| 6 | | CASE NO. EO-2023-0448 |
| 7 | Q. | Please state your name and business address. |
| 8 | A. | My name is Randall Jennings and my business address is P.O. Box 360, |
| 9 | Jefferson C | ity, Missouri 65102. |
| 10 | Q. | Who is your employer and what is your present position? |
| 11 | A. | I am employed by the Missouri Public Service Commission ("Commission") as |
| 12 | a member o | f the Commission Staff ("Staff"). My current title is Research and Data Analyst for |
| 13 | the Tariff a | nd Rate Design Department of the Industry Analysis Division. I was formerly a |
| 14 | Senior Utili | ty Regulatory Auditor for the Financial Analysis Department, in the Financial and |
| 15 | Business A | nalysis Division. |
| 16 | Q. | Are you the same Randall T. Jennings who submitted a Memorandum in support |
| 17 | of Staff's R | ecommendation filed on June 3, 2024 in this proceeding? |
| 18 | A. | Yes, I am |
| 19 | Q. | What is the purpose of your rebuttal testimony? |
| 20 | A. | The purpose of my rebuttal testimony is to respond to the direct testimony of |
| 21 | Mr. Daniel | E. Deschler. Mr. Deschler sponsored direct testimony on behalf of Union Electric |
| 22 | Company, | d/b/a Ameren Missouri ("Ameren Missouri" or "Company") regarding the |
| 23 | Company's | request involving the 2024 triennial filing of cost estimates for the Callaway Energy |
| | | |

Center ("Callaway") decommissioning and approval of the funding level of the Nuclear 1 2 Decommissioning Trust Fund ("NDF").

Within this testimony, Staff will address issues related to the determination of Ameren Missouri's amount of annual contribution to the NDF as determined in this proceeding.

The purpose of my rebuttal testimony is to present a brief history of previous decommission filings from Ameren Missouri regarding Callaway and Staff's interpretation of the results provided by Ameren Missouri in the current proceeding.

I. **Executive Summary**

Q. What is the overview of your response to the testimony of Mr. Deschler?

Staff's rebuttal will focus on the direct testimony of Mr. Deschler regarding the A. Company's request to maintain the current annual contribution level of \$6,758,605 to the NDF.¹ Mr. Deschler proposed that a funding adequacy model from Willis Towers Watson ("WTW"), using 5,000 stochastic modeling scenarios and utilizing varying amounts for multiple variables, supports Ameren Missouri recommending the continuation of the current annual contribution amount of \$6,758,605 to its NDF.²

Mr. Deschler proposed that the WTW model results indicated that the continuation of the current annual contribution amount would result in a 67% probability of having sufficient funds available to decommission Callaway.³

During the review process, Staff did not perform an analysis of the cost to decommission Callaway. Staff does not have the data necessary to either support or challenge the cost estimate

Page 2, Lines 7-10, Deschler Direct Testimony.
 Page 12, Lines 9-15, Deschler Direct Testimony.

³ Page 12, Lines 11-12, Deschler Direct Testimony.

to decommission Callaway, but Staff did not find any evidence that the Commission should reject the estimated decommission cost from TLG Services, Inc. ("TLG") and presented by Ameren Missouri.

Staff did not perform an analysis of the current annual contribution cost estimate to determine its validity. Staff was unable to obtain a copy of the WTW model to replicate or verify the results as presented by Ameren Missouri. Due to the model, and the information used therein, being proprietary property of WTW, Ameren Missouri claims that it lacks the authority to share the model with Staff.⁴ As a result, Staff cannot verify whether, as per § 393.292, RSMo, "the amounts collected from ratepayers and paid into such trust funds will be neither greater nor lesser than the amounts necessary to carry out the purposes of the trusts."

Staff has submitted a request to the Company to have a representative from WTW meet with Staff at the Company's Jefferson City office so that Staff can access the stochastic model. Discussions for such a meeting are ongoing.

- Q. What are the specific areas in which Staff disagrees with Mr. Deschler's analysis and conclusions?
- A. Staff disagrees with Mr. Deschler's claims that (1) the current annual funding level is reasonable and consistent with the mandate that the trust should only collect funds necessary and adequate to decommission Callaway, and (2) that the stochastic model demonstrates that the current annual funding level will result in the Nuclear Decommissioning Trust Fund having a balance neither greater nor lesser than the amount necessary to carry out the purposes of the fund.⁵

⁴ Staff Data Requests No. 0001, 0013, 0013.1, 0013.2, 0021, 0021.1, and 0023.2.

II. Nuclear Decommissioning Trust Fund and Decommission Cost

- Q. What is a Nuclear Decommissioning Trust Fund ("NDF")?
- A. Under federal law, the U.S. Nuclear Regulatory Commission ("NRC") establishes minimum amounts necessary for licensees to provide reasonable assurance that funds will be available for the decommissioning process.⁶ However, federal regulations also provide that "Funding for the decommissioning of power reactors may also be subject to the regulation of Federal or State Government agencies (e.g., the Federal Energy Regulatory Commission ("FERC") and State Public Utility Commissions) that have jurisdiction over rate regulations."⁷ The NRC's federal regulations are in addition to, and not a substitution for, other requirements, and are not intended to be used by themselves or by other agencies to establish rates.⁸
 - Q. How does the NRC define the term "decommission"?
- A. The NRC defines the term "decommission" as follows in 10 C.F.R. §50.2 and limits decommissioning to the radiological part of the facility:

Decommission means to remove (as a facility) safely from service and reduce residual radioactivity to a level that permits release of the property for unstructured use and termination of license.

- Q. How does the Commission define the term "decommission"?
- A. This Commission defines "decommissioning" and "decommissioning costs" as follows under Commission Rule 20 CSR 4240-20.070:
 - (1) As used in this rule, decommissioning means those activities undertaken in connection with a nuclear generating unit's retirement from service to ensure that the final removal, disposal, entombment or other disposition of the unit and of any radioactive components and

_

⁶ 10 CFR 50.75(a) (2022); § 50.75 Reporting And Recordkeeping For Decommissioning Planning. | NRC.gov.

⁷ Ibid

⁸ Ibid.

materials associated with the unit, are accomplished in compliance with all applicable laws, and to ensure that the final disposition does not pose any undue threat to the public health and safety.

Decommissioning includes the removal and disposal of the structures, systems and components of a nuclear generating unit at the time of decommissioning.

(2) As used in this rule, decommissioning costs means all reasonable costs and expenses incurred in connection with decommissioning, including all expenses to be incurred in connection with the preparation for decommissioning, including, but not limited to, engineering and other planning expenses; and to be incurred after the actual decommissioning occurs, including, but not limited to, physical security and radiation monitoring expenses, less proceeds of insurance, salvage or resale of machinery, construction equipment or apparatus the cost of which was charged as a decommissioning expense.

In addition, 20 CSR 4240-20.070(4) establishes the frequency of filings with the Commission of information regarding the decommissioning trust fund, stating in pertinent part:

Every three (3) years, utilities with decommissioning trust funds shall perform and file with the commission cost studies detailing the utilities' latest cost estimates for decommissioning their nuclear generating unit(s) along with the funding levels necessary to defray these decommissioning costs. These studies shall be filed along with appropriate tariff(s) effectuating the change in rates necessary to accomplish the funding required. In addition, the commission, at any time for just cause, may require a utility to file an updated decommissioning cost study, funding requirement, and associated tariff(s).

- Q. How was the estimated cost to decommission Callaway determined?
- A. Ameren Missouri contracted with TLG to perform the site-specific cost study to determine the estimated cost for decommissioning Callaway. TLG prepared a *Decommissioning Cost Analysis for the Callaway Energy Center* ("2023 Study") included as Attachment 3 to Ameren Missouri's Amended Application in this proceeding. TLG's current analysis of the cost to decommission Callaway is an update of the study that TLG initially performed for Ameren Missouri in 1993 and has also completed for subsequent triennial filings.

22

23

24

25

26

Ameren Missouri further states in its Amended Application, "TLG is an industry leader in nuclear power plant decontamination and decommissioning planning, cost estimating, and project field supervision and has prepared and updated decommissioning cost estimates for the vast majority of nuclear generation units in the country. TLG also is the company that prepared the decommissioning cost estimates that were filed with and approved by the Commission in 1993, 1999, 2002, 2005, 2008, 2011, 2015, 2018, and 2020 as well as the Independent Spent Fuel Storage Installation ("ISFSI") decommissioning cost estimate in 2015 and 2018."

- Q. Has TLG's cost estimates been submitted in other jurisdictions, including the NRC?
- A. TLG cost estimates have been presented many times (>100) to various state and federal agencies, including the NRC.¹⁰
 - Q. Does Staff have any major concerns with the 2023 cost study prepared by TLG?
- A. Staff does not find any major concerns with the 2023 cost study prepared by TLG. Staff has not conducted research or attempted to obtain information from other sources regarding the cost estimates provided by TLG.
 - Q. How is the cost of decommission paid?
 - A. Section 393.292, RSMo, states that:

Notwithstanding any other provision of law to the contrary, the public service commission shall have the power, pursuant to regulations, to review and authorize changes to the rates and charges contained in the schedules of an electric corporation as a result of a change in the level of annual accrual of funding necessary for its nuclear power plant decommissioning trust fund only after a full hearing and after considering all facts relevant to such funding level or accrual rate. The commission shall also have the authority to adopt regulations to govern the procedure for submission, examination, hearing, and approval of

⁹ Page 5, Ameren Missouri Amended Application.

¹⁰ Company response to Staff Data Request 0010.

such tariff changes and to ensure that the amounts collected from ratepayers and paid into such trust funds will be neither greater nor lesser than the amounts necessary to carry out the purposes of the trusts. (emphasis added)

In other words, an annual contribution amount is determined and included in the Company's base rates. This annual contribution is intended to be an amount deposited into an NDF that, upon the expiration of Callaway's operating license, will have a balance that is neither greater nor lesser than the amount necessary to perform Callaway's decommissioning.

- Q. Why is the determination of the annual contribution amount important?
- A. Determining a correct amount of annual contribution ensures that rate payers over multiple decades are equally burdened with the cost of decommissioning. Setting a current annual contribution amount that is excessive burdens today's rate payers with an uneven percentage of the total decommissioning cost for benefits future rate payers will receive. Setting a current annual contribution amount that is insufficient will burden future rate payers for benefits provided to current rate payers.
- Q. Prior to this proceeding, has Ameren Missouri filed triennial filings stating Callaway's estimated decommission cost and the decommission fund balance at that time?
- A. Yes. Below is a list of recent Ameren Missouri triennial filings with data from each filing's respective application:

| Case No. | License Expires | Total Estimated Decommission Cost | Decommission Fund Balance | Annual Contribution |
|--------------|--------------------|---|------------------------------|------------------------|
| EO-2006-0098 | 2024 | \$ 586,515,200 | \$ 220,451,094 | \$ 6,486,378 |
| EO-2009-0081 | 2024 | \$ 693,907,000 | \$ 264,089,093 | \$ 6,486,378 |
| EO-2012-0070 | 2024 | \$ 754,500,000 | \$ 335,197,431 | \$ 6,758,605 |
| EO-2015-0253 | 2044 | \$ 864,734,000 | \$ 502,192,646 | \$ 6,758,605 |
| EO-2018-0051 | 2044 | \$ 943,465,000 | \$ 595,480,833 | \$ 6,758,605 |

7

8

Q. From 2005 to 2024, what has happened to the estimated decommission cost and to the decommissioning trust fund balance?

A. The estimated decommission cost and the NDF balance have increased 87% and 342%, respectively, between 2005 and 2024. These increases have translated to the NDF balance having a shortage, or insufficient balance, that has decreased from \$366,064,106 (62.41%) in 2005 dollars to \$123,803,000 (11.28%) in 2023 dollars.

III. Funding Adequacy Analysis

- Q. In the current proceeding, how did Ameren Missouri evaluate whether the current annual contribution amount will provide the NDF sufficient funding?
- A. Ameren Missouri depended upon a study from WTW that used a proprietary model of 5,000 stochastic scenarios which was included as Attachment 4 to Ameren Missouri's Amended Application in this proceeding.
 - Q. What variable did WTW's stochastic model calculate?
- A. WTW's proprietary model used various market and economic assumptions simulating 5,000 different scenarios as outlined in Attachment 4 of the amended application to calculate the future balance of the NDT.¹²
- Q. Has WTW's stochastic model using 5,000 scenarios been filed with this Commission or any other regulatory body before this proceeding?
- A. No. The model used to support Ameren Missouri's filing has not been filed with any other state commissions concerning nuclear fund adequacy analysis or in support of a rate hearing. ¹³ WTW has used its stochastic model to support thirty-one (31) other nuclear generating units and to assist only their owners in evaluating the probability whether there will be sufficient funding available at the time of decommissioning. ¹⁴
 - Q. What did Ameren Missouri conclude from the stochastic model?
- A. WTW's analyses considered the current amount of annual funding and determined the probability there would be sufficient funds available for the decommissioning

¹² Page 6, Paragraph 14, Ameren Missouri's Amended Application.

- of Callaway and through decommissioning under various market and economic assumptions. 15
- 2 The Company concluded the annual contribution amount should remain unchanged based on
- 3 WTW's analyses that in nearly 67% of the 5,000 modeling scenarios there will be sufficient
- 4 funds available for decommissioning Callaway under the DECON method starting in 2044. ¹⁶
 - Q. How does Callaway's NDF balance and 67% of the modeling scenarios having sufficient funds available for decommissioning compare to the other thirty-one (31) nuclear units analyzed by WTW?
 - A. In its Application, Ameren Missouri stated "This compares favorably with the peer universe of 31 other nuclear units analyzed by Willis Towers who has a median probability of successfully funding their decommissioning costs of 73%." The Company further stated "The probability of having enough funds is not a precise forecast but represents a reasonable expectation of a likely outcome. The 67% vs 73% difference is not a material difference when looking at the range of the 31 other utilities." ¹⁸
 - Q. Does Ameren Missouri monitor the funding status of other NDFs held by other utilities?
 - A. Ameren Missouri does not monitor the funding status of other NDFs. The Company stated "However, Ameren's consultant, Willis Towers Watson, does provide consulting services to other nuclear units and therefore does monitor and assess the funding of various NDT trusts for these nuclear units. Ameren's conclusion in its application that the

¹⁵ Page 6, Paragraph 14, Ameren Missouri's Amended Application.

¹⁶ DECON refers to a decontamination process used during the decommissioning of nuclear facilities, which is the process of safely shutting down and dismantling a nuclear facility at the end of its operational life. For the definition of DECON, please see Page viii of xxi in Attachment 3 of the Amended Application.

21

- current funding level is adequate is based on the conclusion from Willis Towers Watson when
 compared to other comparable nuclear units analyzed by Willis Towers Watson."

 1
 - Q. Did Ameren Missouri indicate how it could increase the probability of its NDF being sufficiently funded from 67% to 73% to match the median probability of the other thirty-one (31) nuclear units analyzed by WTW?
 - A. Yes. Ameren Missouri indicated that by raising the current annual contribution amount from its current \$6.8 million to \$14 million, the probability of having sufficient funds would increase from 67% to 73%. ²⁰
 - Q. Although Ameren Missouri did not provide an electronic copy of the stochastic model created by WTW, were the results provided?
 - A. Yes, Ameren Missouri provided a list of the simulations and the result of each simulation listing the "PV Surplus End of Decommissioning," the "PV of Remaining Costs When Assets Deplete," and the sum of the two amounts for each simulation.²¹
 - Q. What was Staff's analysis of the results from the simulations?
 - A. The WTW model presented by Ameren Missouri produced scenarios with NDF ending balances ranging from a deficit of \$1.2 Billion (116% of the total decommission cost) to a surplus of \$3.8 Billion (346% of the total decommission cost).²² Table 1 displays how scenarios fell within a given percentage of the total decommission cost.

As an example, highlighted below, of the 5,000 scenario results, 453 (or 9.06% of all scenario results) had ending balances within -16% to -20% and 16 to 20% of the total decommission cost. These scenario results had **either** a deficit between -\$175.7 and -\$219.6

¹⁹ Company response to Staff Data Request 0009.

²¹ Company Supplemental Response to Staff Data Request 0024.1.

²² Ibid.

million **or** a surplus between \$175.7 and \$219.6 million. The average amount of surplus for these 453 scenario results was \$43.09 million. Cumulatively, 2,432 (or 48.64%) of the 5,000 scenario results had ending balances between -20% to 20% of the total decommission cost. In other words, 48.64% of the scenario results are within \$219.6 million of the total decommission cost in 2023 dollars.

see the attached Schedule RTJ-r1.

10

11

12

Q. What was Staff's conclusion regarding the NDF ending balances?

A. After sorting the 5,000 scenario results in order from largest deficit to largest surplus, Staff found the mean (average) result was a surplus amount of \$227.0 million

For additional information regarding the calculations contained in Table 1 above, please

4

5

6

7

8

9

10

11

12

13

14

1 (or 20.68% of the total decommission cost) while the median, or middle result, was a surplus
2 amount of \$141.2 million or 12.86% of the total decommission cost in 2023 dollars.²³

For scenarios resulting in an insufficient balance (33% or 1,669 scenarios), the average deficiency is \$174.3 million dollars or 15.88% of the total decommission cost in 2023 dollars.²⁴

For the 67% of the scenarios resulting in a balance sufficient to carry out the purpose of the trust, the average surplus amount was \$428 million or 38.99% of the total decommission cost in 2023 dollars.²⁵

Q. Did Staff also examine the scenarios while attempting to remove extreme results?

A. Yes. Staff examined the middle 66% (3,300) of the scenarios, excluding 17% (850) at each end of the scenario results in order to remove the extremes. By removing equal amounts of results from each end of the spectrum, Staff hoped to remove extremities equally that could skew the overall picture of the model. Table 2 below represents how the scenarios fell within a given percentage of the total decommission cost:

| 36% to 40% | \$ 395.3 to \$ 439.2 mil | 191 | 5.79% | \$ 417.84 mil | 2,965 | 89.85% |
| 41% to 45% | \$ 450.2 to \$ 494.1 mil | 145 | 4.39% | \$ 471.31 mil | 3,110 | 94.24% |
| 46% to 50% | \$ 505.1 to \$ 549.0 mil | 133 | 4.03% | \$ 526.14 mil | 3,243 | 98.27% |
| 51% to 55% | \$ 560.0 to \$ 603.9 mil | 57 | 1.73% | \$ 564.87 mil | 3,300 | 100.00% |

As an example, highlighted above, of the 3,300 scenario results, 275 (or 8.33% of all

scenario results) had ending balances within -16% to -20% and 16 to 20% of the total

decommission cost. These scenario results had either a deficit between -\$175.7 and -\$219.6

million or a surplus between \$175.7 and \$219.6 million. The average amount of surplus for

these 275 scenario results was \$198.04 million. Cumulatively, 2,083 (or 63.12%) of the 3,300

scenario results had ending balances between -20% to 20% of the total decommission cost.

In other words, 63.12% of the scenario results are within \$219.6 million of the total

Schedule RTJ-r2.

Q. What was Staff's conclusion?

decommission cost in 2023 dollars.

1415

A. The 3,300 scenarios examined had an average surplus of \$167.3 million (or 15.23% of the total decommission cost in 2023 dollars) and a median amount of \$141.1

5

6

7

17

million (or 12.86% of the total decommission cost in 2023 dollars). The 3,300 scenario results ranged from a deficit of \$129.4 million (or 11.79% of the total decommission cost) to a surplus of \$576.3 million (or 52.49% of the total decommission cost). The surplus of \$576.3 million (or 52.49% of the total decommission cost).

For scenarios resulting in an insufficient balance (24.82% or 819 scenarios), the average deficiency is \$57.3 million dollars or 5.21% of the total decommission cost in 2023 dollars.²⁸

For the remaining 75.18% of the scenarios resulting in a balance sufficient to carry out the purpose of the trust, the average surplus amount was \$241.4 million or 21.98% of the total decommission cost in 2023 dollars.²⁹

IV. Stochastic vs. Deterministic Model

- Q. Is Ameren Missouri's funding adequacy analysis in this proceeding the same method the Company has used in previous proceedings?
- A. No, it is not. While the method used in this proceeding utilized a stochastic model of 5,000 scenarios, the Company previously used a deterministic model that included fixed inputs of economic and market assumptions provided by WTW as agreed to in prior filings with the Commission.³⁰
- Q. What is the difference between a "stochastic" model and a "deterministic" model?

²⁷ Ibid.

A. A stochastic model contains an element(s) of uncertainty, which is built into the model through the inputs. Due to the uncertainty present in a stochastic model, the results provide an estimate of the probability of various outcomes.³¹

A deterministic model is the exact opposite and does not involve any uncertainty or randomness. The defining characteristic of a deterministic model is that regardless of how many times the model is run, the results will always be the same.³²

- Q. How does the previously used deterministic model differ from the stochastic model used in this proceeding?
- A. The deterministic model solved for one variable. "The Excel model [previously used] would solve for an overall rate of inflation for the cost of decommissioning that would result in 'zero dollars' at the end of decommissioning Callaway." "The static model reflects one market scenario only and solves for a rate of inflation for the cost of decommissioning." 34

The stochastic model submitted in this proceeding used ranges of multiple economic and market inputs to solve for the ending balance of the NDF.

Listed below are the inputs (or the ranges thereof) used in the stochastic model, the deterministic model, and the actual historical average for each of the economic and market inputs since the inception of the Callaway NDF:

³¹ Stochastic Modeling - Definition, How It Works (corporatefinanceinstitute.com); https://corporatefinanceinstitute.com/resources/data-science/stochastic-modeling/

³³ Company response to Staff Data Request 0025.

³⁴ Company response to Staff Data Request 0013.3.

| | 2020 Deterministic | 2023 Deterministic | 2023 Stochastic | |
|--------------------------------|------------------------|------------------------|---------------------|---------------------|
| | Model | Model | Model | Historical |
| Economic / Market Input | Variables ¹ | Variables ¹ | Ranges ¹ | Average |
| Inflation Rate (CPI) | 2.15% | 3.00% | 0.5% to 4.5% | $2.80\%^{1}$ |
| Nominal Return on Bonds | 3.20% | 3.91% | 2.7% to 5.9% | 5.40% ³⁷ |
| Nominal Return on Equities | 8.50% | 5.56% | 0.4% to 12.9% | 10.22%1 |
| Weighted-Average Return | 6.65% | 4.98% | 2.1% to 9.9% | $8.59\%^{37}$ |
| Decommissioning Cost Inflation | 4.19%1 | 3.84% ³⁸ | 2.2% to 6.2% | $3.83\%^{37}$ |

Q. Are the economic and market inputs used by the Company in the stochastic model based on historical data and if so, what are the sources for that information?

A. The Company stated:

All of Willis Towers Watson's projections are based on their firm view on capital markets. Willis Towers Watson takes the current economic conditions and forecasts how they are expected to revert to long term normative levels. While Willis Towers Watson uses historical data to shape their views on normative levels, the projections are their independent proprietary views.³⁵

Q. Are the economic and market inputs used by the Company in the deterministic model based on historical data and if so, what are the sources for that information?

A. The Company stated:

The basis for these inputs came from the output of the "breakeven scenario" in the stochastic modeling. The reasonableness for the assumptions that were varied is the parameters fall within the market ranges that were established when setting up the stochastic modeling and identified in the Amended Filing in Attachment 4. The parameters that were varied included CPI Inflation, Nominal Pre-tax and Expense Returns for Bonds and Equities. These factors and the ranges within which they were varied came from Willis Towers Watson as of July 1, 2023, market assessment. ³⁶

35 Company response to Staff Data Request 0023.2.
 36 Company response to Staff Data Request 0013.3.

Q. What is the benefit of using a stochastic model rather than a deterministic model to determine the adequate annual contribution to the NDF in order to ensure the amounts collected from ratepayers and paid into such trust funds will be neither greater nor lesser than the amounts necessary to carry out the purposes of the trust?

A. The Company stated:

The benefit of using the stochastic modeling is it properly reflects what could happen going forward recognizing many factors and market assumptions will vary into the future. Ameren Missouri believes the "probability of having enough funds available" reflects more the reality of future outcomes since many variables will change over time and affect the funding level at time of decommissioning. Employing this probability of outcomes is reasonable and comparing it to other nuclear generating units provides a better snapshot of how well funded Callaway's NDT fund is in relation to the industry in general. Ameren Missouri recognizes this outcome is less "deterministic" than the prior approach, however, the stochastic model reflects better the range of potential outcomes as it relates to funding for decommissioning.³⁷

- Q. Did Ameren Missouri submit a stochastic model using scenarios, applying the same ranges of variable inputs, to solve for the level of annual contribution collected from ratepayers necessary so the NDF will have an ending balance neither greater nor lesser than the amount needed to carry out the purposes of the NDF?
- A. No. Ameren Missouri discussed the possibility of "tweaking" the stochastic model with WTW trying to forecast a zero ("breakeven") balance through all the 5,000 simulations at the end of decommissioning by varying the contribution amount, but the Company said this is not possible or meaningful given the contribution amount would be negative under certain simulations.³⁸ Neither the "tweaked" stochastic model nor its results

³⁷ Company response to Staff Data Request No. 0025.

³⁸ Company response to Staff Data Request No. 0026.

could be manually changed to remove negative contributions and determine an annual contribution resulting in a breakeven balance.³⁹

Q Does Staff agree with Ameren Missouri's interpretation of WTW's analyses using the stochastic model presented in the Company's amended application?

A. Ameren Missouri has repeatedly stated WTW's model and data are proprietary and cannot be provided to Staff.⁴⁰ Staff has been unable to obtain a copy of the WTW model or selected WTW data, has been unable to replicate or independently verify the results presented by Ameren Missouri, or determine an annual contribution amount that will result in an ending balance neither greater nor lesser than the amount necessary to carry out the purpose of the NDF. However, as noted earlier in this testimony, Staff is discussing alternative ways for the Company to provide Staff access to the WTW model.

Staff does not have concerns at this time with the credibility of WTW or its use of a stochastic model. In addition, Staff agrees with Ameren Missouri that the current funding amount of \$6,758,605 would indeed provide sufficient funds for the decommissioning of Callaway. However, the stochastic model produced a median result of an ending balance having a surplus of \$141 million, or 13% of the current liability in 2023 dollars.⁴¹

In § 393.292, RSMo it states that "the amounts collected from ratepayers and paid into such trust funds will be neither greater nor lesser than the amounts necessary to carry out the purposes of the trusts." Therefore, Staff has not found any evidence that the current decommissioning trust fund level is appropriate to utilize for the ratemaking purposes of Ameren Missouri.

³⁹ Company response to Staff Data Request No. 0026.1.

⁴⁰ Staff Data Requests No. 0001, 0013, 0013.1, 0013.2, 0021, 0021.1, and 0023.2.

⁴¹ Company response to Staff Data Request No. 0024.1s1.

V. <u>Summary and Conclusions</u>

Q. Please summarize the conclusions of your rebuttal testimony.

A. Staff does not find any issue with the cost study presented by TLG. Likewise, Staff does not presently find any issue with the stochastic model presented by WTW, though the model is proprietary property and it has not been made available for Staff's review.

However, Staff questions Mr. Deschler's statement that the analysis performed by WTW demonstrates that the funding level is neither greater nor less than the amounts necessary to carry out the purposes of the trust. 42 The WTW stochastic model provides scenarios of varying economic conditions with the continued current contribution level. These scenarios provide differing results with various ending balances within a percentage of the desired decommissioning amount, as Staff has previously described and illustrated.

Mr. Deschler stated "the outcome of the 5,000 scenarios showed that in 67% of the cases the ending value was sufficient to fund the anticipated costs of decommissioning Callaway."⁴³ Mr. Deschler did not provide context for this statement including that the average NDF balance, for scenarios ending with sufficient funds, was \$428.1 million in excess of the amount necessary, or 39%, of the estimated decommission cost in 2023 dollars.

Based on the stochastic model scenario results that are using the annual contribution amount requested by the Company, Staff cannot conclude that the annual contribution amount is appropriate and will result in the NDF having an ending balance to carry out the purpose of the trust while ensuring the NDF is neither over nor underfunded.

⁴² Page 16, Lines 8-10, Daniel Deschler Direct Testimony.

⁴³ Page 7, Lines 4-5, Daniel Deschler Direct Testimony.

Staff requests in this filing and all future filings, involving models used in support of the Company's position, that the Company be required to provide Staff access to a working copy of said models so that Staff has an opportunity to perform an analysis of the model and its results. This will ensure Staff has a chance to determine its validity and to confirm that the requested annual contribution will result in the NDF having neither a surplus nor a deficit upon decommission. Staff further requests that the Company file a proper NDF annual contribution, along with evidence and testimony in support thereof, in its next rate case for ratemaking purposes.

- Q. Does this conclude your rebuttal testimony?
- A. Yes.
