Dear Commissioners:

This letter is written testimony concerning Electric Utility Resource planning.

I endorse MoPIRG's proposal that you direct electric utilities to invest at least 4.5% of their gross annual Missouri revenues in energy efficiency and renewable energy measures.

I support the PSC effort to write resource plan rules. But even the best process needs a goal. If the goal of a electric utility is to boost consumption of electricity, the utility could follow your resource planning process and still not invest a penny in energy efficiency or renewable energy.

Missouri needs this investment, both to protect the environment and to create local jobs. Therefore, I support the 4.5% spending rule proposed by MoPIRG.

Sincerely,

Tim Hippensteel
