**Affidavit of Brian C. Andrews**

Brian C. Andrews, being first duly sworn, on his oath states:

1. My name is Brian C. Andrews. I am a consultant with Brubaker & Associates, Inc., having its principal place of business at 16690 Swingley Ridge Road, Suite 140, Chesterfield, Missouri 63017. We have been retained by the Missouri Industrial Energy Consumers in this proceeding on their behalf.

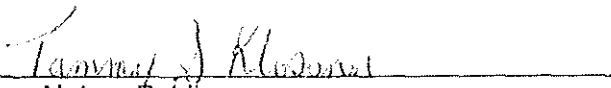

2. Attached hereto and made a part hereof for all purposes are my direct testimony and schedules which were prepared in written form for introduction into evidence in Missouri Public Service Commission Case No. ER-2019-0335.

3. I hereby swear and affirm that the testimony and schedules are true and correct and that they show the matters and things that they purport to show.

**Direct Testimony of Brian C. Andrews**

1    **Q     PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

2    A     Brian C. Andrews. My business address is 16690 Swingley Ridge Road, Suite 140,  
3         Chesterfield, MO 63017.

4    **Q     WHAT IS YOUR OCCUPATION?**

5    A     I am a Senior Consultant in the field of public utility regulation with the firm of Brubaker  
6         & Associates, Inc. ("BAI"), energy, economic and regulatory consultants.

7    **Q     PLEASE DESCRIBE YOUR EDUCATIONAL BACKGROUND AND EXPERIENCE.**

8    A     This information is included in Appendix A to this testimony.

9    **Q     DO YOU BELONG TO ANY PROFESSIONAL SOCIETIES?**

10   A     Yes. I am a member and the current President of the Society of Depreciation  
11         Professionals ("SDP").

12   **Q     PLEASE DESCRIBE THE SOCIETY OF DEPRECIATION PROFESSIONALS.**

13   A     SDP is a national society that was organized to recognize the professional field of  
14         depreciation analysis and individuals contributing to this field; to promote the  
15         professional development and professional ethics of those practitioners in the field of

Brian C. Andrews  
Page 1

1 depreciation; to collect and exchange information about depreciation and analysis; and  
2 to promote a national forum of programs and publications concerning depreciation.  
3 More information on SDP can be found on its website, [www.depr.org](http://www.depr.org).

4 **Q DO YOU HOLD ANY CERTIFICATIONS AS A DEPRECIATION EXPERT?**

5 A Yes. I have been awarded the designation of Certified Depreciation Professional  
6 ("CDP") by the SDP. This certification is based upon my education, experience, and  
7 successful completion of the CDP Exam.

8 **Q ON WHOSE BEHALF ARE YOU APPEARING IN THIS PROCEEDING?**

9 A This testimony is presented on behalf of the Missouri Industrial Energy Consumers  
10 ("MIEC"), a non-profit corporation that represents the interest of large customers in  
11 Missouri utility matters. These companies purchase substantial quantities of electricity  
12 from Ameren Missouri, and the outcome of this proceeding will have an impact on their  
13 cost of electricity.

14 **Q HAVE YOU TESTIFIED BEFORE THE MISSOURI PUBLIC SERVICE COMMISSION  
15 IN PRIOR PROCEEDINGS?**

16 A Yes. I have previously testified before the Missouri Public Service Commission  
17 ("Commission" or "MPSC") regarding Ameren Missouri's net base fuel costs in Case  
18 No. ER-2014-0258. Also, I have provided expert witness testimony in 32 regulatory  
19 proceedings in 13 states. I have provided a list of these other proceedings in  
20 Schedule BCA-1.

Brian C. Andrews  
Page 2

1 **INTRODUCTION AND SUMMARY**

2 **Q WHAT IS THE PURPOSE OF YOUR TESTIMONY?**

3 A My direct testimony will provide MIEC's proposed depreciation rates for Ameren  
4 Missouri's production plant accounts. I will show how reallocating existing production  
5 function book reserves among the production accounts to better align book reserves  
6 with the current life and net salvage parameters will reduce the production plant  
7 depreciation expense recovered through Ameren Missouri's base rates. Since I have  
8 not made any other changes, Ameren Missouri will still be able to recover all of its  
9 investment according to its proposed life and net salvage parameters.

10 **Q HOW IS YOUR DIRECT TESTIMONY STRUCTURED?**

11 A First, I will present an overview of book depreciation concepts. This includes a  
12 description of the purpose of book depreciation as well as a brief overview of how  
13 depreciation rates are determined in a depreciation study.

14 Next, I will present a discussion of the depreciation reserve analysis I have  
15 conducted that will better align Ameren Missouri's book reserves with the life and net  
16 salvage parameters that it is proposing in its depreciation study.

17 Last, I present proposed depreciation rates that I recommend the Commission  
18 approve in this proceeding.

19 **Q PLEASE SUMMARIZE YOUR CONCLUSIONS AND RECOMMENDATIONS.**

20 A The depreciation rates proposed by Ameren Missouri result in excessive depreciation  
21 expense to be paid by Ameren Missouri's customers. I have conducted a depreciation  
22 reserve analysis which demonstrates that there are significant imbalances in Ameren  
23 Missouri's reserve accounts, ranging from under-accruals of 285% to over-accruals of

Brian C. Andrews  
Page 3

1 131%. These reserve imbalances result in excessive depreciation rates and expense  
2 recoverable through Ameren Missouri's base rates. I have reallocated Ameren  
3 Missouri's book reserves such that future depreciation accruals will more accurately  
4 reflect current life and net salvage estimates of the production assets. The production  
5 plant depreciation rates that will accomplish this result are shown in Schedule BCA-7.  
6 These production plant depreciation rates will reduce Ameren Missouri's proposed  
7 2018 depreciation expense by \$23.7 million. Since Ameren Missouri proposed to  
8 increase depreciation expense by \$34.6 million, my recommendation would still provide  
9 Ameren Missouri with an annual increase in depreciation expense of \$10.9 million.

### 10 **BOOK DEPRECIATION CONCEPTS**

11 **Q PLEASE EXPLAIN THE PURPOSE OF BOOK DEPRECIATION ACCOUNTING.**

12 **A** Book depreciation is the recognition in a utility's income statement of the consumption  
13 or use of assets to provide utility service. Book depreciation is recorded as an expense  
14 and is included in the ratemaking formula to calculate the utility's overall revenue  
15 requirement.

16 The basic underlying principle of utility depreciation accounting is  
17 intergenerational equity, where the customers/ratepayers who benefit from the  
18 service of assets pay all the costs for those assets during the benefit period, which  
19 is over the life of those assets.<sup>1</sup> This concept of intergenerational equity can be  
20 achieved through depreciation by allocating costs to customers in a systematic and

---

<sup>1</sup>Edison Electric Institute, Introduction to Depreciation for Public Utilities and Other Industries, April 2013, page viii.

1 rational manner that is consistent with the period of time in which customers receive  
2 the service value.<sup>2</sup>

3 Book depreciation provides for the recovery of the original cost of the utility's  
4 assets that are currently providing service. Book depreciation expense is not intended  
5 to provide for replacement of the existing assets, but provides for capital recovery or  
6 return of existing investment. Generally, this capital recovery occurs over the average  
7 service life of the investment or assets. As a result, it is critical that appropriate average  
8 service lives be used to develop the depreciation rates so no generation of ratepayers  
9 is disadvantaged.

10 In addition to capital recovery, depreciation rates also reflect recovery of net  
11 salvage. Net salvage is simply the scrap or reuse value less the removal cost of the  
12 asset being depreciated. Accordingly, a utility will also recover the net salvage costs  
13 over the useful life of the asset.

14 **Q ARE THERE ANY DEFINITIONS OF DEPRECIATION ACCOUNTING THAT ARE**  
15 **UTILIZED FOR RATEMAKING PURPOSES?**

16 **A** Yes. One of the most quoted definitions of depreciation accounting is the one  
17 contained in the Code of Federal Regulations:

18 "Depreciation, as applied to depreciable electric plant, means the loss  
19 in service value not restored by current maintenance, incurred in  
20 connection with the consumption or prospective retirement of electric  
21 plant in the course of service from causes which are known to be in  
22 current operation and against which the utility is not protected by  
23 insurance. Among the causes to be given consideration are wear and  
24 tear, decay, action of the elements, inadequacy, obsolescence, changes  
25 in the art, changes in demand and requirements of public authorities."<sup>3</sup>

---

<sup>2</sup>*Id.* at 22.

<sup>3</sup>Code of Federal Regulations, Title 18, Chapter 1, Subchapter C, Part 101.

1 Effectively, depreciation accounting provides for the recovery of the original cost of an  
2 asset, adjusted for net salvage, over its useful life.

3 **Q HOW DO DEPRECIATION RATES AFFECT A UTILITY'S REVENUE**  
4 **REQUIREMENT?**

5 A Depreciation expense is typically one of the largest single line items in a utility's overall  
6 revenue requirement. When a utility updates its depreciation rates, it is effectively  
7 updating the amount of capital that is returned to it each year for investments that have  
8 been made to provide utility service. The depreciation rates are calculated in a  
9 depreciation study. The resulting depreciation rates are then applied to test year plant  
10 balances to determine the depreciation expense component of the utility revenue  
11 requirement.

12 **Q HOW ARE DEPRECIATION RATES DETERMINED?**

13 A Depreciation rates are determined in a depreciation study using a depreciation system.  
14 There are three components, each with a number of variations, used to determine a  
15 depreciation system, which is then used to estimate depreciation rates. The three basic  
16 components of a depreciation system are: (1) methods, (2) grouping procedures, and  
17 (3) techniques. The choice of a depreciation system can significantly affect the  
18 resulting depreciation rates, thus the revenue requirement.

19 The depreciation study results in depreciation rates that should recover all  
20 unrecovered plant investment and net salvage costs over the remaining lives of the  
21 accounts studied.

1 Q IN YOUR EXPERIENCE, WHAT DEPRECIATION SYSTEM IS MOST COMMONLY  
2 UTILIZED TO DETERMINE UTILITY DEPRECIATION RATES FOR RATEMAKING  
3 PURPOSES?

4 A The most common depreciation system is one that consists of the straight line method,  
5 the average life group procedure, and the remaining life technique. This is the same  
6 depreciation system used by Mr. Spanos to calculate Ameren Missouri's depreciation  
7 rates.<sup>4</sup>

### 8 DEPRECIATION RESERVE ANALYSIS

9 Q WHAT IS A DEPRECIATION RESERVE ANALYSIS?

10 A The purpose of a depreciation reserve analysis is to compare the actual balances of a  
11 company's accumulated depreciation accounts with a theoretical reserve. This  
12 comparison analysis allows for a measurement of what is termed a reserve imbalance.  
13 Depending on the resulting reserve imbalances calculated in the depreciation reserve  
14 analysis, it may be appropriate to take corrective action to alleviate certain reserve  
15 imbalances.

16 Q WHAT IS A THEORETICAL DEPRECIATION RESERVE?

17 A The theoretical depreciation reserve is a calculated balance that would be in the  
18 accumulated depreciation account at a point in time using the currently proposed  
19 retirement dates, survivor curves, and net salvage rates. The theoretical depreciation  
20 reserve is also known as the Reserve Requirement, Computed Reserve, or Calculated  
21 Accrued Depreciation ("CAD"). Ameren Missouri's main depreciation witness, John

---

<sup>4</sup>Spanos Direct Testimony at page 5, lines 12-18.

Spanos, refers to it as the CAD in his depreciation study. For each vintage of property, for each plant, and for each account, a theoretical reserve has been calculated by Mr. Spanos.<sup>5</sup>

**Q HAVE YOU CONDUCTED A COMPARISON OF AMEREN MISSOURI'S BOOK RESERVES AND THEORETICAL DEPRECIATION RESERVES?**

**A** Yes. I present in Schedule BCA-2, the depreciation reserve analysis conducted on Ameren Missouri's production plant accounts. I present a summary of this analysis in Table BCA-1.

<u>Plant/Production Type</u>	<u>Theoretical Reserve</u>	<u>Book Reserve</u>	<u>Reserve Imbalance</u>	<u>Imbalance Percentage</u>
Meramec	\$ 536.38	\$ 482.59	(\$ 53.79)	(10%)
Sioux	\$ 558.38	\$ 520.14	(\$ 38.24)	(7%)
Labadie	\$ 569.77	\$ 613.81	\$ 44.04	7%
Rush Island	\$ 307.62	\$ 332.65	\$ 25.02	8%
Common All Steam Plants	\$ 17.38	\$ 20.07	\$ 2.69	15%
<b>Total Steam Production</b>	<b>\$1,989.53</b>	<b>\$1,969.26</b>	<b>(\$ 20.28)</b>	<b>(1%)</b>
<b>Nuclear</b>	<b>\$1,516.65</b>	<b>\$1,603.45</b>	<b>\$ 86.80</b>	<b>6%</b>
<b>Hydro</b>	<b>\$ 126.88</b>	<b>\$ 101.32</b>	<b>(\$ 25.56)</b>	<b>(20%)</b>
<b>Other</b>	<b>\$ 466.53</b>	<b>\$ 673.11</b>	<b>\$206.57</b>	<b>44%</b>
<b>Total Production Plant</b>	<b>\$4,099.59</b>	<b>\$4,347.13</b>	<b>\$247.54</b>	<b>6%</b>

<sup>5</sup>Spanos Direct Testimony, Schedule JJS-D2, pages IX-2 through IX-152, column (3).

1 **Q WHAT DO YOU CONCLUDE FROM YOUR DEPRECIATION RESERVE ANALYSIS?**

2 A Several conclusions can be drawn from the depreciation reserve analysis. First, it is  
3 clear that relative to the theoretical reserve, the actual book reserves have been  
4 over-accrued by \$247.5 million, or 6%. Both the Steam and Hydro groups are  
5 under-accrued, Nuclear is over-accrued and Other Production is significantly  
6 over-accrued. Note that both Meramec and Sioux are under-accrued and Labadie and  
7 Rush Island are over-accrued, while total Steam Production is only under-accrued by  
8 1%.

9 In addition, this analysis shows that Ameren Missouri's investment in Other  
10 Production (mostly combustion turbines) is overstated by \$207 million, or 44%. This is  
11 because FERC Account 344 is significantly over-accrued. The theoretical reserve for  
12 Account 344 is \$380 million, but the actual reserve for this account is \$562 million,  
13 which is \$181 million, or 48%, greater than what is theoretically necessary for this  
14 account.

15 This analysis shows that it is appropriate to reallocate the actual book reserves.

16 **Q WHY IS IT APPROPRIATE TO REBALANCE OR REALLOCATE AMEREN**  
17 **MISSOURI'S BOOK RESERVES?**

18 A As the depreciation reserve analysis shows, overall production is over-accrued by  
19 nearly \$250 million, or 6%, but some of the individual accounts or plants are either  
20 significantly over-accrued, or under-accrued. A rebalancing of the actual book reserves  
21 will better match Ameren Missouri's accumulated depreciation reserves with the current  
22 estimates of the life and net salvage parameters for these production assets.

1 Q WHAT PROCEDURE IS COMMONLY USED TO REALLOCATE BOOK  
2 RESERVES?

3 A The theoretical reserves are used to create ratios that allow for the book reserves to  
4 be allocated in proportion to the theoretical reserves. The first step is calculate an  
5 allocation factor based on the theoretical reserve. This allocation factor for each  
6 Plant/FERC Account is calculated by dividing the theoretical reserve for the individual  
7 Plant/FERC Account by the total of all theoretical reserves within each functional type  
8 (Steam, Nuclear, Hydro, or Other). Those ratios are then multiplied by the total actual  
9 book reserve within each functional type. The result is an allocation of book reserve  
10 that is proportional to the theoretical reserve. I will provide a more detailed description  
11 of this procedure later in testimony.

12 Q DOES REALLOCATING AMEREN MISSOURI'S BOOK RESERVES REDUCE THE  
13 TOTAL AMOUNT OF FUTURE ACCRUALS?

14 A No. Reallocation of Ameren Missouri's book reserves will not reduce the total amount  
15 of future depreciation accruals. Rather, the reallocation of book reserves alters the  
16 timing of those accruals such that those accruals better match the current life and net  
17 salvage estimates of Ameren Missouri's production assets. Reallocating book reserves  
18 is a very common procedure used when determining depreciation rates within a  
19 depreciation study.

13

**Q** WHAT ARE MIEC'S PROPOSED ADJUSTMENTS TO AMEREN MISSOURI'S DEPRECIATION RATES?

**A** MIEC proposes to adjust Ameren Missouri's proposed depreciation rates by conducting a reallocation of book reserves, conducted in two phases.

**Q** WHAT IS THE FIRST PHASE OF THE RESERVE ALLOCATION ADJUSTMENT?

**A** In the first phase of the depreciation rate adjustment, the book reserves within each functional production type (Steam, Nuclear, Hydro, Other) have been reallocated to each of the Plant/FERC Accounts in proportion to each of those Plant/FERC Accounts' theoretical reserve. The phase one book reserve allocation is provided in Schedule BCA-3. As an example of how this book reserve allocation was conducted, I will discuss the process utilized to determine the amount of book reserves allocated to FERC Account 312 for the Meramec Plant. I also show this example in Table BCA-2.

<b>Table BCA-2</b>		
<b>Depreciation Reserve Allocation Methodology</b>		
<b>Meramec FERC Account 312</b>		
<b>(\$-Million)</b>		
<b>Step</b>	<b>Description</b>	<b>Results (Location in Schedule BCA-3)</b>
1	Meramec – Account 312 CAD divided by Total CAD – Steam Production	$\$355.9 / \$1,989.5 = 17.9\%$ (Col 2, Line 2 / Col 2, Line 43)
2	Meramec Account 312 CAD Allocator calculated in Step 1 applied to Book Reserve of all Steam Production Accounts	$17.9\% * \$1,960.0 = \$352.3$ (Col 3, Line 2 * Col 4, Line 43)
3	Reallocated Meramec Account 312 Book Reserve	$\$352.3$ (Col 4, Line 2)

Brian C. Andrews  
Page 11

1 As is shown in Column (2), Line (2) of Schedule BCA-3, Account 312 for Meramec has  
2 a theoretical reserve or Calculated Accrued Depreciation of \$355,899,560. This value  
3 was calculated in Ameren Missouri's depreciation study and is shown on page IX-10 of  
4 Schedule JJS-D2. The CAD was used to create an allocator of 17.9%, which is shown  
5 in Column (3), Line (2). 17.9% was the result of dividing the \$355.9 million of CAD for  
6 Meramec Account 312 by the total CAD for all of Steam Production, \$1,989,533,183  
7 shown in Column (2), Line (43). In Column (4), the allocated book reserve is shown.  
8 For Meramec Account 312, \$352,272,473, or 17.9%, of the entire \$1.969 billion of book  
9 reserve for all steam plants has been allocated. The resulting reserve imbalance is  
10 shown in Column (5) and the imbalance percentage is shown in Column (6). As can  
11 be seen from this schedule, each of the four coal plants now have positive reserve  
12 imbalances of only \$3.1 - \$5.8 million (1%). These resulting reserve imbalances are  
13 significantly lower, in absolute terms, than the \$25.0 - \$53.8 (7% - 10%) million reserve  
14 imbalances that would exist under Ameren Missouri's proposed allocation of book  
15 reserves (See Table BCA-1 and Schedule BCA-2).

16 The procedure described for Meramec Account 312, was conducted for every  
17 production plant FERC account. As can be seen in the total lines for each function  
18 plant type (Schedule BCA-3, page 1, lines 43 and 52; page 2, lines 83 and 94), the  
19 overall reserve imbalances that were presented in Table BCA-1 and Schedule BCA-2  
20 are unchanged; this phase one reserve allocation did not move any book reserves  
21 between production plant types.

1 Q HAVE YOU CALCULATED DEPRECIATION RATES CONSISTENT WITH THE  
 2 RESERVE ALLOCATION ADJUSTMENT THAT REALLOCATES THE RESERVES  
 3 WITHIN EACH OF THE FOUR TYPES OF GENERATING PLANTS?

4 A Yes. I present these depreciation rates in Schedule BCA-4. These depreciation rates  
 5 for Ameren Missouri's production plants were calculated in the same manner as those  
 6 proposed by Ameren Missouri, but with the allocated book reserve presented in  
 7 Schedules BCA-3.

8 Q HOW DOES THIS ADJUSTMENT AFFECT THE DEPRECIATION RATES AND 2018  
 9 DEPRECIATION EXPENSE?

10 A I present this comparison in Schedule BCA-5 and summarize it in Table BCA-3.  
 11 Overall, the phase one reserve allocation adjustment would reduce Ameren Missouri's  
 12 proposed 2018 depreciation expense by \$12.4 million.

<b>Table BCA-3</b>			
<b>Production Plant 2018</b>			
<b><u>Depreciation Expense Summary</u></b>			
<b>(\$-Million)</b>			
<b><u>Production Type</u></b>	<b><u>Ameren Missouri</u></b>	<b><u>MIEC – Phase One</u></b>	<b><u>Delta</u></b>
Steam	\$192.4	\$181.0	(\$11.4)
Nuclear	\$ 82.8	\$ 81.7	(\$ 1.1)
Hydro	\$ 12.8	\$ 13.1	\$ 0.2
Other	<u>\$ 22.5</u>	<u>\$ 22.5</u>	<u>(\$ 0.1)</u>
<b>Total</b>	<b>\$310.5</b>	<b>\$298.2</b>	<b>(\$12.4)</b>

1 **Q PLEASE EXPLAIN THE PHASE TWO RESERVE ALLOCATION ADJUSTMENT.**

2 A As I alluded to earlier in my discussion of the depreciation reserve analysis, Ameren  
3 Missouri has over-accrued its combustion turbine ("CT") investment in Account 344 by  
4 approximately \$181 million, or 48%. Unless corrective action is taken now, this  
5 over-accrual will be flowed back to customers over the 29.4 year remaining life of the  
6 CTs.<sup>6</sup> Overall, Ameren Missouri has over-accrued its production plant investment by  
7 \$247.5 million, or only 6%. The phase two adjustment will remove the \$181 million in  
8 over-accrued book depreciation from Other Production and spread it to the  
9 under-accrued plant types, Steam and Hydro. Specifically, \$181.3 million will be  
10 removed from Other Production. \$35 million will be reallocated to the Hydro accounts  
11 and the remaining \$146.3 million will be reallocated among the Steam Production  
12 accounts. The process used for allocating the new total functional book reserves is  
13 conducted using the exact same procedure as was used in phase one. This is shown  
14 in Schedule BCA-6. This phase two book reserve allocation results in Ameren  
15 Missouri's book reserves being allocated to all accounts in a manner much more  
16 reflective of the overall reserve imbalance. In other words, Ameren Missouri's total  
17 plant investment reserve is over-accrued by 6%. With the phase two book reserve  
18 reallocation, all accounts will be allocated the book reserves with an over-accrual  
19 between 5-7%. In contrast, under Ameren Missouri's allocation of book reserves, the  
20 accounts range from an under-accrual of 285% to an over-accrual of 131%.<sup>7</sup> I present  
21 a summary of the phase two book reserve reallocation in Table BCA-4.

---

<sup>6</sup>See Spanos Direct Testimony, Schedule JJS-D2, pages VI-6 and IX-81.

<sup>7</sup>See Schedule BCA-2, Column (5).

Table BCA-4

Phase Two Book Reserve Reallocation Summary  
(\$-Million)

<u>Plant/Production Type</u>	<u>Theoretical Reserve</u>	<u>Book Reserve</u>	<u>Reserve Imbalance</u>	<u>Imbalance Percentage</u>
Meramec	\$ 536.38	\$ 570.35	\$ 33.97	6%
Sioux	\$ 558.38	\$ 593.74	\$ 35.36	6%
Labadie	\$ 569.77	\$ 605.85	\$ 36.08	6%
Rush Island	\$ 307.62	\$ 327.11	\$ 19.49	6%
Common All Steam Plants	\$ 17.38	\$ 18.48	\$ 1.10	6%
<b>Total Steam Production</b>	<b>\$1,989.53</b>	<b>\$2,115.53</b>	<b>\$126.00</b>	<b>6%</b>
<b>Nuclear</b>	<b>\$1,516.65</b>	<b>\$1,603.45</b>	<b>\$ 86.80</b>	<b>6%</b>
<b>Hydro</b>	<b>\$ 126.88</b>	<b>\$ 136.32</b>	<b>\$ 9.44</b>	<b>7%</b>
<b>Other</b>	<b>\$ 466.53</b>	<b>\$ 491.84</b>	<b>\$ 25.31</b>	<b>5%</b>
<b>Total Production Plant</b>	<b>\$4,099.59</b>	<b>\$4,347.13</b>	<b>\$247.54</b>	<b>6%</b>

1 Q HAVE YOU CALCULATED DEPRECIATION RATES CONSISTENT WITH  
2 REALLOCATING RESERVES AND REMOVING THE \$181 MILLION  
3 OVER-ACCRUAL FROM ACCOUNT 344 AND ALLOCATING THAT AMOUNT TO  
4 STEAM AND HYDRO PRODUCTION?

5 A Yes. I present these depreciation rates in Schedule BCA-7. Again, these depreciation  
6 rates for Ameren Missouri's production plants were calculated in the same manner as  
7 those proposed by Ameren Missouri, but with the allocated book reserve presented in  
8 Schedule BCA-6.

Brian C. Andrews  
Page 15

1 Q HOW DOES THE PHASE TWO BOOK RESERVE ALLOCATION ADJUSTMENT  
2 AFFECT THE DEPRECIATION RATES AND 2018 DEPRECIATION EXPENSE?

3 A I present this comparison in Schedule BCA-8 and summarize it in Table BCA-5.  
4 Overall, the phase one and phase two reserve allocation adjustments would reduce the  
5 2018 depreciation expense by \$23.7 million.

<u>Production Type</u>	<u>Ameren Missouri</u>	<u>MIEC – Phase Two</u>	<u>Delta</u>
Steam	\$192.4	\$164.3	(\$28.1)
Nuclear	\$ 82.8	\$ 81.7	(\$ 1.1)
Hydro	\$ 12.8	\$ 12.0	(\$ 0.9)
Other	\$ 22.5	\$ 28.9	\$ 6.4
<b>Total</b>	<b>\$310.5</b>	<b>\$286.8</b>	<b>(\$23.7)</b>

6 Q WHICH PRODUCTION PLANT DEPRECIATION RATES ARE YOU REQUESTING  
7 THE COMMISSION APPROVE IN THE PROCEEDING?

8 A I recommend the Commission approve the production plant depreciation rates that are  
9 presented in Schedule BCA-7. These rates were calculated in the same manner as  
10 those proposed by Ameren Missouri, but with a reallocation of book reserves that better  
11 matches the current life and net salvage parameters for the production assets. These  
12 depreciation rates would result in a reduction to Ameren Missouri's 2018 depreciation  
13 expense of \$23.7 million. Since Ameren Missouri proposes to increase rates by \$34.6  
14 million, my recommendation would still provide Ameren Missouri with an annual  
15 increase in depreciation expense of \$10.9 million. These depreciation rates in no way

Brian C. Andrews  
Page 16

1           reduce the total amount of future depreciation accruals for Ameren Missouri's  
2           production plants, but rather alter the timing of the accruals to better reflect current life  
3           and net salvage estimates.

4    **Q       DOES THAT CONCLUDE YOUR DIRECT TESTIMONY?**

5    **A       Yes, it does.**

## Qualifications of Brian C. Andrews

1    **Q     PLEASE STATE YOUR NAME AND BUSINESS ADDRESS.**

2    A     Brian C. Andrews. My business address is 16690 Swingley Ridge Road, Suite 140,  
3        Chesterfield, MO 63017.

4    **Q     PLEASE STATE YOUR OCCUPATION.**

5    A     I am a Senior Consultant in the field of public utility regulation with the firm of Brubaker  
6        & Associates, Inc. ("BAI"), energy, economic and regulatory consultants.

7    **Q     PLEASE STATE YOUR EDUCATIONAL BACKGROUND AND PROFESSIONAL  
8        EMPLOYMENT EXPERIENCE.**

9    A     I received a Bachelor of Science Degree in Electrical Engineering from the Washington  
10        University in St. Louis/University of Missouri - St. Louis Joint Engineering Program. I  
11        have also received a Master of Science Degree in Applied Economics from Georgia  
12        Southern University.

13            I have attended training seminars on multiple topics including class cost of  
14        service, depreciation, power risk analysis, production cost modeling, cost-estimation  
15        for transmission projects, transmission line routing, MISO load serving entity  
16        fundamentals and more.

17            I am a member and the current President of the Society of Depreciation  
18        Professionals. I have been awarded the designation of Certified Depreciation  
19        Professional ("CDP") by the Society of Depreciation Professionals. I am also a certified  
20        Engineer Intern in the State of Missouri.

Brian C. Andrews  
Appendix A  
Page 1

1           As a Senior Consultant at BAI, and as a Consultant, Associate Consultant and  
2 Assistant Engineer before that, I have been involved with several regulated and  
3 competitive electric service issues. These have included book depreciation, fuel and  
4 purchased power cost, transmission planning, transmission line routing, resource  
5 planning including renewable portfolio standards compliance, electric price forecasting,  
6 class cost of service, power procurement, and rate design. This has involved use of  
7 power flow, production cost, cost of service, and various other analyses and models to  
8 address these issues, utilizing, but not limited to, various programs such as Strategist,  
9 RealTime, PSS/E, MatLab, R Studio, ArcGIS, Excel, and the United States Department  
10 of Energy/Bonneville Power Administration's Corona and Field Effects ("CAFÉ")  
11 Program. In addition, I have received extensive training on the PLEXOS Integrated  
12 Energy Model and the EnCompass Power Planning Software. I have provided  
13 testimony on many of these issues before the Public Service Commissions in Arizona,  
14 Arkansas, Florida, Illinois, Indiana, Kansas, Michigan, Minnesota, Missouri, Montana,  
15 New Mexico, Oklahoma, and Texas.

16           BAI was formed in April 1995. BAI provides consulting services in the  
17 economic, technical, accounting, and financial aspects of public utility rates and in the  
18 acquisition of utility and energy services through RFPs and negotiations, in both  
19 regulated and unregulated markets. Our clients include large industrial and institutional  
20 customers, some utilities and, on occasion, state regulatory agencies. We also prepare  
21 special studies and reports, forecasts, surveys and siting studies, and present seminars  
22 on utility-related issues.

23           In general, we are engaged in energy and regulatory consulting, economic  
24 analysis and contract negotiation. In addition to our main office in St. Louis, the firm  
25 also has branch offices in Phoenix, Arizona and Corpus Christi, Texas.
