I.	INTRODUCTION	. 1
	PURE POWER	
	MARYLAND HEIGHTS RENEWABLE ENERGY CENTER	

	REBUTTAL TESTIMONY
2	OF
3	WILLIAM J. BARBIERI
4	CASE NO. ER-2012-0166
	I. <u>INTRODUCTION</u>
(Q. Please state your name and business address.
<u> </u>	A. My name is William J. Barbieri. My business address is One Ameren Plaza,
8	1901 Chouteau Avenue, St. Louis, Missouri 63103.
9	Q. By whom and in what capacity are you employed?
10	A. I am employed by Union Electric Company, d/b/a Ameren Missouri
11	("Ameren Missouri" or "Company") as Manager, Renewable Energy.
12	Q. Please describe Ameren Missouri.
13	A. Ameren Missouri is a regulated utility and wholly owned subsidiary of
14	Ameren Corporation.
15	Q. Please describe your employment history with Ameren Missouri.
16	A. I joined the Fossil Fuel Department of Ameren Corporation in August, 1999
17	as Senior Business Development Executive. In 2000, I was promoted to Coal Business
18	Development Director handling procurement and sales of third party coal along with
19	marketing functions for coal terminal activities. In November of 2004, I was asked to
20	coordinate the renewable energy initiative for Ameren Corporation along with the Ameren
21	affiliates as the Managing Executive, Renewables. In 2007, I was promoted to Manager,
22	Renewables. In January, 2010 the department was transferred to Ameren Missouri at which
23	time my title was changed to Manager, Renewable Energy.

Q. Please describe your duties and responsibilities as Manager, Renewable

2 Energy.

22

My primary responsibilities are the development of the renewable energy policy, goals and procedures for Ameren Missouri, including strategy and planning. One of my primary duties is to ensure Ameren Missouri is in full compliance with the requirements of the Missouri Renewable Energy Standard ("RES"). This involves leading negotiations related to the acquisition of renewable energy resources in the form of power purchase agreements, Renewable Energy Credit ("REC") procurement and project development resulting in renewable generation facilities owned and operated by Ameren Missouri. I am also responsible for coordinating activities of internal groups related to research and analysis concerning technology assessments for wind, solar, biomass, landfill gas, hydro and other renewable resource options. This includes financial feasibility analysis. I am responsible for the preparation of compliance plans and reports as required by statute and Missouri Public Service Commission regulations. I support the regulatory and legislative departments by providing guidance and information on renewable energy issues at both the state and federal level. At times, I also help educate and provide information to customers in raising awareness of renewable energy and associated issues. I oversee all customer renewable issues as related to the RES for programs such as net-metering, solar rebates and the solar My department also provides extensive renewable energy Standard Offer Contract. information to customers by updating data on the Company's websites, providing tours in the Energy Learning Center at the Company's general office building and speaking at numerous community and industry sponsored events.

1	Q. Please describe your qualifications.
2	A. I received a Bachelor of Science Degree in Business Administration from
3	St. Louis University in 1977 with accounting as my area of specialization. I have been in the
4	energy industry for approximately 33 years and I have extensive contract negotiation
5	experience.
6	Q. What is the purpose of your rebuttal testimony?
7	A. The purpose of my rebuttal testimony is first to respond to the portion of the
8	Missouri Public Service Commission Staff ("Staff") Report on Revenue Requirement Cost o
9	Service ("Staff's Report") sponsored by Staff witness Michael Ensrud, related to Amerer
10	Missouri's Voluntary Green Program-Pure Power ("Pure Power").
11	Second, I will provide an update regarding the Company's successful completion o
12	its Maryland Heights Renewable Energy Center, which is now providing renewable energy
13	generated from landfill gas to Ameren Missouri's customers.
14	II. <u>PURE POWER</u>
15	Q. Staff is recommending that the tariffed Pure Power Program be
16	terminated and that the program become a deregulated activity. What is Amerer
17	Missouri's position regarding this recommendation?
18	A. In addressing the termination of the program, it should first be noted that the
19	Company's contract with 3Degrees (the renewable energy and marketing development firm
20	that has managed the Pure Power program since its inception) will expire on December 31
21	2012. After completing a competitive Request for Proposal ("RFP") solicitation, Amerer
22	Missouri selected 3Degrees to develop and manage the program for five years. 3Degrees
23	was selected as the 2007, 2008 and 2009 Department of Energy's Renewable Marketer of the

Year and currently runs three of the top performing utility voluntary renewable energy programs in the nation. Ameren Missouri is in the process of negotiating terms and conditions for a new contract with 3Degrees. Should those negotiations prove successful, a

revised tariff would be filed with the Commission for approval. We believe that some of the

5 concerns expressed in the Staff Report, primarily those concerning participation costs of the

existing program, will be addressed in the terms of the new agreement.

To Staff's suggestion that the Company not tariff the program, it should be noted that this program is only offered to customers of Ameren Missouri and is promoted as Ameren Missouri's first effort to address the desire for renewables and renewable development of its customers. Second, a program that is not tariffed would add unnecessary costs for customers who desired to support the program. The costs associated with developing computer software in order to place it on participating customers' bills have already been incurred (and paid for below the line). If the program cannot be billed directly on the existing bill of a customer, additional programing costs would be incurred, a separate billing function would need to be developed, separate mailing costs would be required and there would be no access to the customer usage numbers that are required to determine the level of participation. Finally, it is noteworthy that this program is held to the highest industry standards because it is Green-e Energy certified. This certification ensures that the program is scrutinized by an independent third party and that it is in full compliance with industry standards.

A non-tariffed program could theoretically be available to anyone, even those who are not Ameren Missouri electric customers, which is not the Company's intent for the program. The program was not designed as a forum to offer REC purchases to those who are not Ameren Missouri customers but to make it convenient for those Ameren Missouri

- customers who voluntarily choose to support renewable development through the purchase of
 RECs.
- Q. Staff states that, "Contributing to the purchase of a REC is not a traditional transaction for service rendered by a utility" and that "Even today, no other Missouri utility utilizes a similar voluntary program." Are these statements correct?
 - A. I am unsure where Staff gets its information. According to the Department of Energy's National Renewable Energy Lab ("NREL"), there are approximately 860 utilities in the U.S. that offer similar green programs, which are similarly priced and utilize RECs to supply the program because RECs are the industry norm. These programs result in more than 50% of U.S. electricity customers having the opportunity to support renewable energy through the purchase of RECs directly through their utility, with approximately 570,000 customers electing to participate nationally. The Department of Energy reports that in Missouri alone there are nine other green pricing programs in addition to Ameren Missouri's Pure Power program. Although these programs are not offered by other Commission-regulated utilities, they are offered by many Missouri electric cooperatives, as shown in the chart shown below:

Utility	Price per kWh	Year Program Began
Ameren Missouri	1.5	2007
Boone Electric Cooperative	2	2003
Cuivre River Electric Cooperative	2.5	2004
Howell-Oregon Electric Cooperative	6	2004
Intercounty Electric Cooperative	3	2006
Laclede Electric Cooperative	3.5	2005
Lewis County Rural Electric Cooperative	2	2003
White River Valley Electric Cooperative	3.5	2004
City Utilities of Springfield	5	2001
Corn Belt Energy	0.5	2004

19

20

21

22

23

- The national average price for a REC, according to this NREL report, was 1.67¢/kWh. The Ameren Missouri Pure Power program participation price of 1.50¢/kWh continues to be below the national average and is well below the price of RECs available through similar programs offered by electric cooperatives in the state except for Corn Belt Energy.
 - Q. Staff contends that not enough of the total price of \$15 per REC goes toward the direct purchase cost of the RECs. How do you respond to this concern?
 - A. Staff's concern has been reviewed in several previous rate cases throughout the term of the program. The total program participation price has always been comprised of the price paid by 3Degrees for RECs from qualified facilities, and portions to cover education, marketing and administration. When the program first started, Ameren Missouri stated that, based on research of similar programs established by numerous utilities across the country, as awareness about renewables and these types of programs grew, funds utilized for education and marketing purposes would decline while increased demand would increase the funds used to acquire RECs. This has proven to be the case in Ameren Missouri's Pure Power program as well. As I previously mentioned, there are over 860 utilities across the country that offer similar voluntary programs, as reported by the National Renewable Energy Lab (NREL, 2010). This same source states that the demand created by these programs has contributed to 1,600 MWs of renewable energy generation capacity, which refutes Staff's assumption to the contrary. To further address Staff's claim, I would point to the 146 MW Farmers City wind farm located in Atchison County, Missouri, which has been one of the primary sources of RECs over Pure Power's life and the only source of RECs since March, 2010. In March of 2009, 3Degrees entered into a four-year contract to purchase the RECs

- from Farmers City in a volume estimated to provide 100% of the demand for the Pure Power
- 2 Program through 2012. This contract was executed prior to the wind farm coming on line.
- 3 The purchase of RECs through Pure Power was a contributing factor that allowed for the
- 4 development and construction of this wind farm, thus supporting the development of
- 5 renewables.
- 6 Since the Pure Power program's inception, through June, 2012, a total of 346,844
- 7 RECs have been purchased with only 673 of those RECs coming from outside the state of
- 8 Missouri. By focusing the REC supply on Missouri renewable generating resources, less
- 9 costly RECs from facilities located in states with more abundant renewable resources are not
- being used. Therefore, the cost of a virtually all-Missouri REC program is more expensive.
- 11 However, customers have stated that a principal reason for their participation in Pure Power
- is the fact that the RECs purchased by the program come from Missouri resources.
- While Ameren Missouri believes the current program is appropriately structured, a
- 14 major part of the negotiations for the next contract concerns how to reduce the price of
- participation while maintaining as close to a 100% Missouri REC supply as possible.
- Q. Staff also asserts that the Pure Power Program does not fulfill the tariffed
- 17 purpose, which is "to provide customers with an option to contribute to the further
- 18 development of renewable energy technologies." How do you respond to that assertion?
- A. As I stated above, there is empirical evidence that this statement is untrue.
- 20 Pure Power was instrumental in the success of Farmers City, as the REC sales were a
- 21 contributing factor allowing for the development and construction of this wind farm.
- In addition, Staff's argument has already been considered and rejected by the
- 23 Commission. In the "Findings of Fact" portion of its Report and Order in Case No.

1 ER-2008-0318, the Commission explained, "A REC is not produced until actual renewable

2 energy is produced. Even though those electrons have already been produced and used, the

sale and purchase of a REC stimulates demand for additional sources of renewable energy."

There is a last consideration that should be factored into the Commission's decision on this issue. Because of the significant decline in the price of energy over the last several years and the price instability projected for the future, intermittent renewable generator projects, such as wind farms and solar installations, are even more dependent on their ability to sell RECs to programs such as Pure Power in order to maintain financial viability. The Pure Power Program has met and continues to meet its stated purpose, and Staff's concerns,

which were rejected by the Commission in the past, should be rejected once more.

Q. Staff states that information on Ameren Missouri's Pure Power website is problematic and misleading. Staff contends that Ameren Missouri's materials lead customers to believe they are receiving physical green energy. Please respond to Staff's criticisms.

A. All marketing materials and materials used on the Pure Power website are reviewed annually by the Center for Resource Solutions (Green-e Energy). The Center for Resource Solutions' Green-e Energy certification represents the "gold standard" for green programs, ensuring compliance with the strictest industry standards.

Second, at the beginning of each year, starting two years ago, Ameren Missouri began providing copies of the Pure Power marketing materials intended for use during that year to Staff for its comments and review. In those instances where Staff has determined there to be an issue, Ameren Missouri has worked with Staff to resolve the issue. That effort has led to Ameren Missouri making changes to some materials. As for the marketing materials used in

¹ Case No. ER-2008-0318, Report and Order, February 6, 2009, p. 106.

27	Program?
26	Q. In summary, do you have any closing thoughts regarding the Pure Power
25	energy.
24	customers who choose to participate and to support the program that they are not purchasing
23	by the Commission effective on March 24, 2010. Ameren Missouri clearly explains to
22	Non-unanimous Stipulation and Agreement in Case No. ER-2010-0036, which was approved
20 21	This is language agreed upon by Staff and the Company (and other signatories) in the <i>First</i>
18 19	purchased under this program are <u>Green-e Energy</u> certified by the independent Center for Resource Solutions.
16 17	associated with past renewable energy generation are retired on behalf of program participants. All RECs
14 15	purchase of energy. Renewable Energy Credits (RECs) which represent the environmental attributes
13	Participation in this program does not constitute the
12	pages on the website and on direct mail marketing materials.
11	Finally, I would point out that the following statement is clearly posted on multiple
10	customers rather than waiting for a rate case in which to raise these issues.
9	them to let Ameren Missouri know of their concern before we started circulating materials to
8	being misled by these materials, a concern I don't believe is valid, I would have expected
7	issues related to the materials. If Staff is truly concerned about the possibility of customers
6	and July 6, 2012, when the Staff Report was filed, Staff had not advised the Company of any
5	March 18, 2011.) In the five months between when the Staff was provided those materials
4	concerns. (Similarly, Ameren Missouri had e-mailed the 2011 materials to Staff on
3	advising us that it would review the material and get back to us if Staff had any questions or
2	attached. We received a reply acknowledging that Staff had received the information and
1	2012, Ameren Missouri sent an e-mail to Staff on February 7, 2012, with all materials

A. I do. While the Company understands that some Staff members have concerns about this program, the concerns addressed in the Staff Report only repeat concerns voiced in earlier rate cases, which the Commission considered and rejected. We are now five years into the Pure Power Program, a program which has been very successful and won two national awards.

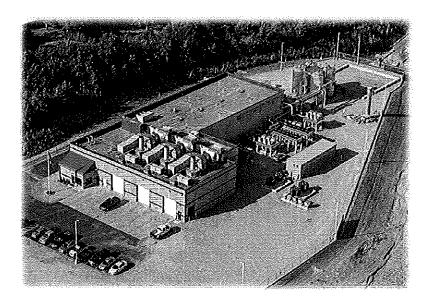

The Commission also should keep in mind that the Pure Power Program is a completely voluntary program, allowing those customers who choose to participate to do so as they see fit. There are no contracts required and customers may leave the program at any time with no obligation. Ameren Missouri goes to great lengths to ensure that customers understand all aspects of the program. This is one of the main reasons that Ameren Missouri sought and utilizes Green-e Energy certification: to provide a high level of confidence to our customers concerning program integrity. In the short time that this program has been in existence, it has won two national awards issued by the U.S. EPA, U.S. Department of Energy and the Center for Resource Solutions. This program has been a key contributor in helping to educate and raise awareness of renewable energy issues to customers in the state.

III. MARYLAND HEIGHTS RENEWABLE ENERGY CENTER

Q. What type of facility is the Maryland Heights Renewable Energy Center?

A. The Maryland Heights Renewable Energy Center, which is the newest addition to Ameren Missouri's generation fleet, was constructed as part of our effort to meet the Missouri Renewable Energy Standard. Construction of the physical plant began in early 2011. The plant collects landfill gas through 120 landfill wells and is able to deliver it at a rate of 6,000 cubic feet per minute. The electric generation plant is equipped with 3 gas turbines specifically designed to burn landfill gas methane. Total operational output is

- 1 approximately 15 MWs of generation and the plant is anticipated to produce approximately
- 2 100,000 MWhs of renewable energy to be used in meeting the compliance provisions of the
- 3 RES. This makes the facility the largest landfill gas to electric generating station in the state
- 4 and one of the largest in the country. An aerial photograph of the plant is shown below:

6

7

8

9

10

11

12

13

14

15

16

Q. How has Ameren Missouri ensured a long-term supply of landfill gas to power this facility?

A. Landfill gas is under contract for 20 years under the terms of the gas supply agreement for this facility. The price paid by Ameren Missouri during the first year of operation is a set amount. For subsequent years, that price is revised based on the percentage increase or decrease in the Missouri regulated weighted average cost of all fuels, as reflected in Ameren Corporations's two most recent annual reports (Form 10K), not to exceed +/-10%.

Q. Is the Maryland Heights Energy Center "in-service?"

A. Yes it is. Earlier this year, Ameren Missouri worked closely with the Staff in order to agree upon in-service criteria. These criteria are attached to my testimony as

Rebuttal Testimony of William J. Barbieri

- 1 Schedule WJB-ER1. The generating station met the agreed-upon criteria and, accordingly,
- 2 was in-service as of June 15, 2012. Data supporting that conclusion has been submitted to
- 3 Staff engineer and witness Michael Taylor. Once Staff has completed its review, the
- 4 Company is confident they will agree that the facility should be treated as in-service as of
- 5 June 15, 2012.
- 6 Q. Does this conclude your rebuttal testimony?
- 7 A. Yes, it does.

BEFORE THE PUBLIC SERVICE COMMISSION OF THE STATE OF MISSOURI

In the Matter of Union Electric Company d/b/a Ameren Missouri's Tariffs to Increase Its Revenues for Electric Service. Case No. ER-2012-0166				
AFFIDAVIT OF WILLIAM J. BARBIERI				
STATE OF MISSOURI)) ss CITY OF ST. LOUIS)				
William J. Barbieri, being first duly sworn on his oath, states:				
1. My name is William J. Barbieri. I am employed by Union Electric Company,				
d/b/a Ameren Missouri as Manager Renewable Energy.				
2. Attached hereto and made a part hereof for all purposes is my Rebuttal Testimony				
on behalf of Union Electric Company, d/b/a Ameren Missouri, consisting of 12 pages (and WJB-ER1 Schedulesthrough if any), all of which have been prepared in written form for				
introduction into evidence in the above-referenced docket.				
3. I hereby swear and affirm that my answers contained in the attached testimony to				
the questions therein propounded are true and correct. William J. Barlin -

Landfill Gas Electrical Generator

In-Service Test Criteria

Maryland Heights Landfill Gas Energy Center

- 1. All major construction work is complete.
- 2. All preoperational tests have been successfully completed.
- 3. Each combustion turbine generator (CTG) successfully meets contract operational guarantees that are necessary for satisfactory completion of all other items in this list.
- 4. Each CTG successfully demonstrates its ability to initiate the start sequence resulting in the unit transitioning from zero (0) rpm (or turning gear) to a load equal to or greater than 90% Available Power.

Available Power is determined from the unit-specific Gross Available Power Determination (guaranteed power output performance as supplied by the turbine manufacturer) for conditions during testing.

- 5. Each CTG successfully demonstrates its ability to initiate the shutdown sequence resulting in the unit transitioning from a load equal to or greater than 90% Available Power to zero (0) rpm (or turning gear).
- 6. Each CTG successfully demonstrates its ability to operate at or above a Capacity Factor of forty percent (40%) for one hundred sixty eight (168) hours.

Capacity Factor is determined utilizing Available Power based on average conditions during duration of testing.

- 7. Each CTG demonstrates its ability to operate at or above a Capacity Factor of sixty five percent (65%) for seventy two (72) hours.
- 8. Each CTG successfully demonstrates its ability to operate at a Capacity Factor of ninety percent (90%) for four (4) hours.
- 9. The failure of any CTG to achieve operations shall only impact that unit from being considered as in-service.

- 10. Landfill gas collection/supply system is capable of delivering fuel to support items (6), (7), and (8) listed above.
- 11. Sufficient transmission/distribution interconnection facilities shall exist for the total CTG (plant) design net electrical capacity at the time the unit is declared fully operational and used for service.
- 12. Sufficient transmission/distribution facilities shall exist for the total CTG (plant) design net electrical capacity into the utility service territory at the time the unit is declared fully operational and used for service.
