ECONOMIC DEVELOPMENT RIDER CREDITS
RATE DESIGN

# BEFORE THE PUBLIC SERVICE COMMISSION OF THE STATE OF MISSOURI SURREBUTTAL TESTIMONY OF J. MATT TRACY ON BEHALF OF MISSOURI PUBLIC SERVICE, A DIVISION OF UTILICORP UNITED INC. CASE NO. ER-2001-672

1	Q.	Please state your name and business address.
2	A.	My name is J. Matt Tracy and my business address is 20 West 9th Street, Kansas City,
3		Missouri, 64105.
4	Q.	Are you the same J. Matt Tracy who provided direct and rebuttal testimony in this
5		case on behalf of Missouri Public Service ("MPS")?
6	A.	Yes.
7	Q.	What is the purpose of your surrebuttal testimony in this case before the Missouri
8		Public Service Commission ("Commission")?
9	A.	First I will point out the problem with the economic development rider ("EDR")
10		credits annualization proposal as set out in the rebuttal testimony of Commission
11		Staff witness Pyatte. Second, I will respond to Ms. Pyatte's comments on rate design
12		ECONOMIC DEVELOPMENT RIDER CREDITS
13	Q.	Is there a problem with Staff witness Pyatte's annualization of EDR credits?
14	A.	Yes. It does not account for the full level of credits that MPS will provide to EDR
15		customers. By shifting EDR customers forward one year as proposed by Staff MDS

1		cannot recover the 12 months of 30% credit given to customers during their first year
2		on the EDR.
3	Q.	Can you provide an example that shows the impact of Staff's method?
4	A.	Yes. On my attached Schedule JMT-2, I provide a simplified example of the impact
5		of Staff's method on the level of allowed EDR credits. The detail of the example
6		follows, but it shows that the Staff's method accounts for less than the expected going
7		forward level of EDR credits.
8	Q.	Please explain the schedule.
9	A.	The example in Schedule JMT-2 runs through 7 years, by month. Every month a new
10		customer is added to the EDR, represented in the example by the row titled "New
11		Revenue", with monthly revenues of \$10, or \$120 per year. So in Year 1, the
12		Monthly EDR Revenues are \$10, \$20, \$30, on up to \$120 in December, which
13		reflects 12 customers, each generating \$10 of revenue per month. The row below
14		shows the Monthly EDR Credits @ 30%, running \$3, \$6, \$9, on up to \$36 for
15		December.
16		The first month of Year 2 adds another customer, but the first customer from Year 1
17		now moves down to the second row on the EDR, and their associated credits move to
18		the 25% level. The \$10's in the boxes in the first month of the first 5 years all reflect
19		the same customer moving through the 5 levels of the EDR. The \$3, \$2.5, \$2, \$1.5,
20		and \$1 in boxes are the EDR credits for that customer. This shows the basic premise

1 of the EDR, providing 1 period free, over 5 periods (3+2.5+2+1.5+1=10). In the first 2 month of Year 6 the first customer receives no more credits. 3 Year 6 achieves ongoing stability, with a customer being added, and a customer 4 dropping off the EDR each month. The Sum of EDR Credits is \$120 each month, for 5 an Annual Sum of EDR Credits of \$1440. 6 Q. How would you characterize this sum? Conceptually, this is the value I believe is most appropriate for MPS to collect. It 7 A. 8 reflects the ongoing stable level of EDR credits. Staff's proposal rolls through another year, but no longer adds any customers; it only allows them to drop off the 9 EDR. Year 7 shows the impact, as New Revenue is set to \$0 each month. The 10 11 Monthly EDR Credits @ 30% drop \$3 each month, falling from \$36 in December of 12 Year 6, to \$0 in December of Year 7. The Annual Sum of EDR Credits for Year 7 is 13 only \$1206, less than the \$1440 from Year 6. Does MPS expect to add a new EDR customer each month, and do you expect each 14 Q. 15 such customer to be the same size? No, and no. Additions to the EDR are more random, both in timing, and in size. But 16 A. the principal difference between Staff's method and the one we propose is most easily 17 seen using the simple example. 18

Is it your opinion that MPS will continue to add EDR customers?

19

Q.

1	A.	Yes. For example, as of January 15, 2002, we are waiting for a customer to return a
2		signed copy of an EDR contract. The recent experience of MPS also shows that we
3		will continue to add EDR customers.
4	Q.	What evidence is there that MPS will continue to add EDR customers?
5	A.	On December 20, 2001, I sent a highly confidential file with detailed EDR customer
6		information to Ms. Pyatte. I later updated that file in response to Staff DR-3537.
7		That file included the graph attached as Schedule JMT-3. The graph shows the
8		rolling 12-month total MPS EDR Discount Dollars, which is analogous to the Annual
9		Sum of EDR Credits from the example. The first value at the left is for December of
10		1997, and reflects information from January through December of 1997. The last
11		value at the right is for November of 2001, so the graph represents one month less
12		than 5 years of information.
13		The graph provides evidence that the annual sum of EDR credits is increasing.
14		Though there are some level periods, and some declines, the overall trend is distinctly
15		one of growth. To treat MPS as if it will have no additional EDR customers is not
16		supported by the last five years of MPS's actual experience as shown in the graph.
17	Q.	What is your recommendation regarding calculation of the EDR credit?
18	A.	I recommend that the EDR credit be calculated based on the 12 months of actual EDR
19		credits ending January 31, 2002. This will allow MPS to recover the full amount of
20		the credit provided through the EDR tariff.

#### 1 RATE DESIGN

- 2 Q. Do you agree with Staff witness Pyatte's factor-up method to calculate new rate
- 3 values?
- 4 A. Yes. The values on the tariff sheets filed in this case were calculated as Ms. Pyatte
- 5 described. My expression of those calculations in words was apparently less precise,
- 6 "strictly speaking," than possible, but I believe we are agreed on applying the change
- 7 only to those values to be changed.
- 8 Q. Is the lesser of test for Small General Service ("SGS") in place because of cost-of-
- 9 service considerations?
- 10 A. No. The lesser of test is a price ceiling, reducing the amount that customers with load
- factors less than 25% pay for demand costs they impose on the electric system.
- Maintaining the test is inconsistent with the goal of having cost-of-service based
- rates.
- 14 Q. Does this conclude your surrebuttal testimony?
- 15 A. Yes it does.
