

White River's Previous Elec. Service to Property – DR 7.0 Ex. 206

REQ: Please provide a description of electric service that was previously provided to the property located at the southwest corner of US Highway 65 and State Highway F near Ozark, MO including what is referenced in Paragraph 9 of the Company Response to the Application.

White River Valley Electric Cooperative built a single-phase line across this property in 1978. We then provided electric service from 1983 through 1994 to a permanent structure (house) and well on this property. It was a standard electric service with a primary voltage of 7.62 kV and 120/240 volt secondary. Our line, transformer, and meter loop are still present on the property. On information and belief, the home on the property has been demolished.
