Subject: Proposed new coal-fired plant in KC

Dear members of the Public Service Commission,

I am very concerned about KCPL's proposed new coal-fired power plant near KC. I sit on the Environmental Advisory Board for the Mid-America Regional Commission and am familiar with how close our area is to non-attainment for certain federal air quality parameters. We absolutely cannot be adding this huge new potential source. Furthermore, the people of the Kansas City region want more megawatts -- investments in energy efficiency - and more sustainable economic development through with renewable energy generation. We also need pollution prevention at the current plants! This is what I want to pay for, and others in my community!

Thank you.
