DIRECT TESTIMONY OF CHARLOTTE T. EMERY THE EMPIRE DISTRICT ELECTRIC COMPANY D/B/A LIBERTY BEFORE THE MISSOURI PUBLIC SERVICE COMMISSION DOCKET NO. ER-2024-0261

1 I. INTRODUCTION

- 2 Q. Please state your name and business address.
- A. My name is Charlotte T. Emery. My business address is 602 South Joplin Avenue,
 Joplin, MO, 64802.

5 Q. By whom are you employed and in what capacity?

A. I am employed by Liberty Utilities Service Corp. ("LUSC") as a Senior Director of
Rates and Regulatory Affairs for the Liberty Central Region, which includes The
Empire District Electric Company d/b/a Liberty ("Liberty" or "Company").

9 Q. On whose behalf are you testifying in this proceeding?

10 A. I am testifying on behalf of Liberty.

11 Q. Please describe your educational and professional background.

12 A. I graduated from College of the Ozarks, Point Lookout, Missouri, in 2000 with a 13 Bachelor of Science degree with a major in Accounting. I have been a Certified Public 14 Accountant ("CPA") in the State of Missouri since 2006. I was hired by Liberty in July 15 2016 as a Rates Analyst and promoted to my current position as a Senior Director in 16 the Rates and Regulatory Affairs Department in 2022. In my current role, I am 17 responsible for all regulatory matters involving electric, natural gas, and 18 water/wastewater utilities in Arkansas, Illinois, Iowa, Kansas, Missouri and Oklahoma. 19 In addition to managing the Central Region Rates and Regulatory Affairs Department, 20 I am responsible for the development of regulatory strategy, interacting with regulators 21 and other parties on behalf of all the utilities within the Central Region footprint,

reviewing and preparing other aspects of regulatory filings, and internal approval of
 rates and changes, among other duties.

Prior to joining the Company, I worked for six years in the regulated insurance
industry in Springfield, Missouri as a Director of Accounting. In addition, I have nine
years of public accounting experience working for both a national and "Big Four"
accounting firms. My primary roles at these organizations included serving as a
supervisor for financial statement audits and a tax consultant.

8 Q. Have you previously testified before the Missouri Public Service Commission 9 ("Commission") or any other regulatory agency?

A. Yes. I have testified on behalf of Liberty and/or its affiliates before this Commission,
 as well as before the Kansas Corporation Commission, the Arkansas Public Service
 Commission, and the Oklahoma Corporation Commission. The case references are
 attached to this testimony as Direct Schedule CTE-16.

14 Q. What is the purpose of your direct testimony in this proceeding?

15 A. My direct testimony serves many purposes. First, I provide and explain the basis for 16 the Company's overall revenue requirement and cost to serve its retail electric 17 customers in Missouri. I support the rate base and income statement pro-forma 18 adjustments. In addition, I provide testimony requesting establishment of a regulatory 19 mechanism to track environmental compliance costs, seeking authorization for an 20 Accounting Authority Order ("AAO") to defer certain accounting items as it relates to 21 new natural gas generation units, as well as requesting termination of the Company's 22 Asbury AAO liability. Lastly, I provide support for the allocation factors utilized in 23 allocating the revenue requirement components among Liberty's four electric retail and 24 FERC jurisdictions.

1 Q. Are you sponsoring any schedules with your testimony?

2 A. Yes. I am sponsoring the following schedules:

Schedule	Description
Direct Schedule CTE-1	Revenue Requirement Summary
Direct Schedule CTE-2	Rate Base Summary
Direct Schedule CTE-3	Rate Base Adjustment Summary
Direct Schedule CTE-3.1	Plant in Service
Direct Schedule CTE-3.2	Accumulated Depreciation/Amortization
Direct Schedule CTE-3.3	Cash Working Capital
Direct Schedule CTE-3.4	Prepayments
Direct Schedule CTE-3.5	Materials, Supplies & Inventory
Direct Schedule CTE-3.6	Customer Deposits
Direct Schedule CTE-3.7	Customer Advances
Direct Schedule CTE-3.8	Regulatory Assets
Direct Schedule CTE-3.9	Regulatory Liabilities
Direct Schedule CTE-3.10	Accumulated Deferred Income Taxes
Direct Schedule CTE-4	Explanation of Rate Base Adjustments
Direct Schedule CTE-5	Income Statement Summary
Direct Schedule CTE-6	Income Statement Adjustment Summary
Direct Schedule CTE-6.1	Revenues
Direct Schedule CTE-6.2	Operation and Maintenance Expenses
Direct Schedule CTE-6.3	Depreciation Expense
Direct Schedule CTE-6.4	Amortization Expense
Direct Schedule CTE-6.5	Taxes Other Than Income Taxes
Direct Schedule CTE-6.6	Interest on Customer Deposits
Direct Schedule CTE-7	Explanation of Income Statement Adjustments
Direct Schedule CTE-8	Weighted Average Cost of Capital
Direct Schedule CTE-9	Weighted Average Cost of Debt
Direct Schedule CTE-10	Income Taxes
Direct Schedule CTE-11	Pro Forma Income Taxes
Direct Schedule CTE-12	Interest Synchronization

Direct Schedule CTE-13	Gross Revenue Conversion Factor
Direct Schedule CTE-14	Composite Tax Rate
Direct Schedule CTE-15	Basis of Jurisdictional Allocations
Direct Schedule CTE-16	Case Reference Listing
Direct Schedule CTE-17	Interruptible Service, Rider IR Tariff

- Q. Was the information contained in the Schedules obtained or derived from the
 books and records of the Company?
- 3 A. Yes.

4 Q. Did Liberty provide the Commission timely notice of the Company's intent to file 5 a general rate case?

6 Yes. Pursuant to Commission Rule 20 CSR 4240-4.017, a utility is required to provide A. 7 at least 60 days' notice to the Commission of its intent to file a case. On March 25, 2024, Liberty filed its Notice of Intended Case Filing, which was assigned Case No. 8 9 ER-2024-0261, satisfying the requirements of Commission Rule 20 CSR 4240-4.017. 10 Additionally, on August 30, 2024, the Company requested a waiver from the Rule to 11 not have the docket close at the end of the one hundred eighty (180) day timeframe. 12 The Commission approved the Company's waiver request on September 19, 2024, 13 stating the file shall remain open until January 1, 2025. Liberty made a general rate case filing in this Case No. ER-2024-0261 on November 6, 2024 (Tariff Tracking No. 14 15 JE-2025-0069).

16 II. <u>GENERAL RATE CHANGE BACKGROUND</u>

17 Q. Please describe the Company's recent history of general rate case filings.

A. The Company filed its last general rate case in Missouri in Case No. ER-2021-0312 on
 May 28, 2021. The Commission issued its Order Approving Stipulations and
 Agreements effective March 19, 2022. The Commission issued its Report and Order

with an effective date of April 16, 2022, and approved compliance tariffs with an
 effective date of June 1, 2022. The Company was authorized to increase base rate tariff
 revenues annually by \$35,515,913.

4 Q. What is the amount of the annual revenue deficiency requested in this case?

A. The Company is seeking to recover an annual base rate revenue deficiency of
\$152,825,837 based on a rate base of \$2,563,858,141. This represents a 29.64%
increase in total operating revenue. Chart 1 below reflects the major drivers of the
Company's proposed rate increase. My direct testimony will address these specific
revenue requirement drivers.

Chart 1

Revenue Increase Drivers (\$Millions)¹

12 13

10

11

¹ Based on comparing to Company's surrebuttal position in docket ER-2021-0312, which resulted in a black box settlement. The Parties agreed to a total net operating income and did not agree to any particular revenue or costs amounts to be used to calculate the revenue increase.

Q. How did Liberty determine its annual revenue deficiency and its need for a general rate change?

A. This request is based on a test year ending September 30, 2023. Adjustments have been
proposed for known and measurable changes to the test year and to normalize operating
results. The direct schedules, as presented, contain all expense items, and Chart 2
below shows a calculation of the annual revenue deficiency.

7

Chart 2

Line No.	Revenue Requirement Component	Reference Schedule	Dollar Amount
1	Total Rate Base	Direct Schedule CTE-1	\$ 2,563,858,141
2	Required Rate of Return	Direct Schedule CTE-1	7.29%
3	Required Net Operating Income	Line 1 x Line 2	186,938,447
4	Operating Income Deficiency	Direct Schedule CTE-1	116,392,005
5	Gross Revenue Conversion Factor	Direct Schedule CTE-1	1.3130
6	Total Revenue Deficiency	Line 5 x Line 6	152,825,837

8

9 III. <u>REVENUE REQUIREMENT</u>

10 Q. What is meant by the term "revenue requirement"?

11 A. A utility's "revenue requirement" is the sum of its Operation and Maintenance 12 ("O&M") expenses, depreciation/amortization expense, income and other taxes, and a 13 fair return on the utility's rate base. The revenue requirement is often determined based 14 on a historical test year with pro forma adjustments reflecting reasonably known and 15 measurable changes to revenues, expenses, and rate base items. When the revenue 16 requirement exceeds the utility's normalized test year revenues, a revenue deficiency 17 exists, which is the case here, and a rate increase is required. The calculation presented 18 in this case is made specific to the Company's Missouri retail jurisdiction.

19 Q. What are the general categories of pro forma adjustments proposed by the 20 Company?

1 A. *Pro forma* adjustments generally fall into one of the following categories:

- Normalization Adjustments made to rate base and expenses to offset unusual levels
 of operations recorded during the test year. An example of such an adjustment would
 be the use of a 13-month average for materials and supplies to address the variable
 nature of the expense.
- 6 2) Annualization Adjustments made to recognize a cost incurred during the test year
 7 that will be ongoing and must be captured on a prospective basis. An example of
 8 such an adjustment would be the adjustment to payroll to account for salary increases
 9 during the update period. This annualization is necessary to adjust payroll costs to a
 10 level reflecting the *pro forma* salary for the entire year.
- 3) Out of Period Adjustments reflect known and measurable changes that occur
 outside the end of the test year. An example of such an adjustment would be
 increases in Plant in Service based on Construction Work that is expected to be
 complete, and used and useful by the end of the update period.
- 4) Costs that are not necessary to provide electric service An example of such an
 adjustment would be to remove the common plant utilized by Liberty's gas or water
 utility affiliates.
- S) Costs recovered elsewhere reflect any cost recovery that occurs outside of base
 rates. An example of such an adjustment would be to remove franchise fees. This
 adjustment is necessary to ensure that customers are not double charged for costs
 recovered or passed through a separate mechanism or tariff.
- 22 Q. What test year is the Company proposing in this case?
- A. The Company is proposing a historical test year based on twelve months ended
 September 30, 2023.

1	Q.	Is Liberty requesting the test year be updated?
2	A.	Yes. Liberty is proposing the test year be updated through September 30, 2024. The
3		impact of the update process has been included in the Company's revenue requirement
4		and presented in direct testimony. However, because certain pro-forma adjustments
5		are based on anticipated September 30, 2024, balances it is appropriate for the
6		Company to provide an update with actual update period financial information during
7		the pendency of the case.
8	Q.	Is Liberty requesting a "true-up" process at this time?
9	A.	No.
10	Q.	What is Liberty's calculated overall Rate of Return ("ROR")?
11	A.	Liberty's adjusted update period ROR is 2.75%. The adjusted update period ROR is
12		calculated by dividing adjusted test year operating income by the adjusted test year rate
13		base. Liberty's last authorized rate of return is 6.77%, thus reflecting that the Company
14		is significantly underearning.
15	Q.	Please summarize the rate relief the Company is seeking in this proceeding.
16	A.	As stated above, the Company is seeking to recover an annual base rate revenue
17		deficiency of approximately \$152.8 million based on a rate base of approximately
18		\$2,563,858,141.
19	Q.	What is the revenue requirement model?
20	A.	A revenue requirement model is the analysis that calculates the various components of
21		the revenue requirement which was mentioned previously in my testimony and
22		provides a determination of whether a utility is earning its authorized ROR.
23	Q.	Please describe the direct schedules of the revenue requirement model.

1 A. **Direct Schedule CTE-1**, Revenue Requirement Summary, presents the Company's 2 proposed revenue requirement and the overall revenue requirement calculation. Direct Schedule CTE-2, Rate Base Summary, reflects the Company's test year rate base, 3 4 including pro forma adjustments and the resulting pro forma update period rate base. 5 Rate base is the value of property upon which a public utility can earn a specified ROR. 6 Direct Schedule CTE-3, Rate Base Adjustment Summary, and Direct Schedule CTE-7 6, Income Statement Adjustment Summary, provides the known and measurable 8 adjustments to rate base and operating income that the Company expects through the 9 update period. Direct Schedule CTE-5, Income Statement Summary, provides the test 10 year statement of operating income with pro forma adjustments and the resulting pro 11 forma update period operating income. Direct Schedule CTE-8, Weight Average Cost 12 of Capital, presents the overall cost of capital used in the calculation of the revenue 13 requirement, which will be addressed in detail by Company witness Daniel S. Dane's 14 direct testimony. Direct Schedule CTE-11, Pro Forma Income Taxes, calculates 15 income taxes based on state and federal effective tax rates. Direct Schedule CTE-12, 16 Interest Synchronization, calculates the synchronized interest expense based on the 17 Company's pro-forma rate base and weighted cost of debt. The Interest 18 Synchronization calculation is necessary to properly calculate the amount of income 19 taxes to be recovered through rates as the Company receives a tax deduction for interest 20 expense which reduces the Company's taxable income. 21 Q. Does Liberty allocate its revenue requirement components across the retail states

in which it operates, as well as, for its FERC jurisdictional operations?

A. Yes. Liberty operates in four retail jurisdictions: Missouri, Arkansas, Kansas, and
 Oklahoma. The Company also has two Federal Energy Regulatory Commission

("FERC") formula rates used for transmission and wholesale generation customers.
Because Liberty's financial information is reported on a total Company basis for many
rate making components (i.e., rate base, production expenses, transmission expenses,
and customer expenses), it is necessary to determine a method to allocate costs between
the various jurisdictions in which Liberty operates.

6 **Q.**

7

balances in the Company's revenue requirement.

Please describe the allocations used to populate the Missouri jurisdictional

8 The basis of the Missouri jurisdictional allocations used by the Company to populate A. 9 its Missouri balances is determined either directly or indirectly by the allocation of the 10 Company's demand (12-month average coincidental peak) and energy consumption 11 (12-month ending kWh sales) at the test year end among each of its five jurisdictions 12 (four state retail and FERC). In addition, the Company also directly assigns accounts 13 as appropriate. When assigning allocations to its costs, the Company looks at each 14 individual general ledger account to determine the appropriate method of allocation. 15 This helps ensure that accounts that may be jurisdictional specific are either allocated 16 100% to Missouri, or if it is unrelated to Missouri, then Missouri customers are 17 assigned none of the costs. Direct Schedule CTE-15 provides a detailed listing of the 18 basis for allocation of each of the revenue requirement categories, and where applicable 19 direct assignments within those categories.

20 <u>Direct Schedule CTE-15</u> reflects that the jurisdictional demand drives the 21 allocation of the production and transmission plant; the distribution plant is direct 22 assigned to each jurisdiction; and the allocation of intangible and general plant is based 23 off the allocation of total production, transmission, and distribution plant combined. 24 Many of the other categories are then allocated utilizing the allocation of electric plant

1 (by the demand allocation factor indirectly). Variable expenses, such as fuel inventory 2 and other production expenses, are allocated based on each jurisdiction's 12-month ending energy consumption which occurred at the test year. The Company uses its 3 4 distribution of labor and 12-month average customer count to allocate the 5 Administrative and General ("A&G") general ledger accounts and Customer 6 Accounts/Assistance categories, respectively. It should be noted some accounts may 7 contain balances that are retail specific or wholesale specific, whereas for example, the 8 Company will create an allocation of its 12-month average coincidental peak based 9 solely on retail demand. Assigning an allocation basis for each specific general ledger 10 account, this helps to ensure that the Company is including the appropriate amount of 11 each of the components of the revenue requirement for its Missouri customers and 12 prevents subsidization of costs among its five jurisdictions.

13 IV. <u>RATE BASE</u>

14 Q. What is the Company's proposed rate base in this case?

A. As shown in <u>Direct Schedule CTE-2</u>, Rate Base Summary, the Company's pro forma
update period rate base is \$2,563,858,141. It is comprised of the test year rate base of
\$2,759,266,603, with pro forma adjustments totaling (\$195,408,461).

18 Q. Please explain Rate Base ("RB") Adjustment ("ADJ") 1 for Plant Additions.

A. RB ADJ 1 is an Out of Period Adjustment that increases plant in service and
accumulated depreciation for projects reasonably expected to be placed in service and
used and useful by the end of the update period, September 30, 2024. This adjustment
consists of three distinct categories of additions: Cybersecurity, Customer First, and all
other capital investments. The Missouri jurisdictional increase for Cybersecurity
additions is \$6,421,895, for Customer First is \$146,424,668, and for all other

investments is \$87,427,246. In total, this results in a Missouri jurisdictional pro forma
 plant in service balance of \$240,273,809.

3 The accumulated depreciation is split in a similar way as the plant in service. 4 The Missouri jurisdictional increase to accumulated depreciation for Cybersecurity is 5 \$474,395, Customer First is \$3,062,922, and for all other investments is \$1,868,283. 6 This results in an increase for total Missouri jurisdictional accumulated depreciation of 7 \$5,405,600. Since this pro forma adjustment is currently based on anticipated update 8 period plant and accumulated depreciation balances it would be appropriate to revise 9 this adjustment with actual September 30, 2024, balances during the pendency of this 10 case.

11 Q. Was there any remaining book value of assets being replaced by the Customer 12 First Project?

A. The assets replaced by Customer First were nearing the end of their respective lives.
Therefore, the undepreciated balance as of March 31, 2024, was \$1,016,271. These
assets will be fully or almost fully depreciated by the time new rates take effect as a
result of this case.

17 Q. Please explain RB ADJ 2 for Common Plant Removal.

A. Certain general plant assets recorded on Liberty's books are shared between Liberty
electric and other non-electric affiliated business entities; therefore, a portion must be
removed from the cost of service to avoid subsidization by Missouri electric customers.
In this adjustment, the Company calculated a "mass rate" to remove a percentage of
common plant utilized by other businesses, which includes certain buildings such as
the Joplin Corporate Office, the Joplin Kodiak Operations Office, and the Ozark Call
Center. The adjustment results in a decrease to Total Company and Missouri

jurisdictional plant by \$8,056,129 and \$7,007,466, respectively, and reduces the associated accumulated depreciation reserve by \$4,135,243 for Total Company and \$3,596,960 for Missouri jurisdictional. Since this pro forma adjustment is currently based on anticipated plant and accumulated depreciation update period balances it would be appropriate to revise this adjustment with actual September 30, 2024 balances during the pendency of this case.

7 Q. Please explain RB ADJ 3 for Additional Accumulated Depreciation.

A. RB ADJ 3 is an Out of Period adjustment that decreases the Company's rate base by
\$107,371,596 for the Missouri jurisdiction to account for the additional accumulated
depreciation related to the test year plant in service (less the test year balance of
common plant removed) which is expected to be incurred by the end of the update
period. Since this pro forma adjustment is currently based on anticipated additional
accumulated depreciation update period balances it would be appropriate to revise this
adjustment with actual September 30, 2024, balances during the pendency of this case.

15 Q. Please explain RB ADJ 4 for Additional Accumulated Amortization.

A. RB ADJ 4 is an Out of Period adjustment that decreases the Company's rate base by \$9,009,366 on a Total Company and by \$7,860,276 on a Missouri jurisdictional basis to account for the additional accumulated amortization amounts related to the test year plant in service which is expected to be incurred by the end of the update period. Since this pro forma adjustment is currently based on anticipated additional accumulated amortization update period balances it would be appropriate to revise this adjustment with actual September 30, 2024, balances during the pendency of this case.

23 Q. Please explain RB ADJ 5 for Cash Working Capital.

13

A. RB ADJ 5 decreases the Company's rate base by \$9,650,939 on a Missouri
jurisdictional basis to account for the appropriate level of cash working capital. Please
refer to Company witness Timothy S. Lyons' direct testimony, which supports the
Company's lead-lag study. Since Cash Work Capital is dependent upon the various
revenue requirement income statement balances it is appropriate to update this
adjustment when any of the income statement components are adjusted during the
pendency of this case.

8 Q. Please explain RB ADJ 6 for the 13-Month Average Adjustments.

9 A. RB ADJ 6 is a normalization adjustment that utilizes a 13-month average to reduce 10 fluctuations in certain costs and is used to provide a more representative measure of 11 costs for inclusion in rate base. Applying this methodology results in a decrease to 12 materials and supplies test year balance of \$3,781,386 on a Total Company basis and a 13 decrease of \$3,294,458 on a Missouri jurisdictional basis. Using a 13-month average 14 for Prepayments results in a decrease of the test year balances of \$1,070,731 for Total 15 Company and a decrease of \$931,538 for Missouri. Similarly, a 13-month average 16 increases test year customer deposit balances by \$465,288 for Total Company and 17 \$454,984 for Missouri. Additionally, a 13-month average for customer advances 18 increases its test year balance by \$881,990 on a Total Company basis and \$883,503 on 19 a Missouri jurisdictional basis. Since this pro forma adjustment is currently based on 20 the 13-month average at the end of the test year it would be appropriate to revise this 21 adjustment utilizing a 13-month average as of September 30, 2024, during the 22 pendency of this case.

23 Q. Please explain RB ADJ 7 for Fuel Inventory Normalization.

1 A. The Company calculated coal inventories by determining the average daily burn and 2 multiplying it by the appropriate number of days for inventory for each applicable 3 generating plant, resulting in a decrease to Total Company test year coal inventories of 4 \$1,961,848 or a decrease of \$1,731,821 on a Missouri level. For fuel oil, the Company 5 utilized a September 30, 2023 balance of fuel inventory (in gallons) and multiplied it 6 by the weighted average price per gallon. This resulted in a decrease to test year fuel 7 oil inventory of \$5,341 for Total Company and of \$4,715 for Missouri. For all other 8 fuel inventories, the Company utilized a 13-month average, which results in a decrease 9 to the test year balances of \$173,857 for Total Company and a decrease of \$153,472 10 for Missouri. This results in a Total Company decrease to fuel inventories by 11 \$1,782,650 and a decrease to Missouri by \$1,573,635. This pro forma adjustment is 12 utilizing calculation inputs and is also utilizing amounts currently based on the 13-13 month average at the end of the test year it would be appropriate to revise this adjustment utilizing September 30, 2024 inputs, during the pendency of this case. 14 15 Q. Please explain RB ADJ 8 to Update Accumulated Deferred Income Taxes

16 **("ADIT").**

A. RB ADJ 8 is an Out of Period adjustment that increases the amount of accumulated deferred income taxes included in rate base by \$58,171,957 on a Total Company level and by \$50,609,687 for Missouri jurisdictional to reflect the expected balance at September 30, 2024. Since this pro forma adjustment is currently based on anticipated ADIT update period balances it would be appropriate to revise this adjustment with actual September 30, 2024, balances during the pendency of this case.

23 Q. Please explain RB ADJ 9 to Update the Regulatory Assets.

15

1 A. RB ADJ 9 is an Out of Period adjustment that decreases the current authorized 2 regulatory asset balances at the test year to the expected balances at the end of the September 2024 update period. Additionally, the Company is reflecting the projected 3 4 September 2024 balance of any new regulatory assets being requested for recovery in 5 this case. RB ADJ 9 indicates a total test year decrease to regulatory asset balances in 6 the amount of \$(293,684,948) for the Missouri jurisdiction, inclusive of adjustments to 7 the below items. Since this pro forma adjustment is currently based on anticipated 8 Regulatory Asset update period balances it would be appropriate to revise this 9 adjustment with actual September 30, 2024, balances during the pendency of this case.

10

• <u>Iatan 1, Iatan 2, and Plum Point Deferred Carrying Costs:</u>

11 The Company adjusted its general ledger balances for the deferred carrying costs 12 to comply with the Report and Order in Case No. ER-2019-0374. The purpose of 13 the adjustment is to calculate the balance of the regulatory assets for Iatan 1, Iatan 14 2, and Plum Point Carrying Costs at the end of the update period. This is done by 15 reducing the asset balances at the test year by twelve months of the authorized 16 amortization expense from Case No. ER-2019-0374. This results in a Missouri 17 jurisdictional pro forma adjustment of (\$84,729) for Iatan 1, (\$44,828) for Iatan 2, 18 and (\$1,987) for Plum Point. After these adjustments, the Missouri jurisdictional 19 pro forma ending balances for Iatan I is \$3,544,376, for Iatan II is \$1,938,944, and 20 for Plum Point is \$91,650.

21

<u>Customer Programs Collaborative:</u>

In accordance with the Report and Order from Case No. ER-2021-0312, the Company adjusted its general ledger balances for its Customer Demand Program and the related amortization expense. The adjustment captures the costs related to

1 Liberty's demand-side management programs and includes the payments to 2 Liberty's participating customers. Any amounts incurred prior to the end of the 3 Company's Regulatory Plan (June 15, 2011) are being amortized over ten years. 4 For any Pre-MEEIA amounts that were incurred after the end of the Regulatory 5 Plan, but before the January 2022 implementation of the Company's Missouri 6 Energy Efficiency Investment Act ("MEEIA") program are being amortized over a 7 period of six years, as approved in the Commission's Report and Order in Case No. 8 ER-2014-0351. The costs incurred starting in 2010 through 2017 will be fully 9 amortized by the end of the update period of this case; therefore, this adjustment 10 reduces the regulatory asset to a zero balance. The costs incurred from 2018 to 2021 11 have been adjusted to reflect the additional months of amortization that will be 12 incurred from the end of the test year through the update period. The proposed 13 adjustment reduces the regulatory asset by \$701,488 which indicates an anticipated 14 Missouri pro forma ending balance of \$889,764.

15

• Low-Income Pilot Program ("LIPP"):

16 The purpose of this adjustment is to update the balance of the low-income pilot 17 program regulatory asset to its anticipated balance at the end of the update period. 18 This adjustment includes an increase in the regulatory asset based on projections of 19 anticipated participation, as well as a reduction in the approved amortization 20 expense by an additional twelve months. As a result, the regulatory asset increases 21 by \$16,780, bringing the anticipated pro forma Missouri balance to \$345,807. The 22 Company is also proposing to make several modifications to its current low-income 23 pilot program, which are discussed in the direct testimony of Company witness 24 Nathaniel W. Hackney filed in this proceeding. In addition to the changes described

1		by Mr. Hackney, the Company continues to request the tracking of its proposed
2		low-income program in a regulatory asset for recovery in a future rate case.
3	•	Pension/OPEB/Prepaid Pension Regulatory Assets:
4		The Company is adjusting its pension, Other Post-Employment Benefits ("OPEB"),
5		and prepaid pension regulatory assets for the projected balances at the end of its
6		September 2024 update period. For further discussion of these adjustments refer to
7		the direct testimony of Company witness James A. Fallert.
8	•	<u>Missouri Solar Initiative:</u>
9		This adjustment is reflective of the projected balance of Missouri solar initiatives
10		at the end of the September 2024 update period. This results in an increase to rate
11		base of \$727,268, bringing the solar initiative Missouri pro forma ending balance
12		to \$6,101,902.

To reflect the projected balance at the end of the update period for the Riverton 12 Tracker, an adjustment was made using the approved amortization expense from the prior rate case. This results in a pro forma adjustment of (\$1,969,212), making the update period pro forma Missouri ending balance for this tracker equal to \$3,455,555. Solar Rebate: In Case Nos. ER-2016-0023, ER-2019-0374, and ER-2021-0312, the Company

1customers; therefore, all balances are assigned to the Missouri retail jurisdiction.2This adjustment reduces the regulatory asset for the additional twelve months3(October 2023 to September 2024) of amortization incurred through the update4period. The Company calculated the pro forma update period balance of the solar5rebate regulatory asset to be \$11,198,497; therefore, an adjustment of (\$2,244,915),6was made to reduce the test year balance to the anticipated balance on September730, 2024.

8

<u>Asbury Stranded Assets:</u>

9 The Company retired its Asbury coal plant in March 2020, and in March 2024, the 10 Company began recovering its Asbury plant costs from its customers through its 11 Securitized Utility Tariff Charge ("Rider SUTC") which was approved in Case No. 12 EO-2022-0193. Therefore, this adjustment is being made to remove the test year 13 Asbury regulatory asset balance from the rate base since this balance is being 14 recovered through a different mechanism. This adjustment, results in a rate base 15 reduction of \$(176,234,553). For further discussion regarding the status of the 16 Company's Asbury plant and the successful decommissioning of the plant, please 17 refer to the direct testimony of Company witness Shaen T. Rooney.

18 • Plant-In-Service Accounting ("PISA") Regulatory Asset:

19On August 12, 2020, Liberty filed its notice of election for PISA in Case No. EO-202019-0046. Pursuant to RSMo. §393.1400, the Company may defer 85% of the21depreciation and return associated with qualifying plant additions in the Missouri22jurisdiction for the time period between when those plant additions are placed into23service and when they are included in the Company's base rates (so long as the24Company meets the provisions of the statute). Liberty started receiving recovery of

1 its first tranche of PISA costs in base rates starting June 1, 2022 within Case No. 2 ER-2021-0312. To account for the additional monthly amortization that will be incurred through the update period for the first tranche the Company made a rate 3 base adjustment to decrease the test year PISA regulatory asset balance by 4 5 \$629,868. Since this is a regulatory asset specifically established by Missouri 6 statute, it is 100% direct assigned to Missouri retail customers. This results in a 7 Missouri pro forma update period ending balance of \$11,127,673 for the first tranche of PISA costs. 8

9 Since the update period in the Company's last rate, Liberty has been recording 10 additional deferred balances related to its second tranche of PISA assets. To account 11 for the second tranche of PISA eligible project deferrals through the end of the 12 September 2024 update period, the Company has incorporated an adjustment of 13 \$55,628,949 to increase the Company's proposed rate base balance on a Missouri 14 jurisdictional basis. This results in a Missouri pro forma update period ending 15 balance of \$162,391,450 for the second tranche of PISA deferrals.

16

<u>Missouri Electric Rate Case Expense:</u>

The deferred debit for rate case expense does not meet the standards for an Accounting Authority Order, therefore, the Company is not seeking rate base recovery of its rate case expense. As a result of removing this item from rate base an adjustment was made to decrease rate base by \$949,689 at a Missouri jurisdictional level. Please note, however, the Company is seeking recovery of its projected annual rate case expense within its EXP ADJ 8, which will be discussed later in my testimony.

24 • <u>SB-EDR:</u>

20

1This regulatory asset was established during the prior rate case (ER-2021-0312) to2reflect the discounts given to customers in accordance with the provisions of Senate3Bill 564 related to economic development (Section 393.1640, RSMo). This4adjustment results in an increase to rate base of \$1,767,579, which produces a pro5forma update period ending balance of \$7,069,690. Since this regulatory asset is6created by a Missouri statute this balance has been direct assigned to Missouri retail7customers.

8

• <u>Storm Uri Regulatory Assets:</u>

9 The Commission authorized the Company to recover its Storm Uri extraordinary 10 costs through its Rider SUTC starting in March 2024, therefore the Company is 11 proposing an adjustment to remove this balance from the revenue requirement 12 calculation for this rate case since the costs are being recovered through a separate 13 mechanism. The Missouri jurisdictional pro forma adjustment results in a decrease 14 to rate base of \$(216,896,455).

15

• Missouri Property Tax Tracker:

16 In accordance with Senate Bill No. 745, which is codified as Section 393.1275, 17 RSMo, the Company began tracking the difference in any state and local property 18 tax expenses it actually incurred and the baseline level of property tax expense 19 included in its most recently approved revenue requirement in Case No. ER-2021-20 0312, which was used to set current base rates. Any differences in the actual 21 expense incurred for the Company compared to the baseline amount set in the base 22 rates of its last rate case is being deferred and included in a regulatory asset or 23 liability for future recovery or refund. Since the approval of the Senate Bill, the 24 Company has incurred more property tax expense than authorized in its last case

and, the Company is including the projected September 2024 balance of that tracker
 balance in its revenue requirement calculation. This results in a pro forma
 adjustment of \$6,029,415, which makes the Missouri pro forma update period
 ending balance for the regulatory asset equal to \$11,263,155.

5

• <u>Riverton & State Line LTM Deferred Assets:</u>

6 Based on an accounting treatment evaluation in 2022, the Company's long-term 7 maintenance contracts for its Riverton Unit 12-1 and State Line Units 2-1 and 2-2, 8 changed which in accordance with FERC resulted in the Company establishing two 9 long-term prepaid/deferred asset accounts. Additionally, a third prepaid/deferred 10 asset was established for Riverton 12-2 in the Company's pro forma period. These 11 prepaid/deferred debits were created because the accounting treatment for these 12 contract costs were previously entirely expensed and the accounting treatment now 13 is to defer these contract costs to a prepaid/deferred asset accounts until the 14 scheduled outages are performed (any portion of the contract associated with 15 ongoing maintenance continues to be expensed to FERC Account 553). When the 16 long-term maintenance work is performed, a portion of the prepaid/deferred asset 17 will be relieved and either capitalized and charged to plant-in-service or expensed 18 in accordance with an outage analysis. This adjustment results in a Missouri pro 19 forma adjustment of \$6,482,694 and a Missouri pro forma ending balance of 20 \$15,878,161.

21

<u>MEEIA Energy Efficiency Costs:</u>

This adjustment removes the balance of the regulatory asset account which tracks activity related to the MEEIA program, since this balance is recoverable under a different mechanism it is appropriate to remove this balance from rate base in this case. Refer to Case No. EO-2022-0078 for more specifics on the MEEIA program.
 This results in a decrease to Missouri rate base by \$3,756,314.

• Transportation Electrification Pilot Program ("TEPP"):

4 This adjustment removes the balance of the regulatory asset account, which tracks 5 activity related to the Company's TEPP program. Per Case No. ET-2020-0390², the recovery of the Company's TEPP program costs will be requested in the 6 Company's next rate case following the conclusion of the electrification pilot 7 program. Because the electrification pilot program has not concluded it is 8 9 appropriate to remove these costs from the revenue requirement calculation. This 10 adjustment results in a decrease to Missouri rate base by \$186,330. For further discussion regarding the Company's TEPP, please refer to the direct testimony of 11 12 Company witness Dmitry Balashov.

13 • <u>HLBV Paygo:</u>

3

14 In the Fourth Partial Stipulation and Agreement in Case No. ER-2021-0312, the 15 Signatories agreed that a base amount of \$4 million in Paygo revenue would be 16 included in Liberty's overall revenue requirement. Additionally, the Signatories 17 agreed that Liberty would track its actual Paygo revenue amounts against the base 18 amount of \$4 million and record any variances in a regulatory tracker account. The 19 adjustment being proposed by Liberty is to project the pro forma update period 20 balance for this authorized regulatory tracking account. The Missouri pro forma 21 adjustment decreases rate base by \$(2,028,720), which results in a Missouri pro 22 forma ending balance of \$1,244,987.

² Case No. ET-2020-0390, Item No. 50, Order Approving Stipulation and Agreement, Section I.3.c, page 4.

1

15

• Interruptible Service Credits:

2 The Company's Interruptible Service ("Rider IR") tariff states the Company will 3 include the monthly interruptible service participation credits in the Customer 4 Programs Collaborative Account. With the goal of properly tracking the balances 5 for the interruptible service participation credits separately from the Customer 6 Programs Collaborative regulatory account, the Company is proposing to reclass 7 the interruptible credits provided to customers from the effective date of MEEIA 8 through the update period in a new regulatory asset for rate base treatment. The 9 Company has also revised the language in its current Rider IR to account for this 10 change which has been reflected in the proposed tariff change as outlined in Direct 11 Schedule CTE-17. Additionally, the Company has made a correction to the 12 regulatory asset balance to reflect the appropriate total amount of interruptible 13 credits provided to customers since the last rate case. Therefore, this adjustment 14 results in a Missouri pro forma update period ending balance of \$1,219,528.

• Wind Service, Maintenance, and Warranty Agreements ("SMWA") Deferral:

16 On December 28, 2023, Liberty reached an agreement with Vestas to amend each 17 of the SMWAs for the Company's windfarms. Of particular note is that one of the 18 amended terms extended the length of the agreements from 10 years to 20 years. 19 This amendment was made to further establish the relationship with Vestas and to 20 provide stability for both parties. Vestas's long-term contract provides for the 21 replacement of parts and components of the Liberty wind turbines and the contract 22 term of 20 years now exceeds many of the major wind turbine components. 23 Therefore, to align the accounting treatment of this long-term contract to match that 24 of State Line Combined Cycle and Riverton agreements with Siemens, mentioned earlier in my testimony, the SMWA with Vestas, is being recorded in a long-term
prepaid/deferred debit until the work has been performed. Once the contract work
is performed the appropriate amount of costs is moved out of the prepaid/deferred
debit account and is either capitalized as part of plant in service or expensed, based
upon the specific work performed. This adjustment reflects the September 2024
projected update period balance for the Wind SMWA regulatory asset; resulting in
a total Missouri pro forma adjustment of \$6,053,181.

8

<u>Riverton Environmental Costs:</u>

9 In the Company's last rate case, the Commission approved a regulatory asset 10 balance and amortization for the environmental regulatory asset costs incurred for 11 the Riverton asbestos. In this adjustment, the Company is projecting out the 12 additional amortization incurred through the Company's September 2024 update 13 period. The adjustment amount for this additional amortization results in a 14 reduction to rate base of (\$1,133,276) at the Missouri jurisdictional level. This 15 results in a Missouri pro forma ending balance of \$755,515.

16 • <u>COVID 19:</u>

17 The Covid-19 deferred debit is not authorized for rate base treatment and is being 18 removed from the revenue requirement calculation; therefore the pro forma 19 adjustment for Missouri reduces rate base in the amount of (\$14,798).

20

<u>Missouri Securitization Deferred Asset:</u>

This account includes upfront and ongoing legal and consulting transaction costs related to the Company's bond issuance for the securitization balances approved in Case Nos. EO-2022-0040/EO-2022-0193. These securitization costs are currently being recovered through the Company's Rider SUTC. Therefore, this adjustment 1

2

3

removes the test year balance of that account from the revenue requirement calculation resulting in a total Missouri pro forma adjustment of (\$4,121,334).

• Excess Accumulated Deferred Income Tax ("EADIT") Tracker:

4 Within Case No. ER-2021-0312, a tax tracker was authorized to capture the 5 differences between the protected EADIT returned to customers and the actual 6 amortization recorded by the Company using the Average Rate Assumption 7 Method ("ARAM"), as well as any over-refund of the Company's unprotected 8 EADIT ordered to be given back to customers since the Company's last rate case 9 until new rates are set in the current rate case. The Company has projected that it 10 will have over-refunded customers \$20,886,328 in unprotected EADIT by the time 11 new rates go into effect as a result of this case. Accordingly, that balance is being 12 included as an increase to the Company's Missouri rate base. Please see the direct 13 testimony of Company witness Michael McCuen for further discussion of the 14 Company's EADIT Tracker.

15 Q. Please explain RB ADJ 10 to update the Regulatory Liabilities.

A. RB ADJ 10 is an Out of Period adjustment that decreases the various Regulatory Liability account balances at the test year, to the anticipated balance at the end of the update period. The total decrease to Missouri Regulatory Liabilities is (\$39,368,821) and is inclusive of adjustments to the below accounts. Since this pro forma adjustment is currently based on anticipated Regulatory Liability update period balances it would be appropriate to revise this adjustment with actual September 30, 2024, balances during the pendency of this case. 1

2

3

4

5

• <u>Pension/OPEB Regulatory Liabilities:</u>

The Company is adjusting its pension and OPEB Regulatory Liabilities for the projected balances at its September 2024 update period. Please see the direct testimony of Company witness James A. Fallert regarding the rate base adjustments made for Pension and OPEB.

6

Tax Cuts and Jobs Act ("TCJA") EADIT:

7 This adjustment is to reflect the balance of the tax reform EADIT regulatory 8 liability at the end of the update period. This is accomplished by removing twelve 9 months of amortization expense from the balance of the regulatory liability at the 10 test year. This results in a Missouri pro forma adjustment reducing the liability in 11 the amount of (\$2,739,109) and a Missouri pro forma ending balance of 12 \$79,435,623.

13 • Accumulated Deferred Income Tax ("ADIT") Gross Up:

14 This adjustment is to reflect the anticipated deferred tax liability account 254100 at 15 the end of the update period. This results in Missouri jurisdictional pro forma 16 adjustment and pro forma balance of \$35,728,787.

17

• Asbury Environmental Costs:

Per the Order in Case No. EO-2022-0193 the Commission allowed a projected amount of Asbury environmental costs to be included in the securitized bond balance, however, the Company was directed to true-up its actual Asbury environmental costs incurred to the amount being recovered from customers through the Rider SUTC charge and any difference is to be included in the Company's next general rate case filing. The total amount of Missouri jurisdictional Asbury environmental costs authorized in the securitization case was \$22,926,042 and the total Missouri jurisdictional amount of actual environmental costs settled and paid out through September 2024 is \$21,919,890. Since the amount of estimated Asbury environmental costs included in the securitization bond is higher than actual costs, in the amount of \$1,006,152, it is appropriate to refund this difference back to customers. The Missouri jurisdictional adjustment reduces the Company's rate base.

7

• Asbury EADIT:

8 The retired Asbury portion of EADIT was included as part of the securitized costs 9 authorized in Case No. EO-2022-0193 and is being refunded to customers through 10 the Company's Rider SUTC. Because this balance is being recovery through a 11 separate mechanism it is appropriate to remove the September 2023 test year 12 balance of the Asbury excess ADIT account from the revenue requirement 13 calculation. This results in a Missouri pro forma adjustment of \$12,173,188, and a 14 Missouri jurisdictional pro forma ending balance of zero, which ultimately 15 increases the Company's rate base balance.

16

• Asbury AAO Liability:

17 Per the Order in Case No. EO-2022-0193, the Commission allowed a projected 18 amount of Asbury decommissioning costs to be included in the securitized bond 19 balance, however, the Company was directed to true-up its actual Asbury 20 decommissioning costs incurred to the amount being recovered from customers 21 through the Rider SUTC charge. The Company has recorded these differences in 22 the Asbury AAO liability account and in accordance with the Order is including 23 this balance within the case (it's next general rate case filing). The total amount of 24 Missouri jurisdictional Asbury decommissioning costs authorized in the

1 securitization case was \$8,212,438 and the total Missouri jurisdictional amount of 2 actual decommissioning costs projected through September 2024 is \$5,701,806. 3 This results in an overcollection of \$2,510,632 (Missouri jurisdictional) from 4 customers that needs to be refunded to them for the Asbury decommissioning costs. 5 Furthermore, in the Company's last rate case, the Company was also authorized 6 to continue its Asbury AAO liability and the baseline amounts were set to zero. In 7 addition to the decommissioning costs, the Company also incurred several months 8 of actual non-fuel/non-labor Asbury operating and maintenance expenses, grossed 9 up for taxes. Since the baseline of rates included zero amounts for Asbury costs 10 the difference between zero and actual costs have been tracked as part of the Asbury 11 AAO liability. Finally, this adjustment reflects the removal of the Asbury AAO 12 liability costs balance that are included as part of the securitized bond costs being 13 recovered from customers through the Rider SUTC. In total, the Company is 14 proposing a Missouri pro forma ending balance for its Asbury AAO liability in the 15 amount of (\$3,250,192) to refund to customers, resulting in a pro forma adjustment 16 to reduce the test year liability balance by \$70,362,731. 17 **Q**. Does the Company project any additional costs for Asbury in the future that will

18 need to be tracked through the Company's AAO liability?

A. No, the Company does not expect any additional costs to be incurred for Asbury past
the update period in this case. Therefore, the Company is proposing the termination of
the Asbury AAO. For additional information regarding the retirement and
decommissioning of the Asbury plant, please refer to the direct testimony of Company
witness Shaen T. Rooney.

Q. Please explain RB ADJ 11 for the Iatan and PCB Environmental Costs Regulatory Assets.

3 The Company has currently incurred various environmental capital expenditures at its A. 4 plants that have been identified as part of the legal obligations associated with the 5 retirement of those tangible long-lived assets, which have yet to be recovered in rates. 6 Therefore, based on the guidance from the Commission in the Amended Report and 7 Order in Case No. ER-2019-0374, the Company is offsetting the projected September 8 2024 Iatan environmental costs settled and paid against its remaining accumulated 9 reserve accounts. The Company has also offset the accumulated reserve accounts for 10 its environment capital expenditures costs related to PCB Transformers/Sub 11 Transformers Equipment. The net adjustment amount for the Iatan and PCB 12 transformer/Sub Transformer related environmental costs that will offset Accumulated 13 Depreciation results in a Missouri jurisdictional increase to rate base in the amount of 14 \$7,403,604.

15

V. <u>OPERATING INCOME</u>

16 Q. Has the Company proposed any adjustments to its test year operating income?

A. Yes, the Company has proposed multiple adjustments to normalize and annualize
balances to arrive at what it deems is a normal test year. The various operating income
adjustments will be discussed in further detail later in my testimony.

20 Q. Do any of the proposed adjustments relate to revenue?

- A. Yes. The Company proposes the following adjustments to test year revenue ("REV
 ADJ"):
- REV ADJ 1 to remove Fuel Adjustment Clause ("FAC") and Energy Efficiency
 Cost Recovery ("EECR") related revenues;

1		• REV ADJ 2 to remove unbilled revenues;
2		• REV ADJ 3 to annualize customer counts;
3		• REV ADJ 4 to weather normalize test year revenues;
4		• REV ADJ 5 to annualize for customer load growth and loss;
5		• REV ADJ 6 to remove the test year accounting revenue entries pertaining to the
6		Asbury AAO;
7		• REV ADJ 7 to remove franchise fees collected during the test year;
8		• REV ADJ 8 to remove revenues related to MEEIA;
9		• REV ADJ 9 to annualize Non-FAC wind operating revenues in the Company's
10		revenue requirement;
11		• REV ADJ 10 to remove revenues for the Missouri Property Tax Tracker;
12		• REV ADJ 11 to determine the normalized balances related to the fuel and
13		purchased power revenue accounts at the end of the update period; and
14		• REV ADJ 12 to remove customer interruptible credits that were inappropriately
15		offsetting the Company's revenues during the test year.
16	Q.	Do any of the proposed adjustments relate to expense?
17	A.	Yes. The Company proposes the following adjustments to test year expenses ("EXP
18		ADJ"):
19		• EXP ADJ 1 to normalize fuel and purchased power expenses;
20		• EXP ADJ 2 to normalize non-labor O&M generation expenses;
21		• EXP ADJ 3 to normalize vegetation management expenses;
22		• EXP ADJ 4 to normalize customer facilities expense;
23		• EXP ADJ 5 to increase test year depreciation expense for the amount that
24		recorded related to the PISA regulatory asset;
		21

1	• EXP ADJ 6 to annualize the uncollectible expense account;
2	• EXP ADJ 7 to reflect the annual amortization of the Company's Regulatory
3	Assets and Liabilities;
4	• EXP ADJ 8 to annualize rate case expense;
5	• EXP ADJ 9 to normalize the level of expected insurance premium expense;
6	• EXP ADJ 10 to normalize the amount of injuries and damages and worker's
7	compensation claims paid out;
8	• EXP ADJ 11 to remove non-recoverable expenses from the test year;
9	• EXP ADJ 12 to annualize payroll and payroll tax expense;
10	• EXP ADJ 13 to annualize expenses for employee benefits;
11	• EXP ADJ 14 to annualize the MPSC assessment for 2024;
12	• EXP ADJ 15 to annualize depreciation expense;
13	• EXP ADJ 16 to annualize amortization expense;
14	• EXP ADJ 17 to annualize property tax related to non-wind plant;
15	• EXP ADJ 18 to remove franchise fees expenses from the test year;
16	• EXP ADJ 19 to include interest on customer deposits as an operating expense;
17	• EXP ADJ 20 to annualize the non-fuel expenses incurred from the Company's
18	investment in the Wind Projects;
19	• EXP ADJ 21 to include refunds for the Moody's Investor invoices;
20	• EXP ADJ 22 to normalize the pension and OPEB expenses;
21	• EXP ADJ 23 to normalize the long-term maintenance contracts for Stateline
22	and Riverton;

1		• EXP ADJ 24 to annualize the expenses incurred for water usage at the Stateline
2		Plant;
3		• EXP ADJ 25 to normalize Department 115 O&M
4		• EXP ADJ 26 to normalize expected Customer First expenses; and
5		• EXP ADJ 27 to true-up income tax.
6	Q.	Please explain REV ADJ 1 to remove FAC and EECR related revenues.
7	A.	REV ADJ 1 is being made to remove FAC and EECR related test year revenues from
8		the revenue requirement. These test year revenues represent the amount recovered
9		from/refunded to customers via the FAC tariff as well as revenues received from
10		customers via the EECR section of the base rate tariffs. Both of these revenues are
11		being rebased within the revenue requirement calculation. This results in a pro forma
12		adjustment to decrease revenues by \$61,240,674.
13	Q.	Please explain REV ADJ 2 to remove Unbilled Revenues.
14	A.	This adjustment removes \$3,043,488 of Missouri revenues from the test year that were

not billed to or received from customers and which the respective billing determinants
have not been used to calculate a normalized level of revenue. This adjustment is
required to avoid a double counting of revenue.

18 Q. Please explain REV ADJ 3 for Customer Annualization and REV ADJ 4 for 19 Revenue Normalization.

A. REV ADJ 3 adjusts revenues based on an annualized count of customers, resulting in
a Missouri adjustment amount of \$861,041. REV ADJ 4 also incorporates an
adjustment to normalize revenues for weather. The total revenue normalization
adjustment (customer annualization and weather) for Missouri is \$1,689,042. Please
see the direct testimony of Company witnesses Timothy S. Lyons and Eric Fox

regarding the details pertaining to the revenue customer annualization and weather
 normalization adjustments. Since this pro forma adjustment is based on billing
 determinants from the test year it would be appropriate to revise this adjustment with
 actual update period data during the pendency of this case.

5 Q. Please explain REV ADJ 5 for Customer Load Growth/Loss.

6 A. REV ADJ 5 adjusts revenues based on expected customer load growth and loss. During 7 the update period the Company lost a large industrial customer because of this loss the Company is reducing revenue by (3,363,205). Additionally, the Company has 8 9 experienced industrial customer load growth. Therefore, the Company is increasing 10 revenue in the amount of \$1,571,770 to properly reflect this additional revenue. For 11 both Total Company and Missouri jurisdictional REV ADJ 5 results in a net decrease 12 of revenue in the amount of (\$1,791,435) and a pro forma ending revenue balance of 13 \$6,664,831. Since this pro forma adjustment is based partially on anticipated load 14 growth it would be appropriate to revise this adjustment with actual update period data 15 during the pendency of this case.

Q. Please explain REV ADJ 6 for the reversal of Revenues Related to the Asbury Retirement AAO.

18 A. REV ADJ 6 eliminates the test year revenue recorded as the offset for the Asbury AAO 19 liability. This adjustment results in a Missouri jurisdictional reduction in revenue of 20 (\$14,789,877) and a pro forma ending balance of zero.

21 Q. Please explain REV ADJ 7 for Franchise Fees Revenues.

A. REV ADJ 7 reduces Missouri test year revenues by (\$11,321,242) to ensure the
 revenues from franchise fees are not included in the Company's base rates. Since
 franchise fees are collected by the Company on behalf of local governments and then
1		remitted to those governments it is not appropriate to include these balances in the
2		Company's revenue requirement calculation. It should be noted an additional
3		adjustment is made to test year O&M expenses (EXP ADJ 18) to ensure franchise fee
4		expenses are also being removed from base rates.
5	Q.	Please explain REV ADJ 8 to remove MEEIA Revenues.
6	A.	REV ADJ 8 removes MEEIA related revenues from the revenue requirement. As
7		mentioned above, these revenues are recovered from customers per the Commission's
8		order in Case No. EO-2022-0078 in the Demand-Side Investment Mechanism Rider
9		("Schedule DSIM") tariff and therefore should not be included within the revenue
10		requirement calculation of base rates. This results in a pro forma adjustment to
11		decrease revenues by (\$3,314,624).
12	Q.	Please explain REV ADJ 9 for the Non-Fuel Wind Revenues.
13	A.	REV ADJ 9 calculates an annualized amount of non-fuel wind revenues associated
14		with the Company's Wind Projects as it relates to the following agreements:
15		• Asset Management and Administrative Services Agreement ("AMA")
16		• Energy Management Services Agreement ("EMSA")
17		• Operations and Maintenance Agreement ("OMA")
18		Transmission Easement Agreement
19		Additionally, the test year revenue balances contained amounts associated with the
20		Neosho Ridge Wind outage. Since the Neosho Ridge Wind outage was a one-time
21		occurrence, any amounts associated with this outage should be removed from the
22		revenue requirement. The net result is a decrease in the Total Company revenues of
23		(\$4,871,823) and a decrease in Missouri jurisdictional revenues in the amount of
24		(\$4,316,661).

1	Q.	Please explain REV ADJ 10 for the Missouri Property Tax Tracker.
2	A.	The Company established a regulatory asset to account for the impacts of the Missouri
3		Property Tax Tracker as stated in Senate Bill No. 745, codified as Section 393.1275
4		RSMo, and booked a correlating revenue account for the tax tracker amounts. This
5		adjustment removes the test year revenues related to the property tax tracker, resulting
6		in a Missouri pro forma adjustment to reduce revenues by (\$5,233,740) and a Missouri
7		pro forma balance of zero.
8	Q.	Please explain REV ADJ 11 for Fuel and Purchased Power Revenues.
9	A.	See EXP ADJ 1 below for both the revenue and expense impacts related to the
10		Company's proposed fuel and purchased power balances.
11	Q.	Please explain REV ADJ 12 for Interruptible Service Credits.
12	А.	REV ADJ 12 removes the interruptible credits from the revenue requirement that were
13		inadvertently reflected in the balance of retail revenue during the test year. These
14		credits should have been reclassed to the Customer Programs Collaborative regulatory
15		asset. This correcting adjustment results in a Missouri pro forma adjustment to increase
16		revenues of \$365,712.
17	VI.	EXPENSE ADJUSTMENTS
18	Q.	Please explain REV ADJ 11 and EXP ADJ 1 for Fuel and Purchased Power
19		Expenses.
20	A.	REV ADJ 11 and EXP ADJ 1 adjustments normalize the applicable Fuel and Purchase
21		Power account balances based on the Company's production cost model. The purpose
22		of the adjustment is to reflect an expected level of Fuel and Purchase Power balances
23		in base rates. The net adjustment of REV ADJ 11 and EXP ADJ 1 results in a Total
24		Company pro forma ending balance of Fuel and Purchase Power accounts of

- \$105,724,391 and a Missouri jurisdictional pro forma ending balance of \$98,689,854.
 The direct testimony of Company witness Todd W. Tarter further discusses the
 production model and base fuel calculations.
- 4 Q. Please explain EXP ADJ 2 to normalize the Generation O&M Expenses.
- 5 A. EXP ADJ 2 increases test year expenses by \$3,768,678 on a Total Company basis and 6 \$3,331,146 on a Missouri jurisdictional basis to reflect the appropriate amount of non-7 labor O&M expense for Liberty's generation facilities. This adjustment results in a 8 Missouri pro forma ending balance of \$15,932,554. To capture the major maintenance 9 overhaul cycles, Liberty utilized a five-year average for most of its generating units. 10 The Company utilized a six-year average for its State Line Combined Cycle unit to 11 capture its major maintenance overhaul cycle as the last steam turbine outage began in 12 February of 2021. The six-year average will allow the Company to ensure adequate 13 maintenance expense is captured in base rates going forward.

14 Q. Please explain EXP ADJ 3 for Vegetation Management normalization.

A. Since the Company's test year did not reflect a normal on-going level of anticipated vegetation management costs, the Company utilized its 2024 budget to reflect a normalized amount of vegetation management expenses that the Company expects to incur. This results in a \$563,276 Total Company or a \$484,198 Missouri jurisdictional increase to the vegetation management expense accounts. This adjustment results in a Total Company pro forma balance of \$10,876,004 and Missouri pro forma ending balance of \$9,349,127.

- 22 Q. Please explain EXP ADJ 4 for Customer Facilities Expense normalization.
- A. EXP ADJ 4 normalizes the Company's Customer Facilities expense. An inventory
 adjustment was incorrectly made in the test year causing the account to have a large

credit balance. To determine a normal test year amount, the Company utilized a three year average, excluding the test year. This results in a Total Company pro forma
 adjustment of \$591,904 and a pro forma ending balance of \$15,354, or a Missouri pro
 forma adjustment of \$512,080 and a pro forma ending balance of \$13,283.

5

Q. Please explain EXP ADJ 5 for PISA Depreciation.

A. Since the Company is seeking full recovery under PISA, this adjustment is necessary
to remove the depreciation expense offset balance in the amount of \$10,564,101. This
adjustment is appropriate to ensure the annualized amount of depreciation expense is
not impacted by the PISA depreciation offset entry made in the Company's general
ledger. Therefore, the purpose of this adjustment is to reflect a pro forma update period
balance of zero.

12 Q. Please explain EXP ADJ 6 for Uncollectible Expense.

A. EXP ADJ 6 increases Missouri uncollectible expenses by \$1,185,166 by normalizing the expense based on a three-year historical uncollectible percentage. In addition, the adjustment amount above also reflects the incremental increase in uncollectible expense anticipated for the requested revenue deficiency. Since this pro forma adjustment is impacted by the overall revenue deficiency it would be appropriate to revise this adjustment during the pendency of this case.

Q. Please explain EXP ADJ 7 to annualize amortization expense for the Regulatory Assets and Liabilities.

A. EXP ADJ 7 reflects the adjustment to amortization expense for certain Regulatory
 Assets and Liabilities in order to annualize the expense at the update period. The total
 increase to amortization expense is \$27,403,521 (Missouri jurisdictional) and is
 inclusive of adjustments to the below accounts. Since this pro forma adjustment is

currently based on anticipated Regulatory Asset and Liability update period balances
 it would be appropriate to revise this adjustment, where applicable, with actual
 September 30, 2024, balances during the pendency of this case.

• <u>Iatan 1, Iatan 2, Plum Point Deferred Carrying Costs Amortization:</u>

This adjustment reflects the annual amortization that was approved in ER-2019-0374, which is \$84,729 for Iatan 1, \$44,828 for Iatan 2, and \$1,987 for Plum Point. Due to the test year reflecting a full year of these amortization expenses, there was no additional pro forma adjustment needed in this case.

<u>Protected and Unprotected Excess ADIT Amortization:</u>

10This adjustment reflects a total annual amortization of \$8,388,389 of Protected11and Unprotected Excess Accumulated Deferred Income Taxes ("EADIT").12Please refer to the direct testimony of Michael McCuen who provides additional13discussion on Protected and Unprotected EADIT amortization.

Additionally, and as mentioned above, the Company was authorized an EADIT tracker. The annual amount of amortization for the proposed Unprotected tracker balance is \$6,962,109, which aligns with the amortization period ordered in Case No. ER-2021-0312. The test year includes annual amortization of \$2,345,691 for the Stub Period regulatory liability. Since this represents a full year worth of amortization within the test year, there is no additional adjustment needed.

21• Riverton 12 Tracker Amortization:

4

5

6

7

8

9

The Company is seeking an annual amortization amount of \$691,111 related to the Riverton 12 Tracker regulatory asset. This amount represents both Total Company and Missouri jurisdictional as these expense accounts are 100% direct assigned to Missouri and were setup specifically to amortize the Riverton 12
 Tracker regulatory asset. The adjustment results in a decrease to expenses of
 (\$880,052).

4

• <u>LIPP Amortization:</u>

5 Per the Stipulation and Agreement in Case No. ER-2016-0023, if the 6 Commission ordered a Low-Income Pilot Program, the program's expenses 7 were to receive the same regulatory asset/rate base treatment as the Demand 8 Side Management ("DSM") costs. As such, the Company is proposing a six-9 year amortization period consistent with the treatment of DSM costs based on 10 the pro forma ending balance of the Regulatory Asset amortization. This results 11 in a new proposed Missouri annual amortization of \$57,634, which causes a 12 decrease to Missouri expenses of (\$5,499).

13

SB-EDR Amortization:

14The amortization of the economic development discounts through the update15period results in an increase to Missouri operating expenses of \$1,413,93816annually, based on a proposed five-year amortization of the SB-EDR17Regulatory Asset.

18 • Missouri Solar Initiative Amortization:

19The Company is continuing the ten-year amortization of the Missouri solar20initiative balance projected for September 2024. This adjustment increases the21Missouri electric revenue requirement calculation by \$610,190, for the annual22amount of amortization expense related to this regulatory asset.

• <u>Customer Programs Collaborative Amortization</u>: This adjustment annualizes the amortization expense related to the projected balance of the Regulatory Asset as of September 2024, reducing the amount of operating expenses by (\$362,235) at the Missouri jurisdictional level. This adjustment accounts for vintage costs that will become fully amortized by the update period, as well as additional vintage costs that were incurred through the update period. A six-year amortization period is utilized for the additional

vintage costs which is consistent with approval obtained in Case No. ER-2014-0351.

10

17

1

2

3

4

5

6

7

8

9

<u>Missouri Solar Rebate Amortization:</u>

This adjustment reflects an annual amortization of the Missouri Solar Rebate amounts approved in Case Nos. ER-2016-0023, ER-2019-0374, and ER-2021-0312. The annual amount of amortization for the solar rebates based on the approved ten-year amortization is \$2,244,915 at the Total Company and Missouri jurisdictional levels, since the test year contains this level of amortization no additional adjustment is needed to the test year.

<u>Riverton Environmental Cost Regulatory Assets Amortization</u>:

18 This adjustment reflects an annual amount of amortization expense related to 19 the environmental cost regulatory asset for the Riverton asbestos and ash pond. 20 The annual amount of amortization at a Missouri level is \$1,133,275. Due to 21 the test year already including a full year of this amortization, there is no 22 additional adjustment needed.

1

• **<u>PISA Asset Amortization:</u>**

Liberty is utilizing a 20-year amortization period for the PISA Regulatory Assets. As mentioned above, this amortization period is authorized pursuant to Section 393.1400.4, RSMo. The annual amortization expense for both tranches of the Missouri direct assigned PISA Regulatory Assets is \$8,749,441. This results in a pro forma adjustment of \$8,119,573 being added to the Company's Missouri operating expenses.

8 • Missouri Property Tracker Amortization:

9 The Company is seeking a Missouri annual amortization amount of \$3,754,385 10 related to the Missouri Property Tax Tracker Regulatory Asset. The Company 11 is proposing a three-year amortization period.

12

HLBV Paygo:

13The Company is proposing an amortization period of three years for the under-14recovered balance of Paygo revenue Regulatory Asset. As a result, the15Company is seeking to recover from customers approximately \$414,996 in16Missouri annual amortization expense.

17 • Asbury Environmental Costs Amortization:

18The Company is proposing an amortization period of three years for the over-19recovered balance of Asbury environmental asset costs. This over-collection is20related to the true-up of actual settled and paid environmental costs incurred21compared to the amount being recovered through the Company's Rider SUTC.22As a result, the Company is reducing its annual Missouri amortization expense23by (\$335,384).

1

<u>Asbury AAO Liability Amortization:</u>

The Company is proposing an amortization period of three years for the overrecovered balance of the Asbury AAO liability. This over-collection of costs is
largely related to the true-up of actual decommissioning costs incurred
compared to the amount being recovered through the Company's Rider SUTC.
As a result, the Company is reducing its annual Missouri amortization expense
by (\$1,083,397).

8

<u>Interruptible Service Credit Amortization:</u>

9 The Company is proposing an amortization period of three years for the 10 unrecovered balance of interruptible service credits. As a result, the Company 11 is seeking to recover \$406,509 in annual Missouri amortization expense.

12 Q. Please explain EXP ADJ 8 for Rate Case Expense.

13 A. Rate case expense is defined as the incremental costs incurred by a utility for the 14 preparation and filing of its application to change its general rates and proceeding 15 thereafter. These costs normally include charges incurred from outside witnesses, 16 consultants, and external attorneys hired by the utility to participate in the various 17 stages of the rate case process. The pro forma amount of Missouri rate case expense 18 being proposed in the current case is \$446,135, which results in an adjustment of 19 (\$894,055) to the Missouri test year balance. The pro forma balance includes the 20 following costs: 1) the total line loss study costs from Case No. ER-2019-0374, that is 21 remaining outside of our update period of \$667; 2) the remaining depreciation study 22 costs from Case No. ER-2021-0312 being amortized over five years which totals 23 \$19,213; 3) the costs related to the Company's current Line Loss Study, which the 24 Company is proposing over a four-year period in the amount of \$3,849; and 4)

projected general rate case costs in the amount of \$422,406 expected to be incurred for
 the current case amortized over three years.

3 Q. Does the Company believe its costs incurred for rate case expense are 4 discretionary?

5 A. No. The costs represent expenses related to consultants and outside legal counsel that 6 are utilized by the Company to conduct a rate case proceeding. Due to the relatively 7 small size of Liberty, these services are not performed in-house; however, that does not 8 deem the costs incurred discretionary.

9 Q. Does the Company believe a sharing mechanism should be applied to rate case 10 expense?

11 A. No. The Company believes the costs included in its cost of service are prudent, and 12 because rate case expense is a cost of supplying service to our customers, the entire 13 costs should be included in the Company's base rates. Applying a sharing mechanism 14 to the Company's consulting and legal costs harms Liberty inappropriately, as the 15 Company does not have in-house rate design or a cost of service department; therefore, 16 the Company must contract for expertise when it does not have that expertise in-house. 17 Other larger utilities have these personnel in-house and are allowed to fully recover 18 those costs through internal labor included in rates. It is inappropriate to effectively 19 penalize and require the Company to absorb a portion of these costs just because it 20 chooses to use outside personnel for expertise in its rate case proceedings.

21 Q. Please explain EXP ADJ 9 to annualize Insurance Premium Expense.

A. This adjustment is being proposed to reflect an annualized amount for its upcoming
 insurance policy premiums that will be renewed by September 2024. Additionally, the
 adjustment also reflects other known and measurable insurance expenses at the time of

the update period. As a result of this adjustment, the Company has added \$1,460,012
 to its insurance premium expenses on a Total Company level and \$1,289,207 on a
 Missouri jurisdictional level. This adjustment results in a pro forma balance of
 \$6,575,152 (Total Company) or \$5,805,957 (Missouri jurisdictional).

5

Q.

Please explain EXP ADJ 10 related to Injuries and Damages.

A. EXP ADJ 10 normalizes the amount of expenses within the test year that relate to
injuries and damages. The Company compares test year expenses to a five-year average
of public liability and property damage payouts, as well as a five-year average of
workers compensation payouts. The Total Company balance at the end of the test year
was (\$234,223). The five-year average for public liability, property damage, and
workers compensation is \$6,861. Therefore, the Total Company adjustment is
\$241,084, and total Missouri adjustment is \$6,056.

13 Q. Please explain EXP ADJ 11 for Non-Recoverable Expenses.

A. Certain expenses included in the Company's test year expense would not be appropriate
 to include in its revenue requirement calculation. Therefore, an adjustment has been
 made to remove these costs from the Company's revenue requirement. Please refer to
 the direct testimony of Company witness Jill Schwartz regarding the details of the
 expense adjustment made for Non-Recoverable Expenses.

19 Q. Please explain EXP ADJ 12 for Payroll Annualization.

A. This adjustment is to include in the revenue requirement calculation an annualized level
of payroll and payroll taxes expected at the end of the update period. To calculate this,
the Company obtained the annual salary amount for each active employee at the end of
the test year and applied a projected 3.50% merit increase which was effective in March
2024. This approach allows the Company to project an annual salary amount to include

1 at the Company's September 2024 update period. The Company also included in its 2 adjustment a portion of annualized payroll related to overtime. This annualized amount 3 of overtime was determined by using an overtime percentage computed for the non-4 union and union employees based upon a two-year average of overtime hours actually 5 incurred and the overtime rate as of September 30, 2023. This rate was then applied to 6 the Company's pro forma update period base payroll amounts as previously described. 7 In addition to annualizing the base salaries and overtime, the Company also included 8 in its revenue requirement calculation, payroll related to open positions the Company 9 anticipates hiring by the end of the update period. These amounts were then compared 10 back to the test year amounts and an adjustment was made for the difference.

11 The annualized level of Missouri jurisdictional payroll related to the base 12 salaries with the incorporated merit increase mentioned above is \$27,875,868. The 13 annualized level of payroll related to overtime is \$5,085,358, and the annualized level 14 of payroll related to the open positions anticipated to be hired by the update period is 15 \$1,133,631, resulting in a total Missouri pro forma balance of payroll of \$41,611,186 or a Total Company pro forma balance of payroll of \$47,370,593. To adjust the test 16 17 year to this pro forma update period balance an adjustment of \$14,945,839 on a Total 18 Company or \$13,160,650 on a Missouri jurisdictional level was necessary. Since this 19 pro forma adjustment is based on employees at a certain point in time it would be 20 appropriate to revise this adjustment with actual payroll information as of September 30, 2024 during the pendency of this case. 21

22

Q. Was an adjustment made for payroll taxes?

A. Yes, the Company made an adjustment to its test year level of payroll taxes based on
the pro forma update period level of payroll included in the revenue requirement

1 calculation and applying the 2023 tax rates. The pro forma update period amount of 2 payroll taxes included in the revenue requirement calculation is \$3,291,627 Total 3 Company or \$2,905,658 on a Missouri jurisdictional basis, resulting in a pro forma 4 adjustment to increase the test year balances by \$1,048,842 Total Company or 5 \$925,857 Missouri jurisdictional. Since this pro forma adjustment is based on 6 employees at a certain point in time it would be appropriate to revise this adjustment 7 with actual payroll information as of September 30, 2024 during the pendency of this 8 case.

9

Q. Please explain EXP ADJ 13 for Employee Benefits.

10 A. Liberty currently offers a variety of benefits, such as, Medical, Dental, Vision, Life 11 Insurance, Accidental Death and Dismemberment, Accident Insurance, Short and 12 Long-Term Disability, and a 401k match, to its employees. For EXP ADJ 13, the 13 Company obtained the annualized amounts it was incurring for each employee at the 14 test year end and included benefit amounts for any open positions that the Company 15 anticipates being hired by the end of the update period. To determine an annualized 16 401k expense, the actual 401k match rates that each employee was receiving at the test 17 year end was used and then the Company match rate was used for the open positions. 18 These rates were then applied to the pro forma update period salary amounts calculated 19 in EXP ADJ 12 and then compared back to the test year amounts included in the 20 revenue requirement calculation. The annualized pro forma update period balance of 21 benefits related to active employees at the test year end is \$7,228,261 (Total Company) 22 and an annualized pro forma update period balance of benefits for open positions that 23 are anticipated to be hired by the end of the update period is \$275,668 Total Company, 24 resulting in a Total Company pro forma update period balance of total employee benefit costs of \$7,503,929 or \$6,624,035 on a Missouri jurisdictional level. To adjust the test
year to this pro forma update period balance an adjustment of \$184,016 on a Total
Company or \$162,439 on a Missouri jurisdictional level was made. Since this pro
forma adjustment is based on employees at a certain point in time it would be
appropriate to revise this adjustment with actual payroll information as of September
30, 2024 during the pendency of this case.

7 Q. Please explain EXP ADJ 14 to annualize MPSC assessment costs.

A. EXP ADJ 14 represents an annualized amount of Missouri Public Service Commission
Assessment costs, which became effective July 1, 2023. This decreases Missouri
operating expenses by (\$91,085), and results in a Missouri jurisdictional pro forma
balance of \$3,342,624. The Company will update this adjustment to the annual
assessment effective July 1, 2024 during the update period.

13 Q. Please explain EXP ADJ 15 to annualize Depreciation Expense.

14 A. EXP ADJ 15 represents an annual depreciation expense based on plant in service at the 15 end of the update period including plant additions in RB ADJ 1. Since the Company 16 is not proposing a new depreciation study, this adjustment is annualizing the 17 depreciation expense based on current depreciation rates. This results in a total increase 18 in operating expenses of \$5,673,084, and a pro forma ending balance of \$110,534,068 19 for annual depreciation expense on a Missouri jurisdictional level. Since this pro forma 20 adjustment is currently based on anticipated plant in service update period balances it 21 would be appropriate to revise this adjustment with actual September 30, 2024 22 information during the pendency of this case.

23 Q. Please explain EXP ADJ 16 to annualize Amortization Expense.

1 A. EXP ADJ 16 reflects a net increase in Missouri jurisdictional operating expenses of 2 \$10,983,122 for annual amortization expense and a pro forma update period ending 3 balance of \$17,983,360. This adjustment consists of removing annual amortization 4 expense for assets that will be fully amortized during the update period, as well as, 5 including the additional amortization expense for the increase in intangible plant included in plant in service from RB ADJ 1. Since this pro forma adjustment is 6 7 currently based on anticipated plant in service update period balances it would be 8 appropriate to revise this adjustment with actual September 30, 2024 information 9 during the pendency of this case.

10 **O**.

Q. Please explain EXP ADJ 17 to annualize Non-Wind Property Tax Expense.

11 A. This adjustment represents the annualized amount of non-wind property tax expense 12 expected to be incurred for the Company's pro forma plant that is included in its 13 revenue requirement calculation. The property tax rate utilized by the Company in this 14 adjustment is based on its estimated 2024 property tax liability. This results in a 15 Missouri pro forma balance of property tax expense of \$28,465,799 and a Missouri pro 16 forma adjustment to increase expenses by \$3,683,037. Since this pro forma adjustment 17 is currently based on anticipated plant in service update period balances it would be 18 appropriate to revise this adjustment with actual September 30, 2024 information 19 during the pendency of this case.

20 Q. Please explain EXP ADJ 18 to remove Franchise Tax Expense.

A. In conjunction with REV ADJ 7 discussed above, EXP ADJ 18 removes franchise tax
expenses from its revenue requirement calculation. EXP ADJ 18 removes
(\$12,383,980) on a Total Company basis or (\$11,321,145) on a Missouri jurisdictional
basis.

49

```
1 Q. Please explain EXP ADJ 19 for Interest on Customer Deposits.
```

A. EXP ADJ 19 increases Missouri operating expense by \$1,465,043 to include interest
paid to Missouri customers on their deposit accounts, as the test year revenue
requirement does not reflect an account balance for customer deposit interest expense.
The Company utilized the interest rate set by the Commission, which went into effect
in January 2024, which is an annual rate of 9.5%.

7 Q. Please explain EXP ADJ 20 for Non-Fuel Wind related Expenses.

8 EXP ADJ 20 decreases Missouri jurisdictional operating expenses by (\$261,074) and A. 9 (\$295,089) for Total Company for expenses related to the Wind Projects not eligible to 10 be included in the Company's FAC. This adjustment includes the annualization of 11 expenses associated with the AMA, EMSA, OMA, and Transmission Easement 12 Agreement. Additionally, this adjustment removes the expenses associated with the 13 Neosho Ridge Wind Outage, annualizes the amount of insurance expense expected to be incurred based on updated premium costs, and accounts for the deferral of expenses 14 15 associated with the Vestas O&M Service Fee. For more detail regarding the O&M 16 deferral, please refer to the explanation above pertaining to RB ADJ 9, Wind SMWA 17 Deferral.

18 Q. Please explain EXP ADJ 21 for Rating Agency Fees normalization.

A. A refund was issued and recorded in the test year for the Moody's Investor invoices
causing an abnormal credit balance in account 903150 when comparing to previous
years. This pro forma adjustment reflects the expected amount of fees to be paid in
2024 related to rating agency fees. This results in a Total Company pro forma
adjustment of \$236,538 and a pro forma ending balance of \$112,350 or a Missouri pro
forma adjustment of \$210,700 and a Missouri pro forma ending balance of \$100,078.

1	Q.	Please explain EXP ADJ 22 for Pension and OPEB Expense.
2	A.	The Company has adjusted to test year pension and OPEB expense based on the
3		Company's projected 2024 actuarial costs. For further discussion of these adjustments,
4		please see the direct testimony of Company witness James A. Fallert.
5	Q.	Please explain EXP ADJ 23 for Riverton and State Line Long-Term Maintenance
6		Expense normalization.
7	А.	As previously mentioned, the Company changed its accounting treatment related to its
8		long-term maintenance contracts. Therefore, EXP ADJ 23 is to normalize the annual
9		level of expense within these accounts going forward resulting in an increase of
10		expenses of \$3,714,158 on a Missouri jurisdictional level.
11	Q.	Please explain EXP ADJ 24 to annualize the Company's Missouri American
12		Water Expenses.
13	А.	As discussed in Company witness Brian Berkstresser's direct testimony, the State Line
14		power plant utilizes water provided from Missouri American Water ("MAW"). In May
15		of 2023, rates from MAW increased, therefore, EXP ADJ 24 annualizes the water costs
16		to operate the State Line power plant. This results in a Total Company pro forma
17		adjustment of \$613,338 and a total Missouri pro forma adjustment of \$542,343.
18	Q.	Please explain EXP ADJ 25 for Department 115 O&M Normalization.
19	А.	EXP ADJ 25 adjusts and normalizes test year balances for the Company's department
20		115 non-labor O&M costs. Department 115 captures costs to support services for many
21		of Liberty's generating facilities, including the Company's wind farms. In this
22		adjustment, the Company adjusted its test year balances of costs to a normalized
23		amount of expense based on the Company's 2024 budget, less those costs specifically
24		accounted for in EXP ADJ 20 for Wind non-fuel O&M costs. This adjustment results

1		in a Total Company pro forma adjustment of \$243,978 and a total Missouri pro forma
2		adjustment of \$215,715 to increase operating expense in the Company's revenue
3		requirement calculation.
4	Q.	Please explain EXP ADJ 26 for the Customer First Expenses.
5	A.	EXP ADJ 26 is to annualize the Company's projected level of on-going operating costs
6		related to its Customer First project. This adjustment results in a Missouri pro forma
7		adjustment to increase operating expenses in the amount of \$5,165,203. Please refer
8		to the direct testimony of Company witness Colin Penny for further discussion on the
9		Customer First investment.
10	Q.	Please explain EXP ADJ 27 for the Income Tax True-Up.
10 11	Q. A.	Please explain EXP ADJ 27 for the Income Tax True-Up. EXP ADJ 27 is being proposed to help calculate the annualized amount of income

Since this pro forma adjustment is dependent on the various inputs of the revenue requirement calculation it

- A. Yes. Liberty is requesting a tracker for expected increases in environmental compliance
 costs related to its Neosho Ridge, North Fork, and King's Point wind farms
 (collectively referred to as the "Wind Projects"), as well as an AAO for new natural
 gas generation investments.
- 23 Q. Please explain the purpose of the Wind Environmental Compliance tracker.

A. As described in the direct testimony of Mr. Rooney, Liberty currently incurs costs
related to the environmental monitoring related to its Wind Projects to comply with the
Endangered Species Act ("ESA") and the Bald and Golden Eagle Protection Act. These
costs include obtaining permits, costs for generation curtailment, and monitoring costs
which include costs for mowing vegetation around the turbines, crop damage payments,
contractor costs for carcass searches, as well as contractor costs related to acoustic
monitoring.

In the near future, the Company is expecting additional environmental 8 9 monitoring required by the United States Fish and Wildlife Service ("USFWS") to 10 include the tricolored bat, which will result in an increase in monitoring costs, which 11 can be material. The Company also expects to continue to see increases in these costs 12 as other species of bats meet the criteria of the Endangered Species list. Because these 13 requirements are mandated, can be material in nature, and the timing and types of 14 monitoring required is outside of Liberty's control, the Company is proposing a tracker 15 mechanism for these costs in this proceeding.

16

Q. Please describe the mechanics of the tracker.

A. If approved, the Company would track the actual monthly amount of incurred
environmental monitoring compliance costs incurred for its Wind Projects compared
to the amount approved in base rates for recovery in this proceeding and defer the
difference in a Regulatory Asset or Liability account.

Q. What amount of environmental monitoring costs are included in the Company's revenue requirement calculation that would serve as the baseline of this tracker? A. The Company's revenue requirement calculation is inclusive of \$2,079,241 of Missouri jurisdictional environment compliance monitoring costs related to the Company's

Wind Projects. Of that total, \$153,418 is for the crop damage payments paid out to
 landowners during the Company's test year and the remaining \$1,925,823 is related to
 the various other monitoring costs the Company incurs, as I previously described.

4

5

Q. If the Commission were to approve this tracker, what would ensure the Company

is making prudent decisions regarding its environmental compliance costs?

A. While the Company always strives to keeps its costs as low as possible, the costs related
to the environmental compliance are in large part outside of the Company's control as
previously mentioned. The costs, however, would be subject to a prudence review in a
subsequent rate case for stakeholder review. If any imprudent costs were to be found,
they would be excluded from the Regulatory Asset/Liability tracker balance
calculation.

12 Q. Please describe the special deferral accounting treatment via an AAO related to 13 new natural gas generation unit investments the Company is seeking.

14 A. The Company is requesting that it be allowed to establish and seek recovery of a 15 Regulatory Asset which would defer Missouri's allocated portion of the "return on" 16 and "return of", along with applicable federal and state taxes, of any natural gas 17 generating unit that are placed in service in between general rate cases. This special 18 deferral accounting treatment would remain in effect until such time as new base rates 19 reflecting the investment in such natural gas facility take effect. Additionally, the 20 Company would propose to offset this Regulatory Asset with Missouri's allocated portion of SPP revenue that it receives from selling the power to SPP. The purpose of 21 22 this AAO request will be for the Company to reduce the Company's regulatory lag 23 related to capital investments of new natural gas generation needed for increased 24 reliability. As discussed in the direct testimony of Aaron J. Doll, the Company needs

- to invest in generation to comply with SPP Resource Adequacy goal, which would be
 to "ensure there is enough capacity available to meet the needs of the end-use customers
 in SPP."³
- 4

Q. Further explain the specifics related to the Company's proposal of its AAO.

A. As mentioned above, the Company is proposing to defer depreciation expense and a
weighted average cost of capital ("WACC") on its investments of new natural gas
generation, including but not limited to Riverton Units 10 & 11 replacements, to a
Regulatory Asset commencing on the date these projects are placed in service on the
Company's books ("Construction Accounting"), subject to the following terms:

- 10I.If the PISA statute is amended so that it applies to the Riverton Units or any11other statute applies to the Units that results in deferral and recovery of12return on and of investments from the in-service date to the effective date13of new rates, then no Constructive Accounting will be applied.
- 14 II. A WACC approved by the Commission for purposes of PISA within this15 docket.
- 16 III. The Company will provide surveillance reporting, consistent with its
 17 current practices, during the Construction Accounting Period;
- 18 IV. Once these projects are reflected in new base rates, no additional dollars
 19 will be added to the Construction accounting balance; and
- V. This Regulatory Asset will be offset with Missouri's allocated portion of
 SPP revenue that it receives from selling the natural gas generation power
 to SPP.

³ https://www.spp.org/engineering/resource-adequacy.

Q. Does Missouri currently have a similar mechanism that electric corporations can utilize related to special deferral accounting?

A. Yes. Electrical corporations who have elected to utilize PISA may defer 85% of the
depreciation and return associated with qualifying plant additions in the Missouri
jurisdiction for the time period between when those plant additions are placed into
service and when they are included in the Company's base rates (so long as the
Company meets the provisions of the Section 393.1400, RSMo).

8 Q. Why does the Company need to request the establishment of an AAO if Missouri
9 Statutes allow for similar treatment?

A. As mentioned above, Missouri Statutes allow for PISA deferral accounting for certain
 qualifying plant. Unfortunately, new natural gas generating units do not qualify for the
 special deferral accounting treatment. Therefore, the Company must seek authorization
 from the Commission to establish such accounting treatment.

14 Q. Has the Company started the process of a filing a Certificate of Convenience and
15 Necessity ("CCN") related to enhance system reliability?

- A. Yes. The Company has filed and since received Commission approval to construct,
 install, own, operate, maintain, and otherwise control and manage two combustion
 turbine generators to replace existing combustion turbine generators Riverton Unit 10
 and Riverton Unit 11.⁴
- 20 Q. Does this conclude your direct testimony?
- 21 A. Yes.

⁴ Case No. EA-2023-0131 Order Approving Stipulation and Agreement Granting Certification of Convenience and Necessity.

VERIFICATION

I, Charlotte T. Emery, under penalty of perjury, on this 26th day of February, 2025, declare that the foregoing is true and correct to the best of my knowledge and belief.
