**FILE NO. GR-2024-0369**

---

**DIRECT TESTIMONY OF**  
**JOHN J. SPANOS**  
**ON BEHALF OF**  
**AMEREN MISSOURI**

---

**Camp Hill, Pennsylvania**

**September, 2024**

**JOHN J. SPANOS DIRECT**

## **TABLE OF CONTENTS**

|                                   | <b><u>PAGE</u></b> |
|-----------------------------------|--------------------|
| I. INTRODUCTION AND PURPOSE ..... | - 1 -              |
| II. DEPRECIATION STUDY .....      | - 3 -              |

1                           **I.        INTRODUCTION AND PURPOSE**

2   **Q.    PLEASE STATE YOUR NAME AND ADDRESS.**

3   A.   My name is John J. Spanos. My business address is 207 Senate Avenue, Camp Hill,  
4                           Pennsylvania.

5   **Q.    ARE YOU ASSOCIATED WITH ANY FIRM?**

6   A.   Yes. I am associated with the firm of Gannett Fleming Valuation and Rate  
7                           Consultants, LLC (“Gannett Fleming”).

8   **Q.    HOW LONG HAVE YOU BEEN ASSOCIATED WITH GANNETT  
9                           FLEMING?**

10   A.   I have been associated with the firm since June, 1986.

11   **Q.    WHAT IS YOUR POSITION WITH THE FIRM?**

12   A.   I am President.

13   **Q.    ON WHOSE BEHALF ARE YOU TESTIFYING IN THIS CASE?**

14   A.   I am testifying on behalf of Ameren Missouri (“Ameren Missouri” or the “Company”).

15   **Q.    PLEASE STATE YOUR QUALIFICATIONS.**

16   A.   I have over 38 years of utility depreciation experience, which includes providing  
17                           expert testimony in more than 470 cases before approximately 46 regulatory  
18                           commissions, including this Commission. These cases have included depreciation  
19                           studies in the electric, gas, water, wastewater and pipeline industries. In addition to  
20                           the cases where I have submitted testimony, I have supervised over 900 other  
21                           depreciation or valuation assignments. Please refer to Schedule JJS-D1 for my  
22                           qualifications statement, which includes further information regarding my work  
23                           history, case experience and leadership in the Society of Depreciation Professionals.

1 Q. WHAT IS THE PURPOSE OF YOUR TESTIMONY IN THIS  
2 PROCEEDING?

3 A. I sponsor the depreciation study performed for Ameren Missouri attached hereto as  
4 Schedule JJS-D2 (“Depreciation Study”). The study was conducted by me and by  
5 others working for me under my direction and control. The Depreciation Study sets  
6 forth the calculated annual depreciation accrual rates by account as of December 31,  
7 2023. The proposed rates appropriately reflect the rates at which Ameren Missouri’s  
8 assets should be depreciated over their useful lives and are based on the most  
9 commonly used methods and procedures for determining depreciation rates.

10 Q. CAN YOU SUMMARIZE THE IMPACT ON DEPRECIATION RATES  
11 BASED ON THE DEPRECIATION STUDY?

12 A. Yes. The table below sets forth a comparison of a) the current depreciation rates and  
13 resultant expense to b) the proposed depreciation rates and expense by function as of  
14 December 31, 2023.

| <u>Function</u> | Current      |                             | Proposed     |                |
|-----------------|--------------|-----------------------------|--------------|----------------|
|                 | <u>Rates</u> | <u>Proforma<br/>Expense</u> | <u>Rates</u> | <u>Expense</u> |
| Transmission    | 1.38         | 115,052                     | 1.37         | 114,386        |
| Distribution    | 1.73         | 10,639,746                  | 1.74         | 10,681,280     |
| General         | 5.49         | 2,896,248                   | 5.56         | 2,933,206      |
| Total           | 2.02         | \$13,651,046                | 2.03         | \$13,728,872   |

15 Q. CAN YOU EXPLAIN SOME OF THE MAJOR FACTORS THAT CAUSED  
16 THE CHANGES IN DEPRECIATION RATES?

17 A. Yes, however, the overall expense did not change much since the last study. The most  
18 significant change since the previous depreciation study submitted in 2021 is related

1 to the longer service life for Accounts 378.00 and 379.00 which resulted in a decrease  
2 in depreciation expense. The Company also began installing AMI modules to meters  
3 in their system, so there is a new subaccount related to those assets that was not in the  
4 prior depreciation study which increases depreciation expense. The increase in  
5 general plant was due mostly to a change in overall life cycle for Account 392.00  
6 Transportation Equipment.

## **II. DEPRECIATION STUDY**

**8 Q. PLEASE DEFINE THE CONCEPT OF DEPRECIATION.**

9      A. Depreciation refers to the loss in service value not restored by current maintenance,  
10     incurred in connection with the consumption or prospective retirement of utility plant  
11     in the course of service from causes which are known to be in current operation and  
12     against which the Company is not protected by insurance. Among the causes to be  
13     given consideration are wear and tear, decay, action of the elements, inadequacy,  
14     obsolescence, changes in the art, changes in demand, and the requirements of public  
15     authorities.

16 Q. DID YOU PREPARE THE DEPRECIATION STUDY TO BE SUBMITTED BY  
17 AMEREN MISSOURI TO THE COMMISSION'S STAFF AND THE OFFICE  
18 OF THE PUBLIC COUNSEL IN ACCORDANCE WITH THE  
19 COMMISSION'S RULES?

20 A. Yes. I prepared the depreciation study submitted by Ameren Missouri. My report  
21 which as noted is attached to this testimony as Schedule JJS-D2, is entitled: "2023  
22 Depreciation Study - Calculated Annual Depreciation Accruals Related to Gas Plant

1       as of December 31, 2023.” This report sets forth the results of my depreciation study  
2       for Ameren Missouri.

3   **Q. IN PREPARING THE DEPRECIATION STUDY, DID YOU FOLLOW**  
4   **GENERALLY ACCEPTED PRACTICES IN THE FIELD OF**  
5   **DEPRECIATION VALUATION?**

6   A. Yes.

7   **Q. ARE THE METHODS AND PROCEDURES OF THIS DEPRECIATION**  
8   **STUDY CONSISTENT WITH PAST PRACTICES?**

9   A. The methods and procedures of this study are the same as those utilized in the last  
10      study for this Company as well as others before this Commission. Depreciation rates  
11      are determined based on the average service life procedure and the remaining life  
12      method.

13   **Q. PLEASE DESCRIBE THE CONTENTS OF YOUR REPORT.**

14   A. My report is presented in nine parts. Part I, Introduction, presents the scope and basis  
15      for the depreciation study. Part II, Estimation of Survivor Curves, includes  
16      descriptions of the methodology of estimating survivor curves. Parts III and IV set  
17      forth the analysis for determining life and net salvage estimation. Part V, Calculation  
18      of Annual and Accrued Depreciation, includes the concepts of depreciation and  
19      amortization using the remaining life. Part VI, Results of Study, presents a description  
20      of the results and a summary of the depreciation calculations. Parts VII, VIII and IX  
21      include graphs and tables that relate to the service life and net salvage analyses, and  
22      the detailed depreciation calculations.

1                   The table on page VI-4 presents the estimated survivor curve, the net salvage  
2                   percent, the original cost as of December 31, 2023, the book depreciation reserve and  
3                   the calculated annual depreciation accrual and rate for each account or subaccount.  
4                   The section beginning on page VII-2 presents the results of the retirement rate analyses  
5                   prepared as the historical bases for the service life estimates. The section beginning  
6                   on page VIII-2 presents the results of the net salvage analysis. The section beginning  
7                   on page IX-2 presents the depreciation calculations related to surviving original cost  
8                   as of December 31, 2023.

9           **Q. PLEASE EXPLAIN HOW YOU PERFORMED YOUR DEPRECIATION  
10                  STUDY.**

11          A. I used the straight line remaining life method of depreciation, with the average service  
12               life procedure. The annual depreciation is based on a method of depreciation  
13               accounting that seeks to distribute the unrecovered cost of fixed capital assets over the  
14               estimated remaining useful life of each unit, or group of assets, in a systematic and  
15               reasonable manner.

16                   For General Plant Accounts 391.0, 391.2, 394, 395, 397 and 398, I used the  
17               straight line remaining life method of amortization. The account numbers identified  
18               throughout my testimony represent those in effect as of December 31, 2023. The  
19               annual amortization is based on amortization accounting that distributes the  
20               unrecovered cost of fixed capital assets over the remaining amortization period  
21               selected for each account and vintage.

22          **Q. HOW DID YOU DETERMINE THE RECOMMENDED ANNUAL  
23                  DEPRECIATION ACCRUAL RATES?**

1     A. I did this in two phases. In the first phase, I estimated the service life and net salvage  
2           characteristics for each depreciable group, that is, each plant account or subaccount  
3           identified as having similar characteristics. In the second phase, I calculated the  
4           composite remaining lives and annual depreciation accrual rates based on the service  
5           life and net salvage estimates determined in the first phase.

6     **Q. PLEASE DESCRIBE THE FIRST PHASE OF THE DEPRECIATION STUDY,  
7           IN WHICH YOU ESTIMATED THE SERVICE LIFE AND NET SALVAGE  
8           CHARACTERISTICS FOR EACH DEPRECIABLE GROUP.**

9     A. The service life and net salvage study consisted of compiling historical data from  
10          records related to Ameren Missouri's plant; analyzing these data to obtain historical  
11          trends of survivor characteristics; obtaining supplementary information from  
12          management and operating personnel concerning practices and plans as they relate to  
13          plant operations; and interpreting the above data and the estimates used by other gas  
14          utilities to form judgments of average service life and net salvage characteristics.

15    **Q. WHAT HISTORICAL DATA DID YOU ANALYZE FOR THE PURPOSE OF  
16          ESTIMATING SERVICE LIFE CHARACTERISTICS?**

17    A. Generally speaking, I analyzed the Company's accounting entries that recorded plant  
18          transactions during the period 1931 through 2023. The transactions included  
19          additions, retirements, transfers, sales and the related balances.

20    **Q. WHAT METHOD DID YOU USE TO ANALYZE THESE SERVICE LIFE  
21          DATA?**

22    A. I used the retirement rate method. This is the most appropriate method when  
23          retirement data covering a long period of time is available because this method

1       determines the average rates of retirement actually experienced by the Company  
2       during the period of time covered by the depreciation study.

3   **Q. PLEASE DESCRIBE HOW YOU USED THE RETIREMENT RATE**  
4   **METHOD TO ANALYZE AMEREN MISSOURI'S SERVICE LIFE DATA.**

5   A. I applied the retirement rate analysis to each different group of property in the study.  
6       For each property group, I used the retirement rate data to form a life table which,  
7       when plotted, shows an original survivor curve for that property group. Each original  
8       survivor curve represents the average survivor pattern experienced by the several  
9       vintage groups during the experience band studied. The survivor patterns do not  
10      necessarily describe the life characteristics of the property group; therefore,  
11      interpretation of the original survivor curves is required in order to use them as valid  
12      considerations in estimating service life. The Iowa-type survivor curves were used to  
13      perform these interpretations.

14   **Q. WHAT IS AN "IOWA-TYPE SURVIVOR CURVE" AND HOW DID YOU USE**  
15   **SUCH CURVES TO ESTIMATE THE SERVICE LIFE CHARACTERISTICS**  
16   **FOR EACH PROPERTY GROUP?**

17   A. Iowa-type curves are a widely-used group of survivor curves that contain the range of  
18       survivor characteristics usually experienced by utilities and other industrial  
19       companies. The Iowa curves were developed at the Iowa State College Engineering  
20       Experiment Station through an extensive process of observing and classifying the ages  
21       at which various types of property used by utilities and other industrial companies had  
22       been retired.

1           Iowa-type curves are used to smooth and extrapolate original survivor curves  
2       determined by the retirement rate method. The Iowa curves and truncated Iowa curves  
3       were used in this study to describe the forecasted rates of retirement based on the  
4       observed rates of retirement and the outlook for future retirements.

5           The estimated survivor curve designations for each depreciable property group  
6       indicate the average service life, the family within the Iowa system to which the  
7       property group belongs, and the relative height of the mode. For example, the Iowa  
8       60-R2.5 indicates an average service life of sixty years; a right-moded, or R, type  
9       curve (the mode occurs after average life for right-moded curves); and a moderate  
10      height, 2.5, for the mode (possible modes for R type curves range from 0.5 to 5).

11     **Q. WERE AMEREN MISSOURI'S PLANT AND EQUIPMENT PHYSICALLY  
12     OBSERVED AS PART OF YOUR DEPRECIATION STUDY?**

13     A. Yes. My team made field reviews of Ameren Missouri's property during July 2024  
14     to observe representative portions of plant. Also, my team conducted a field visit in a  
15     previous study during March 2014. Field reviews are conducted to become familiar  
16     with Company operations and to obtain an understanding of the function of the plant  
17     and information with respect to the reasons for past retirements and the expected future  
18     causes of retirements. This knowledge, as well as information from other discussions  
19     with management, was incorporated in the interpretation and extrapolation of the  
20     statistical analyses.

21     **Q. WOULD YOU EXPLAIN THE CONCEPT OF "NET SALVAGE"?**

22     A. Net salvage is a component of the service value of capital assets that is reflected in  
23     depreciation rates. The service value of an asset is its original cost less its net salvage.

1 Net salvage is the salvage value received for the asset upon retirement less the cost to  
2 retire the asset. When the cost to retire exceeds the salvage value, the result is negative  
3 net salvage.

4 Inasmuch as depreciation expense is the loss in service value of an asset during  
5 a defined period, e.g., one year, it must include a ratable portion of both the original  
6 cost and the net salvage. That is, the net salvage related to an asset should be  
7 incorporated in the cost of service during the same period as its original cost so that  
8 customers receiving service from the asset pay rates that include a portion of both  
9 elements of the asset's service value, the original cost and the net salvage value.

10 For example, the full recovery of the service value of a \$20,000 regulator  
11 includes not only the \$20,000 of original cost, but also, on average, \$2,200 to remove  
12 the regulator at the end of its life and \$200 in salvage value. In this example, the net  
13 salvage component is negative \$2,000 (\$200 - \$2,200), and the net salvage percent is  
14 negative 10%  $((\$200 - \$2,200)/\$20,000)$ .

15 **Q. PLEASE DESCRIBE HOW YOU ESTIMATED NET SALVAGE  
16 PERCENTAGES.**

17 A. I estimated the net salvage percentages by reviewing the Company's account specific  
18 historical gross salvage and cost of removal data for the period 1984 through 2023 as  
19 a percentage of the associated retired plant, as well as considering industry experience  
20 in terms of net salvage estimates for other gas companies.

21 **Q. PLEASE DESCRIBE THE SECOND PHASE OF THE PROCESS THAT YOU  
22 USED IN THE DEPRECIATION STUDY IN WHICH YOU CALCULATED**

1           **COMPOSITE REMAINING LIVES AND ANNUAL DEPRECIATION**  
2           **ACCRUAL RATES.**

3       A. After I estimated the service life and net salvage characteristics for each depreciable  
4           property group, I calculated the annual depreciation accrual rates for each group, using  
5           the straight line remaining life method, and using remaining lives weighted consistent  
6           with the average service life procedure.

7       **Q. PLEASE DESCRIBE THE STRAIGHT LINE REMAINING LIFE METHOD**  
8           **OF DEPRECIATION.**

9       A. The straight line remaining life method of depreciation allocates the original cost of  
10          the property, less accumulated depreciation, less future net salvage, in equal amounts  
11          to each year of remaining service life.

12      **Q. PLEASE DESCRIBE AMORTIZATION ACCOUNTING.**

13       A. In amortization accounting, units of property are capitalized in the same manner as  
14          they are in depreciation accounting. Amortization accounting is used for accounts  
15          with a large number of units, but small asset values. Depreciation accounting is  
16          difficult for these assets because periodic inventories are required to properly reflect  
17          plant in service. Consequently, retirements are recorded when a vintage is fully  
18          amortized rather than as the units are removed from service. That is, there is no  
19          dispersion of retirements. All units are retired when the age of the vintage reaches the  
20          amortization period. Each plant account or group of assets is assigned a fixed period  
21          which represents an anticipated life during which the assets will render full benefit.  
22          For example, in amortization accounting, assets that have a 20-year amortization  
23          period will be fully recovered after 20 years of service and taken off the Company's

books, but not necessarily removed from service. In contrast, assets that are taken out of service before 20 years remain on the books until the amortization period for that vintage has expired.

**Q. FOR WHICH PLANT ACCOUNTS IS AMORTIZATION ACCOUNTING BEING UTILIZED?**

A. Amortization accounting is only appropriate for certain General Plant accounts. These accounts are 391.0, 391.2, 394, 395, 397 and 398. These accounts represent slightly more than 2 percent of the Company's depreciable plant.

**Q. PLEASE USE AN EXAMPLE TO ILLUSTRATE HOW THE ANNUAL DEPRECIATION ACCRUAL RATE FOR A PARTICULAR GROUP OF PROPERTY IS PRESENTED IN YOUR DEPRECIATION STUDY.**

A. I will use Account 380, Services, as an example because it is one of the largest depreciable mass accounts and represents approximately 25 percent of total depreciable plant.

The retirement rate method was used to analyze the survivor characteristics of this property group. Aged plant accounting data was compiled from 1931 through 2023 and analyzed in periods that best represent the overall service life of this property. The life tables for the 1931-2023 and 1994-2023 experience bands are presented on pages VII-35 through VII-40 of the report. The life table displays the retirement and surviving ratios of the aged plant data exposed to retirement by age interval. For example, page VII-35 shows \$274,191 retired at age 0.5 with \$189,020,142 exposed to retirement. Consequently, the retirement ratio is 0.0015 and

1           the surviving ratio is 0.9985. These life tables, or original survivor curves, are plotted  
2           along with the estimated smooth survivor curve, the 50-S0.5 on page VII-34.

3           The net salvage percent is presented on pages VIII-18 through VIII-20. The  
4           percentage is based on the result of annual gross salvage minus the cost to remove  
5           plant assets as compared to the original cost of plant retired during the period 1984  
6           through 2023. The 40-year period experienced \$2,590,277 (\$89,250 - \$2,679,5272)  
7           in net salvage for \$23,199,615 plant retired. The result is negative net salvage of 11  
8           percent (\$2,590,277 /\$23,199,615). Recent trends have shown indications of around  
9           negative 4 percent, however, it was determined that based on industry ranges,  
10           historical indications and Company expectation, that negative 10 percent was the most  
11           appropriate estimate.

12           My calculation of the annual depreciation related to the original cost as of  
13           December 31, 2023, of electric plant is presented on pages IX-12 through IX-14. The  
14           calculation is based on the 50-S0.5 survivor curve, 10 percent negative net salvage,  
15           the attained age, and the allocated book reserve. The tabulation sets forth the  
16           installation year, the original cost, calculated accrued depreciation, allocated book  
17           reserve, future accruals, remaining life and annual accrual. These totals are brought  
18           forward to the table on page VI-4.

19           **Q.     DOES THIS CONCLUDE YOUR DIRECT TESTIMONY?**

20           A.     Yes.

Schedule JJS-D1

Schedule JJS-D1

**JOHN SPANOS**

**DEPRECIATION EXPERIENCE**

**Q. Please state your name.**

A. My name is John J. Spanos.

**Q. What is your educational background?**

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College.

**Q. Do you belong to any professional societies?**

A. Yes. I am a member and past President of the Society of Depreciation Professionals and a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

**Q. Do you hold any special certification as a depreciation expert?**

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013, February 2018 and February 2023.

**Q. Please outline your experience in the field of depreciation.**

A. In June 1986, I was employed by Gannett Fleming Valuation and Rate Consultants, Inc. as a Depreciation Analyst. During the period from June 1986 through December 1995, I helped prepare numerous depreciation and original cost studies for utility companies in various industries. I helped perform depreciation studies for the following telephone companies: United Telephone of Pennsylvania, United Telephone of New Jersey, and Anchorage Telephone Utility. I helped perform depreciation studies for the following companies in

the railroad industry: Union Pacific Railroad, Burlington Northern Railroad, and Wisconsin Central Transportation Corporation.

I helped perform depreciation studies for the following organizations in the electric utility industry: Chugach Electric Association, The Cincinnati Gas and Electric Company (CG&E), The Union Light, Heat and Power Company (ULH&P), Northwest Territories Power Corporation, and the City of Calgary - Electric System.

I helped perform depreciation studies for the following pipeline companies: TransCanada Pipelines Limited, Trans Mountain Pipe Line Company Ltd., Interprovincial Pipe Line Inc., Nova Gas Transmission Limited and Lakehead Pipeline Company.

I helped perform depreciation studies for the following gas utility companies: Columbia Gas of Pennsylvania, Columbia Gas of Maryland, The Peoples Natural Gas Company, T. W. Phillips Gas & Oil Company, CG&E, ULH&P, Lawrenceburg Gas Company and Penn Fuel Gas, Inc.

I helped perform depreciation studies for the following water utility companies: Indiana-American Water Company, Consumers Pennsylvania Water Company and The York Water Company; and depreciation and original cost studies for Philadelphia Suburban Water Company and Pennsylvania-American Water Company.

In each of the above studies, I assembled and analyzed historical and simulated data, performed field reviews, developed preliminary estimates of service life and net salvage, calculated annual depreciation, and prepared reports for submission to state public utility commissions or federal regulatory agencies. I performed these studies under the general direction of William M. Stout, P.E.

In January 1996, I was assigned to the position of Supervisor of Depreciation Studies. In July 1999, I was promoted to the position of Manager, Depreciation and

Valuation Studies. In December 2000, I was promoted to the position as Vice-President of Gannett Fleming Valuation and Rate Consultants, Inc., in April 2012, I was promoted to the position as Senior Vice President of the Valuation and Rate Division of Gannett Fleming Inc. (now doing business as Gannett Fleming Valuation and Rate Consultants, LLC) and in January of 2019, I was promoted to my present position of President of Gannett Fleming Valuation and Rate Consultants, LLC. In my current position I am responsible for conducting all depreciation, valuation and original cost studies, including the preparation of final exhibits and responses to data requests for submission to the appropriate regulatory bodies.

Since January 1996, I have conducted depreciation studies similar to those previously listed including assignments for Pennsylvania-American Water Company; Aqua Pennsylvania; Kentucky-American Water Company; Virginia-American Water Company; Indiana-American Water Company; Iowa-American Water Company; New Jersey-American Water Company; Hampton Water Works Company; Omaha Public Power District; Enbridge Pipe Line Company; Inc.; Columbia Gas of Virginia, Inc.; Virginia Natural Gas Company National Fuel Gas Distribution Corporation - New York and Pennsylvania Divisions; The City of Bethlehem - Bureau of Water; The City of Coatesville Authority; The City of Lancaster - Bureau of Water; Peoples Energy Corporation; The York Water Company; Public Service Company of Colorado; Enbridge Pipelines; Enbridge Gas Distribution, Inc.; Reliant Energy-HLP; Massachusetts-American Water Company; St. Louis County Water Company; Missouri-American Water Company; Chugach Electric Association; Alliant Energy; Oklahoma Gas & Electric Company; Nevada Power Company; Dominion Virginia Power; NUI-Virginia Gas Companies; Pacific Gas & Electric Company; PSI Energy; NUI - Elizabethtown Gas Company; Cinergy Corporation – CG&E; Cinergy

Corporation – ULH&P; Columbia Gas of Kentucky; South Carolina Electric & Gas Company; Idaho Power Company; El Paso Electric Company; Aqua North Carolina; Aqua Ohio; Aqua Texas, Inc.; Aqua Illinois, Inc.; Ameren Missouri; Central Hudson Gas & Electric; Centennial Pipeline Company; CenterPoint Energy-Arkansas; CenterPoint Energy – Oklahoma; CenterPoint Energy – Entex; CenterPoint Energy - Louisiana; NSTAR – Boston Edison Company; Westar Energy, Inc.; United Water Pennsylvania; PPL Electric Utilities; PPL Gas Utilities; Wisconsin Power & Light Company; TransAlaska Pipeline; Avista Corporation; Northwest Natural Gas; Allegheny Energy Supply, Inc.; Public Service Company of North Carolina; South Jersey Gas Company; Duquesne Light Company; MidAmerican Energy Company; Laclede Gas; Duke Energy Company; E.ON U.S. Services Inc.; Elkton Gas Services; Anchorage Water and Wastewater Utility; Kansas City Power and Light; Duke Energy North Carolina; Duke Energy South Carolina; Monongahela Power Company; Potomac Edison Company; Duke Energy Ohio Gas; Duke Energy Kentucky; Duke Energy Indiana; Duke Energy Progress; Northern Indiana Public Service Company; Tennessee- American Water Company; Columbia Gas of Maryland; Maryland-American Water Company; Bonneville Power Administration; NSTAR Electric and Gas Company; EPCOR Distribution, Inc.; B. C. Gas Utility, Ltd; Entergy Arkansas; Entergy Texas; Entergy Mississippi; Entergy Louisiana; Entergy Gulf States Louisiana; the Borough of Hanover; Louisville Gas and Electric Company; Kentucky Utilities Company; Madison Gas and Electric; Central Maine Power; PEPCO; PacifiCorp; Minnesota Energy Resource Group; Jersey Central Power & Light Company; Cheyenne Light, Fuel and Power Company; United Water Arkansas; Central Vermont Public Service Corporation; Green Mountain Power; Portland General Electric Company; Atlantic City Electric; Nicor Gas Company; Black Hills Power; Black Hills Colorado Gas; Black Hills Energy Arkansas, Inc.; Black Hills Kansas

Gas; Black Hills Service Company; Black Hills Utility Holdings; Public Service Company of Oklahoma; City of Dubois; Peoples Gas Light and Coke Company; North Shore Gas Company; Connecticut Light and Power; New York State Electric and Gas Corporation; Rochester Gas and Electric Corporation; Greater Missouri Operations; Tennessee Valley Authority; Omaha Public Power District; Indianapolis Power & Light Company; Vermont Gas Systems, Inc.; Metropolitan Edison; Pennsylvania Electric; West Penn Power; Pennsylvania Power; PHI Service Company - Delmarva Power and Light; Atmos Energy Corporation; Citizens Energy Group; PSE&G Company; Berkshire Gas Company; Alabama Gas Corporation; Mid-Atlantic Interstate Transmission, LLC; SUEZ Water; WEC Energy Group; Rocky Mountain Natural Gas, LLC; Illinois-American Water Company; Northern Illinois Gas Company; Public Service of New Hampshire; FirstEnergy Service Corporation; Northeast Ohio Natural Gas Corporation; Blue Granite Water Company; Spire Missouri, Inc.; Dominion Energy South Carolina, Inc.; South FirstEnergy Operating Companies; Dayton Power and Light Company; Liberty Utilities; East Kentucky Power Cooperative; Bangor Natural Gas; Hanover Borough Municipal Water Works; West Virginia American Water Company; Evergy Metro; Evergy Missouri West; Granite State Electric; Bluegrass Water; The Borough of Ambler; Newtown Artesian Water Company and Connecticut Water Company.

My additional duties include determining final life and salvage estimates, conducting field reviews, presenting recommended depreciation rates to management for its consideration and supporting such rates before regulatory bodies.

**Q. Have you submitted testimony to any state utility commission on the subject of utility plant depreciation?**

A. Yes. I have submitted testimony to the Pennsylvania Public Utility Commission; the

Commonwealth of Kentucky Public Service Commission; the Public Utilities Commission of Ohio; the Nevada Public Utility Commission; the Public Utilities Board of New Jersey; the Missouri Public Service Commission; the Massachusetts Department of Telecommunications and Energy; the Alberta Energy & Utility Board; the Idaho Public Utility Commission; the Louisiana Public Service Commission; the State Corporation Commission of Kansas; the Oklahoma Corporate Commission; the Public Service Commission of South Carolina; Railroad Commission of Texas – Gas Services Division; the New York Public Service Commission; Illinois Commerce Commission; the Indiana Utility Regulatory Commission; the California Public Utilities Commission; the Federal Energy Regulatory Commission (“FERC”); the Arkansas Public Service Commission; the Public Utility Commission of Texas; Maryland Public Service Commission; Washington Utilities and Transportation Commission; The Tennessee Regulatory Commission; the Regulatory Commission of Alaska; Minnesota Public Utility Commission; Utah Public Service Commission; District of Columbia Public Service Commission; the Mississippi Public Service Commission; Delaware Public Service Commission; Virginia State Corporation Commission; Colorado Public Utility Commission; Oregon Public Utility Commission; South Dakota Public Utilities Commission; Wisconsin Public Service Commission; Wyoming Public Service Commission; the Public Service Commission of West Virginia; Maine Public Utility Commission; Iowa Utility Board; Connecticut Public Utilities Regulatory Authority; New Mexico Public Regulation Commission; Commonwealth of Massachusetts Department of Public Utilities; Rhode Island Public Utilities Commission and the North Carolina Utilities Commission.

**Q. Have you had any additional education relating to utility plant depreciation?**

- A. Yes. I have completed the following courses conducted by Depreciation Programs, Inc.:

“Techniques of Life Analysis,” “Techniques of Salvage and Depreciation Analysis,” “Forecasting Life and Salvage,” “Modeling and Life Analysis Using Simulation,” and “Managing a Depreciation Study.” I have also completed the “Introduction to Public Utility Accounting” program conducted by the American Gas Association.

**Q. Does this conclude your qualification statement?**

A. Yes.

Attention Wendy K. Tatro, Esq.  
Director and Assistant General Counsel

Ladies and Gentlemen:

Pursuant to your request, we have conducted a depreciation study related to the gas plant of Ameren Missouri as of December 31, 2023. The attached report presents a description of the methods used in the estimation of depreciation, the summary of annual depreciation accrual rates, the statistical support for the life and net salvage estimates and the detailed tabulations of annual depreciation.

We gratefully acknowledge the assistance of Ameren Missouri personnel in the conduct of this study.

Respectfully submitted,

### **DEPRECIATION STUDY**

#### **EXECUTIVE SUMMARY**

Pursuant to Ameren Missouri (“Ameren” or “Company”) request, Gannett Fleming Valuation and Rate Consultants, LLC (“Gannett Fleming”) conducted a depreciation study related to the gas plant as of December 31, 2023. The purpose of this study was to determine the annual depreciation accrual rates and amounts for book and ratemaking purposes.

The annual and accrued depreciation were calculated using the straight line method, the remaining life basis and the average service life procedure. The calculations were based on attained ages and estimated service life and net salvage characteristics for each depreciable group of gas property.

The most significant change since the previous depreciation study submitted in 2021 is related to the longer service life for Accounts 378.00 and 379.00 which resulted in a decrease in depreciation expense. The Company also began installing AMI modules to meters in their system, so there is a new subaccount related to those assets that was not in the prior depreciation study.

Gannett Fleming recommends the calculated annual depreciation accrual rates set forth herein apply specifically to gas plant in service as of December 31, 2023 as summarized by Table 1 of the study. Supporting analysis and calculations are provided within the study.

The study results set forth an annual depreciation expense of \$13.7 million when applied to depreciable plant balances as of December 31, 2023. The results are summarized at the functional level as follows:

**SUMMARY OF ORIGINAL COST, ACCRUAL RATES AND AMOUNTS**

| <b><u>FUNCTION</u></b> | <b><u>ORIGINAL COST<br/>AS OF<br/>DECEMBER 31, 2023</u></b> | <b><u>PROPOSED<br/>RATE</u></b> | <b><u>PROPOSED<br/>EXPENSE</u></b> |
|------------------------|---|---------------------------------|------------------------------------|
| Transmission Plant     | \$8,345,786.54  | 1.37                            | \$114,386                          |
| Distribution Plant     | 613,743,690.06  | 1.74                            | 10,681,280                         |
| General Plant          | <u>52,757,739.57</u>  | 5.56                            | <u>2,933,206</u>                   |
| <b>Total</b>           | <b><u>\$674,847,216.17</u></b>                              | <b>2.03</b>                     | <b><u>\$13,728,872</u></b>         |

## **PART I. INTRODUCTION**

**AMEREN MISSOURI**  
**DEPRECIATION STUDY**

**PART I. INTRODUCTION**

**SCOPE**

This report sets forth the results of the depreciation study for Ameren Missouri (“Ameren”), as applied to gas plant in service as of December 31, 2023. The study results include annual depreciation rates and amounts for book and ratemaking purposes applicable to the original cost of gas plant as of December 31, 2023. The rates and amounts are based on the straight line method, average service life procedure using the remaining life technique. The report also describes the concepts, methods, and basic judgments which underlie recommended annual depreciation accrual rates related to gas plant in service as of December 31, 2023.

The service life and net salvage estimates resulting from the study were based on informed judgment which incorporated analyses of historical plant retirement data as recorded through 2023; a review of Company practice and outlook as they relate to plant operation and retirement; and consideration of current practice in the gas industry, including knowledge of service life and net salvage estimates used for other gas properties.

**PLAN OF REPORT**

Part I, Introduction, contains statements with respect to the plan of the report, and the basis of the study. Part II, Estimation of Survivor Curves, presents descriptions of the considerations and the methods used in the service life and net salvage studies. Part III, Service Life Considerations, presents the factors and judgment utilized in the average service life analysis. Part IV, Net Salvage Considerations, presents the judgment utilized for the net salvage study. Part V, Calculation of Annual and Accrued Depreciation, describes the procedures used in the calculation of group depreciation. Part VI, Results

of Study, presents summaries by depreciable group of annual depreciation accrual rates and amounts, as well as composite remaining lives. Part VII, Service Life Statistics presents the statistical analysis of service life estimates, Part VIII, Net Salvage Statistics sets forth the statistical indications of net salvage percents, and Part IX, Detailed Depreciation Calculations presents the detailed tabulations of annual depreciation.

## **BASIS OF THE STUDY**

### **Depreciation**

Depreciation, in public utility regulation, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among causes to be given consideration are wear and tear, deterioration, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and the requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs, less net salvage, over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing gas utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

For most accounts, the depreciation accrual rates were calculated by the straight line method using the average service life procedure and the remaining life basis. For certain General Plant accounts, the annual depreciation is based on amortization

accounting. Both types of calculations were based on original cost, attained ages, and estimates of service lives and net salvage.

The straight line method, average service life procedure is a commonly used depreciation calculation procedure that has been widely accepted in jurisdictions throughout North America. Gannett Fleming recommends its continued use. Amortization accounting is used for certain General Plant accounts because of the disproportionate plant accounting effort required when compared to the minimal original cost of the large number of items in these accounts. An explanation of the calculation of annual and accrued amortization is presented beginning on page V-4 of the report.

### **Service Life and Net Salvage Estimates**

The service life and net salvage estimates used in the depreciation and amortization calculations were based on informed judgment which incorporated a review of management's plans, policies and outlook, a general knowledge of the gas utility industry, and comparisons of the service life and net salvage estimates from our studies of other gas utilities. The use of survivor curves to reflect the expected dispersion of retirement provides a consistent method of estimating depreciation for gas plant. Iowa type survivor curves were used to depict the estimated survivor curves for the plant accounts not subject to amortization accounting.

The procedure for estimating service lives consisted of compiling historical data for the plant accounts or depreciable groups, analyzing this history through the use of widely accepted techniques, and forecasting the survivor characteristics for each depreciable group on the basis of interpretations of the historical data analyses and the probable future. The combination of the historical experience and the estimated future yielded estimated survivor curves from which the average service lives were derived.

---

## **PART II. ESTIMATION OF SURVIVOR CURVES**

## PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below and the development of net salvage is discussed in later sections of this report.

### SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

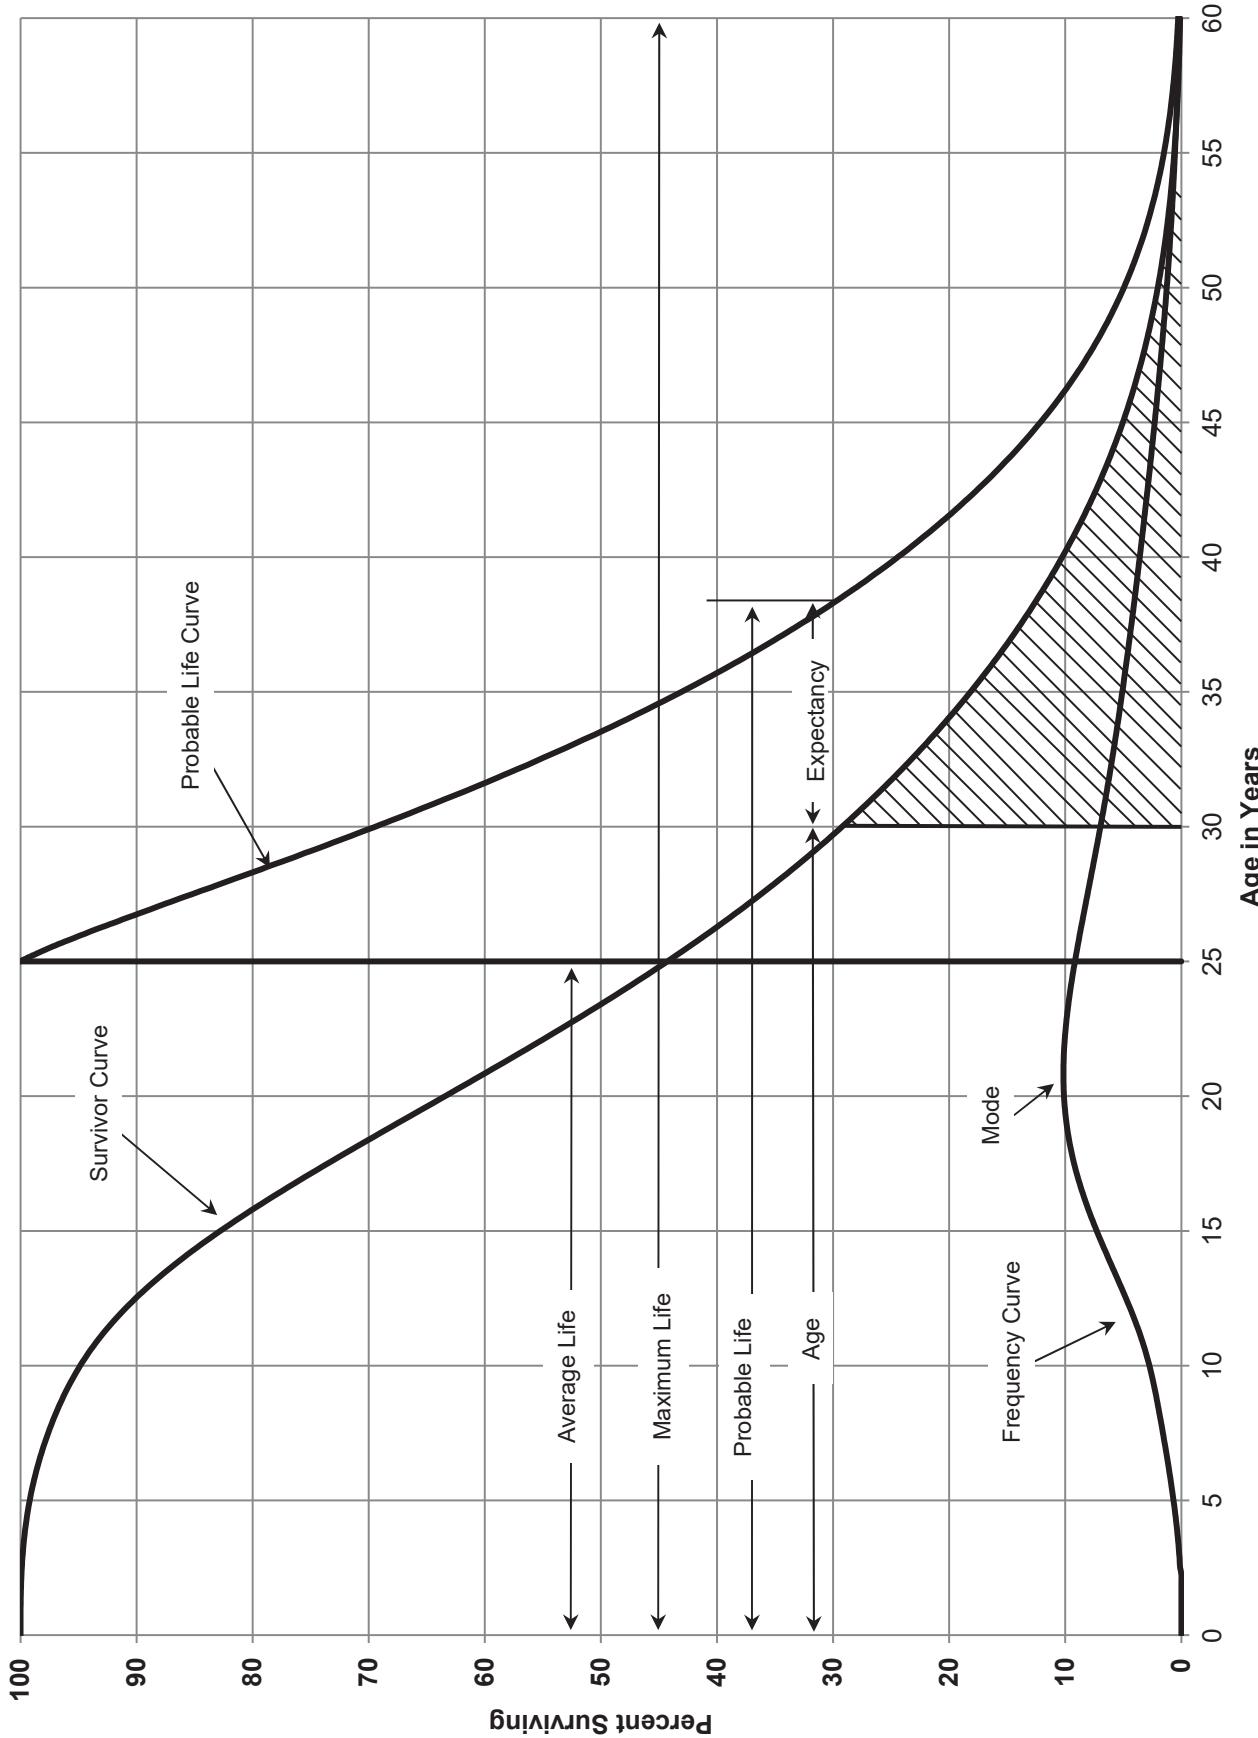

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

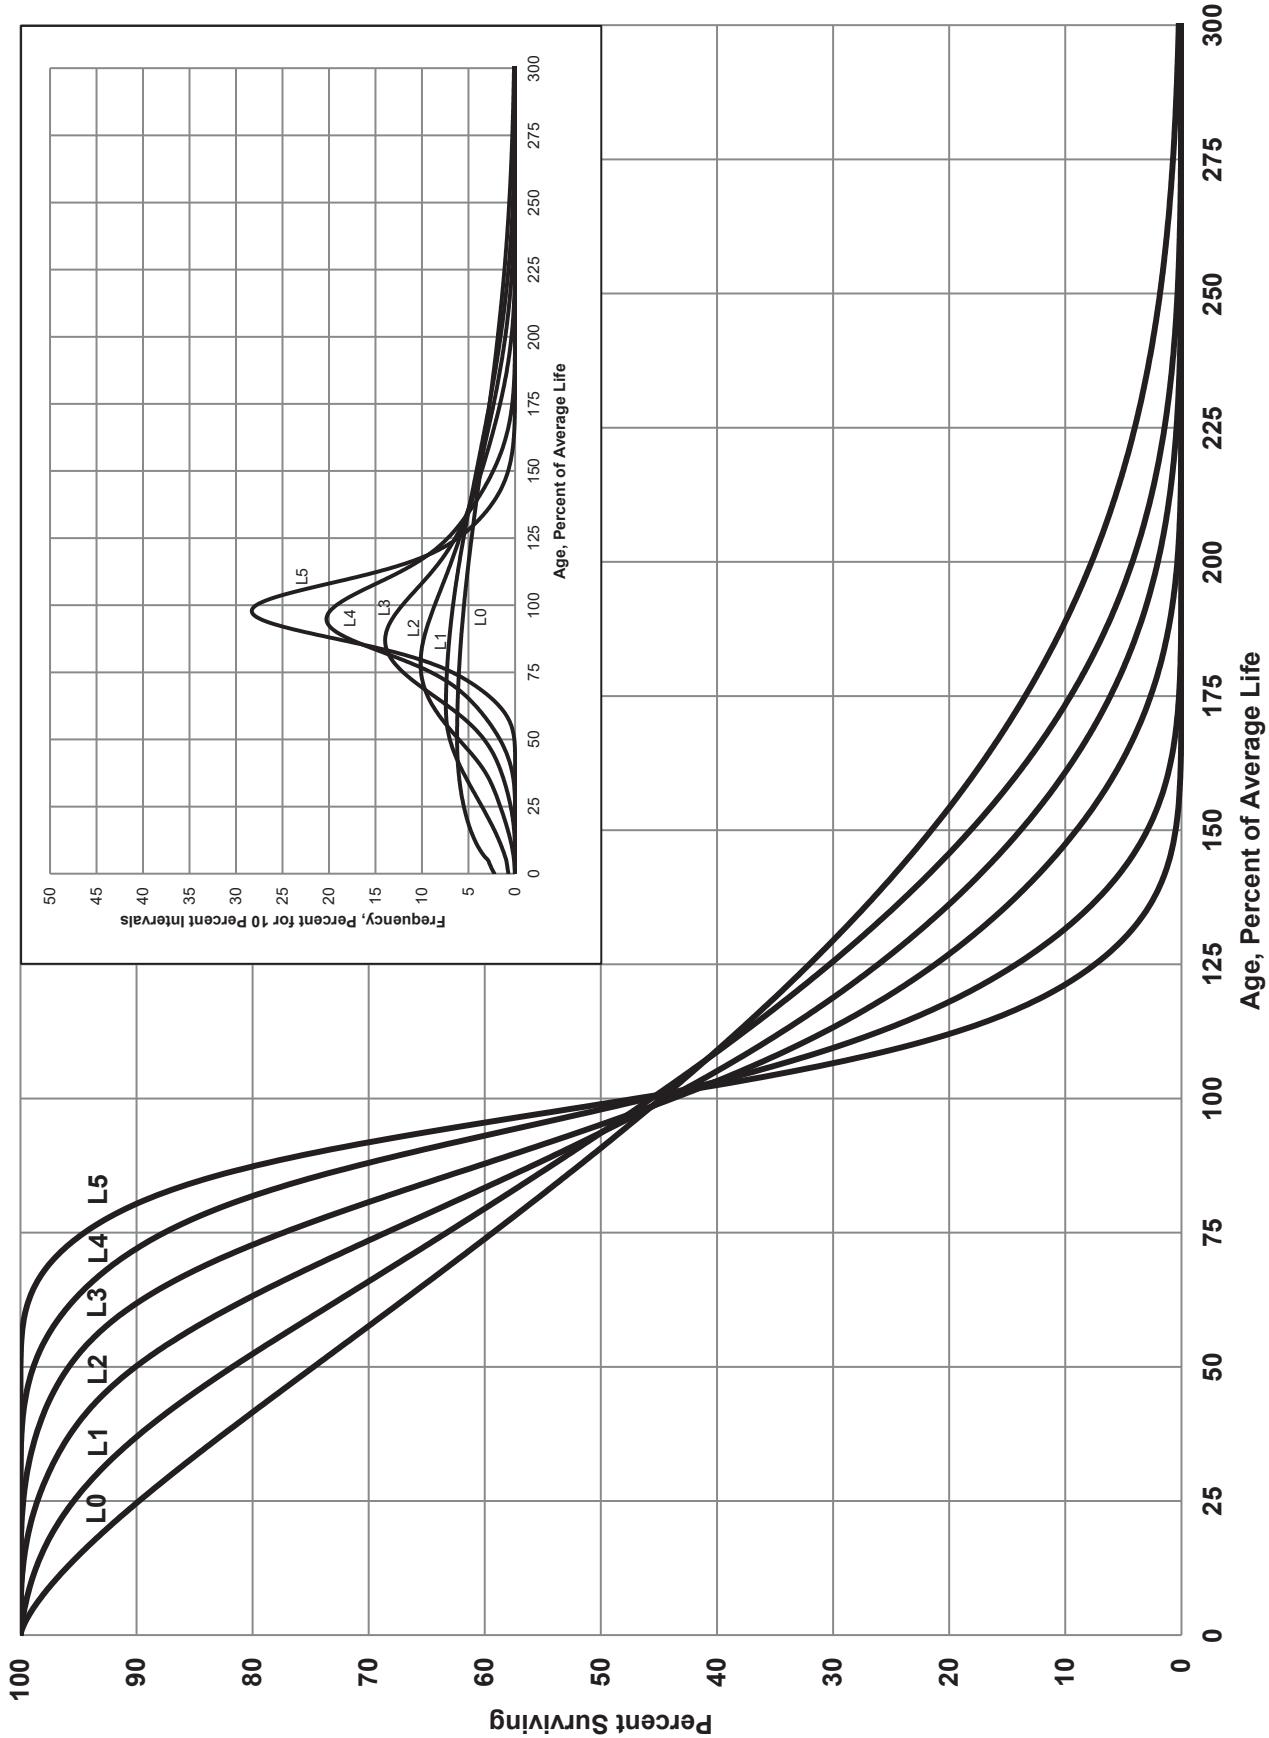

### **Iowa Type Curves**

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

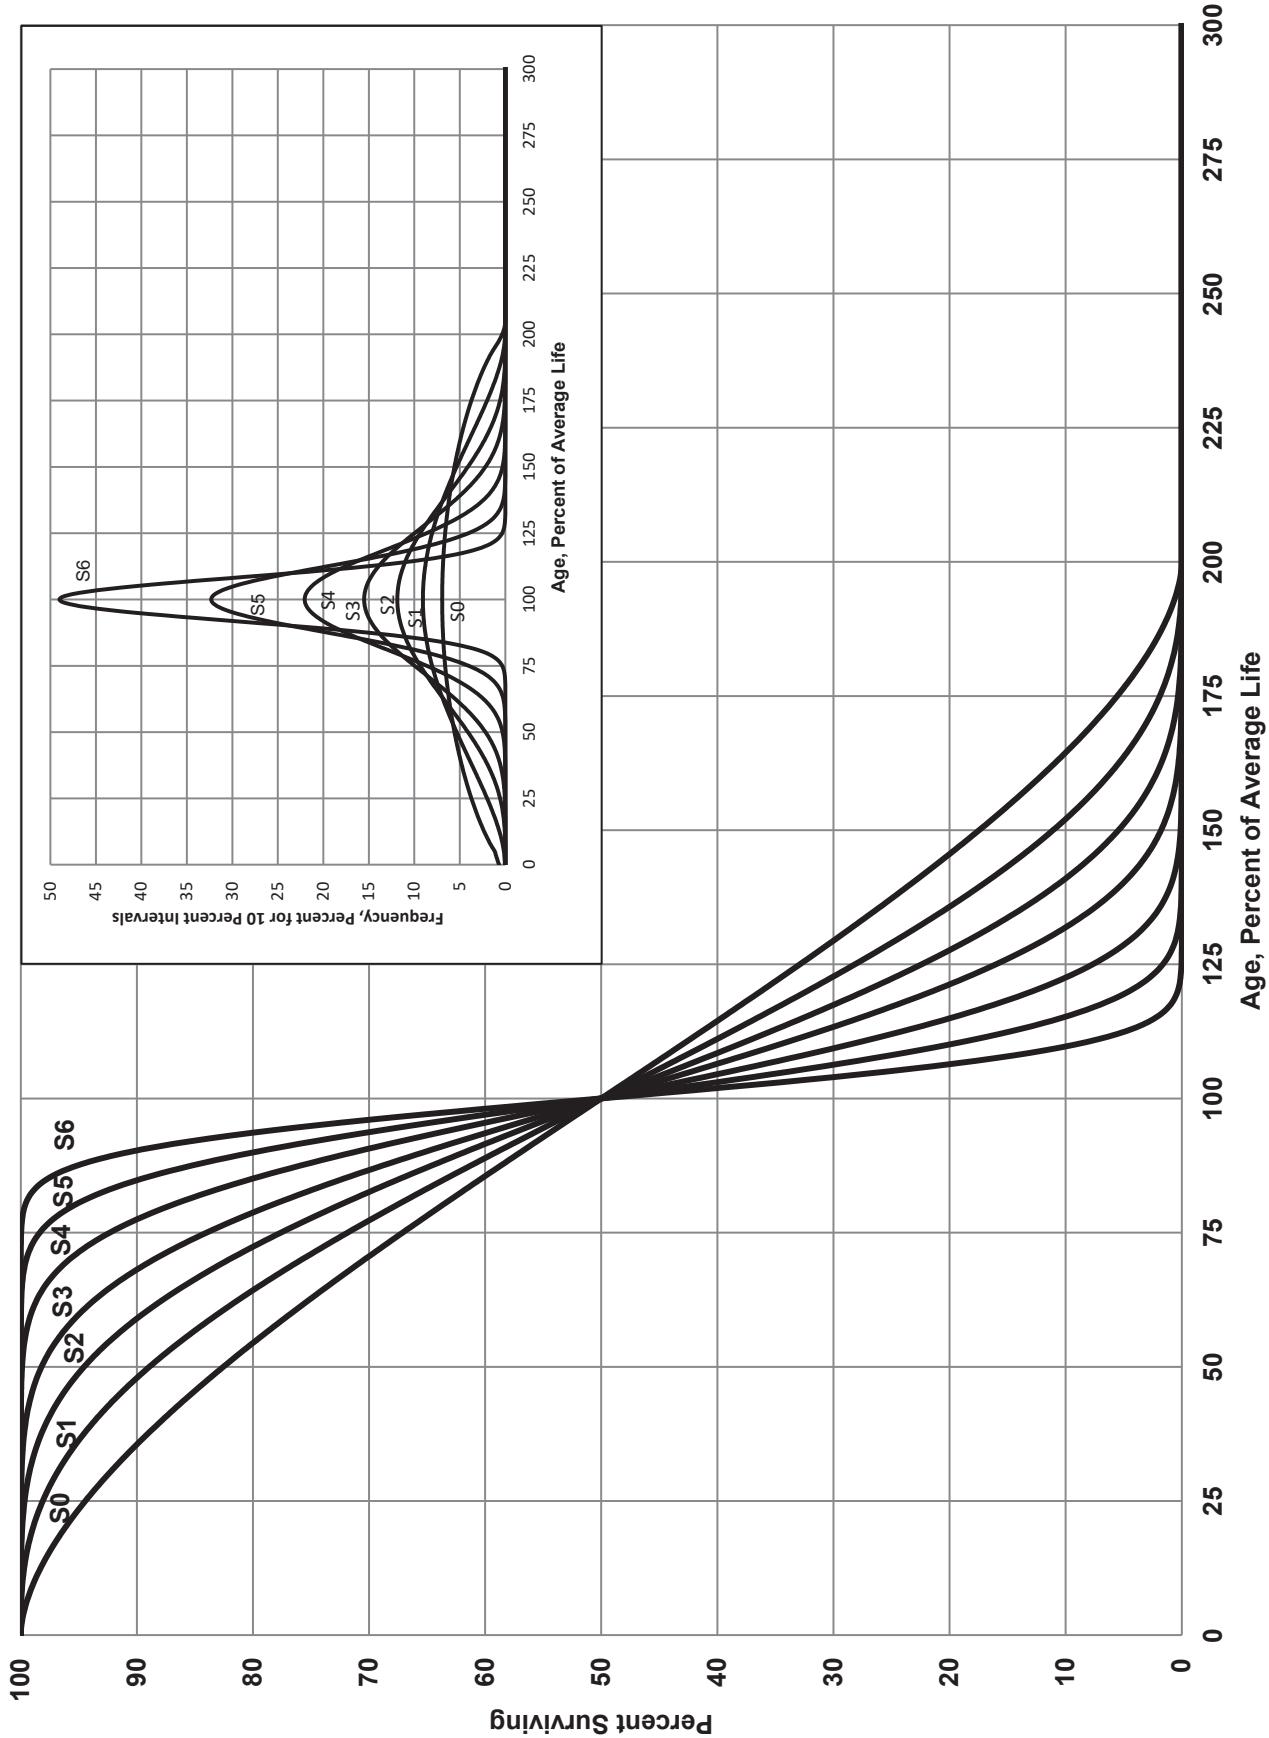

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

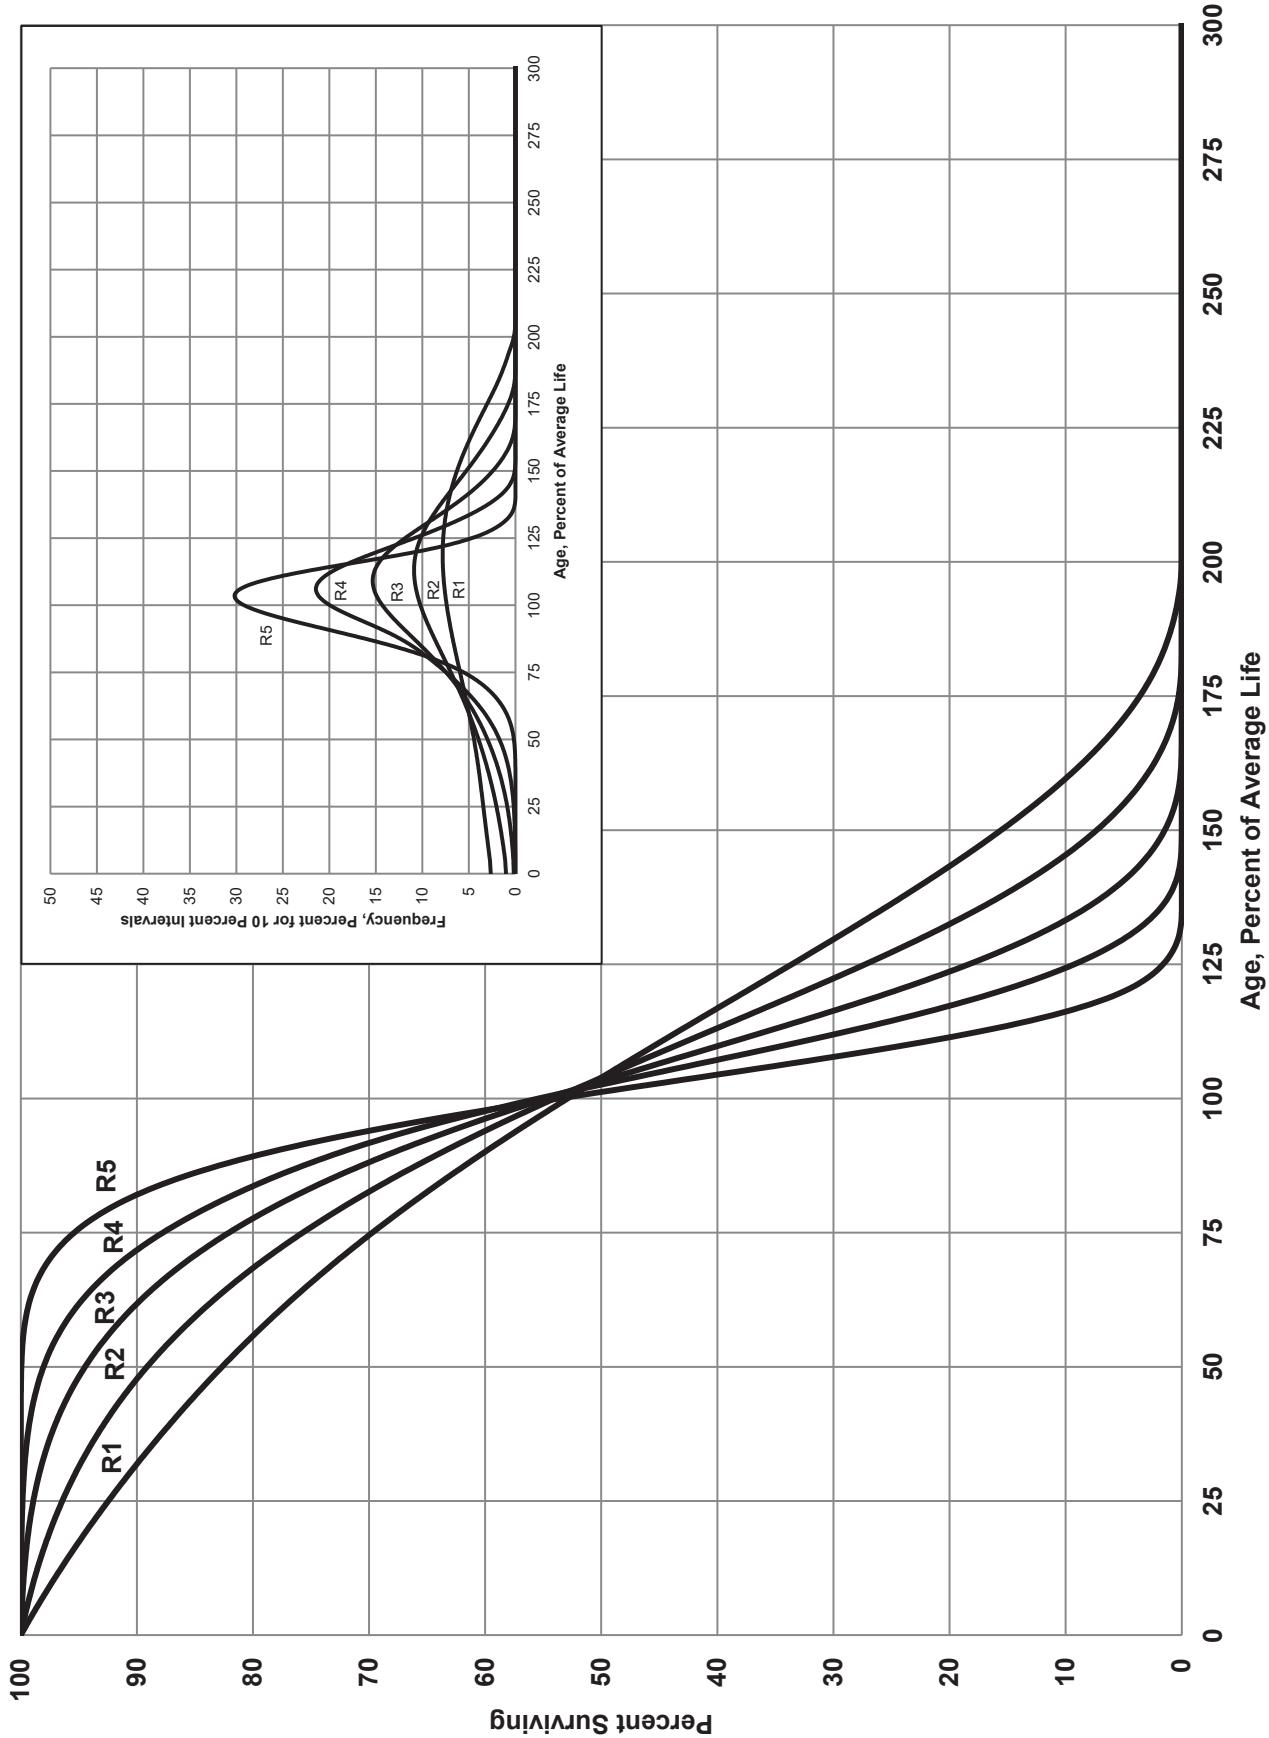

**FIGURE 1. TYPICAL SURVIVOR CURVE AND DERIVED CURVES**

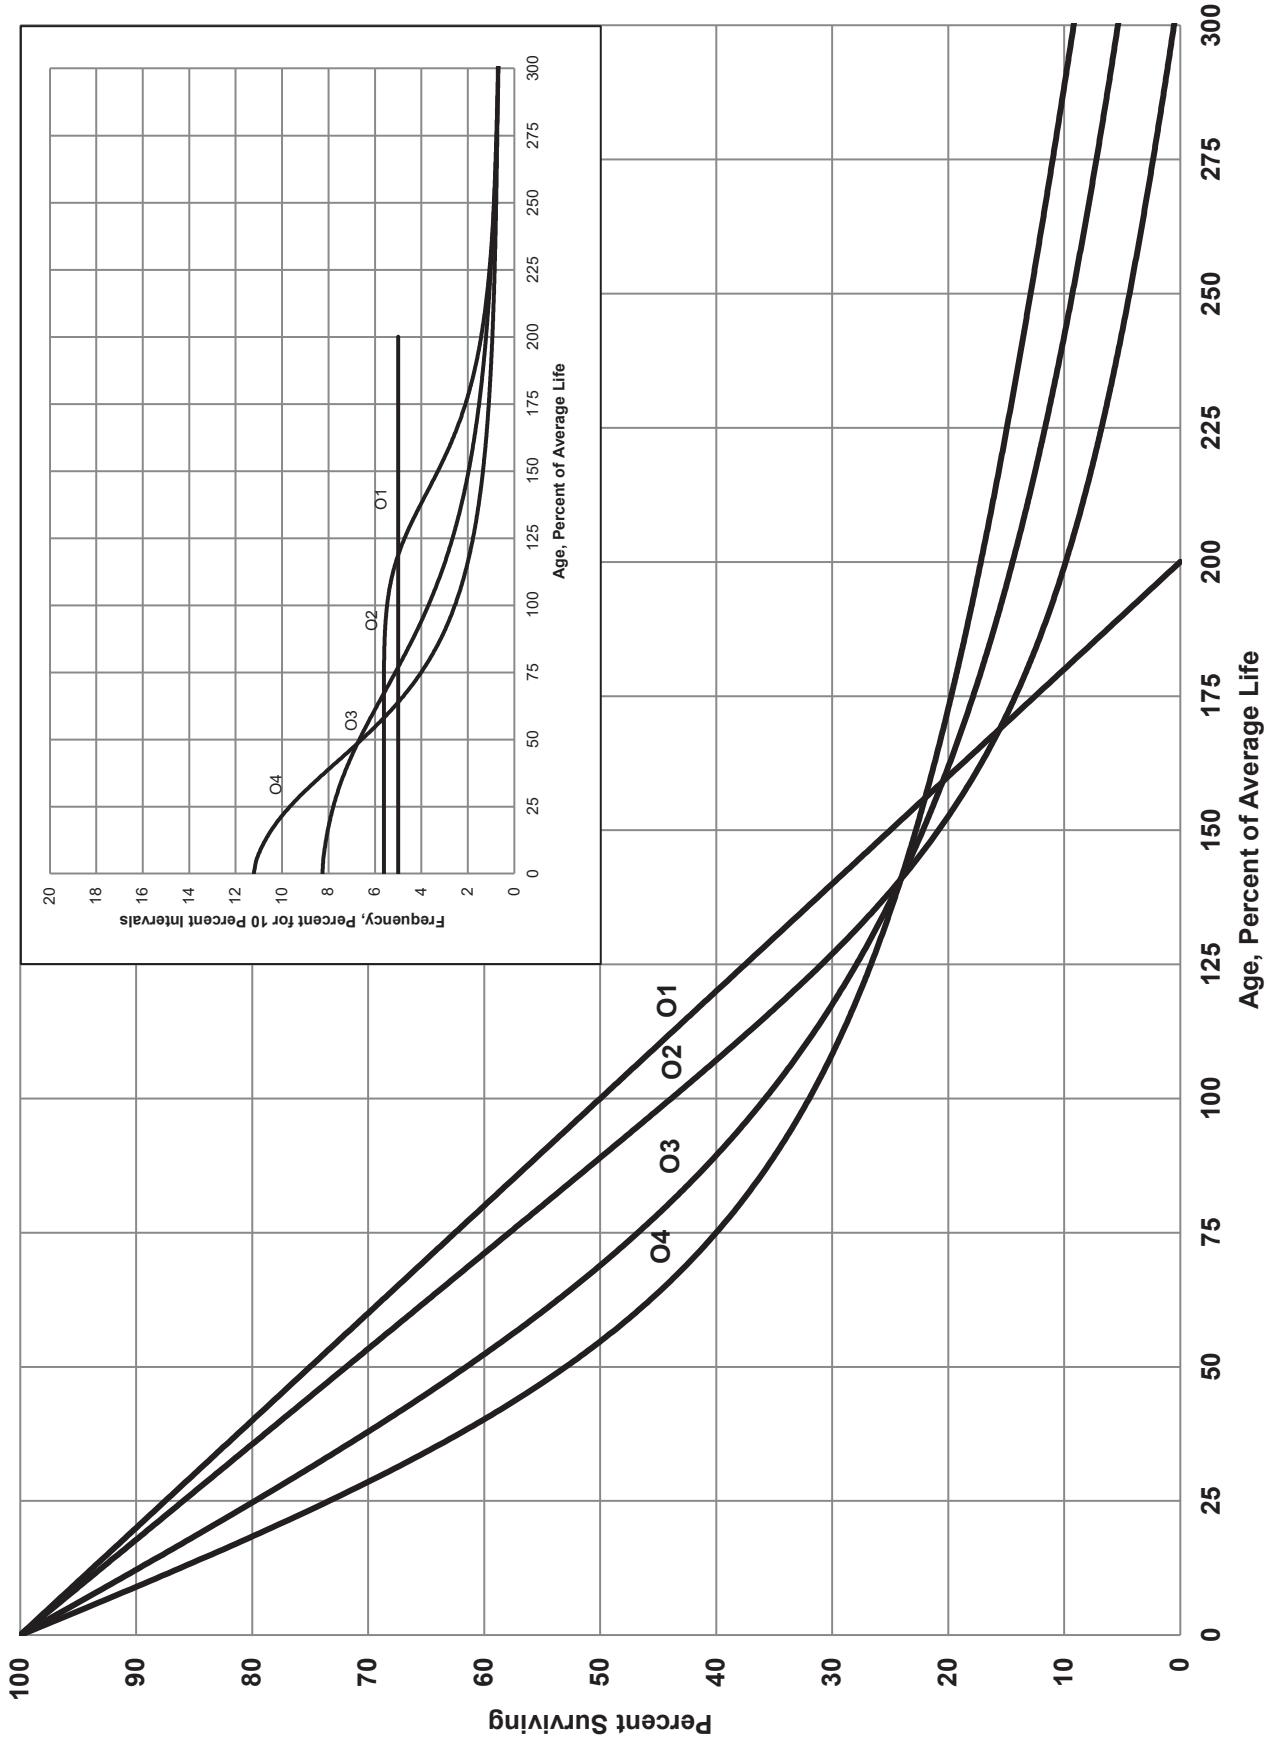

**FIGURE 2.. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES**

**FIGURE 4.. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES**

**FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES**

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."<sup>1</sup> In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

### **Retirement Rate Method of Analysis**

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"<sup>2</sup> "Engineering Valuation and Depreciation,"<sup>3</sup> and "Depreciation Systems."<sup>4</sup>

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

## **Schedules of Annual Transactions in Plant Records**

The property group used to illustrate the retirement rate method is observed for the experience band 2014-2023 for which there were placements during the years 2009-2023. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, \$10,000 of the dollars invested in 2009 were retired in 2014. The \$10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of \$143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2014 retirements of 2009 installations and ending with the 2023 retirements of the 2018 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

$$10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.$$

<sup>a</sup> Transfer Affecting Exposures at Beginning of Year

<sup>b</sup> Transfer Affecting Exposures at End of Year

<sup>c</sup> Sale with Continued Use  
Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

### **Schedule of Plant Exposed to Retirement**

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2014 through 2023 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2019 are calculated in the following manner:

|                     |                                   |             |
|---------------------|-----------------------------------|-------------|
| Exposures at age 0  | = amount of addition              | = \$750,000 |
| Exposures at age ½  | = \$750,000 - \$ 8,000            | = \$742,000 |
| Exposures at age 1½ | = \$742,000 - \$18,000            | = \$724,000 |
| Exposures at age 2½ | = \$724,000 - \$20,000 - \$19,000 | = \$685,000 |
| Exposures at age 3½ | = \$685,000 - \$22,000            | = \$663,000 |

**SCHEDULE 3. PLANT EXPOSED TO RETIREMENT  
JANUARY 1 OF EACH YEAR 2014-2023  
SUMMARIZED BY AGE INTERVAL**

| 2022        |                                 |       |       |   |       | 1,080 <sup>a</sup> | 1,069              | 1,069                              | 1,069              | 6,579 | ½-1½   |         |
| 2023        |                                 |       |       |   |       |                    | 1,220 <sup>a</sup> | 1,220 <sup>a</sup>                 | 1,220 <sup>a</sup> | 7,490 | 0-½    |         |
| Total       | 1,975                           | 2,382 | 2,824 | 3,318   | 3,872 | 4,494              | 5,247              | 6,017                              | 6,852              | 7,799 | 44,780 |         |

<sup>a</sup>Additions during the year

For the entire experience band 2014-2023, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

$$255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.$$

### **Original Life Table**

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

|                               |   |                                   |
|-------------------------------|---|-----------------------------------|
| Percent surviving at age 4½   | = | 88.15                             |
| Exposures at age 4½           | = | 3,789,000                         |
| Retirements from age 4½ to 5½ | = | 143,000                           |
| Retirement Ratio              | = | $143,000 \div 3,789,000 = 0.0377$ |
| Survivor Ratio                | = | $1.000 - 0.0377 = 0.9623$         |
| Percent surviving at age 5½   | = | $(88.15) \times (0.9623) = 84.83$ |

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

**SCHEDULE 4. ORIGINAL LIFE TABLE  
CALCULATED BY THE RETIREMENT RATE METHOD**

Experience Band 2014-2023

Placement Band 2009-2023

(Exposure and Retirement Amounts are in Thousands of Dollars)

| Age at Beginning of Interval | Exposures at Beginning of Age Interval | Retirements During Age Interval | Retirement Ratio | Survivor Ratio | Percent Surviving at Beginning of Age Interval |

| 12.5                         | 323                                    | 44                              | 0.1362           | 0.8638         | 48.90  |
| 13.5                         | <u>167</u>                             | <u>26</u>                       | 0.1557           | 0.8443         | 42.24  |
|                              |  |                                 |                  |                | 35.66  |
| Total                        | <u>44,780</u>                          | <u>1,606</u>                    |                  |                |  |

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.

Column 3 from Schedule 1, Column 12, Retirements for Each Year.

Column 4 = Column 3 Divided by Column 2.

Column 5 = 1.0000 Minus Column 4.

Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

### **Smoothing the Original Survivor Curve**

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

## **PART III. SERVICE LIFE CONSIDERATIONS**

## PART III. SERVICE LIFE CONSIDERATIONS

### FIELD TRIPS

In order to be familiar with the operation of the Company and observe representative portions of the plant, a field trip is typically conducted during the study. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during field trips and during discussions with the Company. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

The following is a list of the locations visited during the past field trips.

#### July 30, 2024

MoGas Take Point – Wentzville  
Doctors Town Border Station  
Wright City Town Border Station  
Warrenton Town Border Station  
Hawk Point Town Border Station  
Geeding Landing Station  
MoGas Take Point - Winfield

#### March 10-13, 2014

Troy Operations Center  
Master Regulator Station at Geeding  
Main Replacement Project at Hawk Point  
Bellflower PVC Main Replacement Project  
Columbia Works Headquarters – New Building – Built in 2013.  
Loy Martin Measuring and Regulating Station – Serves Ashland, MO  
Columbia Measuring Station  
Oakland Gravel Road Regulating Station

### SERVICE LIFE ANALYSIS

The service life estimates were based on judgment which considered a number of factors. The primary factors were the statistical analyses of data; current company policies and outlook as determined during conversations with management; and the

survivor curve estimates from previous studies of this company and other gas utility companies.

For the majority of the accounts and subaccounts, the statistical analysis resulted in good to excellent indications of complete survivor patterns. These accounts represent 94% of the depreciable plant. Generally, the information external to the statistics led to minimal or no significant departure from the indicated survivor curves for the accounts listed below:

DISTRIBUTION PLANT

|        |                             |
|--------|-----------------------------|
| 375.00 | Structures and Improvements |
| 376.00 | Mains                       |
| 380.00 | Services                    |
| 381.00 | Meters                      |
| 383.00 | House Regulators            |

GENERAL PLANT

|        |                             |
|--------|-----------------------------|
| 390.00 | Structures and Improvements |
| 392.00 | Transportation Equipment    |
| 396.00 | Power Operated Equipment    |

The two largest accounts, 376.00, Mains, and 380.00, Services, are used to illustrate the manner in which the study was conducted for the accounts in the preceding list. Aged plant accounting data have been compiled for the years through 2023. These data have been coded according to account or property group, type of transaction, year in which the transaction took place and year in which the utility plant was placed in service. The retirements, other plant transactions and plant additions were analyzed by the retirement rate method.

The survivor curve estimate for Account 376.00, Mains, is the 60-R2.5 and is based on the statistical indication for the periods 1931 - 2023, 1994 - 2023 and 2004 - 2023. The existing estimate is the 60-L2.5. A 60-R2.5 survivor curve is a reasonably good fit for the significant portion of original survivor curve as set forth on page VII-17.

The company has used throughout its history a variety of pipe material for gas distribution mains such as cast iron, bare steel, coated steel and plastic. Additionally, all steel mains added after 1970 were cathodically protected. Cast iron and bare steel mains were used predominantly prior to 1960, however there is no more cast iron pipe left in the system. Coated steel mains were installed primarily in the 1960's along with the introduction of plastic mains. The mains installed since 1970 are primarily plastic or coated and wrapped, cathodically protected steel with most mains being plastic. The majority of mains in service today are either plastic or cathodically protected, coated and wrapped steel. In the past, the Company had a higher percentage of bare steel and cast iron mains, which have shorter life expectations than plastic and cathodically protected coated and wrapped steel mains. The 60-R2.5 is an excellent fit through age 76. Maintaining the average service life of 60 years is consistent with management's outlook that plastic and cathodically projected, coated and wrapped steel mains will have longer life cycle than the cast iron and bare steel mains that had been in service in the past. The average service life estimate of 60 years is within the typical service life range of 55 to 70 years for mains used by other gas companies.

The survivor curve estimate for Account 380.00, Services, is the 50-S0.5 and is based on the statistical indication for the periods 1931-2023 and 1994-2023. The existing estimate is the 50-L1. The 50-S0.5 is an excellent fit of the significant portion of the original survivor curve as set forth on page VII-34. The 50 year life is consistent with management outlook and is on the longer end of the typical service life range of 40-50 years for services.

Similar studies were performed for the remaining plant accounts. The survivor curve estimates for the remaining accounts were based on judgment incorporating the

statistical analyses and previous studies for this and other gas utilities. Each of the judgments represented a consideration of statistical analyses of aged plant activity, management's outlook for the future, and the typical range of lives used by other electric companies.

The selected amortization periods used for certain general plant accounts are described in the section "Calculated Annual and Accrued Amortization." These certain general plant accounts comprised slightly more than one percent of the depreciable plant balance.

---

## **PART IV. NET SALVAGE CONSIDERATIONS**

## PART IV. NET SALVAGE CONSIDERATIONS

### NET SALVAGE ANALYSIS

The estimates of net salvage were based in part on historical data compiled for the years 1984 through 2023. Cost of removal and gross salvage were expressed as percents of the original cost of plant retired, both on annual and three-year moving average bases. The most recent five-year average also was calculated for consideration. The net salvage estimates are expressed as a percent of the original cost of plant retired.

#### Net Salvage Considerations

The estimates of net salvage were based primarily on judgment which considered a number of factors. The primary factors were the analyses of historical data, a knowledge of management's plans and operating policies, and net salvage estimates from previous studies of this company and other gas companies.

Account 380.00, Services, is used to illustrate the manner in which the study was conducted for the accounts in the preceding list. Depreciation reserve accounting data were compiled for the years 1984 through 2023. These data include the retirements, cost of removal and gross salvage.

The net salvage estimate for this account is negative 10 percent and is based on the trends in cost of removal and gross salvage percents as shown in the tabulation on pages VIII-18 through VIII-20. Prior to 2000, the Company has experienced significant cost of removal for retirements of services, although the level of removal cost has been lower in recent years. There has been limited gross salvage, and in most years the gross salvage as a percentage of original cost has been zero. Zero percent for gross salvage is expected and consistent with management's outlook as most service lines are retired in place and most services retired in the future will be made of plastic which has little to no gross salvage value as scrap material. The overall average net salvage for this account is negative 11 percent. The most recent five year average is negative 4 percent.

Typical net salvage estimates for services range from negative 10 percent to as high as 200 percent. The negative 10 percent estimate for this account is at the low end of this range, but reflects the overall historical average and more recent net salvage history.

There are costs associated with retiring mains and service lines even though most are retired in place. Some of the costs are common to the installation of a new main or service, as well as the retirement of the existing asset. These costs include travel time to the job site, costs associated with digging a trench or cutting open a street or sidewalk, repaving the street and repairing the sidewalk. Some of the retirement work tasks include cutting the existing line, purging the gas and capping the line. It is expected that these costs will continue into the future. Therefore, it is reasonable to expect that removal costs will exceed the gross salvage value of mains and services in the future.

---

**PART V. CALCULATION OF ANNUAL AND  
ACCRUED DEPRECIATION**

## PART V. CALCULATION OF ANNUAL AND ACCRUED DEPRECIATION

### GROUP DEPRECIATION PROCEDURES

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally the items within a group do not have identical service lives, but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group. In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

#### Single Unit of Property

The calculation of straight line depreciation for a single unit of property is straightforward. For example, if a \$1,000 unit of property attains an age of four years and has a life expectancy of six years, the annual accrual over the total life is:

$$\frac{\$1,000}{(4 + 6)} = \$100 \text{ per year.}$$

The accrued depreciation is:

$$\$1,000 \left(1 - \frac{6}{10}\right) = \$400.$$

### **Remaining Life Annual Accruals**

For the purpose of calculating remaining life accruals as of December 31, 2023, the depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation follow. The detailed calculations as of December 31, 2023, are set forth in the Results of Study section of the report.

### **Average Service Life Procedure**

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{\text{Average Remaining Life}}{\text{Average Service Life}}.$$

## CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization period and service lives used by other utilities, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is proposed for a number of accounts that represent numerous units of property, but a very small portion of depreciable electric plant in service. The accounts and their amortization periods are as follows:

| <u>ACCT</u> | <u>TITLE</u>                     | <u>AMORTIZATION PERIOD, YEARS</u> |
|-------------|----------------------------------|-----------------------------------|
| 391.00      | Office Furniture and Equipment   |                                   |
|             | Furniture and Equipment          | 15                                |
|             | Computers                        | 5                                 |
| 394.00      | Tools, Shop and Garage Equipment | 20                                |
| 395.00      | Laboratory Equipment             | 20                                |
| 397.00      | Communication Equipment          | 15                                |
| 398.00      | Miscellaneous Equipment          | 15                                |

For the purpose of calculating annual amortization amounts as of December 31, 2023, the book depreciation reserve for each plant account or subaccount is assigned or allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion

to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

---

## **PART VI. RESULTS OF STUDY**

## PART VI. RESULTS OF STUDY

### QUALIFICATION OF RESULTS

The calculated annual and accrued depreciation are the principal results of the study. Continued surveillance and periodic revisions are normally required to maintain continued use of appropriate annual depreciation accrual rates. An assumption that accrual rates can remain unchanged over a long period of time implies a disregard for the inherent variability in service lives and net salvage and for the change of the composition of property in service. The annual accrual rates were calculated in accordance with the straight line remaining life method of depreciation using the average service life procedure based on estimates which reflect considerations of current historical evidence and expected future conditions.

The annual depreciation accrual rates are applicable specifically to the gas plant in service as of December 31, 2023. For most plant accounts, the application of such rates to future balances that reflect additions subsequent to December 31, 2023, is reasonable for a period of three to five years.

### DESCRIPTION OF DETAILED TABULATIONS

Table 1 is a summary of the results of the study as applied to the original cost of gas plant as of December 31, 2023 presented on page VI-4 of this report. Table 1 presents the remaining life accrual rates and amounts for each plant account.

The service life estimates were based on judgment that incorporated statistical analysis of retirement data, discussions with management and consideration of estimates made for other gas utilities. The results of the statistical analysis of service life are presented in the section beginning on page VII-2, within the supporting documents of this report.

For each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. The survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the curve type designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. The titles of the chart indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The analyses of net salvage data are presented in the section titled, "Net Salvage Statistics". The tabulations present annual cost of removal and gross salvage data, three-year moving averages and the most recent five-year average. Data are shown in dollars and as percentages of original costs retired.

The tables of the calculated annual depreciation applicable to depreciable assets as of December 31, 2023 are presented in account sequence starting on page IX-2 of the supporting documents. The tables indicate the estimated survivor curve and net salvage percent for the account and set forth, for each installation year, the original cost, the calculated accrued depreciation, the allocated book reserve, future accruals, the remaining life, and the calculated annual accrual amount.
