RE: Reliability Performance Report

The Empire District Electric Company ("Liberty") respectfully submits its annual reliability report for calendar year 2024. Commission Rule 20 CSR 4240-23.010(2-8) requires the production of an annual reliability performance report including performance metrics for both including and excluding major event days, a list of the Company's worst performing circuit program and activities to improve performance, and a list of the Company's multi-year worst performing circuits and activities to improve performance.

Pursuant to Rule 23.010(2-8), Liberty's annual Reliability Performance Report discusses the 2024 performance and planned 2025 reliability activities to maintain or improve service reliability for Liberty's electric customers. Please note that this is a working document, and the planned activities are subject to change.

Respectfully submitted,

Sam McGarrahan
Director of Planning and Asset Management

2024 Missouri Annual Reliability Report

The Empire District Electric Company

d/b/a Liberty

April 30, 2025

2024 Monthly Actual Circuit Reliability Indices.....	pg. 20
2024 Monthly Adjusted Circuit Reliability Indices	pg. 81

Section 1:

Introduction

This report details the annual reliability metrics and worst performing circuits for calendar year 2024 for The Empire District Electric Company (“Liberty” or “Company”), as required by Missouri Public Service Commission Rule 20 CSR 4240-23.010, Electric Utility System Reliability Monitoring and Reporting Submission Requirements. This report will provide the reliability measures requested by the Rule, the list of Worst Performing Circuits, the Multi-Year Worst Performing Circuits, and the actions taken or planned to improve the performance of these circuits.

Definitions

For the purpose of this report, the following definitions shall apply:

1. System Average Interruption Frequency Index (“SAIFI”) – how often the average customer experiences a sustained interruption over a predefined period of time.
2. Customer Average Interruption Frequency Index (“CAIFI”) – the average frequency of sustained interruptions for those customers experiencing sustained interruptions. The customer is counted once regardless of the number of times interrupted for this calculation.
3. System Average Interruption Duration Index (“SAIDI”) – the total duration of interruption for the average customer during a predefined period of time. SAIDI is measured in minutes.
4. Customer Average Interruption Duration Index (“CAIDI”) – the average time required to restore service. CAIDI is measured in minutes.
5. Worst Performing Circuit (WPC) – A distribution circuit whose SAIFI value, adjusted to exclude major events per IEEE Standard 1366-2022 when compared to the SAIFI values for the other circuits in the Liberty system places it among the 5% of circuits with the highest SAIFI values in the Liberty system.

Section 2:

Liberty serves electric customers in sixteen counties of the southwest corner of Missouri. The region is comprised of rural communities, small towns, and medium cities.

2024 Missouri Reliability Indices including Major Event Days

Month	SAIDI	SAIFI	CAIDI
January	12.41	0.108	115.23
February	3.72	0.065	57.28
March	7.46	0.061	122.29
April	20.70	0.187	110.42
May	76.35	0.253	301.79
June	14.60	0.091	160.81
July	17.28	0.105	164.83
August	41.27	0.151	273.90
September	8.57	0.085	101.34
October	13.06	0.140	93.34
November	14.48	0.095	152.32
December	3.26	0.040	82.02

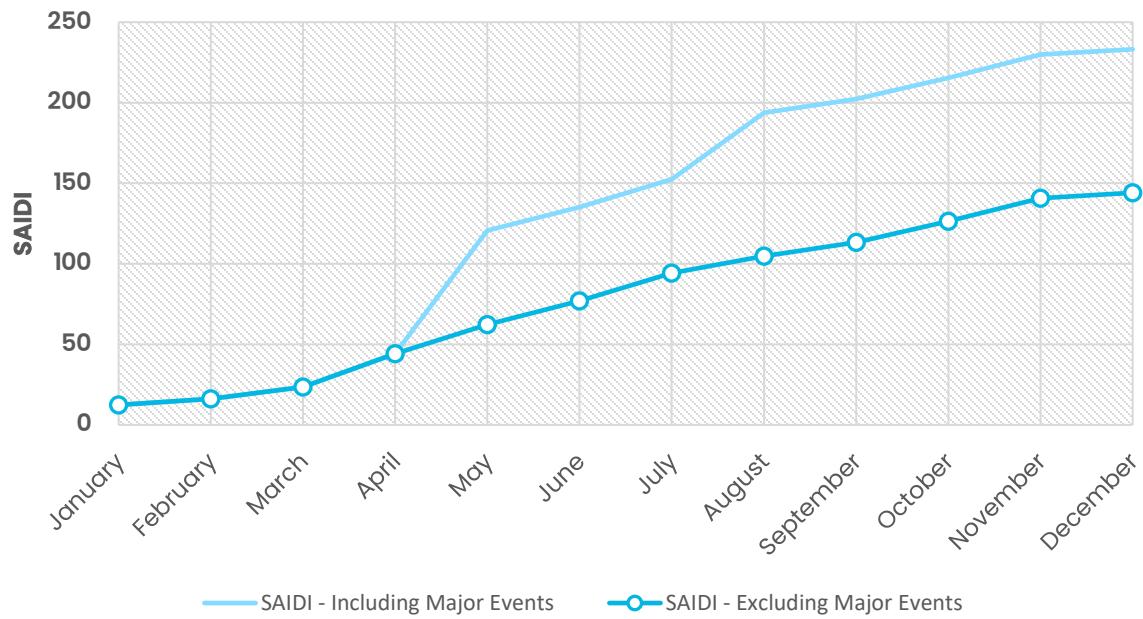

2024 Missouri Reliability Indices excluding Major Event Days

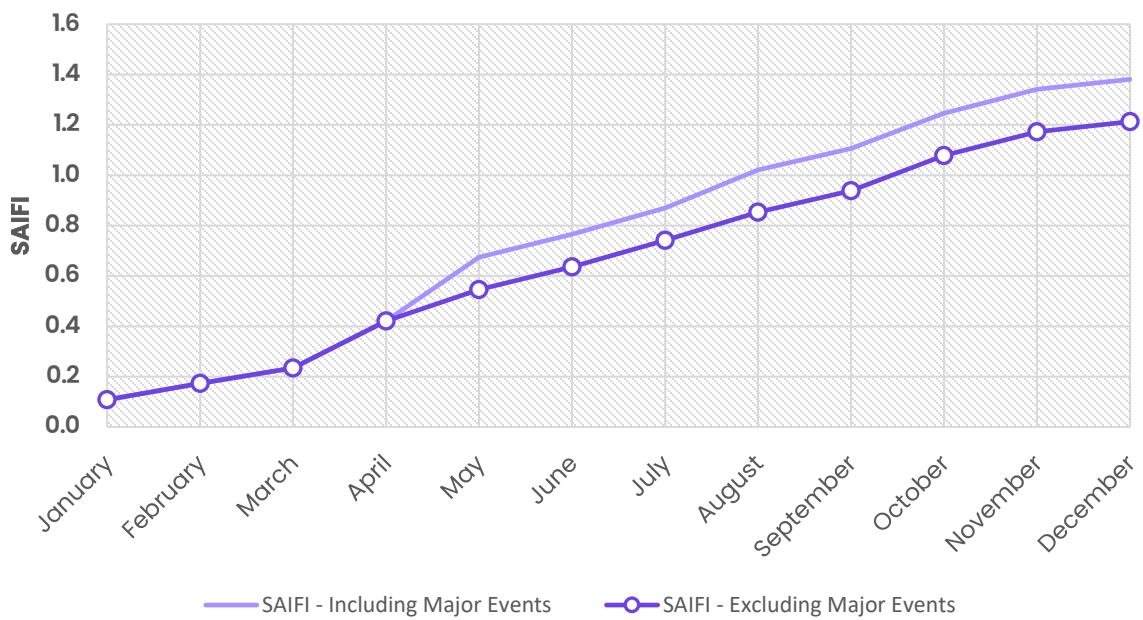

Month	SAIDI	SAIFI	CAIDI
January	12.41	0.108	115.23
February	3.72	0.065	57.28

Section 3:

Worst Performing Circuit Analysis/Improvement Program

Liberty's top 5% worst performing circuits for 2024 are provided in the table below.

2024 Worst Performing Circuits

Circuit Number	Location	Customer Outage Minutes	Customers Affected	Total Customers on Affected Circuits	SAIFI	SAIDI
4324	Oakland – North	37,969	421	66	6.379	575.29
2951	Reeds Spring – 161 KV	754,888	7,142	1,085	6.084	671.41
3901	Purdy – South	774,039	4,773	805	6.012	989.37
3304	Ozark – Northwest	878,881	6,460	1,152	5.655	764.58
2952	Reeds Spring – 161 KV	174,422	1,919	353	4.936	448.67
4102	Forsyth – North	202,867	1,925	543	3.690	390.11
4361	Webb City – Cardinal	609,409	6,071	1,610	3.670	378.87
1050	Webb City – Tom Street	441,926	6,551	1,776	3.670	251.65
3982	Neosho – East	327,178	5,549	1,795	3.150	184.47
6021	Bolivar Plant	281,397	3,871	1,317	3.074	223.43
4101	Forsyth – North	496,544	2,582	933	2.890	556.18
3181	Collins South	97,293	1,918	657	2.856	140.94
1523	Monett – H.T.	175,732	2,070	733	2.830	240.59
3311	Branson – North	313,523	1,555	535	2.810	563.50

Worst Performing Circuit Assessment

Circuit 4324

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received an overhead and underground detail inspection in 2020 and an intrusive inspection in 2021. This circuit is scheduled for an overhead and underground patrol inspection in 2025 and an intrusive inspection in 2028.

Circuit 4324 predominantly serves industrial customers but also has a fused tap serving residential customers. The fused tap serves approximately 80% of the circuit's customer count and experienced seven outages in 2024. Five of the outages occurred within a week period prior to remediating the underlying issue.

A thorough walkthrough of this circuit was performed to determine the appropriate remediation. Liberty then performed "hot-spot" vegetation clearing and installed wildlife cover-up to the affected devices behind the fuse. This fuse has not experienced an outage since the remediation was performed.

Circuit 2951

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2027.

This circuit received an overhead and underground patrol inspection in 2022 and an intrusive inspection in 2022. This circuit is scheduled for overhead and underground patrol inspections in 2028.

Circuit 2951 experienced four transmission related outages affecting the entire Reeds Spring – 161 KV substation. One incident occurred when Liberty crews attempted to operate a transmission switch but it was unable to perform the necessary load-breaking function. Liberty has adjusted operational procedures to prevent future similar incidents. A second transmission outage occurred due to an unidentified fault on Liberty's 161 kV line serving the #295 – Reeds Spring substation. Liberty crews patrolled the line however the root cause was not discovered. The line was successfully re-energized and has not experienced a recurrence.

Due to system configuration, Liberty's #295 – Reeds Spring substation experiences an outage when an outage or fault occurs at Associated Electric Cooperative's (AEC) #424 – Reeds Spring substation. Two faults originating in AEC's equipment resulted in two substation outages of #424 – Reeds Spring which caused a loss of supply to Liberty's #295 – Reeds Spring substation.

This circuit also experienced three large-scale outages. One incident affected the circuit breaker due to a vehicle hitting a pole. Another two incidents occurred on a three-phase recloser due to weather.

Circuit 3901

Vegetation maintenance was last performed in 2023 and is scheduled to be performed in 2025.

This circuit received an intrusive inspection in 2020 and overhead and underground detail inspections in 2022. This circuit is scheduled for overhead and underground detail inspections in 2028.

Circuit 3901 experienced five circuit-wide outages in 2024 due to a variety of causes. Two circuit-wide outages occurred due to vehicles hitting poles. Another outage occurred due to wildlife. A fourth outage occurred while line crews had reclosing blocked to replace a primary metering rack. The resulting outage root cause was unidentified. It is standard policy for Liberty crews to block reclosing to safely perform work on energized equipment. Liberty interrupted power to #390 – Purdy South to perform planned transmission maintenance work. The #390 – Purdy South substation is radially fed and requires a service interruption to customers to safely perform some maintenance activities.

Circuit 3304

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received overhead and underground detail inspections in 2021. This circuit is scheduled for overhead and underground detail inspections in 2025 and an intrusive inspection in 2026.

Circuit 3304 experienced four circuit-wide outages in 2024 due to a variety of causes. Two circuit-wide outages occurred due to equipment failures. The third circuit-wide outage was caused by lightning. The final circuit-wide outage occurred when a dump truck drove into an energized line with its raised truck bed.

Circuit 2952

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2027.

This circuit received overhead and underground detail inspections in 2021. This circuit is scheduled for an intrusive inspection in 2025 and overhead and underground detail inspections in 2027.

Circuit 2952 experienced four transmission related outages affecting the entire Reeds Spring – 161 KV substation. One incident occurred when Liberty crews attempted to operate a transmission switch but it was unable to perform the necessary load-breaking function. Liberty has adjusted operational procedures to prevent future similar incidents. A second transmission outage occurred due to an unidentified fault on Liberty's 161 kV line serving the #295 – Reeds Spring substation. Liberty crews patrolled the line however the root cause was not discovered. The line was successfully re-energized and has not experienced a recurrence.

Due to system configuration, Liberty's #295 – Reeds Spring substation experiences an outage when an outage or fault occurs at Associated Electric Cooperative's (AEC) #424 – Reeds Spring substation. Two faults originating in AEC's equipment resulted in two substation outages of #424 – Reeds Spring which caused a loss of supply to Liberty's #295 – Reeds Spring substation.

Circuit 2952 also experienced a circuit breaker outage due to lightning.

Circuit 4102

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received overhead and underground detail inspections in 2023. This circuit is scheduled for overhead and underground detail inspections in 2027 and an intrusive inspection in 2028.

The first outage occurred due to protection relaying isolating the autotransformer at Liberty's #312 - Ozark Dam - Powersite substation. The incident cause was not discovered, however the transformer was thoroughly tested and is in good condition. Revisions to the relaying logic were implemented for a more robust design. The second outage occurred because of operational error. A third outage was caused by wildlife.

The existing 39-0 69 kV transmission line that feeds the #410 - Forsyth North substation is currently planned to be rebuilt and upgraded to 161 kV. This upgrade is part of a systemic transmission upgrade at the request of the Southwest Power Pool (SPP). The #410 - Forsyth North substation is currently served radially and this line rebuild will allow the substation to be fed from two sources.

Circuit 4361

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2026.

This circuit received an intrusive inspection in 2020 and overhead and underground detail inspections in 2021. This circuit is scheduled for overhead and underground detail inspections in 2025.

Circuit 4361 experienced three circuit-wide outages in 2024. The first circuit-wide outage occurred due to overload caused by extreme cold. The second circuit-wide outage was caused by a vehicle striking a pole. The final circuit-wide outage occurred due to wildlife. Liberty's response to these outages included upgrading the distribution breaker, installing wildlife protective devices, and upgrading a 69 kV circuit switcher to a new 69 kV breaker.

Circuit 1050

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received overhead and underground patrol inspections in 2020 and an intrusive inspection in 2022. This circuit will receive underground and overhead detail and patrol inspections in 2025.

This circuit experienced two circuit-wide outages in 2024. The first circuit-wide outage occurred due to wildlife. The second circuit-wide outage occurred due to a transmission line failure on the radial source to the #105 – Webb City – Tom Street substation.

Circuit 3982

Vegetation maintenance was last performed in 2023 and is scheduled to be performed in 2027.

This circuit received overhead and underground detail inspections in 2021. This circuit is scheduled for overhead and underground detail inspections in 2025 and an intrusive inspection in 2028.

Hot Line Tag (HLT) was introduced last year on circuit 3981 as part of a system-wide protection procedure change. Its purpose is to minimize the incident energy line personnel are exposed to during energized (“hot”) line work. HLT causes the protective device to trip with minimal delay which causes the circuit to immediately lose power when faults are detected. HLT is enabled when personnel are required to work within a specified distance of an energized conductor.

Circuit 3981 experienced two outages related to HLT as they occurred during energized work.

Liberty has reviewed and implemented new policies concerning HLTs. Liberty has updated the HLT logic to be less sensitive and allow downstream devices to operate while maintaining safety for the crews. In addition to this technical adjustment, Liberty is introducing a procedural change. The updated procedure permits HLT to be bypassed in scenarios where the work area is limited to a single-phase fault or when another line protective device (such as a fuse or recloser) is located upstream of the work area.

Circuit 6021

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received an intrusive inspection in 2019 and overhead and underground detail inspections in 2020. This circuit is scheduled for overhead and underground patrol inspections in 2025.

Circuit 6021 experienced two circuit-wide outages caused by wildlife in the #602 – Bolivar Plant substation. The first substation outage was caused by a squirrel on the circuit breaker that feeds this circuit. The second outage was caused by a squirrel on the substation's distribution bus. Liberty is planning wildlife coverup for this substation.

Liberty experienced a third and final circuit-wide outage due to an equipment failure.

Circuit 4101

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received overhead and underground detail inspections in 2022. This circuit is scheduled for overhead and underground detail inspections in 2026 and an intrusive inspection in 2027.

The first outage occurred due to protection relaying isolating the autotransformer at Liberty's #312 – Ozark Dam – Powersite substation. The incident cause was not discovered, however the transformer was thoroughly tested and is in good condition. Revisions to the relaying logic were implemented for a more robust design. The second outage occurred because of operational error.

The 39-0 line that feeds the Forsyth – North substation is currently planned to be rebuilt and upgraded to 161 kV. This upgrade is a part of a systemic transmission upgrade at the request of the Southwest Power Pool (SPP). The Forsyth – North substation is currently served radially and this line rebuild will allow the substation to be fed from two sources.

Circuit 3181

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received overhead and underground detail inspection in 2019. This circuit is scheduled for overhead and underground detail inspections in 2025 and an intrusive inspection in 2026.

Circuit 3181 experienced two circuit-wide outages in 2024. The first circuit-wide outage was caused by equipment failure. The second circuit-wide outage occurred when the circuit breaker

did not properly reclose during a fault. The circuit breaker was evaluated and testing indicated it to be in good operating condition.

Circuit 1523

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received overhead and underground detail inspections in 2020 and an intrusive inspection in 2021. This circuit is scheduled for overhead and underground patrol inspections in 2024 and an intrusive inspection in 2027.

Circuit 1523 experienced two circuit-wide outages and two other large-scale outages. The first circuit-wide outage was caused by a pole failure. The pole failure did not cause the outage, however circuit 1523 had to be de-energized to safely replace the pole. The second circuit-wide outage was caused by weather. A three-phase recloser experienced an outage on two separate occasions. Once due to weather and another due to a vehicle striking a pole.

Circuit 3311

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2026.

This circuit received an overhead detail inspection in 2020 and an underground detail inspection in 2021. This circuit is scheduled for a patrol inspection in 2025 an intrusive inspection in 2027.

Circuit 3311 experienced two circuit-wide outages. The first circuit-wide outage was caused by a malfunctioning relay. The relay was thoroughly tested and is in proper working condition. The other circuit-wide outage was caused by a vehicle striking a pole.

Multi-Year Worst Performing Circuits

Liberty has identified four multi-year worst performing circuits in accordance with Rule 20 CSR 4240-23.010(8). To improve the performance of the circuits, Liberty adopted a corrective action plan that includes the following activities:

- Liberty employees perform a “walk-through” of the worst performing circuit collecting engineering data to support the following coordination study and sectionalizing program. Visually identifiable defects are noted and corrected as part of the corrective action plan.
- Upon walk-through completion, a coordination study of the circuit occurs. The coordination study evaluates protective equipment settings and application to ensure each protective device properly operates with other upstream and downstream protective equipment. Additional sectionalizing is then added to the circuit to reduce the number of customers experiencing an outage, in the event an outage occurs, thus increasing reliability to other customers on the circuit. Faulted circuit indicators are also added to the circuit to reduce restoration time and shorten customer outage duration.
- In addition to the coordination study and sectionalizing program, any vegetation related issues identified are scheduled to be cleared for each circuit.

The multi-year worst performing circuits are indicated in the chart below and are ranked according to their 2024 SAIFI value. A more detailed list of each circuit's corrective action will follow.

2024 Multi-Year Worst Performing Circuits

Location	Circuit Number	SAIFI		
		2022	2023	2024
Reeds Spring – 161 KV	2951	3.615	0.744	6.084
Forsyth – North	4101	2.606	1.431	2.89
Monett – H.T.	1523	0.784	5.432	2.83
Buffalo – North	4092	3.144	3.032	1.178

Circuit 2951

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2027.

This circuit received an overhead and underground patrol inspection in 2022 and an intrusive inspection in 2022. This circuit is scheduled for overhead and underground patrol inspections in 2028.

Circuit 2951 was a Missouri Worst Performing Circuit (WPC) in 2022 and 2024. Liberty did not identify consistencies in outage causes from 2022 to 2024. In 2022, Circuit 2951 had wildlife issues that were addressed via an initiative to provide wildlife cover-up and alternative nesting habitats for ospreys attempting to nest on Liberty's equipment. This circuit also had several small vegetation outages which were addressed via routine vegetation inspection and maintenance.

In 2024, Circuits 2951 and 2952 both experienced four transmission related outages affecting the entire Reeds Spring – 161 kV substation. One incident occurred when Liberty crews attempted to operate a transmission switch but it was unable to perform the necessary load-breaking function. Liberty has adjusted operational procedures to prevent future similar incidents. A second transmission outage occurred due to an unidentified fault on Liberty's 161 kV line serving the #295 – Reeds Spring substation. Liberty crews patrolled the line however the root cause was not discovered. The line was successfully re-energized and has not experienced a recurrence.

Due to system configuration, Liberty's #295 – Reeds Spring substation experiences an outage when an outage or fault occurs at Associated Electric Cooperative's (AEC) #424 – Reeds Spring substation. Two faults originating in AEC's equipment resulted in two substation outages of #424 – Reeds Spring which caused a loss of supply to Liberty's #295 – Reeds Spring substation.

This circuit also experienced three large-scale outages. One incident affected the circuit breaker due to a vehicle hitting a pole. Another two incidents occurred on a three-phase recloser due to weather.

Circuit 4101

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received overhead and underground detail inspections in 2022. This circuit is scheduled for overhead and underground detail inspections in 2026 and an intrusive inspection in 2027.

Circuit 4101 was a Missouri WPC in 2022 and 2024. This circuit experienced two circuit-wide outages due to vehicles striking poles. These incidents were located near the substation and outage scope reduction via sectionalization could not occur.

The first outage occurred due to protection relaying isolating the autotransformer at Liberty's #312 - Ozark Dam - Powersite substation. The incident cause was not discovered, however the transformer was thoroughly tested and is in good condition. Revisions to the relaying logic were implemented for a more robust design. The second outage occurred because of operational error.

The 39-0 line that feeds the Forsyth - North substation is currently planned to be rebuilt and upgraded to 161 kV. This upgrade is a part of a systemic transmission upgrade at the request of SPP. The Forsyth - North substation is currently served radially and this line rebuild will allow the substation to be fed from two sources.

Circuit 1523

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received overhead and underground detail inspections in 2020 and an intrusive inspection in 2021. This circuit is scheduled for overhead and underground patrol inspections in 2024 and an intrusive inspection in 2027.

Circuit 1523 received five circuit-wide outages in 2023. Two of the circuit-wide outages were caused by wildlife, two of the circuit-wide outages were caused by weather, and the final circuit-wide outage was caused by a vehicle hitting a pole.

In 2024, circuit 1523 experienced two circuit-wide outages and two other large-scale outages. The first circuit-wide outage was caused by a pole failure. The pole failure did not cause the outage, however circuit 1523 had to be de-energized to safely replace the pole. The second circuit-wide outage was caused by weather. A three-phase recloser experienced an outage on two separate occasions. Once due to weather and another due to a vehicle striking a pole.

This circuit is being analyzed for potential sectionalization and other reliability enhancements.

Circuit 4092

Vegetation maintenance was performed in 2024 and is scheduled to be performed in 2025.

This circuit received both overhead and underground detail inspections in 2020. This circuit is scheduled for both overhead and underground detail inspections in 2026 and an intrusive inspection in 2029.

This circuit was impacted by defective automatic transmission switching equipment in 2022. The transmission system did not properly isolate two faults causing two substation-wide outages. Liberty contacted the manufacturer about a defective control panel which controls the automatic transmission switching. The defective equipment has been replaced and the issue is now resolved. There were no transmission outages in 2023 as a result of this remediation.

This circuit experienced three circuit-wide outages due to varying issues in 2023. Liberty is currently monitoring this circuit for its reliability performance.

Monthly Indices Reports

Liberty appends monthly indices reports every year to the end of the MPSC Annual Reliability Report. The Indices reports detail the monthly Indices values for every circuit and the totals for the state of Missouri for each month. These Indices reports include customer interrupted (CI), customer minutes interrupted (CMI), outage hours experienced, customer counts, SAIFI, SAIDI, CAIDI, CAIFI, and ASAI calculations. In mid-April of 2024, Liberty implemented a new Outage Management Systems (OMS). For this reason, Liberty will present two indices reports for the month of April, one for the beginning of April before this OMS transition occurred and the other for after the new OMS implementation.

The total number of customers displayed is reduced beginning April 22nd due to a change in the method used to count customers. This revision has occurred as a part of Liberty's implementation of the new OMS. Liberty's legacy OMS contained all service points, including service points that may be in a transition tenancy, which resulted in temporary meter vacancy. Liberty's reliability calculations for number of customers by circuit may have included service points that did not have an active meter assignment. Liberty's new outage system reports a count of only active meters by circuit. Liberty believes this revision provides greater accuracy, while having no impact on the reliability calculations, but does result in a lower customer count.
