6 **CASE NO. EO-2023-0448**

7 Q. Please state your name and business address.

8 A. My name is Randall Jennings and my business address is P.O. Box 360,  
9 Jefferson City, Missouri 65102.

10 Q. Who is your employer and what is your present position?

11 A. I am employed by the Missouri Public Service Commission (“Commission”) as  
12 a member of the Commission Staff (“Staff”). My current title is Research and Data Analyst for  
13 the Tariff and Rate Design Department of the Industry Analysis Division. I was formerly a  
14 Senior Utility Regulatory Auditor for the Financial Analysis Department, in the Financial and  
15 Business Analysis Division.

16 Q. Are you the same Randall T. Jennings who submitted a Memorandum in support  
17 of Staff’s Recommendation filed on June 3, 2024 in this proceeding?

18 A. Yes, I am

19 Q. What is the purpose of your rebuttal testimony?

20 A. The purpose of my rebuttal testimony is to respond to the direct testimony of  
21 Mr. Daniel E. Deschler. Mr. Deschler sponsored direct testimony on behalf of Union Electric  
22 Company, d/b/a Ameren Missouri (“Ameren Missouri” or “Company”) regarding the  
23 Company’s request involving the 2024 triennial filing of cost estimates for the Callaway Energy

1 Center (“Callaway”) decommissioning and approval of the funding level of the Nuclear  
2 Decommissioning Trust Fund (“NDF”).

3 Within this testimony, Staff will address issues related to the determination of Ameren  
4 Missouri’s amount of annual contribution to the NDF as determined in this proceeding.

5 The purpose of my rebuttal testimony is to present a brief history of previous  
6 decommission filings from Ameren Missouri regarding Callaway and Staff’s interpretation of  
7 the results provided by Ameren Missouri in the current proceeding.

8 **I. Executive Summary**

9 Q. What is the overview of your response to the testimony of Mr. Deschler?

10 A. Staff’s rebuttal will focus on the direct testimony of Mr. Deschler regarding the  
11 Company’s request to maintain the current annual contribution level of \$6,758,605 to the NDF.<sup>1</sup>  
12 Mr. Deschler proposed that a funding adequacy model from Willis Towers Watson (“WTW”),  
13 using 5,000 stochastic modeling scenarios and utilizing varying amounts for multiple variables,  
14 supports Ameren Missouri recommending the continuation of the current annual contribution  
15 amount of \$6,758,605 to its NDF.<sup>2</sup>

16 Mr. Deschler proposed that the WTW model results indicated that the continuation of  
17 the current annual contribution amount would result in a 67% probability of having sufficient  
18 funds available to decommission Callaway.<sup>3</sup>

19 During the review process, Staff did not perform an analysis of the cost to decommission  
20 Callaway. Staff does not have the data necessary to either support or challenge the cost estimate

---

<sup>1</sup> Page 2, Lines 7-10, Deschler Direct Testimony.

<sup>2</sup> Page 12, Lines 9-15, Deschler Direct Testimony.

<sup>3</sup> Page 12, Lines 11-12, Deschler Direct Testimony.

1 to decommission Callaway, but Staff did not find any evidence that the Commission should  
2 reject the estimated decommission cost from TLG Services, Inc. (“TLG”) and presented by  
3 Ameren Missouri.

4 Staff did not perform an analysis of the current annual contribution cost estimate to  
5 determine its validity. Staff was unable to obtain a copy of the WTW model to replicate or  
6 verify the results as presented by Ameren Missouri. Due to the model, and the information  
7 used therein, being proprietary property of WTW, Ameren Missouri claims that it lacks the  
8 authority to share the model with Staff.<sup>4</sup> As a result, Staff cannot verify whether, as per  
9 § 393.292, RSMo, “the amounts collected from ratepayers and paid into such trust funds will  
10 be neither greater nor lesser than the amounts necessary to carry out the purposes of the trusts.”

11 Staff has submitted a request to the Company to have a representative from WTW meet  
12 with Staff at the Company’s Jefferson City office so that Staff can access the stochastic model.  
13 Discussions for such a meeting are ongoing.

14 Q. What are the specific areas in which Staff disagrees with Mr. Deschler’s analysis  
15 and conclusions?

16 A. Staff disagrees with Mr. Deschler’s claims that (1) the current annual funding  
17 level is reasonable and consistent with the mandate that the trust should only collect funds  
18 necessary and adequate to decommission Callaway, and (2) that the stochastic model  
19 demonstrates that the current annual funding level will result in the Nuclear Decommissioning  
20 Trust Fund having a balance neither greater nor lesser than the amount necessary to carry out  
21 the purposes of the fund.<sup>5</sup>

---

<sup>4</sup> Staff Data Requests No. 0001, 0013, 0013.1, 0013.2, 0021, 0021.1, and 0023.2.

<sup>5</sup> Page 16, Lines 6-10, Deschler Direct Testimony.

1 **II. Nuclear Decommissioning Trust Fund and Decommission Cost**

2 Q. What is a Nuclear Decommissioning Trust Fund (“NDF”)?

3 A. Under federal law, the U.S. Nuclear Regulatory Commission (“NRC”)  
4 establishes minimum amounts necessary for licensees to provide reasonable assurance that  
5 funds will be available for the decommissioning process.<sup>6</sup> However, federal regulations also  
6 provide that “Funding for the decommissioning of power reactors may also be subject to the  
7 regulation of Federal or State Government agencies (e.g., the Federal Energy Regulatory  
8 Commission (“FERC”) and State Public Utility Commissions) that have jurisdiction over rate  
9 regulations.”<sup>7</sup> The NRC’s federal regulations are in addition to, and not a substitution for, other  
10 requirements, and are not intended to be used by themselves or by other agencies to  
11 establish rates.<sup>8</sup>

12 Q. How does the NRC define the term “decommission”?

13 A. The NRC defines the term “decommission” as follows in 10 C.F.R. §50.2 and  
14 limits decommissioning to the radiological part of the facility:

15 Decommission means to remove (as a facility) safely from service and  
16 reduce residual radioactivity to a level that permits release of the  
17 property for unstructured use and termination of license.

18 Q. How does the Commission define the term “decommission”?

19 A. This Commission defines “decommissioning” and “decommissioning costs” as  
20 follows under Commission Rule 20 CSR 4240-20.070:

21 (1) As used in this rule, decommissioning means those activities  
22 undertaken in connection with a nuclear generating unit’s retirement  
23 from service to ensure that the final removal, disposal, entombment or  
24 other disposition of the unit and of any radioactive components and

---

<sup>6</sup> 10 CFR 50.75(a) (2022); § 50.75 Reporting And Recordkeeping For Decommissioning Planning. | NRC.gov.

<sup>7</sup> Ibid.

<sup>8</sup> Ibid.

1 materials associated with the unit, are accomplished in compliance with  
2 all applicable laws, and to ensure that the final disposition does  
3 not pose any undue threat to the public health and safety.  
4 Decommissioning includes the removal and disposal of the structures,  
5 systems and components of a nuclear generating unit at the time  
6 of decommissioning.

7 (2) As used in this rule, decommissioning costs means all reasonable  
8 costs and expenses incurred in connection with decommissioning,  
9 including all expenses to be incurred in connection with the preparation  
10 for decommissioning, including, but not limited to, engineering and  
11 other planning expenses; and to be incurred after the actual  
12 decommissioning occurs, including, but not limited to, physical security  
13 and radiation monitoring expenses, less proceeds of insurance, salvage  
14 or resale of machinery, construction equipment or apparatus the cost of  
15 which was charged as a decommissioning expense.

16 In addition, 20 CSR 4240-20.070(4) establishes the frequency of filings with the Commission  
17 of information regarding the decommissioning trust fund, stating in pertinent part:

18 Every three (3) years, utilities with decommissioning trust funds shall  
19 perform and file with the commission cost studies detailing the utilities'  
20 latest cost estimates for decommissioning their nuclear generating  
21 unit(s) along with the funding levels necessary to defray these  
22 decommissioning costs. These studies shall be filed along with  
23 appropriate tariff(s) effectuating the change in rates necessary to  
24 accomplish the funding required. In addition, the commission, at  
25 any time for just cause, may require a utility to file an  
26 updated decommissioning cost study, funding requirement, and  
27 associated tariff(s).

28 Q. How was the estimated cost to decommission Callaway determined?

29 A. Ameren Missouri contracted with TLG to perform the site-specific cost study to  
30 determine the estimated cost for decommissioning Callaway. TLG prepared a  
31 *Decommissioning Cost Analysis for the Callaway Energy Center* ("2023 Study") included as  
32 Attachment 3 to Ameren Missouri's Amended Application in this proceeding. TLG's current  
33 analysis of the cost to decommission Callaway is an update of the study that TLG initially  
34 performed for Ameren Missouri in 1993 and has also completed for subsequent triennial filings.

1 Ameren Missouri further states in its Amended Application, “TLG is an industry leader  
2 in nuclear power plant decontamination and decommissioning planning, cost estimating, and  
3 project field supervision and has prepared and updated decommissioning cost estimates for the  
4 vast majority of nuclear generation units in the country. TLG also is the company that prepared  
5 the decommissioning cost estimates that were filed with and approved by the Commission in  
6 1993, 1999, 2002, 2005, 2008, 2011, 2015, 2018, and 2020 as well as the Independent Spent  
7 Fuel Storage Installation (“ISFSI”) decommissioning cost estimate in 2015 and 2018.”<sup>9</sup>

8 Q. Has TLG’s cost estimates been submitted in other jurisdictions, including  
9 the NRC?

10 A. TLG cost estimates have been presented many times (>100) to various state and  
11 federal agencies, including the NRC.<sup>10</sup>

12 Q. Does Staff have any major concerns with the 2023 cost study prepared by TLG?

13 A. Staff does not find any major concerns with the 2023 cost study prepared by  
14 TLG. Staff has not conducted research or attempted to obtain information from other sources  
15 regarding the cost estimates provided by TLG.

16 Q. How is the cost of decommission paid?

17 A. Section 393.292, RSMo, states that:

18 Notwithstanding any other provision of law to the contrary, the public  
19 service commission shall have the power, pursuant to regulations, to  
20 review and authorize changes to the rates and charges contained in the  
21 schedules of an electric corporation as a result of a change in the level of  
22 annual accrual of funding necessary for its nuclear power plant  
23 decommissioning trust fund only after a full hearing and after  
24 considering all facts relevant to such funding level or accrual rate. The  
25 commission shall also have the authority to adopt regulations to govern  
26 the procedure for submission, examination, hearing, and approval of

---

<sup>9</sup> Page 5, Ameren Missouri Amended Application.

<sup>10</sup> Company response to Staff Data Request 0010.

1 such tariff changes and **to ensure that the amounts collected from**  
2 **ratepayers and paid into such trust funds will be neither greater nor**  
3 **lesser than the amounts necessary to carry out the purposes of the**  
4 **trusts.** (emphasis added)

5 In other words, an annual contribution amount is determined and included in the  
6 Company's base rates. This annual contribution is intended to be an amount deposited into an  
7 NDF that, upon the expiration of Callaway's operating license, will have a balance that is  
8 neither greater nor lesser than the amount necessary to perform Callaway's decommissioning.

9 Q. Why is the determination of the annual contribution amount important?

10 A. Determining a correct amount of annual contribution ensures that rate payers  
11 over multiple decades are equally burdened with the cost of decommissioning. Setting a current  
12 annual contribution amount that is excessive burdens today's rate payers with an uneven  
13 percentage of the total decommissioning cost for benefits future rate payers will receive.  
14 Setting a current annual contribution amount that is insufficient will burden future rate payers  
15 for benefits provided to current rate payers.

16 Q. Prior to this proceeding, has Ameren Missouri filed triennial filings stating  
17 Callaway's estimated decommission cost and the decommission fund balance at that time?

18 A. Yes. Below is a list of recent Ameren Missouri triennial filings with data from  
19 each filing's respective application:

20

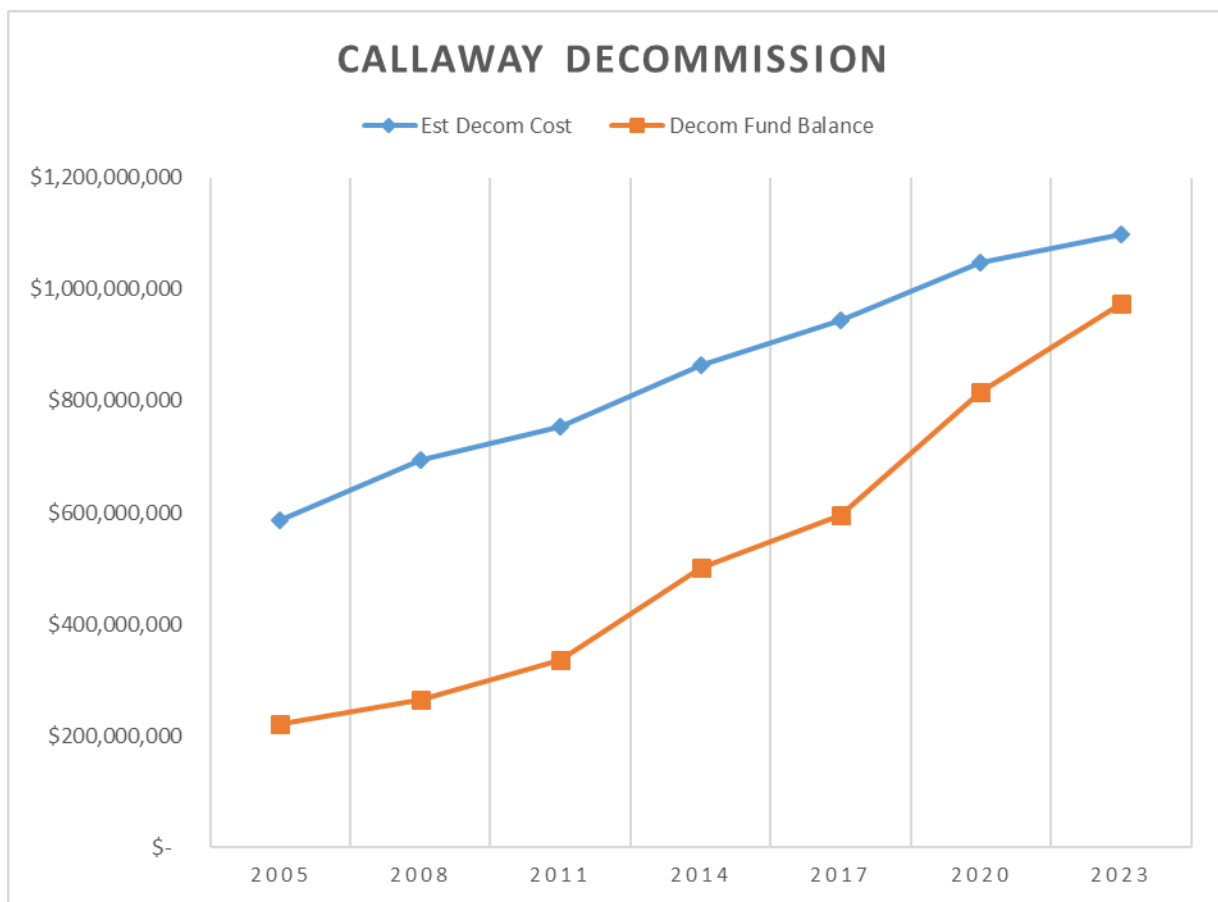

Case No.	License Expires	Total Estimated Decommission Cost	Decommission Fund Balance	Annual Contribution
EO-2006-0098	2024	\$ 586,515,200	\$ 220,451,094	\$ 6,486,378
EO-2009-0081	2024	\$ 693,907,000	\$ 264,089,093	\$ 6,486,378
EO-2012-0070	2024	\$ 754,500,000	\$ 335,197,431	\$ 6,758,605
EO-2015-0253	2044	\$ 864,734,000	\$ 502,192,646	\$ 6,758,605
EO-2018-0051	2044	\$ 943,465,000	\$ 595,480,833	\$ 6,758,605
EO-2021-0050	2044	\$ 1,046,835,000	\$ 816,417,131	\$ 6,758,605
EO-2023-0448	2044	\$ 1,097,947,000	\$ 974,144,000	\$ 6,758,605

21

1 Q. From 2005 to 2024, what has happened to the estimated decommission cost and  
2 to the decommissioning trust fund balance?

3 A. The estimated decommission cost and the NDF balance have increased 87% and  
4 342%, respectively, between 2005 and 2024.<sup>11</sup> These increases have translated to the NDF  
5 balance having a shortage, or insufficient balance, that has decreased from \$366,064,106  
6 (62.41%) in 2005 dollars to \$123,803,000 (11.28%) in 2023 dollars.

7

8

<sup>11</sup> Schedule RTJ-r3, Jennings' Rebuttal Testimony.

1 **III. Funding Adequacy Analysis**

2 Q. In the current proceeding, how did Ameren Missouri evaluate whether the  
3 current annual contribution amount will provide the NDF sufficient funding?

4 A. Ameren Missouri depended upon a study from WTW that used a proprietary  
5 model of 5,000 stochastic scenarios which was included as Attachment 4 to Ameren Missouri's  
6 Amended Application in this proceeding.

7 Q. What variable did WTW's stochastic model calculate?

8 A. WTW's proprietary model used various market and economic assumptions  
9 simulating 5,000 different scenarios as outlined in Attachment 4 of the amended application to  
10 calculate the future balance of the NDT.<sup>12</sup>

11 Q. Has WTW's stochastic model using 5,000 scenarios been filed with this  
12 Commission or any other regulatory body before this proceeding?

13 A. No. The model used to support Ameren Missouri's filing has not been filed with  
14 any other state commissions concerning nuclear fund adequacy analysis or in support of a rate  
15 hearing.<sup>13</sup> WTW has used its stochastic model to support thirty-one (31) other nuclear  
16 generating units and to assist only their owners in evaluating the probability whether there will  
17 be sufficient funding available at the time of decommissioning.<sup>14</sup>

18 Q. What did Ameren Missouri conclude from the stochastic model?

19 A. WTW's analyses considered the current amount of annual funding and  
20 determined the probability there would be sufficient funds available for the decommissioning

---

<sup>12</sup> Page 6, Paragraph 14, Ameren Missouri's Amended Application.

<sup>13</sup> Company response to Staff Data Request 0021.1.

<sup>14</sup> Ibid.

1 of Callaway and through decommissioning under various market and economic assumptions.<sup>15</sup>  
2 The Company concluded the annual contribution amount should remain unchanged based on  
3 WTW's analyses that in nearly 67% of the 5,000 modeling scenarios there will be sufficient  
4 funds available for decommissioning Callaway under the DECON method starting in 2044.<sup>16</sup>

5 Q. How does Callaway's NDF balance and 67% of the modeling scenarios having  
6 sufficient funds available for decommissioning compare to the other thirty-one (31) nuclear  
7 units analyzed by WTW?

8 A. In its Application, Ameren Missouri stated "This compares favorably with the  
9 peer universe of 31 other nuclear units analyzed by Willis Towers who has a median probability  
10 of successfully funding their decommissioning costs of 73%."<sup>17</sup> The Company further stated  
11 "The probability of having enough funds is not a precise forecast but represents a reasonable  
12 expectation of a likely outcome. The 67% vs 73% difference is not a material difference when  
13 looking at the range of the 31 other utilities."<sup>18</sup>

14 Q. Does Ameren Missouri monitor the funding status of other NDFs held by  
15 other utilities?

16 A. Ameren Missouri does not monitor the funding status of other NDFs. The  
17 Company stated "However, Ameren's consultant, Willis Towers Watson, does provide  
18 consulting services to other nuclear units and therefore does monitor and assess the funding of  
19 various NDT trusts for these nuclear units. Ameren's conclusion in its application that the

---

<sup>15</sup> Page 6, Paragraph 14, Ameren Missouri's Amended Application.

<sup>16</sup> DECON refers to a decontamination process used during the decommissioning of nuclear facilities, which is the process of safely shutting down and dismantling a nuclear facility at the end of its operational life. For the definition of DECON, please see Page viii of xxi in Attachment 3 of the Amended Application.

<sup>17</sup> Ibid.

<sup>18</sup> Company response to Staff Data Request 0013.

1 current funding level is adequate is based on the conclusion from Willis Towers Watson when  
2 compared to other comparable nuclear units analyzed by Willis Towers Watson.”<sup>19</sup>

3 Q. Did Ameren Missouri indicate how it could increase the probability of its NDF  
4 being sufficiently funded from 67% to 73% to match the median probability of the other  
5 thirty-one (31) nuclear units analyzed by WTW?

6 A. Yes. Ameren Missouri indicated that by raising the current annual contribution  
7 amount from its current \$6.8 million to \$14 million, the probability of having sufficient funds  
8 would increase from 67% to 73%.<sup>20</sup>

9 Q. Although Ameren Missouri did not provide an electronic copy of the stochastic  
10 model created by WTW, were the results provided?

11 A. Yes, Ameren Missouri provided a list of the simulations and the result of each  
12 simulation listing the “PV Surplus End of Decommissioning,” the “PV of Remaining Costs  
13 When Assets Deplete,” and the sum of the two amounts for each simulation.<sup>21</sup>

14 Q. What was Staff’s analysis of the results from the simulations?

15 A. The WTW model presented by Ameren Missouri produced scenarios with NDF  
16 ending balances ranging from a deficit of \$1.2 Billion (116% of the total decommission cost)  
17 to a surplus of \$3.8 Billion (346% of the total decommission cost).<sup>22</sup> Table 1 displays how  
18 scenarios fell within a given percentage of the total decommission cost.

19 As an example, highlighted below, of the 5,000 scenario results, 453 (or 9.06% of all  
20 scenario results) had ending balances within -16% to -20% and 16 to 20% of the total  
21 decommission cost. These scenario results had **either** a deficit between -\$175.7 and -\$219.6

---

<sup>19</sup> Company response to Staff Data Request 0009.

<sup>20</sup> Company response to Staff Data Request 0013.1.

<sup>21</sup> Company Supplemental Response to Staff Data Request 0024.1.

<sup>22</sup> Ibid.

Rebuttal Testimony of  
Randall T. Jennings

1 million or a surplus between \$175.7 and \$219.6 million. The average amount of surplus for  
2 these 453 scenario results was \$43.09 million. Cumulatively, 2,432 (or 48.64%) of the 5,000  
3 scenario results had ending balances between -20% to 20% of the total decommission cost.  
4 In other words, 48.64% of the scenario results are within \$219.6 million of the total  
5 decommission cost in 2023 dollars.

6

Grand Total		5,000	100.00%		5,000	100.00%

7  
8 For additional information regarding the calculations contained in Table 1 above, please  
9 see the attached Schedule RTJ-r1.

10 Q. What was Staff's conclusion regarding the NDF ending balances?

11 A. After sorting the 5,000 scenario results in order from largest deficit to largest  
12 surplus, Staff found the mean (average) result was a surplus amount of \$227.0 million

1 (or 20.68% of the total decommission cost) while the median, or middle result, was a surplus  
2 amount of \$141.2 million or 12.86% of the total decommission cost in 2023 dollars.<sup>23</sup>

3 For scenarios resulting in an insufficient balance (33% or 1,669 scenarios), the average  
4 deficiency is \$174.3 million dollars or 15.88% of the total decommission cost in 2023 dollars.<sup>24</sup>

5 For the 67% of the scenarios resulting in a balance sufficient to carry out the purpose of  
6 the trust, the average surplus amount was \$428 million or 38.99% of the total decommission  
7 cost in 2023 dollars.<sup>25</sup>

8 Q. Did Staff also examine the scenarios while attempting to remove  
9 extreme results?

10 A. Yes. Staff examined the middle 66% (3,300) of the scenarios, excluding 17%  
11 (850) at each end of the scenario results in order to remove the extremes. By removing equal  
12 amounts of results from each end of the spectrum, Staff hoped to remove extremities equally  
13 that could skew the overall picture of the model. Table 2 below represents how the scenarios  
14 fell within a given percentage of the total decommission cost:

---

<sup>23</sup> Schedule RTJ-r1, Jennings' Rebuttal Testimony.

13

14

15

As an example, highlighted above, of the 3,300 scenario results, 275 (or 8.33% of all scenario results) had ending balances within -16% to -20% and 16 to 20% of the total decommission cost. These scenario results had **either** a deficit between -\$175.7 and -\$219.6 million **or** a surplus between \$175.7 and \$219.6 million. The average amount of surplus for these 275 scenario results was \$198.04 million. Cumulatively, 2,083 (or 63.12%) of the 3,300 scenario results had ending balances between -20% to 20% of the total decommission cost. In other words, 63.12% of the scenario results are within \$219.6 million of the total decommission cost in 2023 dollars.

For additional information regarding the calculations in Table 2 please see attached Schedule RTJ-r2.

Q. What was Staff's conclusion?

A. The 3,300 scenarios examined had an average surplus of \$167.3 million (or 15.23% of the total decommission cost in 2023 dollars) and a median amount of \$141.1

1 million (or 12.86% of the total decommission cost in 2023 dollars).<sup>26</sup> The 3,300 scenario results  
2 ranged from a deficit of \$129.4 million (or 11.79% of the total decommission cost) to a surplus  
3 of \$576.3 million (or 52.49% of the total decommission cost).<sup>27</sup>

4 For scenarios resulting in an insufficient balance (24.82% or 819 scenarios), the average  
5 deficiency is \$57.3 million dollars or 5.21% of the total decommission cost in 2023 dollars.<sup>28</sup>

6 For the remaining 75.18% of the scenarios resulting in a balance sufficient to carry out  
7 the purpose of the trust, the average surplus amount was \$241.4 million or 21.98% of the total  
8 decommission cost in 2023 dollars.<sup>29</sup>

9 **IV. Stochastic vs. Deterministic Model**

10 Q. Is Ameren Missouri's funding adequacy analysis in this proceeding the same  
11 method the Company has used in previous proceedings?

12 A. No, it is not. While the method used in this proceeding utilized a stochastic  
13 model of 5,000 scenarios, the Company previously used a deterministic model that included  
14 fixed inputs of economic and market assumptions provided by WTW as agreed to in prior  
15 filings with the Commission.<sup>30</sup>

16 Q. What is the difference between a "stochastic" model and a  
17 "deterministic" model?

---

<sup>26</sup> Ibid.

<sup>27</sup> Ibid.

<sup>28</sup> Ibid.

<sup>29</sup> Ibid.

<sup>30</sup> Company response to Staff Data Request 0025.

1           A.     A stochastic model contains an element(s) of uncertainty, which is built into the  
2 model through the inputs. Due to the uncertainty present in a stochastic model, the results  
3 provide an estimate of the probability of various outcomes.<sup>31</sup>

4           A deterministic model is the exact opposite and does not involve any uncertainty or  
5 randomness. The defining characteristic of a deterministic model is that regardless of how  
6 many times the model is run, the results will always be the same.<sup>32</sup>

7           Q.     How does the previously used deterministic model differ from the stochastic  
8 model used in this proceeding?

9           A.     The deterministic model solved for one variable. “The Excel model [previously  
10 used] would solve for an overall rate of inflation for the cost of decommissioning that would  
11 result in ‘zero dollars’ at the end of decommissioning Callaway.”<sup>33</sup> “The static model reflects  
12 one market scenario only and solves for a rate of inflation for the cost of decommissioning.”<sup>34</sup>

13           The stochastic model submitted in this proceeding used ranges of multiple economic  
14 and market inputs to solve for the ending balance of the NDF.

15           Listed below are the inputs (or the ranges thereof) used in the stochastic model, the  
16 deterministic model, and the actual historical average for each of the economic and market  
17 inputs since the inception of the Callaway NDF:

2

3

Q. Are the economic and market inputs used by the Company in the stochastic

4

model based on historical data and if so, what are the sources for that information?

5

A. The Company stated:

6

All of Willis Towers Watson’s projections are based on their firm view on capital markets. Willis Towers Watson takes the current economic conditions and forecasts how they are expected to revert to long term normative levels. While Willis Towers Watson uses historical data to shape their views on normative levels, the projections are their independent proprietary views.<sup>35</sup>

7

8

9

10

11

12

Q. Are the economic and market inputs used by the Company in the deterministic

13

model based on historical data and if so, what are the sources for that information?

14

A. The Company stated:

15

The basis for these inputs came from the output of the “breakeven scenario” in the stochastic modeling. The reasonableness for the assumptions that were varied is the parameters fall within the market ranges that were established when setting up the stochastic modeling and identified in the Amended Filing in Attachment 4. The parameters that were varied included CPI Inflation, Nominal Pre-tax and Expense Returns for Bonds and Equities. These factors and the ranges within which they were varied came from Willis Towers Watson as of July 1, 2023, market assessment.<sup>36</sup>

<sup>35</sup> Company response to Staff Data Request 0023.2.

<sup>36</sup> Company response to Staff Data Request 0013.3.

1 Q. What is the benefit of using a stochastic model rather than a deterministic model  
2 to determine the adequate annual contribution to the NDF in order to ensure the amounts  
3 collected from ratepayers and paid into such trust funds will be neither greater nor lesser than  
4 the amounts necessary to carry out the purposes of the trust?

5 A. The Company stated:

6 The benefit of using the stochastic modeling is it properly reflects what  
7 could happen going forward recognizing many factors and market  
8 assumptions will vary into the future. Ameren Missouri believes the  
9 “probability of having enough funds available” reflects more the reality  
10 of future outcomes since many variables will change over time and affect  
11 the funding level at time of decommissioning. Employing this  
12 probability of outcomes is reasonable and comparing it to other nuclear  
13 generating units provides a better snapshot of how well funded  
14 Callaway’s NDT fund is in relation to the industry in general. Ameren  
15 Missouri recognizes this outcome is less “deterministic” than the prior  
16 approach, however, the stochastic model reflects better the range of  
17 potential outcomes as it relates to funding for decommissioning.<sup>37</sup>

18 Q. Did Ameren Missouri submit a stochastic model using scenarios, applying the  
19 same ranges of variable inputs, to solve for the level of annual contribution collected from  
20 ratepayers necessary so the NDF will have an ending balance neither greater nor lesser than the  
21 amount needed to carry out the purposes of the NDF?

22 A. No. Ameren Missouri discussed the possibility of “tweaking” the stochastic  
23 model with WTW trying to forecast a zero (“breakeven”) balance through all the 5,000  
24 simulations at the end of decommissioning by varying the contribution amount, but the  
25 Company said this is not possible or meaningful given the contribution amount would be  
26 negative under certain simulations.<sup>38</sup> Neither the “tweaked” stochastic model nor its results

---

<sup>37</sup> Company response to Staff Data Request No. 0025.

<sup>38</sup> Company response to Staff Data Request No. 0026.

1 could be manually changed to remove negative contributions and determine an annual  
2 contribution resulting in a breakeven balance.<sup>39</sup>

3 Q Does Staff agree with Ameren Missouri's interpretation of WTW's analyses  
4 using the stochastic model presented in the Company's amended application?

5 A. Ameren Missouri has repeatedly stated WTW's model and data are proprietary  
6 and cannot be provided to Staff.<sup>40</sup> Staff has been unable to obtain a copy of the WTW model  
7 or selected WTW data, has been unable to replicate or independently verify the results presented  
8 by Ameren Missouri, or determine an annual contribution amount that will result in an ending  
9 balance neither greater nor lesser than the amount necessary to carry out the purpose of the  
10 NDF. However, as noted earlier in this testimony, Staff is discussing alternative ways for the  
11 Company to provide Staff access to the WTW model.

12 Staff does not have concerns at this time with the credibility of WTW or its use of a  
13 stochastic model. In addition, Staff agrees with Ameren Missouri that the current funding  
14 amount of \$6,758,605 would indeed provide sufficient funds for the decommissioning of  
15 Callaway. However, the stochastic model produced a median result of an ending balance  
16 having a surplus of \$141 million, or 13% of the current liability in 2023 dollars.<sup>41</sup>

17 In § 393.292, RSMo it states that "the amounts collected from ratepayers and paid into  
18 such trust funds will be neither greater nor lesser than the amounts necessary to carry out the  
19 purposes of the trusts." Therefore, Staff has not found any evidence that the current  
20 decommissioning trust fund level is appropriate to utilize for the ratemaking purposes of  
21 Ameren Missouri.

<sup>39</sup> Company response to Staff Data Request No. 0026.1.

<sup>40</sup> Staff Data Requests No. 0001, 0013, 0013.1, 0013.2, 0021, 0021.1, and 0023.2.

<sup>41</sup> Company response to Staff Data Request No. 0024.1s1.

1 **V. Summary and Conclusions**

2 Q. Please summarize the conclusions of your rebuttal testimony.

3 A. Staff does not find any issue with the cost study presented by TLG. Likewise,  
4 Staff does not presently find any issue with the stochastic model presented by WTW, though  
5 the model is proprietary property and it has not been made available for Staff's review.

6 However, Staff questions Mr. Deschler's statement that the analysis performed by  
7 WTW demonstrates that the funding level is neither greater nor less than the amounts necessary  
8 to carry out the purposes of the trust.<sup>42</sup> The WTW stochastic model provides scenarios of  
9 varying economic conditions with the continued current contribution level. These scenarios  
10 provide differing results with various ending balances within a percentage of the desired  
11 decommissioning amount, as Staff has previously described and illustrated.

12 Mr. Deschler stated "the outcome of the 5,000 scenarios showed that in 67% of the cases  
13 the ending value was sufficient to fund the anticipated costs of decommissioning Callaway."<sup>43</sup>  
14 Mr. Deschler did not provide context for this statement including that the average NDF balance,  
15 for scenarios ending with sufficient funds, was \$428.1 million in excess of the amount  
16 necessary, or 39%, of the estimated decommission cost in 2023 dollars.

17 Based on the stochastic model scenario results that are using the annual contribution  
18 amount requested by the Company, Staff cannot conclude that the annual contribution amount  
19 is appropriate and will result in the NDF having an ending balance to carry out the purpose of  
20 the trust while ensuring the NDF is neither over nor underfunded.

<sup>43</sup> Page 7, Lines 4-5, Daniel Deschler Direct Testimony.

Rebuttal Testimony of  
Randall T. Jennings

1           Staff requests in this filing and all future filings, involving models used in support of  
2 the Company's position, that the Company be required to provide Staff access to a working  
3 copy of said models so that Staff has an opportunity to perform an analysis of the model and its  
4 results. This will ensure Staff has a chance to determine its validity and to confirm that the  
5 requested annual contribution will result in the NDF having neither a surplus nor a deficit  
6 upon decommission. Staff further requests that the Company file a proper NDF annual  
7 contribution, along with evidence and testimony in support thereof, in its next rate case for  
8 ratemaking purposes.

9           Q.     Does this conclude your rebuttal testimony?

10          A.     Yes.
