

Preventative Maintenance Plan

- **Liberty to establish a general preventative maintenance plan (PMP).**
 - The automation of the PMP system went online early 2025.
 - 9,530 assets have been assigned schedules as of today.
 - Schedules are currently being established based on past practice and manufacturers suggested intervals.
 - Identification of assets requiring regular maintenance in the field continues to be stressed with the Operations Team and new assets are being added to the PMP system regularly.
 - Operations Management is simultaneously gathering PMP language and standards to compile in a general PMP document Liberty plans to have drafted in late Q2 or early Q3 2026.
 - Once complete the PMP schedules will be compared to the assigned schedule in the system and adjusted accordingly.
