REBUTTAL TESTIMONY

OF

MARK L. OLIGSCHLAEGER

UTILICORP UNITED INC.

AND

ST. JOSEPH LIGHT & POWER COMPANY

CASE NO. EM-2000-292

Q. Please state your name and business address.

A. Mark L. Oligschaeger, P.O. Box 360, Jefferson City, Missouri 65102.

Q. Please describe your educational background and work experience.

A. I attended Rockhurst College in Kansas City, Missouri, and received a Bachelor of Science degree in Business Administration with a major in Accounting in 1981. I have been employed by the Missouri Public Service Commission (Commission) since September 1981 with the Accounting Department. In November 1981, I passed the Uniform Certified Public Accountant (CPA) examination and, since February 1989, I have been licensed in the state of Missouri as a CPA.

Q. Have you previously filed testimony before this Commission?

A. Yes. A listing of the cases in which I have previously filed testimony before this Commission is given in Schedule 1, which is attached to this rebuttal testimony.

Q. With reference to Case No. EM-2000-292, have you examined the books and records of UtiliCorp United Inc. (UtiliCorp or UCU) and St. Joseph Light & Power Company (St. Joseph or SJLP) (together, the Companies or Joint Applicants)?

A. Yes, with the assistance of other members of the Commission Staff (Staff).

1 Q. What is the purpose of this rebuttal testimony?

2 A. The purpose of this testimony is to present the Staff's recommendations
3 regarding treatment of the costs and benefits associated with the proposed UCU/SJLP merger
4 that is the subject of this proceeding. In conjunction with recommendation, I am also
5 submitting testimony in the following areas:

6 1) A discussion of the relationship between the UCU/SJLP merger
7 transaction and the proposed merger between UtiliCorp and The
8 Empire District Electric Company;

9 2) A brief history of the UCU/St. Joseph merger transaction; and

10 3) A rebuttal to the Joint Applicants' proposed regulatory plan.

11 Q. Please describe each of the Joint Applicants, UCU and SJLP.

12 A. UtiliCorp is a corporation providing both regulated and nonregulated services
13 to customers in eight states within the U.S. and internationally. In Missouri, UCU offers
14 regulated electric and natural gas service to customers through its Missouri Public Service
15 (MPS) division.

16 St. Joseph operates only in the state of Missouri, and offers electric, gas and industrial
17 steam service within this jurisdiction. SJLP also has investments in various nonregulated
18 activities, contained within its SJLP Inc. subsidiary.

19 Q. How did the Staff conduct its audit and investigation of the Companies' Joint
20 Application in this proceeding?

21 A. To obtain data and information from which to better make recommendations
22 to the Commission in this proceeding, the Staff submitted data requests to the Joint
23 Applicants and also conducted interviews of certain of the Joint Applicants' personnel. In

1 some instances, these interviews were transcribed by court reporters. When this procedure
2 was followed, the UCU/SJLP employees had the opportunity to revise the transcript to make
3 corrections and expand upon the responses given in the interview, if desired.¹

4 **The Empire Merger Transaction**

5 Q. Is the proposed UtiliCorp/SJLP merger transaction the only merger involving
6 Missouri jurisdictional utilities that UCU is currently seeking approval from the
7 Commission?

8 A. No. In May 1999, UCU and The Empire District Electric Company (Empire)
9 announced that they had reached an agreement to merge the two utilities. Empire is a
10 regulated utility that operates in Missouri and three other states, and predominantly offers
11 electric service. (Empire also has small water and nonregulated operations.) UCU and
12 Empire are seeking Commission approval of their proposed merger transaction in Case
13 No. EM-2000-369.

14 Q. Are the UtiliCorp-St. Joseph and UtiliCorp-Empire transactions identical to
15 each other?

¹ For many years, the Staff has conducted interviews of company witnesses/personnel in addition to the other forms of discovery. The interviews were followed up with a more formal manner of discovery, such as data requests. In the last decade as a means of furthering the discovery process, the Staff has had these interviews transcribed. The interviews are not depositions conducted by Staff attorneys, but like a deposition the interviewee is provided a copy of the transcript and the interviewee is encouraged to make corrections and provide any additional information the interviewee chooses. As a way of facilitating the Staff's audit, other utilities have not objected to the Staff's use, in testimony and at hearing, of transcripts of interviews of company witnesses by Staff auditors. When the Staff proposed proceeding in the above manner in the instant cases, UCU, SJLP and EDE exercised their rights to object to such a procedure. The Staff and the merger applicants thought that interviews would still serve a beneficial purpose and agreed to proceed in such a manner, with the Staff to follow up the interviews with either data requests and/or depositions rather than use the transcripts of the interviews directly. When the Staff decided to conduct limited depositions of most of the UCU/SJLP witnesses that it had interviewed, it was determined that the Staff and the companies believed that the transcribed interviews as corrected and amended by the UCU/SJLP witnesses obviated any need for depositions.

1 A. Not entirely. There are some financial differences in the structure of the two
2 merger deals. However, there are also many similarities between the two transactions, most
3 notably that the details of the regulatory plans proposed for both merger transactions by UCU
4 are largely identical. Therefore, the Staff believes that the majority of issues potentially of
5 concern to the Commission from these two merger applications will be common issues.

6 Q. Has UCU reflected the existence of the proposed Empire transaction in any of
7 the evidence it has presented in the instant case, Case No. EM-2000-292?

8 A. Yes, in some instances. In the area of estimated merger savings, for example,
9 the Joint Applicants in the UCU/SJLP transaction have assumed a three-way combination
10 (UCU/St. Joseph/Empire) in the calculation of estimated generation/joint dispatch savings for
11 SJLP. UCU and SJLP have also assumed a three-way combination in estimating the impact
12 of UCU corporate allocations on SJLP's revenue requirement. In other areas of estimated
13 savings, however, UCU and SJLP did not take into account the proposed Empire transaction.

14 Q. Based upon the concurrent nature of the two merger transactions, and the
15 many common issues, how does the Staff recommend that the Commission consider the
16 Empire transaction when making its deliberations upon the UCU/SJLP merger?

17 A. The Commission has made a previous determination that the two merger
18 applications should not be consolidated. Nevertheless, the Staff has reflected and discussed
19 some Empire merger matters in its rebuttal testimony in this proceeding when it was believed
20 appropriate and relevant for the Commission in considering various aspects of the proposed
21 UCU/SJLP transaction. Given the overall commonality of issues raised by UCU/SJLP and
22 UCU/Empire in their separate merger cases, the Staff recommends that the Commission hear

1 the evidence in both cases before making decisions in either case. This will better ensure that
2 the customers of all three utilities receive consistent treatment on merger issues.

3 **History of the Merger Transaction**

4 Q. Please provide an overview of the proposed merger transaction.

5 A. On October 19, 1999, UCU and SJLP filed with the Commission an
6 Application to authorize a merger of the two Companies. The proposed transaction calls for
7 SJLP to lose its separate corporate identity and become an operating division of UtiliCorp.

8 Q. Please describe briefly how this merger transaction came about.

9 A. In late 1998, SJLP's Board of Directors embarked upon a course of action to
10 put St. Joseph up for sale through an "auction" process. This action was taken generally in
11 order to maximize existing shareholder value in SJLP in light of potential electric
12 restructuring in the future. To carry out the Board of Directors' decision, St. Joseph, through
13 its financial advisor, Morgan Stanley Dean Witter (Morgan Stanley), contacted a number of
14 utility entities to ask whether they would have an interest in making an offer for SJLP. Three
15 entities, including UCU, responded with preliminary indications of interest in December
16 1998. Those three entities were given the opportunity to perform due diligence work
17 concerning SJLP and its operations, while St. Joseph in turn performed due diligence on the
18 potential bidders. In February 1999, two out of the three potential suitors made offers for
19 SJLP, again including UCU. UCU's bid was the higher of the two received at \$22.50 per
20 SJLP share. In considering the bids made for the utility, SJLP's Board requested that its
21 financial advisor, Morgan Stanley, go back to UCU and ask UCU to increase its bid by 50
22 cents a share, to \$23.00. In late February, UCU agreed to raise its bid as requested by SJLP,
23 and the two Companies proceeded to negotiate on nonprice terms of the merger. On

Rebuttal Testimony of
Mark L. Oligschlaeger

1 March 4, 1999, UCU and SJLP signed the Merger Agreement (Schedule 1 to UCU witness
2 Robert K. Green's direct testimony), setting out the complete terms and conditions of the
3 merger transaction. On March 5, UCU and SJLP made a public announcement of the merger
4 agreement.

5 Staff witness Cary G. Featherstone discusses the course of events leading up to the
6 Merger Agreement in greater detail in his rebuttal testimony.

7 Q. What are some of the more important terms and conditions contained within
8 the UCU/SJLP Merger Agreement?

9 A. The agreed-upon purchase price for SJLP stock at \$23.00 a share results in a
10 total valuation for SJLP of approximately two times its net book value (original cost of assets
11 less accumulated depreciation), or a "premium" or "acquisition adjustment" of approximately
12 \$93 million. The deal is described in the Merger Agreement as to be accounted for as a
13 "pooling of interests," but subsequently it was determined that the merger must be accounted
14 for under generally accepted accounting principles as a "purchase" transaction. Among other
15 items, closing of this transaction is conditioned upon UCU/SJLP receiving regulatory
16 approvals from this Commission and other regulators under terms that will not have a
17 materially adverse effect upon the financial condition of the combined company. The
18 significance of all these items will be discussed later in this testimony, as well as in the
19 rebuttal testimony filed by other Staff witnesses.

20 **The Joint Applicants' Regulatory Plan**

21 Q. Please generally describe the Joint Applicants' proposal for treating merger
22 savings and costs in the future if the merger is approved and implemented.

1 A. The Companies' regulatory plan is set out in the direct testimony of UCU
2 witness John W. McKinney, and is further supported in the testimony of other Joint
3 Applicant witnesses. The key points of the plan as they apply to SJLP are as follows:

- 4 • There would be a five-year rate moratorium implemented once the merger is
5 approved for SJLP electric, gas and steam customers.
- 6 • SJLP will file electric, gas and steam general rate cases in the last year of the
7 moratorium to institute new rate levels in the sixth year following the closing
8 of the merger. In these rate proceedings, SJLP is to be allowed to recover
9 50% of the acquisition adjustment (both a return of and a rate base return on
10 this amount), and a ten-year amortization of transaction costs and "costs to
11 achieve" (transition costs), without rate base treatment.
- 12 • UCU will guarantee SJLP customers at least an approximate \$1.6 million
13 reduction in revenue requirement from net merger savings in the Year Five
14 rate case and any subsequent rate proceedings in Years Six through Ten
15 following the merger. The \$1.6 million is the average estimated amount of
16 annual merger savings for years six through ten following the merger, less the
17 average annual revenue requirement impacts of: (a) 50% recovery of the
18 acquisition adjustment; (b) recovery of other merger costs; and (c) the revenue
19 requirement impact of inclusion of SJLP in UCU's corporate allocations
20 system. The estimated savings amount used to determine the \$1.6 million
21 amount reflects assignment of almost the entire amount of merger savings to
22 SJLP for rate purposes, as opposed to other divisions of UCU, such as MPS.

1 The guaranteed merger benefit to customers is to be ensured by a method of
2 tracking (quantifying) total benefits resulting from the merger.

- 3 • For any rate proceedings in Years Six through Ten following the closing of
4 the merger, a capital structure purporting to represent SJLP's pre-merger
5 capital structure is to be used to set rates.

6 Q. Is SJLP the only Missouri jurisdictional utility that will be impacted by
7 savings and costs associated with the merger?

8 A. No. MPS is a Missouri jurisdictional division of UCU that will experience
9 financial impacts from this proposed transaction.

10 Q. Have the Joint Applicants proposed a specific regulatory plan that would
11 apply to the assignment of merger savings and costs to MPS in future rate proceedings?

12 A. Not explicitly. However, based upon the specific terms of the SJLP
13 regulatory plan proposed by the Joint Applicants, the implicit regulatory plan for MPS
14 customers appears to be as follows:

- 15 • Only a very minimal portion of estimated merger savings should be assigned
16 to MPS for rate purposes, with the bulk of such savings to be assigned to the
17 SJLP division. With the exception of these minimal savings in the
18 generation/joint dispatch area, MPS should be treated in future rate
19 proceedings as essentially being unaffected by this merger;
- 20 • For rate purposes, MPS's allocated level of UCU corporate costs should be
21 calculated as if the SJLP merger transaction had not taken place.

22 Q. What is the Staff's recommendation concerning the regulatory plan put
23 forward by the Companies in this proceeding?

1 A. The Staff opposes this plan, and recommends that the Commission reject it in
2 its entirety. The major concerns that lead to this Staff position are:

- 3 • The proposed recovery of the acquisition adjustment, even at the purported
4 50% level, would require that UCU's Missouri customers inappropriately pay
5 for costs properly assignable to shareholders. A significant driver of the
6 merger premium is perceived benefits to UCU in nonregulated areas. These
7 points are further addressed in this testimony and the testimony of Staff
8 witnesses Featherstone, Charles R. Hyneman, Janis E. Fischer, Michael S.
9 Proctor and David P. Broadwater.
- 10 • The proposed regulatory plan will actually result in the Joint Applicants
11 receiving recovery of far more than 50% of the premium, when the impact of
12 "regulatory lag" and the Companies' proposal concerning the "frozen" SJLP
13 capital structure and "frozen" MPS corporate allocators are properly taken
14 into account. This will also be discussed in the rebuttal testimony of Staff
15 witnesses Broadwater, Featherstone and Steve M. Traxler.
- 16 • The Joint Applicants' proposal would require customers to pay for merger
17 transaction costs, which should be treated in a similar manner to the
18 acquisition adjustment and be assigned to shareholders in entirety. In
19 addition, the proposed regulatory plan would allow recovery from ratepayers
20 of certain "costs to achieve" (transition costs) that also should be assigned to
21 shareholders, such as executive severance payments ("golden parachutes").
22 These points are addressed in the rebuttal testimony of Staff witness James M.
23 Russo.

- 1 • UCU/SJLP's proposal to use a "frozen" stand-alone SJLP capital structure in
2 rates after the merger is implemented would deny customers any benefit for
3 what should be a major source of savings to them: substitution of a lower-cost
4 UCU capital structure for a higher-cost SJLP capital structure. This issue will
5 be discussed in detail in the testimony of Mr. Broadwater.
- 6 • The "guarantee" of the Joint Applicants that SJLP customers will receive a
7 minimum merger benefit in a reduction to the SJLP revenue requirement is
8 based on their assertion that they will have the ability to measure and quantify
9 actual merger savings starting in the fifth year after the closing of the merger.
10 However, the Joint Applicants have failed to present any detailed plan for
11 "tracking" merger savings in their direct testimony, so the purported ability to
12 track merger savings is totally unsupported in actuality and illusory. This
13 situation is addressed in the testimony of Staff witnesses Featherstone and
14 Fischer.
- 15 • The Joint Applicants' plan will result in UCU customers in Missouri receiving
16 the benefit of only a very small, insignificant portion of total merger savings
17 during the first ten years after the closing of the merger. The vast majority of
18 the savings will be retained by UCU to pay off the acquisition adjustment or
19 will be offset by the detrimental impact of increased corporate cost allocations
20 from UCU to SJLP customers. This item is addressed in my testimony and
21 that of Staff witness Traxler.
- 22 • The regulatory plan is premised upon the ability of UCU to recover from
23 SJLP customers significant amounts of total administrative and general

1 (A&G) costs compared to SJLP's stand-alone A&G levels. Not only is this
2 recovery from SJLP ratepayers of a significant portion of UCU's A&G
3 expenses counter-intuitive to legitimate expectations of what should result
4 from a merger of two utilities, but the increase in A&G expenses that would
5 be borne by SJLP customers is in no way related to the provision of safe and
6 adequate service at just and reasonable rates. This topic is covered in the
7 rebuttal testimony of Mr. Traxler.

- 8 • The proposed plan would result in a disproportionate amount of purported
9 merger savings being assigned to SJLP customers at the expense of MPS
10 customers who have historically paid a portion of the costs associated with the
11 "economies of scale" which in part cause the purported potential savings from
12 this proposed transaction to exist in the first place. In addition, this
13 assignment of purported merger savings will pass most purported merger
14 savings SJLP which under the Joint Applicants' proposal will operate under a
15 rate moratorium, while not assigning any material portion of purported merger
16 savings to MPS which under the proposed plan will seek increases in rates
17 during the next several years. Also, this assignment of purported merger
18 savings will result in most of the savings going to SJLP's customers who
19 already pay significantly lower rates in Missouri than MPS customers who
20 have relatively high rate levels. These issues will be further addressed in my
21 testimony and that of Staff witnesses Philip K. Williams, Traxler and Proctor.

1 All of the above concerns have led to the Staff's conclusion that adoption of the
2 Applicants' proposed regulatory plan would be detrimental to the public interest, and should
3 be rejected by the Commission.

4 Q. You earlier stated that the Joint Applicants are seeking Commission approval
5 in this docket of recovery of at least a portion of the acquisition adjustment associated with
6 UCU's purchase of SJLP assets. Please explain this further.

7 A. Yes. In Mr. McKinney's direct testimony in this proceeding, he explains that
8 UCU is seeking recovery of one-half of the annual amortization of the acquisition adjustment
9 in above-the-line expense, as well as one-half of the unamortized portion of the acquisition
10 adjustment to be placed in rate base for UCU to earn a return on. The result of this position,
11 if adopted by the Commission, would be that current SJLP customers would have to
12 reimburse UCU for half of its above-book value "investment" in SJLP, among other costs,
13 before any purported merger savings would be available to flow through to SJLP customers
14 in rates. In short, the direct recovery of the acquisition adjustment puts the risk of attaining
15 estimated merger savings on the customers, not the utility shareholders that approved the
16 utility management's to pursue the acquisition on the terms of the Merger Agreement.

17 Q. Is UCU's decision to purchase the assets of SJLP equivalent to any other
18 investment that UCU might make in providing service to utility customers that would be
19 includable in rate base?

20 A. No. Mr. McKinney in his direct testimony at page 15 implies that UCU's
21 investment in SJLP is analogous to UCU investment in "real assets." An example of a "real
22 asset" investment would be building a power plant to meet customer needs. The analogy
23 does not hold. Construction of power plants generally is required in order for the utility to

1 provide safe and adequate service to ratepayers. Mergers and acquisitions, in contrast, are
2 rarely if ever required in order for utilities to serve customers, and certainly the Joint
3 Applicants in this proceeding have not alleged that the public interest requires them to enter
4 into this transaction. Rather, this transaction by all appearances is a voluntary action by both
5 UCU and SJLP managements that was triggered by both managements' perception of their
6 shareholder interests. This is not to deny that SJLP and UCU customers may also benefit in
7 some respects by this merger, but rather that the primary emphasis of both UCU and SJLP
8 management's in their merger decisions have been their shareholders. This has crucial
9 ramifications in how the acquisition premium and other direct merger costs should be
10 assigned for rate purposes between the customers and shareholders of merging utilities.

11 Q. Should customers be directly responsible for recovery of any portion of
12 acquisition adjustments in rates?

13 A. No. The process of entering into mergers and acquisitions inherently is
14 primarily driven by the requirements and interests of utility shareholders. For this reason,
15 acquisition premiums should be treated as a below-the-line expense and assigned to
16 shareholders. This general Staff position is reinforced in this particular merger application
17 by the evidence that UCU was motivated, at least in part, to enter into this transaction by the
18 perception that benefits in nonregulated areas of its operations are expected to occur as a
19 result of this transaction. The issue of allocation of the merger premium to nonregulated
20 operations is addressed in the rebuttal testimony of Staff witness Hyneman.

21 Q. If UCU is seeking to recover only half of the SJLP acquisition adjustment
22 from its customers, would it be reasonable to assume that the nonregulated assignment of the
23 premium would be covered in the other 50% of the acquisition adjustment?

1 A. Both Mr. McKinney and UCU witness Vern J. Siemek made this argument in
2 their transcribed interviews with the Staff and Office of the Public Counsel (OPC).
3 However, the Joint Applicants have presented no evidence in this proceeding: (1) respecting
4 what an appropriate assignment of the acquisition adjustment would be to nonregulated
5 operations, or (2) why more than 50% of the total acquisition premium should not be
6 assigned to nonregulated operations.

7 Q. Is there any evidence that a substantial portion of the acquisition adjustment
8 arising from the SJLP transaction may relate to perceived nonregulated benefits of the
9 transaction from the perspective of UCU?

10 A. Yes. On page 21 of Mr. Green's direct testimony, he makes a statement that
11 UCU had considered transferring the generation assets of both MPS and SJLP into an exempt
12 wholesale generator (EWG). (An EWG is an unregulated affiliate of a regulated electric
13 utility where the EWG sells electric power at wholesale but not at retail.) Further, Mr. Green
14 says that a portion of the acquisition premium would have also been transferred to the EWG
15 if the creation of an EWG had taken place. According to Mr. Green, UCU chose not to
16 establish an EWG at this time due to concerns respecting how property taxes would be
17 assessed on the EWG generation.

18 Q. What is the relevance of the EWG question to the issue of the merger
19 premium allocation?

20 A. It is clear from a number of sources that SJLP's existing generating assets are
21 considered to be low-cost units, with a potential market value in an unregulated electricity
22 generation marketplace in excess of their net book value. Please refer to Staff Witness
23 Hyneman's rebuttal testimony for a detailed discussion of this topic. Based on the evidence

1 presented by Mr. Hyneman, the expected additional profits that SJLP could make in sales of
2 electricity in a competitive market compared to the regulated rates set by the Commission
3 would be undeniably attractive to potential buyers of SJLP, including UCU.

4 The perceived value of these assets in the future for UCU is one reason why
5 UtiliCorp would be willing to pay a sizeable merger premium for the SJLP properties. That
6 perceived value, and its impact on the premium, is not dependent upon UCU's political, legal
7 and strategic decisions regarding the timing of when to make regulatory filings to get
8 approval to set up an EWG. In short, if UCU indicates it would have been appropriate to
9 allocate part of the acquisition adjustment to non-regulated operations, i.e., an EWG, if that
10 affiliate had been created and approved, it is just as appropriate to allocate a portion of the
11 acquisition adjustment to nonregulated operations in the situation in which an EWG has not
12 been formed. This is the case because the perceived future value of the generating assets is
13 present under either scenario, and therefore contributed to the premium amount.

14 Q. Do all merger and acquisition transactions result in acquisition adjustments?

15 A. No. Acquisition adjustments only result from transactions that are accounted
16 for using the "purchase" method of accounting. Purchase transactions are in essence sales of
17 assets by one entity to another. Some merger transactions are accounted for using the
18 "pooling of interests" method of accounting, and represent, conceptually, a combining of
19 shareholder interests by two previously separated firms through an exchange of stock. No
20 additional investment is recorded on the combined entity's books when a pooling transaction
21 is entered into, so there is no acquisition adjustment for this type of merger. The UCU/SJLP
22 transaction will be accounted for as a purchase transaction.

1 Q. What is the impact on a utility's cost of service of incurring an acquisition
2 adjustment?

3 A. An acquisition adjustment represents an additional amount of payment by an
4 acquiring utility, reflected in the purchase price, above the asset values previously reflected
5 on the acquired entity's books at an original cost valuation. Further, the additional amount
6 paid over the net book value is required by current financial accounting standards to be
7 amortized on the acquiring utility's books over a period not to exceed 40 years. Therefore,
8 the purchasing utility will naturally desire to recover a return of the acquisition adjustment
9 (i.e., the amortization amount) through rates and a rate base return on the acquisition
10 adjustment; otherwise, its book earnings and return will decrease. If the earnings level
11 decreases significantly, the transaction will be dilutive to earnings. Pooling accounting, in
12 contrast, does not result in the potential decrease in earnings that purchase accounting can
13 result in .

14 Q. Would it have been possible for the UCU/SJLP transaction to be structured as
15 a pooling transaction, and thus to eliminate the possibility of an acquisition adjustment?

16 A. Yes. In fact, the initial public announcement of the UCU/SJLP merger
17 transaction made reference to the fact that this combination was to be accounted for as a
18 pooling. It was only several months later that the Joint Applicants determined that pooling
19 accounting was not possible, because of some stock options issued by UCU in late 1998.
20 The circumstances in which the Joint Applicants abandoned pooling accounting for their
21 merger are discussed in the rebuttal testimony of Mr. Hyneman.

1 Q. Does the Staff believe that, in general, utilities undergoing mergers and
2 acquisitions seek different rate treatment of merger costs and savings for pooling transactions
3 compared to purchase transactions?

4 A. Yes. In general terms, utilities undergoing pooling transactions typically offer
5 regulatory plans that are much more benign from a customer perspective than those utilities
6 seeking approval of purchase transactions. This difference is understandable, when one takes
7 into account the need for utilities with "purchase" transactions to seek to offset the
8 detrimental financial statement impact on its earnings of the premium amortization amount
9 and the return on the premium.

10 Q. Please provide an example of utilities asking for different regulatory
11 treatments for mergers accounted for as poolings as opposed to purchases.

12 A. An excellent example is the proposed UCU merger with Kansas City Power &
13 Light Company (KCPL) in 1996, for which approval was sought from this Commission in
14 Case No. EM-96-248. That transaction was to be accounted for as a pooling of interests.
15 (UCU and KCPL later abandoned their merger bid when Western Resources, Inc.
16 successfully outbid UCU for the KCPL properties.)

17 In Case No. EM-96-248, UCU and KCPL proposed a regulatory plan for that merger
18 which included the following terms:

- 19 • A two percent rate reduction, for both KCPL and UCU Missouri
- 20 customers, effective immediately upon closing of the merger;
- 21 • Establishment of an alternative regulation/sharing plan, with
- 22 customer sharing to begin at a 12.00% return on equity;
- 23 • Accelerated depreciation for the Wolf Creek Nuclear Generating
- 24 Station.

25
26 The contrast between the proposed regulatory plan in the UCU/KCPL transaction and
27 the regulatory plan offered by the Joint Applicants in this proceeding could hardly be starker.

1 In Case No. EM-96-248, UCU was willing to offer customers an immediate rate reduction
2 upon closing of the transaction, the opportunity to receive annual rate credits after the merger
3 was closed through operation of an incentive sharing plan, and future rate benefits to
4 customers through a proposal for accelerated depreciation during the term of the regulatory
5 plan. The regulatory plan offered by UCU and SJLP in this case would deny SJLP customers
6 any immediate or deferred benefits of the merger (through pass-through of any achieved
7 merger savings) for at least five full years after closing of the merger. Then, after five years,
8 SJLP customers would be expected to pay directly in rates for a portion of the acquisition
9 adjustment.

10 The reasons why UCU was willing to offer customers much more generous terms
11 related to merger benefits in 1996 than in the current case are not entirely clear. The Staff
12 believes, though, that a major reason (and probably primary reason) for the difference is the
13 simple fact that the UCU/KCPL transaction was intended to be a pooling, while the
14 UCU/SJLP transaction is to be a purchase transaction.

15 Q. Should the Commission authorize different terms to utilities for treatment of
16 merger savings and costs for those utilities undergoing purchase transactions than for utilities
17 undergoing pooling transactions?

18 A. No. The Staff believes the Commission should be indifferent between the
19 purchase and pooling methods of accounting, purchases versus pooling, in setting rate policy
20 for recovery and retention of merger savings and costs.

21 The fact that transactions qualifying for pooling accounting allow utilities to avoid
22 charging earnings for acquisition adjustment amortizations clearly makes this accounting
23 method preferable for most utilities, all other things being equal. It is equally clear that in

1 this case that a primary driver for the inequitable and unfair regulatory plan proposal of the
2 Joint Applicants is the perceived need to offset the financial impact of the acquisition
3 adjustment amortization that it must begin to book as a result of purchase accounting if the
4 merger is consummated.

5 This merger did not have to be structured as a purchase accounting transaction. If the
6 interests of its customers were at all paramount to UCU, greater efforts would have been
7 made by it to try to ensure that pooling accounting was available. This is not to argue that
8 the reasons for which purchase accounting was ultimately deemed to be appropriate by the
9 Joint Applicants are trivial or unimportant; only that clearly the interests of their shareholders
10 drove the structure and the terms of this merger. The Staff is also not arguing that UCU's
11 emphasis on the interests of its investors in making this transaction is inappropriate or
12 improper. The point is that UCU's investors should bear financial responsibility for the
13 merger premium resulting from a voluntary decision to use purchase accounting for the
14 transaction. The ultimate decision of the Joint Applicants to set up this merger as a purchase
15 should have no customer impact whatsoever, as that decision should properly be considered
16 as a shareholder issue.

17 Q. Does the purchase/pooling choice have any relationship to the amount of
18 benefits potentially available to customers from this merger?

19 A. Not at all. Whether this merger is accounted for as a pooling or a purchase
20 will not change the Joint Applicants' merger savings estimates or actual merger savings at
21 all. In short, there are no greater customer savings or benefits associated with purchase
22 accounting to offset the greater costs the Companies are seeking to have their customers
23 shoulder as a result of the UCU/SJLP merger being treated as a purchase transaction.

1 Q. Is the attempt by UCU to seek recovery of part of a merger premium in this
2 proceeding a detriment to the public interest?

3 A. Yes, the Staff asserts that it is. The voluntary nature of merger and acquisition
4 transactions in the electric industry makes clear that utilities cannot justify recovery of
5 acquisition adjustments on the basis of their being necessary for the provision of safe and
6 adequate service. Therefore, utilities must advocate inclusion of merger premiums in rates
7 on the basis of cost/benefit analysis; i.e., that the cost savings passed on to customers as a
8 result of the merger transaction outweigh the increase in rates associated with the acquisition
9 adjustment. However, viewing rate treatment of merger premiums in the context of
10 cost/benefit analyses turns out to be inherently biased against the interests of utility
11 customers. The amount of an acquisition adjustment is known with certainty once a merger
12 transaction is closed, and therefore its impact on customers if allowed in rates in rate base
13 and/or as an element of expense is also known and certain at that time. Merger cost savings,
14 in contrast, are very speculative, and difficult, perhaps impossible to accurately measure.
15 Merger savings are likely subject to contentious disputes in rate case hearings. One can
16 never be as sure of the amount of the savings component on the cost/benefit analysis as one
17 can be of the amount of "cost" component, the premium. It will always take a leap of faith to
18 make a tentative determination that merger savings exceed merger costs, and that
19 determination inherently places the risk of attaining merger savings on customers rather than
20 utilities. For this reason, the Staff views recovery of acquisition adjustments in rates as
21 detrimental to the public interest, because of the very high likelihood that customers' rates
22 are actually being increased as a result of the inclusion of merger premiums.

1 Q. What further information should have been provided by the Joint Applicants
2 regarding its proposal for recovery of its acquisition adjustment?

3 A. Given the evidence presented by the Staff in the proceeding concerning
4 UCU's perception of significant merger benefits in nonregulated areas, a good faith proposal
5 to recover an acquisition adjustment would require merging companies to provide the
6 following:

7 1. A description and quantification of expected merger
8 savings/benefits/synergies in nonregulated areas of operations; and

9 2. A proposal for allocation of an appropriate amount of the acquisition
10 adjustment to nonregulated operations, with detailed support provided.

11 Without this type of evidence presented, any recovery of an
12 acquisition adjustment in rates places a significant risk on customers of subsidizing utilities'
13 nonregulated specifications.

14 Q. If the Staff believes that UCU's attempt to recover a part of the merger
15 premium in rates in this case is detrimental to the public interest, what action does it
16 recommend the Commission take as a result?

17 A. The Staff recommends that the Commission condition approval of the
18 UCU/SJLP Merger Application on the Joint Applicants agreeing to book the acquisition
19 adjustment below-the-line and to forego future rate recovery of a return of and/or a return on
20 the acquisition adjustment amount.

21 Q. Should the Commission be influenced in its decision on the acquisition
22 adjustment issue by UCU's characterization that it is only seeking recovery of one-half of the
23 revenue requirement impact of the acquisition adjustment?

1 A. No. All of the theoretical reasons why direct recovery of acquisition
2 adjustments in rates from customers is inappropriate apply whether the recovery being sought
3 is total or partial. More practically, the net effect of all of the Joint Applicants' ratemaking
4 requests in this proceeding would have the impact of allowing recovery of well over half of
5 the acquisition adjustment in rates for UCU. In particular, this point applies to UCU's
6 proposal to "freeze" SJLP's capital structure at pre-merger levels for the first ten years
7 following the merger in setting rates for the SJLP division of UCU

8 Q. Please explain.

9 A. As discussed in Mr. McKinney's direct testimony at pages 28, UCU is
10 proposing that a capital structure of 53% equity and 47% long term debt be used in any rate
11 proceeding for the SJLP division in the first ten years following the merger. This capital
12 structure is based upon the Staff's recommended capital structure from SJLP's last rate cases,
13 Case Nos. HR-99-245, GR-99-246 and ER-99-247. (SJLP's actual capital structure has been
14 in the past higher in equity and lower in debt than the capital structure advocated by the Staff
15 in these rate proceedings.) Both the actual SJLP capital structures and the imputed Staff
16 capital structures used in past rate proceedings are considerably higher-cost than UCU's
17 current and historical capital structures (i.e., the SJLP capital structure is more equity
18 intensive than UCU's). For example, UCU's current capital structure "target" approximates
19 40% equity and 60% long-term debt. Please refer to the testimony of Staff witness
20 Broadwater on this point.

21 Q. What would be the impact on St. Joseph's customers after the merger of
22 UCU's proposal to freeze SJLP's capital structure?

1 A. The impact of maintaining a pre-merger SJLP capital structure for rate
2 purposes instead of reflecting an actual UCU capital structure after a merger would be to
3 maintain higher rates for SJLP customers than the actual costs incurred by UCU to provide
4 service to SJLP customers. The Staff estimates that the additional revenue requirement to be
5 incurred by SJLP ratepayers if the capital structure incorporates a pre-merger SJLP level of
6 capital structure components as opposed to a post-merger UCU level of the components is at
7 least approximately \$1.7 million on an annual basis. (Please refer again to the rebuttal
8 testimony of Staff witness Broadwater for an explanation of this calculation.) Another way
9 of looking at UCU's capital structure proposal is that SJLP's customers are being asked to
10 forego a potentially significant source of savings that would otherwise accrue to them as a
11 result of this merger. The Staff believes that the intent of the Joint Applicants in seeking to
12 retain this potential source of customer savings is to provide further recovery of the merger
13 premium being incurred as a result of this transaction.

14 Q. How does UCU's capital structure proposal relate to the issue involving
15 acquisition adjustment recovery in this case?

16 A. A utility's recovery of an acquisition adjustment can be accomplished in two
17 different manners. The first manner is through direct recovery of the acquisition adjustment
18 in rates through a regulatory agency's decision. The second manner is if regulators allow the
19 utility to retain a sufficient portion of merger savings in order to offset the financial impact of
20 the acquisition adjustment on the utility's financial results. Through this "indirect" approach,
21 UCU is seeking Commission authorization to retain all capital structure merger savings in
22 order for it to increase its recovery of the merger premium.

1 Q. What is the Staff's position on UCU's proposal to "freeze" SJLP's capital
2 structure for rate purposes after the merger?

3 A. The Staff is opposed to using merger savings otherwise available to benefit
4 customers to allow utilities to specifically recover acquisition adjustments. This position is
5 also addressed in the rebuttal testimony of Staff witnesses Broadwater and Featherstone.

6 Q. The regulatory plan sponsored by Mr. McKinney purports to protect
7 customers from potential rate harm under UCU's regulatory plan by "guaranteeing" an
8 overall merger benefit to customers. Please comment.

9 A. It is true that UCU claims it can guarantee that SJLP customers will derive an
10 overall benefit in revenue requirement associated with the merger under its proposed
11 regulatory plan. However, as will be demonstrated in the Staff's rebuttal testimony, this
12 alleged "guarantee" is illusory in that the Joint Applicants have come forward with no serious
13 proposal that would effectuate or enforce the guarantee. UCU is seeking to collect real
14 dollars from its customers in the form of acquisition adjustment recovery in return for hollow
15 promises that customers will benefit overall from such rate treatment five or more years later.

16 Q. Please explain how the purported "guarantee" of a customer benefit from the
17 merger is intended to work.

18 A. The "guarantee" aspect of the proposed regulatory plan is illustrated in
19 Schedule VJS-1 to UCU witness Siemek's direct testimony. Schedule VJS-1 presents the
20 Joint Applicants' estimates of merger savings and costs to be applied to SJLP customers over
21 the first ten years after closing of the merger; with the yearly estimates averaged together
22 separately for the first five years after closing of the merger, and then for Years 6-10
23 following the closing of the merger. These amounts show that during the first five years after

1 the consummation of the merger, UCU expects total merger costs (including 50% of the
2 merger premium) to be greater than estimated merger savings. The Joint Applicants purport
3 to protect customers during this initial five-year period (Years 1 -5) by recommending a rate
4 moratorium be in place for SJLP customers. But during the second five years following the
5 consummation of the merger (Years 6-10), Schedule VJS-1 shows that merger savings
6 exceed merger "costs" by an average of approximately \$1.6 million a year over that period.
7 The merger "costs" include half of the acquisition adjustment, one-tenth of the merger
8 transaction and transition costs, some relatively minor capital costs associated with
9 integrating the MPS and SJLP systems for transmission purposes, and the net revenue
10 requirement increase associated with placing SJLP into UtiliCorp's corporate allocations
11 system.

12 Q. What is the significance of the \$1.6 million amount described above from
13 Schedule VJS-1?

14 A. Because this is the alleged annual net benefit in revenue requirement that
15 SJLP customers should expect to receive in Years 6-10 after the merger, if the Joint
16 Applicants' estimated costs and savings are considered accurate, the Companies are
17 proposing to guarantee that customers actually have that net benefit reflected in rates during
18 that period. Because this amount reflects a belief that merger benefits will be greater than
19 merger costs during Years 6-10 after the merger, the Joint Applicants are arguing that
20 ensuring that the net benefit will be reflected in rates would mean that inclusion of part of the
21 acquisition adjustment in rates cannot be considered to be a detriment, because merger
22 savings would be greater than merger costs (and customer rates, hence, would be lower
23 because of the merger).

1 Q. Mechanically, how do the Joint Applicants propose to “ensure” receipt by
2 customers of the minimum \$1.6 million net merger benefit during Years 6-10?

3 A. In the rate cases to be filed in Year 5 following the merger, UCU states its
4 intent to measure or “track” merger savings in the test year used in that rate proceeding. If
5 the total merger savings measured at that time are less than the estimated \$1.6 million, then
6 UCU’s regulatory plan proposal states that it will propose an adjustment to impute the
7 additional merger savings to ensure that customers will receive the benefit in rates of that full
8 amount. By imputing savings into cost of service to reflect expense reductions that have not
9 actually been achieved, the financial impact that will result would be a recovery of less than
10 50% of the acquisition adjustment. In turn this process, in theory, would place the risk of
11 attaining the Joint Applicants’ estimated merger savings on UCU and not on its customers.

12 Q. Can this process of “guaranteeing” a certain level of merger benefits for
13 customers work in reality?

14 A. This proposal can only work if UCU’s ability to track merger savings in the
15 Year 5 rate case is feasible, realistic and successful. However, the Joint Applicants have
16 provided absolutely no evidence that they can accomplish the at best extremely difficult and
17 nearly impossible job of measuring merger savings after the fact.

18 Q. Why is it difficult to identify and quantify actual achieved merger savings on
19 an after-the-fact basis?

20 A. Conceptually, the difficulty is that it requires a comparison between actual
21 financial results achieved after a merger and what the financial results would have been for
22 an entity if the merger had never taken place. Of course, no one can “know” what would
23 have happened if a merger had not taken place if, in fact, a merger does take place. This

1 requires guesswork on someone's part to come up with a hypothetical scenario in order to
2 quantify actual merger savings. This guesswork can take two basic forms: first, an
3 assumption that the involved entity's financial results at the time the merger was entered into
4 would have essentially been "frozen" in place from that point on or, second, that some way
5 can be found to accurately project prospectively and retrospectively what the entity would
6 have done on a stand-alone basis (i.e., what savings will be or would have been achieved,
7 what major decisions will be or would have been made, etc.). The first assumption is
8 unrealistic, in that no business entity stands frozen in place for an extended period of time.
9 The second assumption involves hopelessly subjective speculation as to what a business
10 concern will do or would have done when faced with a set of hypothetical facts and
11 circumstances not actually known prospectively or necessarily even accurately known
12 retrospectively.

13 For a regulatory commission to believe that tracking merger savings is possible is to
14 invite further subjective, self-serving speculation in rate proceedings, with no objective facts
15 or standards available to guide the utility commission in judging the savings tracking claims
16 put before it once the agency places itself in the box of deciding that tracking merger savings
17 is possible.

18 Q. Given the conceptual difficulties in measuring merger savings, how do the
19 Joint Applicants propose to overcome them?

20 A. The short and truthful answer is that the Joint Applicants have not proposed a
21 way to overcome these problems, for the reason that they have made no serious proposal as
22 to how their tracking system would work. While Mr. McKinney devotes several pages of his
23 testimony to a very general discussion of how savings tracking will conceptually work to

1 guarantee merger benefits to customers, the only other discussion of the proposed savings
2 tracking system can be found in one short question and answer in the direct testimony of
3 UCU witness Jerry D. Myers (page 7, lines 4-13) Neither Mr. McKinney nor Mr. Myers
4 gives any substantive description of how cost tracking is actually going to be accomplished.
5 The bulk of Mr. Myers' testimony, in fact, concerns UCU's ability to track merger costs
6 using state-of-the-art accounting systems. The reader is asked to assume that modern
7 accounting and financial reporting systems are sophisticated enough to accomplish after-the-
8 fact measurement of merger savings. However, the problem with merger savings tracking is
9 not lack of sophistication of accounting systems, but the inherent lack of knowledge people
10 have of the financial impact of events and actions that did not occur. The best accounting
11 system in the world cannot cure that problem.

12 Q. Has UCU expanded on a proposal to track merger savings subsequent to the
13 filing of its direct testimony?

14 A. In his transcribed interview with the Staff and the Office of Public Counsel
15 (OPC), Mr. Myers discussed an informal proposal as to how this tracking might occur. His
16 idea, in essence, called for a comparison of actual SJLP financial results after the UCU
17 merger with calculation of stand-alone SJLP earnings results produced by "indexing" the
18 SJLP 1999 budget for inflation. Since a multitude of factors, both merger related and non-
19 merger related, can affect the total SJLP division earnings results after the proposed merger,
20 this informal proposal does not in any real way constitute a merger savings tracking system.
21 Staff witnesses Featherstone, Traxler and Fischer further address the issue of merger savings
22 in their rebuttal testimony.

1 Q. Should lack of a detailed and substantive proposal for savings tracking from
2 the Companies mean the rejection of the Joint Applicants' entire regulatory plan?

3 A. Simply stated, yes. Keep in mind that UCU is asking the Commission to
4 agree now, in this merger application, that it will be allowed rate recovery five years in the
5 future of half of its \$93 million acquisition adjustment from the SJLP transaction. In return
6 for that commitment involving hard dollars from ratepayers, UCU/SJLP are claiming that its
7 customers will be protected from future detriment by its minimum net savings guarantee, to
8 be enforced by a savings tracking mechanism. But not only have the Joint Applicants failed
9 to demonstrate that savings tracking is possible in practice, they have failed to offer any
10 specific proposal to do so. UCU/SJLP are seeking that the Commission commit their
11 customers now to pay the merger costs at a future time, with any safety mechanism to be
12 developed at a later time. It is truly difficult to be more polite than to say that what the Joint
13 Applicants are proposing is a classic example of the proverbial "pig in a poke." The
14 Companies' proposed regulatory plan should be rejected for this reason alone.

15 Q. Given that any tracking mechanism would not have to be applied in practice
16 until Year 5 after the merger, what is the harm in having the parties work together to develop
17 a tracking mechanism between the time of this Commission's approval of this Application
18 and the Year 5 rate case?

19 A. The problem, again, is that UCU/SJLP wants the Commission to commit now
20 to rate recovery of half of the acquisition adjustment. Given this request, development of a
21 tracking system cannot be prudently left to the future.

22 Q What is the Staff's position in this proceeding concerning development of a
23 savings tracking procedure?

1 A. The Staff recommends that the Commission reject the idea of a tracking
2 mechanism for the UCU/SJLP merger transaction, primarily the development of such a
3 mechanism is practically impossible. The Staff also notes that the Joint Applicants have
4 failed to make a meaningful proposal regarding such a tracking system and how such a
5 tracking system would work. It should not be the Staff's or other parties' jobs to try to
6 develop or propose what they believe it is not possible to do. In the event the Commission is
7 interested in the concept of the use of merger savings tracking in the future, Staff witness
8 Traxler has some alternative recommendations concerning an appropriate tracking "baseline"
9 for the Commission's consideration on this issue.

10 Q. Is it possible that the Joint Applicants will provide a more detailed merger
11 saving tracking "plan" in its surrebuttal filing in this proceeding?

12 A. Yes. It is the Staff's position that the appropriate time for the Companies to
13 provide a detailed tracking proposal in this proceeding would have been in their direct
14 testimony in this proceeding. In the event the Joint Applicants seek to supplement their
15 regulatory plan in the savings tracking area in their surrebuttal filing, the Staff would reserve
16 the right to seek to file responsive testimony on such a subject matter, among other remedies.

17 Q. Returning to the subject of the alleged \$1.6 million merger benefit
18 "guarantee" to customers, how significant is this amount compared to total savings projected
19 by the Joint Applicants from the merger?

20 A. This alleged "guarantee" of net savings to customers would have the effect of
21 only providing customers only a very minimal and inadequate share of total purported
22 merger savings.

23 Q. What is your support for that statement?

1 A. My support for that statement can be found entirely within Siemek
2 Schedule VJS-1. That schedule shows that after deducting all merger-related costs and
3 corporate allocation impacts of the transaction from the merger savings expected from the
4 transaction, UCU's best estimate of the amount of savings residually available to customers
5 is approximately \$1.6 million annually (for Years 6-10 after the close of the merger.) The
6 Joint Applicants' proposed rate moratorium for SJLP following the merger would ensure that
7 SJLP customers receive no merger benefits at all during the first five years following the
8 closing of the merger. Then, for Years 6-10, Schedule VJS-1 reflects that these customers
9 can expect \$1.6 million a year in net merger benefits through a flow-through of this amount
10 of merger benefits in a rate case processed in Year 5. Therefore, total merger benefits
11 expected to be passed on to customers in rates during the first ten years after the closing of
12 the merger would be approximately \$7.9 million (\$1.577 million * 5).

13 Mr. Siemek's Schedule VJS-11 further shows that total purported merger savings for
14 the first ten years after the consummation of the merger equal \$184,265,000, calculated by
15 taking the average annual gross savings amounts for Years 1-5 and multiplying it by five, and
16 multiplying by five the average annual savings amount for Years 6-10, and then adding the
17 two results together. The customers' share of total merger savings under UCU's proposed
18 sharing plan would, therefore, be approximately 4.3% (\$7,900,000 / \$184,265,000). As
19 discussed in Ms. Fischer's testimony, the Joint Applicants are proposing to pass on the
20 customers only 3.34% of the total savings over the ten-year period when the merger savings
21 amounts cited above are calculated on a net present value basis.

22 Q. What is the Staff's opinion on the fairness of the Joint Applicants' regulatory
23 plan as it relates to customer rates?

1 A. The Staff believes that UCU's proposed regulatory plan would provide for a
2 wholly inadequate level of merger savings to be shared with customers over the first ten
3 years after the consummation of the merger, should the Commission approve the merger.

4 Q. If customers will only receive 4.3% of total merger savings on a nominal
5 dollar basis over ten years after the closing of the merger under the Companies' proposed
6 regulatory plan, what will happen to the other 95.7% of the savings?

7 A. That amount of savings would be retained by UCU. More specifically,
8 Schedule VJS-1 to Mr. Siemeck's testimony shows the different amounts of total merger
9 savings to be retained by the combined company following the merger. In particular, the
10 indicated derivation of the \$1.6 million customer benefit "guarantee" shows that a relatively
11 small portion of merger savings is proposed to be retained by UCU as compensation for
12 merger transaction, transition and miscellaneous capital costs associated with the merger. A
13 far larger amount of merger savings are proposed to be retained by UCU to allow it to
14 recover directly in rates its requested 50% portion of the acquisition adjustment from the
15 UCU/SJLP merger. The largest single "reason" for lack of customer benefit from UCU's
16 regulatory plan, is the amount of merger savings that are negated by the additional UCU
17 corporate A&G costs that will be charged to SJLP customers after the merger through
18 UtiliCorp's current corporate allocation system, compared to SJLP's pre-merger stand-alone
19 level of A&G costs. Staff witness Traxler addresses the issue of SJLP customer detriment
20 from UCU corporate overhead charges in his rebuttal testimony.

21 Q. How would the Staff define a fair percentage of merger savings to be passed
22 on to customers of merged utilities?

1 A. In past merger applications, the Staff has expressed the opinion that at least 50% of
2 total merger benefits should be reflected in customer rates over the long term if a specific
3 "regulatory plan" for a merger is to be adopted. The Staff also has stated that if utilities
4 propose to assign less than half of total merger savings to customers through a regulatory
5 plan, then the company should state compelling reasons why the public interest would justify
6 that result.

7 Q. In this case, has UCU cited any compelling reason why SJLP customers
8 should receive far less than half of total merger savings over the ten-year period of time after
9 the closing of the merger?

10 A. No, not at all. The Staff certainly does not believe that recovery of merger
11 premiums in rates and charging of additional corporate overheads to customers following a
12 merger are persuasive rationales for limiting the purported customer benefit from this merger
13 to a truly insignificant portion of purported total merger savings.

14 Q. If the Commission were to consider adopting a minimum benefit amount for
15 customers as part of any regulatory plan it would order in this proceeding, what amount
16 would the Staff recommend?

17 A. The Staff does not recommend that the Commission adopt the approach of
18 defining a minimum net benefit standard for customers in rates because of the previously
19 mentioned difficulties in measuring actual merger savings incurred after the fact. However,
20 if the Commission were to find conceptual merit in the idea, the Staff would recommend that
21 any "guarantee" should encompass 50% of the estimated merger savings claimed by the Joint
22 Applicants for the first ten years of the conclusion of the merger. These amounts would be as
23 follows:

Rebuttal Testimony of
Mark L. Oligschlaeger

1	Year 1	\$6,354,500
2	Year 2	\$7,674,000
3	Year 3	\$8,218,500
4	Year 4	\$8,947,000
5	Year 5	\$9,498,506
6	Year 6	\$10,297,000
7	Year 7	\$9,888,500
8	Year 8	\$10,539,500
9	Year 9	\$10,435,000
10	Year 10	\$10,280,500

11 (Source: Response to Staff Data Request No. 1)

12 The magnitude of these numbers, compared to the Companies' advocated minimum
13 benefit amount of \$1.6 million, points out the extremely de minimus nature of the Joint
14 Applicants' "guarantee" to SJLP customers.

15 Q. Are there other aspects of the Joint Applicants' proposed regulatory plan that
16 are of concern to the Staff?

17 A. Yes. The fact that no merger benefits whatsoever are to be passed on to SJLP
18 customers over the first five years after the merger, and only a very minimal amount of
19 savings are intended to be passed on to MPS customers over the first ten years of the merger
20 under the regulatory plan, is of significant concern to the Staff.

21 Q. Please further explain your concern as it applies to SJLP customers.

22 A. This concern exists for several reasons. First, the Companies project that this
23 transaction will have major and positive impacts on SJLP's current cost of service through

1 expense reductions, etc. To deny SJLP customers any portion of the savings for a full five
2 years after the merger closing seems unreasonable and excessive on its face.

3 Q. What has UCU's past position been concerning timeliness of customer receipt
4 of merger benefits?

5 A. In Case No. EM-96-248, UCU's Application to merge with KCPL, UCU
6 witness Jon R. Empson made the following statement in his direct testimony: ". . .The two
7 percent rate reduction coupled with a five year general retail electric rate increase
8 moratorium will provide our customers with an immediate benefit and a period of rate
9 stability". . . . (emphasis added. Empson direct p.7) Other KCPL and UCU witnesses made
10 similar statements in their direct testimony. Obviously, the fact that both UCU and KCPL
11 customers were intended to receive an immediate benefit in rates from the UCU/KCPL
12 combination was considered to be a major selling point by UCU/KCPL at that time. To
13 expect customers to wait five years to receive any benefit from the UCU/SJLP merger, as
14 proposed by the Joint Applicants, is an instructive contrast.

15 Q. Is there any other problem with the proposal for a five-year waiting period for
16 customers to receive the benefit of merger savings?

17 A. Yes. In the current environment for the electric industry, such a proposal
18 would significantly increase the risk that SJLP customers will not receive any benefits from
19 the merger at all. There has been an ongoing discussion of possible electric restructuring and
20 deregulation in this state for the past several years, as well as actual initiatives to deregulate
21 the generation component of bundled electric service in other jurisdictions in the same time
22 period. If a similar legislative initiative were to be adopted in Missouri, it is a certainty that
23 the current regulatory process in this state would undergo material modification. At a

1 minimum, all of the generation savings identified by the Joint Applicants in its Application
2 and testimony probably would be no longer available to be passed on to customers after
3 restructuring would take place in SJLP's service territory. Further, many of the restructuring
4 bills that have been passed and implemented in other jurisdictions have called for rate freezes
5 or caps pertaining to the distribution functions of bundled electric service, mechanisms that
6 would serve to potentially prevent pass-through of non-generation merger savings if these
7 provisions are part of restructuring legislation in Missouri.

8 The relevance of this topic to UCU's regulatory plan is that electric restructuring, if it
9 occurs, will probably make any intention to distribute specific amounts of merger savings in
10 the future to customers problematic. Further, common sense indicates that the chance of
11 restructuring legislation passing in Missouri and being implemented increases over time,
12 which makes waiting five years to pass any merger savings on to SJLP customers more risky
13 from a ratepayer perspective.

14 Q. What is UCU's position on electric restructuring legislative issues?

15 A. UCU has been very supportive of the passage of restructuring legislation, both
16 on the federal and Missouri levels.

17 Q. Your comments on UCU's proposed regulatory plan have focused so far on its
18 impact on SJLP customers. Will those customers be the only UCU ratepayers directly
19 affected by this merger if it is approved?

20 A. No. Existing MPS customers will also be directly impacted by the merger,
21 and therefore should receive a fair share of potential merger benefits.

22 Q. How will MPS be affected by the proposed UCU/SJLP merger?

1 A. MPS will be directly affected in several ways. First, the Joint Applicants'
2 testimony in this proceeding is filled with references to merger savings brought about by
3 "economies of scale." Economies of scale is the concept that, for some utility functions, the
4 per unit cost of providing service declines as a result of the increasing size of the
5 organization, therefore creating savings. Since UCU after the merger will be a larger
6 organization than either of the stand-alone SJLP operations or the pre-merger UCU, it is
7 alleged by the Joint Applicants that some economy of scale benefits will be created as a
8 result of the merger. These savings will be reflected in the financial results of all the
9 operating divisions of UCU, not just MPS and SJLP, if normal financial reporting and
10 allocation practices are followed by UCU after this merger.

11 Also, under UCU's current corporate cost allocation system, the addition of a new
12 division, such as SJLP, will cause a re-allocation of the total corporate costs among the
13 divisions of UCU, with existing divisions such as MPS benefiting as some level of pre-
14 existing corporate costs are allocated to SJLP after the merger.

15 Finally, the SJLP and MPS service territories are contiguous, meaning that there are
16 significant opportunities for savings in transmission and distribution costs, as well as the
17 potential for savings in generation operations through the use of joint dispatch. The Joint
18 Applicants' estimated generation savings are addressed in the rebuttal testimony of Staff
19 witness Proctor.

20 Q. Given the above, does UCU's proposed regulatory plan propose to assign
21 some portion of purported merger savings arising from the merger with SJLP to the MPS
22 division?

1 A. Only an insignificant portion. A small component of the expected generation
2 savings (in capacity) are recommended to be split between MPS and SJLP. As far as the
3 Staff can determine, the remainder of the entire amount of estimated merger savings is
4 intended to be assigned to SJLP customers for rate purposes.

5 Q. Would this result represent a fair allocation of merger savings?

6 A. Absolutely not. There are several reasons for this opinion. First, and
7 fundamentally, no true merger savings can occur without the combination of both the pre-
8 merger UCU and SJLP organizations. Since customers of both utilities have historically paid
9 in rates the costs that are potentially subject to reduction through the purportedly beneficial
10 impacts of the merger, it is a matter of elementary fairness that both sets of customers be
11 given a reasonable opportunity to share fairly in any benefits of this merger.

12 Second, as demonstrated in the rebuttal testimony of Staff witness Williams, MPS
13 rates are currently significantly higher than SJLP customer rates, for both electric and gas
14 service. It is simply unfair to assign nearly all merger savings to those customers that are
15 already paying lower rates than customers of other utility divisions that will benefit from the
16 merger at some level..

17 Third, while the Joint Applicants are proposing a five-year moratorium for SJLP, it
18 appears that MPS is planning to request rate relief from the Commission one or more times
19 within the next 24-30 months. Assigning all merger savings to a division undergoing a rate
20 moratorium, while assigning little or no savings to a division planning to seek rate increases,
21 serves only to artificially allow UCU to keep all estimated merger savings for an extended
22 period of time following the merger, at MPS customers' expense, in particular.

1 Finally, the financial data on Schedule VJS-1 seems to indicate that the Joint
2 Applicants must assign nearly all of the purported merger savings resulting from this
3 transaction to SJLP, or else the merger savings allocated to that utility operating division will
4 be less than the costs assigned to that division related to the merger. While this fact points
5 out a potential problem with detriment to SJLP customers, depriving MPS customers of their
6 fair share of merger benefits is not a just or equitable solution to the problem.

7 Q. What is the Staff's recommendation concerning assignment of merger costs to
8 MPS following the merger?

9 A. The Staff recommends that any rate decisions involving merger savings
10 should be implemented based on the general principle that a fair share of such savings be
11 assigned to SJLP, the new division of UCU, and to the pre-existing divisions of UCU,
12 including MPS. The Staff believes that normal financial reporting and corporate cost
13 allocation procedures would serve as at least a starting point for assignment of merger
14 savings among the divisions of UCU. No arbitrary assignment of merger savings to SJLP or
15 any other division of UCU should be permitted as a result of this Application.

16 To the extent that assignment of a reasonable portion of merger savings to MPS
17 would mean that a similar portion of prudent above-the-line merger costs (i.e., "costs to
18 achieve") should also be assigned to MPS, the Staff would support such an assignment.

19 Q. In your testimony, you seem to be arguing that (1) the Joint Applicants'
20 regulatory plan is unfair to MPS, in that it assigns almost all merger savings to SJLP, and (2)
21 the amount of merger savings allocated to SJLP is very minimal and insignificant. Are you
22 being contradictory?

1 A. Unfortunately, from a customer's perspective, no. Apparently the potential
2 rate benefits of this merger are so small in relation to merger costs that the companies are
3 compelled to slant the savings allocation process unfairly in favor of SJLP in order to make
4 any claim that overall SJLP customer merger benefits exceed the cost. In the Staff's opinion,
5 the root cause of this unusual situation is, first, the large premium paid for SJLP by UCU,
6 and second, the very large level of A & G costs incurred by UCU, and the problems
7 associated with allocation of those overheads to the new SJLP division.

8 Q. In the Staff's opinion, is the Joint Applicants' regulatory plan detrimental to
9 the public interest as proposed?

10 A. Yes. Particularly in seeking to have the Commission order that customers be
11 responsible for merger costs now, with no meaningful proposal to ensure that customers
12 actually receive the benefit of a share of merger savings later to offset those costs, SJLP and
13 MPS ratepayers will be exposed to significant risk under the Companies' proposed regulatory
14 plan. As such, the Staff considers the plan to be detrimental to the public interest, and the
15 Commission should reject the entire plan.

16 **Staff Merger Recommendations**

17 Q. What is the Staff's overall conclusion regarding the benefits of this merger
18 from a customer perspective?

19 A. The Staff believes that the Companies' analysis of ten-year merger savings
20 and costs, as set out in Schedule VJS-1 to Mr. Siemek's testimony, is seriously flawed. As
21 discussed in Mr. Traxler's and Dr. Proctor's rebuttal testimonies, the merger savings shown
22 on that schedule are overstated, and the merger costs depicted therein are understated (if one
23 regards the shifting of corporate overhead expenses onto SJLP to be a "cost," which it

1 certainly is from a SJLP customer perspective). When the necessary corrections are made to
2 Schedule VJS-1, as shown in Mr. Traxler's testimony, the results show that total merger
3 costs exceed total merger savings for each of the first ten years following the merger, before
4 the costs associated with the acquisition adjustment are considered at all. Clearly, under
5 these conditions, this merger is detrimental to the public interest. The detriment is further
6 magnified when one considers the nature of the regulatory plan proposed by the Joint
7 Applicants. Conditions proposed by the Staff and other parties to this proceeding to attempt
8 to eliminate detriments in the areas of the acquisition adjustment, corporate overhead
9 allocations and other matters can limit the potential harm from this merger to customers, but
10 cannot entirely eliminate merger-related risk to SJLP and MPS customers. Moreover, such
11 conditions may affect the financial viability of the merger transaction from UCU's
12 perspective.

13 Q. Under these conditions, does the Staff recommend that the Commission
14 approve UCU's and SJLP's Application to merge?

15 A. No. The Merger Application, as proposed by the Joint Applicants, is
16 detrimental to the public interest. Given the low level of merger savings associated with this
17 transaction relative to the level of identified merger costs, as well as UCU's extremely high
18 level of corporate costs, and the possible exposure of SJLP to excessive corporate cost
19 allocations, the Staff cannot affirmatively recommend that this proposed merger be approved
20 by the Commission even with conditions.

21 Q. Is the Staff proposing conditions for merger approval for the Commission's
22 consideration if the Commission decides to approve the Merger Application?

1 A. Yes. The Staff is not recommending that the Commission proceed in this
2 manner because it does not believe that proposed conditions can eliminate sufficient
3 customer risk from the merger, given the specific facts and circumstances discussed in the
4 Staff's testimony. However, if the Commission believes approval of this transaction is
5 warranted, the Staff is proposing certain conditions that will serve to limit, to some degree,
6 customer exposure to merger-related risk.

7 Q. Does the Staff believe that this merger and regulatory plan will be detrimental
8 to MPS customers as well?

9 A. Yes. The Joint Applicants' estimated merger savings and costs amounts in
10 Schedule VJS-1 pertain only to SJLP. As previously explained, it appears the Joint
11 Applicants' intent is not to assign a significant level of merger savings to MPS over the ten-
12 year period covered by the proposed regulatory plan. However, UCU is also proposing to
13 "freeze" MPS corporate cost allocation factors over the course of the regulatory plan so that
14 no reduction in these factors can take place due to the SJLP addition to the UCU structure.
15 In practical terms, this means that MPS customers would pay in rates a level of corporate
16 costs that will exceed the actual amounts indicated for MPS under UCU's own allocation
17 system. This deviation from cost-based rates for MPS customers is detrimental in and of
18 itself. There is a further discussion of this issue in Mr. Traxler's testimony.

19 Q. Can the Commission be confident that potential customer detriments related to
20 this proposed merger can be identified and eliminated in future MPS and SJLP rate
21 proceedings?

22 A. Future rate proceedings are the proper forum to attempt to examine actual
23 impacts on customers from the merger, if the merger is ultimately approved and closed.

1 However, the inability to identify with certainty merger-related costs and (especially) merger
2 related savings after the fact means there will always be a risk of merger costs exceeding
3 merger savings to customers in rates. This inherent risk is particularly troubling in this
4 proposed merger, because the Companies' own projections show there is strikingly little
5 "margin for error" when examining projected merger costs and savings as shown in Siemek
6 Schedule 1. The Staff's adjustments to the amounts shown on that Schedule (as depicted in
7 Schedule 3 attached to Staff witness Traxler's testimony) demonstrate the likelihood that
8 merger costs in fact will exceed reasonable projected merger savings.

9 To leave issues involving merger costs and savings to future rate proceedings will
10 mean the Commission will have to deal with subjective and contentious arguments about
11 actual levels of merger savings and costs, the adequacy of purported methods of tracking
12 costs, etc. This would also involve litigation of issues involving corporate cost assignments
13 to UCU Missouri utility divisions, (i.e., the MPS and SJLP divisions) including issues of
14 merger detriment and excessive levels of corporate cost allocations. Past MPS rate
15 proceedings in this jurisdiction provide examples of how strongly contested and important
16 corporate costs allocation issues are. UCU corporate costs and UCU corporate allocations
17 are not new issues that the Staff is raising for the first time.

18 Q. Does the Staff believe that the Commission should make ratemaking findings
19 in the context of nonmerger applications, such as this Application for a merger?

20 A. The Staff has attempted to take a consistent position in past merger
21 proceedings that the Commission should not make rate determinations in a merger case,
22 except when such findings may be necessary to cure a public detriment. We are also taking
23 this position in this case. The reason for this Staff position is that the Staff believes that

1 ratemaking findings are best made in rate cases or earnings complaint cases, when the
2 Commission has the necessary information before it concerning all relevant factors affecting
3 utility revenue requirement (revenues, expenses and rate base investment). Complete
4 evidence concerning all relevant ratemaking factors is not generally present in non-rate case
5 non-complaint dockets, such as the instant merger application.

6 Q. Are the Joint Applicants asking that the Commission make certain ratemaking
7 findings in this Application?

8 A. Yes. These include:

- 9 • A finding that 50% of the acquisition adjustment resulting from this
10 merger be given rate recovery in future SJLP rate proceedings;
- 11 • Setting SJLP's capital structure at a pre-merger stand-alone level in future
12 SJLP rate proceedings;
- 13 • Ordering a ten-year amortization of transaction costs and costs to achieve
14 for rate purposes; and
- 15 • "Freezing" MPS's corporate allocation factors at pre-SJLP merger levels.

16 Q. Should any of these ratemaking proposals be adopted by the Commission in
17 this proceeding?

18 A. No because, among other reasons, the Commission does not have the benefit
19 of examining all aspects of SJLP's or MPS's revenue requirement factors at this time.
20 Regardless, the specific reasons why the Commission should reject each of these proposals in
21 any event are discussed in my and other Staff witnesses' testimony.

22 Q. Can you provide an example of why the Commission should not approve the
23 ratemaking findings requested by the Joint Applicants?

1 A. Yes. As previously discussed, the Companies are seeking a finding from the
2 Commission upfront in this Merger Application that it will be allowed 50% recovery of its
3 acquisition adjustment in future rate proceedings. This approval is sought even though the
4 Commission obviously has not and will not have the opportunity at this time to examine
5 evidence regarding the extent of actual (as opposed to estimated) merger benefits that may
6 exist in the future as a result of this transaction. While the Staff is opposed to acquisition
7 adjustment recovery in concept as being inherently detrimental to the public interest, the
8 Staff certainly believes that if the Commission allows recovery of this particular cost, it
9 should only make that determination after a thorough examination of evidence from all
10 parties concerning actual merger savings and costs in the context of a general rate
11 proceeding.

12 As another example, Commission adoption of the Joint Applicants' proposed
13 minimum customer merger benefit "guarantee" amount of \$1.6 million would appear to
14 implicitly reflect UCU's positions regarding acquisition recovery, transaction/transition cost
15 recover, allocation of UCU corporate overheads to SJLP and the proposed assignment of
16 merger savings between SJLP and MPS. The Commission definitely should not adopt the
17 Companies' position on these matters explicitly or implicitly at this time.

18 Q. Has the Commission recently ruled on the issue of the appropriate forum for
19 the issue of acquisition adjustment recovery?

20 A. Yes. In Case No. WM-2000-222, the proposed acquisition of all of United
21 Water Missouri's stock by the Missouri-American Water Company (MAWC), the Staff
22 recommended that the Commission make any approval of the application conditional upon a
23 finding in the acquisition docket that the acquisition adjustment associated with the

1 transaction be booked below-the-line and not allowed recovery in future MAWC rate
2 proceedings. The Commission denied the Staff's recommendation, stating that the issue of
3 acquisition adjustment recovery should be reserved for a future MAWC rate proceeding.
4 (MAWC had sought no ratemaking findings in its acquisition application case concerning the
5 acquisition adjustment, merger savings and other merger costs.)

6 Q. If the merger is approved, should potential issues on corporate overheads be
7 handled in future SJLP rate proceedings?

8 A. Yes. The Staff recommends that the Commission state a specific intent to
9 enforce the "no detriment" standard in future SJLP rate proceedings as it applies to potential
10 increases in corporate costs from a SJLP customer perspective. The Staff views that
11 extraordinary rate mechanisms, such as use of an A & G indexed expense cap, may need to
12 be considered in this area to protect SJLP customers in future rate cases.

13 Q. Before continuing with this discussion, what is the Staff's overall philosophy
14 concerning appropriate regulatory treatment of merger savings?

15 A. The Staff believes it is good policy to allow shareholders some opportunity to
16 retain benefits from mergers and acquisitions, as well as other actions undertaken that have
17 the potential to increase efficiency and productivity. Such retention of a portion of benefits is
18 possible under traditional regulation as well as with alternative regulation structures.

19 Q. Should a utility be given the opportunity to retain sufficient savings in order to
20 allow it indirect recovery of an acquisition adjustment?

21 A. No. The purpose of allowing utilities an opportunity to retain some level of
22 merger savings is to encourage actions that will have potential long-term benefits to utility
23 customers, which some mergers and acquisitions do. Explicit policies to allow retention of

1 merger savings in sufficient quantity to allow recovery of acquisition adjustments is
2 equivalent to allowing direct recovery of this item, and is inappropriate for the reasons given
3 in this and other Staff witnesses rebuttal testimony.

4 Q. Why is it acceptable to allow utilities to retain some portion of merger
5 savings, but not to allow them to recover in rates acquisition adjustments?

6 A. Merger savings that apply to regulated utility operations by definition are
7 relevant to and should benefit utility ratepayers. Acquisition adjustments, in contrast,
8 generally (and in this proceeding, specifically) relate to some degree to utility expectations of
9 savings and strategic positioning in nonregulated areas. To tie savings retention to the
10 amount of the acquisition adjustment runs the risk of causing customers to finance utility
11 efforts in nonregulated operation arenas.

12 Allowing utilities to retain some level of merger savings is therefore superior, in that
13 it allows for a sharing to be accomplished in a currency (merger savings) that benefits
14 customers and utility shareholders alike.

15 Q. If the Commission were to approve this requested merger, what is the Staff's
16 recommendation regarding how merger savings and costs resulting from the merger
17 transaction should be treated in future rate proceedings?

18 A. Though specific rate findings concerning merger savings and costs should be
19 reserved to those future rate cases, in general the Staff believes that traditional ratemaking
20 practices, when examined in the context of the occurrence of "regulatory lag," will be
21 sufficient to achieve fair treatment of merger revenue requirement impacts from the
22 perspective of both UCU customers and shareholders. (In the context of this case, "fair
23 treatment" presumes that total merger savings will exceed total merger costs.) In practice,

1 use of traditional regulatory practices would mean that merger savings would be flowed to
2 customers by means of periodic rate proceedings, with appropriate merger costs (i.e., "costs
3 to achieve") charged to expense as incurred as well. In between rate proceedings, UCU
4 would be allowed to retain in total the net amount of any merger savings it can create.
5 Regulatory lag allows, therefore, for a fair sharing of merger savings between customers and
6 shareholders in most situations.

7 Q. What is "regulatory lag?"

8 A. "Regulatory lag" is the time between when a utility experiences a change in
9 its cost of service and when that change is actually reflected in the utility's rates. In this
10 context, under current regulatory practices in Missouri, utilities such as UCU have the
11 opportunity to retain achieved merger savings for a period of time before they may be
12 required to pass through those savings to customers prospectively through a reduction in
13 rates.

14 Q. Are there instances in which regulatory lag may not provide for a fair sharing
15 of merger savings to a utility?

16 A. That is possible. In particular, when a company undergoing a merger faces
17 increasing revenue requirements even when estimated net merger savings are factored in, rate
18 increase cases may serve to pass on achieved merger savings to customers without a chance
19 for the utilities to retain a share of merger savings for a reasonable period. In these instances,
20 the Staff would not be opposed in concept to proposals by utilities to "share" merger savings
21 in the context of a rate proceeding.

22 Q. How would the Staff view such proposals if they were made by UCU in future
23 rate proceedings?

1 A. The Staff's position on such proposals would depend upon the specific facts
2 and circumstances surrounding the request at that time. Any future Staff consideration of
3 merger savings sharing proposals would be tied to production of evidence demonstrating
4 incremental net customer benefits that can clearly be tied to the SJLP merger, and that would
5 not have been possible without the merger occurring. The amount of any savings retained by
6 the utility should not be tied to the amount of the consideration paid by UCU for the SJLP
7 properties (i.e., the acquisition adjustment). Finally, the Staff would evaluate the past ability
8 of UCU to retain merger savings through means of regulatory lag before considering any
9 proposals to share merger savings in rate cases.

10 Q. By taking a position that ratemaking decisions should not be made by the
11 Commission in this merger proceeding, the Staff believes that the Joint Applicants will argue
12 that this will not provide them with enough "certainty" to go ahead with the agreed upon
13 merger. Please comment.

14 A. The Staff is not aware of any occasion in the past in which the Commission
15 has the kind of sweeping ratemaking decisions in a merger application which UCU and SJLP
16 have requested in this case. By seeking upfront rate commitments from the Commission, the
17 Joint Applicants are in essence urging the Commission to change its past policies in order to
18 encourage this transaction (or, in general, merger and acquisition transactions) to be entered
19 into and approved.

20 The Staff continues to believe that the Commission should maintain a "neutral"
21 stance towards mergers and acquisitions in general, neither seeking to encourage utilities to
22 combine, or taking steps to discourage potential combinations. Applying consistent
23 regulatory policies to merger applications before it, and allowing utilities to enter into

1 combinations when the companies reasonably show that they can make a beneficial deal
2 under those policies, is the best way to foster a "neutral" attitude in the Staff's opinion. For
3 this particular transaction, given the Staff's analysis showing merger-related costs in excess
4 of probable merger benefits, Commission "encouragement" of this deal is not appropriate in
5 any event. Given the facts and circumstances surrounding this Merger Application, the
6 regulatory focus should be on protecting customers if this transaction is approved, not in
7 "incenting" UCU to close this or other like deals.

8 Q. Is the Staff proposing an overall "regulatory plan" for the Commission's
9 consideration if this merger is approved?

10 A. No. In this context, the Staff defines "regulatory plan" as an agreement to
11 provide some special (non-traditional) treatment to merger-related savings and costs. As
12 previously discussed, the Staff believes that traditional rate practices should be extended to
13 the merger-related savings and costs arising from this specific transaction.

14 Q. What kinds of special treatment of merger related revenue requirement
15 impacts are often discussed in the context of "regulatory plans?"

16 A. These special treatments generally range from rate moratoriums for a set
17 period of time, to special regulatory mechanisms to allow sharing of merger savings/costs
18 through a defined period, to full-scale earnings sharing/alternative/incentive plans to allow
19 some sharing of earnings (above pre-defined levels) associated with both merger and non-
20 merger-related events.

21 For informational purposes, Staff witness Proctor discusses some hypothetical
22 examples of how special rate treatments for merger impacts in general, and specific areas of
23 merger savings, might work.

1 Q. The Joint Applicants have recommended a five-year rate moratorium be put in
2 effect for SJLP as part of their overall proposed regulatory plan. Has the Staff considered the
3 use of rate moratoriums for SJLP after the merger?

4 A. It is my understanding that rate moratoriums cannot be ordered or imposed by
5 the Commission. Therefore, in the context of discussions with utilities and other parties, the
6 Staff is not opposed to consideration of negotiated rate moratoriums, if reasonable and if
7 appropriate customer protections are part of an overall settlement. The moratorium should be
8 for a reasonable length of time and, if appropriate, coupled with an upfront and/or deferred
9 rate reduction if necessary to balance customer/utility interests. In the context of a merger
10 application, the rate reductions would have the effect of passing on a reasonable share of
11 expected merger and non-merger related savings to customers after a merger.

12 Q. If a moratorium is to be considered for SJLP as a result of the UCU merger,
13 what reasonable customer rate protections would be necessary as part of an overall
14 agreement?

15 A. At a minimum, customer protections would have to be agreed to in the areas
16 of the acquisition adjustment and allocated corporate costs.

17 For the acquisition adjustment issue, the only satisfactory customer protection is
18 agreement that the premium will be treated below-the-line in future rate proceedings.

19 For corporate allocated UCU costs, from a SJLP customer perspective, there would
20 need to be an agreed upon procedure to limit potential increases in the allocation of corporate
21 costs above the A&G expense levels incurred by SJLP on a stand-alone level. The best and
22 simplest way to do this is to agree on the use of "caps" for SJLP A&G expenses in future rate

1 proceedings, in which SJLP's rate recovery of this item would be limited to the pre-merger
2 level of St. Joseph A&G costs, perhaps inflated by an appropriate escalation factor.

3 Q. Did the Staff examine SJLP's current revenue requirement during the
4 investigation of this Merger Application?

5 A. Yes, as discussed in Staff witness Traxler's rebuttal testimony. There were
6 two reasons for the Staff's work in this area:

7 1) to respond to the Joint Applicants' proposal for a five-year rate
8 moratorium for SJLP following consummation of the merger. Implementing a
9 moratorium would not be appropriate if SJLP was either over- or under-earning.

10 2) to provide the Commission with a more appropriate "baseline" or
11 "base year" for merger savings tracking purposes, in the event the commission
12 accepts the Companies' position on this item. The Staff does not recommend
13 adoption of the Companies' savings tracking proposal.

14 The results of this cost of service analysis showed that SJLP's current earnings appear
15 to be reasonable.

16 Q. Is the Staff open to possible use of so-called "alternative regulation" for SJLP
17 and/or MPS after a merger?

18 A. In Case No. EM-96-149, Union Electric Company's (UE) application to
19 merge with CIPSCO, Inc., a stipulation and agreement reached in that case called for merger
20 savings and some merger costs to be flowed through an earnings sharing grid, that had been
21 previously established as part of UE's first Experimental Alternative Regulation Plan
22 (EARP). To utilize the same approach for this Merger Application would require that an

1 entire earnings sharing plan be negotiated among the parties in this proceeding, a project that
2 would have many ramifications beyond consideration of merger- specific issues.

3 At this time, the Staff is opposed to the introduction of new earnings sharing plans
4 similar to UE's first or second EARP or the more limited sharing plans that are applicable to
5 gas costs for gas local distribution companies in Missouri. This Staff position is because of
6 the various problems that have been encountered in the operation of these plans to-date, and
7 that have been brought previously to the Commission's attention previously.

8 Q. If the Commission were interested in earnings sharing/incentive plans as a
9 way to treat merger savings and costs in this case, what does the Staff recommend that it do?

10 A. In the event the Commission is still interested in exploring the usefulness of
11 "alternative regulation" methods in general for utilities in a post-merger environment, the
12 Staff sees two options as to how the Commission could proceed. First, the Commission
13 could direct the parties to attempt to develop a joint plan to set up an earnings sharing
14 approach for SJLP and/or MPS after this merger. This could be done in a new docket to be
15 ordered for that purpose. Second, the Commission could indicate that it is interested in UCU
16 proposing an alternative regulation approach in a future SJLP and/or MPS rate proceeding in
17 Missouri. In that docket, the Staff and other parties could respond to UCU's proposal or
18 propose alternatives, as they see fit.

19 If the Commission is interested in the use of alternative regulation approaches in this
20 context, the Staff recommends that the Commission indicate that interest in the Report and
21 Order in this proceeding, as well as indicate what approach listed above the Commission
22 believes is preferable.

1 **STRANDED COSTS**

2 Q. Please define the term "stranded costs."

3 A. "Stranded costs" (also commonly known as "stranded investment") is a term
4 that is widely used to describe those costs presently charged by electric utilities in rates that
5 may not be recoverable when and if electric utilities must set their prices based upon a
6 competitive electric market. In short, "stranded costs" are "above-market" costs.

7 Q. What types of costs are most often thought to be potentially "stranded" if
8 competition is implemented for the electric industry?

9 A. Because the generating function of electric utilities is thought to be the
10 function most subject to competitive pressures, stranded cost concerns are usually centered
11 on generation assets and expenses.

12 Q. Is the Staff currently aware of any major stranded cost concerns that may exist
13 for either SJLP or MPS?

14 A. No. For MPS, the Staff examined evidence about its potential exposure to
15 stranded costs from its generating assets at the time of MPS' last electric rate proceeding,
16 Case No. ER-97-394, et al. The Staff found no evidence that MPS was likely to face positive
17 stranded costs when all of their generating assets were taken into account at that time, and is
18 aware of no evidence available since the time of that rate proceeding that would change that
19 conclusion.

20 For SJLP, as previously discussed, UCU's assumption appears to be that St. Joseph
21 generating assets will be worth more in an unregulated marketplace than under continued
22 regulation. This is the opposite situation than exposure to positive "stranded costs."

1 Q. Why is the Staff concerned about potential stranded costs in the context of this
2 proceeding?

3 A. While stranded cost policy does not appear to be directly at issue in this
4 proceeding, the Staff wants to ensure that approval of the Application not serve to increase
5 the amount of stranded costs that may be charged to SJLP's or MPS's customers at a later
6 time.

7 Q. Does the Staff have any recommendations for the Commission's consideration
8 concerning the merger and its potential impact on future stranded costs?

9 A. Yes. As previously mentioned, stranded costs are usually defined as the
10 difference between net book value of a regulated asset and its market value if the electric
11 industry is restructured. If electric restructuring occurs, it is possible that the Joint
12 Applicants in the future may argue that any failure to recover UCU's valuation of SJLP's
13 assets (i.e., the portion of the acquisition adjustment allocable to generation operations)
14 would constitute a "stranded cost." This result would mean that SJLP (and perhaps MPS)
15 customers might be exposed to stranded costs in the future, whereas they might not have had
16 such exposure without the merger. This would be a detriment to SJLP and MPS customers.
17 Therefore, the Staff recommends that the Commission order as a condition to any approval of
18 the Merger Application that the Joint Applicants' commit not to seek recovery in any future
19 Missouri regulatory proceeding of any portion of the acquisition adjustment under the claim
20 that such costs represent a recoverable "stranded cost." Further, the Joint Applicants should
21 commit not to seek or endorse legislation in Missouri that would mandate the recovery of all
22 or a portion of the acquisition adjustment as part of claimed "stranded costs."

SUMMARY/CONCLUSIONS/RECOMMENDATIONS

Q. Please summarize the main points in your testimony, as well as the Staff's overall conclusions and recommendations concerning this Merger Application.

A. The evidence presented by the Staff in this case is that the expected rate impact of this merger on SJLP and MPS customers will be negative, in that expected merger costs will exceed expected merger savings when calculated using reasonable assumptions. Based on this evidence alone, the Merger Application as proposed by the Joint Applicants is detrimental to the public interest, and should be rejected by the Commission. Given the relationship between merger costs potentially assignable to customers from this merger, and estimated merger savings calculated under reasonable assumptions, the Staff believes that imposing conditions upon merger approval by the Commission may not serve to entirely eliminate customer risk from this transaction.

In the event the Commission determines approval of the Merger Application is appropriate, however, these conditions and recommendations (among other listed in the Staff's testimony) should be agreed to and accepted by the Joint Applications before approval is granted:

- The Joint Applicants' regulatory plan should be rejected.
- The acquisition adjustment should be booked below-the-line, and not be recoverable at any time in future SJLP or MPS customer rates.
- A fair share of merger savings should be assigned to MPS in the future, and available to be flowed through to customers in rate proceedings.
- Any requested recovery of UCU corporate overheads in future SJLP rate proceedings will be subject to strict scrutiny, with enforcement of the "no detriment" standard from the perspective of SJLP customers in this area.

Rebuttal Testimony of
Mark L. Oligschlaeger

- 1 • The recommendation concerning the "Electric Allocations Agreement"
2 entitled in Staff testimony should be accepted.
3
4 Q. Does this conclude your rebuttal testimony?
5 A. Yes, it does.

BEFORE THE PUBLIC SERVICE COMMISSION
OF THE STATE OF MISSOURI
