## Exhibit No. 119

Staff – Exhibit 119 Testimony of Michael L. Stahlman Direct File No. ER-2024-0261

Exhibit No.:

Issue(s): Weather Normalization
Witness: Michael L. Stahlman
wing Party: MoPSC Staff

Sponsoring Party: MoPSC Staff
Type of Exhibit: Direct Testimony
Case No.: ER-2024-0261

Date Testimony Prepared: July 2, 2025

### MISSOURI PUBLIC SERVICE COMMISSION

# INDUSTRY ANALYSIS DIVISION TARIFF/RATE DESIGN DEPARTMENT

#### **DIRECT TESTIMONY**

**OF** 

MICHAEL L. STAHLMAN

THE EMPIRE DISTRICT ELECTRIC COMPANY, d/b/a Liberty

**CASE NO. ER-2024-0261** 

Jefferson City, Missouri July 2025

1	DIRECT TESTIMONY
2	OF
3	MICHAEL L. STAHLMAN
4 5	THE EMPIRE DISTRICT ELECTRIC COMPANY, d/b/a Liberty
6	CASE NO. ER-2024-0261
7	Q. Please state your name and business address.
8	A. My name is Michael L. Stahlman, and my business address is Missouri Public
9	Service Commission, P.O. Box 360, Jefferson City, Missouri 65102.
10	Q. By whom are you employed and in what capacity?
11	A. I am employed by the Missouri Public Service Commission ("Commission") as
12	a Regulatory Economist for the Tariff/Rate Design Department, in the Industry
13	Analysis Division.
14	Q. Please describe your educational and work background.
15	A. Please see Schedule MLS-1.
16	Q. What is the purpose of your testimony?
17	A. The purpose of my testimony is to describe the weather normalization
18	adjustments, 365-day adjustments, and rate block adjustments I provided to Staff Witness
19	Kim Cox and the Load Requirement at Transmission I provided to Staff witness
20	Shawn E. Lange.
21	Q. Please summarize your testimony.
22	A. I performed regression analysis using weather information provided by the
23	Midwest Regional Climate Center and load information provided by The Empire District
24	Electric Company, d/b/a/ Liberty ("Empire") to estimate the impact of weather on the test year

1 and update period, including the changes to which rate block energy was billed.

This information was provided to Staff Witness Kim Cox.

Further, I estimated the impact of weather on Load Requirement at Transmission, which was provided to Staff Witness Shawn E. Lange.

Q. Do you have any concerns about the load data provided by Empire?

A. Yes. Some of the data points do not appear to be internally consistent with the remaining data. On January 16, 2025, I notified Empire of issues in the daily load data, provided in response to Staff Data Request 0102, which is used in the regression analysis for weather normalization. The response, attached as Schedule MLS-2 indicated that there were issues in retrieving the data on key dates. For those days, I used a function of MetrixND, which is a regression analysis software package, to essentially ignore those dates in the regression analysis.

There was also an issue with the bill cycle data provided in response to Staff Data Request 0100.

For this data, I used the total revenue month data provided by Staff Witness Kim Cox and proportioned it to the bill cycles based on the data provided. This did not impact the weather normalization percentage, but did impact the 365-day adjustment.

Another data issue was that the winter blocked usage for April of the Non-Standard General Service Rate Plan (Schedule NS-GS) was inconsistent with the blocked percentages in the other months. For my blocked-usage analysis, I excluded that month from the regression and used the estimated percentage for the weather-normalized block percentage.

- Q. What is weather normalization?
- A. Weather normalization is the process of adjusting billing determinants to account for differences in weather from year to year. Electricity consumption is highly responsive to the weather, specifically temperature for many rate classes. As the temperature reaches higher levels, the demand for cooling, air conditioning and fans increases the customers' consumption of electricity. As the weather becomes colder, the demand for additional heating, via electric space heating, also forces an increase in electricity consumption. Electric air conditioning and space heating is prevalent in Empire's service territory; therefore, it follows that Empire's electric load is linked with and responsive to temperature. Therefore, Staff uses the correlation of customer class usage with weather and other variables to estimate usage for a year as if the weather was "normal."
  - Q. What is "normal weather"?
- A. Normal weather is an estimate of what the average temperatures would be for a typical year at a given location. Staff witness Randall T. Jennings provided the normal and actual temperatures for the weather normalization process.
  - Q. What is a weather normalization adjustment factor?

- A. The weather normalization adjustment factor is a percentage value that I provide to Staff witness Kim Cox that is the end result of the weather normalization process. It is a monthly value specific to a particular class of Empire's customers that adjusts actual usage in a given revenue month to an estimate of what usage would have been under normal weather. This factor also considers the mismatch of when a customer uses the energy with when a customer was billed for that energy.
  - Q. What is the 365-day adjustment?
- A. The 365-day adjustment accounts for certain bill cycles having greater, or less than, 365 days of consumption. Empire bills its customers in a given revenue month over 21 different bill cycles. A bill cycle is period between the dates on which a customer's meter(s) is read. These cycles typically have usage in two different calendar months and, due to weekends and/or holidays, will often have more or less than 365 days of usage. Staff developed the 365-day adjustment by calculating how many days each bill cycle was over/under 365 days, then subtracting/adding an average use day for each over/under day for each cycle, and then calculating a percentage adjustment factor for each class based on the sum of the adjustments for each bill cycle. This 365-day adjustment factor was provided to Staff Witness Kim Cox.
  - Q. What are the rate block adjustments?
- A. Some of the residential and SGS rate schedules have two winter block rates; one rate for usage at or below 600 kWh for residential [700kWh for Small General Service ("SGS")] and another rate for usage above 600 kWh [700kWh]. The rate block adjustments estimate how the overall energy consumption in a given revenue month will be distributed into the different rate blocks.

- Q. Why is it important to estimate the distribution of usage in the different rate blocks?
  - A. Empire's customers do not have identical usage, so an increase of usage may be in Block 1 for one customer and Block 2 for another. Thus, applying the changes incorrectly will have an impact on the revenues.
    - Q. How did Staff estimate the rate block adjustment?
  - A. A regression analysis was performed on Residential and SGS Block 1 usage percentage as a function of the total rate schedule usage per customer. Weather-normalized usage was then substituted to have an estimated Block 1 usage percentages for each month, which was used to adjust the actual Block 1 usage percentages for each month. These results were given to Staff Witness Kim Cox.
    - Q. What is the Load Requirement at Transmission analysis?
  - A. This analysis provides an estimate of the normalized amount of electricity required to meet the energy demands of both the company's customers and its own needs at the transmission level. This analysis is used by Staff Witness Shawn E. Lange. The hourly loads used in the analysis was obtained from Empire's data provided in accordance with 20 CSR 4240-3.190(1)(C).
    - Q. How was this analysis performed?
  - A. The analysis is performed nearly identically as the rate classes with Time of Use ("TOU") rate schedules discussed above. Regression analysis with actual loads and temperatures is performed for both peak and average energy consumption, then simulated with normal weather. The difference is that the results are also scaled to equal the final total Missouri

# Direct Testimony of Michael L. Stahlman

- 1 Normalized load, calculated by Staff Witness Kim Cox, with a loss factor for transmission
- 2 losses, provided by Staff witness Alan J. Bax.
- Q. Does this conclude your testimony?
- 4 A. Yes, it does.

#### RE: ER-2024-0261, DR 102

From Charlotte Emery < Charlotte. Emery@libertyutilities.com>

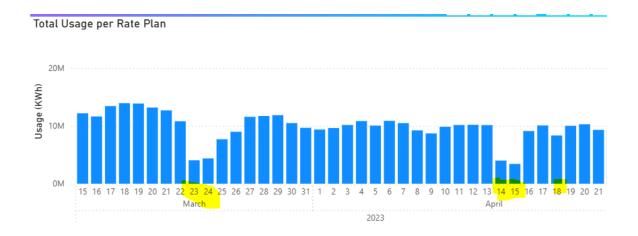

Date Tue 1/21/2025 10:52 AM

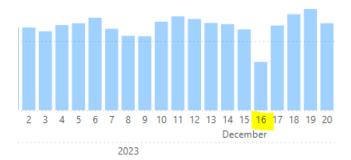

To Stahlman, Michael < Michael. Stahlman@psc.mo.gov>

Cc Luebbert, J < J.Luebbert@psc.mo.gov>; Leigha Palumbo < Leigha.Palumbo@libertyutilities.com>

#### Hi Michael-

As a follow-up to your inquiry below we wanted to provide you feedback that we received from our Load Research team member. She indicated we had several days in 2023 that Itron was unable to recover the data for us. This issue occurred during the initial set up of the data lake and we were still working through sanitizing the data and have since come up with a better process of contacting Itron when we are missing large chunks of meter data to hopefully reduce this issue from occurring in the future. Below are screenshots of the days in question and how they compare to the surrounding days. We also had an issue on 12/16/23 and we were not able to recover the data that day either. At the time of these AMI issues, the majority of LP customers would most likely still have been on the MV90 system...which we will note was manually provided to entered into the data lake, so they wouldn't have been as impacted by an AMI issue as other classes like Residential that are mostly AMI. Please let us know if you have any additional questions/comments. Thanks!

Subject: ER-2024-0261, DR 102

As part of the response to DR 102 in the rate case, we've received a file entitled "LoadData.xslx" as part of the zipped files. I can send a snapshot of the data if it would help, but the load for 3/23/2023-3/25/2023, 4/14/2023-4/15/2023, and 4/18/2023 seems to be unreasonably low. I mainly looked at residential on those dates, but the other classes except LP and Trans seem to be low as well. This data was also used in Eric Fox's workpapers which were attached to that same DR.

Can you verify if that data is correct, and if so, an explanation on why there was seemingly a general system outage or provide an update if that information is not correct? Let me know if you need more help in understanding what I'm looking at.
