BEFORE THE PUBLIC SERVICE COMMISSION OF THE STATE OF MISSOURI

In the Matter of Staff's Investigation of Matters)	
Concerning the Rush Island Energy Center)	File No. EO-2022-0215
Belonging to Union Electric Company d/b/a)	
Ameren Missouri.		

AMEREN MISSOURI MONTHLY REPORT

COMES NOW Union Electric Company, d/b/a Ameren Missouri ("Ameren Missouri" or the "Company") and provides its monthly report on the Rush Island Energy Center ("Rush Island"), below.

1. On February 15, 2022, the Missouri Public Service Commission ("MPSC") issued an order in this docket requiring Ameren Missouri to file monthly reports on the status of the proceedings at the federal court as well as the status of its planning for the retirement of Rush Island. These reports are due on the 15th of each month.

United States District Court for the Eastern District of Missouri Update

2. On September 30, 2023, the District Court entered its order establishing a retirement date for the Rush Island Energy Center of October 15, 2024. On May 1, 2024, the Department of Justice and the Company submitted competing proposals for mitigation relief in the form of proposed orders. The Court has scheduled a hearing for July 25, 2024 to discuss various motions filed by the parties. A date for an evidentiary hearing has not been scheduled.

Proceedings at Federal Energy Regulatory Commission and at the Midcontinent Independent System Operator

3. On July 31, 2023, the Midcontinent Independent System Operator ("MISO") submitted for Commission approval a second System Support Resources ("SSR") agreement by and between MISO and Union Electric d/b/a Ameren Missouri ("Second SSR Agreement"). The Second SSR Agreement is similar to an initial SSR agreement approved by the Federal Energy

Regulatory Commission ("FERC") on October 24, 2022, and made effective September 1, 2022. As with the initial SSR agreement, a MISO operating guide details the specific triggers and conditions that will be and have been used for Rush Island's operations.

As MISO explains in its July 31, 2023, filing, none of the needed transmission upgrades will be in place before the end of the initial SSR agreement and the last will likely not be completed until sometime in 2025. MISO further explains that completion of the transmission projects will address the reliability issues that would result from unplanned outages (i.e. contingencies) and will maintain acceptable system performance within the applicable NERC and Transmission Owner planning criteria. FERC approved the Second SSR Agreement on September 29, 2023.

4. In June of 2024, Rush Island unit 1 operated for 103 hours, producing 38,166 MWhs of net generation. Rush Island unit 2 operated for 196 hours, producing 68,323 MWhs of net generation. Rush Island unit 1 experienced a failure of the 1B circulating water pump due to a ground fault in the motor on June 5, 2024. The unit was offline at the time of failure and there was no immediate impact on generation. Rush Island unit 1 remained available for an SSR start. The associated unit derate is determined by river temperature and level. If the river temperature is 89 degrees Fahrenheit, a derate of 118 megawatts would be expected. If the river temperature is 74 degrees Fahrenheit, a derate of only 50 megawatts would be expected. When the river temperature falls below 50 degrees Fahrenheit, expected this fall, no derate is expected. The Company has engaged MISO regarding repair considerations, given the variable derate amount and the short time remaining until expected retirement.

Rush Island Energy Center Retirement Planning Update

- 5. **Transmission Planning** As previously reported, the projects that must be completed as part of the Rush Island retirement are as follows:
 - Replacement of an existing transformer with a larger transformer at Ameren Missouri's Wildwood substation,
 - Installation of a capacitor bank at Ameren Missouri's Overton Substation,
 - Upgrade of the substation bus at Rush Island's switchyard, and
 - Installation of four Static Compensators (STATCOM) in and around the St. Louis region.
- 6. Also as reported previously, there are certain other projects to be completed to meet Ameren Missouri's local transmission planning criteria with the retirement of Rush Island, but the Rush Island retirement will be independent of these projects going into service:
 - Reconductoring 50 miles of conductor on the 345 kV Coffeen to Roxford transmission line,
 - Retap of the current transformers as well as installation of new metering equipment at the 138kV Hannibal West substation,
 - Raising two structures on the 138kV Neoga-Effingham Northwest transmission line and installing new shunts on the entire line, and
 - Constructing a new 138kV transmission line from Beehive to Dupo Ferry and expanding the capacity of the existing Ameren Illinois Dupo Ferry and Beehive substations to accommodate the new line.
 - 7. Progress on the required projects (listed in paragraph 5 above) is described below.
 - Installation of a larger transformer at Ameren Missouri's Wildwood substation is now complete.
 - Installation of a capacitor bank at Ameren Missouri's Overton Substation was completed in March 2024.
 - Upgrade bus conductor at Rush Island switchyard this project was completed in December 2023.
 - Installation of four STATCOMS in and around the St. Louis region the current schedule calls for three of the STATCOMs to be in-service by December of 2024. Construction is underway. The final STATCOM is planned to be in-service by June of 2025. Design is complete. Civil and electrical contractors have been selected. Construction began in April

- 2024. Ameren Missouri has secured accelerated STATCOM procurement, but the actual construction and delivery of the STATCOM devices is performed by Ameren Missouri's vendors.
- The required projects have all been approved by MISO. Ameren Missouri asked for some additional projects to be approved under MISO's expedited project review process. These additional projects have also been approved and will be incorporated into MTEP23 later this year.
- 8. **Operational Planning** Ameren Missouri started operating under the MISO SSR agreement and associated Operating Guide on September 1, 2022. Since the agreement began, the Rush Island SSR reliability commitments have been as expected, with the units only running during times of MISO need, mostly anticipated to be during summer or winter conditions. We have reduced our O&M and capital budgets for 2023-2025 to reflect that change. We have reached an agreement with the union that will govern how individuals are transferred to other energy centers. The transfers to other facilities will begin in June of this year, with the remainder occurring throughout the year. The plan is to retain approximately 30 employees at Rush Island for safe closure activities.
- 9. As Ameren Missouri has reported previously, the Company continues to work on multiple operational issues that will have to be addressed both during the transition and after retirement of the plant, including creating staffing plans, appropriately adjusting operations and maintenance expenditures and capital investment to reflect retirement of the plant, inspecting remaining inventory to see what is usable elsewhere, and making plans to leave equipment at the plant in safe condition (draining oil, water, etc.), to name a few. Ameren Missouri started with the shutdown plans it developed for the Meramec Energy Center and is modifying them for Rush Island.

WHEREFORE, Ameren Missouri requests the Missouri Public Service Commission accept this filing as compliant with the order to file monthly status reports.

Respectfully submitted,

/s/ William D. Holthaus, Jr.
