the investment costs of individual  
14 districts are kept separate, existing customers have no concern about a utility's expansion or  
15 purchase of a new district. Approval of a CTP design would enhance the Company's  
16 monopolistic reach by making future acquisitions much more attractive thus collectively  
17 passing those future acquisition costs to present-day ratepayers as well. Over time, the total  
18 costs would be much greater as systems would be added increasing rate base.

19 **Q. Is the acquisition of water and wastewater systems a part of MAWC's business**  
20 **strategy?**

21 A. Yes, according to American Water's 10-K filing:

22 An important part of our growth strategy is the acquisition of water and  
23 wastewater systems. . . . We compete with governmental entities, other

1 regulated utilities, and strategic and financial buyers, for acquisition  
2 opportunities.<sup>27</sup>

3 The potential privatization of public systems coupled with a decreased competitive  
4 environment from other private utilities or governmental entities as a result of a CTP design  
5 is a topic that is largely beyond the scope of this testimony. No doubt, there are appropriate  
6 circumstances where systems and the associated ratepayers would and should benefit from  
7 MAWC's professional expertise. OPC has historically supported appropriate consolidation  
8 on a case-by-case basis. However, a CTP design in this case would clearly give MAWC a  
9 competitive advantage in the market place for future municipal acquisitions.

10 **IV. INAPPROPRIATE PRICE SIGNAL TO CONSUMERS**

11 **Q. Will a CTP design provide accurate price signals to consumers?**

12 **A.** No, a CTP design would not reflect the true cost of service and send an inefficient price  
13 signal to water customers.

14 **Q. Please explain.**

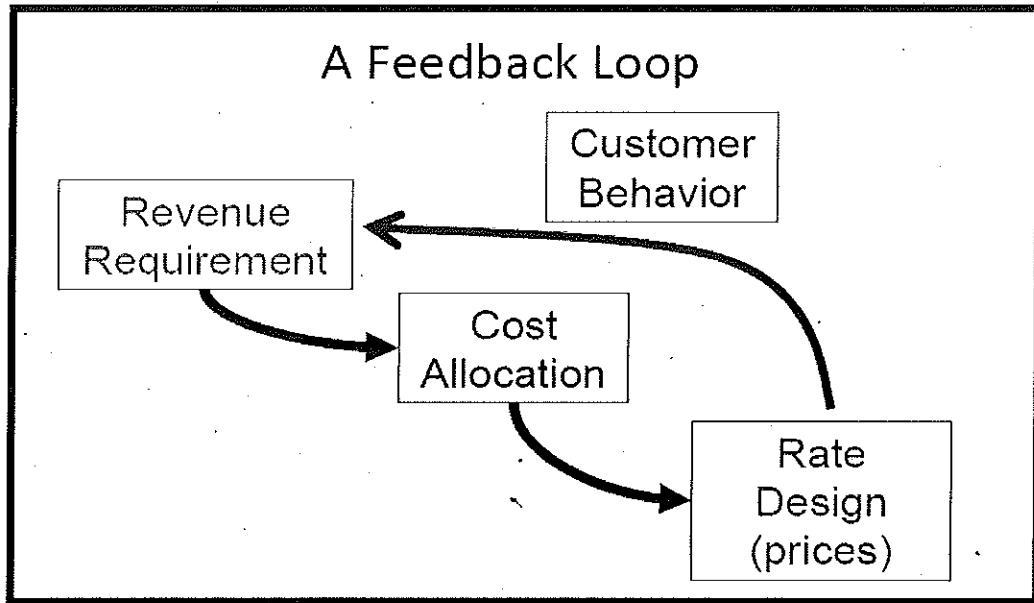

15 **A.** Ratepayers respond to prices. Therefore, how rates are designed will impact ratepayer  
16 behavior and future outcomes. For example, we know we can expect a different response to a  
17 high customer charge and a low volumetric charge than from a low customer charge and a  
18 high volumetric charge, even if the two are designed to produce equal revenues in the short  
19 run. In the long run the design that is chosen will direct future costs because the price signal  
20 functions as a feedback loop designed to influence customer behavior. This is illustrated in  
21 figure 8.

22  
23

22-23.

Figure 8: Feedback loop of rate design price signals

A CTP design minimizes the cost allocation component by averaging out the spatial allocation of the costs of service from each district to all ratepayers. Consumers in low-cost districts are required to purchase water at prices that exceed the real cost of their consumption. A CTP design, therefore, represents a “tax” which discriminates against systems that control their costs and favor those that do not. From a cost control point of view, therefore, a CTP design is a zero-sum situation. Thus, a movement towards CTP would have the effect of increasing consumption in high cost service areas and lowering consumption in the low cost service areas.<sup>28</sup> This is economically inefficient, potentially discriminatory and an inconsistent policy position based on how the Commission and the State has valued natural resources. For example, any conservation efforts would be undermined exactly where they are needed most.

<sup>28</sup>The price elasticity literature, however, is clearer about the usage effects of price increases than the usage effects of price decreases. This will be discussed in greater detail in rebuttal testimony within the context of MAWC’s proposed decoupling mechanism.

1 V. OVERINVESTMENT OF INFRASTRUCTURE

2 Q. Can a CTP design lead to overinvestment of infrastructure?

3 A. Yes, this phenomenon, known as the Averch-Johnson and Willisz (A-J-W) effect, or what is  
4 colloquially known as “gold plating,” reflects a utility’s tendency to expand its rate base,  
5 regardless of the optimal level of capital investment. MAWC’s objective for shareholders is  
6 to maximize profits, which occurs by maximizing capital investments and the associated  
7 return. The Commission’s objective is to ensure the private sector provides safe, clean water  
8 at the lowest cost to the users and the state while permitting utilities to earn a fair return on  
9 their shareholder’s investment. In satisfying their obligation to provide safe and reliable  
10 service to their ratepayers, MAWC has an incentive to invest in capital improvements rather  
11 than O&M expenses, even if a capital improvement represents a sub-optimal solution as  
12 compared to non-capital production factors. Unlike O&M expenses, capital expenditures  
13 provide a rate of return to their shareholders when ultimately included in rate base—this bias  
14 towards capital investment can lead to “gold plating” of water systems. A CTP design  
15 enables this behavior.

16 Q. Can overinvestment occur for capital improvements due to environmental compliance  
17 mandates?

18 A. Yes. Gold plating is a potential issue for all capital improvements. In fact, Staff spoke  
19 convincingly at length on this issue in its Reply Brief from SW-2011-0103, which was  
20 replying to Aqua Missouri (a former IOU operating in Missouri):

21 Aqua Missouri argues that Staff’s concerns regarding overinvestment are  
22 overblown in light of the fact that the vast majority of Aqua’s [sic]  
23 Missouri’s capital improvements are tied to environmental compliance  
24 mandates. Assuming that such environmental compliance measures are  
25 mandated by state and/or federal authorities, Staff would argue that single-  
26 tariff pricing is not necessary to facilitate these mandatory  
27 improvements. Staff is unaware of, and would be shocked to encounter, any

1 situation in the past where Aqua Missouri has not had sufficient capital  
2 necessary to meet environmental compliance requirements (emphasis  
3 added).<sup>29</sup>

4 The Staff Reply Brief then addresses Aqua Missouri's claim that any prudency issue could be  
5 addressed in a general rate proceeding where capital investments could be reviewed and  
6 challenged. Again, Staff states:

7 While technically true, proving that a company acted in an imprudent  
8 manner regarding system overinvestment is a very difficult proposition. As  
9 pointed out by Aqua Missouri, much of the investment that is made by the  
10 water and sewer industries is closely related to environmental compliance.  
11 However, not all investments made to meet environmental compliance  
12 mandates are necessarily prudent or cost-effective. Environmental  
13 compliance mandates (i.e. environmental regulations) focus largely on ends,  
14 as opposed to means. In other words, these regulations generally dictate the  
15 results that must be reached, not the methods that must be employed in  
16 reaching them. Engineers often differ on what is technically appropriate  
17 and/or cost-effective solution to an environmental compliance problem, i.e.,  
18 the means necessary to meet the required end. **A company that does not**  
19 **have a focus upon the localized financial impacts of its decisions will**  
20 **have less incentive to keep costs, environmental or otherwise, at a**  
21 **minimum.** Staff and other parties will have the difficult task of proving that  
22 although some investment was necessary, the specific undertaken was  
23 excessive, imprudent, or not cost-effective. Staff would point out that as a  
24 practical consideration, most environmental compliance measures are  
25 undertaken at the direction of the Missouri Department of Natural Resources

---

<sup>29</sup> SW-2011-0103. (1/12/2011) Reply Brief of the Staff of the Missouri Public Service Commission Item No. 283. In the Matter of the Review of Economic, Legal and Policy Considerations of District-Specific Pricing and Single-Tariff Pricing, p. 3-4.

1 (“DNR”). Once DNR determines that system upgrades are necessary, DNR  
2 approves a company’s proposed compliance plans. **In Staff’s opinion, these**  
3 **approvals are largely based upon the technical feasibility of the**  
4 **proposed solutions and do not focus upon the bottom line impact of**  
5 **these decisions on ratepayers.** Staff is not involved in the compliance plan  
6 approval process and, therefore, often does not have the practical ability to  
7 voice technical or economic opposition at the time such decisions are made.  
8 As a result, Staff is left to argue that an investment decision was imprudent,  
9 after having been approved by another state agency. This is a very difficult  
10 task (emphasis added).<sup>30</sup>

11 OPC wants to encourage proper investment, not overinvestment. By diminishing the price  
12 signal of any given investment, ratepayers are exposed to an increased risk of overpaying for  
13 systems they do not need.

14 **VI. STAFF’S RATE DESIGN REPORT**

15 **Q. Please comment on Staff’s Rate Design report.**

16 **A.** OPC is in general agreement with Staff’s rate design report and looks forward to discussing  
17 the Company’s proposed decoupling mechanism in rebuttal testimony. Regarding the  
18 importance of rate design on customer consumption and meeting a utility’s revenue  
19 requirement, there are many factors that contribute to usage from one year to the next and  
20 from one water utility to another. In addition to pricing, weather, economic factors, and  
21 customer demographics influence water use, and subsequently revenue. Similarly, there are  
22 many factors that impact the revenue stability for a water utility, such as cost drivers, service  
23 area characteristics, and demand projections. As is true with all rate structures, over time,  
24 maintaining equity and efficiency between customers with a given rate and rate structure  
25 requires periodic reviews.

---

<sup>30</sup> Ibid. p. 4-5.

1           Based on our initial review of the data utilized in the Company's work paper's (Company  
2           witness Dunn) as well as the data provided to Staff as the basis for requests in DR 0235  
3           (Monthly Customer Usage per Class per District) and DR 0239 (Monthly Customer Counts  
4           per Class per District) there appears to be a considerable amount of unexplained anomalies in  
5           both usage and customer accounts.

6           OPC has included these data sets in GM-4 (work papers of Company Witness Dunn), GM-5  
7           (Response to Staff's DR-0235), and GM-6 (Response to Staff's DR-0239). Cells highlighted  
8           in GM-4 indicate either a different monthly customer account number per district or a  
9           different monthly customer usage amount per district between the Company's work paper's  
10          and the Company's response to Staff's data requests. Note that, no attempt was made to  
11          reconcile the difference in data in the St. Louis Metro accounts due to missing usage  
12          amounts.

13          With this in mind, Public Counsel is proposing that the Commission consider opening a Rate  
14          Design docket specifically for Missouri American Water following the conclusion of this  
15          case in which agreed to metrics are in place and further policy direction from the  
16          Commission is provided.

17          **Q. Does this conclude your testimony?**

18          **A. Yes.**

## APPENDIX A

### THE HISTORY OF RATE DESIGN FOR MAWC SINCE 1989

A review of the single tariff pricing vs. district-specific pricing debate as it relates to MAWC, begins with a discussion of the “old” Missouri Cities Water Company (Missouri Cities). In approximately 1989, in Commission Case No. WR-89-178, et al., *In the matter of the application of Missouri Cities Water Company of St. Charles, Missouri, for authority to file tariffs designed to increase rates for water service to customers in the Missouri service area of the Company.* (October 4, 1989). (Unreported), Missouri Cities proposed a system of uniform rates that set uniform service charges for all its water districts<sup>1</sup>, along with a differential volumetric rate for softened water versus unsoftened water, and separate, higher volumetric rates for Brunswick. The parties to the case reached a stipulation on the rate design issue. Although the stipulation made no significant progress toward a uniform rate, Missouri Cities and OPC supported uniform rates to one degree or another and recognized some of the benefits as a basis for recommending approval of uniform rates (albeit only a partial approval in the case of OPC) Report & Order, p. 2, 3.

In approximately 1990, in Case No. WR-90-236, Missouri Cities again proposed uniform rates, but then tempered the proposal by developing an “equalization” rate, which, when added to the uniform rate, effectively resulted in the same district-specific rates as were approved in the previous case. *In the matter of Missouri Cities Water Company*, 30 Mo. P.S.C. (NS) 363 (October 12, 1990). This case was revenue neutral, that is, the newly proposed rate design was not intended to increase or decrease overall company revenues, but merely to implement the

<sup>1</sup>In 1989, Missouri Cities provided water service to the following five (5) areas or districts: Brunswick, Mexico, Platte County, St. Charles County, and Warrensburg.

uniform rate with an “equalization” rate adjustment. The Commission approved the uniform rate tariff with an equalization rate adjustment in this case stating as follows:

The Commission has reviewed the evidence in this matter and finds that the proposal to establish a system-wide rate for water service is reasonable. These tariffs would not make everyone’s water bill the same. This proposal would only make future rate increases the same. That is, current differences in rates among the districts would remain the same but the increases would be spread equally among all customers. The Commission finds also that the proposal to establish equalization rates to maintain the current differentials between Company districts is also reasonable. The Commission agrees with Public Counsel that the proposal will allow Company to spread future increases in rates on a system-wide basis while maintaining the current rate differential which will reduce rate shock in future cases and limit cross-subsidization. Spreading the costs to all Company customers will also allow Company greater flexibility in timing plant additions.

The Commission agrees with Public Counsel that the equalization rates should stay in effect until some future date. Even though an equalization rate might change because of changed billing determinants, the Commission finds that the current rate differential should be maintained. This matter can be reviewed in some future rate case.

30 Mo. P.S.C. (NS) at 365.

The next Missouri Cities rate case was in approximately 1991 (Case No. WR-91-172). *In the matter of Missouri Cities Water Company*, 1 Mo. P.S.C. 3d 119 (September 20, 1991). The Report and Order summarized the position of the parties on rate design as follows:

Company, Public Counsel, Warrensburg and the City of St. Peters urge the Commission to stay with Company’s “uniform” rate design, a design which this Commission approved in Company’s revenue neutral rate design case, No. WR-90-236. Platte County Intervenors would have the Commission adopt “full” uniform rates.

1 Mo. P.S.C. 3d at 144. The Commission further observed “The aim of the parties in the rate design case, including OPC, was to formulate a design which would eventually lead to uniform Company-wide rates, and according to OPC, ‘single tariff’ filings.” *Id.* at 144. The Commission’s statement of policy at that time was as follows:

The Commission continues to support the concept of system-wide rates for Company, and in this respect is of the opinion that Staff's proposal to establish a system-wide flat rate for Company's minimum monthly charge and private fire charge is a step in the right direction.

*Id.* at 147.

In approximately 1992 (Case No. WR-92-207), Missouri Cities again proposed to spread an increase to all districts under the uniform rate, but to maintain the equalization rate component. *In the matter of Missouri Cities Water Company*, 2 Mo. P.S.C. 3d 60 (January 8, 1993). The Commission decision in that case maintained the equalization rate component since “. . . Missouri Cities has not completed its first ‘building cycle’ since the implementing of uniform rates barely a year ago in Case No. WR-91-172.” 2 Mo. P.S.C. 3d at 89. Again, the Commission expressed a desire, at some future date, to implement uniform rates. After completion of this case, Missouri Cities was acquired by MAWC, See *In the Matter of the Application of Missouri-American Water Company for approval of its acquisition of the common stock of Missouri Cities Water Company*, 2 Mo. P.S.C. 3d 305 (July 30, 1993).

The first consolidated case for MAWC after acquiring the Missouri Cities' properties was in 1995 (Case No. WR-95-205), *In the matter of Missouri American Water Company*, 4 Mo. P.S.C. 3d 205 (November 21, 1995), in which the Company proposed a “stepped” implementation of single tariff pricing for the seven (7) districts of the merged Company<sup>2</sup>. Three parties to the case, Company, Staff and OPC, joined in a stipulation in an effort to resolve the single tariff pricing issue by implementing a three step implementation plan. After hearing testimony on the issue, the Commission concluded:

The Commission finds the proposed move toward single tariff pricing for

<sup>2</sup> Those seven (7) districts included the five (5) districts previously served by Missouri Cities, plus Joplin and St. Joseph.

Missouri-American and all of its districts, as jointly agreed to by the Staff, Missouri-American and OPC and as, to some degree, supported by all intervenors, is therefore in the public interest

*Id.* at 226.

As a result of the Stipulation and Agreement in Case No. WR-95-205, MAWC began a three step process toward full implementation of single tariff pricing. In the first step, MAWC implemented uniform rates in its St. Joseph, Joplin, Platte County and St. Charles Districts immediately upon the conclusion of the case. Rates in the Mexico and Brunswick Districts were lowered, but they were still above the uniform level established for the other four districts. Rates in Warrensburg were increased but they were still below the level of the uniform rates. In the second step, which occurred one year after implementation of the rates set in Case No. WR-95-205, (approximately December 5, 1996), rates in the Warrensburg District were again increased, and the rates in Mexico and Brunswick were reduced so that the overall impact on MAWC was revenue neutral.

In the third step (and consistent with the Stipulation), MAWC proposed implementation of uniform rates for all of its districts in its 1997 rate case filing (Case No. WR-97-237 et al.), *In the matter of Missouri American Water Company*, 6 Mo. P.S.C. 3d 549 (November 6, 1997). In its Report and Order, the Commission approved a rate design based upon single tariff pricing given the record in that case. However, the Commission also expressed a desire to make a more detailed comparison of the methodologies before making a final commitment to single tariff pricing. The Commission stated as follows:

The difficulty for the Commission is that, without a district specific cost study there is no way to compare the resulting rates under STP with the resulting rates under more traditional ratemaking. The Commission is left with unsupported allegations from both sides of the controversy as to which method is theoretically

superior.

6 Mo. P.S.C. 3d at 556.

The Commission agrees with OPC that the distinction between costs which are directly assignable to specific customer groups, and costs which are joint and common costs cannot be made without a detailed cost of service study. The Commission also agrees with OPC that it can only properly evaluate the advantages and disadvantages of a uniform rate design if it has the necessary information for a clear understanding of the design's financial impact.

Id at 557.

Subsequently, on November 20, 1997, the Commission issued its Order Establishing Class Cost of Service Study and Rate Design Case and Proceeding Notice in Case No. WO-98-204. As a result of the proceedings in that case, the Commission found as follows:

Although the Commission's decision in Case No. WR-97-237 adopted a rate design that used STP, the Commission declined to announce what approach it would use during MAWC's next rate case. The record indicates that it is anticipated that the St. Joseph water treatment plant currently under construction may be added to the rate base in MAWC's next rate proceeding. This, in itself, is sufficient reason for the Commission to defer its decision on this issue.

8 MoPSC 3d 394, 397(November 2, 1999).

Given the significant uncertainties associated with the exact amount of rate base that will be included in rates in the next rate case, and the effects, if any, of the proposed merger of MAWC's parent with the parent of St. Louis County Water Company, the Commission will not attempt to decide the rate design issue until the next rate case.

Id at 397.

In 2000, MAWC filed another rate case for its seven (7) water districts and proposed to maintain the single tariff pricing rate design then in effect. (Case No. WR-2000-281), *In the Matter of Missouri-American Water Company*, 9 MoPSC 3d.254, (August 31, 2000).<sup>3</sup> Of

<sup>3</sup> Although, MAWC had acquired the St. Louis County Water Company and United Water Missouri, Inc. around the time of the filing of this rate case, MAWC had not had sufficient time to incorporate or merge the St. Louis County

significance to the rate design issue in this case, was MAWC's request to recover the costs associated with its recent completion of an approximate \$70 million water treatment plant and related facilities in the St. Joseph District. Numerous parties intervened in the case. The City of St. Joseph and the St. Joseph Area Public Water Supply Districts supported MAWC's proposal to maintain single-tariff pricing. Virtually all of the other intervenors, including Staff and OPC, opposed STP and supported district specific pricing or something close to it. The Commission, on a three to two vote, decided the issue as follows:

The Commission will move away from STP and toward DSP. One factor for consideration in determining just and reasonable rates is public perception. The testimony adduced at the Local Public Hearings held in this matter was strongly in favor of DSP. MAWC, therefore, must set its rates separately for each service area in order to recover the appropriate revenue requirement for each service area. As the Company requested, no phase-in of rate increases shall be permitted. In moving toward DSP, however, the Commission will adhere to the principle that no district receive a rate decrease. (9 MoPSC 3d 291)

The Commission later clarified its position that "no district will receive a rate decrease" by stating that the Joplin District, which would otherwise receive an overall rate decrease under pure district-specific pricing will "contribute \$880,000 toward the total water system increased revenue requirement . . ." (Order of Clarification, p. 2, issued September 12, 2000)<sup>4</sup>

A number of parties sought review of various aspects of the Commission's Report and Order.<sup>5</sup> As it relates to the issue of rate design, the Circuit Court of Cole County affirmed the Commission's decision to switch from single tariff pricing to district-specific pricing, but

and Jefferson City properties into its existing operations.

<sup>4</sup> Although no district received an overall rate decrease, some rates to certain customer classes within a district did receive a rate decrease as a result of the Commission's adoption of the Staff's Class Cost of Service Study. (Order of Clarification, p. 2)

<sup>5</sup> Initially, ten (10) Petitions for Writ of Review were filed in three (3) different counties. After issuing a Writ of Prohibition, the Missouri Supreme Court allowed seven (7) Petitions for Review to proceed in the Circuit Court of Cole County.

remanded as to its decision not to decrease the level of rates in the Joplin District finding that the Commission had not supported its decision with adequate findings of fact:

Ultimately, the Commission explained its decision regarding the Joplin rates in its Report and Order on Second Remand<sup>6</sup> as follows:

#### FINDINGS OF FACT

\* \* \*

14. The cost of service is simply a guide used to set rates. A just and reasonable rate, under the circumstances of this case, is one that moves away from single-tariff pricing, but tries to mitigate the resulting rate shock. One way to accomplish such a result is for “no district [to] receive a decrease in rates when another district is receiving an increase. Any extra revenues collected from districts paying more than their cost of service [should] be allocated to the smaller districts in a way that balances the rate increases among those [under-recovering] districts.

15. The Joplin district produces revenue substantially in excess of its cost of service, and has done so since Missouri-American’s last rate case.

16. Holding the Joplin district at current rates is reasonable to help offset the increases to the citizens of Brunswick, Mexico and Parkville.

\* \* \*

#### CONCLUSIONS OF LAW

\* \* \*

11. The Commission concludes that the rates paid by Joplin ratepayers prior to the Report and Order in this case were lawful and not discriminatory. They did not become discriminatory because they were not reduced, while rates in other districts increased. They did not become discriminatory even though it was demonstrated in the case that Joplin (along with some other districts) contributes more in revenue to the state-wide system than it costs to provide service, as that was true of the rates prior to this case. Joplin was not singled out to receive no reduction – no district received a reduction. Therefore, the Commission concludes that the rates charged to Joplin ratepayers in this matter are fair and reasonable and do not discriminate against Joplin ratepayers. (footnotes

<sup>6</sup>Case No. WR-2000-281, issued December 4, 2007.

omitted)(Order, p, 8, 12)

Although Joplin appealed the Commission's Report and Order on Second Remand, the Circuit Court of Cole County affirmed the Commission's decision. Thereafter, Joplin sought further review by the Missouri Court of Appeals – Western District, but later dismissed its appeal prior to any decision being issued by that Court.

In 2003, MAWC filed a general rate for its water districts which now totaled nine (9), as the St. Louis County Water Company and the Jefferson City Waterworks Company (f/k/a United Water Missouri, Inc.) had been merged with MAWC. *In the matter of Missouri-American Water Company's Tariff to Revise Water and Sewer Rate Schedules*, 12 MoPSC 3d. 409, (April 6, 2004). That rate case was ultimately resolved by Stipulation of the Parties. With regard to revenue requirements, the Parties agreed that there would be no revenue increases for any of the Water Districts, but that the Joplin District would receive a \$350,000 revenue reduction. With regard to the issue of rate design, the Commission made the following specific findings:

The Rate design Stipulation and Agreement filed on January 7 addressed, in addition to rate design, inter-district subsidies, consolidated billing, a customer class study, an interruptible industrial rate for the Joplin District, and elimination of the minimum usage amount from the Jefferson City District tariffs and some corresponding adjustments to the volumetric rates for that district. The agreed rate design is based on the current rate design, with certain adjustments. No rate adjustments will be made in the St. Louis County District, the St. Charles County District, and the Jefferson City District. Only the customer classes receiving adjustments are referred to below. . . .

The agreed rate design is revenue-neutral, that is, it redistributes the current revenue requirement for each district. Any increase or decrease in district-specific revenue requirements must be evenly distributed across the classes in the form of equal percentage changes to each revenue classification for each customer class and by applying a uniform change to each volumetric rate component for each revenue classification.

The Rate Design Stipulation and Agreement provides that the Brunswick District will receive a subsidy of \$213,000 from the St. Louis County District. There will be no other

inter-district subsidies. (12 MoPSC 3d 412))

MAWC's next general water rate case was filed in 2006 and included the water operations of Warren County Water & Sewer Company. *In the matter of Missouri-American Water Company's Request for Authority to Implement a General Rate Increase for Water Service Provided in Missouri Service Areas*, MoPSC Case No. WR-2007-0216 (October 4, 2007).

Although the issue of rate design for all ten (10) water districts was settled by way of Stipulation, the Commission made the following observation as it addressed certain "allocation of cost" issues raised by the City of Joplin:

As a result of the compromises in Global Agreement, the allocation of costs to Joplin is actually less than it would be under a strict application of district-specific costs, resulting in a revenue increase for the Joplin District that is far less than it would be under a strict district-specific cost of service allocation. Joplin's main professed concern with the Global Agreement was that the resulting increase for Joplin was somehow discriminatory. Given that Joplin would receive a much lower revenue increase from the Global Agreement than it would receive using strict district-specific pricing, there is no credible argument that the Global Agreement is discriminatory. (footnote omitted) (Report and Order, p. 72-73)

MAWC's 2008 water rate case was settled by way of Stipulation. *In the matter of Missouri-American Water Company's Request for Authority to Implement a General Rate Increase for Water and Sewer Service Provided in Missouri Service Areas*, Case No. WR-2008-0311 (November 14, 2008). The only rate design issue of significance was the Agreement of the Parties to merge the St. Louis County and St. Charles County rate districts into one district, to be known as the St. Louis Metro District. (Unanimous Stipulation and Agreement, p. 3)

MAWC's 2009 rate case was also settled by way of Stipulation. *In the matter of Missouri-American Water Company's Request for Authority to Implement a General Rate Increase for Water Service Provided in Missouri Service Areas*, Case No. WR-2010-0131 (June

16, 2010). Although the Commission accepted the Stipulation, it expressed concern regarding the wide variance in rates among MAWC's service territories, stating as follows:

. . . the Commission notes that the settlement's effect on the average residential customer varies widely among MAWC's service territories . . . While the record contains substantial and competent evidence weighing in favor of the settlement's provisions, it does not describe the facts that lead to such disparity of rates. Therefore, the Commission will order a report as follows.

Staff, MAWC, and the Office of the Public Counsel shall jointly file a report setting forth, for each service in each service territory, the underlying facts that support each territory's cost of service. Such details may include, but are not limited to, variations in infrastructure requirements, age of each system, number of customers, or differences in water treatment to make water potable. Also, the report . . . will estimate a single-tariff rate based on comparable usage for the average residential customer. (Report and Order, p. 16)

On October 15, 2010, Staff, MAWC and OPC filed their Joint Report on Cost of Service in Case No. WR-2010-0131 which provided the cost and rate information requested by the Commission. That Joint Report was later transferred to the instant docket on or about October 18, 2010.

Missouri American Wastewater districts / counties in which no water service is offered\*

District / County	Population by County 2014	Current customer accounts in district (Sept. 2015)	Multi-unit Housing 2009-2013	Homeowner rate 2009-2013	Population % change 2010-2014	Median Household Income 2009-2013	% of Persons below poverty level 2009-2013
Arnold Jefferson	222,716	6,390	9.1%	82.6%	1.8%	\$54,845	11.3%
Jefferson City Sewer Callaway Cole	44,750	1,357	10.8%	76.1%	0.9%	\$47,964	13.0%
Warren County Lincoln Warren	54,249 33,253	420 97	7.0% 7.5%	78.1% 79.4%	3.2% 2.3%	\$52,835 \$50,830	13.6% 13.4%
