Private Line Service Tariff
Section 2
4th Revised Sheet 1
Replacing 3rd Revised Sheet 1

SERVICES AND RATES

2.1 GENERAL

- 2.1.1 In addition to the regulations set forth in the Regulations Section of this tariff applicable to Private Line Services, additional regulations are set forth throughout this Section.
- 2.1.2 Channels are classified by series and further classified within each series by types. The various series and types are described in terms of circuit characteristic and/or use.
- 2.1.3 The customer is responsible for the selection of the service, i.e., type of circuit signaling options, jacks and terminating interfaces required to meet his needs. The customer premises equipment, station apparatus and premises wiring must be compatible with the service provided by the Telephone Company. The Telephone Company has overall responsibility for the Private Line Service up to and including the Demarcation Point, including the selection of all local channels.
- 2.1.4 Exchange rates, rules and regulations apply for the exchange portion of the total service when Private Line Services are used in connection with Exchange Services or are connected to Exchange Services.
- 2.1.5 When the number of Private Line Services is such that cable service components are required, such cable service components may be provided specifically for the customer's use and not as a part of the Telephone Company's general distributing plant, at charges based upon cost in lieu of tariff charges, where to do so will result in lower charges to the customer.(1)

(CT)

(RT)

(RT)

2.2 DESCRIPTION OF SERVICES

2.2.1 Special Signaling Service-Series 100

A. These channels are suitable for use with Two-Point or Multi-Point Service within the same LATA subject to the number of point limitations indicated for each type and are provided for use with customer-provided power and signaling equipment and other special signaling services.

(1) Obsolete to existing service installations at existing locations for existing customers. For existing United States Military establishments additional cable service components may be provided on a cost basis to meet the National Security and Emergency preparedness needs of the Military.

2.2.1 Special Signaling Service-Series 100-(cont'd)

C. Transmission characteristics of Types 101 and 102 are as follows:

- 1. Type 101 service has a two-wire interface with two-wire service components suitable for use with direct current transmission (metallic continuity). Customers may order two, two-wire services to achieve four-wire service.

Transmission specifications and limitations are described in the Bell System Technical Reference on the transmission specification for Private Line metallic circuits which include the following:

Current applied by CPE - AC and DC components per conductor, not to exceed .150 amperes rms.

Magnitude of the peak of the voltage between any conductor and ground, not to exceed 70.7 volts except continuous DC voltage not to exceed 135 volts.

- 2. Type 102 service has a two-wire interface with two-wire service components suitable for low-speed, unidirectional series-operated signaling and may be implemented by either metallic channels or by other means at the Telephone Company's option. If provided by "other means,"

2.2 DESCRIPTION OF SERVICES-(Continued)

2.2.2 Sub-Voice Grade Service-Series 200

A. Sub-Voice Grade service provides, and is designed for transmission of low speed data at rates up to 75 and up to 150 baud within certain technical specifications. These channels are furnished for half-duplex and duplex operation. The service is not suitable for the transmission of alternating current tones.

(RT)

|
(RT)

(MT)

(FC)

B. The types of local channels and the transmission characteristics offered for termination at a premises for termination in customer premises equipment and systems are as follows:

- 1. Type 250 - An interface engineered for binary signals at rates up to 75 baud, 20 ± 1 or 62.5 ± 2.5 milliamperes neutral signals(1). The terminal equipment shall deliver no more than 8 percent telegraph distortion and shall be capable of processing received data signals with up to 35 percent telegraph distortion.

- (1) The Telephone Company has the option of providing 20 of 62.5 milliamperes and will notify the customer of the current level to be supplies. The Telephone Company will supply the line voltage and provide for the current adjustment. The maximum open circuit voltage across the send data leads at the interface will not exceed 270 volts.

(CP) 2.2.3 Voice Grade Service-Series 300(1) and 400

(CP) A. Series 300 local channels for Voice Grade service are furnished for half duplex (voice or data use) and duplex (data use) operation for oral communications and data communications which operate within certain technical specifications. Unless expressly provided for elsewhere, these are the only channels provided for voice grade transmission. The various types of local channels which are offered for termination are provided on a customer premises as follows:

1. Type 311 - Furnished for two-point or multipoint voice transmission, Private Line voice or intercommunication line or supervisory control use. Signaling options required to arrange Type 311 for suitable signaling are provided in section 2 of this Tariff. Limited to five (5) local channels on multipoint service where two-way communication is required.
2. Type 312 - Furnished for off-premises main and extension stations associated with premises PBX (or similar) switching systems. Technical specifications are a two-wire interface with effective two-wire service components engineered for 1000Hz net loss of VLN +4dB.
3. Type 314 - Furnished for tie line use between two premises PBX (or similar) switching systems (314A).

(AT) (1) Obsolete-applicable to existing service installations at existing locations for existing customers.

2.2 DESCRIPTION OF SERVICES-(Continued)

DEC - 4 1980

2.2.3 Voice Grade Service-Series 300 and 400-(Continued)

B. Series 400 local channels are furnished for use as the customer elects and operate within certain technical specifications. The various types and the transmission characteristics of local channels which are offered for termination at a premises for connection to only customer-provided terminal equipment and systems (except as provided in Paragraph 2.1.5) are as set forth following:

1. Type 420 - A four-wire interface with four-wire facilities engineered for 1000 Hz net loss of 16 db. Normally suitable for use as a full duplex data channel.(1)

2. Type 422 - A two-wire interface with effective two-wire facilities engineered for a 1000 Hz net loss of 16 db. Normally suitable for use as a half duplex data channel.(1)

(AT) 3. Type 423 - A two-wire interface with effective two-wire facilities engineered for a 1000 Hz net loss of up to 10 db for Two-Point service and up to 20 db for Multi-Point service. Normally suitable for use as a voice channel.(1)

(C) 4. Type 424 - A four-wire interface with four-wire facilities engineered to 23 db net gain. Normally suitable for use as a tie line. Multi-Point service not available.

5. Type 425 - A four-wire interface with four-wire facilities engineered for a 1000 Hz net loss of 16 db. Normally suitable for use as a voice channel.

6. Type 428 - A two-wire interface with effective two-wire facilities engineered for a 1000 Hz net loss of 0 db to 3.5 db. Normally suitable for use as an off-premises station of less than 100 miles long. Multi-Point service is not available.

7. Type 434 - A two-wire interface with effective two-wire facilities engineered to VNL + 4 net loss. Normally suitable for use as an off-premises station greater than 100 miles but less than 1850 miles. Multi-Point service is not available.

2.2 DESCRIPTION OF SERVICES (cont'd)

2.2.3 Voice Grade Service-Series 300(1) and 400-(cont'd)

B. (cont'd)

Signaling options required to arrange Series 400 channels for suitable signaling are available at charges specified in Paragraph 2.2.15, following. The application of signaling options currently provided to arrange Series 400 on premises, same building and additional point of termination services has been obsoleted to existing installations at existing locations for existing customers.

Bridging charges, per channel bridged, apply when three or more voice grade channels are connected at the same location.

Customers must insure that neither direct transmitted signal nor reflected signal energy is allowed to violate interconnection protection criteria and regulations as set forth in Section 1.

Specifications of net loss (or gain) refer to the requirement of the total channel offering, not the individual local channel. Gains or losses present in CPE have not been included.

C. Parameters and Specifications

(AT) Parameters and specifications for two-point service used with Customer Premises Equipment (CPE) and station equipment are as follows: Speech application specifications and limits apply to all local channels except Types 420 and 422. Data application specifications and limits apply only to Types 420 and 422. DATAPHONE Select-a-Station (2) application, specifications and limits are provided in the appropriate Bell System Technical Reference Pub 41014 and apply only to Types 442 and 443.

- (AT) (1) Obsolete-applicable to existing service installations at existing locations for existing customers.
- (AT) (2) Obsolete – applicable to existing service installations at existing locations for existing customers until September 1, 2003 when the service will be completely withdrawn.

SERVICES AND RATES

2.2 DESCRIPTION OF SERVICES-(Continued)

(CP) 2.2.3 Voice Grade Service-Series 300(1) and 400-(Continued)

D. MultiPoint

(CP) The Telephone Company will provide bridging equipment in serving offices and primary serving offices to provide multipoint service. Bridging charges apply per channel (interoffice channel, local channel and inter-exchange channel) in offices where three or more channels are bridged. Bridging charges do not apply to Foreign Exchange, Foreign Serving Office and Types 312(1), 415, 417, 428, 442 and 443. See Paragraph 2.2.3, E.10. for intraLATA intraexchange charges and Paragraph 2.2.3, F.8. for intraLATA interexchange charges.

Standard bridging equipment for two-way communication between all points will be provided unless the customer specifies another fixed bridging arrangement.

The transmission parameters specified in Paragraph 2.2.3, C., preceding, are not applicable to multipoint service consisting of more than five points where local channels with two-wire service components and two-way communication are involved or more than 20 points otherwise.

(AT) (1) Obsolete-applicable to existing service installations at existing locations for existing customers.
