(AT) OBSOLETE CENTREX SERVICE(1)

2.1 GENERAL REGULATIONS

2.1.1

The Telephone Company will provide, subject to the availability of facilities, Centrex Service which is an arrangement of exchange access switching equipment, attendant positions and other facilities in accordance with the provisions of this Tariff.

Facilities will be considered to be available if:

- Central office capacity is adequate to provide service to the customer without prematurely necessitating an addition in that central office, and
- Outside facilities exist so that major additions are not required in order to provide service to the customer.

At the customer's request, service may be provided if facilities are not available. If the requested service is provided, additional charges covering the costs incurred by the Company will apply based on the necessary additions.

The Telephone Company will determine and provide the necessary network access lines, switching equipment and other facilities required for exchange and other services furnished by the Telephone Company. Provision of optional features is limited to the capabilities of the serving office. Attendant positions and related equipment are rated separately.

2.1.2 Additional equipment or facilities required as a result of seasonal business requirements or for customer-owned facilities will be charged for on an individual-case basis.

2.1.3 The following terms as used in this Section apply to Centrex II and Centrex III Service and shall mean:

Primary Centrex location - Any customer location designated as the main service location. Attendant positions will normally be situated at the primary location. However, within transmission limitations, the attendant positions may be situated at a location other than the primary.

Secondary Centrex location - Customer location other than the primary, but is served by the same Centrex System as the primary.

Centrex station line - A main station line of the Centrex System which has full in-out dialing privileges and access to or from the attendant.

2.1 GENERAL REGULATIONS-(Continued)

2.1.13 The assignment of telephone numbers for Centrex Systems shall be in accordance with Section 17 of this Tariff.

2.1.14 When a customer requests a special service offering or modification of a standard service offering, it will be furnished whenever possible if not detrimental to any of the services or equipment of the Telephone Company. Such special service offering or modification of standard service offerings will be furnished at additional charges.

2.1.15 Private line charges as specified in Section 2 of the Private Line Service Tariff apply to station lines extending outside the same building or beyond the same premises at both primary and secondary locations. Such station lines must be provided from the location from which they are measured.

Customer locations meeting the minimum station line requirements for secondary location rate treatment, but served by switching equipment serving another primary or secondary location may be rated as secondary locations in lieu of mileage charges as specified above. Such locations must be in the same serving office area as the related primary or secondary and must be served by switching equipment located on Telephone Company premises.

Urban mileage charges for circuits extending beyond the base rate area apply at a primary location as specified in Section 12 of this Tariff. Such charges do not apply to secondary locations.

2.1.16 Mileage charges applicable to secondary locations are measured from the primary location. In the case of off-premises station lines, mileage is measured from either the primary or secondary location, whichever is closer, however, service must be provided from the location from which it is measured.

CENTREX SERVICE

JAN 20 1984

MISSOURI
Public Service Commission

2.1 GENERAL REGULATIONS-(Continued)

(AT) 2.1.21 Centrex II - The Exchange Access and Intercommunication station line charges are not offered separately. The rates specified herein for main station lines provide for a main station line component. The main station line consists of all facilities, including intercommunication and outside plant facilities from the Centrex System dial-switching equipment to the network interface located on the customer's premises at the point where the network cable terminates.(1)

(AT) Centrex III - A Centrex III main station line consists of all facilities including intercommunication and outside plant facilities from the Centrex System dial switching equipment to the network interface located on the customer's premises at the point where the network cable terminates.(1)

The rates and charges specified herein for fully restricted main station lines provide for a fully restricted main station line component. The fully restricted main station line consists of all facilities, including intercommunication and outside plant facilities from the Centrex System dial switching equipment to the network interface located on the customer's premises at the point where the network cable terminates.(1)

2.1.22 The customer may move Centrex Service within the same serving central office where facilities permit based on costs. The customer's contract is not affected.

2.1.23 Service and Equipment Charge of \$5.25 applies per change, per station, when providing or rearranging hunting; changing to or from restricted stations, nonrestricted stations or semi-restricted stations.

OBSOLETE CENTREX SERVICE(6)

2.3 STANDARD FEATURES

2.3.1 Centrex II and III Standard Features include: direct outward calling direct inward calling, station-to-station calling, station hunting, call transfer-attendant, restriction from outgoing calls, station restriction(3), reserve power, busy verifications, night service, identified outward calling, call interception, call transfer-individual, consultation hold, add-on and trunk answer from any station. (1)(2)(4)(5)

(C) Touch-Tone Calling is a standard feature of Centrex III service.

The station line rate does not include attendant positions and related equipment.

- (1) The reserve power feature provides an alternate independent source of power to maintain telephone service (excluding certain attendant supervisory functions and key telephone arrangements) during a commercial power failure. The Telephone Company agrees to make every reasonable effort to assure continued operation until such time as commercial power is restored.
- (2) Busy verification will be provided subject to the operating limitations of the equipment or facilities selected by the Telephone Company and provided no unusual expense is involved.
- (3) Does not include toll restriction.
- (4) Call transfer-individual, consultation hold and add-on will function only on an incoming call from the telecommunications network.
- (5) Add-on provided for a maximum of one additional station line being added at one time to an existing incoming call from the telecommunications network.
- (6) Available only to existing customer.

2.8 TERMINATION CHARGES AND CONTRACT TERM-(Continued)

2.8.1 (Continued)

D. Contract Conditions

1. Termination charges will apply for Centrex Service if discontinued or transferred to another address before the expiration of the initial contract period. Termination charges as set forth above shall be reduced by 1/36 for each month the service is retained in service at the same location.
2. Initial termination contract amounts are based on the one-year forecast of the workable station line capacity. Separate termination contracts are required as additional working station lines are connected and when the workable station line capacity exceeds the range of the present contract schedule. These termination contracts will be executed for the difference between the existing termination contract amount and the amount specified by the new contract schedule. Contracts will run concurrently until expired or terminated.
3. Termination charges will apply when a Centrex System is reduced to the extent that the workable station line capacity falls into the next lower range of the contract schedule and equipment is removed.
4. When facilities directly associated with the provision of Centrex Service are disconnected, which are covered by a Contract Term, applicable charges are determined on a last-in, first-out basis.

5. The customer will be given the choice of arranging for change in location on the same premises by one of the methods as shown in Section 19 of this Tariff and regardless of whether or not the initial contract period has expired.

6. Cancellation of Contract

Where the applicant cancels an application for service prior to start of engineering, manufacturing or installation work, no charge applies.

Where engineering, manufacturing or installation of facilities has been started prior to the cancellation, the charge specified below, whichever is lower, applies.

A charge equal to the estimated costs incurred in connection with such engineering, manufacturing or installation work, less estimated net salvage.

The charge for the minimum period of the service ordered by the customer as provided in this Tariff plus the full amount of any termination charges applicable.

7. The move of attendant consoles from the current primary location to a secondary location, thus making the secondary the new primary location by definition, does not constitute a termination of service. Charges for this type of move will be based on cost.

Footnotes:

- (1) See Sheet 28 for additional regulations applicable to Automatic Route Selection.
- (2) Applies per facility regardless of the number of patterns having access to that facility.
- (3) Applies in addition to standard rate for the facilities involved.
- (4) There is no Complex Installation/Move Charge for adding or deleting facilities used in the Automatic Route Selection feature other than those associated with the facility itself, unless it results in the addition or deletion of a route.
- (5) The number and type of patterns is determined by the customer.
- (6) If Toll Restricted or Toll Diverted stations access patterns described in Paragraph 2.9.1, A.1.a. or A.2.a., they should be charged for as stated in either Paragraph 2.9.1, A.1.b. or A.2.b., respectively.
- (7) If these changes result in a change in screening, it should be considered as a new pattern, and normal installation charges apply.
- (8) This charge applies to each NPA translated where Central Office Code translation is required for more than one NPA per single facility group or route.
- (9) The Service and Equipment Charges for Optional Features apply only to changes and additions to existing systems.
- (10) A Service Establishment Charge of \$1,650.00 applies.
- (11) Available only to existing customer.

(AT) OBSOLETE CENTREX SERVICE(1)

2.9 OPTIONAL FEATURES-(Continued)

2.9.1 Centrex Optional Features-(Continued)

Automatic Route Selection-(Continued)

Definitions for terms used in this Tariff are as follows:

CODE - is either the Numbering Plan Area (NPA) Code or Central Office (NNX) Code of the dialed telephone number. In 312-555-1212, 312 is the Numbering Plan Area Code and 555 is the Central Office Code.

FACILITY - denotes a specific FX, CCSA - Off-Net, WATS, Tie Line or OCC access line compatible with Automatic Route Selection and has senderized operation and uniform numbering that is consistent with the Message Telecommunications Network.

ROUTE - refers to an access path group of like facilities which are used to complete seven- or 10-digit calls between the same points. Examples of facility groups would be seven FX trunks to Chicago or one Band 5 WATS. A route may be used in one or more patterns.

ROUTE SELECTION PATTERN - is a group of up to four (4) routes arranged in a sequence determined by the customer.

SCREENING - is a process of scanning over Numbering Plan Area Codes (NPA screening) or over Numbering Plan Area and Central Office Codes (NPA/NNX screening). NPA screening also provides scanning over those NNX codes which are in the home NPA.

Regulations

All route and pattern assignments will be designated by the customer. The customer is responsible for notifying the Telephone Company of any changes required in his Automatic Route Selection feature.

All rates and charges for Automatic Route Selection are in addition to the rates and charges for the associated facilities. OCC services may be terminated in Automatic Route Selection by the use of the universal tie line terminal at applicable Tariff rates in addition to the Automatic Route Selection rates and charges.

(AT) (1) Available only to existing customer.

No supplement to this tariff will be issued except for the purpose of canceling this tariff.

Patterns without final route to the Telecommunications Network may be offered only if a customer subscribes to a sufficient number of facilities which in the judgment of the Telephone Company provide an adequate level of service so as to avoid interfering with the service of others or to prevent others from making or receiving calls.

The Telephone Company is not responsible for notifying the customer of new codes or changes in any local calling rates.

A pattern may have overflow to tone or overflow to the Telecommunications Network but not to both.

Where Central Office Code translation is required for more than one NPA per single facility group or route, rates and charges as specified in Paragraph 2.9.1, A.1.a. and b. apply.

Automatic Route Selection is a call routing capability in which all codes must be routed. Code blocking is not provided.

2.9 OPTIONAL FEATURES-(Continued)

2.9.1 Centrex Optional Features-(Continued)

Footnotes:

- (1) When Call Forwarding - Busy Line and Don't Answer are provided on the same station, both must forward to the same address (either station line or attendant).
- (2) The customer must specify whether he wants Centrex intercom calls to be forwarded in addition to incoming calls.
- (3) Applies on initial installations and subsequent operational changes. Examples are: change of the forwarding address, change from DID only to DID and intercom.
- (4) A maximum of \$4.00 applies per station line when installing any three or fraction thereof noted optional features with the initial installation of the station line or on subsequent additions of these features to an existing station line.
- (5) These features are provided as a group per station line equipped; however, a station line must be equipped for Call Hold before it can be equipped for Call Pickup. When one station line in a Dial Pickup group is equipped for Call Pickup, all station lines in that same group are automatically equipped with the same feature; therefore, the above rate and Complex Installation/Move Charge will apply to each station line in the Dial Pickup group.
- (6) This feature is available to all station lines in a system and is provided only on a system basis.
- (7) This feature and rate includes Call Waiting - Terminating.
- (8) This Complex Installation/Move Charge applies only when the station line has not been previously equipped with Call Waiting -Terminating.
- (9) Complex Installation/Move Charge applies only to each Circle Hunt group established, not to each terminal within that group.
- (10) Regulations covering the provisions of this service are applicable as provided in Section 4 of this Tariff.
- (11) This is a station line controlled conferencing arrangement. This conferencing equipment provides for the simultaneous connection of several Centrex station lines on the same premises. Connection of lines, other than as stated above, is subject to the limitations of the equipment, and where such equipment can be connected to Telephone Company Exchange Service, Private Line Service or Long Distance Message Telecommunications Service, the responsibility of the Telephone Company shall be limited to the furnishing of facilities suitable for Exchange Service, Private Line Service or Long Distance Message Telecommunications Service and to the maintenance and operation of such facilities in a manner proper for such service.

(AT) OBSOLETE CENTREX SERVICE(1)

2.9 OPTIONAL FEATURES-(Continued)

2.9.1 Centrex Optional Features-(Continued)

Electronic Tandem Switching-(Continued)

B. Regulations-(Continued)

1. Explanation of Terms-(Continued)

b. Automatic Route Selection - Deluxe (ARS-D)

ARS-D provides for the origination of only ten-digit off-network calls to a public network telephone number, after the Centrex ARS-D access code, (e.g., "8"), automatically scans the digits and selects a first choice completing route when available, or subsequent route if the first choice route is not available. Routes may include Foreign Exchange Trunk lines, Wide Area Telecommunications Service lines, exchange trunk lines to the toll network and access lines to Common Control Switching Arrangements or other arrangements where compatible with senderized operation and uniform numbering.

The final completing route may be the toll network or, at the option of the customer, the call attempt is routed to overflow tone if a Facilities Restriction Level (FRL) is insufficient to complete the call.

When ARS-D is provided in conjunction with Uniform Numbering/Automatic Alternate Routing (UN/AAR), incoming tie lines from other Centrex or PBX Systems connected directly to the Centrex System may be arranged to have automatic access to the ARS-D and UN/AAR features. When such arrangements are provided, the tie lines to the ARS-D become "dedicated" tie lines and separate tie lines are required from the distant Centrex or PBX System if access is to be provided to other Centrex functions at the ARS-D equipped Centrex System. In addition, when ARS-D is provided in conjunction with UN/AAR, routes may include tie lines to a distant Centrex or PBX System equipped with an ARS-D like capability for subsequent access to the toll network.

(AT) (1) Available only to existing customer.

Electronic Tandem Switching-(Continued)

B. Regulations-(Continued)

1. Explanation of Terms-(Continued)

b. Automatic Route Selection - Deluxe (ARS-D)

ARS-D provides for the origination of only ten-digit off-network calls to a public network telephone number, after the Centrex ARS-D access code, (e.g., "8"), automatically scans the digits and selects a first choice completing route when available, or subsequent route if the first choice route is not available. Routes may include Foreign Exchange Trunk lines, Wide Area Telecommunications Service lines, exchange trunk lines to the toll network and access lines to Common Control Switching Arrangements or other arrangements where compatible with senderized operation and uniform numbering.

The final completing route may be the toll network or, at the option of the customer, the call attempt is routed to overflow tone if a Facilities Restriction Level (FRL) is insufficient to complete the call.

When ARS-D is provided in conjunction with Uniform Numbering/ Automatic Alternate Routing (UN/AAR), incoming tie lines from other Centrex or PBX Systems connected directly to the Centrex System may be arranged to have automatic access to the ARS-D and UN/AAR features. When such arrangements are provided, the tie lines to the ARS-D become "dedicated" tie lines and separate tie lines are required from the distant Centrex or PBX System if access is to be provided to other Centrex functions at the ARS-D equipped Centrex System. In addition, when ARS-D is provided in conjunction with UN/AAR, routes may include tie lines to a distant Centrex or PBX System equipped with an ARS-D like capability for subsequent access to the toll network.

2.9.1 Centrex Optional Features-(Continued)

Electronic Tandem Switching-(Continued)

B. Regulations-(Continued)

1. Explanation of Terms-(Continued)

b. Automatic Route Selection - Deluxe (ARS-D)-(Continued)

The ARS-D feature provides all number translation and supervision necessary to route the call. "More Expensive Route" (MER) Tone is supplied, at the option of the customer, as a function of the route selected for a particular call.

Time-of-Day (TOD) Routing is an ARS-D option which permits pre-programmed selection of alternate routing pattern groups for off-network calls (up to three sets of ARS-D routing pattern groups) on a time-of-day and day-of-week basis. Manual override is available with the Facility Administration and Control feature. The maximum number of programmed changes per week is 16.

c. Facilities Restriction Levels (FRL)

FRL is required in connection with ARS-D and is provided on each station and incoming or two-way tie line to determine both the types of calls and types of facilities within the privileges of the associated user. When the FRL is transmitted over a tie line to a distant PBX or Centrex System equipped with ARS-D (for call screening at the distant point), it is identified as a Traveling Class Mark (TCM).

Authorization Codes are an FRL option which provide for a station user to dial a code which overrides the FRL associated with that station line or incoming tie line. The Centrex requests dialing of the authorization code when the default FRL (i.e., the FRL associated with the station line or incoming tie line) has insufficient privileges to complete the call. The Authorization Code is also inspected for validity as a security check. The Authorization Code is recorded in the Station Message Detail Recording to Premises record of the call when the SMDR-P feature is provided.

d. Deluxe Queuing

Deluxe Queuing permits station users to be placed in a queue whenever the first choice route for completing a particular call is already in use. Two queuing arrangements are available:

- A Ring-back Queue (RBQ), in which case the calling station goes on-hook and is called back when a facility becomes available.
- An Off-hook Queue (OHQ), in which case the calling station remains off-hook and is held in queue until a facility becomes available.

Calls held in queue beyond a predetermined time limit will be removed from the queue and be routed, at the option of the customer, via either subsequent route choices or to overflow tone.

e. Station Message Detail Recording to Premises (SMDR-P)

SMDR-P provides a record on magnetic tape equipment located at the customer's premises of calls originating from Centrex station lines to locations outside the same Centrex System. Facility groups may also be designated as requiring originating and/or terminating records.

Calls held in queue beyond a predetermined time limit will be removed from the queue and be routed, at the option of the customer, via either subsequent route choices or to overflow tone.

e. Station Message Detail Recording to Premises (SMDR-P)

SMDR-P provides a record on magnetic tape equipment located at the customer's premises of calls originating from Centrex station lines to locations outside the same Centrex System. Facility groups may also be designated as requiring originating and/or terminating records.

Account Codes are an SMDR-P option which permit a station user to dial a series of digits (code) which will appear in the SMDR-P record for that particular call. The Account Code can be used by the customer for account or project identification. Adding an Account Code to a call, where arrangements have been made to provide this capability, is at the discretion of the station user. Each customer's Account Codes must contain the same number of digits, not to exceed eight, and must not conflict with on-network code assignments.

f. Facilities Administration and Control

Facilities Administration and Control permits customer control of parameters which determine user calling privileges, i.e., Authorization Code and associated FRL. In addition, FRL associated with stations, tie lines and Authorization Codes may be collectively upgraded or downgraded by invoking a predetermined set of FRL's identified as Controlled Alternate FRL's. Manual control (override) to TOD pattern groups and activation or deactivation of queuing is also provided.

g. Traffic Data to Customer (Pollable)

Traffic Data to Customer (Pollable) permits the customer to poll the switching equipment on a daily or hourly basis to obtain certain traffic measurements. Equipment must be provided at the customer's premises to record the traffic data.

Facility Assurance Reports (FAR) provide the customer the ability to obtain automatic circuit assurance data via the same equipment utilized to record traffic data. FAR includes, for example, the identity of facilities not accessed or facilities constantly off-hook during a specified period of time.

h. Uniform Numbering/Automatic Alternate Routing (UN/AAR)

UN permits station users to place calls via tie lines using a uniform dialing plan. The user dials an access code followed by a seven-digit number which uniquely identifies a specific on-network station line. The number consists of a three-digit location code and a four-digit station line code. (When the same access code is followed by a ten-digit public network number, the call is routed via the ARS-D feature.) The feature provides the number translation and supervision necessary to route the call.

AAR provides automatic routing of on-network calls to alternate tie line routes when primary tie line routes are busy.

Automatic Overflow to DDD provides completion of on-network calls via the toll network when all primary and alternate tie line routes are busy.
