### BEFORE THE PUBLIC SERVICE COMMISSION OF THE STATE OF MISSOURI SURREBUTTAL TESTIMONY OF DENNIS R. WILLIAMS ON BEHALF OF AQUILA, INC. D/B/A AQUILA NETWORKS-MPS AND AQUILA NETWORKS-L&P CASE NOS. ER-2004-0034 AND HR-2004-0024 (CONSOLIDATED)

	1	Q.	Please state your name and business address.			
	2	A.	My name is Dennis R Williams. My business address is 10700 East 350 Highway,			
÷	3		Kansas City, Missouri 64138.			
	4	Q.	Are you the same Dennis Williams who previously filed rebuttal testimony in this			
	5		proceeding before the Missouri Public Service Commission ("Commission") on behalf of			
	6		Aquila, Inc ("Aquila" or "Company")?			
	7	A.	Yes, I am.			
	8	Q.	What is the purpose of your surrebuttal testimony?			
	9	A.	I will respond to the rebuttal testimony of Commission Staff ("Staff") witness Trisha			
	10		Miller and Office of Public Counsel ("Public Counsel") OPC witness Ted Robertson			
	11		pertaining to accounting authority orders; to Staff witness Amanda McMellen's rebuttal			
	12		testimony regarding uncollectible accounts expense; and to Public Counsel witness			
	13		Robertson's manufactured gas plant testimony.			
	14		MPS ACCOUNTING AUTHORITY ORDERS			
	15	Q.	Please explain your understanding of Staff witness Trisha Miller's rebuttal testimony			
	16	<b>X</b> ,	with regards to the Aquila Networks-MPS ("MPS") Ice Storm Accounting Authority			
	17		Order ("AAO")?			
	18	A.	Staff has included a total of \$1,648,979 per year in extraordinary maintenance costs			
-,	19		related to the ice storm, representing one fifth of MPS's total incremental costs as			

1

Ę.

$\sim 1$		authorized by the Commission in Case No. EU-2002-1053 (see page 2 lines 16-20 of Ms.			
2		Miller's rebuttal testimony). Staff's ratemaking treatment allows MPS' electric			
3 operations to earn a "return of" a portion of the extraordinary expenditures in					
4 restore service to its electric customers as a result of the ice storm that occur					
5	5 January 2002. However, Staff has excluded from rate base the unamortized AAC				
6	6 balance at September 30, 2003 related to the ice storm.				
7 Q. What is your understanding of Staff's position regarding the disallowance of					
8	treatment of the unamortized AAO balance?				
9 A. Ms. Miller discusses in her rebuttal testimony the Commission's past treatment of A					
10 resulting from extraordinary events. Staff contends that extraordinary ex		resulting from extraordinary events. Staff contends that extraordinary expenditures			
11		associated with "acts of God" have been shared between shareholders and ratepayers and			
		that this is achieved by allowing the amortization in the Company's cost of service but			
		denying rate base treatment for the unamortized deferred AAO balance.			
14	Q.	What is your response?			
15	Α.	A. MPS believes that a utility's request for an AAO varies depending on the nature of even			
16		or circumstances surrounding the request and therefore the Commission should evaluate			
17		the corresponding ratemaking treatment on a case-by-case basis. The ice storm, in MPS'			
18		case, was an extraordinary event resulting in significant and material expenditures			
19		incurred by the Company to repair its electric system and restore service to its normal			
20 operating conditions. These expenditures are legitimate costs i		operating conditions. These expenditures are legitimate costs incurred specifically to			
21		serve customers by restoring service. Customers received the benefit of these			
22		expenditures and investors should not have to bear the costs legitimately incurred to serve			
23		the customer.			

Q. Why do you believe that customers should bear the cost of events such as an ice storm? 1 2 A. Simply stated, it is because customers have received the benefit of the costs expended to 3 restore service. More explicitly, the regulatory process acts as a surrogate for a 4 competitive marketplace. A competitive business is able to reserve for "acts of God" and 5 build the expense associated with establishing that reserve into it prices. While Missouri 6 regulatory precedent does not allow for recovery of establishing a reserve in advance of a 7 natural disaster, the Accounting Authority Order process was established as a mechanism 8 to allow utility companies an opportunity to recover in their prices the impacts of natural 9 disasters. The process should allow for the recovery of legitimate costs to restore service 10 to the customer as well as provide an opportunity for the investor to earn a return on the 11 funds they have advanced as a result of the natural disaster. A utility company has no 12 control over "acts of God" and, to me, it makes no more sense to establish a sharing 13 mechanism for these types of prudently incurred costs than it does for any other prudently 14 incurred cost. 15 Q. Has the Commission ever approved a rate recovery mechanism that shares the cost of

natural disasters between investors and customers?

A. Yes. Ms. Miller is correct in her description of the rate order in Case No. WR-95-145
wherein the Commission determined that a sharing was appropriate and could be
achieved by allowing a return of the cost incurred without a return on those costs.
However, Ms. Miller did not identify a difference in that sharing mechanism compared to

21 the sharing mechanism already embedded in the MPS Ice Storm AAO.

Q. Please explain how a sharing mechanism is already embedded within the MPS Ice Storm
AAO,

1 Α. In MPS Case No. EU-2002-1053, the Commission accepted the Staff's position that the 2 Company should begin amortization of the incremental deferred expenses beginning in 3 February 2002, the date of the storm. Beginning in February 2002 MPS began recording expenses of over \$137,000 per month as it amortized the \$8.2 million dollars expended to 4 5 restore service after the ice storm. By the time any recovery of this monthly amortization 6 occurs through new rates established in this case, almost \$4 million of expense will have 7 been amortized without any opportunity for recovery. Moreover, Aquila in its direct 8 filing, requested recovery of a return on only the unamortized balance or about half of the 9 dollars originally expended. MPS investors provided the cash to restore service in 10 February 2002 and under the Company's proposal have already absorbed about 50% of 11 those costs with no opportunity for recovery. Staff's approach goes even further and suggests that not only should the investor absorb the first 50% of the costs incurred to 12 13 restore service; they should also receive no return on the remaining unamortized 14 expenses. The result is that investors will absorb nearly two-thirds of the deferred costs 15 associated with the 2002 ice storm. 16 How is this sharing mechanism different from the 1995 rate case that Ms. Miller referred Q.

to in her testimony?

17

A. Ms. Miller referenced an AAO pertaining to a severe flooding incident that occurred in
19 1993 and to a subsequent rate case in 1995. She correctly pointed out that the 1995 rate
20 order approved recovery by the utility of the amortization of costs incurred, but did not
21 allow for a return by the utility's investors of a return on their investment. However, it
22 should be noted that the utility was not required to start amortizing the deferral at the time

1		the flood occurred in 1993. Amortization did not begin until the following year thereby	
2	,	reducing the sharing of costs absorbed by the Company to below 50 percent.	
3	Q.	Please summarize your understanding of the rebuttal testimony submitted by Public	
· 4	4 Counsel witness Mr. Ted Robertson.		
. 5	A.	With regards to Mr. Robertson's rebuttal testimony, there are three areas that the	
6		Company wishes to address. These issues are as follows: 1) his proposal to exclude the	
· 7		unamortized deferred AAO balances from rate base; 2) his suggestion that the	
8		Company's accounting records may not support the incremental costs incurred; and 3) his	
9		statements that the Company failed to properly maintain its accounting records to track	
10	I	the deferred income taxes associated with the AAO's.	
11	Q.	What explanation does Mr. Robertson give to support Public Counsel's position	
12		regarding rate base treatment of the unamortized deferred AAO balances?	
13	А.	Public Counsel believes that AAO's have the effect of protecting the Company from	
.14		regulatory lag (see page 9, lines 22-23 of Mr. Robertson's rebuttal testimony) and while	
15		this may benefit the utility it is not necessarily beneficial to ratepayers (page 10, lines 1-	
16		2).	
17	Q.	How does the Company respond?	
18	A.	MPS' application for an AAO and the Commission's subsequent Order in Case No. EU-	
19		2002-1053 authorizing the deferral of incremental ice storm expenses has not lessened	
20	I	the effect of regulatory lag for the Company. As stated in my rebuttal testimony, MPS	
21		made the necessary expenditures to restore electric service to thousands of its customers	
22		affected by the ice storm in the quickest manner possible. The cash was expended in	
23		January and February 2002, and the Company was required to start amortizing these	

	. 1	;	expenses over a period of 60 months beginning in February 2002 as stated in the Order
	2		granted by the Commission. Therefore, the unamortized AAO balance that the Company
	3		has proposed to be included in rate base has already been reduced by 24 months of
	4		amortization. The Company's investors have already experienced two years of regulatory
	5		lag, receiving no "return on" or "return of" their plant investment, and this regulatory lag
	6		will continue until new rates are established in the current rate proceeding before the
	7		Commission.
	8	Q.	At pages 9 - 10 of his rebuttal testimony, Mr. Robertson discusses regulatory lag and
	9		indicates that it can be a benefit. Do you understand this concept?
	10	А.	Yes. I have heard witnesses in a number of proceedings point to regulatory lag as a
	11		benefit because utility companies are given an incentive to control costs.
(	12	Q.	Should a Commission emphasize the benefits of regulatory lag in the context of a natural
	13		disaster such as the ice storm that occurred in early 2002?
	14	A.	No. Cost containment efforts should not be the focus in an emergency situation. MPS
	15		could have reduced the regulatory lag it has experienced as a result of the ice storm, I
	16		suppose, by containing costs associated with restoring service. Aquila could have limited
	17		overtime; it could have limited the number of crews brought in from outlying states; and
	18		the Company could have limited the number of outside contractors we used to restore
	19		service. Costs would have been contained, but the time to restore service would have
	20		been greatly extended. If our focus had been on regulatory lag, that is an approach
	21		Aquila would have taken. However, I doubt that Aquila's customers want the Company
	22		or the Commission to be focusing on cost containment, or reducing regulatory lag, when
a de la compañía de la	23		they are without power and it is freezing outside.

13

Q.

Please explain the Company's response to the "documentation dispute" that the Public Counsel has referred to.

A. Mr. Robertson's rebuttal testimony (page 8, lines 10-11), makes reference to an on-going documentation availability dispute that Staff has with the Company. I am aware of no documentation dispute and believe that Mr. Robertson's comment relates to Ms. Miller's direct testimony where she states that Staff's ice storm AAO adjustment was "subject to change" pending necessary documentation to support the costs incurred (see page 9, lines 9-12). After Staff's further review of the responses and related documentation provided in answer to data requests MPSC-0543, MPSC-0544 and MPSC-0564 which I discussed in my rebuttal testimony (see pages 12-14), Staff has accepted the Company's level of incremental expenses associated with the ice storm totaling \$8,244,893, (see page 2, lines 16-20 of Ms. Miller's rebuttal testimony). Therefore, I do not believe there is any documentation dispute.

Q. Public Counsel notes on page 10, lines 15-17 of its rebuttal testimony that "the utility will
still recover the amounts booked and deferred, including the cost of carrying the deferred
balances". What is your response?

A. I do not understand this statement at all. Carrying costs are computed and included in
rates by multiplying the cost of money times rate base. By definition, exclusion of the
AAO account from rate base precludes the Company from recovering carrying costs on
that balance. Moreover, no property taxes or depreciation expense is included in the
\$8,244,893 in incremental expenses for which the Company has requested amortization
over five years.

- Q. What is the Company's response to the remarks made by Public Counsel involving the
   "Company's failure to maintain the proper financial records" associated with the deferred
   income taxes on the MPS deferred AAO balances?
- A. Mr. Robertson points to the Company's response to OPC data request number 1031 to
  support his statement. I have attached that response as Surrebuttal Schedule DRW-1 to
  this testimony. This response simply indicates that from a ratemaking perspective, no
  deferred taxes related to the 1990 or 1992 MPS AAOs. This is because the tax benefits
  relating to those AAOs were flowed through to customers. Thus, provision of deferred
  taxes would not be appropriate. I simply do not understand the allegation that our
  accounting records have been improperly maintained.
- Q. What is Public Counsel's proposal with regards to the amount of deferred income taxes
   associated with the deferred AAO costs that should be subtracted from rate base?
- 13 A. On page 11, lines 17-20 of Mr. Robertson's rebuttal testimony, Public Counsel
- recommends that the Commission include deferred income taxes associated with the
   accounting authority orders as a rate base offset.
- 16 Q. Does the Company agree with Public Counsel's proposal?
- 17 A. No it does not. Mr. Robertson has suggested retaining the rate base offset associated with
- 18 deferred taxes while never having included the related AAO in rate base. His result
- would be to reflect a negative investment as a result of our having incurred substantial
   costs to restore service to our customers.
- 21

#### L&P ACCOUNTING AUTHORITY ORDERS

Q. What is the position of Public Counsel witness Ted Robertson regarding the AM/FM
 Accounting Authority Order that L&P has included in its revenue requirement
 calculation?

A. Mr. Robertson recommends the disallowance of the amortization expense that L&P has
included in its cost of service related to the AM/FM system, as well as the unamortized
AAO balance that both the Company and Staff have included in rate base. Public
Counsel cites that the Company has exceeded the six-year timeframe for which the
Commission authorized the amortization, and the unamortized deferred AAO balance is
nearly zero and will be fully amortized by October 2004 (see page 13, lines 11-14).

10 Q. Does the Company agree with Public Counsel's position?

A. No it does not. In its application requesting the accounting authority order, St. Joseph Light & Power Company ("SJLP") estimated the expenses related to the AM/FM system to be approximately \$1.4 million. However, the project lasted longer than expected and SJLP continued to incur additional expenses related to the project. In addition, the amortization schedule was not adjusted to reflect a new monthly amortization amount based on the additional expenses incurred; therefore L&P is still amortizing the expenses that is scheduled to be complete by October 2004.

Q. Do you agree with Mr. Robertson's statement that continued amortization of the L&P
 AAO will result in over-recovery of deferred costs?

A. No. This contention clearly contradicts the test year concept and Public Counsel's
positions on one-issue rate-making.

22 Q. What has been the treatment of the unamortized AAO balance in past rate proceedings?

	1	A.	In SJLP's last rate proceeding, Case No. ER-99-247, both SJLP and Staff included the
·	2		unamortized AAO balance of \$679,307 in rate base in their filed case. As such, both
	3		Company and Staff have recommended the same accounting treatment of the AM/FM
	4		System in the current rate proceeding before the Commission, Case No. ER-2004-0034.
	5		BAD DEBT EXPENSE
	6	Q.	Please explain your understanding of the method Staff used to calculate bad debt
	7		expense.
	8	A.	Two different time periods were used to calculate bad debt expense for Aquila's Missouri
	9		operations. For MPS electric operations, Staff used a three-year and nine-month average
	10		of actual net write-off rates. For L&P's electric operations, Staff used a five-year and
-14	11		nine-month average of actual net write-off rates.
	12	Q.	What is Staff's rationale for using a three-year and nine-month average and a five-year
	13		and nine-month average of actual net write-off rates for MPS and L&P, respectively?
	14	A.	In MPS' case, Staff believes that the use of a three-year and nine-month average is
	15		representative of ongoing levels of actual net write-offs, and that this is consistent with
	16		the revenue calculation which has been updated to September 30, 2003 (see page 4, lines
	17		15-18 of Ms. McMellen's rebuttal testimony). For L&P's electric operations, Staff
	18		concludes that a five-year and nine-month average best reflects the Company's ongoing
	19		level of bad debts based on historical data (see page 6, lines 12-13).
	20	Q.	Does the Company agree with Staff's position?
	21	A.	No it does not. Staff's use of a three-year and nine-month average for MPS and five-year
	22		and nine-month average for L&P significantly distorts the average uncollectible rate in
	23		that fourth quarter write-offs, which are normally higher than in other quarters, are

- -

	1		excluded causing a calculated understatement of total net write-offs for the year resulting
	2		in a lower average uncollectible rate. As stated in my rebuttal testimony on page 21 lines
	3		7-9, the exclusion of fourth quarter write-offs for MPS and L&P for 2003 resulted in an
	4		understatement of actual net write-offs for the year of approximately 50% for both
	5		divisions. Therefore, it is not reasonable for Staff to exclude fourth quarter net write-
	6		offs and include only the nine months ending September 30, 2003 in its calculation of the
	7		average uncollectible rate just to be consistent with the update period.
	8	Q.	Why are write-offs traditionally higher in the fourth quarter of the year?
	9	Α.	Aquila's Missouri electric operations are largely suburban and residential, resulting in a
	10		high summer peak due to air conditioning load. Customer billings are therefore highest
	11		in the summer months of July through September (billing for usage during the months of
	12		June through August). A ninety-day tolerance limit is generally viewed by the
Per series	13		Company's outside auditors as sufficient for collection of accounts. Bills outstanding
	14		beyond that period of time are more likely to be written off. Thus write-offs are
-	15		substantially higher in the fourth quarter as summer billings reach the point where they
	16		are considered to be uncollectible.
	17	Q.	Staff noted in its rebuttal testimony (page 5, lines 23-26) that the Company utilized a
	18		three-year average uncollectible rate for L&P in the update, compared to the five-year
	19		average uncollectible rate that was used in its direct filing. How does the Company
	20		respond?
	21	A.	For consistency purposes, the Company changed L&P's average uncollectible rate to
	22		agree with the three-year average uncollectible rate reflected in the adjustment of bad
	23		debt expense prepared for MPS in both its direct and updated filing.

11

### 1

### MANUFACTURED GAS PLANT REMEDIATION COSTS

2	Q.	What is the purpose of your testimony in regards to manufactured gas plant ("MGP")	
3		remediation costs as described by Public Counsel witness Ted Robertson's rebuttal	
4		testimony?	
5	Α.	Mr. Robertson states that MGP costs should only be charged to existing MPS gas	
6		customers. He states that the electric customers should not have pay for any MGP	
7		expenses.	
8	Q.	Do you agree with Mr. Robertson on this issue?	
9	А.	No.	
10	Q.	Why not?	
11	A.	It is Aquila's position that the MGP costs are a corporate wide clean-up obligation and	
12		should be a charge to all existing customers as a cost of doing business.	
13	Q.	Please explain what you mean by "corporate wide clean-up obligation."	
14	A.	Aquila has a corporate and legal responsibility to clean up the MGP sites in its service	
15		territory. In the late 1800's and until the 1940's gas was manufactured from coal and was	
16		used to heat and light homes and businesses. These plants were abandoned all over the	
17		United States with the building of natural gas pipelines. These abandoned sites are now	
18		being cleaned up by various parties because of the potential contamination from coal tar	
19		and other residual chemicals left in the soil. MPS has nine of these MGP sites within its	
20		service territory and has an obligation to remediate these sites per the Environmental	
21		Protection Agency and the Missouri Department of Natural Resources.	
22	Q.	Beyond the fact that these are corporate obligations, is there any other reason that electric	
23		customers should share in the cost of remediation?	

<u>Ceş</u>	1	A.	Yes, Although Mr. Robertson characterizes these sites as being disassociated from
	2		electric operations, that characterization is not correct. The environmental liability
	3		associated with manufactured gas plant facilities goes with the land on which the MGP
	4		plant is located. As a combination electric/gas utility, MPS has a number of facilities that
	5		share facilities between its gas and electric operations. A number of MGP plant sites are
	6		at locations that currently house both gas and electric operations or are used exclusively
	7		for electric operations. For example, the Clinton site is used for pole storage; a substation
	8		resides on a site in Nevada; a warehouse is on an MGP site in Sedalia; and a power plant
	9		is located at the former MGP plant site in Trenton.
	10	Q.	Has the Staff taken a position on this issue in the past?
	11	Α.	Yes. In MPS Case No. ER-93-37, Staff's position was to have both electric and gas
	12		customers pay for the clean-up of the MGP sites.
₹÷.	13	Q.	Who was the Staff witness that filed testimony on this issue?
	<u>1</u> 4	Α.	Shirley J. Norman filed direct testimony for the Staff in Case No. ER-93-37.
•	15	Q. 1	Has MPS received any insurance payments relating to the site clean-ups?
	16	A.	Yes.
	17	Q.	Which customers received the benefit of these payments?
	18	Α.	Both electric and gas customers.
	19	Q.	Please summarize Aquila's position on the MGP clean-up costs.
	20	А.	MGP site clean up is a corporate wide obligation and all costs and recovery should be
	21		assigned to both electric and gas customers. Therefore, the Public Counsel adjustment
	22		recommended by Ted Robertson, which requires gas customers to bear all of the costs
	23		associated with MGP site clean-up, should not be accepted by the Commission.

## 1 Q. Does this conclude your prefiled surrebuttal testimony?

-----

2 A. Yes, it does.

#### AQUILA, INC. CASE NO. ER-2004-0034 & GR-2004-0072 OFFICE OF PUBLIC COUNSEL DATA REQUEST NO. OPC-1031

DATE OF REQUEST:	November 30, 2003
DATE RECEIVED:	November 30, 2003
DATE DUE:	December 20, 2003
REQUESTOR:	Ted Robertson

#### QUESTION:

- A reconciliation showing the September 30, 2003 balance of deferred income taxes related to each separate MPS Accounting Authority Order (i.e., 1990 electric, 1992 electric, 2002 ice storm and gas) and the L&P AM/FM project, respectively. I am not requesting the amount of deferred incomes taxes on the remaining balances at the end of the update test year as shown in Company work paper RBO-31. I'm seeking the total deferred income taxes booked since inception for each separate AAO and the AM/FM project, the amortizations for each, if any, and the remaining balances as shown (assuming the reconciliation balances) on the financial books of record.
- 2. Copies of the general ledger pages, and other pertinent accounting documents, that support the numbers provided in #1.

#### **RESPONSE:**

1 – MPS Accounting Authority Orders relating to 1990 electric, 1992 electric and gas: No deferred taxes have been recorded on these items. Since inception, MPS has been rate made on a flow-through basis for these items.

1 - 2002 ice storm: No deferred taxes have been recorded through 9/30/03. A deferred tax adjustment was recorded in November, 2003 related to the return-to-accrual for the M-1 item included on the 2002 Federal Income Tax Return.

1 - L & P AM/FM project: Please see attached excel spreadsheet OPC\_1031.xls.

2 - L & P AM/FM project only: Prior to 12/31/00, accounting and general ledger information is quite limited. After this date, deferred taxes are not journalized or retained in the general ledger by individual timing differences. Timing differences and the associated deferred taxes are segregated by various combinations of accounts (282/410, 282/411, 283/410, and 190/411). The support for journal entries is prepared and retained by the Tax Department. A file containing such support for 2001, 2002 and 2003 accruals and actuals is provided in the attached excel spreadsheet OPC\_1031 Support.xls. The line for the AM/FM item is highlighted in green.

ATTACHMENTS: Two Excel files related to the L&P AM-FM Project
