Q. Please state your name and business address.

A. Graham A. Vesely, Noland Plaza Office Building, 3675 Noland Road, Suite 110, Independence, MO 64055.

Q. By whom are you employed and in what capacity?

A. I am a Regulatory Auditor for the Missouri Public Service Commission (Commission).

Q. Please describe your education background.

A. In May of 1985, I received a Bachelor's degree in Civil Engineering from Saint Martins College, Olympia, Washington. In May of 1998, I completed an MBA degree with a focus in Accounting from Central Missouri State University, Warrensburg, Missouri. I am a Certified Public Accountant with a permit to practice in Missouri.

Q. Please describe your employment history.

A. In May of 1985, I was employed as a Facilities Maintenance Engineer by the United States Air Force. From March 1988 until May 1995, I was employed by the Army Corps of Engineers as a member of a construction management group. Subsequently, I began working with the engineering firm of Malsy & Associates,

Direct Testimony of  
Graham A. Vesely

1 Lincoln, Missouri, as a Civil Engineer. On February 26, 1999, I began my current  
2 employment with the Commission.

3 Q. What is the nature of your duties while in the employ of this Commission?

4 A. I am responsible for assisting in the audits and examinations of the books  
5 and records of utility companies operating within the state of Missouri.

6 Q. With reference to Case Nos. ER-2004-0034 and HR-2004-0024, have you  
7 made an investigation of the books and records of Missouri Public Service (MPS) and  
8 Light and Power (L&P), two divisions of Aquila Inc. (Aquila or Company) relating to the  
9 proposed rate application?

10 A. Yes, with the assistance of other members of the Commission  
11 Staff (Staff).

12 Q. Have the electric and steam cases been combined?

13 A. Yes, these two cases have been consolidated by the Commission's Order  
14 Consolidating Cases issued July 24, 2003.

15 Q. Have you filed testimony previously?

16 A. Yes. Schedule 1 attached to this direct testimony identifies the cases in  
17 which I have participated.

18 Q. Please describe your principal areas of responsibility in this case.

19 A. In the area of fuel and purchased power expense I am responsible for  
20 determining the price of coal, natural gas, and fuel oil that was used in the Staff's case, as  
21 well as for assigning the value of fuel inventories used in the Staff's case. I am also  
22 responsible for annualizing the expense associated with sulfur dioxide emissions  
23 allowances, and transmission expense.

Direct Testimony of  
Graham A. Vesely

1 Q. What knowledge, skills, experience, training, or education do you have in  
2 these subjects?

3 A. I have acquired general knowledge of these topics through my experience  
4 in previous rate cases before this Commission. I have reviewed the testimony, work  
5 papers, and order from the previous MPS and L&P cases. I have reviewed the  
6 Company's testimony, work papers, and data request responses related to these topics.  
7 In addition, my college coursework included accounting, auditing, and engineering  
8 classes. During my employ with the Commission I have attended formal training on  
9 regulatory issues and received informal on-the-job training from senior audit Staff  
10 throughout the course of this and previous audits.

11 Q. What adjustments are you sponsoring in Case Nos. ER-2004-0034 and  
12 HR-2004-0024

13 A. I am sponsoring the following adjustments to the Income Statement  
14 Accounting Schedule 9:

15 MPS: S-10.5, S-15.3, S-22.2, S-30.1, S-31.1, and S-39.1

16 L&P (Electric): S-10.4, S-12, S-16.2, S-23.1, S-28.1, S-29.1, and

17 S-38.1

18 L&P (Steam): S-5.1

19 **OVERVIEW OF ELECTRIC GENERATION**

20 Q. What generating facilities does the Company own and use for the  
21 production of electric power?

1           **Missouri Public Service (MPS)**

2           A.     Aquila owns, wholly or in part, the following electrical power generating  
3 facilities:

4                             Jeffrey Energy Center--Units 1, 2 and 3 (8% ownership share)

5                             Sibley Units 1, 2 and 3 (100%)

6                             Greenwood 1, 2, 3 and 4 (100%)

7                             Nevada (100%)

8                             Ralph Green (100%)

9                             KCI (100%)

10          Q.     Please describe each plant, including the type of units at each plant and the  
11 primary and secondary fuel sources for each.

12          A.     The Jeffrey Energy Center (Jeffrey) is jointly owned by Westar  
13 Energy (Westar) and Aquila-MPS, with Aquila-MPS's ownership share being 8%.  
14 Westar is the operating partner of the three generating units at Jeffrey. Each of the  
15 Jeffrey units is a base-load steam unit utilizing coal as the primary fuel and No. 2 oil for  
16 start-ups and flame stabilization. The first unit at Jeffrey went into service in 1978 and  
17 the last unit went into commercial operation in 1983.

18                     The Sibley generating station consists of three coal-burning base-load  
19 units, the first and last units of which went into commercial operation in 1960 and 1969,  
20 respectively.

21                     The Greenwood plant consists of four gas turbines. The first went into  
22 service in 1975 and the last went into commercial operation in 1979. In 1996, this

Direct Testimony of  
Graham A. Vesely

1 facility was converted from oil to natural gas as its primary fuel. Oil continues to be used  
2 mainly as an emergency backup fuel.

3 The Nevada generating facility, which consists of one oil-fired turbine  
4 used for peaking purposes, went into service in 1974.

5 The Ralph Green plant went into commercial operation in 1981 and  
6 consists of one gas turbine peaking unit.

7 The KCI plant was purchased by Aquila-MPS in 1977, and consists of two  
8 gas turbine peaking units.

9 **Light&Power (L&P)**

10 Aquila-L&P's generating facilities include the Lake Road station and the Iatan  
11 station. L&P owns 100% of the Lake Road station. Kansas City Power & Light  
12 Company (KCPL) is the majority owner (70%) and operator of the Iatan station.  
13 L&P owns 18% of the Iatan station, while The Empire District Electric Company owns  
14 the remaining 12%.

15 Q. Please describe the Iatan station and Lake Road station.

16 A. Iatan is a large 670-megawatt (MW) base-load power plant that utilizes  
17 low cost, low sulfur western coal as the boiler fuel. No. 2 fuel oil is required for boiler  
18 start-ups and flame stabilization.

19 The Lake Road station consists of four steam-turbine generators, three  
20 combustion turbines, six steam boilers and one heat recovery steam generator. The  
21 station's generating units have a combined net electric generating capability of 254 MW.  
22 The station consists of three separate systems: a 900-pound system, an 1,800-pound

1 system and a combustion turbine (CT) system. The 900-pound system also supplies  
2 steam to industrial customers.

3 Q. What types of fuel do these systems use?

4 A. The 900-pound system uses coal and natural gas. The 1,800 pound system  
5 uses coal as the primary fuel and natural gas as the start-up fuel or as an alternative fuel.  
6 The CT system consists of CT No. 5 and two aircraft jet turbines. CT No. 5 uses natural  
7 gas and the jets burn No. 2 fuel oil.

8 **FUEL AND PURCHASED POWER EXPENSE**

9 Q. What was your responsibility in this case with regard to fuel and  
10 purchased power expense?

11 A. I was responsible for establishing the prices that the Staff would adopt in  
12 its case for coal, natural gas, and fuel oil burned in the Company's generating facilities;  
13 I also calculated the annual level of demand expense Aquila incurs under its existing  
14 purchased power contracts, except for the MEPPH contract for which I was provided a  
15 value by Staff witness Mark L. Oligschlaeger. I provided MPS and L&P fuel prices to  
16 Staff witness David Elliott (of the Engineering Section of the Energy Department) for  
17 input into the RealTime<sup>TM</sup> production cost model (production cost model or fuel model)  
18 on a joint dispatch basis. Staff witness Elliott input these prices to the fuel model to  
19 compute normalized net system fuel and purchased power expense, exclusive of  
20 purchased power demand charges, cost of off-system sales (sales to other electric  
21 utilities), and cost of energy exchanged. I subsequently added the costs associated with  
22 purchased power capacity (demand) charges to the fuel model's results. I also added the

Direct Testimony of  
Graham A. Vesely

1 following costs to the fuel model's results to arrive at an overall total annualized level of  
2 fuel and purchased power expense:

- 3 • Maintenance and leasing costs for unit trains
- 4 • Fixed (demand) natural gas transportation costs
- 5 • Non-labor fuel handling costs

6 The RealTime<sup>TM</sup> production cost model will be discussed in detail by Staff  
7 witness Elliott in his direct testimony. Labor costs related to fuel handling will be  
8 addressed in Staff witness Dana E. Eaves' payroll annualization. Property taxes related  
9 to unit trains will be addressed in Staff witness Trisha D. Miller's property tax  
10 annualization.

11 **FUEL PRICES**

12 Q. Were the coal prices the same for each plant?

13 A. No. The coal burned at each plant may not be the same, may be provided  
14 under a different contract, and may be subject to different freight charges.

15 Q. How were the fuel prices for coal determined?

16 A. The fuel prices were based on contractual coal and freight prices at  
17 September 30, 2003. Aquila uses a blend of two different coals at its Sibley and  
18 Lake Road coal-burning plants that is optimal for the operational characteristics of the  
19 unit; therefore I provided Staff witness Elliott with a blending percent for each coal, in  
20 accordance with the mix used historically at each plant. At Jeffrey Energy Center the  
21 contract identifies a price for the first specified level of tons per year of coal received  
22 under the contract ("Tier 1" price), and another price for all coal beyond that amount

Direct Testimony of  
Graham A. Vesely

1 received under the contract ("Tier 2" price). This fact is reflected in my computation of  
2 coal prices provided to witness David Elliott for input to the Staff's fuel model.

3 Q. How did you arrive at the fuel oil prices that you provided to Staff witness  
4 Elliott?

5 A. Aquila burns No. 2 oil as a primary fuel at its Nevada facility. All other  
6 No. 2 fuel oil is burned as an emergency fuel or for start-ups and flame stabilization.  
7 I am sponsoring a price for fuel oil at the Nevada, Greenwood, and Lake Road plants  
8 based on data of Aquila's most recent purchases at that plant. Finally, at Iatan I am  
9 sponsoring a fuel price based on prices used by Aquila to value its fuel inventory at that  
10 site, as no other information was obtained in response to a Staff data request.

11 Q. How did you arrive at the price of natural gas for generation used in the  
12 Staff's model?

13 A. I averaged the prices Aquila actually paid throughout the test year and the  
14 update period. Further, instead of trying to establish one single price for all of Aquila's  
15 power plants where natural gas is used, I am sponsoring a separate natural gas price at  
16 each location in order to better reflect Aquila's actual cost at that site. All of the Staff's  
17 natural gas prices reflect the commodity price of natural gas and include any pipeline  
18 costs Aquila is charged for delivery to each power plant site. These prices do not include  
19 any fixed demand charges for pipeline transportation. Those fixed charges are added to  
20 fuel costs to arrive at total fuel expense.

21 Q. Why did you select an average of gas prices over the twelve-month period  
22 of the test year and the nine months of the update period, for a total of twenty-one  
23 months?

Direct Testimony of  
Graham A. Vesely

1           A.     First, consistent with the Staff's practice, I have relied on historical prices  
2 only and not on any forecasts for the price of gas beyond September 30, 2003. Second,  
3 because the price of natural gas tends to fluctuate up and down, it is common to use some  
4 kind of averaging method. The actual price Aquila paid for natural gas did vary widely  
5 from the beginning of the test year through the end of the update period. The Staff's  
6 averaging method gives equal weight, without bias, to the price Aquila paid each month  
7 for natural gas at each power plant.

8           Q.     Why is the Staff not recommending a mechanism of the type that includes  
9 an additional charge to customers for a limited period of time, subject to true-up and  
10 refund if gas prices ended up being low enough?

11          A.     Such a mechanism might be helpful; however, it is the Staff's  
12 understanding that this Commission cannot impose such a measure on Aquila and that,  
13 rather, a proposal of this type requires the concurrence of Aquila.

14          Q.     Please describe one example of such a mechanism.

15          A.     Staff has previously concurred with a plan under which a base amount of  
16 fuel and purchased power expense is designed into permanent utility rates, and an  
17 additional amount of expense is included in rates on a temporary basis during the period  
18 of especially high natural gas price uncertainty. At the end of the pre-determined period  
19 of time an audit is held of the utility's fuel and purchased power costs, and any over-  
20 collection (determined based, among other things, on the cost paid for natural gas) is  
21 refunded to customers, with interest.

22          Q.     Where has this type of mechanism been used before?

Direct Testimony of  
Graham A. Vesely

1           A.     Most recently it was used in Case No. ER-2001-299, The Empire District  
2 Electric Company (Empire). Earlier, in the 1980s, it was employed to include forecasted  
3 fuel costs in Kansas City Power and Light and Empire cases when the price of coal and  
4 natural gas increased to significantly above normal historical levels.

5           Q.     If the Staff did propose using this type of mechanism in this case, what  
6 range of natural gas prices would it recommend for computing total fuel and purchased  
7 power expense?

8           A.     While I cannot say what the impact on total fuel and purchased power  
9 expense would be at this point, based on a review of historical natural gas prices, the  
10 Staff would recommend a base fuel and purchased power expense amount with a ceiling,  
11 subject to a true-up and refund provision. As part of this process, natural gas prices  
12 included in the Staff's calculations would be higher than those being recommended in  
13 this direct filing.

14          Q.     What would be the benefit of doing this?

15          A.     If an agreement among all parties were reached and the Commission  
16 approved such a plan, with rates to be set accordingly, Aquila would have some  
17 protection against having to pay natural gas prices above those I am sponsoring in my  
18 direct testimony. Customers' rates would reflect natural gas prices actually paid by  
19 Aquila (up to the top of the range) in providing them with utility service. However, any  
20 funds collected for fuel and purchased power above those required to meet actual costs  
21 would be refunded to customers, with interest. If natural gas prices paid by Aquila for  
22 producing electrical service turned out to be low enough, customers could well see

Direct Testimony of  
Graham A. Vesely

1 savings they would otherwise not experience using the prices I am sponsoring in my  
2 direct testimony.

3 Q. Is Aquila's current financial condition a concern in using this type of a  
4 mechanism?

5 A. Yes. As Aquila would be collecting from customers funds that are subject  
6 to refund, the Staff would agree with using this mechanism only if it were possible to  
7 exclude these funds from being in any way subject to the claims of Aquila's creditors and  
8 shareholders.

9 **DEMAND CHARGES-PURCHASED POWER CAPACITY CONTRACTS**

10 Q. Please list the capacity contracts that Aquila had as of the end of the  
11 update period.

12 A. Aquila had contracted with the following organizations to secure firm  
13 purchased power arrangements:

14 MPS

- 15 • Sunflower Electric Power Corporation
- 16 • MEP Pleasant Hill (Base)
- 17 • MEP Pleasant Hill (Peak)

18 L&P

- 19 • Sunflower Electric Power Corporation
- 20 • Nebraska Public Power District

21 Q. How did you reflect the contractual purchased power demand costs in this  
22 case?

1           A.     I annualized the demand costs Aquila pays under these contracts by  
2 multiplying the respective monthly demand charges by twelve and summing up the  
3 results, with the exception of the MEP Pleasant Hill contract. Staff witness  
4 Mark L. Oligschlaeger provided me with the total (base and peak) annualized demand  
5 charge for MEP Pleasant Hill.

6           **FUEL INVENTORIES**

7           Q.     What was your responsibility in this case regarding fuel inventories?

8           A.     My responsibility was to determine a reasonable value for fuel inventory  
9 to include in rate base. Aquila maintains inventories of coal at its Sibley, Jeffrey,  
10 Lake Road, and Iatan plants. It maintains fuel oil inventories at Greenwood, Nevada,  
11 Lake Road and Iatan.

12          Q.     What coal inventory levels have you included in this case?

13          A.     The Staff has included a 61-day supply for coal inventories at the Sibley  
14 plant, a 72-day supply at Jeffrey, a 49-day supply at Iatan and a 75-day supply at  
15 Lake Road. The numbers of days are consistent with the inventory policies of Sibley,  
16 Jeffrey, Iatan and Lake Road generating facilities. The inventory tonnages represent coal  
17 quantities sufficient for the respective number of average-burn days, as per the results of  
18 the generation levels determined using the production cost model. A 13-month average  
19 has been used for oil inventories for purposes of this case.

20          **TRANSMISSION EXPENSE**

21          Q.     Please explain your adjustment in this area.

22          A.     Aquila has contracts securing the ability to use the transmission lines  
23 owned by other companies or organizations, in order to be able to receive the power it

Direct Testimony of  
Graham A. Vesely

1 purchases under certain firm commitments. For Aquila-MPS I have annualized the  
2 transmission expense paid to Sunflower and MAPP in order to be able to transmit the  
3 power received under the firm purchase agreement with Sunflower. For Aquila-L&P  
4 I have annualized the transmission expense paid to NPPD in order to be able to transmit  
5 the power received under the firm purchase agreement with NPPD. The adjustments  
6 represent the amounts by which the test year level of expense must be increased or  
7 decreased in order to include the Staff's annualized values in this case.

8 **EMISSION ALLOWANCES**

9 Q. What were your responsibilities in this area?

10 A. I was responsible for including in the Staff's case the annualized level of  
11 expense Aquila pays to secure rights from the Federal Government to produce sulfur  
12 dioxide emissions from its power plants as a result of burning fossil fuels. Aquila secures  
13 these rights by purchasing emission credits, or allowances, which are then held in reserve  
14 until they are either used up by Aquila or possibly, if not entirely needed for its  
15 operations, sold to other utilities. The unused level of emissions allowances that Aquila  
16 carried on its books at September 30, 2003 is included, on a 13-month average basis, in  
17 rate base.

18 Q. Does this conclude your direct testimony?

19 A. Yes, it does.

**GRAHAM A. VESELY**
