Natelle,

Thank you for providing an opportunity to comment on the KEMA – Baseline Preliminary Memo. Please find below our comments. These comments are for both KCP&L and KCP&L GMO.

- **SEDS Natural gas data**

SEDS industrial consumption would include natural gas used as a feedstock to produce products such as fertilizers, and chemicals.

Including this consumption could overstate industrial direct end-use potential.

- **List of residential electric base end-use measures on pg 5** is a mix of base measures, energy efficient measures or non-descriptive.

Examples:

13 SEER DX A/C is code standard and base for a new system.

Lighting 60w incandescent is a base measure

15W CFL is an energy efficient improvement.

What exactly constitutes a "Refrigerator"? Please define and clarify.

It would be preferable to state the baseline measure and the energy efficient measure.

This list is a combination of both.

- **We would find it useful to have the end-use measures grouped and listed by category class. Such as:**

Space Heating
 Central Cooling
 Room Cooling
 Furnace Fans
 Water Heating
 Refrigeration
 Freezers
 Cooking
 Lighting
 Appliances
 Refrigerators
 Clothes Washers
 Clothes Dryers
 Dishwashers
 Plug Loads
 Personal Computers

Color Televisions

- We would find it useful to list Base and EE improvements or group of alternative improvements side by side. For example:

Base	Energy Efficient\
13SEER DX A/C	14, 15, 16, 16+ SEER DX A/C

Again, thank you for providing an opportunity for us to comment.

Subject: RE: MoPSC DSM Potential Study

Thank you for your responses to the first deliverable in the MoPSC DSM Potential Study. Attached is the next deliverable from KEMA – Baseline Preliminary Memo. Please review and provide any comments to me by Friday October 8 at 3pm. There are no associated work papers with this deliverable. Thanks,
Natelle
