

ER-2024-0319

Brett Felber submits this application to intervene in the matter of ER-2024-0319.

While, Brett Felber is an individual and would be Pro Se, Brett Felber would be seeking to protect the best interest of Missourians in this matter and would protect Missourians from Ameren Missouri seeking a rate increase in this matter.

Brett Felber, submitted factual data in matter EF-2024-0021 that was moved into the comment section that predicted these rate hikes would occur upon the approval of Ameren Missouri seeking secure bonds to decommission the Rush Island nuclear plant.

Page four of Mr. Felbers, submission in EF-2024-0021, explains that the decommissioning and Ameren securing tariff bonds to close Rush Island would result in a substantial rate increase.

Ameren Missouri is now filing for a tariff increase that lines them up with the adjusted gross profit off Rush Island closure and bonds that would adjust the average Missourians rates anywhere from \$10-\$17 dollar per billing cycle.

In fact suggested data in Ameren's recent public filing might actually show that Ameren's supplied tariff increase is actually an increase to go towards their investors and upper management.

Data shows that the purchase cost of goods has actually gone down, instead of up like Ameren Missouri suggests.

Again, while Mr. Felber is an individual it is urgent that Mr. Felber be allowed to intervene in this matter, therefore he can ensure that Missourians themselves are protected from another unconstitutional rate hike at the disposal of Ameren Missouri's failures and failures to abide by State and Federal Statutes.
