OF

ANNE E. ROSS

MISSOURI GAS ENERGY

CASE NO. GR-2009-0355

Jefferson City, Missouri

October 2009

Staff Exhibit No. 64
Case No(s). GR-2009-0355
Date 10-26-09 Rptr KE

**BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF MISSOURI**

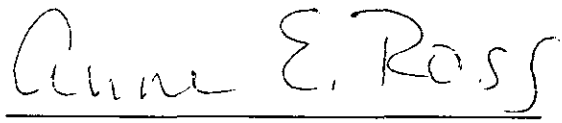

In the Matter of Missouri Gas Energy and)
Its Tariff Filing to Implement a General)
Rate Increase for Natural Gas Service)

Case No. GR-2009-0355

AFFIDAVIT OF ANNE E. ROSS

STATE OF MISSOURI)
) ss
COUNTY OF COLE)

Anne E. Ross, of lawful age, on her oath states: that she has participated in the preparation of the following Surrebuttal Testimony in question and answer form, consisting of 5 pages of Surrebuttal Testimony to be presented in the above case, that the answers in the following Surrebuttal Testimony were given by her; that she has knowledge of the matters set forth in such answers; and that such matters are true to the best of her knowledge and belief.

Anne E. Ross

Subscribed and sworn to before me this 14th day of October, 2009.

SUSAN L. SUNDERMEYER

SURREBUTTAL TESTIMONY

OF

ANNE E. ROSS

MISSOURI GAS ENERGY

CASE NO. GR-2009-0355

13 Q. Please state your name and business address.

14 A. My name is Anne E. Ross and my business address is Missouri Public
15 Service Commission, P. O. Box 360, Jefferson City, Missouri, 65102.

16 Q. Are you the same Anne E. Ross that contributed to the Staff Revenue
17 Report (Staff Revenue Requirement Report) filed August 21, 2009, the Staff Cost-of-
18 Service and Rate Design Report (Staff COS Report) filed on September 3, 2009, and filed
19 Rebuttal Testimony on September 25, 2009?

20 A. I am.

21 **1. Rate Design**

22 Q. On pages 12 and 13 of her rebuttal testimony, Ms. Meisenheimer
23 compares a seasonal rate differential with a flat volumetric rate, and makes the claim that
24 the two different rate designs "achieve a similar outcome." What are your comments
25 regarding this comparison?

26 A. In some situations, the two rate designs will produce a similar result, but
27 for completely different reasons. In other situations, the two rate designs will produce
28 different results. The traditional rate design that The Office of Public Council (OPC)
29 supports for residential customers is different than the seasonal rate design that Mr.
Johnstone is advocating for his customers; in fact, Mr. Johnstone argues against the Large

Surrebuttal Testimony of
Anne E. Ross

1 Volume Service (LVS) customers having a rate design similar to the traditional
2 Residential rate design.

3 Q. How does a traditional rate design impact a customer's bill?

4 Q. With a traditional rate design, the amount the customer pays depends
5 entirely on the amount they use. Their pattern of usage does not matter, as the rate is the
6 same year round.

7 Q. How does a seasonally differentiated rate design impact a customer's bill?

8 A. With a seasonal differential, the amount of gas a customer consumes
9 impacts the bill, as each unit of usage is multiplied times some per-unit rate. In addition,
10 the customer's *pattern* of usage affects the bill, since the per-unit rate is different in the
11 winter vs. non-winter months.

12 The two rate designs will result in higher winter bills if the customer has more
13 usage in the winter than in the non-winter months. If the customer's usage is higher
14 during the non-winter months, the two rate designs will produce opposite results.

15 Q. Ms. Meisenheimer notes a measure of demand is used to allocate some of
16 Missouri Gas Energy (MGE or Company) costs between its customer classes, then relies
17 on that to support *intra*-class subsidies based on usage. (Meisenheimer, Rebuttal, page
18 13, lines 1-5) Do you agree with this approach?

19 A. No. The goal of establishing reasonably homogeneous classes of
20 customers is to limit both inter- and intra- class subsidies. Allocators such as coincident
21 or non-coincident demand are appropriate to use to allocate costs between customer
22 classes, but not within rate classes. To the greatest extent possible, rate classes are
23 composed of customers who are similar in terms of size and usage patterns. As

Surrebuttal Testimony of
Anne E. Ross

1 customers become larger and more diverse, it becomes more difficult to group them
2 according to similar size and usage patterns. These more diverse customers are placed in
3 larger, less homogeneous groups, and rates are designed in a more complex manner. For
4 example, when customers within a class have very different levels of demand, to
5 eliminate subsidies, this might be reflected by using a Demand Charge to collect some of
6 the class' revenues.

7 The difference in demand for a majority of residential customers is a few
8 hundred Ccfs, while the difference in demand for the LVS customers can be as much as
9 50,000 Ccfs.

10 The difference between two individual Residential or two Small General
11 Service (SGS) customers' size and/or usage patterns is comparatively small. In the past
12 we have not attempted to include a demand component in rate design for these customers,
13 and do not propose one in this case.

14 Q. Does any Missouri Local Distribution Company (LDC) have a demand
15 charge for its residential or SGS customers?

16 A. No.

17 Q. Ms. Meisenheimer (Rebuttal, page 17, lines 9-10) states that under the
18 straight fixed variable (SFV) rate design "low use customers pay substantially more
19 whether or not they need the same level of service" as high use customers. What are your
20 comments on this statement?

21 A. There is only one level of service for residential customers - access to the
22 natural gas distribution system. This service allows a residential customer to consume the

Surrebuttal Testimony of
Anne E. Ross

1 amount of natural gas that they wish and to consume it whenever they wish, and provides
2 the billing and customer service for the commodity.

3 The factor that differs among Residential customers is the actual amount of gas
4 used, and the charge for that is collected in the variable portion of SFV which is the
5 amount of gas consumed.

6 Q. Do you have any clarifications regarding your rebuttal testimony
7 regarding MGE's energy efficiency program?

8 A. Yes. On page five of my rebuttal testimony, I stated that "...a single
9 [collaborative] member's opposition would stop a program and this led to gridlock."
10 During the collaborative process, I do not specifically recall a single member stopping a
11 program by objecting to it. However, with unanimous consent required, this result is not
12 an impossibility.

13 This statement should have read "...a single [collaborative] member's opposition
14 could prevent recommended changes from being implemented, and this could lead to
15 gridlock."

16 Q. Do you have any comments on OPC witness Ryan Kind's testimony?

17 A. I do. I would like to point out that, while Mr. Kind claims that "...MGE
18 has experienced a great amount of difficulty in designing and delivering energy
19 efficiency programs to its residential customer over the last couple of years," (Kind,
20 Rebuttal, p. 2, lines 14-15, he does not include the other decision-making members of the
21 collaborative – OPC, Department of Natural Resources (DNR) and Staff.

22 Q. Why is it appropriate that all participants be recognized when discussing
23 the results of MGE's efficiency programs?

Surrebuttal Testimony of
Anne E. Ross

1 A. MGE's proposals could be blocked by any other member since decisions
2 had to be unanimous or programs could not be implemented.

3 Q. How are the other collaborative groups set up?

4 A. With the exception of the Atmos Natural Gas collaborative, the
5 stakeholders in energy efficiency collaborative do not have veto capability in
6 collaborative decisions; rather, their role is advisory. Limiting stakeholders to an
7 advisory role will avoid a potential conflict in interest when Staff, OPC or DNR must
8 subsequently critique programs they had discretionary control in setting up.

9 As recommended in Staff witness Dr. Henry Warren's rebuttal testimony, Staff
10 believes that this group should be advisory.

11 Q. Does this conclude your surrebuttal testimony?

12 A. Yes, it does.
