

Exhibit No. 71

Exhibit No.:
Issue: Depreciation Studies
Witness: John Spanos
Type of Exhibit: Direct Testimony
Sponsoring Party: Evergy Missouri Metro
Case No.: ER-2022-0129
Date Testimony Prepared: January 7, 2022

MISSOURI PUBLIC SERVICE COMMISSION

CASE NOS.: ER-2022-0129

DIRECT TESTIMONY

OF

JOHN SPANOS

ON BEHALF OF

EVERGY MISSOURI METRO

**Kansas City, Missouri
January 2022**

DIRECT TESTIMONY

OF

JOHN SPANOS

Case No. ER-2022-0129

1 **Q: Please state your name and business address.**

2 A: My name is John J. Spanos. My business address is 207 Senate Avenue, Camp
3 Hill, Pennsylvania, 17011.

4 **Q: By whom and in what capacity are you employed?**

5 A: I am employed by Gannett Fleming Valuation and Rate Consultants, LLC
6 (“Gannett Fleming”) and serve as President.

7 **Q: Who are you testifying for?**

8 A: I am testifying on behalf of Evergy Metro, Inc. d/b/a Evergy Missouri Metro
9 (“Evergy Missouri Metro”).

10 **Q. Please state your educational background.**

11 A. I have Bachelor of Science degrees in Industrial Management and Mathematics
12 from Carnegie-Mellon University and a Master of Business Administration from
13 York College of Pennsylvania.

14 **Q. Do you belong to any professional societies?**

15 A. Yes. I am a past President and member of the Society of Depreciation
16 Professionals. I am also a member of the American Gas Association/Edison
17 Electric Institute Industry Accounting Committee.

1 **Q. Do you hold any special certification as a depreciation expert?**

2 A. Yes. The Society of Depreciation Professionals has established national standards
3 for depreciation professionals. The Society administers an examination to become
4 certified in this field. I passed the certification exam in September 1997, and was
5 recertified in August 2003, February 2008, January 2013 and February 2018.

6 **Q: What are your responsibilities?**

7 A: My responsibilities include conducting depreciation, valuation and original cost
8 studies, determining service life and net salvage estimates, conducting field
9 reviews, presenting recommended depreciation rates to clients, and supporting such
10 rates before state and federal regulatory agencies.

11 **Q: Please state your qualifications.**

12 A: I have over 35 years of depreciation experience which includes giving expert
13 testimony in over 380 cases before 41 regulatory commissions, including this
14 Commission. These cases have included depreciation studies in the electric, gas,
15 water, wastewater and pipeline industries. In addition to cases where I have
16 submitted testimony, I have also supervised over 700 other depreciation or
17 valuation assignments. Please refer to **Appendix A** for my qualifications
18 statement, which includes further information with respect to my work history, case
19 experience, and leadership in the Society of Depreciation Professionals.

20 **Q: Have you previously testified in a proceeding at the Missouri Public Service**
21 **Commission (“MPSC” or “Commission”) or before any other utility**
22 **regulatory agency?**

23 A: Yes.

1 **Q. What is the purpose of your testimony in this proceeding?**

2 A. My testimony will support and explain the depreciation study conducted under my
3 direction and supervision for the electric utility plant of Evergy Missouri Metro.
4 The study represents all electric plant assets.

5 **Q. Please define the concept of depreciation.**

6 A. Depreciation refers to the loss in service value not restored by current maintenance,
7 incurred in connection with the consumption or prospective retirement of utility
8 plant during service from causes which are known to be in current operation,
9 against which the Company is not protected by insurance. Among the causes to be
10 given consideration are wear and tear, decay, action of the elements, obsolescence,
11 changes in the art, changes in demand and the requirements of public authorities.

12 **Q. Have you filed any exhibits with your testimony?**

13 A. Yes. Attached to my testimony is **Schedule JJS-1**.

14 **Q. Was schedule JJS-1 prepared under your direction and control?**

15 A. Yes.

16 **Q. Please describe schedule JJS-1.**

17 A. Schedule JJS-1 is a report entitled, "2021 Depreciation Study - Calculated Annual
18 Depreciation Accruals Related to Electric Plant as of June 30, 2021." This report
19 sets forth the results of my depreciation study for Evergy Missouri Metro.

20 **Q. Is schedule JJS-1 a true and accurate copy of your depreciation study?**

21 A. Yes.

1 **Q. Does schedule JJS-1 accurately portray the results of your depreciation study**
2 **as of June 30, 2021?**

3 A. Yes.

4 **Q. What was the purpose of your depreciation study?**

5 A. The purpose of the depreciation study was to estimate the annual depreciation
6 accruals related to electric plant in service for ratemaking purposes and determine
7 appropriate average service lives and net salvage percentages for each plant
8 account.

9 **Q. Please describe the contents of your report.**

10 A. The Depreciation Study is presented in nine parts. Part I, Introduction, presents the
11 scope and basis for the Depreciation Study. Part II, Estimation of Survivor Curves,
12 includes descriptions of the methodology of estimating survivor curves. Parts III
13 and IV set forth the analysis for determining service life and net salvage estimates.
14 Part V, Calculation of Annual and Accrued Depreciation, includes the concepts of
15 depreciation and amortization using the remaining life basis. Part VI, Results of
16 Study, presents a description of the results of my analysis and a summary of the
17 depreciation calculations. Parts VII, VIII and IX include graphs and tables that
18 relate to the service life and net salvage analyses, and the detailed depreciation
19 calculations by account.

20 The Depreciation Study also includes several tables and tabulations of data
21 and calculations. Table 1 on pages VI-4 through VI-8 of the Depreciation Study
22 presents the estimated survivor curve, the net salvage percent, the original cost as
23 of June 30, 2021, the book depreciation reserve, and the calculated annual

1 depreciation accrual and rate for each account or subaccount. The section
2 beginning on page VII-2 presents the results of the retirement rate analyses
3 prepared as the historical bases for the service life estimates. The section beginning
4 on page VIII-2 presents the results of the net salvage analysis. The section
5 beginning on page IX-2 presents the depreciation calculations related to surviving
6 original cost as of June 30, 2021.

7 **Q. Please explain how you performed your depreciation study.**

8 A. I used the straight line remaining life method of depreciation, with the average
9 service life procedure for all plant assets except some general plant accounts. The
10 annual depreciation is based on a method of depreciation accounting that seeks to
11 distribute the unrecovered cost of fixed capital assets over the estimated remaining
12 useful life of each unit, or group of assets, in a systematic and rational manner.

13 For General Plant Accounts 391.00, 391.01, 391.02, 393.00, 394.00, 395.00,
14 397.00, and 398.00, I used the straight line remaining life method of amortization.
15 The annual amortization is based on amortization accounting that distributes the
16 unrecovered cost of fixed capital assets over the remaining amortization period
17 selected for each account and vintage.

18 **Q. How did you determine the recommended annual depreciation accrual rates?**

19 A. I did this in two phases. In the first phase, I estimated the service life and net salvage
20 characteristics for each depreciable group, that is, each plant account or subaccount
21 identified as having similar characteristics. In the second phase, I calculated the
22 composite remaining lives and annual depreciation accrual rates based on the
23 service life and net salvage estimates determined in the first phase.

1 **Q. Please describe the first phase of the depreciation study, in which you**
2 **estimated the service life and net salvage characteristics for each depreciable**
3 **group.**

4 A. The service life and net salvage study consisted of compiling historic data from
5 records related to Every Missouri Metro's plant; analyzing these data to obtain
6 historic trends of survivor and net salvage characteristics; obtaining supplementary
7 information from Every Missouri Metro's management, and operating personnel
8 concerning practices and plans as they relate to plant operations; and interpreting
9 the above data and the estimates used by other electric utilities to form judgments
10 regarding average service life and net salvage characteristics.

11 **Q. What historic data did you analyze for the purpose of estimating service life**
12 **characteristics?**

13 A. I analyzed the Company's accounting entries that record plant transactions during
14 the period 1920 through 2020. The transactions included additions, retirements,
15 transfers and the related balances. The Company records also included surviving
16 dollar value by year installed for each plant account as of June 30, 2021.

17 **Q. What method did you use to analyze this service life data?**

18 A. I used the retirement rate method. This is the most appropriate method when aged
19 retirement data are available, because this method determines the average rates of
20 retirement actually experienced by the Company during the period of time covered
21 by the study.

1 **Q. Please describe how you used the retirement rate method to analyze Evergy**
2 **Missouri Metro’s service life data.**

3 A. I applied the retirement rate method to each different group of property in the study.
4 For each property group, I used the retirement rate method to form a life table
5 which, when plotted, shows an original survivor curve for that property group.
6 Each original survivor curve represents the average survivor pattern experienced
7 by the several vintage groups during the experience band studied. The survivor
8 patterns do not necessarily describe the life characteristics of the property group;
9 therefore, interpretation of the original survivor curves is required to use them as
10 valid considerations in estimating service life. The Iowa-type survivor curves were
11 used to perform these interpretations.

12 **Q. What is an “Iowa-type survivor curve” and how did you use such curves to**
13 **estimate the service life characteristics for each property group?**

14 A. Iowa type curves are a widely used group of generalized survivor curves that
15 contain the range of survivor characteristics usually experienced by utilities and
16 other industrial companies. The Iowa curves were developed at the Iowa State
17 College Engineering Experiment Station through an extensive process of observing
18 and classifying the ages at which various types of property used by utilities and
19 other industrial companies had been retired.

20 Iowa type curves are used to smooth and extrapolate original survivor
21 curves determined by the retirement rate method. The Iowa curves and truncated
22 Iowa curves were used in this study to describe the forecasted rates of retirement
23 based on the observed rates of retirement and the outlook for future retirements.

1 The estimated survivor curve designations for each depreciable property
2 group indicate the average service life, the family within the Iowa system to which
3 the property group belongs, and the relative height of the mode. For example, the
4 Iowa 53-R1.5 indicates an average service life of fifty-three years; a right-moded,
5 or R, type curve (the mode occurs after average life for right-moded curves); and a
6 moderate height, 1.5, for the mode (possible modes for R type curves range from
7 0.5 to 5).

8 **Q. What approach did you use to estimate the lives of significant production**
9 **facilities?**

10 A. I used the life span technique to estimate the lives of significant facilities for which
11 concurrent retirement of the entire facility is anticipated. In this technique, the
12 survivor characteristics of such facilities are described using interim survivor
13 curves and estimated probable retirement dates. The interim survivor curve
14 describes the rate of retirement related to the replacement of elements of the facility,
15 such as, for a power plant, the retirement of assets such as pumps, motors and piping
16 that occur during the life of the facility. The probable retirement date provides the
17 rate of final retirement for each year of installation for the facility by truncating the
18 interim survivor curve for each installation year at its attained age at the date of
19 probable retirement. The use of interim survivor curves truncated at the date of
20 probable retirement provides a consistent method for estimating the lives of the
21 several years of installation for a particular facility inasmuch as a single concurrent
22 retirement for all years of installation will occur when it is retired.

1 **Q. Is this approach widely accepted for estimating the service lives of production**
2 **facilities?**

3 A. Yes. The life span has been used previously for Evergy Missouri Metro as well as
4 for Evergy Missouri West. My firm has also used the life span technique in
5 performing depreciation studies presented to and accepted by many public utility
6 commissions across the United States and Canada, including Missouri.

7 **Q. What is the basis for the probable retirement year that you have estimated for**
8 **each facility?**

9 A. The basis for the probable retirement years are life spans for each facility that are
10 based on judgment and incorporate consideration of the age, use, size, nature of
11 construction, management outlook and typical life spans experienced and used by
12 other electric utilities for similar facilities. Most of the life spans result in probable
13 retirement years that are many years in the future. As a result, the retirements of
14 these facilities are not yet subject to specific management plans. Such plans would
15 be premature. At the appropriate time, detailed studies of the economics of
16 rehabilitation and continued use or retirement of the structure will be performed,
17 and the results incorporated in the estimation of the facility's life span.

18 **Q. Are the factors considered in your estimates of service life and net salvage**
19 **percents presented in schedule JJS-1?**

20 A. Yes. A discussion of the factors considered in the estimation of service lives and
21 net salvage percents are presented in Part III and Part IV of Schedule JJS-1.

1 **Q. Did you physically observe Evergy Missouri Metro’s plant and equipment as**
2 **part of your depreciation study?**

3 A. Yes. I made field reviews of Evergy Missouri Metro’s property during September
4 2021 to observe representative portions of plant. Also, I have conducted field visits
5 in prior studies in August 2014 and August 2009. Field reviews are conducted to
6 become familiar with Company operations and obtain an understanding of the
7 function of the plant and information with respect to the reasons for past retirements
8 and the expected future causes of retirements. This knowledge was incorporated in
9 the interpretation and extrapolation of the statistical analyses.

10 **Q. How did your experience in development of other depreciation studies affect**
11 **your work in this case?**

12 A. Because I customarily conduct field reviews for my depreciation studies, I have had
13 the opportunity to visit scores of similar plants and meet with operations personnel
14 at other companies. The knowledge accumulated from those visits and meetings
15 provide me useful information that I can draw on to confirm or challenge my
16 numerical analyses concerning plant condition and remaining life estimates.

17 **Q. Would you please explain the concept of “net salvage”?**

18 A. Net salvage is a component of the service value of capital assets that is recovered
19 through depreciation rates. The service value of an asset is its original cost less its
20 net salvage. Net salvage is the salvage value received for the asset upon retirement
21 less the cost to retire the asset. When the cost to retire exceeds the salvage value,
22 the result is negative net salvage.

1 Inasmuch as depreciation expense is the loss in service value of an asset
2 during a defined period, e.g. one year, it must include a ratable portion of both the
3 original cost and the net salvage. That is, the net salvage related to an asset should
4 be incorporated in the cost of service during the same period as its original cost so
5 that customers receiving service from the asset pay rates that include a portion of
6 both elements of the asset's service value, the original cost and the net salvage
7 value.

8 For example, the full recovery of the service value of a \$1,000 line
9 transformer will include not only the \$1,000 of original cost, but also, on average,
10 \$75 to remove the line transformer at the end of its life and \$25 in salvage value.
11 In this example, the net salvage component is negative \$50 ($\$25 - \75), and the net
12 salvage percent is negative 5% ($(\$25 - \$75)/\$1,000$).

13 **Q. Please describe how you estimated net salvage percentages.**

14 A. I estimated the net salvage percentages based on informed judgment that, for most
15 accounts, incorporated analyses of the historical data for the period 1976 through
16 2020 and considered estimates for other electric companies, experience of industry
17 practices as well as trends in the industry. In the historical analyses, the net salvage,
18 cost of removal and gross salvage amounts were expressed as percents of the
19 original cost retired. These percents were calculated on annual and three-year
20 moving average bases for the 1976 to 2020 period.

1 **Q. Were the net salvage percentages for generating facilities based on the same**
2 **analyses?**

3 A. Yes, for interim analyses. The net salvage percentages for generating facilities
4 were based on two components, the interim net salvage percentage and the final net
5 salvage percentage. The interim net salvage percentage is determined based on the
6 historical indications from the period 1976-2020 for steam; 1987-2020 for nuclear;
7 1982-2020 for other production and 2010-2020 for wind. The cost of removal and
8 gross salvage amounts are based as a percentage of the associated plant retired. The
9 final net salvage or dismantlement component was determined based on the assets
10 anticipated to be retired at the concurrent date of final retirement. The
11 decommissioning costs were determined by a 1898 & Co. study for steam, other
12 production and wind. The study is attached to the Direct Testimony of Jeffrey T.
13 Kopp.

14 The final net salvage or decommissioning component was determined based
15 on the retirement activities associated with the assets anticipated to be retired at the
16 concurrent date of final retirement.

17 **Q. Have you included a dismantlement or decommissioning component into the**
18 **overall recovery of generating facilities?**

19 A. Yes. A dismantlement or decommissioning component has been included to the
20 net salvage percentage for steam and other production facilities including wind.

1 **Q. Can you explain how the final net salvage component is included in the**
2 **depreciation study?**

3 A. Yes. The dismantlement component is part of the overall net salvage for each
4 location within the production assets. Based on studies for other utilities and the
5 cost estimates of Evergy Missouri Metro, it was determined that the dismantlement
6 or decommissioning costs for steam and other production facilities is best
7 calculated by dividing the dismantlement cost by the surviving plant at final
8 retirement. These amounts at a location basis are added to the interim net salvage
9 percentage of the assets anticipated to be retired on an interim basis to produce the
10 weighted net salvage percentage for each location. The detailed calculations of the
11 overall net salvage for each location is set forth on pages VIII-2 and VIII-3 of
12 Schedule JJS-1.

13 **Q. What is the basis of the dismantlement or decommissioning cost estimates?**

14 A. The decommissioning cost estimates are based on decommissioning studies of each
15 generating site performed by 1898 & Co. These estimates are based on the current
16 cost to decommission the facility. Although, the costs to decommission power
17 plants has tended to increase over time (as have construction costs in general) there
18 is no escalation of the costs to the time of retirement

19 **Q. Please describe the second phase of the process that you used in the**
20 **depreciation study in which you calculated composite remaining lives and**
21 **annual depreciation accrual rates.**

22 A. After I estimated the service life and net salvage characteristics for each depreciable
23 property group, I calculated the annual depreciation accrual rates for each

1 depreciable group based on the straight line remaining life method, using remaining
2 lives weighted consistent with the average service life procedure. The calculation
3 of annual depreciation accrual rates was developed as of June 30, 2021.

4 **Q. Please describe the straight line remaining life method of depreciation.**

5 A. The straight line remaining life method of depreciation allocates the original cost
6 of the property, less accumulated depreciation, less future net salvage, in equal
7 amounts to each year of remaining service life.

8 **Q. Please describe the average service life procedure for calculating remaining
9 life accrual rates.**

10 A. The average service life procedure defines the group for which the remaining life
11 annual accrual is determined. Under this procedure, the annual accrual rate is
12 determined for the entire group or account based on its average remaining life and
13 this rate is applied to the surviving balance of the group's cost. The average
14 remaining life of the group is calculated by first dividing the future book accruals
15 (original cost less allocated book reserve less future net salvage) by the average
16 remaining life for each vintage. The average remaining life for each vintage is
17 derived from the area under the survivor curve between the attained age of the
18 vintage and the maximum age. Then, the sum of the future book accruals is divided
19 by the sum of the annual accruals to determine the average remaining life of the
20 entire group for use in calculating the annual depreciation accrual rate.

21 **Q. Please describe amortization accounting.**

22 A. Amortization accounting is used for accounts with many units, but small asset
23 values. In amortization accounting, units of property are capitalized in the same

1 manner as they are in depreciation accounting. However, depreciation accounting
2 is difficult for these assets because periodic inventories are required to properly
3 reflect plant in service. Consequently, retirements are recorded when a vintage is
4 fully amortized rather than as the units are removed from service. That is, there is
5 no dispersion of retirement. All units are retired when the age of the vintage reaches
6 the amortization period. Each plant account or group of assets is assigned a fixed
7 period which represents an anticipated life during which the asset will render
8 service. For example, in amortization accounting, assets that have a 20-year
9 amortization period will be fully recovered after 20 years of service and taken off
10 the Company books, but not necessarily removed from service. In contrast, assets
11 that are taken out of service before 20 years remain on the books until the
12 amortization period for that vintage has expired.

13 **Q. Amortization accounting is being implemented for which plant accounts?**

14 A. Amortization accounting is only appropriate for certain General Plant accounts.
15 These accounts are 391.00, 391.01, 391.02, 393.00, 394.00, 395.00, 397.00, and
16 398.00, which represent less than three percent of depreciable plant.

17 **Q. Please use an example to illustrate the development of the annual depreciation
18 accrual rate for a particular group of property in your depreciation study.**

19 A. I will use Account 367, Underground Conductors and Devices, as an example
20 because it is one of the largest depreciable groups.

21 The retirement rate method was used to analyze the survivor characteristics
22 of this property group. Aged plant accounting data were compiled from 1947
23 through 2020 and analyzed in periods that best represent the overall service life of

1 this property. The life tables for the 1947-2020 and 1981-2020 experience bands
2 are presented in the depreciation study on pages VII-137 through VII-142. Each
3 life table displays the retirement and surviving ratios of the aged plant data exposed
4 to retirement by age interval. For example, page VII-137 of Schedule JJS-1, shows
5 \$2,092,710 retired during age interval 0.5-1.5 with \$674,125,254 exposed to
6 retirement at the beginning of the interval. Consequently, the retirement ratio is
7 0.0031 ($\$2,092,710/\$674,125,254$) and the survivor ratio is 0.9969 ($1-0.0031$). The
8 percent surviving at age 0.5 of .9984 percent is multiplied by the survivor ratio of
9 99.69 to derive the percent surviving at age 1.5 of 99.53 percent. This process
10 continues for the remaining age intervals for which plant was exposed to retirement
11 during the period 1947-2020. The life tables, or original survivor curves, are plotted
12 along with the estimated smooth survivor curve, the 53-R1.5, on page VII-136 of
13 Schedule JJS-1.

14 The net salvage percent is presented on pages VIII-74 through VIII-76 of
15 Schedule JJS-1. The percentage is based on the result of annual gross salvage
16 minus the cost to remove plant assets as compared to the original cost of plant
17 retired during the period 1976 through 2020. The 45-year period experienced
18 negative \$14,138,684 ($\$19,969,480-\$34,108,164$) in net salvage for \$65,853,977
19 plant retired. The result is negative net salvage of 21 percent
20 ($\$14,138,684/\$65,853,977$); however, the most recent five-year period and the
21 rolling three-year averages trend toward negative 59 and negative 41 percent,
22 respectively. Therefore, based on the statistics and industry averages, negative
23 twenty percent was recommended.

1 My calculation of the annual depreciation related to original cost of electric
2 utility plant as of June 30, 2021 for Account 367 is presented on pages IX-114 and
3 IX-115 of Schedule JJS-1. The calculation is based on the 53-R1.5 survivor curve,
4 20% negative net salvage, the attained age, and the allocated book reserve. The
5 tabulation sets forth the installation year, the original cost, calculated accrued
6 depreciation, allocated book reserve, future accruals, remaining life and annual
7 accrual. These totals are brought forward to Table 1 on page VI-7.

8 **Q. In your opinion, are the depreciation and amortization rates set forth in**
9 **Schedule JJS-1 the appropriate rates for the commission to adopt in this**
10 **proceeding for Evergy Missouri Metro?**

11 A. Yes. These rates appropriately reflect the rates at which the costs of Evergy
12 Missouri Metro’s assets are being consumed over their useful lives. These rates are
13 an appropriate basis for setting electric rates in this matter and for the Company to
14 use for booking depreciation and amortization expense going forward.

15 **Q. Have you developed depreciation rates for new or reclassified assets?**

16 A. Yes. The existing assets in Account 312.00, Boiler Plant Equipment, which related
17 to bags and catalysts have been reclassified into Account 312.05, Boiler Plant
18 Equipment – Bags and Catalysts and a more appropriate life parameter established
19 for these assets. In the event, new bags or catalysts are added to the Hawthorn Unit
20 9 then those assets will have a rate of 12.50 percent. Additionally, existing assets
21 in Account 354.05, Towers and Fixtures - Subtransmission; Account 355.05, Poles
22 and Fixtures – Subtransmission; Account 356.05, Overhead Conductors and
23 Devices – Subtransmission; Account 357.05, Underground Conduit –

1 Subtransmission; Account 358.05, Underground Conductor and Devices –
2 Subtransmission, have been reclassified into separate subaccounts to properly
3 recover their investment over their remaining lives. The life and salvage parameters
4 for the subtransmission assets are the same as the related primary transmission
5 account.

6 **Q: Does this conclude your testimony?**

7 A: Yes, it does.

BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF MISSOURI

In the Matter of Evergy Metro, Inc. d/b/a Evergy)
Missouri Metro's Request for Authority to)
Implement A General Rate Increase for Electric)
Service)

Case No. ER-2022-0129

AFFIDAVIT OF JOHN J. SPANOS

COMMONWEALTH OF PENNSYLVANIA)

) ss

COUNTY OF CUMBERLAND)

John J. Spanos, being first duly sworn on his oath, states:

1. My name is John J. Spanos. I work in Camp Hill Pennsylvania, and I am employed by Gannett Fleming Valuation and Rate Consultants, LLC and serve as President.

2. Attached hereto and made a part hereof for all purposes is my Direct Testimony on behalf of Evergy Missouri Metro consisting of nineteen (19) pages, having been prepared in written form for introduction into evidence in the above-captioned docket.

3. I have knowledge of the matters set forth therein. I hereby swear and affirm that my answers contained in the attached testimony to the questions therein propounded, including any attachments thereto, are true and accurate to the best of my knowledge, information and belief.

John J. Spanos
John J. Spanos

Subscribed and sworn before me this 5th day of January 2022.

Mary Lynn Eckert

Appendix A

JOHN SPANOS

DEPRECIATION EXPERIENCE

Q. Please state your name.

A. My name is John J. Spanos.

Q. What is your educational background?

A. I have Bachelor of Science degrees in Industrial Management and Mathematics from Carnegie-Mellon University and a Master of Business Administration from York College.

Q. Do you belong to any professional societies?

A. Yes. I am a member and past President of the Society of Depreciation Professionals and a member of the American Gas Association/Edison Electric Institute Industry Accounting Committee.

Q. Do you hold any special certification as a depreciation expert?

A. Yes. The Society of Depreciation Professionals has established national standards for depreciation professionals. The Society administers an examination to become certified in this field. I passed the certification exam in September 1997 and was recertified in August 2003, February 2008, January 2013 and February 2018.

Q. Please outline your experience in the field of depreciation.

A. In June 1986, I was employed by Gannett Fleming Valuation and Rate Consultants, Inc. as a Depreciation Analyst. During the period from June 1986 through December 1995, I helped prepare numerous depreciation and original cost studies for utility companies in various industries. I helped perform depreciation studies for the following telephone companies: United Telephone of Pennsylvania, United Telephone of New Jersey, and Anchorage Telephone Utility. I helped perform depreciation studies for the following

companies in the railroad industry: Union Pacific Railroad, Burlington Northern Railroad, and Wisconsin Central Transportation Corporation.

I helped perform depreciation studies for the following organizations in the electric utility industry: Chugach Electric Association, The Cincinnati Gas and Electric Company (CG&E), The Union Light, Heat and Power Company (ULH&P), Northwest Territories Power Corporation, and the City of Calgary - Electric System.

I helped perform depreciation studies for the following pipeline companies: TransCanada Pipelines Limited, Trans Mountain Pipe Line Company Ltd., Interprovincial Pipe Line Inc., Nova Gas Transmission Limited and Lakehead Pipeline Company.

I helped perform depreciation studies for the following gas utility companies: Columbia Gas of Pennsylvania, Columbia Gas of Maryland, The Peoples Natural Gas Company, T. W. Phillips Gas & Oil Company, CG&E, ULH&P, Lawrenceburg Gas Company and Penn Fuel Gas, Inc.

I helped perform depreciation studies for the following water utility companies: Indiana-American Water Company, Consumers Pennsylvania Water Company and The York Water Company; and depreciation and original cost studies for Philadelphia Suburban Water Company and Pennsylvania-American Water Company.

In each of the above studies, I assembled and analyzed historical and simulated data, performed field reviews, developed preliminary estimates of service life and net salvage, calculated annual depreciation, and prepared reports for submission to state public utility commissions or federal regulatory agencies. I performed these studies under the general direction of William M. Stout, P.E.

In January 1996, I was assigned to the position of Supervisor of Depreciation Studies. In July 1999, I was promoted to the position of Manager, Depreciation and

Valuation Studies. In December 2000, I was promoted to the position as Vice-President of Gannett Fleming Valuation and Rate Consultants, Inc., in April 2012, I was promoted to the position as Senior Vice President of the Valuation and Rate Division of Gannett Fleming Inc. (now doing business as Gannett Fleming Valuation and Rate Consultants, LLC) and in January of 2019, I was promoted to my present position of President of Gannett Fleming Valuation and Rate Consultants, LLC. In my current position I am responsible for conducting all depreciation, valuation and original cost studies, including the preparation of final exhibits and responses to data requests for submission to the appropriate regulatory bodies.

Since January 1996, I have conducted depreciation studies similar to those previously listed including assignments for Pennsylvania-American Water Company; Aqua Pennsylvania; Kentucky-American Water Company; Virginia-American Water Company; Indiana-American Water Company; Iowa-American Water Company; New Jersey-American Water Company; Hampton Water Works Company; Omaha Public Power District; Enbridge Pipe Line Company; Inc.; Columbia Gas of Virginia, Inc.; Virginia Natural Gas Company National Fuel Gas Distribution Corporation - New York and Pennsylvania Divisions; The City of Bethlehem - Bureau of Water; The City of Coatesville Authority; The City of Lancaster - Bureau of Water; Peoples Energy Corporation; The York Water Company; Public Service Company of Colorado; Enbridge Pipelines; Enbridge Gas Distribution, Inc.; Reliant Energy-HLP; Massachusetts-American Water Company; St. Louis County Water Company; Missouri-American Water Company; Chugach Electric Association; Alliant Energy; Oklahoma Gas & Electric Company; Nevada Power Company; Dominion Virginia Power; NUI-Virginia Gas Companies; Pacific Gas & Electric Company; PSI Energy; NUI - Elizabethtown Gas Company;

Cinergy Corporation – CG&E; Cinergy Corporation – ULH&P; Columbia Gas of
Kentucky; South Carolina Electric & Gas Company; Idaho Power Company; El Paso

Electric Company; Aqua North Carolina; Aqua Ohio; Aqua Texas, Inc.; Aqua Illinois, Inc.; Ameren Missouri; Central Hudson Gas & Electric; Centennial Pipeline Company; CenterPoint Energy-Arkansas; CenterPoint Energy – Oklahoma; CenterPoint Energy – Entex; CenterPoint Energy - Louisiana; NSTAR – Boston Edison Company; Westar Energy, Inc.; United Water Pennsylvania; PPL Electric Utilities; PPL Gas Utilities; Wisconsin Power & Light Company; TransAlaska Pipeline; Avista Corporation; Northwest Natural Gas; Allegheny Energy Supply, Inc.; Public Service Company of North Carolina; South Jersey Gas Company; Duquesne Light Company; MidAmerican Energy Company; Laclede Gas; Duke Energy Company; E.ON U.S. Services Inc.; Elkton Gas Services; Anchorage Water and Wastewater Utility; Kansas City Power and Light; Duke Energy North Carolina; Duke Energy South Carolina; Monongahela Power Company; Potomac Edison Company; Duke Energy Ohio Gas; Duke Energy Kentucky; Duke Energy Indiana; Duke Energy Progress; Northern Indiana Public Service Company; Tennessee- American Water Company; Columbia Gas of Maryland; Maryland-American Water Company; Bonneville Power Administration; NSTAR Electric and Gas Company; EPCOR Distribution, Inc.; B. C. Gas Utility, Ltd; Entergy Arkansas; Entergy Texas; Entergy Mississippi; Entergy Louisiana; Entergy Gulf States Louisiana; the Borough of Hanover; Louisville Gas and Electric Company; Kentucky Utilities Company; Madison Gas and Electric; Central Maine Power; PEPCO; PacifiCorp; Minnesota Energy Resource Group; Jersey Central Power & Light Company; Cheyenne Light, Fuel and Power Company; United Water Arkansas; Central Vermont Public Service Corporation; Green Mountain Power; Portland General Electric Company; Atlantic City Electric; Nicor Gas Company; Black Hills Power; Black Hills Colorado Gas; Black Hills Energy Arkansas, Inc.; Black Hills Kansas Gas; Black Hills Service Company; Black Hills Utility Holdings; Public Service Company of Oklahoma; City of Dubois; Peoples Gas Light and Coke Company; North Shore Gas Company; Connecticut Light

and Power; New York State Electric and Gas Corporation; Rochester Gas and Electric Corporation; Greater Missouri Operations; Tennessee Valley Authority; Omaha Public Power District; Indianapolis Power & Light Company; Vermont Gas Systems, Inc.; Metropolitan Edison; Pennsylvania Electric; West Penn Power; Pennsylvania Power; PHI Service Company - Delmarva Power and Light; Atmos Energy Corporation; Citizens Energy Group; PSE&G Company; Berkshire Gas Company; Alabama Gas Corporation; Mid-Atlantic Interstate Transmission, LLC; SUEZ Water; WEC Energy Group; Rocky Mountain Natural Gas, LLC; Illinois-American Water Company; Northern Illinois Gas Company; Public Service of New Hampshire and Newtown Artesian Water Company.

My additional duties include determining final life and salvage estimates, conducting field reviews, presenting recommended depreciation rates to management for its consideration and supporting such rates before regulatory bodies.

Q. Have you submitted testimony to any state utility commission on the subject of utility plant depreciation?

A. Yes. I have submitted testimony to the Pennsylvania Public Utility Commission; the Commonwealth of Kentucky Public Service Commission; the Public Utilities Commission of Ohio; the Nevada Public Utility Commission; the Public Utilities Board of New Jersey; the Missouri Public Service Commission; the Massachusetts Department of Telecommunications and Energy; the Alberta Energy & Utility Board; the Idaho Public Utility Commission; the Louisiana Public Service Commission; the State Corporation Commission of Kansas; the Oklahoma Corporate Commission; the Public Service Commission of South Carolina; Railroad Commission of Texas – Gas Services Division; the New York Public Service Commission; Illinois Commerce Commission; the Indiana

Utility Regulatory Commission; the California Public Utilities Commission; the Federal Energy Regulatory Commission (“FERC”); the Arkansas Public Service Commission; the Public Utility Commission of Texas; Maryland Public Service Commission; Washington Utilities and Transportation Commission; The Tennessee Regulatory Commission; the Regulatory Commission of Alaska; Minnesota Public Utility Commission; Utah Public Service Commission; District of Columbia Public Service Commission; the Mississippi Public Service Commission; Delaware Public Service Commission; Virginia State Corporation Commission; Colorado Public Utility Commission; Oregon Public Utility Commission; South Dakota Public Utilities Commission; Wisconsin Public Service Commission; Wyoming Public Service Commission; the Public Service Commission of West Virginia; Maine Public Utility Commission; Iowa Utility Board; Connecticut Public Utilities Regulatory Authority; New Mexico Public Regulation Commission; Commonwealth of Massachusetts Department of Public Utilities; Rhode Island Public Utilities Commission and the North Carolina Utilities Commission.

Q. Have you had any additional education relating to utility plant depreciation?

A. Yes. I have completed the following courses conducted by Depreciation Programs, Inc.: “Techniques of Life Analysis,” “Techniques of Salvage and Depreciation Analysis,” “Forecasting Life and Salvage,” “Modeling and Life Analysis Using Simulation,” and “Managing a Depreciation Study.” I have also completed the “Introduction to Public Utility Accounting” program conducted by the American Gas Association.

Q. Does this conclude your qualification statement?

A. Yes.

Attention Mr. Ron Klote
Director, Regulatory Affairs

Ladies and Gentlemen:

Pursuant to your request, we have conducted a depreciation study related to the electric plant of Evergy Metro, Inc. as of June 30, 2021. The attached report presents a description of the methods used in the estimation of depreciation, the summary of annual depreciation accrual rates, the statistical support for the life and net salvage estimates and the detailed tabulations of annual depreciation.

We gratefully acknowledge the assistance of Evergy Metro, Inc. personnel in the conduct of this study.

Respectfully submitted,

GANNETT FLEMING VALUATION
AND RATE CONSULTANTS, LLC

EVERGY METRO IC.
DEPRECIATION STUDY

EXECUTIVE SUMMARY

Pursuant to Evergy Metro Inc.'s ("Company") request, Gannett Fleming Valuation and Rate Consultants, LLC ("Gannett Fleming") conducted a depreciation study related to the electric plant as of June 30, 2021. The purpose of this study was to determine the annual depreciation accrual rates and amounts for book and ratemaking purposes.

The depreciation rates are based on the straight line method using the average service life ("ASL") procedure and were applied on a remaining life basis. The calculations were based on attained ages and estimated average service life, and forecasted net salvage characteristics for each depreciable group of assets.

The Company's accounting policy has not changed since the last depreciation study was prepared. However, there have been changes to the life spans of generating facilities and estimates of life and net salvage. The overall effect of these changes has created an increase in depreciation expense as compared to the rates approved in the last proceeding.

Gannett Fleming recommends the calculated annual depreciation accrual rates set forth herein apply specifically to electric plant in service as of June 30, 2021 as summarized by Table 1 of the study. Supporting analysis and calculations are provided within the study.

The study results set forth an annual depreciation expense of \$176.6 million when applied to depreciable plant balances as of June 30, 2021. The results are summarized at the functional level as follows:

SUMMARY OF ORIGINAL COST, ACCRUAL RATES AND AMOUNTS

FUNCTION	ORIGINAL COST AS OF JUNE 30, 2021	PROPOSED RATE	PROPOSED EXPENSE
Steam Production Plant	\$ 2,030,112,727.71	3.59	\$ 72,873,569
Nuclear Production Plant	1,095,465,202.30	2.24	24,529,508
Production Plant	342,684,201.19	3.68	12,609,025
Transmission Plant	301,544,746.57	2.15	6,475,659
Distribution Plant	1,563,202,096.59	2.86	44,696,082
General Plant	269,463,790.69	5.18	13,956,200
Reserve Adjustment for Amortization	-	-	1,490,516
Total	<u>\$5,602,472,765.05</u>	3.15	<u>\$176,630,559</u>

PART I. INTRODUCTION

**EVERGY METRO INC.
DEPRECIATION STUDY**

PART I. INTRODUCTION

SCOPE

This report sets forth the results of the depreciation study for Evergy Metro Inc. (“Company”), to determine the annual depreciation accrual rates and amounts for book purposes applicable to the original cost of electric plant as of June 30, 2021. The rates and amounts are based on the straight line remaining life method of depreciation. This report also describes the concepts, methods and judgments which underlie the recommended annual depreciation accrual rates related to electric plant in service as of June 30, 2021.

The service life and net salvage estimates resulting from the study were based on informed judgment which incorporated analyses of historical plant retirement data as recorded through 2020, a review of Company practice and outlook as they relate to plant operation and retirement, and consideration of current practice in the electric industry, including knowledge of service lives and net salvage estimates used for other electric companies.

PLAN OF REPORT

Part I, Introduction, contains statements with respect to the plan of the report, and the basis of the study. Part II, Estimation of Survivor Curves, presents descriptions of the considerations and the methods used in the service life and net salvage studies. Part III, Service Life Considerations, presents the factors and judgment utilized in the average service life analysis. Part IV, Net Salvage Considerations, presents the judgment utilized for the net salvage study. Part V, Calculation of Annual and Accrued Depreciation, describes the procedures used in the calculation of group depreciation. Part VI, Results

of Study, presents summaries by depreciable group of annual depreciation accrual rates and amounts, as well as composite remaining lives. Part VII, Service Life Statistics, presents the statistical analysis of service life estimates, Part VIII, Net Salvage Statistics, sets forth the statistical indications of net salvage percents, and Part IX, Detailed Depreciation Calculations, presents the detailed tabulations of annual depreciation.

BASIS OF THE STUDY

Depreciation

Depreciation, in public utility regulation, is the loss in service value not restored by current maintenance, incurred in connection with the consumption or prospective retirement of utility plant in the course of service from causes which are known to be in current operation and against which the utility is not protected by insurance. Among causes to be given consideration are wear and tear, deterioration, action of the elements, inadequacy, obsolescence, changes in the art, changes in demand, and the requirements of public authorities.

Depreciation, as used in accounting, is a method of distributing fixed capital costs, less net salvage, over a period of time by allocating annual amounts to expense. Each annual amount of such depreciation expense is part of that year's total cost of providing electric utility service. Normally, the period of time over which the fixed capital cost is allocated to the cost of service is equal to the period of time over which an item renders service, that is, the item's service life. The most prevalent method of allocation is to distribute an equal amount of cost to each year of service life. This method is known as the straight line method of depreciation.

For most accounts, the annual depreciation was calculated by the straight line method using the average service life procedure and the remaining life basis. For certain General Plant accounts, the annual depreciation is based on amortization accounting.

Both types of calculations were based on original cost, attained ages, and estimates of service lives and net salvage.

The straight line method, average service life procedure is a commonly used depreciation calculation procedure that has been widely accepted in jurisdictions throughout North America. Gannett Fleming recommends its continued use. Amortization accounting is used for certain General Plant accounts because of the disproportionate plant accounting effort required when compared to the minimal original cost of the large number of items in these accounts. An explanation of the calculation of annual and accrued amortization is presented beginning on page V-4 of the report.

Service Life and Net Salvage Estimates

The service life and net salvage estimates used in the depreciation and amortization calculations were based on informed judgment which incorporated a review of management's plans, policies and outlook, a general knowledge of the electric utility industry, and comparisons of the service life and net salvage estimates from our studies of other electric utilities. The use of survivor curves to reflect the expected dispersion of retirement provides a consistent method of estimating depreciation for electric plant. Iowa type survivor curves were used to depict the estimated survivor curves for the plant accounts not subject to amortization accounting.

The procedure for estimating service lives consisted of compiling historical data for the plant accounts or depreciable groups, analyzing this history through the use of widely accepted techniques, and forecasting the survivor characteristics for each depreciable group on the basis of interpretations of the historical data analyses and the probable future. The combination of the historical experience and the estimated future yielded estimated survivor curves from which the average service lives were derived.

**PART II. ESTIMATION OF
SURVIVOR CURVES**

PART II. ESTIMATION OF SURVIVOR CURVES

The calculation of annual depreciation based on the straight line method requires the estimation of survivor curves and the selection of group depreciation procedures. The estimation of survivor curves is discussed below and the development of net salvage is discussed in later sections of this report.

SURVIVOR CURVES

The use of an average service life for a property group implies that the various units in the group have different lives. Thus, the average life may be obtained by determining the separate lives of each of the units or by constructing a survivor curve by plotting the number of units which survive at successive ages.

The survivor curve graphically depicts the amount of property existing at each age throughout the life of an original group. From the survivor curve, the average life of the group, the remaining life expectancy, the probable life, and the frequency curve can be calculated. In Figure 1, a typical smooth survivor curve and the derived curves are illustrated. The average life is obtained by calculating the area under the survivor curve, from age zero to the maximum age, and dividing this area by the ordinate at age zero. The remaining life expectancy at any age can be calculated by obtaining the area under the curve, from the observation age to the maximum age, and dividing this area by the percent surviving at the observation age. For example, in Figure 1, the remaining life at age 30 is equal to the crosshatched area under the survivor curve divided by 29.5 percent surviving at age 30. The probable life at any age is developed by adding the age and remaining life. If the probable life of the property is calculated for each year of age, the probable life curve shown in the chart can be developed. The frequency curve presents the number of units retired in each age interval. It is derived by obtaining the differences between the amount of property surviving at the beginning and at the end of each interval.

This study has incorporated the use of Iowa curves developed from a retirement rate analysis of historical retirement history. A discussion of the concepts of survivor curves and of the development of survivor curves using the retirement rate method is presented below.

Iowa Type Curves

The range of survivor characteristics usually experienced by utility and industrial properties is encompassed by a system of generalized survivor curves known as the Iowa type curves. There are four families in the Iowa system, labeled in accordance with the location of the modes of the retirements (or the portion of the frequency curve with the highest level of retirements) in relationship to the average life and the relative height of the modes. The left moded curves, presented in Figure 2, are those in which the greatest frequency of retirement occurs to the left of, or prior to, average service life. The symmetrical moded curves, presented in Figure 3, are those in which the greatest frequency of retirement occurs at average service life. The right moded curves, presented in Figure 4, are those in which the greatest frequency occurs to the right of, or after, average service life. The origin moded curves, presented in Figure 5, are those in which the greatest frequency of retirement occurs at the origin, or immediately after age zero. The letter designation of each family of curves (L, S, R or O) represents the location of the mode of the associated frequency curve with respect to the average service life. The numbers represent the relative heights of the modes of the frequency curves within each family. A higher number designates a higher mode curve.

The Iowa curves were developed at the Iowa State College Engineering Experiment Station through an extensive process of observation and classification of the ages at which industrial property had been retired. A report of the study which resulted in the classification of property survivor characteristics into 18 type curves, which constitute three of the four families, was published in 1935 in the form of the Experiment Station's Bulletin 125.

FIGURE 1. TYPICAL SURVIVOR CURVE AND DERIVED CURVES

FIGURE 2. LEFT MODAL OR "L" IOWA TYPE SURVIVOR CURVES

FIGURE 3. SYMMETRICAL OR "S" IOWA TYPE SURVIVOR CURVES

FIGURE 4. RIGHT MODAL OR "R" IOWA TYPE SURVIVOR CURVES

FIGURE 5. ORIGIN MODAL OR "O" IOWA TYPE SURVIVOR CURVES

These curve types have also been presented in subsequent Experiment Station bulletins and in the text, "Engineering Valuation and Depreciation."¹ In 1957, Frank V. B. Couch, Jr., an Iowa State College graduate student, submitted a thesis presenting his development of the fourth family consisting of the four O type survivor curves.

Retirement Rate Method of Analysis

The retirement rate method is an actuarial method of deriving survivor curves using the average rates at which property of each age group is retired. The method relates to property groups for which aged accounting experience is available and is the method used to develop the original stub survivor curves in this study. The method (also known as the annual rate method) is illustrated through the use of an example in the following text and is also explained in several publications including "Statistical Analyses of Industrial Property Retirements,"² "Engineering Valuation and Depreciation,"³ and "Depreciation Systems."⁴

The average rate of retirement used in the calculation of the percent surviving for the survivor curve (life table) requires two sets of data: first, the property retired during a period of observation, identified by the property's age at retirement; and second, the property exposed to retirement at the beginning of the age intervals during the same period. The period of observation is referred to as the experience band. The band of years which represent the installation dates of the property exposed to retirement during the experience band is referred to as the placement band. An example of the calculations used in the development of a life table follows. The example includes schedules of annual aged property transactions, a schedule of plant exposed to retirement, a life table and illustrations of smoothing the stub survivor curve.

Schedules of Annual Transactions in Plant Records

The property group used to illustrate the retirement rate method is observed for the experience band 2011-2020 for which there were placements during the years 2006-2020. In order to illustrate the summation of the aged data by age interval, the data were compiled in the manner presented in Schedules 1 and 2 on pages II-11 and II-12. In Schedule 1, the year of installation (year placed) and the year of retirement are shown. The age interval during which a retirement occurred is determined from this information. In the example which follows, \$10,000 of the dollars invested in 2006 were retired in 2011. The \$10,000 retirement occurred during the age interval between 4½ and 5½ years on the basis that approximately one-half of the amount of property was installed prior to and subsequent to July 1 of each year. That is, on the average, property installed during a year is placed in service at the midpoint of the year for the purpose of the analysis. All retirements also are stated as occurring at the midpoint of a one-year age interval of time, except the first age interval which encompasses only one-half year.

The total retirements occurring in each age interval in a band are determined by summing the amounts for each transaction year-installation year combination for that age interval. For example, the total of \$143,000 retired for age interval 4½-5½ is the sum of the retirements entered on Schedule 1 immediately above the stair step line drawn on the table beginning with the 2011 retirements of 2006 installations and ending with the 2020 retirements of the 2015 installations. Thus, the total amount of 143 for age interval 4½-5½ equals the sum of:

$$10 + 12 + 13 + 11 + 13 + 13 + 15 + 17 + 19 + 20.$$

^a Transfer Affecting Exposures at Beginning of Year

^b Transfer Affecting Exposures at End of Year

^c Sale with Continued Use

Parentheses Denote Credit Amount.

In Schedule 2, other transactions which affect the group are recorded in a similar manner. The entries illustrated include transfers and sales. The entries which are credits to the plant account are shown in parentheses. The items recorded on this schedule are not totaled with the retirements, but are used in developing the exposures at the beginning of each age interval.

Schedule of Plant Exposed to Retirement

The development of the amount of plant exposed to retirement at the beginning of each age interval is illustrated in Schedule 3 on page II-14. The surviving plant at the beginning of each year from 2011 through 2020 is recorded by year in the portion of the table headed "Annual Survivors at the Beginning of the Year." The last amount entered in each column is the amount of new plant added to the group during the year. The amounts entered in Schedule 3 for each successive year following the beginning balance or addition are obtained by adding or subtracting the net entries shown on Schedules 1 and 2. For the purpose of determining the plant exposed to retirement, transfers-in are considered as being exposed to retirement in this group at the beginning of the year in which they occurred, and the sales and transfers-out are considered to be removed from the plant exposed to retirement at the beginning of the following year. Thus, the amounts of plant shown at the beginning of each year are the amounts of plant from each placement year considered to be exposed to retirement at the beginning of each successive transaction year. For example, the exposures for the installation year 2016 are calculated in the following manner:

Exposures at age 0	= amount of addition	= \$750,000
Exposures at age ½	= \$750,000 - \$ 8,000	= \$742,000
Exposures at age 1½	= \$742,000 - \$18,000	= \$724,000
Exposures at age 2½	= \$724,000 - \$20,000 - \$19,000	= \$685,000
Exposures at age 3½	= \$685,000 - \$22,000	= \$663,000

2019									1,080 ^a	1,069	6,579	6,579	½-1½	
2020										1,220 ^a	7,490	7,490	0-½	
Total	1,975	2,382	2,824	3,318	3,872	4,494	5,247	6,017	6,852	7,799	44,780	44,780		

^aAdditions during the year

For the entire experience band 2011-2020, the total exposures at the beginning of an age interval are obtained by summing diagonally in a manner similar to the summing of the retirements during an age interval (Schedule 1). For example, the figure of 3,789, shown as the total exposures at the beginning of age interval 4½-5½, is obtained by summing:

$$255 + 268 + 284 + 311 + 334 + 374 + 405 + 448 + 501 + 609.$$

Original Life Table

The original life table, illustrated in Schedule 4 on page II-16, is developed from the totals shown on the schedules of retirements and exposures, Schedules 1 and 3, respectively. The exposures at the beginning of the age interval are obtained from the corresponding age interval of the exposure schedule, and the retirements during the age interval are obtained from the corresponding age interval of the retirement schedule. The retirement ratio is the result of dividing the retirements during the age interval by the exposures at the beginning of the age interval. The percent surviving at the beginning of each age interval is derived from survivor ratios, each of which equals one minus the retirement ratio. The percent surviving is developed by starting with 100% at age zero and successively multiplying the percent surviving at the beginning of each interval by the survivor ratio, i.e., one minus the retirement ratio for that age interval. The calculations necessary to determine the percent surviving at age 5½ are as follows:

Percent surviving at age 4½	=	88.15	
Exposures at age 4½	=	3,789,000	
Retirements from age 4½ to 5½	=	143,000	
Retirement Ratio	=	143,000 ÷ 3,789,000	= 0.0377
Survivor Ratio	=	1.000 - 0.0377	= 0.9623
Percent surviving at age 5½	=	(88.15) x (0.9623)	= 84.83

The totals of the exposures and retirements (columns 2 and 3) are shown for the purpose of checking with the respective totals in Schedules 1 and 3. The ratio of the total retirements to the total exposures, other than for each age interval, is meaningless.

SCHEDULE 4. ORIGINAL LIFE TABLE
CALCULATED BY THE RETIREMENT RATE METHOD

Experience Band 2011-2020

Placement Band 2006-2020

(Exposure and Retirement Amounts are in Thousands of Dollars)

Age at Beginning of Interval	Exposures at Beginning of Age Interval	Retirements During Age Interval	Retirement Ratio	Survivor Ratio	Percent Surviving at Beginning of Age Interval
(1)	(2)	(3)	(4)	(5)	(6)
0.0	7,490	80	0.0107	0.9893	100.00

13.5	<u>167</u>	<u>26</u>	0.1557	0.8443	42.24
					35.66
Total	<u>44,780</u>	<u>1,606</u>			

Column 2 from Schedule 3, Column 12, Plant Exposed to Retirement.
 Column 3 from Schedule 1, Column 12, Retirements for Each Year.
 Column 4 = Column 3 Divided by Column 2.
 Column 5 = 1.0000 Minus Column 4.
 Column 6 = Column 5 Multiplied by Column 6 as of the Preceding Age Interval.

The original survivor curve is plotted from the original life table (column 6, Schedule 4). When the curve terminates at a percent surviving greater than zero, it is called a stub survivor curve. Survivor curves developed from retirement rate studies generally are stub curves.

Smoothing the Original Survivor Curve

The smoothing of the original survivor curve eliminates any irregularities and serves as the basis for the preliminary extrapolation to zero percent surviving of the original stub curve. Even if the original survivor curve is complete from 100% to zero percent, it is desirable to eliminate any irregularities, as there is still an extrapolation for the vintages which have not yet lived to the age at which the curve reaches zero percent. In this study, the smoothing of the original curve with established type curves was used to eliminate irregularities in the original curve.

The Iowa type curves are used in this study to smooth those original stub curves which are expressed as percents surviving at ages in years. Each original survivor curve was compared to the Iowa curves using visual and mathematical matching in order to determine the better fitting smooth curves. In Figures 6, 7, and 8, the original curve developed in Schedule 4 is compared with the L, S, and R Iowa type curves which most nearly fit the original survivor curve. In Figure 6, the L1 curve with an average life between 12 and 13 years appears to be the best fit. In Figure 7, the S0 type curve with a 12-year average life appears to be the best fit and appears to be better than the L1 fitting. In Figure 8, the R1 type curve with a 12-year average life appears to be the best fit and appears to be better than either the L1 or the S0.

In Figure 9, the three fittings, 12-L1, 12-S0 and 12-R1 are drawn for comparison purposes. It is probable that the 12-R1 Iowa curve would be selected as the most representative of the plotted survivor characteristics of the group.

PART III. SERVICE LIFE CONSIDERATIONS

PART III. SERVICE LIFE CONSIDERATIONS

FIELD TRIPS

In order to be familiar with the operation of the Company and observe representative portions of the plant, a field trip was conducted for the study. A general understanding of the function of the plant and information with respect to the reasons for past retirements and the expected future causes of retirements are obtained during field trips. This knowledge and information were incorporated in the interpretation and extrapolation of the statistical analyses.

The following is a list of the locations visited during the most recent field trips.

September 21-22, 2021

- Iatan Generation Station
- Tiffany Substation
- North Congress Substation
- LaCygne Generating Station
- Hawthorne Generating Station

August 11 and 12, 2014

- West Gardner Generating Station
- LaCygne Generating Station
- Facilities and Maintenance Facility
- Northeast Substation Office
- Avondale Substation
- North Congress Substation
- Iatan Generating Station

August 17-19, 2009

- Hawthorn Generating Station
- Hawthorn Combustion Turbine Station
- Iatan Generating
- Northeast Combustion Turbine Station
- Chouteau Substation
- Iatan Substation
- Northeast CT Substation
- Facilities and Maintenance Facility

SERVICE LIFE ANALYSIS

The service life estimates were based on informed judgment which considered a number of factors. The primary factors were the statistical analyses of data; current Company policies and outlook as determined during conversations with management; and the survivor curve estimates from previous studies of this company and other electric companies.

For many of the plant accounts and subaccounts for which survivor curves were estimated, the statistical analyses using the retirement rate method resulted in good to excellent indications of the survivor patterns experienced. These accounts represent 91 percent of depreciable plant. Generally, the information external to the statistics led to no significant departure from the indicated survivor curves for the accounts listed below. The statistical support for the service life estimates is presented in the section beginning on page VII-2.

<u>Account No.</u>	<u>Account Description</u>
STEAM PLANT	
311.00	Structures and Improvements
312.00	Boiler Plant Equipment

392.01	Transportation Equipment – Light Trucks
392.02	Transportation Equipment – Heavy Trucks
392.03	Transportation Equipment – Tractors
392.04	Transportation Equipment – Trailers
396.00	Power Operated Equipment

Account 364, Poles, Towers and Fixtures, is used to illustrate the manner in which the study was conducted for most of the accounts. Aged retirement and other plant accounting data were compiled for the years 1920 through 2020. These data were coded in the course of the Company's normal recordkeeping according to plant account or property group, type of transaction, year in which the transaction took place, and year in which the electric plant was placed in service. The data were analyzed by the retirement rate method of life analysis. The survivor curve chart for the account is

presented on page VII-121 and the life table for the experience band plotted on the chart follows it.

The survivor curve estimate is based on the statistical indications for the periods 1920 through 2020. The Iowa 47-R2.5 is a reasonable fit of the stub original survivor curve for Poles, Towers and Fixtures. The 47-year service life is within the typical service life range of 40 to 55 years for distribution poles. The 47-year life reflects the Company's plans to replace poles at the time the equipment fails or requires an upgrade due to growth in the service territory, is within the range of service life estimates used by other electric companies and is a reasonable interpretation of the significant portion of the stub survivor curve through age 68.

For Account 367, Underground Conductors and Devices, the estimate of survivor characteristics is based on the 1947-2020 and 1981-2020 experience bands. Most retirements have been due to deterioration, inadequacy and voltage conversions. Typical service lives for underground conductors and devices range from 40 to 55 years. The Iowa 53-R1.5 survivor curve is at the upper end of the range of other estimates, is a reasonable interpretation of the significant portions of the survivor curves through age 73 and reflects the outlook of management.

Life Span Estimates

The life span technique was used for the Company's Power Production accounts in conjunction with the use of interim survivor curves which reflect interim retirements that occur prior to the ultimate retirement of the major unit. The life span procedure is appropriate for these accounts since all of the assets within the plant will be retired concurrently. Probable retirement dates were estimated for each power plant. Life spans

for each unit were estimated based on discussions with management regarding future outlook, age and condition of the plant, life spans typically experienced and estimated for similar plants. The life span and probable retirement dates used for production plants are as follows:

<u>Depreciable Group</u>	<u>Major Year in Service</u>	<u>Probable Retirement Year</u>	<u>Life Span</u>
Steam Production Plant			
Hawthorn Unit 5	1969,2001	2045	76,44
Hawthorn Unit 9	1955,2000	2045	90,45
Iatan Unit 1	1980	2040	60
LaCygne Unit 1	1973	2038	65
LaCygne Unit 2	1977	2038	61
Iatan Unit 2	2010	2070	60
Nuclear Production Plant			
Wolf Creek	1985	2045	60
Other Production Plant			
Northeast	1972,1977	2040	68,63
West Gardner	2003	2048	45
Miami County	2003	2048	45
Hawthorn Unit 6	2001	2045	44
Hawthorn Unit 7	2000	2045	45
Hawthorn Unit 8	2000	2045	45
Spearville Unit 1	2006	2026	20
Spearville Unit 2	2010	2030	20
Solar	2013	2038	25

Power plants typically are retired when there are other units that can generate electricity at a lower cost. Typical life spans for base load, coal-fired power plants have been 50 to 65 years, however, in recent years 45-50 years has been more common. For example, Units 1, 2 and 3 at Montrose were completed in 1958, 1960 and 1964, respectively. The estimated probable retirement date for Montrose Unit 1 was 2016 and Montrose Units 2 and 3 was 2018. Thus, the life spans estimated for the Montrose power

plant were 58 years for Unit 1, 58 years for Unit 2 and 56 years for Unit 3, which were within the typical range of their vintage of coal plant. The more recent units such as Iatan are expected to have lives of 60 years for both Unit 1 and Unit 2. The estimated retirement dates should not be interpreted as commitments to retire these plants on these dates, but rather, as reasonable estimates subject to modification in the future as circumstances dictate.

The life span for the Wolf Creek Nuclear Power Plant is based on the length of the operating license as established by the Nuclear Regulatory Commission (NRC). The Company's current operating license is valid for 60 years from the date of issue. The probable retirement date estimated for the Wolf Creek Nuclear Plant is June 2045.

Similar studies were performed for the remaining plant accounts. Each of the judgments represented a consideration of statistical analyses of aged plant activity, management's outlook for the future, and the typical range of lives used by other electric companies.

The selected amortization periods for other General Plant accounts are described in the section "Calculated Annual and Accrued Amortization."

PART IV. NET SALVAGE CONSIDERATIONS

PART IV. NET SALVAGE CONSIDERATIONS

NET SALVAGE ANALYSIS

The estimates of net salvage by account were based in part on historical data compiled for the years 1976 through 2020. Cost of removal and gross salvage were expressed as percents of the original cost of plant retired, both on annual and three-year moving average bases. The most recent five-year average also was calculated for consideration. The net salvage estimates by account are expressed as a percent of the original cost of plant retired.

Net Salvage Considerations

The estimates of future net salvage are expressed as percentages of surviving plant in service, i.e., all future retirements. In cases in which removal costs are expected to exceed salvage receipts, a negative net salvage percentage is estimated. The net salvage estimates were based on judgment which incorporated analyses of historical cost of removal and gross salvage data, expectations with respect to future removal requirements and markets for retired equipment and materials.

The analyses of historical cost of removal and gross salvage data are presented in the section titled “Net Salvage Statistics” for the plant accounts for which the net salvage estimate relied partially on those analyses.

Statistical analyses of historical data for the period 1976 through 2020 contributed significantly toward the net salvage estimates for 35 plant accounts, representing 85 percent of the depreciable plant, as follows:

STEAM PRODUCTION PLANT	
312.00	Boiler Plant Equipment
314.00	Turbogenerator Units
315.00	Accessory Electric Equipment
316.00	Miscellaneous Power Plant Equipment

NUCLEAR PLANT

321.00	Structures and Improvements
322.00	Reactor Plant Equipment
323.00	Turbogenerator Units
324.00	Accessory Electric Equipment
325.00	Miscellaneous Power Plant Equipment

OTHER PRODUCTION PLANT

341.00	Structures and Improvements
342.00	Fuel Holder, Producers and Accessories
344.00	Generators
345.00	Accessory Electric Equipment

TRANSMISSION PLANT

352.00	Structures and Improvements
353.00	Station Equipment
353.03	Station Equipment – Communication Equipment
355.00	Poles and Fixtures
355.05	Poles and Fixtures – Subtransmission

DISTRIBUTION PLANT

361.00	Structures and Improvements
362.00	Station Equipment
362.03	Station Equipment – Communication Equipment
364.00	Poles, Towers and Fixtures
365.00	Overhead Conductors and Devices
367.00	Underground Conductors and Devices
368.00	Line Transformers
369.00	Services
370.00	Meters
370.02	Meters – AMI
371.00	Installations on Customers' Premises

GENERAL PLANT

390.00	Structures and Improvements
392.00	Transportation Equipment – Autos
392.10	Transportation Equipment – Light Trucks
392.20	Transportation Equipment – Heavy Trucks
392.30	Transportation Equipment – Tractors
392.40	Transportation Equipment – Trailers
396.00	Power Operated Equipment

Account 364.00, Poles, Towers and Fixtures, is used to illustrate the manner in which the study was conducted for the groups in the preceding list. Net salvage data for

the period 1976 through 2020 were analyzed for this account and are shown on pages VIII-65 through VIII-67. The data includes cost of removal, gross salvage and net salvage amounts and each of these amounts is expressed as a percent of the original cost of regular retirements. Three-year moving averages for the 1976-1978 through 2018-2020 periods were computed to smooth the annual amounts.

Cost of removal was high during the entire forty-five year period and in particular the last twelve years. The primary cause of the high levels of cost of removal was the required effort needed to take out the poles and towers. Cost of removal for the most recent five years averaged 225 percent.

Gross salvage has varied widely throughout the period but has been relatively high in comparison to most utilities for poles. The most recent five-year average of 34 percent gross salvage reflects recent trends and the reuse value of poles for Evergy Metro.

The net salvage percent based on the overall period 1976 through 2020 is 78 percent negative net salvage and based on the most recent five-year period is negative 191 percent. The range of estimates made by other electric companies for Poles, Towers and Fixtures is negative 25 to negative 100 percent. The net salvage estimate for poles is negative 75 percent, is within the range of estimates for other electric companies and reflects the overall history of negative net salvage related to retirements.

The overall net salvage estimates for the Company's production facilities, for which the life span method is used, is based on estimates of both final net salvage and interim net salvage. Final net salvage is the net salvage experienced at the end of a production plant's life span. Interim net salvage is the net salvage experienced for interim retirements that occur prior to the final retirement of the plant. The final net salvage estimates in the

study were based on a decommissioning study performed by 1898 & Co. The interim net salvage estimates were based in part on an analysis of historical interim retirement and net salvage data. Based on informed judgment that incorporated these interim net salvage analyses for each plant account, an interim net salvage estimate was established for each production account and applied to the original cost.

The interim survivor curve estimates for each account and production facility were used to calculate the percentage of plant expected to be retired as interim retirements and final retirements. These are shown on Table 2 in the Net Salvage Statistics section on page VIII-2. These percentages were used to determine the weighted net salvage estimate for each account and production facility based on the interim and final net salvage estimates. These calculations, as well as the estimated final net salvage amounts and interim net salvage percents, are shown on Tables 2 and 3 of the Net Salvage Statistics section starting on page VIII-2.

The net salvage estimates for most of the remaining accounts were estimated using the above-described judgment process incorporating historical indications and reviewing the typical range of estimates used by other electric companies. The results of the net salvage analysis for each plant account are presented in account sequence beginning in the section titled “Net Salvage Statistics”, page VIII-4.

Generally, the net salvage estimates for the general plant accounts were zero percent, consistent with amortization accounting.

**PART V. CALCULATION OF ANNUAL AND
ACCRUED DEPRECIATION**

**PART V. CALCULATION OF ANNUAL AND
ACCRUED DEPRECIATION**

GROUP DEPRECIATION PROCEDURES

A group procedure for depreciation is appropriate when considering more than a single item of property. Normally the items within a group do not have identical service lives, but have lives that are dispersed over a range of time. There are two primary group procedures, namely, average service life and equal life group. In the average service life procedure, the rate of annual depreciation is based on the average life or average remaining life of the group, and this rate is applied to the surviving balances of the group's cost. A characteristic of this procedure is that the cost of plant retired prior to average life is not fully recouped at the time of retirement, whereas the cost of plant retired subsequent to average life is more than fully recouped. Over the entire life cycle, the portion of cost not recouped prior to average life is balanced by the cost recouped subsequent to average life.

Single Unit of Property

The calculation of straight line depreciation for a single unit of property is straightforward. For example, if a \$1,000 unit of property attains an age of four years and has a life expectancy of six years, the annual accrual over the total life is:

$$\frac{\$1,000}{(4 + 6)} = \$100 \text{ per year.}$$

The accrued depreciation is:

$$\$1,000 \left(1 - \frac{6}{10} \right) = \$400.$$

Remaining Life Annual Accruals

For the purpose of calculating remaining life accruals as of June 30, 2021, the depreciation reserve for each plant account is allocated among vintages in proportion to the calculated accrued depreciation for the account. Explanations of remaining life accruals and calculated accrued depreciation follow. The detailed calculations as of June 30, 2021, are set forth in the Results of Study section of the report.

Average Service Life Procedure

In the average service life procedure, the remaining life annual accrual for each vintage is determined by dividing future book accruals (original cost less book reserve) by the average remaining life of the vintage. The average remaining life is a directly weighted average derived from the estimated future survivor curve in accordance with the average service life procedure.

The calculated accrued depreciation for each depreciable property group represents that portion of the depreciable cost of the group which would not be allocated to expense through future depreciation accruals if current forecasts of life characteristics are used as the basis for such accruals. The accrued depreciation calculation consists of applying an appropriate ratio to the surviving original cost of each vintage of each account based upon the attained age and service life. The straight line accrued depreciation ratios are calculated as follows for the average service life procedure:

$$Ratio = 1 - \frac{Average\ Remaining\ Life}{Average\ Service\ Life}.$$

CALCULATION OF ANNUAL AND ACCRUED AMORTIZATION

Amortization is the gradual extinguishment of an amount in an account by distributing such amount over a fixed period, over the life of the asset or liability to which it applies, or over the period during which it is anticipated the benefit will be realized. Normally, the distribution of the amount is in equal amounts to each year of the amortization period.

The calculation of annual and accrued amortization requires the selection of an amortization period. The amortization periods used in this report were based on judgment which incorporated a consideration of the period during which the assets will render most of their service, the amortization period and service lives used by other electric companies, and the service life estimates previously used for the asset under depreciation accounting.

Amortization accounting is proposed for a number of accounts that represent numerous units of property, but a very small portion of depreciable electric plant in service. The accounts and their amortization periods are as follows:

<u>ACCT</u>	<u>TITLE</u>	<u>AMORTIZATION PERIOD, YEARS</u>
391.00,	Office Furniture and Equipment	20
391.01	Office Furniture and Equipment – Wolf Creek	20
391.02,	Computer Equipment	8
393.00,	Stores Equipment	25
394.00,	Tools, Shop and Garage Equipment	30
395.00,	Laboratory Equipment	30
397.00,	Communication Equipment	35
398.00,	Miscellaneous Equipment	30

For the purpose of calculating annual amortization amounts as of June 30, 2021, the book depreciation reserve for each plant account or subaccount is assigned or

allocated to vintages. The book reserve assigned to vintages with an age greater than the amortization period is equal to the vintage's original cost. The remaining book reserve is allocated among vintages with an age less than the amortization period in proportion to the calculated accrued amortization. The calculated accrued amortization is equal to the original cost multiplied by the ratio of the vintage's age to its amortization period. The annual amortization amount is determined by dividing the future amortizations (original cost less allocated book reserve) by the remaining period of amortization for the vintage.

PART VI. RESULTS OF STUDY

PART VI. RESULTS OF STUDY

QUALIFICATION OF RESULTS

The calculated annual and accrued depreciation are the principal results of the study. Continued surveillance and periodic revisions are normally required to maintain continued use of appropriate annual depreciation accrual rates. An assumption that accrual rates can remain unchanged over a long period of time implies a disregard for the inherent variability in service lives and net salvage and for the change of the composition of property in service. The annual accrual rates were calculated in accordance with the straight line remaining life method of depreciation, using the average service life procedure based on estimates which reflect considerations of current historical evidence and expected future conditions.

The annual depreciation accrual rates are applicable specifically to the electric plant in service as of June 30, 2021. For most plant accounts, the application of such rates to future balances that reflect additions subsequent to June 30, 2021, is reasonable for a period of three to five years.

DESCRIPTION OF DETAILED TABULATIONS

Table 1 is a summary of the results of the study as applied to the original cost of electric plant as of June 30, 2021 and is presented on pages VI-4 through VI-8 of this report.

The service life estimates were based on judgment that incorporated statistical analysis of retirement data, discussions with management and consideration of estimates made for other electric companies. The results of the statistical analysis of service life are presented in the section beginning on page VII-2, within the supporting documents of this report.

For each depreciable group analyzed by the retirement rate method, a chart depicting the original and estimated survivor curves followed by a tabular presentation of the original life table(s) plotted on the chart. The survivor curves estimated for the depreciable groups are shown as dark smooth curves on the charts. Each smooth survivor curve is denoted by a numeral followed by the curve type designation. The numeral used is the average life derived from the entire curve from 100 percent to zero percent surviving. The titles of the chart indicate the group, the symbol used to plot the points of the original life table, and the experience and placement bands of the life tables which were plotted. The experience band indicates the range of years for which retirements were used to develop the stub survivor curve. The placements indicate, for the related experience band, the range of years of installations which appear in the experience.

The analyses of net salvage data are presented in the section titled, "Net Salvage Statistics". The tabulations present annual cost of removal and gross salvage data, three-year moving averages and the most recent five-year average. Data are shown in dollars and as percentages of original costs retired.

The tables of the calculated annual depreciation applicable to depreciable assets as of June 30, 2021 are presented in account sequence starting on page IX-2 of the supporting documents. The tables indicate the estimated survivor curve and net salvage percent for the account and set forth, for each installation year, the original cost, the calculated accrued depreciation, the allocated book reserve, future accruals, the remaining life, and the calculated annual accrual amount.

EVERGY METRO, INC.

TABLE 1. SUMMARY OF ESTIMATED SURVIVOR CURVE, NET SALVAGE PERCENT, ORIGINAL COST, BOOK DEPRECIATION RESERVE AND CALCULATED ANNUAL DEPRECIATION ACCRUALS RELATED TO ELECTRIC PLANT AS OF JUNE 30, 2021

ACCOUNT	(1)	(2)	(3)	(4)	(5)	(6)	(7)	CALCULATED		(10)=(7)/(8)
