## DIRTY, DANGEROUS, AND RUN AMOK

Natural gas drillers exploit government loopholes, ignore decades-old environmental protections, and disregard the health of entire communities. "Fracking," a violent process that dislodges gas deposits from shale rock formations, is known to contaminate drinking water, pollute the air, and cause earthquakes. If drillers can't extract natural gas without destroying landscapes and endangering the health of families, then we should not drill for natural gas.

*"No state has adequate protections in place. Even where there are rules, they are poorly monitored and enforced. Thanks to the multiple federal exemptions, we can't even count on the federal government to keep us safe! Together, though, we can change that! No industry, no matter how wealthy or powerful, can withstand the righteous passion of the American people. The out-of-control rush to drill has put oil and gas industry profits ahead of our health, our families, our property, our communities, and our futures. If drillers can't extract natural gas without destroying landscapes and endangering the health of families, then we should not drill for natural gas."*

—Allison Chin, Sierra Club president, July 28, 2012, at the Stop the Frack Attack rally

## WHAT WE DO

KCP&L Exhibit No. 146  
Date 6-17-15 Reporter AT  
File No. ER. 2014. 0370

Fracking for natural gas

Fracking for natural gas damages the land, pollutes water and air, and causes illness in surrounding communities.

Drilling for natural gas

If we can't drill safely, then we shouldn't be drilling at all. Natural gas production is environmentally damaging and harms public health.

Swan in a field

Latest studies from the International Energy Agency reveal a switch from coal to gas would lead to a global temperature rise of more than 3.5 degrees Celsius, an outcome we simply cannot afford.

Liquefied natural gas (LNG)

Exporting liquefied natural gas (LNG) to overseas markets is a dirty, dangerous practice that lets the industry make a killing at the expense of human health.
