1.0 Introduction

A recent study by the Midcontinent Independent System Operator (MISO) revealed the need for significant system upgrades in the region to handle an increase of approximately 1,500 megawatts of new, third-party generation. Federal regulation requires Ameren to meet these needs and provide access to our transmission system. To meet MISO needs and strengthen the safety and reliability of the region's energy grid, Ameren Missouri (Ameren) plans to construct a new double-circuit electrical transmission line between the Burns Substation in Callaway County and the Montgomery Substation in Montgomery County, Missouri.

1.1 Project Description

Ameren is working to build a more reliable and resilient energy grid for the future. Ameren's Montgomery-Callaway Connector Project ("Project") includes siting, constructing, operating, and maintaining one, approximately 30-mile, double circuit 345 kilovolt (kV) transmission line from the existing Montgomery Substation in Montgomery County to the existing Burns Substation in Callaway County, Missouri. The proposed Project also includes upgrades of both Ameren's existing substations.

The Project will utilize galvanized steel monopole structures (Figure 1-1) ranging from 110-150 feet in height based on site-specific conditions. The average span length between each transmission structure will be approximately 750-1,000 feet, averaging about 5-7 structures per mile. A 150-foot right-of-way (ROW) will be required to accommodate the Project.

1.2 Overview of Route Study Process

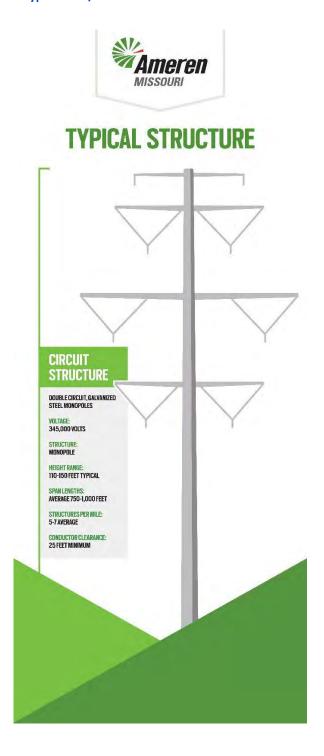

A routing study is a multi-step process designed to use various resources and inputs to narrow a broad study area containing numerous route options to a recommendation for the construction and operation of the proposed transmission line. The routing study process includes:

- Acquisition and mapping of natural, social, and environmental resource data
- Development of a study area
- Development of route network
- Field investigation of the route network
- · Refinement of the route network
- Analysis of the refined route network
- Selection of the Proposed Route

The following chapters review each of the steps in the routing study and provide context and justification for the Proposed Route.

Figure 1-1: Typical 345/345 kV Double Circuit Transmission Structure

2.0 Development of Route Alternatives

The following section includes a description of the study area and specifics regarding the resources within it. Also included in this section is information about agency coordination, a description of the route segment network, and description of the route refinement process.

2.1 Development of the Study Area

The study area was designed to provide an area within which numerous potential route options could be developed without being so large as to burden the analysis (Figure 2-1). The study area was developed both to provide direct routes between the endpoints and to provide flexibility for the development of route options. The presence and location of existing infrastructure corridors in the area that could be used were identified and considered as part of defining the study area. Major features considered in developing the boundaries of the study area for the Project are listed below:

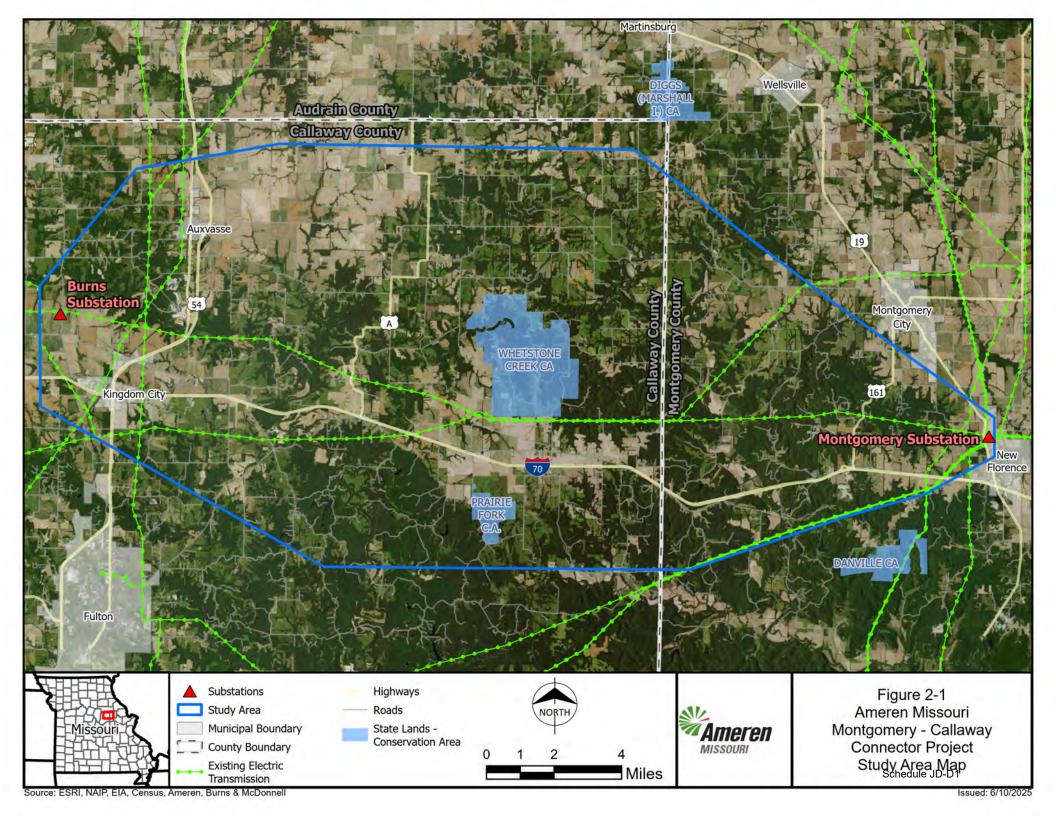

- Burns Substation
- Montgomery Substation
- US Interstate 70 (east/west)
- US Highway 54 (north/south)
- Multiple outdoor recreation areas (Whetstone Creek Conservation Area, Graham Cave State Park, Prairie Fork Conservation Area)
- The municipalities of New Florence, Kingdom City, and Montgomery City

The study area is in the east-central portion of Missouri within Callaway and Montgomery counties. The study area extends east/west approximately 29 miles from Montgomery Substation to Burns Substation. The study area extends north/south approximately 13 miles at the widest portion of the study area.

2.2 Description of the Study Area

The study area is in east-central Missouri, approximately 18 miles east of Columbia, Missouri. The study area includes portions of Montgomery and Callaway Counties. The study area includes all or portions of Kingdom City Village, New Florence City, Montgomery City, and Danville (census designated place, CDP). These communities include dense residential development, commercial and business areas, schools, religious institutions, and industrial areas. Outside of these cities and communities, the study area is predominantly undeveloped forested lands and agricultural land. Interstate 70 runs east-west throughout the southern portion of the study area. There are multiple conservation and state managed lands including Prairie Fork Conservation Area, Whetstone Creek Conservation Area, Graham Cave State Park, and Danville Conservation Area. The following sections include more detailed information regarding natural and human-made resources in the study area.

2.2.1 Natural Resources

2.2.1.1 Topography

There is a range of topography throughout the study area given how large it is. Generally, the southern and eastern portion of the study area has more valleys and shifting topography than the northern portion of the study area. When there are significant topographical variations it can create design, maintenance, and access issues for the construction and maintenance of a transmission line. The region has some cuestas (asymmetric hills where one side has a gentle slope and one side has a steep slope) and low hills. There are multiple bedrock types found in the study area; of these bedrock types there are four associated geological ages: Devonian, Mississippian, Ordovician, and Pennsylvanian (MDNR (2), 2022). A majority of the geology in this region is from the Pennsylvanian age including sandstone, shale, limestone, and coal (Griffith, 2010).

2.2.1.2 Water Resources

There are numerous water resources throughout the study area including rivers, lakes, creeks, and drains. Larger streams include Auxvasse Creek, Bachelor Creek, Whetstone Creek, Loutre River, Little Loutre Creek, and Harrison Creek. Larger lakes include Leisure Lake, Guthrie Lake, Eugene Hooks Lake, Don Woods Lake, and Pierson Lake.

There are ten Missouri Department of Conservation (MDC) managed lakes in the study area. The McCredie Farm Lake is a 12-acre lake owned and maintained by the University of Missouri and is located approximately 1.5 miles northeast of Kingdom City. Other MDC-managed lakes are found in the Whetstone Creek Conservation Area, such as Big Lake, Windy Lake, North Lake, and Horseshoe Lake. There are also several MDC-managed ponds in the study area, eight of which are in the Whetstone Creek Conservation Area, and three of which are in the south-central portion of the study area.

There is one 303d listed impaired stream that intersects the study area; South Fork Salt River (WBID 142) extends 0.13 miles into the study area in its northwest corner, near Auxvasse. The impaired portion of the stream ends approximately 2.2 miles from the nearest route segment. The stream is listed for impairment to dissolved oxygen (MDNR, 2022). No other 303d or 305b impaired rivers or lakes are located within the study area.

2.2.1.3 Vegetation

The study area lies within the Central Irregular Plains ecoregion, which encompasses parts of Missouri, Iowa, Kansas, and Oklahoma. This ecoregion is historically characterized as a "grassland/forest mosaic," with forested areas occurring along streams (Griffith, 2010). The prominent vegetation in this ecoregion includes tallgrass prairie with little bluestem, big bluestem, switchgrass, and Indiangrass, and some oak-hickory woodlands with red oak, white oak, bur oak, chinkapin oak, post oak, shagbark hickory, and bitternut hickory (Griffith, 2010).

According to the National Land Cover Dataset (NLCD), deciduous forest is the dominant land use type, comprising 67,233 acres of the study area. Pasture/hay and cultivated crops are the next most common land use type, comprising 43,416 acres and 41,564 acres respectively (MRLC, 2023). See section 2.2.2.2 Land Use for additional information.

2.2.1.4 Wildlife

The study area includes a mosaic of different land uses, vegetation communities, and habitat types that support a wide variety of wildlife species. The study area is situated between two regions: Interior River Valleys and Hills and Central Irregular Plains (Griffith, 2010). Common wildlife in these two regions includes white-tailed deer, badger, weasel, raccoon, skunk, muskrat, cottontail rabbit, mink, Canada goose, bobwhite quail, western meadowlark, Carolina chickadee, ring-neck pheasant, redback salamander, copper belly water snake, eastern box turtle, paddlefish, and various darters.

As part of the Missouri Bat Programmatic (MBP) informal consultation framework, the U.S. Army Corps of Engineers (USACE), in partnership with U.S. Fish and Wildlife Service (USFWS), has defined three bat zones to evaluate the impacts of actions taken within the state of Missouri. Zone 3 conservation measures apply to actions that occur within 0.25 miles (radius) of a known roost tree or hibernacula, Zone 2 conservation measures apply to actions within 5.0 miles (radius) of a known roost tree or hibernacula, and Zone 1 applies to areas outside of Zone 2 and Zone 3. 70.2 percent of the study area is classified as Zone 1, while 29.8 percent is classified as Zone 2—one contiguous area located exclusively in the western half of the study area, primarily falling east of Kingdom City, south of Auxvasse, west of Bachelor, and extending south of Calwood (USACE, 2019).

2.2.1.5 Threatened and Endangered Species

The Endangered Species Act of 1973 affords legal protection to those species and their habitats determined to meet the specified criteria for listing by the Federal government as either threatened or endangered. Federally listed threatened species are those species likely to become endangered within the foreseeable future throughout all or a significant portion of their range. Federally listed endangered species are those species already in danger of extinction throughout all, or a significant portion of, their range.

The study area was put into the Information for Planning and Consultation (IPaC) tool from USFWS to determine listed species that could potentially occur in the study area and any designated critical habitat. According to USFWS, three federally listed endangered species, no threatened species, and one each of proposed endangered and candidate species are known or likely to occur within the study area (Table 2-1; Appendix A).

Class **Common Name** Scientific Name Status Gray bat Myotis grisescens Endangered Indiana bat Myotis septentrionalis Endangered Mammals Northern long-eared bat Myotis septentrionalis Endangered Tricolored bat Perimyotis subflavus Proposed Endangered Monarch Butterfly Danaus plexippus **Proposed Threatened** Insects Western Regal Fritillary Argynnis idalia occidentalis **Proposed Threatened**

Table 2-1: Threatened and Endangered Animal Species

Source: USFWS, 2025. IPaC

2.2.1.6 Protected Lands

Throughout the study area, there are multiple protected lands and conservation resources – one of the most prominent being Whetstone Creek Conservation Area. Other conservation areas include the Prairie Fork

Conservation Area and the Danville Conservation Area. There are three state recreation areas - Graham Cave State Park, Loutre Lick Access, and Moore's Mill Access.

2.2.2 Social Resources

2.2.2.1 Demographics

The study area includes portions of Callaway and Montgomery Counties. Callaway County had an estimated population of 44,517 (0.7% of Missouri) and Montgomery County had an estimated population of 11,421 (0.1% of Missouri) (U.S Census Bureau [USCB], 2022).

For comparative purposes, the estimated 2022 American Community Survey (ACS) 5-year Data Profile population characteristics for counties within the study area and the State are provided below in Table 2-2.

Table 2-2: Demographics - American Community Survey 2018-2022

	Callaway	Montgomery	
Data	County	County	Missouri
2022 Population	44,517	11,421	6,154,422
White (percent)	90.3%	93.6%	79.4%
Black or African American (percent)	4.3%	1.7%	11.3%
American Indian and Alaskan Native (percent)	0.4%	0.5%	0.3%
Asian (percent)	0.1%	0.2%	2.1%
Native Hawaiian and Other Pacific Islanders	0.2%	0.0%	0.1%
Some Other Race	0.5%	0.3%	1.5%
Two or More Races	4.2%	3.7%	5.4%

Source: USCB ACS 5-Year Data Profile, 2022

Table 2-3 provides employment data for counties within the study area (USCB, 2022). Callaway County has the highest unemployment percentage at 5.2% percent. The top industries in these countries are educational services, health care, and social assistance (USCB, 2022).

Table 2-3: Employment Data: American Community Survey 2018-2022

		Montgomery	
Data	Callaway County	County	Missouri
Population 16 years and over	36,425	9,188	4,940,395
In labor force	21,750	5,286	3,107,514

Table 2-4 provides housing data for the counties within the study area. Montgomery County has the highest poverty rate when compared to all counties reviewed and the State of Missouri, and had the lowest median household income (USCB, 2022).

Table 2-4: Housing Demographics

Data	Callaway County	Montgomery County	Missouri
Owner-occupied housing unit rate 2018-2022 (percent)	77.3%	74.3%	67.6%
Median value of owner-occupied housing units (2018-2022)	\$184,300	\$162,200	\$199,400
Persons in Household	2.59	2.48	2.56
Median household income (2018-2022)	\$70,599	\$58,660	\$65,920
Persons in poverty (percent)	9.5%	14.8%	12.8%

Source: USCB 5-Year Data Profile, 2022

2.2.2.2 Land Use

The study area is approximately 254 square miles (162,601 acres) and includes portions of Callaway and Montgomery Counties. Most land use in the study area is devoted to deciduous forest (Table 2-5). Forested land (deciduous forest, evergreen forest, and mixed forest) comprises approximately 72,510 acres of the study area, while approximately 8,599 acres include developed land (developed open spaces such as roads to high-intensity development such as cities). Approximately 952 acres of grassland or herbaceous areas are found within the study area (MRLC, 2023). Other land cover includes open water, barren land, and wetlands.

Table 2-5: Land Use Type Table

Land Type	Approximate Acres in Study Area (acres)	Percentage of Study Area	
Deciduous Forest	67,233	39.70%	

Land Type	Approximate Acres in Study Area (acres)	Percentage of Study Area
Pasture/Hay	43,417	25.48%
Cultivated Crops	41,565	24.08%
Mixed Forest	4,981	3.01%
Developed, Open Space	4,325	2.50%
Developed, Low Intensity	2,789	1.53%
Woody Wetlands	1,408	0.85%
Developed, Medium Intensity	1,307	0.71%
Open Water	1,201	0.70%
Grassland/Herbaceous	952	0.56%
Barren Land (Rock/Sand/Clay)	496	0.30%
Shrub/Scrub	396	0.24%
Evergreen Forest	296	0.18%
Developed, High Intensity	178	0.10%
Emergent Herbaceous Wetlands	112	0.07%
Total	170,655	100%

Source: NLCD, (MRLC, 2023)

2.2.2.3 Agriculture

Agriculture is one of the dominant land uses throughout the study area. As shown in Table 2-6, farmland (pasture/hay and cultivated crops) comprises approximately 50% of both Project counties. According to the 2022 Census of Agriculture, Callaway County's top crops in acres include soybeans and forage (U.S. Department of Agriculture, USDA). Montgomery County's top crops in acres include soybeans and corn (USDA, 2022). The top five crops within each Project County, as well as how many acres they occupy, are shown in Table 2-7.

Table 2-6: Percentage of Farmland by County

County Name	Total County Land (square miles)	Total Farmland (square miles)	Percentage of Farmland
Callaway County	834.6	451.6	54.1%
Montgomery County	542	309.5	57.1%

Table 2-7: Top Crops by Acres for Project Counties

Crop Type	Callaway County (acres)	Montgomery County (acres)
Soybeans for beans	52,107	62,588
Forage (hay/haylage), all	34,350	14,315
Corn for grain	19,603	38,834
Wheat for grain, all	6,024	5,997
Sorghum for grain	837	836

2.2.2.4 Transportation

Major transportation networks and roadways within the study area include Interstate 70, which extends east to west across the southern portion of the study area (Figure 2-1). U.S. Highway 54 runs north to south, bisecting Kingdom City in the western portion of the study area. A small portion of State Highway 19 extends north to south through the eastern portion of the study area adjacent to the Montgomery Substation.

Two railroads intersect the study area. The Illinois Central Gulf Railroad runs north-south in the western corner of the study area, travelling through Auxvasse and Kingdom City; this railroad is crossed by all potential routes. The Norfolk and Western Railroad crosses the easternmost corner of the study area, running northwest-southeast through Montgomery and New Florence, just past the eastern border of the Montgomery Substation; none of the route segments cross this railroad.

According to the Federal Aviation Administration (FAA), there are four registered airports in the study area, Table 2-8 lists all airports in the study area. No airports are public airports.

Airport NameAirport IDAirport TypeFlying Shamrock6MU4PrivateSKY-VUMO45PrivateRedgate Ranch11MOPrivateFlying V Ranch10MOPrivate

Table 2-8: Airport in the Study Area

2.2.2.5 Existing Utilities

There are numerous existing utilities throughout the study area. One Ameren-owned transmission line, McCreadie to Montgomery (345 kV), travels east to west—bisecting the study area. Table 2-2 below provides a list of known existing transmission lines within the study area. According to publicly available data, there are no pipelines in service within the study area.

Transmission Line Name	Voltage	Line Direction
McCreadie to Montgomery	345 kV	East/West
Kingdom City to Williamsburg	161 kV	East/West
Williamsburg to Montgomery City	161 kV	East/West
Montgomery City to Chamois	69 kV	North/South
Montgomery to Big Springs Secondary	69 kV	North/South
Guthrie to Montgomery	161 kV	North/South
Montgomery to Unknown	115 kV	North/South
Callaway (MO) to Montgomery	345 kV	North/South
Montgomery to Big Springs Primary	161 kV	North/South
Spencer Creek to Montgomery	345 kV	North/South
Callaway (MO) to Auxvasse	69 kV	North/South
Guthrie to Unknown	138 kV	North/South

Table 2-9: Existing Transmission Lines

Transmission Line Name	Voltage	Line Direction
McCredie to Kingdom City	354 kV	North South

2.2.2.6 Commercial and Residential Development

Commercial and residential development is concentrated in the larger municipalities located in the study area, such as Auxvasse and Kingdom City. The City of Auxvasse, located west of the intersection of US Highway 54 and State Road B, has the highest concentration of residential buildings in the study area and a 2022 population of 1,286. The Village of Kingdom City is located at the intersection of I-70 and Highway 54 and had a 2022 population of 126 (USCB, 2022). As a result of its location, much of the development in the area supports the service industry—including gas stations and convenience stores, restaurants, and lodging accommodations. Other residential development is dispersed sporadically throughout the study area, with smaller concentrations surrounding towns like Calwood, Williamsburg, and Danville. Outside of Kingdom City, commercial development is sparse in the study area, with Auxvasse, Danville, and Williamsburg serving as other commercial hubs.

2.2.2.7 Cultural Resources

There are two National Register of Historic Places (NRHP) sites listed in the study area. Graham Cave (National Register Information System (NRIS) Reference Number 66000420) is located within Graham Cave State Park 0.5 miles north of Mineola. Archaeological excavations beginning in 1949 revealed evidence of human habitation dating back as far as 10,000 years ago, providing insight into the lifestyles of Archaic period Native Americans and their adaptation to post-ice age environments. The Baker, Sylvester Marion, and Frances Anne Stephens House (NRIS Reference Number 99001018) is located at 60 Boonslick Rd. in Montgomery City. Both NRHP-listed locations in the study area occur along I-70 and are approximately 1.5 miles from the nearest route segment (NPS, 2024). Additionally, a review of the State Historic Preservation Office (SHPO) archeological and Historical Geographic Information System (GIS) data was performed. This data was used for the Archeological sites within the ROW analysis factor discussed further in section 3.2.3.

2.3 Route Segment Network

After the data-gathering process and identification of the study area, the routing team identified potential route segments throughout the study area, totaling 85 segments that combine to create 721 unique routes (Figure 2-2). Following the identification of potential alternative routes, a field investigation was conducted to confirm the data gathered in the initial steps of the routing study. From here, a set of key criteria were quantified to reduce and refine the route network. The criteria utilized were the total length of the line, heavy angles, forested land within the ROW, wetlands in the ROW, and number of residents within 500 feet of the route.

This analysis used the z-score method to manage and review the raw data produced. The z-score method is based on the relationship of a route's impact to the mean value for the set of routes. With z-score analysis, a negative score means the route is below the mean for the factor. A positive score means the route is higher than the mean for that factor and has a greater impact than most other routes. The z-score analysis allowed the Project team to ultimately reduce the route network down to five geographically distinct routes (Figure 2-3) from among the 721 unique routes. No weights were applied to the z-score analysis, and the z-score was developed based only on the raw data of the route study.

During the initial analysis, the Project team determined that routes in the southern portion of the study (south of I-70) would require crossing I-70 multiple times, increased the potential to impact protected lands and

would face topographic challenges that could likely impact construction, maintenance, cost, and the reliability of the transmission line; for these reasons they were excluded from further consideration. This resulted in the removal of segments 4, 10, 11, 12, 13, 18, 19, 20, 21, 27, 28, 29, 33, 36, 37, 38, 39, 44, 45, 48, 49, 50, 53, 58, 59, 60, 63, 64, 69, 70, 75, 76, 80, and 82 from further consideration and subsequently removed those route alternatives using any of these segments. The Project team reviewed the remaining segments and removed several additional segments due to those segments either being redundant or potentially more impacting than similar segments, which resulted in the removal of alternative routes using the removed segments. The route network was then narrowed down to the following five, geographically distinct route alternatives for further evaluation (see Figure 2-2):

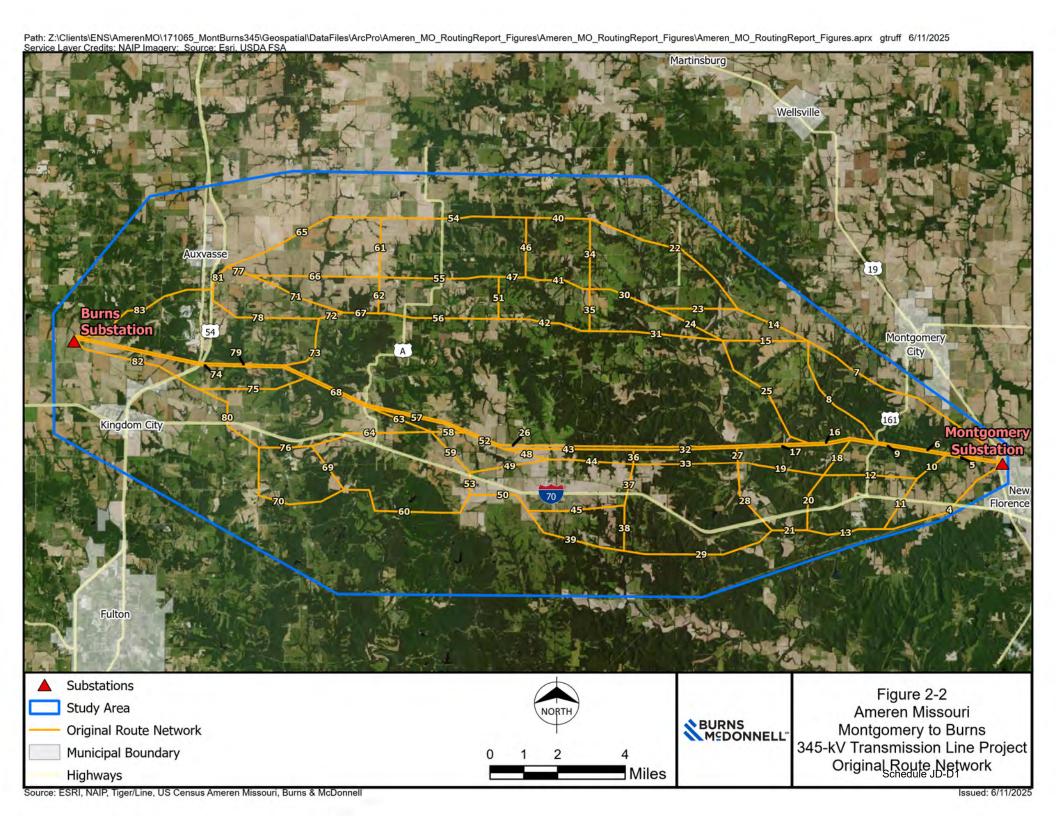

- Route 101 segments 1, 2, 5, 9, 17, 32, 43, 52, 57, 68, 74, 85
- Route 601 segments 1, 3, 7, 14, 22, 40, 54, 65, 81, 83, 84, 85
- Route 641 segments 1, 3, 7, 14, 23, 30, 41, 47, 55, 66, 77, 81, 83, 84, 85
- Route 720 segments 1, 3, 7, 15, 31, 42, 56, 67, 72, 73, 79, 84, 85
- Route 721 segments 1, 3, 7, 15, 31, 42, 56, 67, 72, 78, 83, 84, 85

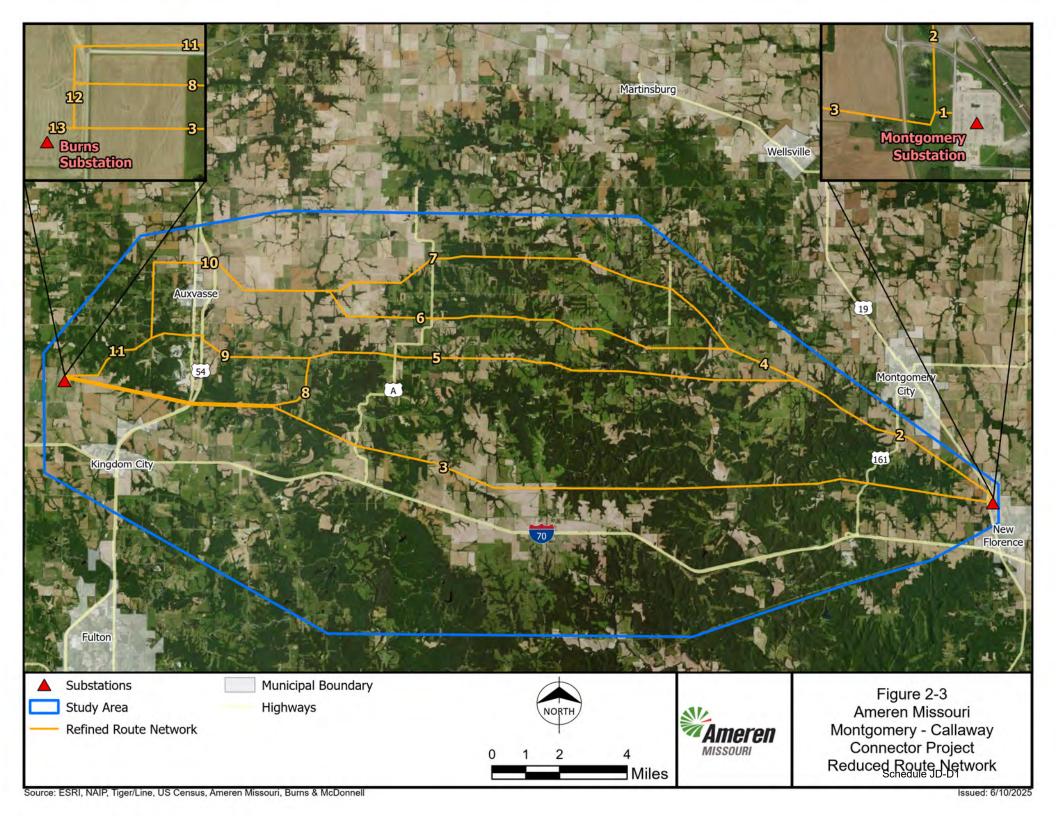

The above routes provided geographically distinct routes including an option (Route 101) that parallels the existing McCreadie – Montgomery 345 kV transmission line. There were modifications made to the remaining five routes. This included modifications to original Routes 601, 641, and 721. These adjustments were made to limit impacts on center pivot irrigation, residences, and the avoidance of a cemetery on Old U.S. Highway 54. Routes 101 and 720 were not modified. After these modifications, the final route network included 13 segments that combined to make 5 routes. The reduced route network, including the segments and the routes, were renumbered as follows (see Figure 2-3):

- Route 1 (originally Route 601) segments 1, 2, 4, 7, 10, 11, 12, 13
- Route 2 (originally Route 641) segments 1, 2, 4, 6, 10, 11, 12, 13
- Route 3 (originally Route 721) segments 1, 2, 5, 9, 11, 12, 13
- Route 4 (originally Route 720) segments 1, 2, 5, 8, 12, 13
- Route 5 (originally Route 101) segments 1, 3, 13

Appendix B includes the analysis table for the z-score analysis performed initially for all 721 route alternatives before renumbering. Chapter 3 reviews the analysis performed on the reduced route network and how the Proposed Route was determined.

3.0 Evaluation of Route Alternatives

This section presents the rationale behind the route identification and evaluation process used for the Project, which resulted in the selection of a Proposed Route. The Project extends from the Burns Substation, northwest of Kingdom City to the Montgomery Substation southeast of Montgomery City.

3.1 Overview of the Routing Process

One of the first steps in the routing process is developing a study area. The limits of the study were established based on the identified endpoints (Burns and Montgomery Substation) provided by Ameren in conjunction with opportunities and constraints. Publicly available data, such as NRHP data, Federal Emergency Management Agency (FEMA) floodplains, National Hydrography Dataset (NHD), and NLCD data helped the routing team identify opportunities and constraints. Local, state, and Federal agencies were contacted early in the Project to obtain information relevant to the routing process. Using this data informed the development of the study area.

Once the study area was defined, the objective was to identify economically and technically feasible routes to connect the substation endpoints, while avoiding or minimizing impacts to social and natural resources. As discussed in section 2.3, over 700 routes were identified in the initial route creation process and were subsequently reduced to five geographically different routes. The reduced route network was then presented to the public in an open-house format to obtain public feedback and input on the routes. After reviewing the open house feedback, a robust set of evaluation criteria was created based on the various opportunities and constraints in the study area in conjunction with stakeholder and landowner feedback. The following sections detail the analysis and provide the recommended route.

3.2 Evaluation Factors

The route evaluation first consisted of comparing the potential routes based on specific evaluation factors. These factors address human and environmental factors, cost, and engineering feasibility. Selected factors can be divided into three categories: engineering, social, and environmental. The route factors used in the evaluation are provided below in **Table 3-1**.

CategoriesEvaluation FactorsEngineeringTotal Length (miles)Heavy Angles (>40 degrees) (count)Road Crossings (count)Length Not Along Roads (miles)Number of Pipeline Crossings (count)Length Not parallel Existing Transmission Line (miles)Transmission Line Crossings (count)Wetlands within ROW (acres)Length through Bat Zone 2 (feet)Length through Bat Zone 3 (feet)

Table 3-1: Evaluation Criteria

Categories	Evaluation Factors
	River/Stream/Waterbodies within the ROW (count)
	Waterbodies within the ROW (count)
	Floodplain in ROW (acres)
	Floodway in ROW (acres)
	Woodlands within ROW (acres)
	Historical/NRHP Districts or Sites within 1,320 ft (count)
	Archaeological Sites within the ROW (count)
	*Residences within 100 ft of centerline (count)
	*Residences within 101 – 300 ft of centerline (count)
	*Residences within 301 – 500 ft of centerline (count)
	Residence Proximity Score (score)
	Landowners within ROW (count)
Social	Length Not Along Parcel Boundary (miles)
	Businesses within 300 ft (count)
	Industrial Facilities within 100 ft of centerline (count)
	Public Facilities within 500 ft of centerline (count)
	Public lands within 500ft of Centerline (count)
	Grasslands/Pasture within ROW (acres)
	Cropland within ROW (acres)
	Center-Pivot Irrigation within 100 ft of Centerline (count)

^{*}Internal factor for residential proximity

3.2.1 Engineering Factors

Engineering factors include:

- Total Length provides a general indicator of the overall presence of the Project. Greater length suggests greater social and environmental impacts and overall cost, assuming all other factors are equal.
- 2. **Number of Heavy Angles** (angles greater than 40 degrees) was considered because these angles typically require larger structures and foundations and, consequently, more space. These structures tend to be more visible and more expensive. Off-ROW easements for pulling conductor may also be necessary at these angle locations.
- 3. **Road Crossings** provide an indicator of potential permitting and/or line-crossing issues that may require special designs or additional permits.
- 4. **Length Not Along Roads** is measured because following roads is preferred where there is little or no adjacent development. In general, following roads is not as preferable as co-locating with existing transmission lines because there are fewer above-ground facilities associated with roads that have already affected the visual environment.
- 5. **Number of Pipeline Crossings** is calculated to provide engineers with a rough estimate of where permits and special designs may be needed to avoid impacting large-diameter pipelines.
- 6. **Length Not Along Existing Transmission Line** is measured because following existing transmission lines is generally considered to have less impact than a new ROW. Because it is desirable and less

- impacting to co-locate a new route along an existing transmission line, potential impacts would be more likely to occur where a route would be built away from the existing line. Therefore, length not along existing transmission lines is measured.
- 7. **Transmission Line Crossings** is measured because it provides an indicator of potential line-crossing issues that may require special designs or additional considerations such as line outages.

3.2.2 Environmental Factors

Environmental factors include:

- 1. **Wetlands within ROW** are calculated using National Wetland Inventory (NWI) data produced by USFWS. Wetlands within the ROW represent areas where additional permitting would be necessary as well as where there could be constraints on structure locations.
- 2. **Length through Bat Zone 2** uses data from USACE and USFWS to identify what length of the potential routes cross identified Bat Zone 2 areas under the MBP informal consultation and may require further permitting and design considerations. Zone 2 conservation measures apply to actions within 5.0 miles (radius) of a known roost tree or hibernacula.
- 3. **Length through Bat Zone 3** uses data from USACE and USFWS to identify what length of the potential routes cross identified Bat Zone 3 areas under the MBP informal consultation. These areas may require further permitting and design considerations. Zone 3 conservation measures apply to actions that occur within 0.25 miles (radius) of a known roost tree or hibernacula.
- 4. **River/Streams/Waterways Crossed** is measured to capture the potential impact of crossing both perennial and intermittent streams based on NHD data. Additional permitting may be required at stream crossings for the transmission line and access roads, if needed.
- 5. **Waterbodies within ROW** will also be measured using NHD data to identify and evaluate waterbodies other than the NHD streams.
- 6. **Floodplains within ROW** is calculated using FEMA floodplain data (1% annual flood chance and 0.2 annual flood chance). Additional permits and design considerations may be required when siting structures or access roads through floodplains.
- 7. **Floodway in ROW** is calculated using FEMA floodplain data, specifically Regulatory Floodway data. A regulatory floodway is a river or watercourse that is regulated to avoid increasing water surface elevation more than the designated height. Additional permits and design considerations may be required when siting structures or access roads through floodways.
- 8. **Woodland within ROW** is determined using NLCD digital data and NAIP Natural Color Infrared imagery to determine likely signatures of woody vegetation. Woodland within the ROW represented the forested areas within the ROW that would be cleared along each route.

3.2.3 Social Factors

Social factors include:

- Historical/NRHP Districts or Sites within 1,320 ft were identified using the (National Park Service)
 NPS NRHP database.
- 2. **Archeological Sites within the ROW** were identified via online data maintained by the Missouri SHPO. Much of the study area has not been surveyed, and as a result there is a likelihood that additional sites could be encountered during ground surveys of the Proposed Routes.
- 3. **The Residential Proximity Score** comprises three residential proximity measurements weighted and summed together to give an overall residential proximity score for each route alternative. Each

of the three measurements is assigned a weight internally, giving different sensitivity levels for different distance zones. The overall weight for the Residential Proximity Score is 10. Along the route options, residences included single-family homes within each distance category. Homes were initially identified using aerial imagery in GIS. Home locations were then confirmed during the field visit to the study area. **Residences within 100 feet** included the total number of habitable residences within 100 feet from the centerline of each route option. The internal weight for residents within 100 ft is 5. **Residences within 101 - 300 feet** of the centerline included the total number of habitable residences between 101 to 300 feet from the centerline of each route option. The internal weight for residences within 101 - 300 feet is 3. **Residences within 301 - 500 feet** of the centerline included the total number of habitable residences between 301 - 500 feet from the centerline of each route option. The internal weight for residences within 301 - 500 feet is 1.

- 4. **Landowners within ROW** was counted using parcel boundaries obtained from Montgomery and Callaway Counties. This factor measures the total number of landowners within the ROW (75 feet on either side of the transmission centerline).
- 5. **Length not along parcel boundary** is measured because following existing parcel boundaries is generally considered to have less impact than a new ROW across the center of a parcel. Because it is desirable and less impacting to locate a new route along a parcel boundary, potential impacts would be more likely to occur where a route would be built away from the parcel boundary, so the length not along the parcel boundary will be measured.
- 6. **Businesses within 300 feet** are quantified from businesses that were documented during the field review of the routes. This count does not include agricultural operations.
- 7. **Industrial Facilities within 100 ft of centerline** generally include warehouses, manufacturing buildings, and solar facilities.
- 8. **Public facilities within 500 feet** are calculated to quantify the potential impact of the line on areas frequented by numbers of people, including schools, religious facilities, parks, and other areas where people may gather, as identified in ESRI or Geographic Names Information System (GNIS) data and from the field review of the routes.
- 9. **Protected lands within 500 ft of centerline** are calculated because crossing these lands will require coordination with agencies and will likely entail extensive permitting requirements.
- 10. **Grasslands/Pasture within ROW** is calculated using the grasslands and pasture classification of NLCD data measuring the proposed new ROW impacting grasslands and pasture.
- 11. **Cropland within the ROW** is calculated using the croplands classification of NLCD data measuring the proposed new ROW impacting croplands.
- 12. **Center-Pivot Irrigation (CPI) within 100 ft of centerline** measures the number of CPIs within 100 feet of the centerline as determined by recent aerials photography, field review and information collected from the public.

3.3 Weighting the Route Factors

The above categories were considered representative of the potential impacts from construction and operation of the new transmission line within this study area. Burns & McDonnell assigned weights to each of the factors based on public feedback, input from Ameren, and Burns & McDonnell experience with transmission line projects across the region. The weights associated with each routing factor are presented in Table 3-2.

Table 3-2: Routing Factor Weight

Evaluation Factors	Unit of Measure	Weight
Engineering		
Total Length	Miles	1
Heavy Angles (>40 degrees)	Count	5
Road Crossings	Count	3
Length Not Along Roads	Miles	3
Number of Pipeline Crossings	Count	1

Length Not Along Parcel Boundary	Miles	2
**Businesses within 300 ft	Count	2
Industrial Facilities within 100 ft of centerline	Count	4
Public Facilities within 500 ft of centerline	Count	6
Protected Lands within 500 ft of centerline	Count	4
Grasslands/Pasture within ROW	Acres	1
Cropland within ROW	Acres	5
Center-Pivot Irrigation within 100 ft of Centerline	Count	7

^{*}internal factor weight

The range of weights (1-10) was determined by the number of factors; the relative importance of each factor in relation to the others, consideration to the public responses, and the need to differentiate among the routes. Weights allow the evaluation to be more sensitive to certain concerns in the Project area. Higher

 $^{{\}bf **} {\bf does} \ not \ include \ agricultural \ operations$

weights are placed on factors that are considered the most influential. For example, the highest weight used in this analysis is 10 for the residential proximity score and parallels the public input on what is considered the most important of the various factors. Below is a summary of responses received from the open house process regarding what factors the public found most and least important.

Open house participants were asked to rate the importance of various factors in determining the route of the transmission line. The top concerns (ranked as most important) included:

- Maximizing distance from homes (80%)
- Minimizing crossing of wetlands and floodplains (63%)
- Minimizing crossing of cropland/aquaculture areas (48%)
- Maximizing distance from historic/cultural sites (41%)
- Maximizing distance from conservation areas (37%)
- Minimizing total length and number of angles to reduce cost (33%)
- Maximizing routing along roads/railroads (32%)
- Maximizing routing along other utility corridors (30%)

Less critical factors included minimizing the total length, cost of the transmission line, and maximizing distance from conservation areas.

- Minimizing total length and cost of the transmission line (3.28%)
- Maximizing routing along roads or railroads (3.26%)
- Maximizing distance from conservation areas (3.65%)

Public and agency involvement was incorporated throughout the Project including virtual agency meetings and open houses to gather community input on the proposed route network. Chapter 5 provides more details of the public and agency outreach conducted for the project. Appendix D contains the full public involvement summary report.

3.4 Results of Evaluation

Once each of the evaluation factors was quantified for each of the alternative routes, the evaluation of the 345 kV route alternatives utilized a minimum—maximum ranking system. The minimum—maximum ranking approach is best suited for the evaluation of a smaller number of route alternatives, such as the five routes evaluated for this Project. This approach uses a proportional distribution between the minimum and maximum values and results in a score between 1 and 5. Scores in the upper ranges would be those with greater relative impacts. Scores of 1 would be the least impacting value for a factor. The scores for each evaluation factor are summed to result in a total route score that can be compared with all other routes. The minimum-maximum rank of each factor is then multiplied by its assigned weight and then summed across all factors for each route alternative to provide an overall score for each route.

Five potential routes were identified and evaluated that would connect the Burns Substation to the Montgomery Substation. To identify a Proposed Route alternative, all five identified potential routes were examined. Each of the five routes was assigned a score between 1 (least impacting) and 5 (most impacting) based on the raw route data, which equates to the proportional distribution between the minimum and maximum values for each route factor. If two or more routes shared the same value, the tied values received the average rank of the tied position.

Table 3-3 shows the route data for the five routes. The resultant weighted scores for these five routes were sorted and are shown in Table 3-4. The route data, unweighted minimum-maximum scores, and weighted sorted minimum-maximum rank tables for all routes evaluated are presented in Appendix C for reference.

The minimum-maximum analysis used for the 345 kV alternatives allowed the routes to be screened and compared using the quantifiable route factor values. The route selection process included this systematic analysis of the alternatives, combined with an understanding of the circumstances in the study area and the public input received. Table 3-4 presents the weighted, sorted minimum-maximum scores for the five routes in consideration, sorted from lowest to highest value. A lower total value generally indicates fewer overall impacts, while a higher value typically indicates greater impacts.

^{*}Categories with no data were removed. See Appendix C for the full route data table including categories with no measured data.

4.0 Selection of the Proposed Route

4.1 Selection of the Proposed Route

Route 3 and Route 4 scored higher (more impacting) than the other routes with a total weighted score of 232.5 and 255.3 respectively. These two routes share all but two segments. Route 4 (Segments 1, 2, 5, 8, 12, 13) had the greatest impact in 4 categories including floodplain in ROW, length through bat zone 2, wetlands within ROW, and length not along roads. Route 3 (segments 1, 2, 5, 9, 11, 12, 13) had the highest impact on 2 categories including road crossings, and residential proximity score. Routes 3 and 4 tie for the highest impact on protected lands within 500 feet and river crossings. In addition to Routes 3 and 4 scoring high for overall impacts, they both had high residential impact scores. For the reasons listed above Routes 3 and 4 were not further considered for the Proposed Route.

Route 1 and Route 2 are comparable in overall score and share all but one segment. These routes had a total weighted score of 199.6 and 196.6 respectively. Route 1 (segments 1, 2, 4, 7, 10, 11, 12, 13) had the highest impacts in 3 categories including total length, length not parallel to existing t-lines, and croplands in ROW. Route 2 (segments 1, 2, 4, 6, 10, 11, 12, 13) had the highest impact for 4 categories including grassland/pasture within ROW, waterbodies within ROW, road crossings, and heavy angles. Route 1 and Route 2 tie for impacts to center-pivot irrigation within 100 feet of centerline and transmission line crossings. Route 2 scored lower than Route 1 in 9 categories. Overall, these two routes a comparable but Route 1 was removed from further consideration due to higher residential impacts, longer total length, higher impacts to woodlands, higher impacts to floodplains, and higher impacts to croplands.

The two lowest-scoring routes for the Proposed 345 kV transmission line between the Montgomery Substation to the Burns Substation are Route 5 and Route 2. Common segments between these routes are segments 1 and 13, which are the segments entering each substation. These routes provide two geographically distinct route alternatives. Route 2 is further north than Route 5, traveling northwest out of the Montgomery Substation staying north of Whetstone Creek Conservation and Auxvasse before heading generally south to the Burns Substation. Route 5 is located south of Whetstone Creek Conservation Area and parallels the existing McCreadie to Montgomery 345 kV Transmission line. Route 5 generally travels northwest to the Burns Substation. Both Route 2 and Route 5 had low residential proximity scores and low protected lands scores. Route 2 was the least impacting across four factors (wetlands, floodplain, woodlands, and archaeological sites). Route 5 was the least impacting across 10 factors such as total length, heavy angles, residential proximity, and protected lands (see Table 3-4 for weighted factor scores). A significant difference between the two routes is total length, with Route 2 measuring at 32.52 miles and Route 5 measuring at 28.04. Route 2 adds significant length and heavy angles which have cost implications and generally increased scores in other routing factors. Route 2 had a slightly higher residential impact score of 11.3 (weighted) whereas Route 5 had a score of 10 (weighted), which is the lowest score of any route considered. Route 5 was ultimately selected as the Proposed Route because it minimized impacts across multiple routing factors including minimized residential impacts, requiring few heavy angles, minimized impacts to CPIs, and maximized paralleling an existing transmission corridor.

4.2 Description of the Proposed Route

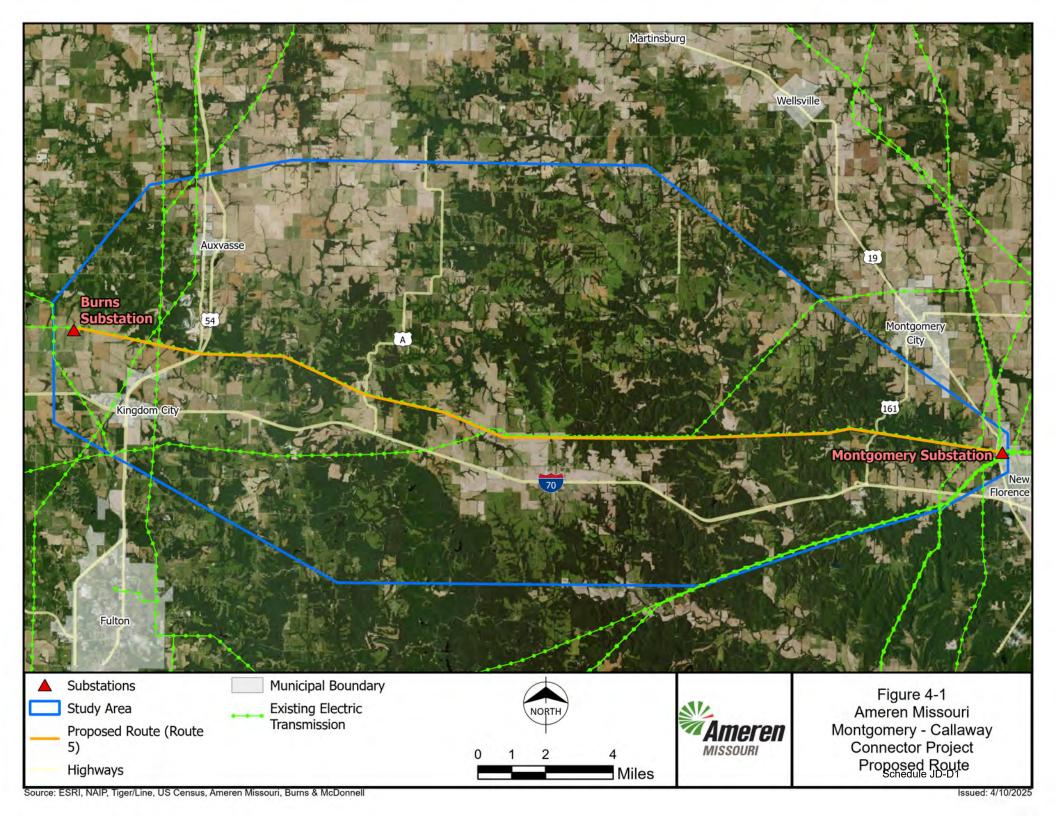

Route 5 was identified as the Proposed Route for the Project (Figure 4-1). Route 5 is composed of segments 1, 3, and 13. Route 5 parallels the existing McCreadie to Montgomery 345 kV transmission line. Paralleling

existing infrastructure can minimize impacts including visual impacts, limit land fragmentation, and in this case, provide a more direct route from the Burns Substation to the Montgomery Substation. Route 5 exits the Montgomery Substation and parallels the south side of the existing McCreadie to Montgomery 345-kV transmission line for its entire length into the Burns Substation.

Route 5 had the lowest score in 13 of the 30 routing factors (lower in approximately 43% of the routing factors). Route 5 was the best overall scoring route for the proposed 345 kV transmission line which best addressed the purpose and need for the line while also minimizing the overall Project impacts. A detailed map showing the Proposed Route (Route 5) is shown below in Figure 4-1. The route data and sorted weighted minimum-maximum score associated with the Proposed Route, along with all other alternatives evaluated, are found in Tables 3-3 and 3-4 as well as Appendix C.

5.0 Agency/Public Outreach and Public Involvement

5.1 Agency Involvement

Ameren Missouri has held three separate meeting series for the project. The first set of meetings took place on August 6th and 7th, 2024 and were held virtually with federal and state agencies that could have an interest in the project. The second set of meetings was held January 21st, 2025, with local leaders and elected officials in Montgomery and Callaway Counties. These meetings were in-person meetings, held at the Legends Rec Plex in Fulton, Missouri and the Montgomery City Lion's Club in Montgomery County. Montgomery County had a second virtual meeting to meet with local leaders who were unable to attend the in-person meeting on February 3rd, 2025. Individuals were invited by notification letters as well as emails. A total of 8 people attended the Callaway County meeting. No local leaders were able to attend the Montgomery County in-person meeting on January 25th. A total of 8 people attended the Montgomery County virtual meeting on February 3rd, 2025.

5.2 Public Involvement

On February 4th and 5th, 2025, Ameren Missouri held a series of in-person Open Houses. The first series of Open Houses occurred at the Legends Rec Plex in Fulton, Missouri on February 4th. Approximately 40 people attended the morning session, while approximately 32 people attended the afternoon session. The second series of Open Houses occurred at the Montgomery City Lions Club in Montgomery City, Missouri on February 5th. Approximately 47 people attended the morning session, while approximately 27 people attended the afternoon session. Additional people attended the event but did not sign in or one person signed in for a party of multiple people. The above numbers include approximations of those that signed in and those attending that did not sign-in.

For the Open Houses the Project team received public comments through verbal communication, Geographical Information Systems (GIS) stations, online questionnaires, hard copy maps and physical questionnaires.

Project specialists answered questions from both the public and key stakeholders. Comments were recorded and were considered in Project planning and route selection processes. The full Public Involvement Summary Report is included in Appendix D.

6.0 Permitting Plan

6.1 Required Permits

The Federal and State Permits or approvals that have been identified as potentially being required for the construction and operation of the Project are shown in Table 6-1.

Agency	Type of Approval	When Required	Need			
USFWS	Section 7 Threatened and Endangered Species Consultation and Clearance	Prior to construction	If the Project will potentially impact protected species or their respective habitat, or if a Section 404 and/or NPDES permit is required, then the FWS must be consulted. The FWS will determine the level of effort needed for the Project to proceed (e.g., desktop evaluation, habitat assessment, species surveys, avian impact studies, etc.).			
	Migratory Bird Treaty Act / Bald and Golden Eagle Protection Act Compliance	Prior to construction	Required when construction or operation of a proposed facility could impact migratory birds, their nests, and especially threatened or endangered species.			
USACE	Clean Water Act - Section 404 Permit	Prior to construction	Required to dredge or place fill in waters of the U.S., including wetlands Nationwide Permit: Less than or equal to 0.5 acre of wetland impacts Individual Permit: More than 0.5 acre of wetland impacts A wetland delineation would be required to determine the extent of wetland and/or stream impacts associated with Project construction.			

	Missouri Bat Programmatic Informal consultation	Prior to Construction	The Missouri Bat Programmatic (MBP) informal consultation covers three bat species (Indiana bat, Northern long-eared bat, and gray bat) listed under the ESA within the state of Missouri.
FAA	Notice of Proposed Construction	Prior to construction	Required for the construction of structures 200 feet tall or within the distance to height ratio from the nearest point of a FAA airport runway. Also required for construction equipment reaching heights over 200 feet, or for equipment taller than an FAA-issued 7460-1 hazard determination.
Missouri Department of Natural Resources (MDNR) – Water Protection Program	Section 401 Water Quality Certification (WQC)	Prior to construction	Required prior to Section 404 approval to verify that Project activities will not violate the State water quality standards. If 401 Water Quality Conditions are met under a USACE Nationwide Permit, then 401 WQC is granted upon issuance of the Nationwide Permit related to wetland and waterbody impacts. Otherwise, an Individual 401 Water Quality Certification is required from MDNR.
	NPDES Stormwater Permit and SWPPP Plan for Construction Activities and associated Notice of Intent (NOI)	Prior to construction	A general stormwater permit is required for construction activities that disturb 1 or more acres of land. A stormwater pollution prevention plan (SWPPP) is also required per the permit.

MDNR – SHPO	National Historic Preservation Act – Section 106 Clearance	Prior to construction	Under Section 106 of the National Historic Preservation Act, Federal agencies must work with the State Historic Preservation Office to address historic preservation issues when planning projects or issuing funds or permits that may affect historic properties and archaeological resources listed in or determined eligible for the National Register of Historic Places.

Appendix A - IPaC

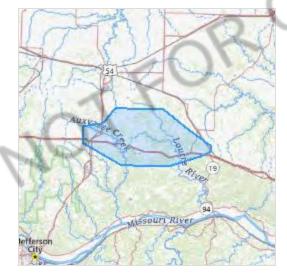

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Location

Local office

Missouri Ecological Services Field Office

(573) 234-2132

(573) 234-2181

101 Park Deville Drive

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

- 1. Draw the project location and click CONTINUE.
- 2. Click DEFINE PROJECT.
- 3. Log in (if directed to do so).
- 4. Provide a name and description for your project.
- 5. Click REQUEST SPECIES LIST.

Listed species¹ and their critical habitats are managed by the <u>Ecological Services Program</u> of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries²).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact <u>NOAA Fisheries</u> for <u>species under their jurisdiction</u>.

- 1. Species listed under the <u>Endangered Species Act</u> are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the <u>listing status page</u> for more information. IPaC only shows species that are regulated by USFWS (see FAQ).
- 2. <u>NOAA Fisheries</u>, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Mammals

NAME STATUS

Gray Bat Myotis grisescens

Endangered

Wherever found

No critical habitat has been designated for this species.

https://ecos.fws.gov/ecp/species/6329

Indiana Bat Myotis sodalis

Endangered

Wherever found

There is **final** critical habitat for this species. Your location does not overlap the critical habitat.

https://ecos.fws.gov/ecp/species/5949

Northern Long-eared Bat Myotis septentrionalis

Wherever found

Endangered

No critical habitat has been designated for this species.

https://ecos.fws.gov/ecp/species/9045

Tricolored Bat Perimyotis subflavus

Proposed Endangered

Wherever found

No critical habitat has been designated for this species.

https://ecos.fws.gov/ecp/species/10515

Insects

NAME STATUS

Monarch Butterfly Danaus plexippus

Proposed Threatened

Wherever found

There is **proposed** critical habitat for this species. Your location does not overlap the critical habitat.

https://ecos.fws.gov/ecp/species/9743

Western Regal Fritillary Argynnis idalia occidentalis

Wherever found

No critical habitat has been designated for this species.

Proposed Threatened

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

There are no critical habitats at this location.

You are still required to determine if your project(s) may have effects on all above listed species.

Bald & Golden Eagles

Bald and Golden Eagles are protected under the Bald and Golden Eagle Protection Act ² and the Migratory Bird Treaty Act (MBTA) ¹. Any person or organization who plans or conducts activities that may result in impacts to Bald or Golden Eagles, or their habitats, should follow appropriate regulations and consider implementing appropriate avoidance and minimization measures, as described in the various links on this page.

Additional information can be found using the following links:

- Eagle Management https://www.fws.gov/program/eagle-management
- Measures for avoiding and minimizing impacts to birds
 https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide avoidance and minimization measures for birds
 <u>https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf</u>
- Supplemental Information for Migratory Birds and Eagles in IPaC https://www.fws.gov/media/supplemental-information-migratory-birds-and-bald-and-golden-eagles-may-occur-project-action

There are Bald Eagles and/or Golden Eagles in your <u>project</u> area.

Measures for Proactively Minimizing Eagle Impacts

For information on how to best avoid and minimize disturbance to nesting bald eagles, please review the <u>National Bald Eagle Management Guidelines</u>. You may employ the timing and activity-specific distance recommendations in this document when designing your project/activity to avoid and minimize eagle impacts. For bald eagle information specific to Alaska, please refer to <u>Bald Eagle Nesting and Sensitivity to Human Activity</u>.

The FWS does not currently have guidelines for avoiding and minimizing disturbance to nesting Golden Eagles. For site-specific recommendations regarding nesting Golden Eagles, please consult with the appropriate Regional Migratory Bird Office or Ecological Services Field Office.

If disturbance or take of eagles cannot be avoided, an <u>incidental take permit</u> may be available to authorize any take that results from, but is not the purpose of, an otherwise lawful activity. For assistance making this determination for Bald Eagles, visit the <u>Do I Need A Permit Tool</u>. For assistance making this determination for golden eagles, please consult with the appropriate Regional <u>Migratory Bird Office</u> or <u>Ecological Services Field Office</u>.

Ensure Your Eagle List is Accurate and Complete

If your project area is in a poorly surveyed area in IPaC, your list may not be complete and you may need to rely on other resources to determine what species may be present (e.g. your local FWS field office, state surveys, your own surveys). Please review the <u>Supplemental Information on Migratory Birds and Eagles</u>, to help you properly interpret the report for your specified location, including determining if there is sufficient data to ensure your list is accurate.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to bald or golden eagles on your list, see the "Probability of Presence Summary" below to see when these bald or golden eagles are most likely to be present and breeding in your project area.

Review the FAQs

The FAQs below provide important additional information and resources.

NAME BREEDING SEASON

Bald Eagle Haliaeetus leucocephalus

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Breeds Sep 1 to Aug 31

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read "Supplemental Information on Migratory Birds and Eagles", specifically the FAQ section titled "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■**)**

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see

below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

- 1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
- 2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
- 3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (=)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (I)

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

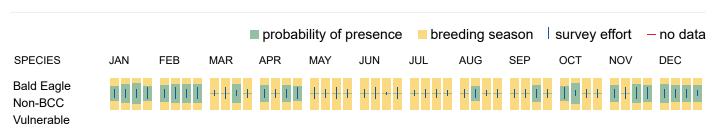

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (-)

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Bald & Golden Eagles FAQs

What does IPaC use to generate the potential presence of bald and golden eagles in my specified location?

The potential for eagle presence is derived from data provided by the <u>Avian Knowledge Network (AKN)</u>. The AKN data is based on a growing collection of <u>survey, banding, and citizen science datasets</u> and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are an eagle (<u>Bald and Golden Eagle Protection Act</u> requirements may apply).

Proper interpretation and use of your eagle report

On the graphs provided, please look carefully at the survey effort (indicated by the black vertical line) and for the existence of the "no data" indicator (a red horizontal line). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort line or no data line (red horizontal) means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list and associated information help you know what to look for to confirm presence and helps guide you in knowing when to implement avoidance and minimization measures to eliminate or reduce potential impacts from your project activities or get the appropriate permits should presence be confirmed.

How do I know if eagles are breeding, wintering, or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating, or resident), you may query your location using the RAIL Tool and view the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If an eagle on your IPaC migratory bird species list has a breeding season associated with it (indicated by yellow vertical bars on the phenology graph in your "IPaC PROBABILITY OF PRESENCE SUMMARY" at the top of your results list), there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

Interpreting the Probability of Presence Graphs

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. A taller bar indicates a higher probability of species presence. The survey effort can be used to establish a level of confidence in the presence score.

How is the probability of presence score calculated? The calculation is done in three steps:

The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.

To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.

The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season ()

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort ()

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps.

No Data ()

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Migratory birds

The Migratory Bird Treaty Act (MBTA) ¹ prohibits the take (including killing, capturing, selling, trading, and transport) of protected migratory bird species without prior authorization by the Department of Interior U.S. Fish and Wildlife Service (Service). The incidental take of migratory birds is the injury or death of birds that results from, but is not the purpose, of an activity. The Service interprets the MBTA to prohibit incidental take.

- 1. The Migratory Birds Treaty Act of 1918.
- 2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Eagle Management https://www.fws.gov/program/eagle-management
- Measures for avoiding and minimizing impacts to birds
 https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
 https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
 https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide avoidance and minimization measures for birds
- Supplemental Information for Migratory Birds and Eagles in IPaC
 https://www.fws.gov/media/supplemental-information-migratory-birds-and-bald-and-golden-eagles-may-occur-project-action

Measures for Proactively Minimizing Migratory Bird Impacts

Your IPaC Migratory Bird list showcases <u>birds of concern</u>, including <u>Birds of Conservation</u>

<u>Concern (BCC)</u>, in your project location. This is not a comprehensive list of all birds found in your project area. However, you can help proactively minimize significant impacts to all birds at your project location by implementing the measures in the <u>Nationwide avoidance and minimization</u>

<u>measures for birds</u> document, and any other project-specific avoidance and minimization

measures suggested at the link <u>Measures for avoiding and minimizing impacts to birds</u> for the birds of concern on your list below.

Schedule JD-D1

Ensure Your Migratory Bird List is Accurate and Complete

If your project area is in a poorly surveyed area, your list may not be complete and you may need to rely on other resources to determine what species may be present (e.g. your local FWS field office, state surveys, your own surveys). Please review the <u>Supplemental Information on Migratory Birds and Eagles document</u>, to help you properly interpret the report for your specified location, including determining if there is sufficient data to ensure your list is accurate.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, see the "Probability of Presence Summary" below to see when these birds are most likely to be present and breeding in your project area.

Review the FAQs

The FAQs below provide important additional information and resources.

NAME	BREEDING SEASON
Bald Eagle Haliaeetus leucocephalus This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.	Breeds Sep 1 to Aug 31
Black-billed Cuckoo Coccyzus erythropthalmus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9399	Breeds May 15 to Oct 10
Bobolink Dolichonyx oryzivorus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 20 to Jul 31
Cerulean Warbler Setophaga cerulea This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/2974	Breeds Apr 21 to Jul 20
Chimney Swift Chaetura pelagica This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds Mar 15 to Aug 25
Eastern Whip-poor-will Antrostomus vociferus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 1 to Aug 20

Field Sparrow Spizella pusilla

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

Breeds Mar 1 to Aug 15

Grasshopper Sparrow Ammodramus savannarum perpallidus

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/8329

Breeds Jun 1 to Aug 20

Henslow's Sparrow Centronyx henslowii

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Breeds May 1 to Aug 31

https://ecos.fws.gov/ecp/species/3941

Kentucky Warbler Geothlypis formosa

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Breeds Apr 20 to Aug 20

Le Conte's Sparrow Ammospiza leconteii

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Breeds elsewhere

Lesser Yellowlegs Tringa flavipes

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9679

Breeds elsewhere

Prairie Warbler Setophaga discolor

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Breeds May 1 to Jul 31

Prothonotary Warbler Protonotaria citrea

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Breeds Apr 1 to Jul 31

Red-headed Woodpecker Melanerpes erythrocephalus

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Breeds May 10 to Sep 10

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9294

Wood Thrush Hylocichla mustelina

Breeds May 10 to Aug 31

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read "Supplemental Information on Migratory Birds and Eagles", specifically the FAQ section titled "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:

- 1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
- 2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
- 3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (=)

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

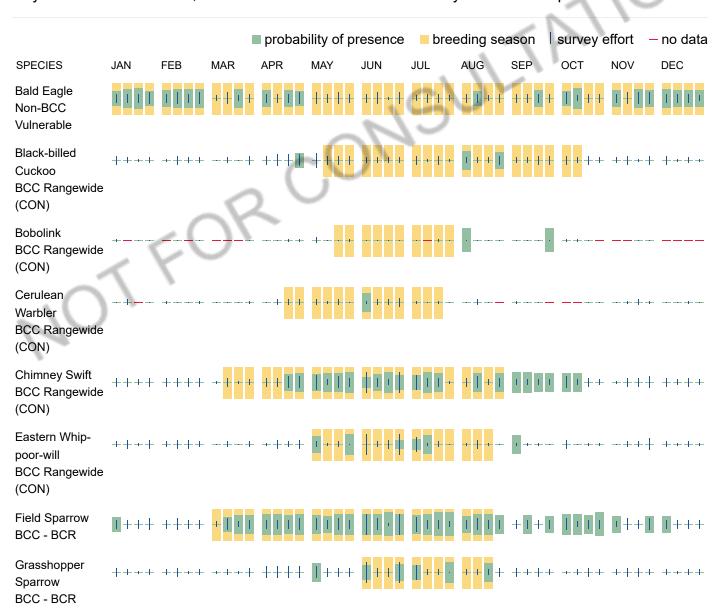

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

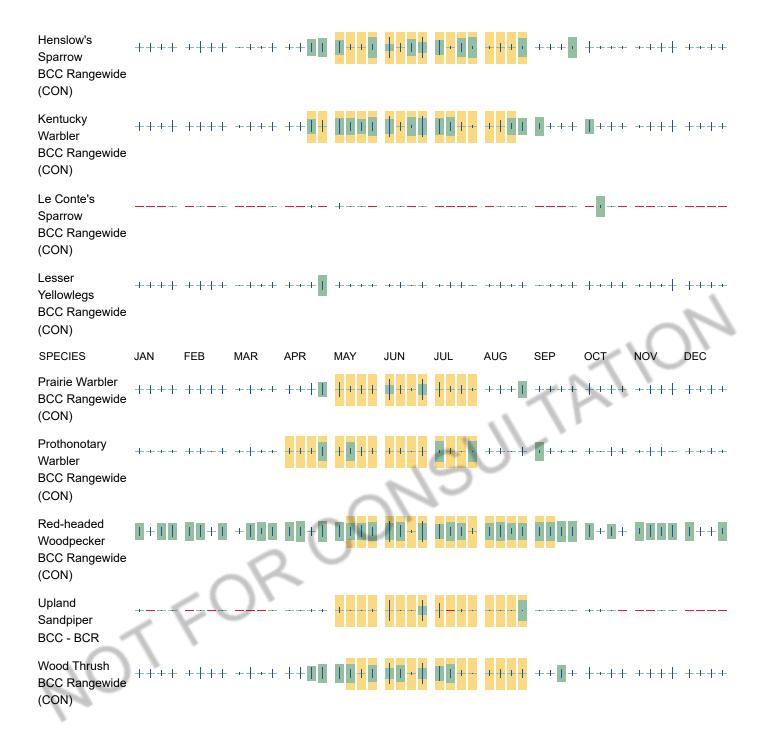

No Data (-)

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Migratory Bird FAQs

Tell me more about avoidance and minimization measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Avoidance & Minimization Measures for Birds describes measures that can help avoid and minimize impacts to all birds at any location year-round. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is one of the most effective ways to minimize impacts. To see when birds are most likely to occur and breed in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the list of migratory birds that potentially occur in my specified location?

The Migratory Bird Resource List is comprised of <u>Birds of Conservation Concern (BCC)</u> and other species that may warrant special attention in your project location, such as those listed under the Endangered Species Act or the <u>Bald and Golden Eagle Protection Act</u> and those species marked as "Vulnerable". See the FAQ "What are the levels of concern for migratory birds?" for more information on the levels of concern covered in the IPaC migratory bird species list.

The migratory bird list generated for your project is derived from data provided by the <u>Avian Knowledge Network (AKN)</u>. The AKN data is based on a growing collection of <u>survey, banding, and citizen science datasets</u> and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) with which your project intersects. These species have been identified as warranting special attention because they are BCC species in that area, an eagle (<u>Bald and Golden Eagle Protection Act</u> requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, and to verify survey effort when no results present, please visit the <u>Rapid Avian Information Locator (RAIL) Tool</u>.

Why are subspecies showing up on my list?

Subspecies profiles are included on the list of species present in your project area because observations in the AKN for **the species** are being detected. If the species are present, that means that the subspecies may also be present. If a subspecies shows up on your list, you may need to rely on other resources to determine if that subspecies may be present (e.g. your local FWS field office, state surveys, your own surveys).

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the <u>Avian Knowledge Network (AKN)</u>. This data is derived from a growing collection of <u>survey, banding, and citizen science datasets</u>.

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go to the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, or migrating in my area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating, or resident), you may query your location using the RAIL Tool and view the range maps provided for birds in your area at the bottom of the profiles provided for each bird in your results. If a bird on your IPaC migratory bird species list has a breeding season associated with it (indicated by yellow vertical bars on the phenology graph in your "IPaC PROBABILITY OF PRESENCE SUMMARY" at the top of your results list), there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

- 1. "BCC Rangewide" birds are <u>Birds of Conservation Concern</u> (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
- 2. "BCC BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
- 3. "Non-BCC Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the <u>Bald and Golden Eagle Protection Act</u> requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially BCC species. For more information on avoidance and minimization measures you can implement to help avoid and minimize migratory bird impacts, please see the FAQ "Tell me more about avoidance and minimization measures I can implement to avoid or minimize impacts to migratory birds".

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Proper interpretation and use of your migratory bird report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please look carefully at the survey effort (indicated by the black vertical line) and for the existence of the "no data" indicator (a red horizontal line). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list does not represent all birds present in your project area. It is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list and associated information help you know what to look for to confirm presence and helps guide implementation of avoidance and minimization measures to eliminate or reduce potential impacts from your project activities, should presence be confirmed. To learn more about avoidance and minimization measures, visit the FAQ "Tell me about avoidance and minimization measures I can implement to avoid or minimize impacts to migratory birds".

Interpreting the Probability of Presence Graphs

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. A taller bar indicates a higher probability of species presence. The survey effort can be used to establish a level of confidence in the presence score.

How is the probability of presence score calculated? The calculation is done in three steps:

The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.

To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.

The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

Breeding Season ()

Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort ()

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps.

No Data ()

A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the <u>National Wildlife Refuge</u> system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

There are no refuge lands at this location.

Fish hatcheries

There are no fish hatcheries at this location.

Wetlands in the National Wetlands Inventory (NWI)

Impacts to <u>NWI wetlands</u> and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local <u>U.S. Army Corps of Engineers District</u>.

Wetland information is not available at this time

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the NWI map to view wetlands at this location.

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in Schedule JD-D1

activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate Federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities. OT FOR CONSULTATIO

Executive Summary

Ameren Missouri is proposing the Montgomery-Callaway Connector Project located in central Missouri. The Project includes approximately 30 miles of double circuit, 345 kV transmission line in Montgomery and Callaway counties. This project will fulfill the needs identified by the Midcontinent Independent System Operator (MISO) to strengthen the safety and reliability of our region's energy grid.

The proposed transmission line will connect the existing Burns Substation in Callaway County and the existing Montgomery Substation in Montgomery County. Ameren Missouri will route, design and construct the new energy infrastructure with the goal of minimizing the impact on the community and the environment. Our goal is to have this project complete and delivering benefits to the local community by 2030.

This report details the outreach activities that are ongoing and/or have been completed, as well as data collected to date via various methods such as open houses, online questionnaires, hotline calls, and letters and emails received. Please be advised that the Ameren Project will continue to receive inquiries until final route approval from the Missouri Public Service Commission (MPSC). The information and data provided are valid as of the date of this report.

Ameren Missouri has held three separate meeting series for the project. The first set of meetings took place on August 6th and 7th, 2024 and were held virtually with agencies that could have an interest in the project. The second set of meetings were held January 21st, 2025. These meetings were in-person meetings, held at the Legends Rec Plex in Fulton, Missouri and the Montgomery City Lion's Club in Montgomery County. The two meetings were with local leaders and elected officials in Montgomery and Callaway counties. Montgomery County had a second virtual meeting to meet with local leaders who were unable to attend the in-person meeting on February 3rd, 2025. Individuals were invited by notification letters as well as emails. A total of 8 people attended the Callaway County meeting. No local leaders were able to attend the Montgomery County in-person meeting on January 21st. A total of 8 people attended the Montgomery County virtual meeting on February 3rd, 2025. Refer to page six for the list of CRF attendees.

Comments from the local leaders were collected via conversations and notes made on the maps provided at the events.

Finally, on February 4th and 5th, 2025, Ameren Missouri held a series of in-person Open Houses. The first series of Open Houses occurred at the Legends Rec Plex in Fulton, Missouri on February 4th. In the morning session approximately 40 people attended. In the afternoon session approximately 32 people attended. The second series of Open Houses occurred at the Montgomery City Lions Club in Montgomery City, Missouri on February 5th. Approximately 47 people attended the morning session. Approximately 27 people attended the afternoon session, refer to Appendix C for the Open House Sign-in Sheets for both days of Open Houses. Additional people attended the event but did not sign in or one person signed in for a party of multiple people. The above numbers include approximations of those that signed in and those attending that did not sign-in.

For the Open Houses the project team received public comments through verbal communication, Geographical Information Systems (GIS) stations, online questionnaires and physical questionnaires.

Project specialists answered questions from both the public and key stakeholders. Comments were recorded and will be considered in project planning and route selection processes. These comments are in Appendix C Engagement Comments.

General – Agency Virtual Meeting

Purpose

The virtual meetings offered an opportunity for agencies who may be affected by the Montgomery-Callaway Connector Project to provide insight and guidance to project team members. These comments will help project planners to identify concerns for potential routes in the Montgomery-Callaway Connector Project.

Notification

The Ameren project team emailed invitations to the agencies and staff members shown in Appendix A – Virtual Agency Meeting Information, on June 17th, 2024. The invite included the map of the study area (included in Appendix A). The invite requested that they RSVP for a link to one of the two Teams meeting, either August 6th at 1 p.m. – 2 p.m. or August 7th from 10 a.m. – 11 a.m. The agencies then had the opportunity to attend the two virtual informational meetings. In the informational meeting, Ameren used a PowerPoint presentation to provide the agencies with a project purpose and need, timeline, study area and routing and siting information, refer to Appendix A – Virtual Agency Meeting for a copy of the presentation. Agencies were given opportunities to ask questions of the project team and provided a contact number and email to reach out to if they had additional questions or information to provide. After the meeting we sent another email thanking them for their attendance and provided them a kmz of the study area, pdf of the study area and a pdf of the slides encouraging them to email or call with information, see email in Appendix A. Meeting minutes from each meeting are included in Appendix A.

Table 1: Agency Virtual Attendees

Name	Agency
Jordan Meyer	Missouri Department of Conservation
Michael K. Dixon	Missouri Department of Transportation – Central District
Joe Summerlin	Environmental Protection Agency – Region 7
Chase Barbarick	Missouri Department of Transportation – Central District
Kirsten Munck	Missouri Department of Transportation – Callaway County
Kris Budd	U.S. Fish and Wildlife Service
Kathryn Bulliner	U.S. Fish and Wildlife Service

Meeting Summary – Community Representative Forum

Purpose

The in-person Community Representative Forum (CRF) meetings offered an opportunity for community leaders and elected officials who may be impacted or have their communities affected by the Montgomery-Callaway Connector Project to provide insight and guidance to project team members. These comments will help project planners to identify concerns for potential routes in the Montgomery-Callaway Connector Project.

Notification

The Ameren project team mailed a set of notification letters on January 10th, 2025, and a round of emails regarding the impending Ameren CRF, copies of the invite list, letter and email are included in Appendix B. Montgomery County officials received a second round of emails on January 17th and 20th. The community leaders then had the opportunity to attend the in-person CRF on January 21st that was held at the Legends Rec Plex in Fulton Missouri for the Callaway County leaders from 8:30 a.m. – 9:30 a.m. or Montgomery County Lions Club in Montgomery County from 12:00 p.m. – 1:00 p.m. In the CRF, community leaders were given a PowerPoint presentation outlining the project, purpose and need, timeline, study area and routing and siting information (located in Appendix B). Community representatives were also provided with a contact number and email to reach out to if they had additional questions or information to provide.

Table 2: Callaway County CRF Attendees

Name	Title	County
Gary Jungermann	Presiding Commissioner, Callaway County	Callaway
Christopher Scott	Western District, Callaway County Commissioner	Callaway
Curt Warfield	Eastern District, Callaway County Commissioner	Callaway
Jim Busch	Director of Industrial Analysis Division, MPSC	Callaway
Jim Schulte	State Representative, District 49	Callaway
Kent Haden	State Representative, District 43	Callaway
Michelle Kidwell	Emergency Management District	Callaway

Due to a mailing and email issue many of the Montgomery County Officials were not able to attend the inperson CRF meeting at the Lions Club, so Ameren hosted a virtual meeting with members of the Montgomery County Chamber of Commerce and staff from the MPSC on February 3rd, where the Project team covered the same PowerPoint and collected comments from these officials. The names in Table 3 below are from our notes, due to the online meeting Ameren was unable to keep accurate track of who attended the meeting.

 Table 3:
 Montgomery County CRF Attendees

Name	Title	County
Jerome Overkamp	Montgomery County Assessor	Montgomery County
Ryan Poston	Presiding Commissioner, Montgomery County	Montgomery County
Dave Teeter	Montgomery County Commissioner, First District	Montgomery County
Doug Lensing	Montgomery County Commissioner, Second District	Montgomery County
Jim Busch	Director of Industrial Analysis Division, MPSC	
Clair Eubanks	Utility Regulatory Engineer II, MPSC	
Donna Hogue	MPSC	
Jeff Porter	Missouri Representative, 42 nd District	Montgomery County

Meeting Summary - Callaway County Open House

Purpose

The in-person Open House offered an opportunity for the public who may be impacted or have their land affected by the Montgomery-Callaway Connector Project to provide insight and guidance to project team members. These comments will help project planners to identify concerns for potential routes in the Montgomery-Callaway Connector Project.

Notification

The Ameren project team mailed a set of notification letters to landowners identified in the map in Appendix C. This mailing area generally included landowners within the 1,000-foot corridor, 1-mile radius of each substation and generally, everyone within the Northern corridors. Additionally, we posted advertisements in the Fulton Sun and Montgomery Standard for 3 weeks prior to the open house (refer to Appendix C for a copy of the advertisement). The Montgomery Standard advertisement ran January 15th, 22nd, and 29th, and Fulton Sun published January 18th, 25th and February 1st. Landowners and affected individuals had the opportunity to attend two open houses at the Legends Rec Plex in Fulton, Missouri on February 4th. The morning session was scheduled from 11 a.m. – 1 p.m., the afternoon session ran from 4 p.m. – 6 p.m. Or at the Montgomery Lions Club on February 5th. The morning session was scheduled from 11 a.m. – 1 p.m., the afternoon session ran from 4 p.m. – 6 p.m.

At the Open Houses, community members were provided with opportunities to learn about: general project information, routing process and stakeholder outreach, structure design, vegetation management, right of way, environmental concerns, construction and provide input, see Appendix C for materials presented at the Open House. There were also various opportunities to look at maps which showed the proposed routes. The public was able to review the physical maps or work with a Geographical Information Systems (GIS) stations where individuals could have a GIS specialist help them find their property and leave comments in the system (e.g. well locations, septic systems, proposed houses, center pivots, etc.). Community members were welcome to ask subject matter specialists questions, they were also provided with a website, hotline and email where they could leave additional comments, review more information about the project or request information.

Meeting Summary – Montgomery County Open House

Purpose

The in-person meetings offered an opportunity for community members who may be affected or have their land affected by the Montgomery-Callaway Connector Project to provide insight and guidance to project team members. These comments will help project planners to identify concerns for potential routes in the Montgomery-Callaway Connector Project.

Notification

The Ameren project team mailed a set of notification letters to landowners identified in the map in Appendix C. This mailing area generally included landowners within the 1,000 foot corridor, 1-mile radius of each substation and generally, everyone within the Northern corridors. Additionally, we posted advertisements in

the Fulton Sun and Montgomery Standard for 3 weeks prior to the open house (refer to Appendix C for a copy of the advertisement). The Montgomery Standard advertisement ran January 15^{th} , 22^{nd} , and 29^{th} , and Fulton Sun published January 18^{th} , 25^{th} and February 1^{st} . Landowners and affected individuals had the opportunity to attend two open houses at the Montgomery City Lions Club in Montgomery City, Missouri on February 5th. The morning session was scheduled from 11 a.m. – 1 p.m., the afternoon session ran from 4 p.m. – 6 p.m. Or at the Legends Rec Plex on February 4^{th} . The morning session was scheduled from 11 a.m. – 1 p.m., the afternoon session ran from 4 p.m. – 6 p.m.

At the Open Houses, community members were provided with opportunities to learn about: general project information, routing process and stakeholder outreach, structure design, vegetation management, right of way, environmental concerns, construction and provide input, see Appendix C for materials presented at the Open House. There were also various opportunities to look at maps which showed the proposed routes. The public was able to review the physical maps or work with a Geographical Information Systems (GIS) stations where individuals could have a GIS specialist help them find their property and leave comments in the system (e.g. well locations, septic systems, proposed houses, center pivots, etc.). Community members were welcome to ask subject matter specialists questions, they were also provided with a website, hotline and email where they could leave additional comments, review more information about the project or request information.

Meeting Summary Open Houses

Multiple Open Houses were hosted between February 4th and 5th, the morning sessions were hosted from 11 a.m. through 1 p.m. and the afternoon sessions were from 4 p.m. – 6 p.m. The events were designed to receive public comments on the proposed routes.

In-Person Open House

The Callaway County morning open house was scheduled to begin at 11:00 a.m., although interested parties began arriving just before 10:45 a.m. The meeting format included information stations, focused on specific project subjects with Subject Matter Specialists at each station to provide detailed information and receive public comments.

The Callaway County afternoon open house was scheduled to begin at 4:00 p.m., although interested parties began arriving just before 3:30 p.m.. The meeting format included information stations, focused on specific project subjects with Subject Matter Specialists at each station to provide detailed information and receive public comments.

The Montgomery County morning open house was scheduled to begin at 11:00 a.m., although interested parties began arriving just before 10:20 a.m. The meeting format included information stations, focused on specific project subjects with Subject Matter Specialists at each station to provide detailed information and receive public comments.

The Montgomery County afternoon open house was scheduled to begin at 4:00 p.m., although interested parties began arriving just before 3:30 p.m.. The meeting format included information stations, focused on specific project subjects with Subject Matter Specialists at each station to provide detailed information and receive public comments.

Public Comment

The public was able to provide comments at the open house via hard copies of the questionnaire (located in Appendix C) and via the GIS stations. Additionally, attendees were given a project factsheet which included links to the project website and questionnaire where they could access the interactive map and leave comments as well. Below are the results of the feedback as of the date of this report. The website and interactive map will be available until issuance of an approval from the MPSC.

Questionnaire Responses (to include hard copy and online submittals)

- Total respondents: 56 individuals participated in the questionnaire.
- Information collected includes names, organizations, addresses, cities, states, ZIP codes, email addresses, and phone numbers.

Key Routing Considerations

Participants were asked to rate the importance of various factors in determining the route of the transmission line. The top concerns (ranked as most important) included:

- Maximizing distance from homes (80%)
- Minimizing crossing of wetlands and floodplains (63%)
- Minimizing crossing of cropland/aquaculture areas (48%)

- Maximizing distance from historic/cultural sites (41%)
- Maximizing distance from conservation areas (37%)
- Minimizing total length and number of angles to reduce cost (33%)
- Maximizing routing along roads/railroads (32%)
- Maximizing routing along other utility corridors (30%)

Less critical factors included minimizing total length and cost of the transmission line, and maximizing routing along roads or utility corridors.

- Minimizing total length and cost of the transmission line (3.28%)
- Maximizing routing along roads or railroads (3.26%)
- Maximizing routing along other utility corridors (3.40%)
- Maximizing distance from conservation areas (3.65%)

Weighted Rankings

Below is the weighted ranking of the criteria from public feedback.

- Maximize distance from homes 4.69
- Minimize crossing wetlands, floodplains, and streams/rivers 4.09
- Minimize total length of transmission line and number of angles (reducing total cost) 3.88
- Minimize crossing cropland/aquaculture/center pivot irrigation 3.72
- Maximize distance from public facilities (schools, parks, churches, cemeteries, etc.) 3.55
- Maximize length along property lines 3.45
- Maximize distance from historic/cultural sites 3.40
- Maximize length along roads/railroads 3.28
- Maximize length along other utility corridors 3.26
- Maximize distance from conservation areas 3.07
- Minimize crossing forested land 3.72
- Maximize distance from commercial/industrial facilities 2.51

Impact on Respondents

Survey responses indicate:

- 75.5% of respondents said their homes, farm or business are within or near the proposed route.
- Only 4% stated they were unaffected.

Common concerns included property devaluation, loss of agricultural land, and environmental impacts.

Awareness of the Project

Participants learned about the project through:

- Letters (73%)
- Neighbors and friends (20%)
- Public notices (16%)
- Internet (12%)

Public Comments and Concerns

A section of the questionnaire contains open-ended comments from respondents. The key themes include:

- Concerns of the projects impact to property devaluation and land use conflicts.
- Concerns about health risks from high-voltage lines.

- Requests for routing adjustments to avoid residential and farming areas.
- Environmental concerns, including impacts to forests, wetlands, and wildlife habitats.
- Suggestions to use existing utility corridors or highways instead of crossing through private land.

Project Hotline and Email Summary

To date we have received a total of 1,616 recorded communications. These have included the following:

- Project Information 73 inquiries (4%) focused on general project details, including routing, impact, and public concerns.
- Public Meeting 1,473 inquiries (91%) about meeting attendance, logistics, and participation.
- Other 64 inquiries (4%) on miscellaneous topics.
 - o Not able to get in contact with the person that left name and number.
 - Noted attended meeting and leaving information about center pivots on website.
- Environmental 1 inquiry (.25%) regarding environmental impact concerns.
- Survey 1 inquiry (.25%) returning a physical survey.
- Real Estate 4 inquiries (.25%) regarding how Ameren would handle easements and if Ameren was open to leases.

Communication Type Breakdown

- Project Hotline 48 communications (3%) received via hotline calls.
- Project Email 22 communications (1%) through email correspondence.
- Notification Mailings 1,368 letters (84%) notification for a public open house.
- Returned Mail 107 letters (6%) for a variety of reasons we received return to sender Open House invitations.
- RSVP 5 communications (.3%) related to event registrations.
- Email 3 communications (.2%) categorized as standard email inquiries.
- Meeting 1 instance (2%) recorded as a meeting.
- Letter 2 communications (.06%) letters received from landowners.
- Other 60 instances (4%) these were attached letters from an attorney.

Interactive Map Comments

We have received the below comments via the interactive map from the open houses and from the online interactive map linked to the Project website.

Total Comments and Unique Commenters

Point-Based Comments:

Total Comments: 74Unique Individuals: 26

Line-Based Comments:

Total Comments: 16Unique Individuals: 9

Polygon-Based Comments:

Total Comments: 31Unique Individuals: 17

Breakdown of Comments by Type

Point-Based Comments

- General Concerns (33 comments) Various concerns including project impact and land use.
- o Agricultural (11 comments) Farmers highlighting land and crop-related concerns.
- o Residences (10 comments) Proximity of power lines to homes and safety risks.
- Irrigation (7 comments) Concerns about interference with irrigation systems.
- o Engineering (3 comments) Structural and technical inquiries.
- o Planned Development (3 comments) Comments regarding future development plans.
- o Wetlands (2 comments) Environmental concerns about water ecosystems.
- o Wildlife (2 comments) Impact on local animal habitats.
- o Right-of-Way (1 comment) Concerns about land access.
- Recreational (1 comment) Comments related to outdoor recreation spaces.

Line-Based Comments

- o Irrigation (5 comments) Issues related to irrigation infrastructure.
- Wetlands (4 comments) Protection of wetland areas.
- o General (4 comments) Miscellaneous concerns about the project.
- o Residences (2 comments) Comments regarding power line proximity to homes.
- o Planned Development (1 comment) Considerations for future developments.

• C. Polygon-Based Comments

- General Concerns (13 comments) Broad project-related concerns.
- o Agricultural (5 comments) Land use impact on farming operations.
- o Planned Development (3 comments) Consideration for future construction.
- o Engineering (2 comments) Structural and logistical concerns.
- o Irrigation (2 comments) Comments on water access for farming.
- o Wildlife (2 comments) Comments about natural habitats.
- o Transmission Easements (TE) (1 comment) Easement-related concerns.
- Recreational (1 comment) Preservation of parks and trails.
- Floodplain (1 comment) Environmental considerations for flood-prone areas.

General Comments

- Jane Hooker (Auxvasse, MO) Expressed concerns about the overall impact of the project on her property and community.
- Anonymous Respondents Multiple individuals raised concerns but did not provide names or specific locations. Issues include land use conflicts, property value depreciation, and opposition to the transmission line.
- Several Commenters Suggested alternative routing to avoid residential and agricultural properties.

• Agricultural Comments

- Kenneth & Mary K Day (Montgomery City, MO) Concerned about potential loss of productive farmland due to power line placement.
- o Robinson Mo Farms (Wellsville, MO) Expressed concern over how the project will affect irrigation systems and farm productivity.
- Other Farmers Mentioned difficulties in maintaining livestock operations, fencing, and crop rotation if the transmission lines cross their land.

Residential Concerns

- o Gary & Amanda Seute (Auxvasse, MO) Raised concerns about transmission lines being too close to their home and the potential impact on their property's value and safety.
- Several Homeowners Voiced issues related to noise pollution, health risks from electromagnetic fields (EMF), and visual obstruction.

• Planned Development Concerns

- o Dean Stillman (O'Fallon, MO) Mentioned a new housing development in progress, requesting that the power line be rerouted to avoid disruption.
- o Paul Beuselinck (Kingdom City, MO) Indicated that future expansion of properties and construction plans would be negatively impacted by the project.
- Multiple Comments Highlighted potential economic loss due to restricted future development in affected areas.

Wetlands Concerns

- o Harrison Creek (Unnamed Commenter) Commented that several cultural sites and wetlands are present in the proposed route, which must be preserved.
- Anonymous Environmentalist Noted that the project might disrupt local water flow, floodplains, and habitats dependent on wetland ecosystems.

• Wildlife Concerns

 Various Commenters – Expressed concerns that the power lines would disturb native wildlife, especially near conservation areas.

• Irrigation Concerns

 Multiple Farmers – Highlighted that irrigation pivots and water access points may be affected, causing potential loss of crop yield.

RE: Montgomery-Burns Transmission Project -Community Representative Forum Invitation

Hello,

Ameren Transmission Company of Illinois (ATXI) is working to build a more reliable and resilient energy grid for the future. We invite you to participate in an agency coordination meeting discussing the Montgomery-Burns Transmission Project.

About the Montgomery-Burns Transmission Project

ATXI's Montgomery-Burns Transmission Project includes siting, constructing, operating, and maintaining two, approximately 30-mile, 345 kV kV transmission lines from the existing Montgomery Substation in Montgomery County to the existing Burns Substation in Callaway County, Missouri. The proposed project also includes the upgrade of both Ameren existing substations. The project has a proposed in-service date of December 2030. An overview map for the project is attached for your review.

Just as additional roads need to be built or expanded over time, the project will prepare the grid for the future by adding transmission capacity. The project will also ensure energy reliability and resiliency while promoting more access to energy sources for Missouri communities and the region

Project Benefits

- Increasing transmission capacity to meet changing energy needs.
- Improving energy reliability for the surrounding region and local communities.
- · Promoting access to diverse energy sources

Join Us for a Virtual Agency Coordination Meeting

Ameren believes early coordination with agencies is a valuable piece of project planning and is notifying your agency directly of their intent to host upcoming virtual **Project Introduction and Coordination Meetings** to be held on **Tuesday**, **August 6**, **2024** (1:00 PM CDT) and **Wednesday**, **August 7**, **2024** (10:00 AM CDT). These meetings will be up to 60 minutes long including a presentation and a Q&A session.

The purpose of these meetings is to provide each invited agency representative with an overview discussion of the project. It will also provide an opportunity to preview the project area and initiate discussions on possible environmental constraints, land use, consultation, and permitting needs that could arise. Your input will assist the project team in developing routes that take advantage of opportunities while minimizing impacts.

Please RSVP by Tuesday, July 30, 2024 via ATXI's routing consultant, Burns & McDonnell, Inc. (Burns & McDonnell) at email connect@MontgomeryBurnsProject.com If you cannot make it to the meeting, please contact us and we can provide you with a copy of our presentation materials by mail or email. Please feel free to forward this invitation to a colleague if you are unable to attend or if

they should also be in attendance. Watch for an email from the project team on Thursday, August 1, 2024 with Microsoft Teams links for each meeting.

Thank you for your time and we look forward to connecting with each of you during the upcoming meetings.

Sincerely,

Samuel F. Gardner

Sam Gardner, Project Manager, Ameren

Thank You Email

From: Project Admin <<u>connect@montgomeryburnsproject.com</u>sent: Thursday, August 8, 2024 9:03 AM
To: Project Admin <<u>connect@montgomeryburnsproject.com</u>subject: Thank you and Attachments.

Good attamoon

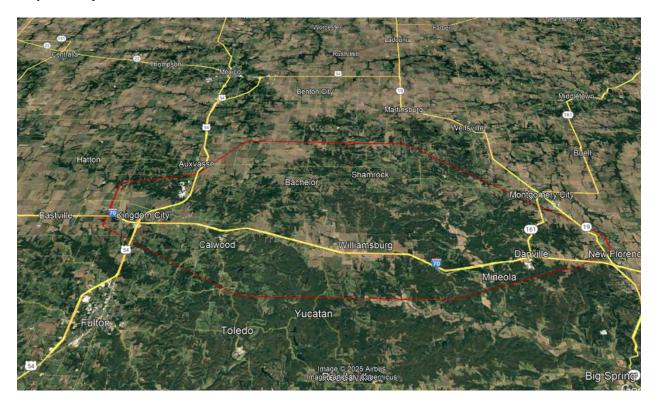

Thank you for attending our Virtual Agency Coordination Meeting for the Montgomery Burns Transmission Project, Attached to this email is a copy of the meeting presentation, a PDF Project Study Area Map, and a KNZ of the Project Study Area.

We value your feedback. If you have any feedback or questions regarding this project, please email us at Connect@Minupmens@urnsPhint.com or call, us at 314-200-4463. One of our Project Representatives will contact you.

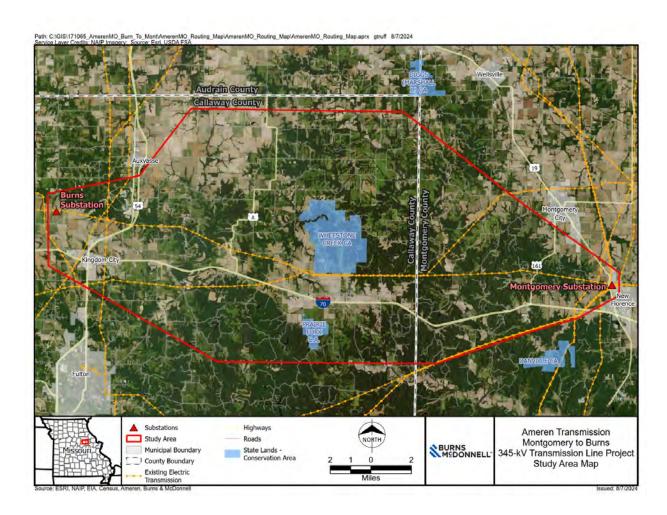

Thank you.

Notes Prepared By: Kate Turnage Date Notes Issued: 08/19/2024

Attendees:

Jordan Meyer, Missouri Department of Conservation Micheal K. Dixon, MODOT Central District Joe Summerlin, EPA Region 7 Chase Barbarick, MODOT Central District Kirsten Munck, MODOT Callaway County Kris Budd, USFWS

Meeting Agenda:

Introductions

Safety Moment – Leah Dettmers discussed back to school safety and harvest season safety.

Project Overview – Sam Gardner explained the project will consist of constructing two 345-kV circuits, currently scoped as separate circuits but requesting to be able to have a double circuit

68/10/0004

Page ?

line to reduce impacts to landowners and the environment. The project will be between the Burns Substation in Callaway County and Montgomery Substation in Montgomery County.

Project Need – Sam continued to explain the MISO study showing a need to upgrade the electrical system to support the injection of approximately 1,500 Megawatts from the new generation. The Burns Substation is a major connection point for the new generation.

Schedule – Sam reviewed the schedule slide showing our current phase as the initial agency consultation on the study area and we will continue to collect background data and refine the route network through the end of the 2024, which will include a windshield review of the route network to confirm desktop reviews. After the windshield review we will look to develop a preferred and alternate route network to present to the agencies and the public for review and comment in early 2025. After input is received, we will finalize the route(s) for a second round of public input or potentially for application submittal.

Routing & Siting – John Dunham explained the methods for collecting data and how we identify constraints and use statistical models to reduce our impacts to landowners, the environment, and agriculture uses.

Public Involvement – John talked about how we would host at least one open house and maybe two depending on the complexity of the route network identified in the siting efforts.

Q&A

Question & Answer

Jordan Meyer: Requests KMZ files of the Study Area, as well as a PDF of the Study Area.

We will send both to all attendees.

Route Alternatives – We will look at greenfield options with all new rights-of-way. We will look to parallel existing infrastructure, if possible, and will also look at a mix of greenfield and following existing infrastructure.

Joe Summerlin, EPA: For your NEPA review, what alternatives would you include?

Stephanie Miller: We are not sure at this point if NEPA will be required. If NEPA is needed for state or federal approvals, then our alternatives would include a mixture of route alternatives as well as different structure design options. These are mostly new lines, we are not looking upgrading existing lines, as we cannot change structures of existing lines.

Joe Summerhin: This is not going to be crossing federal lands? You will not be using any kind of federal funding for this project. Will you be doing an EA or EIS?

09/19/0024

managers.

Jage :

Stephanie Miller: We are not planning to <u>impact</u> any federal or federally funded lands and are not anticipating using federal funding. The only federal nexus would be the US Army Corps of Engineers (Corps) where we would likely apply for a Nationwide Permit for the project and fall under those requirements. Joe asked if the Corps plans to be the lead agency. Stephanie <u>indicated</u> that is the current plan but as we get more details we will coordinate with the Corps and hold a pre-application meeting Joe asked if we plan to only evaluate the crossings or review the entire line? Stephanie responded that we plan to review and study the entire <u>route</u> but we are unsure at this point what the Corps <u>districts</u> requirements will be on review outside their jurisdictional areas.

Stephanie Miller: Asked MDC if they knew of any conservation areas or other lands in the area purchased with federal funds.

Jordan Meyers – indicated that information would have to come from the individual land

John Dunham discusses further, how we evaluate the routes we develop-

- We look at our criteria such as: the total length of the line, the angles of the line, things that
 have an impact on overall engineering on the line.
- 2. We also have social criteria, distance from residences, public facilities, archaeological sites
- Environmental Criteria is evaluated such as acres of woodland that would have to be removed, how many acres of wetlands would be impacted, stream crossings, etc.
- There are other qualitative factors such as planned development in the area, potential road projects that need to be addressed

Leah Dettmets: If you were looking at the I-70 corridor, what would be the preference for how far the line needs to be set back from the Right of Way?

Chase Barbarick: We do not have a set standard or setback, but they would not allow utilities within the highway ROW

Joe Summerlin, EPA: Is there a legacy law that is in place from the past indicating I-70 to be used as an emergency land for military planes? Later Joe submitted a link showing this was not the case.

10/19 2020

Page 4

It is intended to provide space for an emergency landing.

Kirsten Munck: How long are your spans? (Since they are planning to expand I-70?) And how might this affect the highway (shutdowns, etc.) for maintenance of the line?

Justin Wenk: The span length is 850-950 feet. There will be vegetation maintenance and clearing. They will need steel pole and wiring maintenance as the lines age. They are slated to use Grey/Silver Galvanized Steel Poles.

For transmission line maintenance, crews would need to perform visual maintenance at least once a year.

Kirsten Munck: Is there any significance to the blue line color in the study area?

Dunham: The blue lines indicate the existing line; The red lines indicate the study area boundaries.

Leah Dettmers: Are you aware of any timber properties?

No answer was clearly provided, but Conservation agencies would be able to answer this question better.

Kirsten Munck: Is there any negative impact to the residents around this line?

Leah Dettmers: There will be impacts to the landowners near this line. The steel monopole design. We look at how many homes are within the 500 and 1,000 ft of the line.

Later in the process, our Real Estate team will have conversations with landowners about factors like cattle ranching, pivot irrigation, drain tiles, etc.

John Dunham. This dives deeper into our Public Involvement Phase throughout the entirety of the project. There are going to be some factors that we do not know about, and we address those concerns and make modifications where necessary.

Leah Dettmers: We also obtain information from the SHPO to identify culturally sensitive sites and these will not be shared publicly.

Sam Gardner: Are there any sensitive areas on highway 161 or 54 that we should be aware of?

Meeting Notes (cont'd)

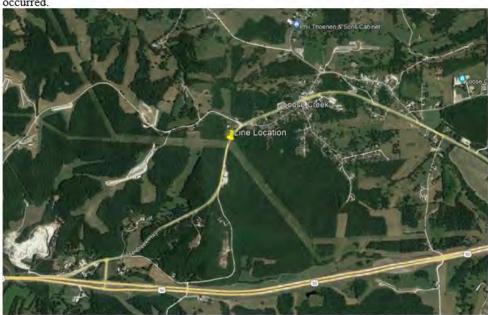

08/19/2024

Page 5

Kirsten Munck: I am not aware of anything, but representatives in that area would be able to provide information.

Chase Barbarick: Staff was repairing guardrails under an energized line and were experiencing "shocks." Chase provided a screen shot of the location where the shocks occurred

Notes Prepared By: Kate Turnage Date Notes Issued: 08/19/2024

Meeting Agenda

Introductions – The full team in the room and on the call introduced themselves.

Safety Moment – Leah Dettmers discussed back to school safety and harvest season safety.

Project Overview - Sam Gardner explained the project will consist of constructing two 345-kV circuits, currently scoped as separate circuits but requesting to be able to have a double circuit line to reduce impacts to landowners and the environment. The project will be between the Burns Substation in Callaway County and Montgomery Substation in Montgomery County.

Project Need - Sam continued to explain the MISO study showing a need to upgrade the electrical system to support the injection of approximately 1,500 Megawatts from the new generation. The Burns Substation is a major connection point for the new generation.

Schedule - Sam reviewed the schedule slide showing our current phase as the initial agency consultation on the study area and we will continue to collect background data and refine the route network through the end of the 2024 which will include a windshield review of the route network to confirm desktop reviews. After the windshield review we will look to develop a

08/11x t(0.) Page 3

preferred and alternate route network to present to the agencies and the public for review and comment in early 2025. After input is received we will finalize the route(s) for a second round of public input or potentially for application submittal.

Routing & Siting- John Dunham explained the methods for collecting data and how we identify constraints and use statistical models to reduce our impacts to landowners, the environment, and agriculture uses. John also utilized Google Earth to discuss the Project Area. He explained what the blue and red lines meant in the Project Area (the blue line being the pre-existing line, and the red line being the study area lines.)

Public Involvement - John talked about how we would host at least one open house and maybe two depending on the complexity of the route network identified in the <u>siting</u> efforts.

Q&A

Question and Answer:

Kathryn Bulliner: I am currently working on the Grain Belt Express project, and I would like to discuss some Environmental concerns such as bats and other wildlife concerns. Kathryn also requested that if there are any other projects in the area, that we keep her updated about those projects.

Stephanie Miller: We plan on the Corps of Engineers being our federal nexus. We can schedule another call to discuss potential consultation pathways for this <u>project</u>. Some projects may not require a federal nexus, because they are upgrades to a substation or existing line.

John Dunham: Mentioned to the call group that we will be sending out other materials such as KMZ files of the Project Study Area Map, a copy of the presentation, and a PDF of the Project Study Area map after the call.

Kathryn Bulliner: Are you still in the process of evaluating the impact to private lands and other (endangered) species?

Dunham: We look for areas where we could put <u>route alternatives</u> if needed. If we can reduce green field impacts, or if we can parallel existing lines, we will try to do that to mitigate concerns.

Kathryn Bulliner and Stephanie Miller agreed to schedule a one-on-one meeting to follow up about Environmental concerns.

Appendix B – Community Representative Forum

Notification Letters

January 10, 2025

«Title» «First_Name» «Last_Name» «Organization» «Address» «City_State_Zip»

Dear «Title» «Last Name»:

Midcontment Independent System Operator (MISO) has identified the need for significant system upgrades in the region to enhance reliability and flexibility. To meet MISO needs and strengthen the safety and reliability of our region's energy grid, Ameren Missouri plans to construct a double circuit electrical transmission line between the Burns Substation in Callaway County and the Montgomery Substation in Montgomery County (Project).

This Project, known as the Montgomery-Callaway Connector Project, will construct an approximately 30-mile, double circuit 345-kilovolt (kV) transmission line in Montgomery and Callaway counties. Ameren Missouri will route, design and construct the new energy infrastructure with the goal of minimizing the impact on the community and the environment.

You have been identified as a key leader in the Callaway area who may have an interest in this project. To provide you with more information about our plans, we're hosting an invitation-only Community Representative Forum on Tuesday, Ian. 21, at 8:30 a.m. at Legends Rec-Plex. To reserve your seat, please RSVP to connect@montgomery-callawayconnectorproject.com or call 314-200-4463.

Montgomery-Callaway Counector Project - Community Representative Forum

Tuesday, Jan. 21, 2025 Legends Rec Plex 808 State Street, Fulton, MO 65251 8:30-9:30 a.m.

We will also host an open house to enable members of the public to learn about the project, hear from subject matter specialists, and provide input, via a questionnaire, into the routing process. The public meeting will be held on Tuesday, Feb. 4, at Legends Rec-Plex. We hope you will also consider attending the open house.

At Ameren Missouri, we take great pride in meeting our customers' energy needs while planning and preparing for the future. We're excited to embark on a project that will move our community forward, and we look forward to meeting with you during the invitation-only Community Representative Forum. If you are unable to attend the event and have comments or questions, please call our hotline number or email listed above. You can also visit Ameren.com/MontgomeryCallaway to learn more about this project.

Sincerely:

Sam Gardner Montgomery-Callaway Connector Project Manager Ameren Transmission

Sam Gardner Montgomery-Callaway Connector Project Manager Ameren Transmission Dear Local Leader:

Midcontinent Independent System Operator (MISO) has identified the need for significant system upgrades in the region to enhance reliability and flexibility. To meet MISO needs and strengthen the safety and reliability of our region's energy grid, Ameren Missouri plans to construct a double circuit electrical transmission line between the Burns Substation in Callaway County and the Montgomery Substation in Montgomery County (Project).

This Project, known as the Montgomery-Callaway Connector Project, will construct an approximately 30-mile, double circuit 345-kilovolt (k/V) transmission line in Montgomery and Callaway counties. Ameren Missouri will route, design and construct the new energy infrastructure with the goal of minimizing the impact on the community and the environment.

You have been identified as a key leader in the Callaway area who may have an interest in this project. To provide you with more information about our plans, we're hosting an invitation-only Community Representative Forum on Tuesday, Jan. 21, at 8:30 a.m. at Legends Rec-Plex. To reserve your seat, please RSVP to connect@montgomery-callawayconnectorproject.com or call 314-200-4463.

Montgomery-Callaway Connector Project - Community Representative Forum

Tuesday, Jan. 21, 2025 Legends Rec Plex 808 State Street, Fulton, MO 65251 8:30-9:30 a.m.

We will also host an open house to enable members of the public to learn about the project, hear from subject matter specialists, and provide input, via a questionnaire, into the routing process. The public meeting will be held on Tuesday, Feb. 4, at Legends Rec-Plex. We hope you will also consider attending the open house.

At Ameren Missouri, we take great pride in meeting our customers' energy needs while planning and preparing for the future. We're excited to embark on a project that will move our community forward, and we look forward to meeting with you during the invitation-only Community Representative Forum, If you are unable to attend the event and have comments or questions, please call our hotline number or email listed above. You can also visit Ameren.com/MontgomeryCallaway (coming soon) to learn more about this project.

Montgomery-Callaway Connector Project

Safety Moment

- · Make sure your car is winter ready
 - Check if your car is ready for winter
 - Check tire pressure, gas levels, oil and other important maintenance checks.
 - · Stock your vehicle
 - Recommended items in your car: jumper cables, ice scraper, phone charger, blankets, First Aid Kit and more.
 - · Drive slowly
 - Leave earlier and drive slower, ice and snow can cause delays.

Project Overview

- Approximately 30-mile, double circuit 345-kV transmission line
- Connecting the existing Montgomery and Burns Substations
- Handle increase new generation of approximately 1,500 megawatts

Montgomery-Callaway Connector Project

Need & Benefit

- · Improving Local Reliability
- · Optimizing Service to Customers
- Creating Additional Pathways to Support Energy Needs
- Addressing the need for system upgrades

Routing Criteria

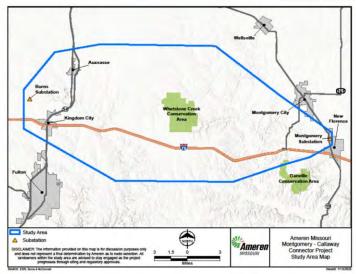

- · Maximizing distance from -
 - Homes
 - · Commercial facilities
 - · Public facilities
 - · Historic/cultural sites
 - · Conservation areas
- · Maximizing interaction with -
 - · Running along property lines
 - · Length along preexisting utility corridors
 - · Length along roads and railroads

MONTGOMERY-CALLAWAY CONNECTOR PROJECT

Improving energy reliability in your community

To meet the needs of Midcontinent Independent System Operator (MISO) and to strengthen the safety and reliability of our region's energy grid, Ameren Missouri plans to construct a double circuit electrical transmission line between the Burns Substation in Callaway County and the Montgomery Substation in Montgomery County.

STUDY AREA MAP: Detailed maps showing our study area will be available for review and comment during the in-person open houses and on our self-paced virtual engagement.

DISCLAIMER: The information provided on this map is for discussion purposes only and does not represent a final determination by Ameren as to route selection. All landowners within the study area are advised to stay engaged as the project progresses through siting and regulatory approvals.

ENGAGEMENT OPPORTUNITIES

We invite the community's valuable feedback about the Montgomery - Callaway Connector Project. We look forward to the public's input to help us understand the study area from the community's perspective.

Join Us for a Public Open House

We invite you to learn more about this project by attending our informational Open House.

ABOUT THE PROJECT

IMPROVING ENERGY RELIABILITY IN YOUR COMMUNITY

Ameren Missouri is proposing the Montgomery-Callaway Connector Project located in central Missouri. The Project includes approximately 30 miles of double circuit, 345 kV transmission line in Montgomery and Callaway counties. This project will fulfill the needs identified by the Midcontinent Independent System Operator (MISO) to strengthen the safety and reliability of our region's energy grid.

The proposed transmission line will run between the existing Burns Substation in Callaway County and the existing Montgomery Substation in Montgomery County. Ameren Missouri will route, design & construct the new energy infrastructure with the goal of minimizing the impact on the community and the environment. Our goal is to have this project complete and delivering benefits to the local community by 2030.

PROJECT BENEFITS

Improve electrical system reliability

Support continued growth in the area

ROUTING PROCESS & STAKEHOLDER OUTREACH

We value your input! Your feedback gives our team important insights about local properties, potential challenges, opportunities, and how the project may impact landowners. We sincerely appreciate the contributions and feedback from everyone involved throughout this process.

TYPICAL STRUCTURE

VEGETATION MANAGEMENT

Safety and reliability are top priorities in managing trees and other vegetation near our transmission lines. Overgrown vegetation can damage power lines, disrupt reliable electrical service and create additional hazards for our line crews.

To protect the community and minimize the risk of power outages, Ameren Missouri has implemented a proactive vegetation management program. This program helps maintain safe clearances around transmission lines, as required by federal and state regulations, reducing the chance of damage and ensuring crews have access for maintenance and repairs.

THIS PROGRAM MAY INCLUDE:

MOWING

MANUAL AND AERIAL TRIMMING

REMOVAL OF VEGETATION

APPLICATION OF ENVIRONMENTALLY SAFE HERBICIDES

RIGHT OF WAY

Once a final route has been approved by the Missouri Public Service Commission (MPSC), our team will begin discussions with impacted landowners. We will work closely with landowners throughout this process, providing clear communication and addressing questions and concerns.

Structures shown are examples only and are not representative of structures that will be built in this project.

WHAT IS A RIGHT OF WAY EASEMENT?

A right-of-way easement is a legal agreement that allows the use of a portion of someone else's property to install and utilize infrastructure such as roadways, utility lines or pipelines. It does not transfer ownership of the land but will grant the right to access the right of way for installation and maintenance of the certain infrastructure. Ameren Missouri will be seeking easement rights for the construction, operation and maintenance of the transmission line.

Our project team works closely with federal, state, and local agencies to protect sensitive resources in the area when planning a new transmission line. In some cases, we may require permits and approvals from these agencies before construction can begin.

TRANSMISSION ROUTING CONSIDERATIONS

 The routing of a transmission line involves many considerations. From the list of routing factors below, please circle the number corresponding to the level of importance of that factor to you.

Factor	Not Important		Somewhat Important		Most Important
a) Maximize distance from homes	1	2	3	4	5
b) Maximize distance from commercial/industrial facilities/businesses	1	2	3	4	5
Maximize distance from public facilities (e.g. schools, parks, churches, cemeteries, etc.)	1	2	3	4	5
d) Maximize length along property lines	1	2	3	4	5
e) Minimize crossing wetlands, floodplains and streams/rivers	1	2	3	4	5
f) Minimize crossing cropland/aquaculture/center pivot irrigation	1	2	3	4	5
g) Minimize crossing forested land	1	2	3	4	5
h) Minimize total length of transmission line and numb- of angles (reducing the total cost)	er 1	2	3	4	5
Maximize distance from historic/cultural sites	1	2	3	4	5
j) Maximize length along roads/railroads	1	2	3	4	5
k) Maximize length along other utility corridors	1	2	3	4	5
I) Maximize distance from conservation areas	1	2	3	4	5

2.	Which of the following applies to your situation?
	My home is within or near the route segment option.
	b. My farm or business is within or near the route segment option.

			02/06/2025 - Called and left a voicemail wondering how to access the maps on the website					
			02/06/2025 - Called back, she informed me the best path would be the southernmost route displayed					
40 mm 11 7 5 7	* * * * * * * * * * * * * * * * * * * *		on the maps. She stated it was the path of least resistance and that no one lives on that route. She					
2/6/2025 Manch, Gall	Project Hotline	Project Information	said she lives in the middle of the northernmost route, and it would go straight across her property. Hello	Stakeholder				
			I am a landowner and have 80 acres under threat by your expansion. Lam also the owner of another					
			20 acres that the planned line runs near the property line. I am building a house on the 20 acres. I am					
			trying to understand all the negatives your power line brings to my future home. A dual circuit 345KV line is an ugly scar on the land. I would like to know the following:					
			Do you have an impact study for the land depreciation you cause when installing these huge					
			structures? I would like to know how much you are decreasing the value of my land through any study	<i>(</i> ************************************				
			you may have performed on past projects. Have you conducted a study on the EMF and the Predicted Intensity of Electric Fields (kV/m) at					
			Maximum Operating Voltage? Other utilities publish these charts for projects such as being					
			proposed. What will be the minimum ground clearance along the route?					
			What do your studies indicate for milligauss readings and decibel levels 600 ft from the right of way					
			centerline? Do you have any study or published white paper on the level of impacts to native wildlife populations					
			such as deer and turkey which are prevalent in these areas.					
			I hope to get answers to the above questions:					
			Thank you Jeff Allen					
			02/06/2025 - forwarded the email to Sam Gardner, Steve Haler and Gabe Goldsmith for responses.					
			02/07/2025 - Chris Korsmeyer responded with the following:					
			Helio Jeff. Please find the attached EMF brochure and here is the link to the brochure online:

Thu. Aug 8, 1:54 PM to me					
Hello,					
Following up on the request made from our meeting, the MOC lands within the project area that are					
associated with fideral funds and would require environmental information to go through NEPA for easement agreements are Danville Conservation Area and Whitstone Creek Conservation Area.					
Additionally, the northern portion of Prairie Fork Conservation Area was acquired through a gift and has a succitated restrictions with the land's use.					
Lastly, I have passed this project to our Natural Heritage Environmental Review Analyst to produce a					
report for the entire project area. Once a specific route and this alternates are chosen, resultmining shapefiles to aniatric hierardepreview/femilies to praintive hardgereview/femilies to praintive hardgereview/femilies to praintive hardgereview/femilies to praintive hardgereview/femilies to provide a more accurate species record specific to those routes.					
Please let me know if you have any questions. Thank you again for the opportunity to comment review

RE: Montgomery-Callaway Connector

Dear Jason & Sam:

Thank you for taking time to discuss the Montgomery-Callaway Connector project with Mr. Gabel and mc.

As we discussed, attached are additional concerns for your consideration in routing. These landowners have significant concerns about the northern routes being proposed and strongly urge Ameren to select the southernmost proposed route.

We are happy to answer additional questions at your convenience and look forward to an update from you as you continue the process.

Sincerely.

Stephanie S. Bell Attorney at Law

Ameren Montgomery Callaway Connector Project

TO Whom it may concern:

The natural character of our 100 acre property located at the end of Callaway County road 1035 would be greatly altered with a 150 foot right-of way and 110-150 foot tall electric monopoles cutting through the woods and across our tree lined access lane. We have and are making improvements on this property including a new house and a large pond near the house. The proposed line and right-of-way would be visible from the house and the majority of our property. This would greatly decrease the value of the property, especially for anyone searching for a secluded, natural area.

Therefore, we are greatly opposed to the location of the right-of-way on our property.

Re: Montgomery Callaway Connector Project

To Whom it may concern,

Our organizations have previously provided detailed information concerning our center pivot irrigation maps, alongside current and future NRCS programs for bat habitat, pollinators, cover crops etc. Today, I wish to highlight the profound economic and personal impact this transmission line will have on our farms. The proposed transmission line threatens to disrupt the existing infrastructure of our farms, resulting in significant financial losses. Our irrigation systems, which are crucial for maintaining farm productivity and profitability, will be severely affected. The interruption of our irrigation capabilities will lead to decreased crop yields and, consequently, a substantial loss of income. This financial burden will be monumental and exceedingly costly for your organization to overlook or breach.

Our farm hosts an annual fifth grade farm tour for students in Montgomery County R-II and Wellsville-Middletown R-I, known as the Stevens Farm Tour, which started in 1982. Each year, students visit different stops on the farm and receive education on various topics, ranging from farm safety to wildlife conservation. We proudly partner with Montgomery County SWCD, and in attendance are also employees from NRCS and MDC. The event hosts around 150 people, including students, parents, and volunteers. The proposed transmission line would be rather distasteful to explain, as it downgrades the property and undermines the educational value of our farm tours.

On a deeply personal level the proposed line crosses areas that hold immense sentimental value to our family. Two of our close family friends have their ashes spread in the very location where this proposed line right of way will go. Additionally, our late sixteen-year-old son, who passed away fifteen years ago, spent countless hours around our irrigation lake, engaging in recreation, hunting, and fishing as well as we do today. The proposed line directly intersects this cherished location, intensifying our emotional opposition.

Furthermore, our farm is a legacy passed down through generations. Founded by my grandsons' great grandparents in 1959, the fourth generation is being raised on this very land. The memories and personal history tied to this farm make the potential intrusion of the transmission line profoundly distressing. We are determined to protect these memories and oppose the transmission line with every resource at our disposal.

As the statements above illustrate, our commitment to opposing the transmission line stems from both economic and deeply personal motivations. For our past generations and those

yet to come, we are prepared to fight this proposed development with unwavering resolve and dedication. This farm represents not just a livelihood, but the legacy, memories, and identity of our family.

In conclusion, it is essential to recognize the tremendous impact this transmission line will have on our farms, both economically and personally. The proposed disruption to our irrigation infrastructure and the desecration of sites with profound emotional significance compel us to resist this development to the fullest extent of our financial and personal capacity.

Sincerely,

Mark & Cherie Stevens Revocable Trust

Luke Stevens Farms LLC

L&M Land LLC

Stevens Farms GP (Farm Operator)

Schedule JD-D1

To whom it may concern,

Our family has a farm in Callaway and Montgomery counties. We use it on week-ends and the men are there most of deer season.

This is a rest and relaxation area that we visit and enjoy with our families. We have a pond where the grandkids can fish.

The idea of a double circuit 345-kilovolt transmission line spoils the private farm surroundings. When we are there, we enjoy seeing the birds, animals and deer at our private family get away. For these reasons we are against the Montgomery-Callaway Connector Project.

Warm regards,

Lela Viehmann Vollmer, trustee

Ernest William Viehmann

Ruth Ann Marsh

I am opposed to the Northern routes of the proposed electric easement because any of those three routes would impact the front of my property requiring removal of considerable timber that I have been maintaining for over 55 years.

The proposed right of way would devastate the esthetics of my property thus negatively impacting the value of my 55 years of improving our property.

Respectfully Submitted,

Joseph and Carol Honich

Notes from JoAnn Reagan

1) The timeline is troubling.

Landowners should have been notified. Who are the initial shareholders if the landowners are not?

A farmer plans for 10 years ahead, 20 years ahead for the next generation. (How will this affect these long term plans?)

2) Routing and Siting

The character of land varies a great deal. For construction purposes the sites for circuit structures will vary greatly, almost structure to structure.

My personal reasons for opposition are construction and probably the negative effect on the farm operation. It is difficult to get to that site without tearing up the land.

Ameren Missouri 1901 Chouteau Avenue P.O. Box 66149 St. Louis, MO 63166-6149

Dear Ameren Missouri,

I am writing to formally oppose the proposed route of the Montgomery-Callaway Connector Project, specifically the portion that passes through my property located at 121 Fordson Road, Montgomery City, Missouri. As a property owner who intends to build a home on this land in 2025, I am deeply concerned about the potential impacts this project could have on my plans, as well as the environment and the community at large.

The construction of a 30-mile, double circuit 345-kilovolt transmission line through Montgomery and Callaway counties would directly affect my property, which I have carefully planned to be the site of a future residence. This route interferes with my ability to develop the land as intended, jeopardizing not only my personal investment but also my long-term future in this community.

I understand the need for infrastructure improvements, but I urge Ameren Missouri to reconsider the current proposed route through my property and explore alternative routes that would not disrupt this residential development. It is crucial to protect the property rights of residents and ensure that future generations are not unduly impacted by unnecessary infrastructure projects.

I ask that you take my concerns into account during the decision-making process and provide an opportunity for open dialogue regarding potential adjustments to the project's route.

Thank you for your attention to this important matter. I look forward to hearing from you soon and hope that we can work together toward a solution that respects the interests of all affected parties.

Sincerely, Sean Matthews March 8, 2025

Ameren Montgomery Callaway Connector team

I am writing on behalf of the Larry and Beverly Robinson family regarding the Montgomery Callaway Connector. This powerline has become a very disturbing issue for all involved.

My father, Larry Robinson, lived his entire life in the rural area of Highway B west of Montgomery City. As a small child of 5 he always wanted to have a lot of acreage and cattle with good fences. He worked his entire life to achieve this and to then leave this legacy to his family. I recall, as a young teen, the farming crash of the 80's and watching our cattle and most of our working horses sold. Followed by the farm equipment and his truck. He secured a part time job nearby and rode his horse to this job so that my mother would have a vehicle to drive if needed. During this time, and long after, she worked as an artist as well. They were both hard workers and very resilient. Over time they were able to build another, larger, herd of cattle and purchase land that had been owned by members of the family for over 100 years. My father worked daily to improve and maintain his farms and led by example teaching his family the value of being good stewards of the land.

My father has passed away and my mother still owns the 7 farms they put together in Montgomery County, 5 of which are in the line of at least one of your route options. Needless to say, our family is strongly opposed to this based on many reasons, but for myself largely because as child I watched how hard they worked to put these family farms together only to think that this may be an "easier route" for a corporation.

The farms are rich not only in heritage but also have natural springs with native plants, waterways, wooded areas with native habitat including eagles and brown bat, and soil that has not been tilled for crops in at least 70 years.

Four of the farms are registered Missouri Century Farms dating: 1838, 1873,1883 and 1902

Union School House, which originally sat on County Line Road, has been restored and moved near the main home. The school served residents of Callaway and Montgomery Counties between Big Loutre Creek and Little Loutre Creek, so the students didn't have to cross during high water times. My father's mother taught school there. One of your proposed routes appears to be very close to the home and restored school.

The land is still being used for cattle grassland. The family also enjoys hunting, campouts, horseback riding and all that nature has to offer. One of the grandsons has continued the cattle operation with the registered brand initially created by my father in 1960. The property he lives on is in the direct path of 2 of the proposed routes. We are the stewards of this land and strongly oppose the land being used in a way that does not resonate with the value of maintaining its health, history and financial value.

Sincerely, Rebecca Robinson Gabel Lisa Robinson Strube Beverly Robinson To whom it may concern:

My name and address is:

Steve Phillips

2036 County Road 1051

Montgomery City, Mo. 63361

I am writing to you so that you will consider my reasons for opposing the path of this connector that would cut my farm in half. The path that I am referring to is the second one from the bottom on the satellite photo from your website.

My farm is 400 acres and for the last 10 years I have spent thousands of dollars

and countless hours trying to restore much of this farm to it's original native ecosystem and habitat.

I have worked tirelessly with the Mo. Department of Conservation and they have identified many unique natural features on my farm that should never be changed or threatened.

I have an original post oak savanna that is very rare in Missouri. In addition I have several small wetlands that have been created by underground springs that never reach the surface.

My farm is in the transition zone between the plains and the Ozarks therefore we have very diverse native plants and animals.

But the most unique feature of my farm is the amount of Native American artifacts that are found annually. Several people well versed in Indian culture have identified probable camp sites on my farm.

I have joined the Loutre Ecosystem Stewardess Group so that we can demonstrate to you how negatively impactful this proposed path would be to a very fragile ecosystem.

Finally, my farm is already chopped up by 3 different electric rights of ways and your proposed path would eliminate many of the few pristine woods I have left.

It would destroy the beautiful view I now enjoy from my house.

Please do not choose this devastating path.

Sincerely

Steve and Sue Phillips.

March 6, 2025

Bill Dreyer

Loutre Ecosystem Stewardship Group

I am opposed to Ameren's proposed Montgomery Callaway Connector Project for a variety of reasons. These many reasons could be called "convoluted"; but I did not invite this proposal.

- Regional big business interests have made a plan for growth which involve "Special Interest and State Government cronyism." That kind of "capital" leverage can change and destroy communities.
- I am aware of the Missouri Senate Bills in progress and the battle for, and against, a Constitutional understanding of the use of Eminent Domain; it is dirty politics.
- In my opinion MISO in their "needs assessment" and recommendation to Ameren
 for development of infrastructure is "reckless." Needs assessments should always
 include the communities involved.
- 4. With respect to Ameren and MISO and other players, you simply do not realize the investment we have in our landscapes, for bio-mass production, soil conservation, water quality, natural systems and future generations. Our community culture is based on production agriculture, preservation of natural resources, friendship and Faith.
- 5. Our climate, soil and rainfall make our county valuable for supplying food, fiber and quality of life.
- 6. We believe there are better ways to produce and supply electricity state by state, and better business growth models!
- 7. I know that Ameren has a history of encouraging and facilitating efficient electric use; I admire and respect that.
- 8. My personal landowner objection is that my "Clay Pan" Tall Grass Prairie is truly a vanishing ecosystem. An easement there would destroy that. Vocational Students and many other groups and individuals come here for inspiration!

- 1) Reduced value of our property
- 2) Don't want to look at it
- 3)Don't want to hear the buzzing from it
- 4) The land is our hunting property, and it would go right through it

We would never have purchased the property we own if these power lines were running through it back then.

Bryan and Karen Schmidt

To Whom It May Concern,

We are Roger & Joann Mayo, we are very much against the proposed electric towers to be going up in our area and property. The poles would cause trees to be cut down and infringe on our private land with damage installing and easements and maintenance . We believe since we don't use Ameren Electric it should be run in areas that do. Or they should be ran along highway or paved road not in middle of our farm ruining our landscape or use of our land for what WE SEE FIT to do with it.

Roger and Joann Mayo

The following	ng are	my thoughts:
	1.	The Ameren plan seems to be reckless and destructive and oblivious to personal and private land usage. It appears to be self-serving to Ameren.
	2.	30 miles of intrusive power structures is a huge waste of money and the natural environment.
	3.	There is NO WAY to accomplish one of Ameren's main published goals of "minimizing the impact on the community and environment."
	4.	Destroying pristine natural environment is thoughtless and unconscionable. The environment can never be restored to its natural beauty.
	5.	The Ameren projected benefits appear to be only for corporate interests. They simply are "catch words and phrases."
		They claim the following: 1. Increasing transmission capacity 2. Improving energy reliability for surrounding regions 3. Promoting access to energy sources 4. Growing economic development NONE OF THE ABOVE ARE NEEDED
		Conclusion: Ameren has not shown a need for any of the above!
	6.	As we look at our nearby neighbors, they include St. Peters, O'Fallon, Wentzville, and Warrenton. All of these have experienced huge growth, but none of them have destroyed their "natural" terrain and beauty.
	7.	The Missouri Public Service Commission needs to be aware of the cost and devastating ruins that Ameren is about to deliver. The commission needs to hear directly from the public concerning these matters.
	8.	Ameren has not answered the following question: "Why is this needed?"
	9.	In this discussion, are the two substations (New Florence and Callaway) presently connected?
	10.	What are Ameren's projected energy needs for this area in the next five years In the next ten years?
		In the next fifteen years?
		In the next twenty years?
	11.	What are the benefits that Ameren will be providing, and what will the cost be for these benefits?
	12.	Who will pay for these costs?
Respectfully s	uhmi#	
Hal Wagner	abriit	leo,

I am writing to express my strong opposition to the Montgomery-Callaway Connector Project and its potential impact on my family's farm. This land has been in our family for 55 years, spanning multiple generations, and holds deep personal and historical significance.

In 2023, I built a new home on this property with no expectation that energy infrastructure would be placed across our land. Beyond the aesthetic and practical disruptions, I have serious concerns about the impact on our timber resources—both now and in the future—as well as the effects on local wildlife habitat. Additionally, and most importantly, this project poses a risk of disturbing my father's gravesite, which is an irreplaceable part of our family's history.

I urge you to reconsider the planned route and explore alternatives that do not disrupt long-standing family farms like mine. I would appreciate the opportunity to discuss this matter further and better understand what options exist to protect our property and its legacy.

Please let me know how we can work together to find a solution that respects the history and integrity of our land.

Sincerely,

Chris Dowell 2170 County Rd 1035 Montgomery City, MO 63361 636-262-7874

I am opposed. Farming should be a priority. We have a cemetery just North of our property that has a direct connection to the Second World War. The transmission lines should avoid this area at all cost.

Frank Rebholz

Callaway County

We are strongly opposed to the transmission line going across our property as we have extensively installed a lot of tile terraces with underground pipe and this would adversely affect that greatly and also other conservation practices we have implemented.

River Acres Inc. Gary River Andy River My name is Tom Block. I oppose all of the routes suggested by their tentative maps. All of these routes come too close to way too many houses all over the county including mine. I think that the power company should be forced to use the easement they have now, especially since these lines won't be used by any of our private residents.

And if it is true that these lines are to transmit power from wind farms in Kansas to people in Indiana. I think that is a ridiculous solution. Indiana should build their own electricity production facilities.

Another terrible result of these power routes is the permanent harm to mine and the other property owners. On my particular property it would render approximately 15 acres totally useless forever. Not to mention the eye sore they create.

Surely there is a way they can retrofit poles on their current easements to accommodate these additional lines. I'm sure I'm not the only one that feels this way. Thank you for reading.

Tom Block

To Whom it may concern, As a landowner in the proposed routing zone of the Montgomery- Callaway Connector Project, I am listing my reasons for opposing said routing plan .which will have several negative effects on our family and property. 1) Our land value would plumet in perpetuity. 2) Esthetically, our property and those properties around us would become a virtual eyesore. 3) Any power line right of way would render our livestock grazing ability unusable. 4) The negative health risks associated with living under or near high voltage transmission lines is well documented. 5) The negative effects on the native wildlife habitat as it exists now would be lost in perpetuity. Most Sincerely, Michael Massey

TO: Whom It May Concern

FROM: Michael & Kerry Ecton

RE: Ameren Montgomery-Callaway Connector Project

DATE: March 7, 2025

Thank you for allowing us to prepare a personal impact statement regarding the proposed transmission lines of the Montgomery-Callaway Connector Project. As landowners on the northern route, the construction of a high voltage transmission line would detrimentally affect us in many ways.

In the area of land stewardship, this acreage was an eroded, row-crop farm when we purchased it. Through an investment of considerable out-of-pocket expense-- with no cost share-- as well as an investment of years in time, we have been able to develop a diverse environment of native grasses, sedges, and forbs. Through the restoration of ecologically productive land, we have observed a high degree of prairie diversity. This acreage now supports Henslow sparrows, prairie sparrows, dickcissels, and bobwhite quail. We have a breeding population of woodcock... a high voltage transmission line would be a concern for their mating flights. We have prairie crawdads, supported by the return of natural seeps.

We have pollinators, including native bees, bumblebees, and butterflies. We have speckled king snakes and garter snakes, representing another link in a healthy ecosystem. We have observed bald eagles taking fish from our pond. Our prairie drainage runs to the Little Loutre Creek.

The tools we use to maintain our diversity include prescribed burning and livestock grazing. The grazing occurs at different locations and different intensities depending on the time of year and environmental conditions. We have an economic goal of achieving a regenerative, sustainable cattle and sheep operation that will carry us into our retirement years.

In the area of local history, this acreage contains the pioneer cemetery of the Harper family. Mr. Charles B. Harper represented the 2nd district in the 13th General Assembly of Missouri. He is buried with his family in a cemetery located on our land.

The proposed route of the northern transmission line comes right through the middle of our property. It is very close to our house, giving the feeling of being "at our back door." The construction of this transmission line would negatively affect all of the above-mentioned natural resource issues, with the additional detriment of de-valuing our property. Some research shows a loss of property value up to 38%. Nobody wants a high voltage transmission line at his back door.

We have tried to be concise in stating our concerns, although there is more that could be said. Feel free to contact us with any questions or comments. Again, thank you for your time and consideration.

Caleb & Jennifer Sommer 62 Sailor Rd Montgomery City, MO, 63361 jrsommer3@gmail.com 573-544-4921 / 636-359-7453 March 11, 2025

Ameren

To Whom It May Concern.

We hope this message finds you well. We wanted to take a moment to share some personal thoughts regarding the proposal to run power lines through our property on Sailor Road. We truly appreciate the hard work that goes into expanding infrastructure to meet our community's energy needs, but we have some concerns about how this could impact our home and the surrounding area.

One of the biggest worries we have is the potential drop in our property value. It seems that homes near high-voltage lines often struggle to attract buyers, which could affect not only our home but also our neighbors' properties and the overall market in the area. We imagine other property owners might be feeling similarly apprehensive.

Beyond the financial implications, the aesthetic changes brought by power lines would quite literally alter our view. We've chosen to live here for the beauty of the landscape, and the thought of power lines cutting across that view feels like a loss of something precious. For us, country living is about escaping the industrial hustle, and it's heartbreaking to think that this serenity could be disrupted.

Since childhood, my wife has dreamed of building a home on Sailor Road. Her vision became a shared passion. We chose our current location to fully appreciate the stunning views, and each day we celebrate the dream we've transformed into reality—one forged through hard work and dedication. While we could have opted for a house in town, we opted to invest ourselves in pursuing our dream instead; anything less would have felt like a compromise to our efforts. All of that hard work would quickly feel diminished if our views consisted of powerlines.

The prospect of power lines marring our view is disheartening. We went to great lengths to bury our own power lines, ensuring that our surroundings remained unblemished and our views unobstructed. If new development occurs, not only would it detract from the pristine landscape, but it would also threaten the only wooded area we have. One of the primary reasons we chose this land was to create a sanctuary for hunting. We hope to preserve this sanctuary and the beauty of our environment for future generations to enjoy.

In light of these factors, we respectfully request that you reconsider the proposed placement of power lines through our property. We understand that the expansion of power infrastructure is essential, and we strongly encourage the company to explore alternative routes or solutions that would achieve the same goal without infringing upon private properties and the well-being of the residents.

Thank you for considering our concerns. We would appreciate the opportunity to discuss this matter further and hope to find a resolution that satisfies all parties involved. Please feel free to contact us at your convenience.

Sincerely,

Caleb and Jennifer Sommer

Dear Ameren, Electric,

I'm against the powerline coming across our property because of the dangers of the high voltage and limiting what I can do with my property.

Lee and Lisa Cutright 59 Mexico Road Montgomery city MO 63361

Bill and I are opposed to the running power lines across our property. Here's why:

- They would have a large impact on our annual farm income since we have only a few small fields that produce income and Ameren's plan shows the possibility of running through every one of them.
- Power lines would reduce future resale value of the entire property.
- There are concerns that electromagnetic fields may cause cancer and other serious health issues such as brain tumors and Alzheimer's disease. We don't want to live near them.
- We don't want to see them.
- · We don't want to hear them.

Bill and Nancy Fankhauser

CONSIDERATIONS AND OBJECTIONS TO AMEREN PROPOSED ROUTING OF TRANSMISSION LINE THROUGH PROPERTY OWNED BY THORN TREE DEVELOPMENT CORPORATION, MONTGOMERY COUNTY,MO.

ROBERT DARR, REPRESENTATIVE.

- 1). CONSIDERING A TRANSMISSION ROUTE IN CLOSE PROXIMITY TO THE CITY OF MONTGOMERY WILL CERTAINLY HAVE A NEGATIVE IMPACT ON FUTURE RESIDENTIAL DEVELOPMENT SOUTH OF THE CITY.
- 2). THIS PROPERTY IS AN IDEAL LOCATION FOR LOW DENSITY, HIGH-END HOUSING THAT WILL BE IN HIGH DEMAND IN THE NEAR TERM FOR MONTGOMERY COUNTY AND MONTGOMERY CITY.
- 3). THIS AREA IS A NATURAL HABITAT AREA FOR ALL TYPES OF WILDLIFE AND IS REPORTED TO BE A BREEDING SITE OF ENDANGERED BATS. CUTTING OUT RIGHT-OF-WAY EASEMENTS WILL DAMAGE THIS HABITAT AREA GREATLY..
- 4). THE NEW FLORENCE AREA IS ALREADY OVERRUN WITH TRANSMISSION LINES COMING FROM MANY DIRECTIONS.
- IT WOULD SEEM LESS DISTRACTING TO INCLUDE NEW TRANSMISSION LINES ON EXISTING OR EXPANDED RIGHT-OF-WAYS.
- 5). MONTGOMERY COUNTY HAS PLANS IN PLACE TO DEVELOP A MEGA INDUSTRIAL COMPLEX WHICH WILL CREATE A DEMAND FOR EXTENSIVE HOUSING DEVELOPMENT. RUNNING A TRANSMISSION LINE THROUGH PRIME HOUSING DEVELOPMENT GROUND AND NATURAL WILDLIFE HABITAT WILL PROVE COUNTER PRODUCTIVE TO FUTURE GROWTH.
- 6). LAND VALUES HAVE BEEN RISING IN THIS AREA AND OBVIOUSLY PUTTING A TRANSMISSION LINE CLOSE OR THROUGH THIS AREA WILL HAVE A NEGATIVE EFFECT ON CURRENT AND FUTURE VALUES. COST OF SECURING A RIGHT-OF-WAY

THROUGH THIS AREA WILL BE INHERENTLY HIGHER BECAUSE OF THE REDUCED VALUATION.

7). NOT WITHSTANDING THE RISING DEMAND FOR ELECTRICITY, HIGH VOLTAGE TRANSMISSION LINES ARE AN EYE SORE.

WHY KEEP MAKING NEW ROUTES THEREBY MAKING MORE EYE SORES? EXPAND EXISTING RIGHT-OF-WAYS WHERE LINES ALREADY EXIST.

8). IF THIS PROJECT IS BEING CONSIDERED FOR FUTURE SAFETY AND RELIABILITY THEN WHY CREATE A NEW SET OF ISSUES BY ROUTING POWER LINES OVER NEW REAL ESTATE? MAINTENANCE AND SAFETY ISSUES HAVE ALREADY BEEN RECOGNIZED ON EXISTING ROUTES.

RESPECTFULLY SUBMITTED

ROBERT DARR

To Whom It May Concern.

I live on a property that is on the path of 2 of the proposed routes for the Montgomery Callaway Connector. I do not want a powerline to come across this property. The property lays in a rectangular shape and one of the lines would almost divide my property in half coming down the length of the center. There is a natural spring that would potentially be in the path of your easement and could be destroyed or altered with the construction process.

I have put considerable effort into improving the farmhouse on this property and improving the land so it can continue to be used for successful cattle grazing. I am building my cattle herd and intend to raise my son, named after my grandfather whose livestock brand I now carry, to continue the family farming legacy. This power line provides only negative outcomes for the future of my family. I do want these power lines because they will vastly deplete the integrity, usability, financial worth and enjoyment of this property.

Keith Strube

We oppose this going across our land for several reasons. This farm has been in our family since 1951. We take part in multiple conservation programs, plus our farm has beautiful timber and wildlife. It is a family farm, not a commercial project for people looking to build their wealth.

Our son's home is directly in the path they are proposing. He has multiple medical issues, we fear could be worsened by this. He is type 1 Diabetic with diabetic retinopathy, kidney issues, plus lung disease. Since studies are unclear of the effects the electromagnetic fields from these power lines would produce, we feel it is a risk for anyone, but most certainly for him. This also would financially devastating for him if he were forced to relocate. His home is paid for and home prices in this area are currently at an all time high.

Our farmland is also at an all time high and we are not willing to accept some token offer so a large corporation can make billions of dollars ripping it apart.

Butch & Barb Clark

To whom it may concern:

I have visited with Loutre Ecosystem Stewardship Group and would like to formally object the Montgomery Callaway Connector Project. These lines will cross directly over my business and through my farm and I am not interested in selling any land for this project. Our county is already facing the menace of solar panels across our valuable farmland that will have to be dealt with at some point. I would be very interested in the reasoning of why this project could not be completed alongside I70. I also noticed it completely avoids the Whetstone Creek Conservation Area. Why is that? If this is project isn't allowed to run through government property then it certainly shouldn't be allowed to run through private property of citizens who do not want it there. Why can't the current easements be used for the new lines?? Also, it seems as though many people do not know about the potential of their land values being ruined by high voltage transmission lines. Please do a better job at getting the word out there Ameren. Send your employees directly to the landowners immediately and let them know "in person" what your plans are. Everyone has a right to know exactly what your intentions are.

Thank you, Suzy Moore (Harrison) 573-999-3197

Bill Dreyer Submissions

February 14, 2025

To Whom It May Concern,

I currently serve as an Agricultural Educator in Montgomery Countly and have good to know Mr. Bill Dreyer through his conservation of native species work. We have been very fortunate that Bill has served as a quest lecturer and his property has been a learning lab for our Agriculture Classes and FFA Career Development Teams. Today I would like to express to you that the stewardship of Mr. Dreyer's grazing lands and forests are vital to our local community.

Through Mr. Dreyer's work we are able to find many native to Montgomery County plant species that you cannot find in other places in our county. His tireless work in restoring the native plants, and by extension native insect, and wildlife species have made his property to be of the highest acological importance in our county.

This property is an Ecological Transition Zone Including the Historic Tail Grass Prainte, Historic Savannan, Woodlands, and Forest. The property is a model of Ecotype Native Plant Communities in our county. The number of bird species that can be found on his property is a direct indicator of the ecological health.

Thanks to Mr. Dreyer's commitment to creating this impressive restoration and preserving this landscape and his commitment to using it for educational purposes, all of Montgomery County and those in Missouri interested in native species have benefited. Mr. Dreyer has hosted multiple field days and training events working with the Missouri Department of Conservation and the Soil and Water Conservation Districts locally to put them on. Private individuals were able to take advantage of those days and learn about grazing, soil health, and native habitats.

Mr. Dreyer has also worked with several of our students who are interested in careers in natural resources and conservation by serving as a mentor and seasonally employing several students to help with the conservation efforts. Each of these students

Impact of an easement for high voltage transmission lines across this landscape:

The initial impact of large equipment on these various soils is critically damaging to a core area for Henslows Sparrows nesting; and foraging in among seasonally diverse native communities. As the National Henslows Sparrow population is dropping from "Threatened" status toward "Endangered" status, The breeding population on this Prairie remnant has increased. Under prairie management Henslows Sparrows thrive here.

Fire is the critical tool for managing successional plant communities important to Henslows habitat needs. Prescribed burning has been the primary restoration tool used for germination of seeds in the seed bank, and to remove excessive ground cover and competing vegetation that supresses seasonal germinaton and seedling establishment.

Carbon columns rising from burning high organic matter Tall Grass Prairie under high voltage lines cause high voltage arcing to the ground. Black columns are normal to prescribed burning in these Tall Grass Prairies. Last year I used 7 seperate burns in different management units on this landscape.

Henslows Sparrows are among the most secretive of ground foraging Sparrows. Construction of an easement would destroy and fragment their most favorable foraging and nesting sites. The influence of electromagnetic EMF radiation on these birds is not understood.

Prairie Crawdads and the Northern Crayfish Frog depend on the

has gained a wealth of knowledge and which will be a ripple effect on future generations.

The continued preservation of Mr. Dreyer's property is of the upmost importance to our agricultural community. The stewardship of our county's crop land, grazing land, forests and ecology are the basis of our economy.

Sincerely

Mary Leykamp
Montgomery County R-II
Agricultural Educator

mleykamp@mc-wildcats.org

soil structure created and maintained by deep rooted Tall Grass species and native forb species; such as the Sylphium Genus; including Cup Plant, Prairie Dock, Compass Plant, Rosin Weed. Water intake in the "Claypan Prairie" soils is only possible because the clay soil structure is dramatically changed by the organic matter to dramatically increase water intake. The Clay Pan Prairie has one of the most unusual water retention dynamics; ie. due to surfaces of clay particles with the addition of organic matter retaining water longer than all other soil types. These dynamics enable Prairie Crayfish to dig deep tunnels into the clay, 3'-4'-5' deep with lateral channels off to the sides. In Summer droughts the crayfish survive in their moist excavations. I have watched Speckled King Snakes go into these holes.

"Continuity" for Prairie water cycle dynamics has something in common with the "Continuity" as applied to electrical circuits. When Soil Structure is degraded by the destruction of suitable native plant communities the soil water table and spring function decreases. As I understand "Continuity" defined to describe electric circuitry refers to a " complete path for current flow." Soil water retention "capacity" is very high in this prairie with the native plant communities. Capacity decreases drastically with the destruction of the native plants and loss of soils structure and compaction.

The evidence of this continuous transition of integrated plant communities and the life of this Wet Mesic/ Clay Pan/ Oak Hickory Savannah/ Woodland / Forest Ecosystem depends on this continuity in the soil water table. By referring to my list of

native brushy species such as Swamp Rose, American Hazelnut, Button Bush, Willows, and trees like Swamp White Oaks and Cottonwoods it is easy to follow the transition of historically adapted species from Prairie to Forest and see the integrity of this living ecosystem.

Breaking this continuity influences the water table and all of the

Construction of High Voltage Transmission lines on this landscape would necessitiate cutting through Savannah which is home to a many species of Birds species of conservation concern.

Construction of transmission lines would destroy Shag Bark Hickories important as Summer breeding habitat for Indiana Brown Bats. Research indicates that Bat foraging activity is significantly reduced in habitats exposed to an EMF of greater than 2 v/m as compared to foraging in sites registering EMF levels of ZERO.

Savannah is one of the most ecologically diverse ecosystems on earth. Destruction of "canopy trees", "Mid-story tree, bush, grass, sedge, wildflower species, will decrease the numbers of both migratory bird species and especially the Savannah nesting bird species which are listed with Audabon Society as both Endangered and among the most vulnerable.

This Bill Dreyer Landscape has some of the highest male Bob-White Quail call frequencies in the State of Missouri. Quail Biologist rank this landscape in the top 6% when compared to the best of State managed lands. Early mating in April as opposed to

This landscape includes an adult pair of * resident Bald Eagles which hunt here daily, along with * resident Osprey, Kingfishers, Green herons, Great Blue Herons. High Voltage Transmission lines are a danger to these Eagles and Osprey.

In order to preserve the quality of these grasslands including the Savannah, I graze cattle. My restrotation grazing system depends on annual and seasonal availability of forages and water. The grazing of grass enhances the wildflower seed production. My income is from native seed and livestock sales. At present this self- sustaining agricultural system provides me with my work and income for stewardship. The easement which is being proposed crosses about 12 out of 22 variable grazing paddock choices I have to operate in. The constraints of an easement would reduce my profit margin to an unsustainable level and the loss of my own life-style, my livelihood, and future.

This landscape is an valuable learning center for Land-Managers, Conservationist, Ecologists, Grazers, High School, and Grade School students in our County. And this is a special part of God's Creation place where people come to enjoy nature, to fish and to hunt. This amazing eco-system can not be replicated.

May mating is also considered a "Prairie Quail" dynamic which sets this landscape apart from other Montgomery County landscapes where this dynamic is not present. In recent years 2 pairs of Cooper Hawks nest and hunt on this landscape. Transmission lines may give predators (such as Coopers Hawks) which dive for prey an extra advantage.

In these complex native plant communities their seasons of growth and various functions create a fabric of life. When the proportions of each species is altered the whole balance changes. I know this as a fact of my life as I have influenced successional changes to restore this balance and great diversity.

Migratory Waterfowl that use this ecosystem are following a drainage that links this landscape with the Smith Branch Creek, and the Loutre River. Trumpeter Swans make regular annual stops on this lake during Spring and Fall migrantions. Their numbers have grown since the first year a single pair stopped here. * Flocks of many different species preparing to land, circle my lake. The obstruction of transmission lines running diagonally across this landscape would interrupt that behavior. Circling is an important behavior in waterfowl to determine the safety of the feeding grounds. Waterfowl which do not have a safe haven will fly on. Wood Ducks in flocks of 100 plus travel through this drainage as their numbers are distributed into NE Montgomery County. In some years as many as 12 nesting pairs have been residents here. The Proposed Transmission Easement will destroy some of their nesting trees and alter their circling and migratory behaviors

Birds, Reptiles, Mammals, Lepidoptera, Insects & pollinators,

Bird Species that frequent the Bill Dreyer landscape & Carl Dreyer Lake - 94 species (seen and heard regularly, and identified and recorded since 2000.)

Of Audubon Societies list for "High vulnerability species in The Mississsippi Flyway", 19 of those species either nest or migrate through here.

Of Audubon Societies list for "Medium vulnerability species in The Mississippi Flyway", also 19 of those species either nest or migrate through here.

Prairie Species, and Savannah: * Federally listed "Henslows Sparrow *(Threatened status) Henslows Sparrows thrive on this landscape with many nesting pairs, Chipping Sparrow, Song Sparrow, Fox Sparrow, ***Field Sparrow, Grass-hopper Sparrow, ***Vespers Sparrow, Savannah Sparrow, Swamp Sparrow, White Crowned Sparrow (seasonal), Fox Sparrow (seasonal), Sedge Wrens, Logger Head Shrike (occasional), Dickcissels (nesting) as many as 50 pair, Bob o Link occassional (migratory).

**Upland Sand Piper; Migratory Bird laws make it illegal to hunt! (grassland habitat disappearing; numbers in decline),
**Northern Herrier is a regular seasonal hunter here, but experienced population declines and is a species of management concern listed by the US Fish and Wildlife Service. (seasonal),
Snowy Owl (Winter),*** Eastern Meadow Lark, Boat Tail Grackle (seasonal); Northern Bob-White Quail nesting pairs and coveys,

Cow birds, Barn Swallows, Cliff Swallows, Morning Doves...

Savannah & edge species Yellow Shafted Flicker, Cat Bird, Mocking Bird, ****Prown Thrashers, Yellow Breasted Chat, Indigo Buntings, Rufus Sided Towhee, Bells Vireo, Gold Finches, Rose-Breasted Grosbeak, Orchard Oriels, Baltimore Oriels, Scarlet Tanager, Purple Finch, Coopers Hawks nesting, Turkey Vultures, Red Tail Hawks nesting, Blue Birds, Kestrel nesting, Dark Eyed Junco, Sharp Shinned Hawks, Blue Jays, Rufuss Sided Towhee, American Crow, Robins, *** American Wood Cocks nesting...

Swamp & Shore-line: Wood Ducks nesting pairs, Red Wing Blackbird, resident King Fishers, resident Green Heron, Night Hawks, Great Blue Heron, Great White Egret (yellow bill / black legs) occasional, Kill Deer, Resident Bald Eagles, Osprey, Fish Crow, Mississippi Kite (migratory)

Water Fowl: Trumpeter Swans (annual migratory), Canadian Geese resident, Snow Geese (seasonal), White Fronted Geese (seasonal), Green and Blue Winged Teal (migratory), Mallards (migratory), Scaup & othjer Diving Duck species (migratory) - Mergansers (rare and seasonal), Cormorants (rare and seasonal), Common Golden Eye (migratory diving ducks in flocks of 200 stay to feed for days), Canvas Back (migration), Northern Pin-Tails (migration), others

***Audubon Society Schlitz Nature Center lists 20 bird species in The Mississippi Flyway of Greatest Conservation Need. Each bird is listed as "Endangered"

Bill Dreyer's input for an Environmental Impact Statement

care of Grace Parrott & Leah Dettmers

The detail in this document will give anyone who needs to understand the character of this landscape the information they need. This Landscape is a vital functioning eco-system.

This landscape is a vanishing Eastern Claypan Tall Grass Prairie Transition Zone of Priority for Ecological Preservation.

Please see my flora and fauna species list.

You will also see my explanations of how and why mitigations for an easement can not be successful for preservation of this landscape.

I will also send a map of soil-types which these various species are associated with.

And I will send a few photographs of plant communities for your study to verify the reality of this landscape. I have numerous photos and videos for you at your request! Some are large landscape photos and others are of single species ore smaller plant communities. But I do not want to inundate you with too many.

Please do not hesitate to ask for others if it will help you to understand the character of this landscape.

Thank You for your attention. Please let me know that this folder has been received.

***8 of these birds are common on "this landscape" my property at 144 Mitchell Road

Woodland and Forest Birds: *** Yellow Billed Cokoos, *Brown Creepers, ***American Wood Thrush, Humming Birds, Whippoorwills, Wild Turkey, Nut Hatch, Tufted Tit-Mouse, White Throated Sparrow, ***Accadian Fly-Catcher, Eastern Phoebe, Orange Crowned Warbler, Cerulean Warbler, Nashville Warblers, Prothornetary Warbler, Cardinals, Pilated Wood-Peckers, ***Red Headed Wood-Peckers, Downy Wood-Peckers, Red-Bellied Wood-Peckers.

Reptiles: Ornate Box Turtles, Painted Water Turtle; Eastern Snapping Turtles; Black Rat Snake, Smooth Green Snake, Dekay's Brown Snake, Prairie King Snake, Speckled King Snakes, Northern Water Snakes, Hog Nose Snakes, Ring Neck Snakes; Five Lined Skinks, Fat Heads Skink, Glass Lizzards, Fence Swifts,

Bill Dreyer Native Plant Species

* These are native species populations found on this landscape. Lists specify plants on the sites where they are most common, and they are found in other sites also. Eco-type native seed was collected from other remnant local sites with the same soil characteristics to increase these populations. Some site typical species are listed but not counted in the eco-type list in order to be historically accurate in the restoration

Grasslands: Species present on the landscape (eco-type natives)

Swamp Agrimony/ Agrimonia parviflora

Alum Root/ Heuchera richardsonii

Asters; Willow Leaf/Symphytrichum praealtum; New England/Symphytrichum novae-angliae, Heath Aster/Symphytrichum ericoides; Smooth Aster/ Symphyotrichum laeve

Beards Tongue; Penstemon Digitalis, Penstemon Tubaeflorus

Bergamont: Monarda Fistulosa

Biden's tripartita/ Burr Marigold / Aristosa; Biden's bipinata/frondosa/ Spanish Needle

Big Blue Stem; Andropogon Gerardii

Black Eyed Susan; Rudbeckia Hirta

Black Sampson / Orbexilum pedunculatum

Blazing Stars: Prairie / Liatris Pycnostachya; Rough / Liatris Aspera; Scaly

Blazing Star/ Liatris Squarrosa; Liatris cylindrica

Boneset: Common / Eupatorium Perfoliatum; Tall/ Eupatorium

Bunch Flower / Melanthium Virginicum Canada Wild Rye/ Elymus canadensis

Blue Eyed Grass/ Sisyrichium Campestre

Goldenrod/ Solidago Nemoralis; Thread Leaf Goldenrod

Ground Cherry/Physalis virginiana

Illinois Bundle Flower/ Desmanthus illinoiensis

Indian Grass/ Sorgastrum nutans

Indian Paint Brush/ Castilleja coccinea

Indigo Creamy/ Baptisia bracteata; Indigo White / Baptesia alba

Ironweed/ Vernonia fasciculata

June Grass/ Koeleria macrantha

Ladies Tresses/ Spiranthes gracillis

Lance-leaved Loosestrife/ Lysimachia lanceolata

Lead Plant/ Amorpha canescens

Lespedeza Round Head/ Lespedeza capitata; Lespedeza Slender /

Lespedeza virginica

Little Bluestem/ Schizachyrium scoparium

Lousewort / Pedicularis canadensis

Maryland Senna/ Senna marilandica

Meadow Rue / Thalictrum dasycarpum

Milkweed Butterfly/ Asclepias tuberosa; Common/ Asclepias Syriaca; Green Milkweed/Asclepias viridiflora; Purple Milkweed/Asclepias purpurascens; Swamp Milkweed/ Asclepias Incarnata

Forb w smell of Maple syrup

Milkwort Field/ Polygala sanguiea

Mountain Mint; Hoarry/ Pycanthemum incanum; Slender Mountain Mint/

Pycanthemum tenuifolium

Mushroom spp. (grassland spp.)

Cinquefoil/ Potentilla Simplex

Compass Plant/ Silphium Lacinatum

Coneflower: Grey Head / Ratibida Pinnata; Pale Purple / Echanaceae Pallida (sparce in clay pan)

Coreopsis; Prairie/ Coreopsis Palmata; Tall / Coreopsis Tripteris

Cudwort

Cup Plant/ Sylphium Perfoliatum Daisy Flebane/ Erigeron strigosus Depthford Pink/ Dianthus armeria

Dewberry/ Rubus flagellaris

Dodder/ Cruscuta

Dogbane/ Apocenaceae cannabinum

Dropseed; Tall /Sporobolus compositus; Prairie / Sporobolus heterolepis

False Sunflower/ Heliopsis helianthoides

Fescue Cluster/ Festuca Paradoxa

Flowering Spurge/ Euphorbia corollata

Fowl Manna Grass

Gama Grass Eastern/ Tripsacum dactyloides

Guara Smooth/ Guara biennis

Gentian; Downy Blue / Gentiana puberulenta; Rose Gentian / Sabatia

angularis; Closed Gentian / Gentiana andrewsii

Germander/ Teucrium canadense Golden Alexanders / Zezia aurea

Goldenrod; Grass-leaved/ Soildago graminifolia; Missouri/ Solidago missouriensis; Stiff Goldenrod/ Solidago rigida; Gray (old field)

Nimbel Will; Muhlenbergia

Nodding Ladies Tresses/ Spiranthes cernua

Obedient Plant/Physostegia virginiana

Orchid; Ragged Fringed Orchid/ Platanthera lacera

Panic Grasses: Beak Seeded Panic Grass/ Coleataenia anceps; Witchgrass/

Panicum virgatum; Deerstongue Panic Grass/ Dichanthelium clandestinum; Switch Grass / Panicum vergatum; ...

Parsley Prairie/ Polytaenia nuttallii

Partrige Pea/ Chamaecrista fasciculata

Pencil Flower/Stylosanthes biflora

Petunia Wild/ Ruella strepens

Petunia Hairy/ Ruellia humilis

Phlox Garden/ Phlox paniculata

Prairie Clover White/ Dalea candida

Prairie Cord Grass/ Spartina pectinata

Prairie Dock/ Sylphium terebinthaceum

Prairie Foxtail /Seteria geniculata

Prairie Cord Grass/ Spartina pectinata

Common Evening Primrose/ Oenothera biennis; "Ozark Primrose" / Prarie Sundrops / Oenothera pilosella

Pussy Toes/ Antennaria neglecta

Wild Quinine/Parthenium integrifolium

Rattlesnake Master/ Eryngium yuccifolium Rose "Swamp"/ Rosa palustris

Rose Prairie/ (not climbing)

Rose Arkansas

Rosin Weed/ Sylphium integrifolium

Rough White Lettuce / Nabalus asper; Lactuca virosa

Rushes spp. "Green Bull Rush" / Scirpus atrovirens; Juncus Minor; + other spp. emerged in waterways and pond edges.

Sampson Snakeroot / Orbexilum Pedunculatum

Sedges: Carex = 21+ species on Prairie, including Cyperus Nutsedge; "Frank's Sedge" Carex Frankii; Carex Shotiana;

Seed Box/ Ludwigia alternifolia - in swales

Sensitive Briar / Mimosa quadrivalvis

Slender False Foxglove / Agalinus tenuifolia (or Fascilated?)

Slim Seeded Climbing Bean / Strophostyles leiosperma

Sneezeweed / Helinium autumnale

Spiderwort/ Tradescantia ohiensis

St. Johns Wort spotted/ Hypericum punctatum

Strawberry wild/ Frageria virginiana

Sunflower "Prairie" / "Stiff" / Helianthus pauciflorus

Sunflower "Sawtooth" Helianthus grosseserratus

Sunflower maximillian/ Helianthus maximiliani

Sunflower Ashy/ Helianthus mollis

Three Awn Grass/ Aristada basiramea

Trefoil Illinois/ Desmodium illinoense

Trefoil Showy/ Desmodium canadensew

Venus Looking Glass/ Campanulaceae (sp.?)

 $15\ eco$ -type natives; not including (Pickerel Weed / Pontederia cordata & Pink Lotus introduced Missouri natives)

Savannah Slopes: Swamp White Oak; American Euonymus; Muhlberry; Nanny Berry Viburnum (*endangered in Missouri) on Southern edge of range; Black Haw Viburnum/ Viburnum prunifolia; Aromatic Sumac; Joe Pye Weed; Giant Trillium; Goat's Rue / Tephrosia virginiana; Showy Goldenrod; Michigan Lily; Indian Physic; May Apples; Post Oaks; Shagbark Hickory; Brushy Saint Johns Wort; Prickly Ash; Woodland Brome; Rudbeckia triloba

19 eco-type species

Open Woodlands: Silky Wild Rye; River Oats; Wood Reed Grass; American Beak Grain Grass; Smilex spp; Bitternut Hickory; Walnut; Northern Red Oak; Black Oak; Black Cherry/ Prunus serotina, Honey Locust; Ash Tree; Pawpaw/ Asimina triloba; Sycamore Tree; Common Serviceberry; Bluebells; Jewell Weed (Touch me not), Stinging Nettle, Woodland Brome Grass; Milk Wort; Sky Blue Aster/ Symphyotrichum oolentangiense; Woodland Blackberries; Red Bud Trees; Solomons Seal/ Polygonatum Biflorum; Upland Boneset/Eupatorium sessilifolium; False Solomon Seal/ Maianthemum racemosum; Wild Ginger/ Asarum canadense; Horse Gentian/ Triosteum aurantiacum; Jerusalem Artichoke / Helianthoides tuberosa; * rare site specific Wild Dill/ Perideridia americana; Licorice Root/ Glycyrrhiza lepidota; Bedstraw / Galium aparine; Culvers Root/ Veronicastrum virginicum; Yellow Star Grass/ Hypoxis hirsuta

 $34\ eco\mbox{-type}$ spp. + Mo native Cardinal Flower/ Lobelia Cardinalis and Purple Coneflower

Forest: White Oak/ Quercus alba; Missouri native *rare Wild Blueberries; American Hop Hornbean; Wild Raspberries; Bell Wort/ Uvularia grandiflora; Skull Cap/ Sculellaria laterifloita; Green Dragon; Wild Hyacinth/Camissia sciloides; Trout Lilies; Dutchmens Britches; Spring Beauties/ Claytonia virginica; Starry Campion; Smilex hispida; Giant Yellow Hysoy; Thin Leafed False Foxglove; False Nettle; Horse Nettle / Solenum; Ground Cherry/ Physicillis; Day Flower/Commelina Virginia; Desmodium perplexing; Virginia Creeper; Horse Gentian; Maryland Figwort; Aster Anomalus (involucre bracts) = "Heart Leaf; Clasping Leaf

	and 189. I'm currently in the process of designing additional facilities for my 2 brothers and son to move up, the route over my property covers my entire property and is not acceptable to me.		
12	Concerns about power lines crossing my property: -Reduces the amount of land needed for crops, -Concerns about EMF emissions and health risks. There are already high transmission prewer lines near me which could perhaps double the health risksSlightly lowers property value.	2/11/2025 8:49 AM	
13	Take my home over my dead body	2/10/2025 11:57 AM	
14	My landscape is an historic ecosystem restored to over 400 Native species. This is the transition zone between the Czarks White Oak, Poners Savannah and tall grass prairie. This is a private natural area with a ffettine of personal investment.	2/10/2025 11:55 AM	
15	The real reason that you refuse to tell the public is because you have been fold to supply the new "mega data center" directly to the cest of my property with reliable power. Route - land to the North of by brases and the neighbors land directly to the north of mine needs termices, that could change the grade and elevation. Route - land directly north of my house has a waterline that parallels Bible Jay road for 1 mile.	2/10/2025 10:41 AM	
16	Concerns about housing. Standing building. Road/drive access, Loss of mature finder, grasses, wildfluxers and privacy. Route 3 - Main focus is loss of trees, privacy and close proximity of power lines to my home.	2/10/2025 10:15 AM	
17	Save money and stay along existing easements. Existing routes save more landowners from being affected.	2/10/2025 9:11 AM	
18	If the Montgomery-Callaway project went through the north area. Would effect our rotational graze cattle operation, Both farms effected, mine and my fathers. Use existing route. Same route = less cost.	2/10/2025 9:06 AM	
19	Use the easiest existing route.	2/10/2025 9:03 AM	
20	From the map we viewed the path of 65 and #8 passes through our property it shows going poer our house and a restal house next to us to the West. We have small children and concerned of the exposure of the time, as well as the visual distultance of our property. Route 5 - goes over our house, concerned for our children, and children in the house to the west of our home.	2/10/2025 9:00 AM	
21	Route 10 - we have pivots along this route and planning to add more.	2/10/2025 8:57 AM	
22	Route 10 - We have several center pivots along this route and are planning to add more.	2/10/2025 8:52 AM	
23	Property in route option is 9 acre lot of a corner only 150 yards from home and less from neighbor, Property value would drastically drop if line goes through. Small acreage - not a farm.	2/10/2025 8:45 AM	
24	Where routes 9, 8 and 5 meet, we have our farm. Route 5 goes right over our house. Concerned about health with a line nurning that close. Also, the location would destroy our view. Route 5 goes overlight next to our farme with four small children.	2/10/2025 8:25 AM	
25	Own 9 acre comer for in route option. Line could be within 150 yards max of home and closer to house across gravel road. Property value of land and home would decrease significantly. Not a farm water small property that would be affected.	2/10/2025 8:20 AM	
26	Preservation of praines, forests, wetlands and streams is crucial to the health of wildlife, people and the earth. Please avoid these natural areas on public and private land.	2/10/2025 8:15 AM	
27	I don't want this going thru my property, I fly a helicopter and planes off and on my property	2/8/2025 2:53 PM	
28	I am vehemently against this project going across my tarm, I already have 2 electric tower excements cutting up my farm and I don't want any more. This towerline would rain the view from my house and rain the farm I have worked so hard to create.	2/8/2025 11:39 AM	
29	One of the proposed routes crosses over 80 acres of our property which is in the Conservation Reserve Program. My concerns are how will that construction and essement impact the property and the program this property is in both financially and related to the grasses/habitat for widtler.	2/7/2025 2:26 PM	
30.	How will this play out if/when Ameren takes a swath out of our leased solar fields that's been in the works for 7 yrs and construction is now underway? Where does this leave us and Ranger	2/7/2025 10:04 AM	

23/25

Montgomery-Callaway Connector Project

Q5 If you would like to comment further on your answers above or identify any other issues that you would like to be considered, please use the space below.

	RESPONSES	DATE
	I do not want any of this on my project, bury the cables	3/14/2025 1:21 PM
2	One route goes directly over my farm. Only concern is avoiding lines going overhead/hear my buildings	3/5/2025 7:39 PM
3	Negative effect on property values, health effects, esthetic value decline, negative effects on wildlife, etc.	3/5/2025 12:22 PM
4	One of your proposed routes cuts my property in half. I already have three electric right of ways chopping up my farm. Your note also would go upts across the area that his the pretitest view from my house. I am YEMEMETH' AGAINST the note that you are panideling that would go over my property. I will do everything legably to prevent you choosing this route.	3/5/2025 6:16 AM
6	Without knowing your route and where it might affect our home and farm this is a worthless form. You should have enabled us very detailed into on how this will have an impact on us, We do not wint your lines on our property. We suspect you have known from the onset the route you will be using - you should be sharing this info from the get-go.	3/3/2005 4:34 PM
6	This could interfere with our contract with Ranger Power.	2/23/2025 3:17 PM
7	Since wooded land is in such short supply, it is important to avoid the destruction of woods and walklife habitat. A 150 foce right of way is a very wide swaft, considering that the land will be aggressively managed in perpetuity to protect the transmission lines.	2/23/2025 1:50 PM
8	The effect on timber and wildlife habitat	2/15/2025 11:55 AN
9	The concern with these high virilige intertesions into six that they have aim impact to the lamining community with their electrical interference with OFF5 in ever domes, Including, sprayers, etc within a 12 a mile. This will provide a substratal impact to the right to latern land a mild around their estimanismosi lines. Thereinssion lines copie to largo largo with a property of the largo largo	2/13/2025 6:13 PM
10	My gonice, we should use the highway right of ways to make it easily accessible for require- shich is a sharple in michould analoging out along individuals form and measuring with their locomes in which they need to tive. Use the original existing highlines and just vasten, it would be most eccommissify and costs sample, My not go sharple from Aucusse to their Periorice instead of going up, cover, up, over etc. Willy not go though the conservation new which will not allect as much formatful. It finitely comed to make how many propelle this a going to effect, the algoricultural farm producing families. Now much diseasection this is a going to cause to good trainland that we need to keep out some, why should go and the term up with an off	2/12/2025 5:45 PM
	construction and repairs and be open to all kinds of people roaming on our lands that we do not even know.	

Montgomery-Callaway Connector Project

Power/Show Me Solar??

31

32

33

According to proposed route map any of the northern routes would take the power lines through part of our and our neighbors properties. That alignment would be close to several houses and planned houses. One young couple bought property to build a house, but this route might planned houses. One young couple bought property to build a house, but this route might eliminate their plan to build. To keep the lines away from our neighbors would move it closes to our house which would require more trees to be removed which voud and uniour property. We have purposely build not house in the woods to isolate us and have the rest of the woods for recreational purposes. Lurge tracts of ram land have the least simple, though not zero. Why can't you use the right of way where the other electric lines are rather than cross in the middle of a person's property and ruin the value of a property? 2/5/2025 5:31 PM

2/5/2025 2:44 PM

ameren needs to be planning lines that can be used for non-fosil fuel electric use. (drive 70 though Karisas we need that kind energy look at our wester, don't think short term) for those that this will go on their land a on eime payment is re-ough, put a fax on the value of the current in those lines and pay those people: they will look at it differently: central missouri is hillybally country. This is all about the Grain Belt Express. Ameren is the middleman to finish out this project. Ameren is being decelful. This is a sham. It is all about the GBX spreading misery to thousands of landowners. There are also health concerns about people who live near these 345kV transmission lines that are not being addressed, not to mention our livelihood, and devaluation of proporty value. 34 2/5/2025 12:09 PM

SaleX tritis intestion meets that are not being aburessed, not to mention our inventiood, and devaluation of property value.

This project will possibly go right through the middle of my property at 712 State Rd N (project trute 47). I didn't realize how big of a land mass that these polls and power lines would consume until I went to the open house in Fulton and seen it in person. Not only would this completely hault the farm production I have. My rotational graze operation would have to have all the fences taken out to give Ameren access. Not to mention I have spent the last 5 years taking out invasive honey locus that consumed my pasture just to have Ameren one in and put in another eyesore. It would take most of my south wood line with the projected pathway through my tame a loan through the USDA and a mn et allowed to take major sections of woods let alone log It. I would have to let USDA know about this potential route and how that would also affect me and the area. Not to mention that's the best turkey hunting spot and deer hunting I have on the farm. Pretty much taking one of the best things I love about my farm away. The last point is this route would go right by my house (I really diorit want that) And go right along my parents doing the same harm as it would have on mine. Disrupting all the hard work my father and I have done everything outselves. Just to see it taken away with this project. I will say I was too numb to comprehend everything at that meet and green in Fution. That our farm was reality one of the options out of 4 possibilities. I sacificed almost all my 20's living with my parents just to have it is sacificed almost all my 20's living with my parents just to have it is sacificed almost all my 20's living with my parents just to food my passible to the proposed project.

What and whom benefits from this from this proposed project. 35

What and whom benefits from this from this proposed project. 1/28/2025 11:44 AM 37 With all the solar fields going in WHY does this project need to happen? And who is paying for the projects AS YOUR CUSTOMER?? 1/23/2025 11:15 AM 38 I see no indication of the consideration of weather-ice storms, tornadoes, wind, etc. Has the technology improved these transmission lines regarding the reliability during storms, etc.? 1/23/2025 10:30 AM
