SURREBUTTAL TESTIMONY

OF

TREVOR RUCKER

**UNION ELECTRIC COMPANY, INC.
d/b/a Ameren Missouri**

CASE NO. EA-2025-0238

INTRODUCTION

Q. Please state your name and business address.

A. My name is Trevor Rucker, and my business address is Missouri Public Service Commission, P.O. Box 360, Jefferson City, Missouri 65102.

Q. What is your current position with the Missouri Public Service Commission (“Commission”)?

A. I am an Associate Engineer in the Engineering Analysis Department of the Industry Analysis Division.

Q. Are you the same Trevor Rucker who contributed to the Staff Rebuttal Report filed on December 12, 2025, in this docket?

A Yes

Q. What is the purpose of your surrebuttal testimony?

A. I will discuss Jordan Seaver's rebuttal testimony filed in this docket on behalf of the Office of Public Counsel ("OPC"). I will specifically discuss the portion of Mr. Seaver's rebuttal testimony regarding the closure of existing electric generating power plants and using the Big Hollow Energy Center ("BHEC") natural gas combustion turbine generator project

Surrebuttal Testimony of
Trevor Rucker

1 (“CTG Project”) and battery energy storage system project (“BESS Project”) (collectively
2 “BHEC Projects”) as replacement reliable electric generation.

3 Q. What are the statutory requirements related to replacement reliable
4 electric generation?

5 A. Senate Bill 4 was truly agreed to and finally passed on March 13, 2025, signed
6 by Governor Kehoe on April 9, 2025, and became effective on August 28, 2025. Among other
7 things, Senate Bill 4 added section 393.401, RSMo, which includes requirements for
8 replacement generation for existing electric generation power plants¹ to be closed. An electrical
9 corporation must certify to the Commission that it has secured and placed onto the electric grid
10 an equal or greater amount of reliable electric generation prior to the closure of an existing
11 electric generating power plant on or after January 1, 2026.² In order to determine if an equal
12 or greater amount of reliable electric generation is being placed onto the electric grid, an
13 electrical corporation shall compare the average of the summer and winter accredited capacity
14 for the generation technology of the existing electric generating power plant to be closed to the
15 average of the summer and winter accredited capacity for the generation technology of the
16 replacement reliable electric generation.³ Dispatchable power resources shall comprise at least
17 eighty percent (80%) of the average of the summer and winter accredited capacity of the
18 replacement reliable electric generation.⁴ The determination of the capacity to be assigned to
19 replacement generation shall use the resource accreditation used by the regional transmission
20 operator or independent system operator (“RTO/ISO”) at the time of the electrical corporation’s

¹ Section 393.401, RSMo, defines “existing electric generating power plant” as a thermal power plant of over one hundred (100) megawatts (MW) in nameplate capacity, a generating unit at a thermal power plant with a nameplate capacity of over one hundred (100) megawatts (MW), or two or more generating units at a thermal power plant with a combined nameplate capacity of over one hundred (100) megawatts (MW).

² Subsection 2 of section 393.401, RSMo.

³ Subsection 2 of section 393.401, RSMo.

⁴ Subsection 2 of section 393.401, RSMo.

Surrebuttal Testimony of
Trevor Rucker

1 application under subsection 1 of section 393.170, RSMo.⁵ There are additional requirements
2 related to unexpected or unplanned closures of existing electric generation power plants, but
3 those requirements are not relevant to this case or discussion.

4 Q. Can you provide an executive summary of your surrebuttal testimony?

5 A. Yes. In my surrebuttal testimony, I will discuss the requirements of
6 section 393.401, RSMo, for replacement reliable electric generation related to
7 the BHEC Projects. My analysis will show that Ameren Missouri is not required to request that
8 the Commission certify the BHEC Projects as replacement reliable electric generation, nor does
9 section 393.401, RSMo, require that the Commission certify the BHEC Projects as replacement
10 reliable electric generation. Additionally, I conclude that Ameren Missouri's calculation of the
11 average accredited replacement capacity for the BHEC CTG Project is not consistent with the
12 requirements of section 393.401, RSMo.

13 **REPLACEMENT GENERATION REQUIREMENTS**

14 Q. Can you summarize the rebuttal testimony of Mr. Seaver as it pertains to
15 replacement generation?

16 A. Yes. Mr. Seaver asserts that Ameren Missouri has not requested that the
17 Commission certify the BHEC Projects as replacement reliable electric generation for the Sioux
18 Energy Center ("Sioux"), and that subdivision 2 of subsection 4 of section 393.401, RSMo,
19 requires that the Commission certify the BHEC Projects as replacement reliable electric
20 generation for Sioux.

⁵ Subdivision 1 of subsection 4 of section 393.401, RSMo. Subsection 1 of section 393.170, RSMo, requires an electrical corporation to obtain a certificate of convenience and necessity ("CCN") prior to beginning the construction of an energy generation unit larger than one (1) megawatt (MW).

1 Surrebuttal Testimony of
2 Trevor Rucker

3 Mr. Seaver's rebuttal testimony also discusses the prudence and timing of the future
4 retirement of Sioux, including the impact of any delay to a future combined cycle natural gas
5 generation project intended to replace Sioux. Mr. Seaver notes that neither the retirement of
6 Sioux nor a combined cycle natural gas generation project have dockets before the Commission.
7 Mr. Seaver concludes that the BHEC Projects do not support the requirements of
8 section 393.401, RSMo.

9 Q. Do you agree that Ameren Missouri has not requested that the Commission
10 certify the BHEC Projects as replacement reliable electric generation?

11 A. Yes. In its Application, Ameren Missouri stated that the BHEC CTG Project
12 could be used as replacement generation for 1) Sioux in the event that a planned combined cycle
13 natural gas generation project is delayed, 2) Sioux if an event occurs that forces an early
14 retirement of Sioux, or 3) Labadie Energy Center ("Labadie") if environmental regulations
15 require an early retirement of one or more Labadie units or otherwise impact Labadie's
16 generation.⁶ Ameren Missouri also stated that these same benefits apply with respect to
17 the BHEC BESS Project.⁷ However, Ameren Missouri did not request in its Application – nor
18 in any subsequent filing in this docket – that the Commission certify either of
19 the BHEC Projects as replacement reliable electric generation.

20 Q. If Ameren Missouri has not requested that the Commission certify
21 the BHEC Projects as replacement reliable electric generation, what are Ameren Missouri's
22 plans for utilizing the BHEC Projects as replacement generation?

23 A. As I discussed above, Ameren Missouri stated that a benefit of
24 the BHEC Projects is that they could be used as replacement generation if certain events occur.

⁶ Paragraph 12 of Ameren Missouri's Application.

⁷ Paragraph 29 of Ameren Missouri's Application.

1 Surrebuttal Testimony of
2 Trevor Rucker

1 Ameren Missouri did not indicate that the BHEC Projects would be the primary replacement
2 generation for any of Ameren Missouri's existing electric generating power plants.
3 Ameren Missouri also did not indicate that serving as replacement generation was the primary
4 reason for the need for the BHEC Projects.

5 In its response to Staff Data Request 0140, Ameren Missouri stated that
6 the BHEC CTG Project is intended as replacement generation for Sioux, which has an
7 anticipated retirement date of December 31, 2031. Ameren Missouri further stated that Sioux
8 has an average accredited capacity for winter and summer of 734 MW and that the current
9 expected average accredited capacity for winter and summer for the BHEC CTG is 608 MW.
10 Ameren Missouri noted that the BHEC CTG Project would cover approximately 83% of Sioux,
11 and that other resources would be needed to cover the remaining 17%. Ameren Missouri also
12 stated in response to the data request that the BHEC BESS Project could be designated as
13 replacement reliable generation for Sioux.

14 It is unclear based on this response if Ameren Missouri's plans for utilizing a combined
15 cycle natural gas generation project to serve as replacement generation for Sioux have changed
16 since the Application. It is also unclear whether Ameren Missouri plans to utilize
17 the BHEC BESS Project as replacement reliable generation for Sioux or if Ameren Missouri is
18 simply stating that it could use the BHEC BESS Project as replacement reliable generation for
19 Sioux if needed. Staff sent Data Requests 0140.1 and 0140.2 to Ameren Missouri for
20 clarification. As of the time of this surrebuttal testimony, Staff has not received responses from
21 Ameren Missouri.

Surrebuttal Testimony of
Trevor Rucker

1 Q. Do you agree that subdivision 2 of subsection 4 of section 393.401, RSMo,
2 requires that Ameren Missouri must request that the Commission must certify that
3 the BHEC Projects are replacement generation for Sioux?

4 A. No. Subdivision 2 of subsection 4 of section 393.401, RSMo, states that
5 *“As part of its approval of the replacement reliable electric generation under subsection 1 of*
6 *section 393.170, the public service commission **shall certify** that the requirements of this*
7 *subsection **shall be met** by the replacement reliable electric generation.”* (emphasis added).

8 I'm not an attorney, but I read this to mean that in its approval of a CCN for replacement
9 generation, the Commission must simply require that the requirements of subsection 4 of
10 section 393.401, RSMo, be met in order for a generation unit to be considered replacement
11 reliable electric generation. Additionally, Section 393.401, RSMo, does not explicitly contain
12 a requirement that an electrical corporation request that the Commission certify that a
13 generation unit is designated as replacement generation during the CCN process or at any
14 other point.

15 Q. Did Staff evaluate the requirements of section 393.401, RSMo, in the
16 Staff Rebuttal Report filed in this docket?

17 A. No. At the time of the Staff Rebuttal Report, Staff did not evaluate the specific
18 requirements of section 393.401, RSMo, because Ameren Missouri did not discuss serving as
19 replacement generation as the primary reason for the need of the BHEC Projects and Staff did
20 not anticipate that the requirements of section 393.401, RSMo, would be in dispute.

21 Q. Does Staff believe that it should provide analysis of the requirements of
22 section 393.401, RSMo, and Ameren Missouri's compliance with these requirements at
23 this time?

Surrebuttal Testimony of
Trevor Rucker

1 A. Yes. Rebuttal testimony has been filed on behalf of OPC on the topic of
2 replacement generation requirements, and Staff does not agree with the analysis on the
3 requirements of section 393.401, RSMo, contained therein. This highlights the need for
4 additional analysis.

5 Q. What does section 393.401, RSMo, require regarding the CCN process?

6 A. Subdivision 1 of subsection 4 of section 393.401, RSMo, requires that the
7 determination of the capacity to be assigned to replacement generation must use the resource
8 accreditation used by the RTO/ISO at the time of the electrical corporation's CCN application.
9 Subdivision 2 of subsection 4 of section 393.401, RSMo, requires that as part of its approval of
10 a CCN for replacement reliable electric generation, the Commission shall certify that the
11 requirements of subsection 4 of section 393.401, RSMo, shall be met by the replacement
12 reliable electric generation. There are additional requirements related to the CCN process
13 related to unexpected or unplanned closures of existing electric generation power plants or if
14 an electrical corporation has experienced a significant and long-term loss of load, neither of
15 which are at issue in this case.

16 Q. If section 393.401, RSMo, does not require an electrical corporation to request
17 that the Commission certify that a generation unit is designated as replacement reliable electric
18 generation during the CCN process, what should an electrical corporation include in its CCN
19 application if it intends for a generation unit to be considered as replacement reliable
20 electric generation?

21 A. An electrical corporation should make clear its intentions or plans to utilize a
22 generation unit or facility as replacement reliable electric generation in its application for
23 a CCN to ensure that both Staff and the Commission evaluate the requirements of

Surrebuttal Testimony of
Trevor Rucker

1 section 393.401, RSMo, as they pertain to the project. In fact, it might be wise for the electrical
2 corporation to specifically request that the Commission certify that the requirements of
3 subsection 4 of section 393.401, RSMo, shall be met by the replacement reliable electric
4 generation to ensure this requirement of section 393.401, RSMo, is met. Section 393.401,
5 RSMo, does not appear to allow for this requirement to be met retroactively after
6 the CCN application has been approved.

7 Q. If Ameren Missouri was not required to request that the Commission certify the
8 BHEC Projects are replacement reliable electric generation during the CCN process, what is
9 Ameren Missouri required to do at this time with regards to section 393.401, RSMo, if it intends
10 to utilize the BHEC Projects as replacement reliable electric generation?

11 A. Ameren Missouri must determine the average accredited replacement capacity
12 for the BHEC Projects by averaging the summer and winter accredited capacity using the
13 resource accreditation used by the RTO/ISO at the time of Ameren Missouri's Application.⁸
14 The Midwest Independent System Operator's ("MISO") resource accreditation would apply to
15 the BHEC Projects.

16 Q. Has Ameren Missouri determined the average accredited replacement capacity
17 for the BHEC Projects?

18 A. Ameren Missouri stated that the average accredited replacement capacity for
19 the BHEC CTG Project is 608 MW and referenced Figure 2 of Andrew M. Meyer's
20 direct testimony.⁹ Ameren Missouri has not specifically provided the average accredited
21 replacement capacity for the BHEC BESS Project. Staff sent Data Request 0140.1 to clarify
22 Ameren Missouri's plans for utilizing the BHEC BESS Project as replacement reliable electric

⁸ Subdivision 1 of subsection 4 of section 393.401, RSMo.

⁹ Ameren Missouri's response to Staff Data Request 0140.

Surrebuttal Testimony of
Trevor Rucker

1 generation. The data request additionally asked for the average accredited replacement capacity
2 for the BHEC BESS Project. As of the time of this surrebuttal testimony, Staff has not received
3 a response from Ameren Missouri.

4 Q. How did Ameren Missouri determine the average accredited replacement
5 capacity for the BHEC CTG Project?

6 A. Figure 2 of Mr. Meyer's direct testimony shows the anticipated installed
7 capacity ("ICAP") for the summer, fall, winter, and spring seasons, class average accreditation
8 percentage, and direct loss of load ("DLOL") capacity. The ICAP is multiplied by the class
9 average accreditation percentage to determine the DLOL capacity. Ameren Missouri averaged
10 the summer and winter DLOL capacities to provide the average accredited replacement capacity
11 for the BHEC CTG Project of 608 MW.

12 Q. Is Ameren Missouri's average accredited replacement capacity calculation for
13 the BHEC CTG Project consistent with the requirements of section 393.401, RSMo?

14 A. No. Ameren Missouri used forecasted class average accreditation percentages
15 for the planning year in which the BHEC CTG Project is anticipated to be placed in-service to
16 calculate the average accredited replacement capacity, as discussed in Mr. Meyer's
17 direct testimony.¹⁰ Ameren Missouri should have used MISO's accreditation at the
18 time of the Application to calculate the average accredited replacement capacity for
19 the BHEC CTG Project.

20 Q. How should the average accredited replacement capacity for
21 the BHEC CTG Project be calculated?

¹⁰ Andrew M. Meyer Direct Testimony Page 6 line 11 to Page 7 line 6.

Surrebuttal Testimony of
Trevor Rucker

1 A. The average accredited replacement capacity for the BHEC CTG Project should
2 be calculated by averaging the summer and winter accredited capacities that have been
3 calculated using MISO's accreditation at the time of the Application, as required by subdivision
4 of subsection 4 of section 393.401, RSMo. The accredited capacity for each season is
5 calculated by multiplying the ICAP by the MISO class averages to determine the initial seasonal
6 accredited capacity ("ISAC"), and then applying MISO's UCAP/ISAC¹¹ ratio to identify the
7 final seasonal accredited capacity ("SAC") per season.

8 Q. What would the average accredited replacement capacity be for
9 the BHEC CTG Project using MISO's accreditation at the time of the Application?

10 A. In order to calculate the average accredited replacement capacity, I will use the
11 same ICAP values shown in Figure 2 of Mr. Meyer's direct testimony, MISO's Final
12 Schedule 53 Class Averages for Planning Year 2025-2026, and MISO's Seasonal UCAP/ISAC
13 Ratio for Planning Year 2025-2026.¹² The ICAP values for the BHEC CTG, 673 MW for
14 summer and 798 MW for winter, multiplied by the 2025-2026 class averages for combustion
15 turbines 50+ MW (93.1% for summer, 68.8% for winter)¹³ results in an ISAC for summer and
16 winter of 627 MW and 549 MW, respectively. Applying the UCAP/ISAC ratios for
17 summer (0.983) and winter (1.085)¹⁴ results in SACs of 616 MW for summer and 596 MW for

¹¹ "UCAP" stands for unforced capacity.

¹² Planning Year 2025-2026 began on June 1, 2025. Ameren Missouri filed its Application on June 26, 2025.

¹³ MISO's Final Schedule 53 Class Averages for Planning Year 2025-2026: https://cdn.misoenergy.org/PY%202025-2026%20%20Schedule%2053%20Class%20Average%20-%20Final667331.pdf?_t_id=zOa72IwTYjp44a1j3vOjYg%3d%3d&_t_uuid=MMevxSNeTF23P3_ZeEVADQ&_t_q=schedule+53+class+average&_t_tags=language%3aen%2csiteid%3a11c11b3a-39b8-4096-a233-c7daca09d9bf%2andquerymatch&_t_hit.id=Optics_Models_Find_RemoteHostedContentItem/667331&_t_hit.os=4

¹⁴ MISO's Seasonal UCAP/ISAC Ratio for Planning Year 2025-2026: https://cdn.misoenergy.org/PY25-26%20UCAP%20ISAC%20Ratio679673.pdf?_t_id=zOa72IwTYjp44a1j3vOjYg%3d%3d&_t_uuid=72UOEu9kRJioQtlnQCN2VA&_t_q=ucap%2fisac+ratio&_t_tags=language%3aen%2csiteid%3a11c11b3a-39b8-4096-a233-c7daca09d9bf%2andquerymatch&_t_hit.id=Optics_Models_Find_RemoteHostedContentItem/679673&_t_hit.os=2

Surrebuttal Testimony of
Trevor Rucker

1 winter. The average of the SACs results in an average accredited replacement capacity of
2 approximately 606 MW.

3 Q. How does the average accredited replacement capacity calculated by
4 Ameren Missouri using forecasted class average accreditation percentages compare to the
5 average accredited replacement capacity you calculated using MISO's accreditation at the time
6 of the Application?

7 A. Ameren Missouri provided an average accredited replacement capacity for
8 the BHEC CTG Project of 608 MW, which it stated would cover approximately 83% of the
9 replacement capacity needed for Sioux.¹⁵ The average accredited replacement capacity for
10 the BHEC CTG Project that I calculated was 606 MW, which would still represent
11 approximately 83% of the replacement capacity needed for Sioux, albeit 2 MW less than the
12 value calculated by Ameren Missouri.

13 Q. What are the ramifications for an average accredited replacement capacity
14 calculation that is not consistent with section 393.401, RSMo?

15 A. Specific to the BHEC Projects, there is adequate time for Ameren Missouri to
16 correct its calculations and use average accredited replacement capacities for
17 the BHEC Projects using MISO's accreditation at the time of the Application. Looking to the
18 future, if Ameren Missouri does plan to utilize the BHEC CTG Project as replacement reliable
19 electric generation for Sioux, Ameren Missouri will need to account for the additional capacity
20 needed to ensure that an equal or greater amount of replacement reliable electric generation is
21 placed onto the electric grid prior to the retirement of Sioux. Additionally, Ameren Missouri
22 will need to ensure that it correctly calculates average accredited replacement capacities for

¹⁵ Ameren Missouri's response to Staff Data Request 0140.

Surrebuttal Testimony of
Trevor Rucker

1 replacement reliable electric generation in the future to ensure compliance with section 393.401,
2 RSMo.

3 Q. Do you agree with Mr. Seaver's overall conclusion that the BHEC Projects do
4 not support the requirements identified in section 393.401, RSMo?

5 A. It is unclear to me how exactly Mr. Seaver concluded that the BHEC Projects
6 do not support the requirements of section 393.401, RSMo. It does not appear to me at this
7 time that Ameren Missouri has failed to comply with any of the requirements of
8 section 393.401, RSMo, and compliance with most of the requirements cannot be verified until
9 some point in the future.

10 Q. What is required of Ameren Missouri to comply with the requirements of
11 section 393.401, RSMo?

12 A. Ameren Missouri must provide certification that it has secured and placed on
13 the electrical grid sufficient replacement reliable electric generation to replace the capacity of
14 Sioux prior to its retirement.¹⁶ Ameren Missouri indicated that it may meet this
15 requirement at least in part by utilizing the BHEC Projects as replacement reliable electric
16 generation. Therefore, compliance with this requirement cannot be verified until Sioux is
17 retired and the BHEC Projects are placed in-service. Ameren Missouri suggested that it may
18 use multiple generation projects to serve as replacement reliable electric generation for Sioux,
19 so it is possible that Ameren Missouri won't be able to meet the requirements with
20 the BHEC Projects alone.

21 Ameren Missouri must provide certification to the Commission prior to or on the date
22 that the BHEC Projects are placed in-service that the requirements of section 393.401, RSMo,

¹⁶ Subsection 2 of section 393.401, RSMo.

1 Surrebuttal Testimony of
2 Trevor Rucker

1 have been met in order for the BHEC Projects to be considered replacement reliable electric
2 generation.¹⁷ Again, this is a requirement for which compliance cannot be verified at this time.

3 Subsection 3 of section 393.401, RSMo, allows for replacement reliable electric
4 generation to be placed in-service after the closure of the existing electric generating power
5 plant if some or all of the interconnection facilities for the existing generation will be utilized.

6 However, that is not applicable to this case because the BHEC Projects are not proposed to be
7 built at the Sioux site.

8 Subsections 2 and 4 of section 393.401, RSMo, both include requirements
9 regarding how the average accredited replacement capacity for replacement reliable electric
10 generation is calculated. As I discussed above, the average accredited replacement capacity
11 calculated for the BHEC CTG Project by Ameren Missouri is inconsistent with the
12 requirements of section 393.401, RSMo. However, this can be remedied by Ameren Missouri
13 by correcting the average accredited replacement capacity for the BHEC CTG Project. This
14 should not be an issue with compliance with section 393.401, RSMo, unless Ameren Missouri
15 fails to correct the average accredited replacement capacity for the BHEC CTG Project and/or
16 fails to put sufficient replacement reliable electric generation on the electric grid due to
17 incorrect calculations.

18 **CONCLUSION**

19 Q. Can you summarize your surrebuttal testimony regarding the rebuttal testimony
20 of OPC's witness, the requirements for replacement reliable electric generation in

¹⁷ Subsection 6 of section 393.401, RSMo.

1 Surrebuttal Testimony of
2 Trevor Rucker

1 section 393.401, RSMo, and Ameren Missouri's compliance with those requirements as they
2 pertain to the BHEC CTG Project and BHEC BESS Project?

3 A. Yes. I agree with Mr. Seaver that Ameren Missouri has not requested that the
4 Commission certify the BHEC Projects as replacement reliable electric generation. Whereas
5 Mr. Seaver asserted that subdivision 2 of subsection 4 of section 393.401, RSMo, requires that
6 the Commission certify that BHEC Projects as replacement reliable electric generation,
7 I concluded that it does not. I also analyzed the requirements of section 393.401, RSMo,
8 regarding the determination of the average accredited replacement capacity for
9 the BHEC Projects and concluded that Ameren Missouri's calculations for
10 the BHEC CTG Project were not consistent with the requirements of section 393.401, RSMo.

11 I also disagree with Mr. Seaver regarding his assertion that the BHEC Projects do not
12 support the requirements of section 393.401, RSMo. I discussed the relevant requirements of
13 section 393.401, RSMo, and concluded that at this time, it does not appear that
14 Ameren Missouri has failed to comply with any of the requirements.

15 Q. Has anything in OPC's rebuttal testimony changed Staff's position that
16 the CCN for the BHEC Projects should be approved?

17 A. No. Staff's position is still that the CCN for the BHEC Projects should be
18 approved, subject to the conditions included in the Staff Rebuttal Report filed in this docket.

19 Q. Does Staff recommend any conditions in addition to those contained in the
20 Staff Rebuttal Report related to its position that the CCN for the BHEC Projects should
21 be approved?

Surrebuttal Testimony of
Trevor Rucker

1 A. Yes. Staff recommends that in addition to the conditions included in the
2 Staff Rebuttal Report filed in this docket, the approval of a CCN for the BHEC Projects should
3 include the following conditions:

4 1. In order for the BHEC Projects to be considered replacement reliable
5 electric generation, Ameren Missouri shall meet the requirements of subsection 4 of
6 section 393.401, RSMo.

7 2. If the BHEC Projects are to be utilized as replacement reliable electric
8 generation, Ameren Missouri shall provide certification to the Commission that the
9 requirements of section 393.401, RSMo, have been met on or before the dates that
10 the BHEC Projects are placed in-service.

11 3. Prior to the closure of an existing electric generating power plant for
12 which the BHEC Projects are to be utilized as replacement reliable electric generation,
13 Ameren Missouri shall certify to the Commission that it has secured and placed on the
14 electric grid an equal or greater amount of reliable electric generation.

15 Q. Does this conclude your surrebuttal testimony?

16 A. Yes.

BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF MISSOURI

In the Matter of the Application of Union)
Electric Company d/b/a Ameren Missouri for)
Permission and Approval and Certificates of) Case No. EA-2025-0238
Public Convenience and Necessity Authorizing)
it to Construct a New Generation Facility and)
Battery Energy Storage System)

AFFIDAVIT OF TREVOR RUCKER

STATE OF MISSOURI)
)
 ss.
COUNTY OF COLE)

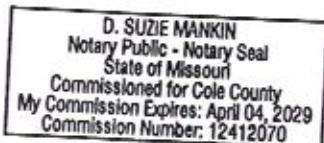

COMES NOW TREVOR RUCKER and on his oath declares that he is of sound mind and lawful age; that he contributed to the foregoing *Surrebuttal Testimony of Trevor Rucker*; and that the same is true and correct according to his best knowledge and belief.

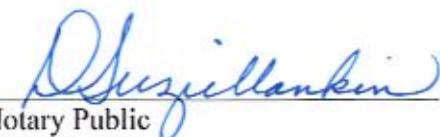

Further the Affiant sayeth not.

TREVOR RUCKER

JURAT

Subscribed and sworn before me, a duly constituted and authorized Notary Public, in and for the County of Cole, State of Missouri, at my office in Jefferson City, on this 15th day of January 2026.

Suzie Mankin
Notary Public
