

Exhibit No.:
Issue(s): Transmission
Interconnection
Distribution Reliability
Witness: James L. Ketter
Type of Exhibit: Rebuttal
Sponsoring Party: MoPSC Staff
Case No.: EM-2000-369

ON BEHALF OF THE
MISSOURI PUBLIC SERVICE COMMISSION
UTILITY OPERATIONS DIVISION

REBUTTAL TESTIMONY

OF

JAMES L. KETTER

UTILICORP UNITED INC. AND
THE EMPIRE DISTRICT ELECTRIC COMPANY

CASE NO. EM-2000-369

Exhibit No. 704
Date 9-13-00 Case No. EM-2000-
Reporter NI 369

Jefferson City, Missouri

June, 2000

Rebuttal Testimony of
James L. Ketter

1 Engineer in the state of Missouri; my registration number is E-20056. I am a member of
2 the National Society of Professional Engineers and I am a member of the Jefferson City
3 Chapter of the Missouri Society of Professional Engineers.

4 Q. What is the purpose of your testimony in this case?

5 A. Concerning this application from UtiliCorp United Inc. (UtiliCorp) to
6 merge its electric operations with The Empire District Electric Company (Empire), the
7 purpose of my testimony is to discuss issues involving the interconnection of transmission
8 facilities and the reliability of the distribution system for the combined company.

9 UtiliCorp and Empire presently have no direct connection of their
10 transmission facilities. UtiliCorp witness Richard C. Kreul outlines in his direct testimony
11 alternatives studied to provide a direct connection for the proposed merger. I will address
12 the alternative assumed by the Staff in evaluating the total merger costs. I will also address
13 electric service reliability to customers under the proposed merger, and the need for
14 establishment of reliability indices, so that the merger is not detrimental to the public
15 interest.

16 Q. How does your testimony filed in this merger application compare to
17 the testimony you filed earlier concerning the same issues in the UtiliCorp/St. Joseph Light
18 & Power Company merger application, Case No. EM-2000-292?

19 A. This testimony is very similar, and in some sections is identical to, the
20 testimony on the same issues I previously filed in Case No. EM-2000-292.

TRANSMISSION LINE INTERCONNECTION

Q. Have you reviewed the direct testimony of Mr. Kreul and the proposed transmission interconnection alternatives?

A. Yes, I have.

Q. Please summarize your conclusions concerning the proposed alternatives for direct interconnection of the two electric utilities.

A. The present configuration of the transmission systems of UtiliCorp and Empire does not include a direct connection between the two systems. The preferred option identified by Mr. Kreul is construction of a 161 kV line from UtiliCorp's Nevada Substation to Empire's Asbury Generating Station. The estimated cost for this option is \$16 million, which includes construction of approximately 42 miles of 161 kV transmission line and terminations at substations at either end of the line. This is the least cost option for a physical connection of the two utilities and the Staff used this cost in evaluating total merger costs.

Q. Does this alternative of constructing a new transmission line raise any problems?

A. Yes. New transmission line construction can be difficult to predict from the perspective of the time and cost required to complete. Acquiring new right-of-way can be an expensive and time-consuming process. The costs for right-of-way and possible condemnation costs are unknown. This uncertainty makes quantification of the cost more difficult, if in fact a new transmission line is needed to provide a connection between the merged systems.

1 Q. Mr. Kreul identified other options for electric system interconnection
2 that did not require new construction. Did you evaluate these alternatives?

3 A. Yes. Another option is to participate in a regional transmission
4 organization. The Midwest Independent System Operator (ISO) or the Southwest Power
5 Pool (SPP) Regional Transmission Organization (RTO) provide opportunities for the
6 merged entity to integrate the separate systems through the purchase of network
7 transmission service. The SPP offers Network Service through a Federal Energy
8 Regulatory Commission (FERC) approved regional tariff. UtiliCorp has indicated that it
9 has requested an impact study from the SPP for participation on this tariff. UtiliCorp has
10 received a response from the SPP concerning the requirements for network service and
11 UtiliCorp has found this option more costly than building new transmission facilities.

12 Q. If you assume that the transmission interconnection can be
13 accomplished by one of the above options, what other cost is involved in merging the two
14 transmission systems?

15 A. UtiliCorp has proposed that the merged utilities would be centrally
16 dispatched from the Missouri Public Service (MPS) dispatch center, located in Lee's
17 Summit, Missouri. Control of the merged transmission system will require routing of the
18 Empire Supervisory Control and Data Acquisition (SCADA) system inputs to Lee's
19 Summit. This will be accomplished by routing communication lines from the Empire
20 dispatch center, located in Joplin, to Lee's Summit so that data and remote operation of
21 equipment can be accessed from Lee's Summit. This is a transition cost, estimated at \$1
22 million, that is required to merge the service areas and dispatch from Lee's Summit. The
23 Staff has also used the \$1 million estimated cost in estimating the total merger costs.

DISTRIBUTION RELIABILITY

Q. Are you involved with responding to customer inquiries concerning the reliability of electric service?

A. Yes, as a member of the Electric Department Engineering Staff, I respond to inquiries that are referred from the Commission's Consumer Services Department or from direct contact with the public.

Q. Will other Staff witnesses address quality of service issues?

A. Yes, Staff witness Lisa A. Kremer of the Engineering and Management Services Department (EMSD) is submitting testimony concerning service indicators for the Customer Call Center and Staff witness John M. Kiebel II of the EMSD is submitting testimony concerning quality of service issues.

Q. UtiliCorp witness Stephen L. Pella addresses the implementation plan for a merged operation of the UtiliCorp and Empire systems. Are there potential improvements in the provision of reliable service offered to Empire customers by the proposed merger with UtiliCorp?

A. Yes. A computer-aided dispatching system utilized by UtiliCorp allows service technicians to work remotely more efficiently and effectively by providing information to the service truck. Communication between the Customer Call Center and the truck would provide updates and better information to the workers that would speed the response to customers' needs. This technology is a great tool in providing efficient and effective response to outages and response in general to customer needs. Implementation of this technology in the Empire service area is subject to further analysis by UtiliCorp to

Rebuttal Testimony of
James L. Ketter

1 determine the feasibility of utilizing this computer-aided dispatch in the Empire service
2 area.

3 Communication between computers across the Empire territory is necessary
4 to operate this system of a direct link to the service truck. The feasibility of expanding this
5 system into the Empire service area has not been established. UtiliCorp indicates that if
6 the analysis is positive, the current timetable to expand computer-aided dispatch to the
7 Empire area is the third quarter of 2001. Offering this technology to the Empire area could
8 have a positive benefit to Empire customers, if it can be economically implemented.

9 Q. If the UtiliCorp and the Empire systems are merged, how can
10 reliability be monitored?

11 A. Reliability measures that are currently maintained by UtiliCorp
12 include a System Average Interruption Frequency Index (SAIFI), a System Average
13 Interruption Duration Index (SAIDI) and a Customer Average Interruption Duration Index
14 (CAIDI). These indices provide information from UtiliCorp districts and system-wide
15 averages that can track the overall performance of the delivery of electric service. These
16 same indices are maintained by Empire to track service interruptions.

17 Use of these indices on a total company basis may not reveal the existence
18 of local areas that experience unusual service interruptions, the existence of which are
19 usually brought forward by customer complaints to the utility or to the Commission's
20 Consumer Services Department. Resolution of individual or isolated problems will
21 continue to be addressed by utility action, through the recognition of the need for system
22 improvements, or complaints from customers.

Rebuttal Testimony of
James L. Ketter

These indices (SAIFI, SAIDI and CAIDI) will provide a benchmark to monitor how electric service reliability is being maintained if the utilities are merged. Reliable electric service is an important issue for customers, regardless of the electric supplier, and will be an important issue as the electric industry moves toward a competitive market.

Below is a tabulation of the SAIFI, SAIDI and CAIDI results for UtiliCorp's Missouri Public Service division (MPS) and Empire. These numbers reflect the actual outages and number of customers, without any changes for unusual weather occurrences:

UTILICORP - MPS

	1997	1998	1999	3 YR AVG
SAIFI	0.9830	1.2950	0.9217	1.0666
SAIDI	1.3171	3.8153	1.1474	2.0933
CAIDI	1.3399	2.9461	1.2449	1.8436

EMPIRE

	1997	1998	1999	3 YR AVG
SAIFI	1.14	2.48	2.03	1.9200
SAIDI	0.96	1.60	1.80	1.4800
CAIDI	1.20	1.07	2.06	1.3900

The SAIFI index (number of occurrences) reflects the average frequency that customers experience electric outages and is defined as the total number of customers interrupted divided by the total number of customers. The SAIDI index (hours) reflects the system average interruption duration and is defined as the sum of all customer interruption duration divided by the total number of customers. The CAIDI index (hours) reflects the

Rebuttal Testimony of
James L. Ketter

1 customer average interruption duration and is defined as the sum of all customer
2 interruption duration divided by the total number of customers interrupted.

3 These reliability indices show overall system performance as an average of
4 the total customers, the system average duration and the customer average duration. These
5 measures can help in accessing the performance of the utility in providing reliable electric
6 service. The indices will help define the quality of service provided and bring attention to
7 any positive or negative impact that a merger of utility systems might bring.

8 Q. What is your recommendation concerning the use of the SAIFI,
9 SAIDI and CAIDI indices to monitor quality of electric service?

10 A. My recommendation, should the proposed merger of UtiliCorp and
11 Empire be approved, is that UtiliCorp be directed to maintain the SAIFI, SAIDI and
12 CAIDI reliability measures separately for its MPS and Empire divisions, and provide this
13 information to the Staff in the manner recommended in the rebuttal testimony of Staff
14 witness Kiebel. The Staff will monitor this information, as well as the complaints received
15 from customers, to help ensure that customers continue to receive reliable electric service.

16 Further, I recommend that rolling three-year averages of the SAIFI, SAIDI
17 and CAIDI indices be used as the appropriate indicators for distribution reliability of
18 service for MPS and Empire after the merger. The process for monitoring these indicators
19 and for MPS and Empire to take remedial action in this area, if applicable, is outlined in
20 the rebuttal testimony of Staff witness Kiebel. The rolling average will include the most
21 current three years of distribution service experience for each division, calculated
22 separately. These averages should be adjusted, as appropriate, to eliminate the effects of

Rebuttal Testimony of
James L. Ketter

1 emergency, catastrophe, natural disaster, extreme adverse weather conditions, sabotage or
2 work stoppage before any remedial actions are required of MPS or Empire.

3 Q. Does this conclude your rebuttal testimony?

4 A. Yes, it does.

BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF MISSOURI

In the Matter of the Joint Application of)
UtiliCorp United Inc. and The Empire)
District Electric Company for Authority to)
Merge The Empire District Electric Company) CASE NO. EM-2000-369
